COLLECTION

Voyages and Travels,

Some now first Printed from Original Manuscripts.

Others Translated out of Foreign Languages, and now first Publish'd in English.

To which are added some sew that have formerly appear'd in *English*, but do now for their Excellency and Scarceness deserve to be Re-printed.

In Four Volumes.

-

With a General PREFACE, giving an Account of the Progress of NAVIGATION, from its first Beginning to the Persection it is now in, &c.

The Whole Illustrated with a great Number of Useful Maps, and Cuts, all Engraven on Copper.

The Authors contain'd in this Volume fee over Leaf.

Vol. II.

LONDON:

Printed for Awnsham and John Churchile, at the Black Swan in Pater-Nofter-Row. MDCCIV.

VOYAGES and TRAVELS,

INTO

BRASIL,

AND THE

EAST-INDIES:

CONTAINING,

An Exact Description of the DUTCH BRASIL, and divers Parts of the EAST-INDIES;

Their Provinces, Cities, Living Creatures, and Products:

The Manners, Customs, Habits, and Religion of the Inhabitants:

WITH

A most particular ACCOUNT of all the remarkable Passages that happened during the Author's stay of Nine Years in BRASIL;

ESPECIALLY,

In Relation to the REVOLT of the Portugueses, and the Intestine War carried on there from 1640. to 1649.

AS ALSO,

A most Ample Description of the most famous City of BATAVIA, in the East-Indies.

By Mr. JOHN NIEUHOFF.

Both Adorned with Copper Plates, done after the Life.

ADVERTISEMENT

TO THE

READER

T is about Nineteen Years since my Brother, John Nieuhoff, just before his Second Voyage into the Indies, presented me with his Description of China, and certain Draughts he had made during his Embassy in that Empire, which being afterwards Published, were soon after Translated

into Six several Languages.

My Brother had, before that time, not only been in Brasil, and several other Places in those Parts, but also since that time, has had the Opportunity of Travelling through a great part of Asia, till 1671. when returning into Holland, he brought along with him all his Papers, Observations, and Draughts, he had Collected during his Voyages; which, though much Coveted by all curious Persons, yet, for some Reasons best known to himself, he did not think fit to commit to publick View.

But, after his Decease, considering with my self, that such useful Collections ought not to be Buried in Oblivion, I thought fit to Publish them for the

Publick Good.

As those Things which he relates of the Revolt of the Portugueses in Brasil, are Extracted verbatim out of the Records kept during my Brothers Abode of Nine Years in Brasis, under the Government of the Lords, Henry Hamel, Peter Bas, and Adrian

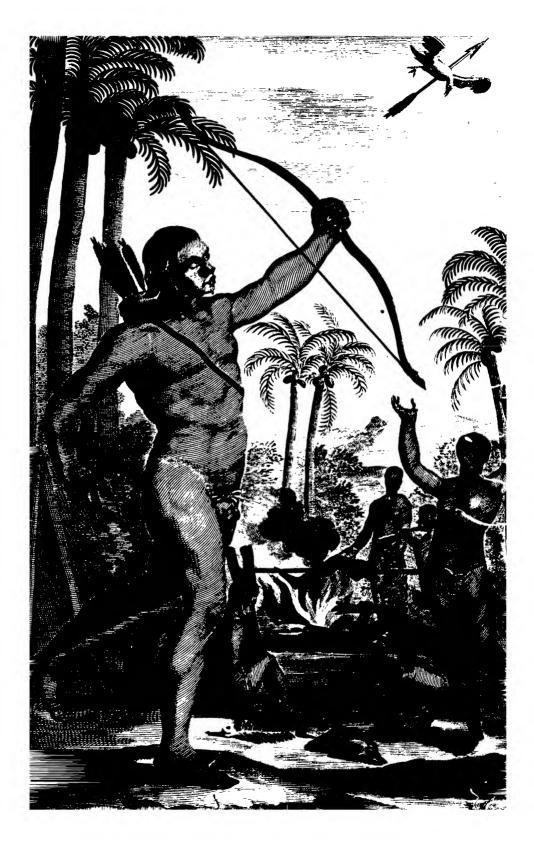

Advertisement to the Reader.

Adrian Bullestrate, and Authentick Letters; so the Truth thereof admits not of the least doubt from Unbyas'd Persons.

The vast Countries through which my Brother Travell'd in his Life-time, as Brasil, part of Persia, Malabar, Madura, Coromandel, Amboyna, Ceylon, Malacca, Sumatra, Java, Tagowan, and part of China, besides many Islands, could not in the least Insect him with that Disease, so incident to Travellers, to Relate Fables instead of Histories, it having been his constant Practice, to Adhere most Religiously in all his Treatises, to the Naked Truth, without the least Disguise.

His last Voyage to the Isle of Madagascar, where he was lost, I have taken partly out of his own Letters, partly out of the Journal of Captain Reinard Claeson, which he brought along with him from thence.

As to his Person, I will only add thus much: He was Born at Ussen in the Earldom of Benthem, (where his Father, Brother, and Brother-in-Law, were all Three Bourgermasters) of a good Family, the 22d of July 1618. He was a comely Person, of a good Understanding, good Humour'd, and agreeable in Conversation, a great Admirer of Poesy, Drawing and Musick: As he delighted in Travelling, so he was thereby become Master of divers Languages: In what Station he Lived during his Abode in Brasil, and the East-Indies, will best appear by the Two sollowing Treatises.

Mr. 70HN NIEUHOFFs

REMARKABLE

Voyages and Travels

T O

BRASIL.

N the Year 1640. I entred into the Service of the West-India Company, and on the 24th of Ostober, went in the Quality of Merchant Supercargo, aboard the Ship called the Rocbuck, of 28 Guns and 130 Men, Commanded by Nicholas Selles of Durkendam.

We set Sail out of the Texell the same of day, in Company of several other Vessels bound for France, Spain and the Street of the Street of Spain and the Street of Street

On the 29th. We were overtaken with a most violent Tampest, which obliged us to take in all our great Sails: It continued from Morning to Night, when the fary of the Winds being somewhat allay'd, we found that we had escaped without any considerable damage; but the Sea continued very turbulent all that Night. The next Day following our Seamen catch'd a Wood-Snipe, a Wild Pidgeon, and several other small Birds; which were forc'd into the Sea by the Violence of the Storm.

On the 31. We found our felves under the 45th Degree of Northern Latitude, The next Morning being the first of November, some of our Sea-Men catch'd a Sea-Hog by the means of a Harpeon; it was fo big, that four Men could scarce lift it into the Ship. It's Taste was not very agreeable, but Rankish, which was the reason our Men did not catch any more of them, tho' they Swam in vast Numbers round about our Vessel. By Sun-set the Wind beginning to encrease, we parted from the other Ships, bound for Spain and the Streights, which were not separated from us in the last Storm, steering Sour Course South West. The 2d and 3d. it blew very hard, with Thunder and Another Lightning, so that we were forc'd to take most vioin all our great Sails, and, the Ship being lent Tems very Leaky ever since the last Tempest, to ply the Pump with all our might.

The 4th. We found our selves under the 40 Deg. 30 Min. when about Midnight the Wind encreased with so much violence, that the Air which furrounded us, appearing no otherwise than one continual Fire, occasion'd by the Lightning which scarce ever ceas'd all that Night. During this Calamity we per-ceived certain small Fires or Lights fixt to the Mast: They are called Peaceables Fires by the Sca-Men. These Fires wild-Fire are suppos'd to be certain Sulphureous Vapours, forc'd by the violence of the Winds from the Shoar into the Sea, where being Lightned by the violent agitation of the Air, they burn till their Oily Substance be confumed. Sea-Men look upon them as a good Omen, that the Storm is going to abate; which prov'd true in effect, the fury of the Winds beginning to allay from that time; and we had the good Fortune to discover two Leaks near our Forecastle, which else might have prov'd of dangerous Consequence.

The 5th we pass'd the Barrels, under They pass the 30th Degree; where according to an the Barrels. ancient Custom, every one, of what Quality or Degree soever, that has not passed there before, is obliged to be Baptized, or redeem himself from it. He that is to be Baptized, has a Rope tyed round his Middle, wherewith he is drawn up to the very top of the Bowsprit, and from thence three times successively tumbled into the Water. There were some who look'd very blank upon the

Matter, but others went chearfully about it, and for a Measure of Spanish Wine, fuffered themselves to be re-baptized for the Master and the Merchant. But this Custom is abolished of late Years, by special Orders from the Governors of the Company, to avoid Broils and Quarrels, which used often to arise upon this occation.

The 6th as we were steering our Course S. S. W. with a fresh Gale, we discryed two Vessels, making all the Sail they could towards us, whom we suppodiffer fing to be Turkish Pirates (as indeed they proved afterwards) it was refolved to detend us till the utmost extremity. Accordingly Orders were given to clear every thing upon the Deck, and to furnish the Scamen with Musquets, Hangers, Pikes, and other fuch like Weapons. Every one having taken his Station, we put up the Bloody Flag, and exn Fr. pected their coming under the found of nent. our Trumpets. The Master of the Ship, being all that time very ill of some Wounds he had received formerly, which were now broken up afresh, and the Commissary Francis Zweers, not being in a condition, by reason of his great Age, to remain upon Deck, I was fain to undertake the whole management of the Ship, and encouraged them to fight bravely for their Lives and Liberty, ordering them not to Fire at all, till they were in their full reach, they being much better Manned than we.

About Noon we faw the Turks make up towards us with Orange-colour'd Flags, which however they foon after changed for the Bloody Flags, and the biggeft of them faluted us with tv . Cannon Shot out of his Forecastle, without doing us the least harm, but the second ment time almost shot our Foremast in pieces. two In the mean while we were come so near to one another, that we fent them a good Broadfide into their Ship, which the Turks repay'd us immediately; but it was not long before we observed the biggest of the two had received a Shot betwixt Wind and Water, which made her keep at some farther distance, till she had repaired her damage, which gave me opportunity to encourage our People with Words, and a good proportion of Wine; which they mix'd with some Gunpowder, and I, to please them, fol-· lowed their Example.

By this time they returned both to the Charge, and saluted us so fiercely with their Cannon and Small-shot, that they took away the Roof of our

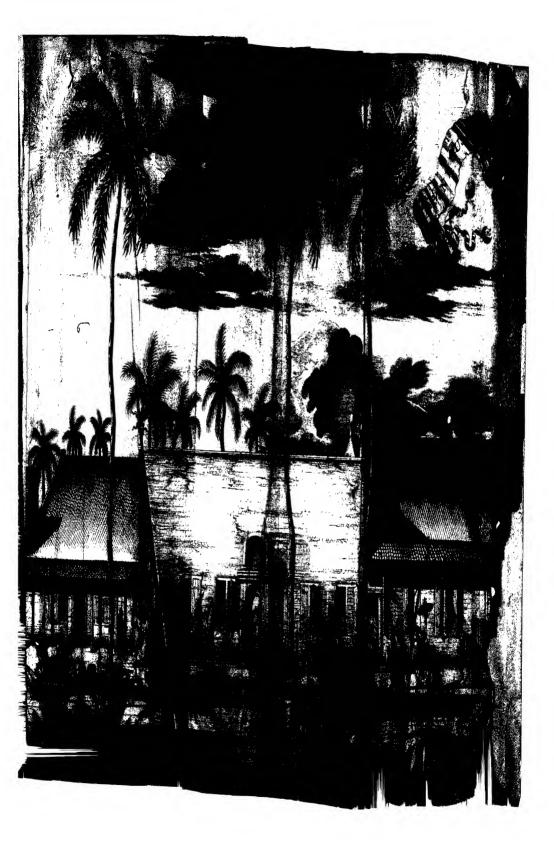

great Cabin, and did us fome dammage in our Rigging. I then changed my Scimetar for a Musquet, and discharged continually upon the Enemy, and I found my felf fore for feveral Weeks after, by the Hurt I received from a Musquet of one that stood hard by me, which being by a Cannonball forced out of his Hands against my Body, I fell down stretch'd all along upon the Deck, without Sense or Motion: but having after some time recovered my felf, I returned to my Post. I then perceived the Captain of the biggest Turkish Ship with a Turbant on his Head, in the Stern, encouraging his Men, which made me order those about me, to aim at him with their Small-shot, which, as I suppofe, fucceeded according to our hopes, it being not long before we lost fight of him. Notwithstanding this, the heat of the Fight encreased on both sides, many Broadfides paffing betwixt us, accompanied with most dreadful Outcries and Lamentations of the Wounded on both fides. However the Turks durft not attempt to Board us; whether it were that they thought us better Mann'd than really we were, or that they feared we would fet Fire to the Ship, which we threatned we would, shewing them a Match ready for that purpose. They answered us in Dutch, That they would not part with us upon those Terms; yet was it not long, before we faw them make away from us, having received many Shots thro' their The Ti Ships; and we with a brisk Gale, made all the Sail we could to be rid of these Figure unwelcome Guefts, fteering a quite different Course, which with the advantage

We gave Thanks to God, for his having delivered us from the danger of Slavery, and crowning our Endeavours with fuccess against an Enemy much stronger than us, the biggest of them carrying 24 Guns, and the other two; whereas we had no more than 18, besides that they were much better Man'd than we. After having taken a view of our Ship, and found is found under Water, we betook our felves to repair the damage we had received during the Fight; but whilst we were busie in this Work, we were on the feventh furprized by fo violent a Storm, that we were forced to take in all our Sails. This put us to a great Nonplus, but by good fortune the Storm blew foon over, when Orders were given to give an Allowance of three Pounds

of the darkness of the Night, brought

us quite out of fight of them by next

kiſh

and a half of Bisket per Week to the Seamen, all our other Bread being become nuffy by that time. The 10th. we found our selves under the 30th Degree, and 30 Minutes, about 20 Leagues off of the Canary Islands; here we discovered the Pike of Tenariff, being two Leagues and a half high, and accounted the highest Mountain in the World, it may be discovered at 60 Leagues distance from the Shoar. Thus we continued our Voyage till the 14th, without any memorable Accident, when we passed the Tropick of Cancer. About Noon we were overtaken by another Storm, which made us take in most of our great Sails, for fear of the worst, but it lasted not

This Tract of the Sea, is called by the Dutch, the Kinns Sea, by the Portuguese, far del Aragaco (or Largaco, or Suargaco) .. e. The Sea of Ducks-meat, because hereabouts, viz. from the 18th to the 30th Degree, or as some will have it, from the 20th to the 22d and 23d Degree of Northern Latitude, it is found in great quantity, and carried along with the Stream: Its Leaves are of a pale green colour, like that of Parrots, fmall, thin and carved at the end. It bears Berries of the same colour, about the bigness of a Pepper-corn, but are quite hollow, without any Seed within, or tafte. It is four times fo closely twisted together, that it stops a Ship in its full course; tho' we had the good Fortune to pass thro' it "Ithout much difficulty; being then about 400 Leagues from the Coast of Africk; where are no Illands, nor Anchorage. It may be pickled with Salt and Pepper, and used like as we do Capers, being accounted a good Remedy against the Gravel. It is generally found without Roots, having only a few thin Sprouts, which, as it is supposed, take Root in the Sandy Grounds of the Sea; 110' others are of opinion, that it is carried by the violence of the Stream from the Hands nto the Sea.

The 18th. one of our Ships Crew died, who was the next Day thrown overpoard, at which time I observed, what ndeed I had heard often before, That he dead Carcaffes always float with their Heads to the East at Sea.

The 22d. we were overtaken by anoher Tempest, called Travado, which with horrible Thunder and Lightning urprizes the Ships so suddenly, that they ave scarce leifure to take in their Sails, d fometimes returns three times in an gur. We catch'd here abundance of Fish, such as Bonytes of 10 Foot long, and They can Korets, and a great Lamprey, which we abund a had enough to do to bring aboard, we only took out the Brains, being local upon as a Sovereign Remedy against the Stone in the Bladder, the Flesh being of an Oily Tafte.

The 24th. we faw great Quantities of fmall Birds about our Vessel, and catch'd one not unlike a Crane, but somewhat finaller, it being a very fair Day.

The 26th, being under the fifth Degree, 47 Minutes, we were so becalmed that we could not perceive the Ship to move, and spent our time in catching of Fish, of which we had such Plenty, that we chose only the best for our eating; among the rest we met with a Fish called the King'.-Fift: For by reason of the impenetrable Depth of the Sea in this place, the Waters are fo clear and transparent in still Weather, that you may see the Fish in vast Numbers swimming near two Feet deep; fo that you need but faften a crooked Nail or any thing else like a Hook to a String, and hanging it in the Sea, you may catch as many Fish as you please. This Calm was followed by a most violent Storm of Rain.

The 30th we found our felves under the fourth Degree, 41 Minutes, where we saw abundance of Flying Fish.

The 3d of Dece, her we came under the first Degree, 30 Minutes, where we met with Millions of Fish, and did catch as many as we thought fit: Some we put in Salt, others we rubbed in the Belly with Pepper and Salt, and hung them up by the Tail in the Sun.

The 4th by Break of Day, being very clear Weather, we faw the Island of St. Paulo, as it is called by the Portu- They guefe, which at a diffance represents a con-Sail, which as you approach neater to iff in it, proves five high Rocks. About Noon we found our felves at 53 Minutes of Northern Latitude, taking our Course five Leagues to the West. Here at several times we catch'd fome Sea-Gulls; those Birds make a shew as if they would bite you, but remain unmoveable in the place, till they are caught or kill'd.

The 5th about 11 a Clock we passed the Equinoctial Line, so that in the Afternoon we found our felves at five Minutes Southern Latitude, where we had but little reason to complain of cold; it being often so calm here, that Ships are forced to fpend a confiderable time in passing this Tract. It is extreamly hot here, and great scarcity of good and fweet Water, the Rain Water being not

wholefome, but caufing the Scurvy, by reason of its being corrupted by the violear heat of the Sun.

About three Years after my Arrival in Bufil, a certain Portuguese Ship was found a-drift under the Equinoctial Line, without any living Creature in it, which according to the Journal, had been fix y pilk whole Weeks under the Line. We had Fqui- a very good Passage, and catch'd abundance of Fish, and among the rest a certain Fish called the Blower, which swallow a confiderable quantity of Water in their Guts, and then at once fpout it forth again. I hey will follow the Ships for a long time.

> The 8th we passed by the Isle, called film Verdinando of Neronba, it being very Screne Weather, we faw vast numbers of Birds, and while Shoals of Flying Fish, which were followed by the Bo-

tytes and Korets.

8.01 The Illand of Ferdinando of Neronha, dana- fituate under the fourth Degree of Southern Latitude, about 50 Leagues from the Coast of Brasil, was about the Year 1630. inhabited by the Dutch, but by reason of the vast numbers of Rats which confumed all the Fruits of the Earth, deferted by them a few Years after; it being otherwise a very fruitful Island, and abounding with Fish, the Inhabitants of Recief, being used to send their Fisherboats thither, which return commonly well freighted with Fish. The Council of Brasil did afterwards send a certain number of Negroes thither, under the Conduct of one Gellis Vepant, to cultivate the Grounds for their Sublistance, who likewise stay'd there for some time. About a Year and a half after the Council of Instice banish'd several Malefactors into hat Island, who being furnish'd with necessary Instruments for cultivating the Ground, were forced to feek for their Suffenance there.

The 11th at Night we found our felves under the seventh Degree, over against the Province of Goyana, about 20 Leagues on this tide of Olinda, with Break of Day we saw the Shoar of Brafil, but kept out at Sea till it was broad Day.

The 12th. it was very foggy, and we kept our Course with fair Wind and Water all along the Coast, and arrived before Noon fafely near the Recief, where we cast our Anchor at several Fathoms depth, after we had spent seven Weeks and one Day in the Voyage.

After we had return'd our Thanks to in Bra- God for his Deliverance from the Dangers of the Sea, and Slavery of the Turks,

I went ashoar the same Night with the Master and Commissary in a Boat, to notific our happy Arrival, and to deliver a Letter to Count Maurice, and the Governour of the Council. I continued ashoar that Night, but return'd aboard the next

The 15th the Pilots conducted our Vessel into the Harbour of the Recief, ... where we found 28 Vessels and two Yachts lying behind the Water Castel.

chts lying behind the Water Caltel.

Towards the latter end of Aug. 1643.

1643. I received Orders from the Council to fail with the Yacht called the Sea- Hog, loaden with Fullers-Earth to the Isle of St. Thomas, to exchange it for Black Sugar, this being the chief Commodity transported from thence. My Voyage proved fortunate enough, not meeting with any finister accident, except with a violent Storm of Thunder, Lightning and Rains, and came the 9th of September at an Anchor there; the Cargo did bear no good Price, yet after a stay of 14 Days, I return'd with a Cargo of Black Sugar to Brasil, where I arriv'd the third of Oftober before the Recief, after a Voyage of near three Months.

The Islc of St. Thomas is of a circular The Island Figure, about 36 Leagues in compass; of St. Thothe high Mountains in the midst of that mas. Island are always covered with Snow, notwithstanding that in the Low Grounds, by reason of its situation under the Line, it is excessive hot. It is very fertile in Black Sugar and Ginger; the Sugar-fields being continually moistned by the mek-d Snow that falls down from the Moun-There were at that time above 60 Sugar-Mills there, but the Air is the most unwholsome in the World, no Foreigner daring to stay as much as one Night a-shoar, without running the hazard of his Life; because by the heat of the Sun-beams such venomous Vapours are drawn from the Earth, as are unfupportable to Strangers. This Fog continues till about ten a Clock in the Morning, when the same is dispersed, and the Air cleared, which made us always stay a Board till after that time. Mist is not observ'd at Sca.

The Air here is very hot and moist throughout the Year, except in the Summer about June, when the South-East and South-West Winds abate much of the heat of the Climate. The Vapours drawn up by the Sun, occasion certain epidemical intermittent Fevers, which carry off the Patient in a few days, with excessive Pains in the Head and violent Torments in the Bowels;

tho' fome attribute it to the immoderate Life of Women, and of the Juice of Coco's. Certain it is, that among 100 Foreigners, ficarce 10 escape with Life, and those feldom live till 50 years of Age; tho I fome of the Inhabitants, as likewise the Negro's (who are all louse here) live to a great Age. Its first Inhabitants were Jews, banish'd out of Portugal; they are of a very odd Complexion. Among the Mountains dwell abundance of Negro's, who are run away from the Portuguefes, and make fometimes Excursions to the very Gates of the City of Pavaofa. It is almost next to a Miracle, that any People should inhabit so unwholsom a Climate; but that the hopes of Lucre makes all Danger casie.

The City of Present, Ulonging to this Island, is lituate upon a Ri nlet; it contains about 800 Houses, id 3 Churches. This City, as well as : whole Island, was 1641. Octob. 16. conquered by the Admiral Cornelins Toi, after a Siege of 40 Days, without any confiderable Lofs; But both he and his Lieutenant, as well as feveral other Commanders and many Seamen were swept away by this Pestilential Air; and of 300 Brasilians not

above 60 escaped with Life.

But, before I proceed to give you an Account of all the Remarkable Passages. that happened in Brafil, fince the Revolt of the Portugueses, and during my stay of Eight Years there; it will not be amiss to infert a short Description of this Countrey.

A Description of Brasil.

America (or the West-Indies) is divided into the Northern and Southern America. Brafil is part of the last.

The Northern America borders to the North upon the Terra Incognita, or rather upon Hudson's Streights; to the South and West upon the South-Sea, and to the East upon the Streights of Fanama, the Bay of Mexico, or (Nieu Spain) and the North

It comprehends the following Provinces; Estotiland and Labrador, Nieu France, Canada, Bakaluos, Nieu England, Virginia, Florida, Nieu Spain, the Provinces of Mexico, Nieu Mexico, Tlaskalla, Guaxaka, Mechoakana, Zakatula, Kolim, Yukatan, Tabasko, Nieu Gallicia, Nieu Biscay, Chiametla, Kuliaka, Cimalon, Nieu Granada, Kalifornia, Anian, Quivira or Nieu Albion, Konibas, Guatemala, Sokonusko, Chiapa,Vera Paz, Honduras, Nikaragua, Kosta-rika, and Veragua. .The Southern America is a Demi-

Island, in form of a Pyramid; the Basis ~~~ of which lies to the North, the Point 164 3 extends to the Streights of Magellan, under the 53d. Degree of Southern Latitude; bordering to the East, upon the Atlantick Ocean, or North Sea, and to the West upon the South Sea, its whole Circuit being of about 4000 Italian of 1000 German Miles. It contains the Provinces of Kastilla d'Or, Tierra sierma, called by the Portugueses, Paria, Kumana, Karibana, Brafil, Chika to the East, to the West Popayan, Peru, Chili, besides several Inland Provinces.

Brasil was first discovered by Pedro Al- Frist Dis varo Kapralis a Portugueje, some time before covery of Americus Vesputius, viz. in the Year 1500. Brail. He gave it the name of Santa Cruz, which was afterwards by the Portugueles changed into that of Brasil, from the Wood of the fame name, which is found there in great quantity, and from thence Transported into all Parts of Europe, for the use of the Dyers.

It is fituate in the midft of the Torrid I's Situa-Zone, extending to the Tropick of Cancer, un.

and the Temperate Zone.

Concerning its Extent from North to Extent. South, there is no fin ill difference arrong the Geographers; but according to the best Computations, its beginning may be fix'd under the fecond Degree and a half of Norther 1 Latitude, more the River Para, and its end under the 24th Degree and a half of Southern Latitude, to the River Capitari, two Leagues above the City of St. I'meert; fo that its whole Extent from North to South, comprehends 25 Degrees or 375 Leagues; Some place Brasil betwixt the River of Maranhaon and Rio de la Plata. The Extent of Brasil from the East (where it borders upon the North Sea) to the West, is not determined hitherto, there being very few who have penetrated fo deep into the Country; tho' its bigness from East to West may be computed to be 742 Leagues; there are however fome who extend its limits farther to the East, and to the West as far as Peru or Guiana, which makes an Addition of 188 Leagues; Some make the Boundaries of Brasil to the North the River of the Amazons; to the South Rio de la Plata; to the East the North Sea, and to the West the Mountains of Peru or Guiana.

Brafil thus limited, is divided by the Its Divi-Portugueses into 14 Districts, called by sion. them Kapitanias, or Captainships; viz. Paria, the first of all towards the North; Maranhaon, Siara, Potigi or Rio Grande, Para ba, Parnambuko, Tamarika or Ita-

narika, Seregippo del Rey, Quirimure or 3. Babia dos todos los Santos, Nhoc-Kombe, Or os Ilhos, Pakata, or Porto Secino, Rio de Jane ro or Nheteroya, St. Vincent and Espi-

fession, it might conveniently be divided into the Dutch and Portuguese Brasil. Each of these Captainships is watered by some considerable River or other, besides several others of less note; Most of these have very rapid Currents in the rainy and overflow the adjacent Months, Country.

The River of St. Francis, the largest ran- and most considerable in those Parts, is the common Boundary of the Captainship of Parnambuko and Bahia de todos los Santos, or the Bay of all Saints. In some places it is fo broad, that a Six-pounder can scarce reach over it, and its Depth is 8, 12, and fometimes 15 Yards; But it admits of no Ships of Burthen, because its Entrance is choak'd up with Sands.

Its first Spring is said to arise out of a certain Lake, which being augmented by many Rivulets out of the Mountains of Peru, but especially by the Rivers of Rio de la Plata and Maranhaon exonerates it felf into the Sea. Some of our People went in a Shallop near 40 Leagues up the River, and found it of a good depth and pretty broad. If we may believe the Portugueles, there are about 50 Leagues from the Sea, certain impassable Cataracts, or Water-falls, called by them Kakocras; Beyond those the River winds to the North, till you come to its Source in the Lake, in which are many pleasant Islands, inhabited by the Barbarians; as is likewise the Shoar round about it. They find good store of Gold Dust in this Lake, but it is none of the best, being carried thither by the many Rivulets, which wash the Gold-bearing Rocks of Peru; here is also most excellent Salt-Petre.

It is observable, That in the Summer and those Winter Months, when it Rains but seldom, this River has more Water than in the rainy Season: The reason alledged for it is, the vast distance from its first Source, whither the Rains that fall from the Mountains must first be conveyed by many Rivulets; All the other Rivers near the Receif, are so empty of · Water during the Summer Season, that they are rendred quite Unnavigable. But the Ridges of Mountains which lie not far from the Sea-shore, exonerate their Waters as well here as in Peru, back-

wards to the West, and dividing themfelves into two Branches; The first runs I 43. to the North, and joins with the large and most rapid Rivers of Maranhaon, and of the Amazons; the other with the Whilst part of Brasil was in our Pos- Rivers of St. Francis de la Plata, and Ja-The Waters of these Rivers being considerably encreased by many Rivulets, they exonerate themselves with fo much violence into the Sea, that the Seamen meet often with fresh Water at a considerable distance at Sea.

> The increase of the Waters in this River, during the dry Season, may likewife be attributed to the vast quantity of Snow among the Mountains, which being melted by the heat of the Sun, occasions the River to transgress its ordinary bounds; which in this point is quite different from other Rivers, which commonly in the Winter time overflow their Banks.

Six of those Captainships were under The Dutch the Iurisdiction of the West-India Com- Brasil. pany, before the Portuguese revolted from the Dutch, which they had conquered with their Swords, viz. The Captainship, (it begins on the Southlide) Seregippe del Rey of Parnambuko, Itamarika, unto which belongs Ganiana, Paraiba, Posigi or Rio Grande and Siara, or Ciara. The Captainship of Maranhaon was 1644, by special Command of the Company, left by the Dutch. This part of Brasil vsed to be called by the Portugueses, the Northern Brafil, as the other remaining in their possession, went by the Name of South

The 6 Dutch Captainships did extend all along the Sea Coast from North to South, in length about 160 or 180 Leagues; for from Rio Grande, to the Northern Border of Seregippe del Rey, is 100 Leagues: the two others, viz. that of Siara to the North, and Seregippe del Rey to the South, make up the rest. Each of those Captainships contain several other lesser Districts, call'd by the Portugueses Fregesias, and by us Fregesien; as for instance, in Seregippe del Rey, are Pojuka, Kameragibi, Porto Calvo, Serinhaim, and several others. Fregasie, comprehends a certain Tract of Ground, composed of divers Villages, Rivers, Hills and Vallies, betwixt each of which is commonly a Tract of barren Hills, of about three or four Leagues in length. Most of the Dutch Captainships, are but indifferently cultivated, because the Portugueses used not to manure the Ground in those parts, beyond three or four, or at farthest, five Leagues distance from the Sea.

The Captainship of Seregippe del Rey, is 1643. likewise called Carigi, from a certain fmall Lake of that Name; it is fituate eregippe in the Southern part of Brafil, extending lel Rey. about 32 Leagues along the Sea Coak bordering on the North side, upon the River of St. Francis, by which it is divided from Parnambuko, as on the South fide it is separated by Rio Real, from Rahia dos todos los Santos. Zeregippe del Rey, has among others, a certain Fregalie, called Porto Calvo, fituated betwixt the 9th and 10th degree of Southern Latitude; being encompass'd on the North Westfide by the Fregasie of Serinhaim, and the small River of Pirasenunga, extending to the South as far as the River Parepuera, by which it is divided from the Fregesie of Alagoasi, containing in all about 12 Leagues in length near the Sea shore, its bounds to the Land side reaching to the unpassable Woods.

In this Fregasic, is a Village call'd by the Portuguesc, Villa de bon successo de Porto Calo, but was formerly called Portocano Dos quatros Rios, it being situate at the confluence of the four Rivers, Maleita, Tapamunde, Commentabunda and Monguaba. It is built upon a rifing Ground, about 4 Leagues from the Sea shore, and by the Dutch strengthned with 2 Forts; the biggest of which was called Bon Succello, being built all of Stone, furrounded with a good Counterscarp, with a large Bason for fresh Water within. The other Fort was called by us, the New Church, being created out of the Ruines of an old Church, called by the Portugueses, Nossa Senhora de Tresentacao. Betwixt both these Forts, a third was ordered to be erected by Count Maurice, upon the Banks of the River, but it lying within the reach of Musket-shot from the Mountains, was not brought to perfection.

The Village has two Streets, the chief of which runs parallel with the River, from one Fort to the other; and is called St. Joseph's street, it contained no more than three Houses of one story high, and about 36 others, covered with Pan-tiles, being only built upon the Ground. The Portugueses have in lieu of their Churches, which were demolish d, when the Fortifications were erected, built themselves another on the other fide of the River, where they fometimes hear Mass. The Village is situate in a most pleasant and wholesome Air, being cooled by the continual Brezes from the

Night time they enjoy the benefit of the Land Wind, which drives the cool Va- 1 64 pours arising from the neighbouring Rivers thither: Formerly there was a certain Town called Seregippe del Rey, fomewhat higher up the River, in a very barren place, of a confiderable bigness, and well built, with three goodly Churches, and a Monastery belonging to the Francifcans, but without any Fortifications. Above this Town you fee a Chappel dedicated to St. Christopher, whither the

Roman Catholicks come on Pilgrimage.

This Captainship was first of all reduced under the Obedience of the Portuguese or Spaniards, by Christovan de Barros; who for this his good fervice, had all the Lands betwixt the small Lake of Segerippe and St. Francisco, granted to him, with full power to fettle Colonies there within a limited time. This drew many of the Inhabitants of the Bay of all Saints thither; who within a few Years after laid the Foundations of this Town, by erecting 4 Sugar-Mills, and building about 100 Houses, with 400 Stables for their Cattle. But this Town, with all the circumjacent Houses, was 1637, the 24th of December, laid desolate by our People, the Inhabitants retiring to the Bay of all Saints. For the Spanish Gencral Benjola being, 1637, posted with a Body of 2000 Men near that place, did with ravaging and burning, confiderable damage to our Colonies, which obliged Count Maurice to dislodge him from thence; but being then fick of an Ague, he committed this Expedition to the charge of Colonel Schoppe; for which purpose having gathered a Body of 2300 Men, besides four hundred Brasilians, and 250 Seamen out of the adjacent Places, near the River of St. Francis, Alagoas, the Cape of St. Austin, out of the Receif and Moribeka, and given him for his Affistant Mr. John van Gieffelen, a Member of the Great Council, he commanded the Dutch Admiral Lichthart, to cruife with his Fleet near the Bay of all Saints, thereby to draw the Enemy out of his advantageous Post to the Sea-shoar. The Spanish General had no sooner notice of our passing the River, but fearing to be enclosed betwixtus and the Fleet, marched with his Body to Torre Garcie de Avila, a place about 14 Leagues to the North of the City of St Salvador.

The Dutch General Schoppe, hearing of his removal immediately attack'd the place which he laid defolate and returned

Here he intrench'd himself, with an intention to annoy the Enemy, by cutring off his Provisions, and driving away his Cattel; which fucceeded fo well, that we kill'd above 3000 of their Horn Beafts, pendes what was carried away off of the Receif. on the other fide of the River; fo that what was left by the Soldiers, was by the Inhabitants carried to the Bay of all Saints; from whence it is evident, what vafe Numbers of Cattel this Countrey did produce at that time.

The Great Council took once a refolution to re-people that part of the Countrey, and agreed for this purpose with Nanno Olferdi, Councellor of Justice in the Receif, who found means to fettle feveral Families there: But the Council of XIX. disapproving the matter, it was

In the Year 1641, Count Maurice reduced th's place under the Obedience of the West-India Company, crected a Fort there, and fur ounded the Town Seregippe del I ey with a Ditch. It lies upon a small River, betwixt St. Francisco and Real, which however at Spring-Tide has 14 Foot Water or thereabouts. Within the jurisdiction of this Captainship, is the Mountain of Tabayna; from whence feveral forts of valuable Oar was prefented to the Council of XIX; but upon Proof, was found not worth farther looking after.

The Captainship of Parnambuko.

The Captain ship of Parnambuko, is one of the chiefest and biggest of the Dutch Brasil. It extends above 60 Leagues along the Coast, betwixt the River of St. Francis, and the Captainship of Tamarika. Parnambuko properly denotes the Entrance of the Harbour, which by reafon of the many Rocks and Shelves hidden under Water, was called by the Por-11 Towns tugnese, Inferno Bokko, and broken Parnamand Villa- buko, or the Mouth of Hell. It is subdiviges of Par- ded into 11 lesser Districts, inhabited by nambuko. the Portugueses, viz. the City of Olinda, Garazu, Receif, Moribeka, St. Anthony, Poyuka, Serinhaim, Gonfalvi d'Una, Porto Calvo, the Northern Alagoa, and the Southern Alagoa. Among which Olinda and Garazu were the chiefest.

> The Town, or rather the Village of Garazu, lies at some distance from the Shoar, over against the Island of Tamarika, upon a River of the Tame Name, about & Leagues from Olinda. It was formerly Inhabited by Portuguese Handierafts Men, but fince our taking of Olinda,

feverel rich Families fettled there; we ~ became Masters of the Place 1633, in 1643

Moribeka lies deeper into the Coun- Moribek Arey, more to the South, about 5 Leagues

St. Anthony is about 7 or 8 Leagues di- St. Anstant from the Receif to the South, near thony. the Cape of St. Austin.

The City of St. Michael de Poyuka, lies Poyuka, about 10 Leagues to the South of the Receif upon a River of the same Name, which difembogues in the Sea, on the South side of the Cape of St. Austin. It was formerly a very Populous Place, and had 13 Sugar-Mills.

The Village Serinhaim, much about the Serinhai fame distance thence with the former, is a very pleafant place, has 12 Sugar-Mills, each of which produces 6 or 7000 Aroba's, an Aroba making about 27 or 28 Pound weight.

The Village of Gonfalv: dona, lics 20 Gonfalv Leagues from the Recent, it has s Su-d'una. gar-Mills.

The Village called Porto Calvo, is 25 Porto Leagues distant from the Recief; it has Calvo. 7 or 8 Sugar-Mills. Here is the Caftle of Pu. ocano, which was not Conquered by us, till under the Government of Count

The Towns of the Northern and Southern Alagoa's, are 40 Leagues from the

Within the Diffrict of Parnambuko, are two Woods, called by the Portugueses the greater and leffer Pulmairas, or Palmtree Woods.

The leffer Falmair as, which is Inhabi-Tl ted by 6000 Negroes, lies about 20 Pe Leagues above the Alagoa's, being enclo-ra sed with Woods near the small Lake of Guagobubi, which exonerates it felf into the great Lake of Parayba, 6 Leagues from thence to the North, about 4 Leagues from the Lake Meridai, to the South of the Northern Alagoa, being near that point of Land commonly called Jaragoa. The Village consists of 3 Streets, each near half a League in length. Their Huts are made of Straw twifted together, one near another, their Plantations being behind. They retain fomething of the Religious Worship of the Portugueses, but have their peculiar Priests and Judges. Their Business is to rob the Portugueses of their Slaves, who. remain in Slavery among them, till they have redeemed themselves by stealing another: But such Slaves as run over them, are as free as the rest. Their Food is Dates, Beans, Meal, Barley, Sug

Garazu.

canes, Tame Fowl, (of which they have 643. great Plenty) and Fish, which the Lake furnishes them withal. They have twice a Year a Harvest of Barley, which being over, they make merry for a whole Week together. Before Sowing time, they light great Fires for 14 Days, which may be feen at a great distance. The' shortest way from the Receif to this Pal-

ma ras, is along the Lake of the Northern

Alagoa.

The greater Palmairas is betwixt 20 and 30 Leagues diffance behind the Village of St. Amar, near the Mountain of Behe, being furrounded with a double Enclosure. About 8000 Negroes are faid to Inhabit the Valleys near the Mountains, belides many others, who dwell in leffer Numbers of 50 or 100, in other places. Their Houses lie stragling, they Sow and Reap among the Woods, and have certain Caves whither they retreat in case of necessity. They dress their Victuals in the Day time, and at Night tell over their whole Number, to see whether any be wanting; if not, they conclude the Evening with Dancing and beating the Drum, which may be heard at a great distance. Then they go to sleep till 9 or 10 a Clock the next Day. During the dry Scason, they detach a certain Number among them, to steal Slaves from the Partugueles. The shorteff cut to their Habitations, is from the Alagoas through St. Amar, and so cross the Plains of Ninunalm and Kororipe, towards the backfide of the Mountain of Warrakaha, till you come to the Lake Paraiba; along which you must pass till you reach the Mountain Eche, from whence you go directly into the Valleys. Under the Government of Count Mainice, the Negroes of this Pulmairas did confiderable mifchief, especially to the Country People about the Alogous; to repress which, he fent 300 Firelocks, 100 Minuelukes, and 700 Di afilians.

The Receif, Maurice's Town, and Authony Vacz.

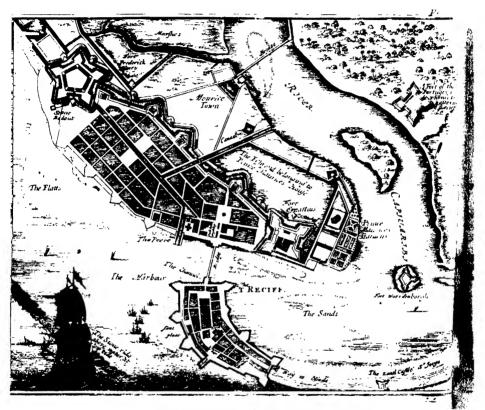

The Receif is, by reason of its commodious and advantageous fituation the strongest place of all Brasil; besides that, it is frengthned and defended by feveral adjacent Forts: But to give you the most commodious View both of the Receif, and the Situation of Maurice's Town, it ne is to be observed, That the whole Coast of Brafil, is from one end to the other, furrounded with a long, thick, and flat widge of Rocks, which in some places is 20, and in others 30 Paces broad: However there are certain Passages in this 164 Ridge, through which the Ships approach the Shoar, and some few Places, where this Ridge is not found at all. Thus a League on this fide Rio dolce, 2 Leagues on the Northfide of the City of Olinda, there is nothing of this Ridge to be found; but begins again near Poundrelle or Soxania de, and extends to the Isle of Itamarika. Betwixt the Ridge and the Continent, you may passin Boats at High-water; for at Low-Tide most of those Rocks appear above Water; tho' the Tide never fails to cover the fame. The Rock over against the Receif of Pernambuko, is between 20 and 30 Paces broad, being not only at Spring-Tides, but at all other Tides overflown by the Sea; it is thereabouts very flat, without any Prominencies, and extends for a League from South to North. North Point is an open Passage for Ships' to approach the Shoar, lying 500 Paces further to the North, than the Receif it felf. It is but narrow, and at Spring-Tide not above 22 Foot deep.

Betwixt this Rocky Ridge and the Continent, there is a Sandy Ridge, or fmall Island extending to the South from Olinda, a League in length and about This is by our Peo-200 Paces broad. ple commonly called, The Sandy Receif, to distinguish it from, The Stony Receif.

On the Southern Point of this little The San Island, a League off Olinda, the Portu-dy Reseif gueles had built a Village, called Povoacano, which fignifies Peopling, or elfe Reciffo; it was very Populous for a confiderable time, till the building of Maurice's Town, in the Island of Anthony Vaez. For after Olinda was for saken by its Inhabitants, and destroyed by us, many of them, but especially the Merchants, fetled in this Reciffo, or the Village of I'vvoacano, where they erected magnificent Structures. At our first Arrival, we found no more than 200 Houses there, which were afterwards increased to above 2000, some of which are very goodly Edifices. We furrounded it with Pallisadoes on the side of the River Biberibi, which at Low-water is fordable; and for its better fecurity fortified it with 3 Bulwarks, one towards Olinda, the other to the Harbour, and the third towards the Salt River; upon each of which was raifed a good Battery with 3 great Cannon. This Receif is lituate under the 8th degree, 20 Minutes Southern Latitude.

Some derive the word Reciffo from the 1. Latin, recipere and receptus to receive, which after was turned into Reciffo, ben- cause the Ships used to be received betwixt the Stony and Sandy Receifs, to load and unload their Goods. Before the here our Factories, and all Business both

of Peace and War, were transacted in this place. In the time of the Portugue- 1 6 4 3. fes, all the Ships coming out of the Sea, did unload on the Village of Povoacano, or the Receif, and the Goods were from thence in Boats and Lighters conveyed building of Maurice's Town, we kept Jup the River Biberibi, to the Suburbs of Olinda.

Before the building of Maurice's Town, most of the Traffick was in the Receif, where all the great Merchants had their Habitations, and from hence the Sugar was transported into Holland. To prevent the Frauds in the Customs, it was furrounded with Pallisadoes, and a goodly Hospital was erected for the conveniency of the Sick and Wounded, and the Education of Orphans, under the tuition of 4 Governours, and as many Governesses.

Upon the uttermost Point of the Stony Receif, on the left fide as you enter the Harbour out of the Sea, is a strong and large Castle, built of Free-stone, furrounded with a very high Wall, upon which are mounted many heavy Cannon, with fuitable Artillery and other Provofions. When we took the place, we found 9 Brass, and 22 Iron pieces of Cannon within it; so that it seems both by Art and Nature impregnable; there being no coming near it on Foot, at High-water.

About 5 Leagues higher, upon a branch of the great River, lies a small Town of little consequence, called by our People, The New City; and upon another branch of the same River, opposite to the former, a Village called Acapuepe.

The Island of Anthony Vaez, and Maurice's Town.

To the South of the Receif, opposite the I to it, lies the lile of Anthony Vaez, of Ant called Vacy-

ed by our People, from its ancient 3. Possessor. It is about half a League in V Circuit, being divided from the Receif,

by the Salt River, or Biberibi.

On the East-side of this Island, Count Maurice laid the foundation of a City, which after his own Name, he call'd ce's Maurice's Town, or City; the Ruines of the Churches and Monasteries of the City of Olinda, furnished the Materials for the building of it, which were from thence carried to the Receif, and fo tranfoorted to this place.

On the West side it is environ'd with a Morass; and on the East side washed by the Sea, which passes the Stony Ridge. Besides which it is on the Land side strengthned with an Earthen Wall, four

Bulwarks, and a large Moat.

On that side where the Fort of Erneflus was, the Town lay open, and the Houses took up a larger compass than those in the Receif; but after the Revolt of the Portuguese, most those Houses were pull'd down, and the place drawn into a more narrow Compass, to render it more defenfible: Yet was the place well stock'd with Inhabitants, as well Merchants as Handicrafts Men.

Maurice's Town was on each fide guarded by a Fort. On the South fide rt by the Fort called Frederick Henry, or the Quinquangular Fort, from its 5 Bulwarks. This Fort was besides this, surrounded by a large Ditch and Pallisadoes, and strengthned by two Hornworks, fo that it commanded the whole Plain, which at Spring-Tides us'd to be overflown by the Sea:

The second-Fort Ernestus, thus called after John Ernest, the Brother of Count Maurice, was foursquare, with 4 Bulwarks, with a very large Ditch; it commanded the River, the Plains, and Manrice's Town. Near this last Fort was the Garden of Count Maurice, stor'd with all forts of Trees, brought thither from

Europe, and both the Indies.

Upon the Northpoint of the Stony Receif, just over against the Sandy Receif, lies the beforenamed Fort, built all of Stone, being about 100 Paces in Circumference, provided with a good Garrison and 20 pieces of great Cannon, tho' in flormy Weather the Water flies over it on all sides. It commands the Harbour, the Land Fort, the Bruin Fort, and the Re-

As the Isle of Anthony Vaez was joyned to the Continent by a Bridge, so it was thought necessary, to joyn the Receif with another Bridge to the faid Island;

for the conveniency of Carriage, the o Sugar Chests being before that time never 1 6 4 3 to be transported to the Receif, except at Low-Water, unless the Owners would run the hazard of expoling them to the danger of the Sea in small Boats. Accordingly the Great Council, with confent of the Governour, Count Maurice, agreed with a certain Architect for the building of a Bridge with Stone Arches, for the Sum of 250000 Florins. But after the Architect had confumed a prodigious quantity of Stone, and raised the Structure near to the height of the Banks of the River, finding that at Low-Water there was still 11 Foot Water, and defpairing to be able to accomplish it, left it unfinished. But the Council being unwilling to defift, renewed the Work, which had already cost 100000 Florins; and by means of many Trees of 40 and so Foot long, stop d the Current till the Bridge was brought to perfection, which was done in 2 Months time, and a certain Toll imposed upon all Passengers, viz. For an Inhabitant 2 Pence, for a Soldier and Negroe 1 Penny, for a Horse 4 Pence, and a Waggon drawn by Oxen, 7 Pence.

The space betwixt the Saudy, and Stony Receif, is properly the Harbour, The 1 which at High-Water has about 13 or bour. 14 Footdepth, where the Ships ride very fafe, being defended from the Sea by the Stony Receif. The Passage betwirt the Sandy Receif and the Continent, is called the Salt River, to designish it from the River Kapivaribi anch carries sweet Water.

The River Kapivaribi has derived its Ther Name from a certain king River or Kapiv Sea Hogs, which used to be trund there, bi and were by the Brafilians called Kapiva-This River arises some Leagues to the West, passing by the Matta, or the Wood of Brasil, Masyasti, St. Lorenzo and Real, where joyning with the River Affogados, near another River of the same Name, disembogues in the Sea, near the Receif. The River Kapivaribi divides it felf into 2 branches; one turns to the South, and passes by the Fort William, and is called Affogados; the other running to the North, retains its former Name, continuing its Course betwixt the Continent and Maurice's Town, or the Isle of Anthony Vacz, (into which you may pass over it by a Bridge) and so to Waerdenbourgh, where it joyns with the River Biberibi, or Sale River, both which are afterwards mix'd with the Sea. The two branches of this River, furround the

River

? River Biberile on the West side, and to 3. the East the life of Arthony l'acz. Upon " that branch of the River, called Affogader, are abundance of Sugar Mills, from whence the Tortigiefes used to convey their Sugar-Chests, either in Boats, by the way of the River, or in Carts to Baretta, and from thence in Flatbottom'd Boats to the Receif, and to O-Inda.

A League to the South of Marrice's Town upon the branch, called Affogados, is a fourfquare Fort of the same Name, otherwise called Fort William; from whence you may pass along a Dike to the ort Fort Frederick Henry, or Maurice's Town. " It was a Noble Structure, surrounded with high and strong Walls, a large Ditch and Palliladoes, with 6 Brass Cannon: It defended the Avenues to the Plains.

About half a League from thence, and - at the Table distance from the Continent. lies another Fort on the Sea shoar, called both by Sea and Land to the Cape of St. Austin, and to the Receif.

Upon that part of the Island which lies betwixt the Rivers Kapivaribi, and Biberibi, and betwixt the Forts of Erneflus and the Triangular Fort of Waerdenburgh, were the before mentioned Garhe Gar-dens of Count Maurice, stor'd with all kinds of Trees, Fruits, Flowers and surce. Greens, which either Europe, Africk, or both the Indies could afford. There were near 700 Cocoa-Trees of all fizes, tome of which were 30, 40, and 50 Foot high; which being transplanted thither, our of the circumjacent Countries, bore abundance of Fruit the very first Year: Above 50 Limon-Trees, and 18 Citron-Trees, So Pomgranate-Trees, and 66 Fig-Trees, were also to be seen in these Gardens.

In the midst of it stood the Seat it felf, called Fryingh, a Noble Structure indeed, which, as is reported, cost 600000 Florins: It had a most admirable Profred, both to the Sea and Land fide, and its two Towers were of fuch a height, that they might be feen 6 or 7 Leagues off at Sea and ferved the Seamen for a Beacen. In the front of the House was a Enttery of Marble, rifing by degrees from the River fide, upon which were mounted to pieces of Cannon, for the defence of the River. About 2 or 3 Rods from the River, were several large Basons in the Garden, containing very sweet Water, notwithstanding the River all round about afforded nothing but Salt Water;

besides this, there were divers Fish-Ponds, stock'd with all forts of Fish.

At the very Foot of the Bridge which 🗠 is built over the River Kapivaribi, from His Sum-Maurice's Town to the Continent, Count mer Seat. Maurice had built a very pleafant Summer Scat, called by the Portugueses, Baavilta, i. c. A fair Prospect. It was not only furrounded with very pleafant Gardens and Fish-Ponds, but served likewise as a Fort for the defence of the Isle of Anthony Vacz, and Maurice's Town.

Upon the Sandy Receif, opposite to the Sea, or Water Fort, was a ftrong Fort built of Stone, called by the Parsuguefes, St. Tori, our People used to call it the The Land Land Fort, to distinguish it from the be- Fort. forementioned Water Fort : it defends the Entrance of the Harbour with 13 Iron pieces of Cannon.

About a Musket Shot thence to the North, lies upon the same Sandy Receif, a small Fort with 4 Bastions, called The fort the Fort of Bruin; and about a Musket- Bruis. shot further to the North, a Redoubt, called Madam de Bruin Both these Forts were built by the Dutch.

Near the Continent, not far from the Salt-Pits, betwixt the Sandy Receif, and the Isle of Anthony Vaez, was a Triangular Fort, called Waerdenburgh. It was at first The Fi a foursquare, but afterwards turned by of Wae the Dutch, into a Triangular Fort, the denbur, fourth Bulwark being not defensible, by reason of the Ground: Those three Bulworks were afterwards changed into as many Redoubts, and provided with fome Brass Guns: At High-Tide it is surrounded on all fides with Water.

The City of Olinda.

At a small distance from the Receif, or Maurice's Town, to the North, is the ruinated City of Olinda, once a famous olinda. place among the Portugueses; the whole Product of Brafil, being from thence transported by Sea into Europe. The best part of the City was built upon divers Hills; towards the Sea, on the South fide, thefe Hills were pretty plain, extending to the Sea-shoar, which has a very white Sand all along that Coast: Towards the Land side, or the North, finose Hills are more steep and craggy, full of Thorn-bushes, intermix'd with a few Orange-Trees. These Hills are an additional strength to the place, which besides this, was guarded by several Baflions to the Land side, tho' by reason of the great variety of Hills contained in its Circuit, it was a difficult Task to

Tir Ta'-1 100 11

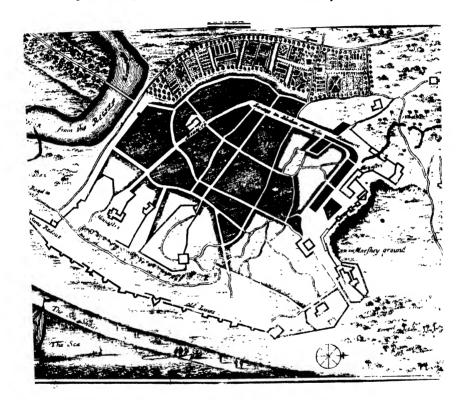

Count

'.'u

no bring the Fortifications into a regular from the higher part of the Town, both to the South and North, or to the Sea and Land side, by reason of the great quantity of circumjacent Trees, which continue Green all the Year round You may also from thence see the lsle of Anthony Veez, and Maurice's Town. The point of Land near Olinda, is called Tipo by the Inhabitants.

Upon the highest Hill within the called St. Salvador, the other St. Perco

place, flood formerly a Convent belonging to the Jesuits, being a magnificent 164 Structure, founded by Sebastian King of Portugal, who endowed it with confiderable Revenues. It had a very fair Profpect, and might be feen at a good distance at Sea. Not far from thence was another Monastery belonging to the Capucines; and near the Sca-shoar, another of the Dominican Fryars: Besides which, it had two Churches; the one

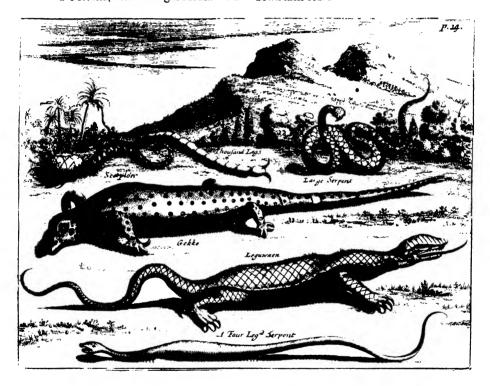

re contained above 2000 Inhabitants, esides the Clergymen and Slaves, among hom were 200, that were accounted ery rich. On the foot of the Mountain pon which the City of Olinda was built, strong Redoubt was erected, which in ie Year 1645, was by a Serjeant beayed to the Portugueses, for a Sum of oney. About a League from the Ci-, near the Waterside, were the Sub-bs, well stor'd with Inhabitants and ickhouses; but destitute of fresh War, which they were fain to fetch from yond the River.

The whole District of Pernambuko abounds in divers kinds of Fruits and The Vallies afford good Pasturage, and the lower Grounds near the Rivers, great store of Sugar-Reeds, which are much cultivated hereabouts. The Mountains produce richer Minerals here, than in the other Captainships. During the Rainy Season, the Heat is more tolerable here in the Day time, than the cold Nights.

643. The Chameleon, or Indian Salamander,

This Creature, which is not only found in Brasil, but also in the lsle of Jaca, belonging to the East-Indies, and which, by our People is called Gekke, from its constant cry (like, among us, that of the Cucket) is properly an Indian Salamaneer. It is about a foot long, its Sain of a pale or Sea green colour, with red Spots. The Head is not unlike that of a Tortolic, with a streight Month. The

Eyes are very large, flarting out Head, with long and small Eye-I. The Tail is diffinguished by white Rings: Its Teeth are so she to make an impression even upon Each of its four Legs had five c. Claws armed on the end with Nail Gate is very flow, but whereeve stens, it is not easily removed. It commonly upon rotten Trees, or the Ruines of Old Houses and Chi it oftentimes settles near the Be which makes semetimes the Moo down their Hurs.

Its constant cry is *Gekko*, but before it begins, it makes a kind of hissing noise. The Sting of this Greature is so venomous, that the Wound proves Mortal, unless it be immediately burnt with a red hot Iron, or cut off. The Blood is of a palish colour, resembling Poison it felf.

The Javanejes use to dip their Arrows in the Blood of this Creature; and those who deal in Poisons among them (an Art much esteemed in the Island of Java, by

both Sexes) hang it up with a ftring tied to the Tail on the Ceiling, by which means it being exasperated to the highest pitch, sends forth a Yellow Liquor out of its Mouth, which they gather in small Pots set underneath, and afterwards coagulate into a body in the Sun. This they continue for several Months together, by giving daily Food to the Creature. It is The unquestionably the strongest Poison in gest the World; its Urine being of so corrofor sive a quality, that it not only raises Blichivo

sters.

and Iravels to BRASII.

Serpents

m Erafil.

fters, whereever it touches the Skin, but 1643. turns the Flesh black, and causes a Gan-∨ grene. The Inhabitants of the East-Indies fay, That the best Remedy against this Poison is the Curcumic Root. Such a Gekko was got within the Body of the Wall of the Church in the Rece f, which obliged us to have a great hole made in the faid Wall, to disludge it from thence.

> There are also several sorts of Scrpents in Brafil, fuch as Rattle Serpents, Doubleheaded Serpents, and fuch like; of which the Brafilians enumerate XXIII. viz. Boigvacu, or Laboya, A abo, Broby, Boiciminga, Poitrapo, Boykapekanga, Bapoba, Kukuruku, Kaninana, Kurukakutinga, Grimpaijaguara, Ibiara, Jakapekoaja, Ibiboboca, Jararaka, Manima, Vona, Tarciboya, Kakaboya, Amorepinima.

> We will give you an account of those only that dwell in the Houses and Woods of Pernambuko, passing by the rest, as not fo well known among us; and it is obfervable, that the' some of the American or Brasilian Serpents exceed those of Europe in bigness, they are nevertheless not

> so Poisonous. The Serpent of Boicininga, or Boicinininga, likewise called Boiquira, by the Brasilians, is by the Portugueses called Kaskaveda and Tangedor, i.e. A Rattle, and by our People a Rattle Serpent, because it makes a noise with its Tail, not unlike a Rattle: This Serpent is found both upon the Highway and in desolate Places; it noves with such swiftness, as if it had Nings, and is extreamly venomous. In he midst it is about the thickness of a Man's Arm hear the Elbow, but grows hinner by degrees, towards the Head nd Tail. The Belly and Head is flatish, the last being of the length and readth of a Finger and a half, with very nall Eyes. It has 4 peculiar Teeth lon-er than all the rest, white and sharp ke a Thorn, which it hides fometimes ithin the Gums. The Skin is covered ith thick Scales, those upon the Back ing fomewhat higher than the reft, id of a pale yellowish colour, with ack Edges. The fides of the Body are cwife yellowish with black Scales on ch side; but those upon the Belly are rger, foursquare and of a yellow cour. It is 3, 4, and fometimes 5 foot ng has a round Tongue split in the iddle, with long and fharp Teeth. he Tail is composed of several loose d bony Joynts, which make fuch a ife, that it may be heard at a distance. rather at the end of the Tail, is a

long piece confifting of feveral Joynts, ioyned within one another in a most pe- 1 6 a culiar manner, not unlike a Chain. Every Year there is an addition of one of these joynts, so that you may know the exact Age of the Scrpent by their Number, Nature feeming in this Point to .have favoured Mankind, as a Warning to avoid this Poisonous Creature by this noise. One of these loynts put in the Fundament, causes immediate Death; but the Sting of this Creature proceeds much flower in its Operation; for in the beginning a Bloody Matter issues from the Wound, afterwards the Flesh turns blue, and the Ulcer corrodes the adjacent Parts by degrees.

The most soveraign Remedy used by the Brasilians against the Poison of this and other Serpents, is the Head of the fame Serpent that has given the Wound; which they bruise in a Mortar, and in form of a Plaster, apply it to me offected part. They mix it commonly with Fasting Spittle, wherewith they also frequently moisten the Would. If they find the Poison begins to feise the nobler Parts, they use the Tiproka as a Cordial, and afterwards give strong Sudorificks. They also lay open the Wound, and apply Cupping-glasses, to draw the Venom from thence. Or elfe they burn it with

a red hot Iron.

The Serpent Kukuruku, is of an Ashe Kukuruk colour, with yellow Spots within, and black Speckles without, and has just such Scales as the Rattle Serpent.

The Serpent Guaku, or Liboya, is questionless the biggest of all Serpents; fome being 18, 24, nay 30 foot long, and of the thickness of a Man in the middle. The Portugueses call it Kobre dehado, or the Roebuck Serpent, because it The Roewill fwallow a whole Roebuck or any buck Serother Dear it meets with; and this is pent. performed by fucking it through the Throat, which is pretty narrow, but the Belly vaftly big. After they have swallowed such a Deer, they fall asleep, and so are catch'd. Such a one I saw near Paraiba, which was 30 foot long, and as big as a Barrel. Some Negroes faw it accidentally swallow a Roebuck, whereupon 13 Musqueteers were sent out, who shot it, and cut the Roebuck out of its Belly. It was of a greyish colour, though others are inclining more to the brown. It is not fo venomous as the other Serpents. The Negroes and Portugueses, may even some of the Dutch eat the Flesh; neither are its Stings look'd

10,1,75

3326

upon as pery infectious, the Wound heal-

Mr. John Nieuhoff's V oyages

ing often up without any application of Remedies; fo that it ought not to be reckoned among the number of Poisonous Serpents, no more than the Kanna, Mavina and Vocia. This Serpent being a very devouring Creature, greedy of Prey, icaps from amongst the Hedges and Woods, and standing upright upon its Tail, wrestles both with Men and wild Beasts; sometimes it leaps from the Trees upon the Traveller, whom it fastens upon, and beats the Breath out of his Body with its Tail.

The Serpent Jararaka is short, seldom exceeding the length of an Arm to the Elbow. It has certain protuberant Veins on the Head, like the Adder, and makes The Skin is covered much fuch a noise. with red and black spots, the rest being The Stings of this of an Earth colour. Creature are as dangerous, and attended with the same Symptoms, as those of other Repents. Its Body, the Head, Tail, addSkin eing before taken away together with the intrails, boil'd in the Water of the Root of Jurepeba, with Salt, Dill, and fuch like, is look'd upon as a very good Remedy.

The Serpent Boitrapo, call'd by the Portugueses, Cobre de Cipo, is about 7 foot in length, of the thickness of a Man's Arm, feeds upon Frogs, and is of an Olive colour, it is very venomous, and when it stings occasions the same Symptoms, as the Serpent Kinkuruku; nay, the Wound is accounted past curing, unless

you apply the hot Iron.

The Adder Ibiara, by the Portugueses called Cobra Vega, or Cobra de dus Cabecas, i. c. The Doubleheaded Seppen, because it appears to have two Heads, which however is not so. They are found in great numbers lurking in holes under Ground. They feed upon Pismires, are of the thickness of the length of a Finger, and a foot and a half long, of a Silver colour; nothing is more poisonous than the Stings of these Creatures, the not beyond all hopes of Cure, provided the beforementioned Remedies be applied in time.

The Serpent by the Brafilians called a Ibiboboka, the Portuguefe call Cobra de Corais. It is very beautiful, of a Snow white colour, speckled with black and red spots, and about two foot long: Its Sting is Mortal, but kills by degrees.

The Serpent Biobi, called by the Portuguefes, Cabro Verde, or the Green Serpent, about three quarters of a yard long, and the thickness of a Thumb; of a shining green colour. It lives among Houses and hurts no Body unless when provoked.

Its Sting is however full of Poison, and fearce curable. A certain Soldier being: 643 wounded by one of these Creatures, which lay hidden in a Hedge, in his Thigh, did for want of proper Remedies, die in few Hours after: His Body swell'd, and turn'd pale blue.

The Serpent Kaninana is yellow on Kaninana the Belly and green on the Back, its length is about 8 Hands, and is look'd upon as the least venomous of all. It feeds upon Eggs and Birds, and the Negrees and Brasilians eat the Body, after they have cut off the Head and Tail.

The Serpent call'd by the Brasilians Ibirakoa, is of several colours, with Ibirakoa. white, black, and red spots. The Sting of this Creature is very Poisonous, attended with the same Symptoms as that of Kukuruku; for it kills infallibly, unless proper Remedies be applied immediately. If the Poison has not seifed the Heart, they boil the Flesh of the same Serpent with certain Roots, and give it the Patient in Wine.

The Serpent Tarciboya, and Kakaboya, are amphibious Creatures. The first is of a blackish colour, very large, and Stings when provoked, but is not very difficult to be cured. The Kakaboya is of a yellowish colour, 6 Hands long, and feeds upon tame Fowl.

Of the Schembi or the Leguan.

Not only in the Captainship of Pernambuko, but also all over Brasil and America; as likewise in the Isle of Java in the Last-Indies, are a certain kind of Land Crocodile, call'd by the Brasitians, Senembi, by our People Leguan & some are larger than others, some being 3, others 4 foot long, but feldom exceed 5: They are all over covered with Scales, which are fomewhat bigger on the Back, Legs, and beginning of the Tail, than on the other parts: The Neck is about a Finger and a half long, the Eyes are black and bright, and the Nostrils in the hindermost part of the Head. Each Jawbone is full of small, black, and short Teeth; the Tongue is very thick: All along the Back from the Neck to the Tail, are fmall sharp Teeth of a greenish colour; othey are biggeft on the Neck, and grow smaller and smaller towards the Tail: Under the Throat are likewise many of the same kind. The whole Skin is of a delicate green, with black and white. fpots. It has 4 Legs and Feet, with 5 Claws armed with very sharp Nails: It can live 2 or 3 Months without Food-

Its Flesh is as white as that of a Rabbit, 6 4 3. and of as good a taste as that of Fowls. or Rabbets, if it be boil'd or well fry'd with Butter. In the Head of this Creature are certain Stones, which are an infallible Remedy to break and drive the Gravel out of the Kidneys, given to the quantity of 2 Drams at a time, or carried on some part of the Body.

> There are in Brafil Lizards both great and finall; fome are green, others greyish, and some 4 foot long, with iparkling Eyes. The Negroes feed upon some of them, whom they kill with blunt Arrows; they broil them, after they have skin'd them, and eat them without the least harm. Among all those that are found among the Thorns and Bryars, or the Ruines of Houses, there is but one kind Venomous, which is called Bibora. They are like the others, but leffer, not exceeding the bigness of a Thumb; they are of an Ash-colour, inclining to White; the Body and Limbs thick and swell'd with the Poison, but the Tail short and broad. The Wounds given by them are full of a thin stinking Matter, with Blue Swellings, with a Pain near the Heart, and in the Bow-

There are also certain Creatures, called Thousand Legs, as likewise Hundred Legs, by the Natives called Ambua, who bend as they crawl along, and are accounted very Poisonous. The first are commonly found in the Houses, and the Tast among the Woods, where they not only spot the Fruits of the Earth, but also plagu Men and Beasts.

Scorpions, by the Brasilians call'd Jaaciaura, are found here in great Numbers, being in shape like the European Scorpions, but not so pestiferous, and confequently the Wounds given by them are easily cured. They lurk in Houses, behind old Stools, Benches and Chefts. They are exceeding big, no bigger being to be found in any other parts, fome being 5 or 6 foot long, and of a confiderable thickness.

There are fuch prodigious quantities of Pismires in Brasil, that for this reafon, they are called by the Portugueses, Rey de Brasil, i. e. King of Brasil. They eat all that lights in their way, as Fruit, Flesh, Fish, and Insects without any harm. There is also a certain Flying Pismire of a Fingers length, with a triangular Head, the Body being separated into two parts, and fastned together by a small string.On the Head are two small and long Horns, their Eyes being very small. On the 001. II.

foremost part of the Body are 6 Legs, 3 Joints each, and 4 thin and transparent Wings; to wit, 2 without, and 2 within; the hindermost part is of a bright brown colour and round, which is eaten by the Negroes. They dig into the Ground, like the Moles, and confume the Seed.

There is another kind of great Pifmires, refembling a great Fly; the whole Body of which, is about the length of half a Finger, and separated into 3 several parts. The last part resembling in shape and bigness a Barly-corn; the middlemost of an Oblong Figure, with 6 Legs, half a Finger long, each of which has 4 Joints: The foremost part, or the Head, is pretty thick, in the shape of a Heart, with 2 Horns, and as many black crooked Teeth: The White of the Eyes is inclining to Black, the whole Composition of the Head being the 2 Eyes, placed opposite to one a nother, resembling the Figure of a The fore and hindernost parts Heart. are of a bright Red colour.

There is another kind of Pismire, of a bright black colour, with black and rough Legs. It is about the length of a Finger, with a large foursquare Head, starting black Eyes, and Teeth, and 2 Horns, half a Finger long. The Body is also separated into 3 parts. The foremost of an Oblong Figure, not very thick, with 6 Legs, each of the length of half a Finger; the Middlemost very fmall and fquare, not exceeding the bigness of a Louse; the Hindermost is the biggest of the three, of an Oval Figure, and sharp on the end. These 3 parts are fastned together, with a single string, the Brasilians call it Tapijai.

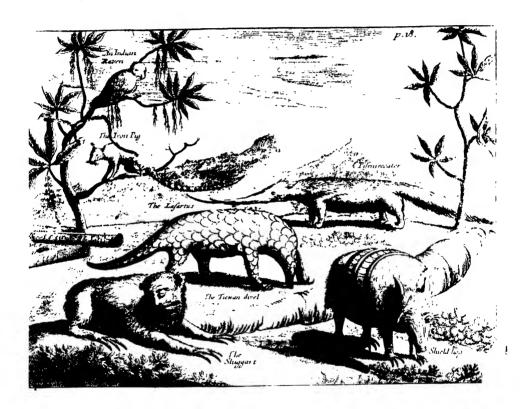

There is besides this another Pisinire, call d by the Brasilians Kupia, of a Chesnut brown colour; its Head being as big as another Pismire, with Black Eyes, 2 Horns, and 2 Tusks instead of Teeth. The whole Body is covered with Hair; it is divided into 2 parts: The Foremost with 6 Legs being somewhat less than the Hindermost; at certain Seasons it gets 4 Wings, the foremost being a little bigger than the hindermost, which it loies again at a certain time.

The Iron-pig of Brasil, called by the Brasilians, Kuandu; and by the Portuguefes Ourico Kachiero, is of the bigness of a large Ape, its whole Body being covered with tharp Spikes of 3 or 4 Fingers long, without any Hair. Towards the Body those Spikes are halfways yellowish, the remaining part is black, ex-

Mr. John Nieuhoff's Voyages

cept the Points, which are whitish, and 43. as sharp as an Awl. When they are vexed, they are able by a certain contraction of the Skin, to throw or dart them with such violence, that they Wound, nay, fometimes Kill Men or , like those of Apes, but with 4 Fingers Beafts. Their whole Body to meafurer only without a Thumb, inflead of which from the hindermost part of the Head, you see a place vacant, as if it had been to the beginning of the Tail, is a Foot cut away. The fore Legs are less than long, and the Tail a Foot and 5 Inches in length, which likewise has half ways sharp Spikes, the rest being covered

with Briftles like other Hogs. The Eyes ~~ are round, starting and glistering like a 1 6 4 3. Carbuncle; about the Mouth and Nose are Hair of 4 Fingers length, resembling those of our Catsor Hares: The Feet are the hindermost, they are likewise armed with Spikes, but not the teet.

This Creature commonly fleeps in the Day time, and roves about by Night; it breaths through the Nostrils, is a great lover of Fowl, and climbs up the Trees, tho' very flowly. The Flesh is of no ungrateful Taste, but Roasted and Eaten by the Inhabitants. It makes a noise Ju, like the Luyaert.

That four-legg'd Creature, by the Brasilians called At, by the Portugueses Priguza, and by the Dutch Luyaert (Lazy-back) from its lazy and flow pace, because in 15 Days time it scarce walks above a Stones throw. It is about the bigness of a middle-sized Fox, its length being a little above a Foot, to measure from the Neck (which is scarce 3 Fingers long) to the Tail. The fore-legs are 7 Fingers long to the Feet, but the hindermost about 6; the Head round of 3 Fingers in length: Its Mouth, which never is without a Foam, is round and fmall, its Teeth neither large nor sharp. The Nose is black, high, and glib, and the Eyes small, black and heavy. Body is covered all over with Ash-coloured Hair, about 2 Fingers long; which are more inclining to the white

towards -

and Travels to BRASIL.

towards the Back. Round about the Neck the Hair is fomewhat longer than the rest. It is a very lazy Creature, unable to undergo any Fatigues, by reason its Legs are as it were disjointed in the but moves, or rather creeps along very flowly. Its Food is the Leaves of the Trees, it never Drinks, and when it Rains, hides it felf. Whereever it fastens with its Paws, it is not calily removed; it makes, tho' foldom, a noise, like our Cats.

The P'smire-Eater, is thus called, because he feeds upon nothing but Pismires; there are two forts, the great and the small: The Brasilians call the sirst Tamanduas, and the last Tamanduai-Gracu. It is a Four-legg'd Creature, of the bigness of a Dog, with a round Head, long Snout, small Mouth, and no Teeth. The Tongue is roundish, but sometimes 25 Inches, nay two Foot and an half When it Feeds, it stretches out its Tongue upone the Dunghills, till the Pismires have settled upon it, and then Swallows them. It has round Ears, and a rough Tail; is not nimble, but may be taken with the Hand in the Field. The finall one, called Tamanduai-Guacu, is of the bigness of a Brasil an Fox, about a Foot in length. On the fore-Feet it has four crooked Claws, two big ones in the midst, and the two lesser on the The Head is round, yet pointed one end, a little bent below; with a little black Mouth without Teeth. The Eyes are very small, the Ears stand upright about a Fingers length. Two broad black Lists run along on both fides of the Back; the Hairs on the Tail are longer than those on the Back, the extremity of the Tail is without Hair, wherewith it fastens to the Branches of the Trees. The Hairs all over the Body are of a pale yellow, hard and bright. Its Tongue is round, and about eight Fingers long. It is a very favage Creature, grasps every thing with its Paws, and if you hit it with a Stick, fits upright like a Bear, and takes hold of it with its Mouth. It Sleeps all day long, with its Head and fore-feet under

the Neck, and roves about in the Night time. As often as it Drinks, the Water Spouts forth immediately through the Nostrils.

They have also a kind of Serpense. middle; yet it keeps upon the Trees, of about two Fathoms long, without begs, with a Skin of various Colours, and four Teeth. The Tongue a Spare in the middle refembling two Acrew and the Poifon is hid in a Bladder in its

> The four Legg'd Creature, called by the Brafilians, Tatu and Tainpera, by the Spaniards, Armadillo, by the Portugueics. Encuberro, and by the Dutch, Sch.li-Verken, (Shield-Hog,) because it is defen- Hog ded with Scales like as with an Armour, resembles in bigness and shape our Hogs; there are feveral forts of them. The uppermost part of the Body, as well as the Head and Tail, is covered with bony Shields, composed of very fine Scales. It has on the Back feven Partitions, betwixt each of which appears a dark brown Skin. The Head is altogether like that of a Hog, with a sharp Nose, wherewith they grub under ground; finall Eyes, which lie deep in the Head; a little, but sharp Tongue; dark brown and short Ears, without Hair or Scales: The Colour of the whole Body inclining to Red; the Tail in its beginning is about four Fingers thick, but grows by degrees sharp and round to the end, like those of our Pigs: But the Belly, the Breast, and Legs are without any Scales; but covered with a Skin not unlike that of a Goose, and whitish Hair of a Fingers length. It is generally very bulky and fat, living upon Maloens and Roots, and does confiderable mischief in the Plantations. It loves to rout under-ground, Eats Rabbets, and the dead Carcasses of Birds, or any other Carrion: It Drinks much, lives for the most part upon the Land, yet loves the Water and marshy Places; Its Flesh is fit to be caten. It is catcht like the Doe in Holland with the Rabbits, by fending a small Dog abroad, who by his Barking, gives notice where it lurks under ground, and fo by digging up the Ground it is found and catcht.

Bitts.

The Batts in Brasil, called by the Inhabitants Ardirika, are of the bigness of our Crows; they are very fierce, and Bite most violently with their sharp Teeth. They build their Nests in hol-

low Trees, and holes.

Wild-Geefe.

The Bird called by the Brafilians, Ipekati Apoa, by the Portugueses, Pata, is no more than a Goose; and for that scason by the Dutch called a Wild-It is of the bigness of one of our Geese of about nine Months old; and in all other Respects resembles them. The Belly, and underpart of the Tail, as likewise the Neck, is covered with white Feathers; but on the Back to the Neck, on the Wings and Head, the Feathers are black, intermixed with some green. There are also some black Feathers intermixed with the white ones on the Neck and Belly. They differ from our Geese in this, that they are somewhat bigger; their Bills resemble rather those of our Ducks, but are black and turn'd at the end; and on the top of it grows a broad round and black piece

of Flesh, with white speckles/ They are commonly found near the River-fide, are very fleshy and well-tastes.

The Bird by the Brafilians called Tou-The Bird kan, (or large Bill) is about the bigness Toukan. of a Wood-Pigeon. It has a crop about the Breast of three or four Fingers in compais, of a Saffron colour, with high red coloured Feathers round the edges, which are yellow on the Breast, but black on the Back and all the other parts of the Body. Its Bill is very large of the length of a Palm of a Hand, yellow without, and red within. It is almost incredible how so small a Bird is able to manage so large a Bill, but that it is very thin and light.

The Bird call'd by the Brafilians, Ko-The Bir ko, is a kind of a Crane, very pleasing Kokol. to the light, as big as our Storks. Their Bills are streight and sharp, about six Fingers in length, of a yellowish colour inclining to green. The Neck is fifteen Fingers long, the Body ten, the Tail five: Their Legs are half ways covered with Feathers, about eight Fingers is.

and Travels to BRASIL.

. length, the remaining part being fix and 1643. an half. The Neck and Throat is white, v both fides of the Head black, mixt with Ash colour. On the far and undermolt part of the Neck are most delicious. white, long, and thin Feathers, fit for Plumes: The Wings and Tail are of an Ash colour, yet, mixt with some white Feathers. All along the Back, you fee long and light Feathers, like those on the Necks, but are of an Ash colour: Their Helh is very good, and of a grateful Tafte. There is another kind of thefe Birds, which is fomewhat bigger than a tame Duck. Its Bill is fireight and sharp at the end, of the length of four Fingers and a half; with a double Set of Teeth both above and below: The Head and Neck, (which is two foot long) refembles the Crane, with black Eyes enclosis in a Gold colour'd Circle. The Body is two foot and a half in length; the Tail, which stands even with the extremity of the Wings, four Fingers. The Bill is of an Ash colour towards the Head, the rest yellow, inclining to green. The Head and upper part of the Neck are covered with long pale yellowish Feathers, intermixt with black. On the Back and Wings it has Ash colour'd Feathers inclining to yellow; but the Legs and Feet are dark grey: The Flesh of this Bird is Eatable, and tastes like that of a Crane.

The Bird called by the Brafilians, Ja-Figel, (on Barn-Bird) has no Tongue, but a very large Bill, near feven foot and a hill long; round and crooked towards the end, of a grey colour. On the top of the Head is a crown of white and green Feathers. The Eyes are black, behind each of which are two great Concavities inflead of Ears. The Neck is ten fingers in length, one half part of which as well as the Head, is not covered with Feathers, but with an Ash colour'd whitish rugged Skin Lind is of the bignels of a Storck, with a fbort black Tail, which flands even with the extremities of the Wings. The other part of the Neck, and the whole Body is covered with white Feathers, and those on the Neck very long. ones: The Wings are likewife white, but mixt with fome red. The Flesh, if Boil'd, after the Skin is taken of, is good alood, being very white, but fomewhat diy.

Brafil produces incredible quantities of other Wild-Fowl, of all forts, both Rigat and small, some of which live a-Vol. II.

mong the Woods, others in the Water, but are very good bood.

Of the best hind are the Thoughes, called by them Bar ode; Pheafants of divers Kines selled by the Barbarians, Makinger, Jaku, and Arakua.

Momon is a Bird of the bigness of a Reacock, but has block Feathers, the Figh is very good and tender. Becaute this Country is full of Fruit-Trees and Woody Places, ir produces abudance of Sparrow-Hawks, and other Hawks, called by the Portnewsfer, Guz .. lon, and by the Brafilians Teguara and Inge, which are always a bamity with

ter and up a she Land it with Ducks claim the Britain and The Britain of the of thole are smaller than the English and Ducks, others much Roged them, being as big Saipes, called ma-Miri and Guaku. Belides the there are Cran Quails, and Offre and Lany others of that kind; the left of which is Earable, but not very too home.

The rest of these Birds are very greedy after the Amber-Greefe, which is thrown a thore by the boisterous Sea, which they devour before the Inhabitants can come thither gather it. They have also abundance of Paradets, or fmall Parrots, thefe never ipeak; but their Parrots are extraordinary fine and large, some of which learn to speak as diffinctly as a Man. I have feen fome of these Parrots express every thing, what they heard cried in the Streets, very plainly; and among the reft, I faw one, which if put in a Basket upon the Floor, would make a Dog, that belonged to the same House, sit up before the Basket; crying out to him, Sit up, Sit up, You nufty Toad. Neither did this Parrot leave of Calling and Crying, till the Dog came to fit up before the Basket. It was afterwards prefented to the Queen of Sweden.

There is among the rest, a certain finall Bird, no bigger than a joint of a Finger, which not with standing this makes a great noise, and is catch'd with the Hands, whilst it is sitting among the Flowers, from whence it draws its Nourishment. As often as you turn this Bird, the Feathers represent a different colour; which makes the Brafilian Women fasten them with golden Wires to their Ears, .as we do our Ear-rings. The Birds here are never destitute of Food, which they always meet with ei-

ther among the Flowers or Fruits of the 643. Trees, which are never spoil'd here during the Winter Season.

The Rivers and Lakes of Brafil, as well as the Neighbouring Sea, furnishes them with great store of all forts of Fish & which are accounted fo wholesome here that they are even allowed for those that are troubled with Agues. The standing Waters near the Sea-side, which sometimes are quite dry'd up, produce abundance of Craw-Fish, Tortoiles, Shrimps,

Crabs, Oysters, and divers others of

this kind, which are all very good Food.

There are abundance of Fish in Brasit, common to the Sea and Rivers; especi- 1643 ally during the Rainy Season; when a great quantity of the River Water being conveyed into the Sea, the sweetness of the Water allures the Fish into the Rivers, where meeting with abundance of green Weeds, (the product of the bottom of the Rivers) they never return to the Sea.

Among the River Fish the chiefest are, the Duja, Prajuba, and Akara-Puku, the last of which resembles the best and largest of our Perches.

Brasil produces also various kinds of Infects, some of which are of four F.ngers length, and an Inch thick. They have likewise Silk-Worms, called by the Brasilians, Isokuku's, and their Silk, Isokurenimbo. There are also divers forts of Fire-Flies, which are likewise found in the East-Indies, where we shall give you a further account of them. Belides thefe, there are many forts of other Flies, Hornets, Wasps, and Bees, some of which produce Honey, some none at all.

Among other kinds of Spiders there Spider is one of a prodigious bigness, which is always found either in Dunghills, or in the Concavities of hollow Trees: .They call it, Nhanduguaka. These Creatures Weave Cobwebs like other Spiders: the Skin is rough and black, provided with sharp and long Teeth. This Creature, if provoked, wounds with its poisonous Sting, (which is so small as scarce to be visible) and raises a blueish Tumour, which is very painful, and if. care be not taken in time, occasions an

and Travels to BRASIL.

And Inflammation, attended with fuch dange-16+3. rous Symptoms, as prove afterwards incureable.

Bailar, or

Near Rio St. Francisco are vast numbers Kabitto, of a certain small Insect not unlike our get fight of this Creature, to satisfie my care Very near as black as the others, and others of this kind; but tho' it makes a very shrill Noise, which resembles that of our Crickets, I was never able to see any of them; for as soon as you approach, they defift, fo that you are at a loss which way to look. They Sing sometimes for a quarter of an Hour without intermission. In the Island of Java in the East-Indies it is commonly heard in the Months of February and June. At last I had the good fortune to get one of these Creatures into my hands. by means of a certain Chinese Woman. atter I had often been in search of it, both within and without the City of Batavia. The Javaneses set two of these little Creatures & Fighting together, and lay Money on both fides, as we do at a Cock-Match.

There are also abundance of ravenous wild Beafts in Brafil, fuch as Tygers, The Tygers are ex-Leopards, &c. treamly Savage here; they fall upon Beafts, and sometimes upon Men, of whom feveral were kill'd by them in my time. A certain Portuguese had a Sugar-

ry pleasantly situated near aWood, we used to go to divert our selves sometimes. The Portuguese sitting one time with four more of his Friends in the Houle, with the Windows drawn up, for the conveniency of the Land-Air, a Dog belonging to the House, who had ventured too far into the adjacent Wood, was purfued by a Tyger, fo that to fave his Life, he leapt into the Window to feek for shelter near his Master; but the Tyger closely pursuing him, leapt also through the Window into the Room, where the Door being shut, he tore two of those there present in pieces, before the rest could make their escape, and afterwards went his way.

There is another fort of Savage Beaft in those Parts, called by some of our People, Jan over-Zee, (or Jack beyond Sea) which surpasses all others in nimbleness, and tears all to pieces it meets with.

Brafil has also great plenty of Cattel, but the Flesh will not keep above 24 hours after it is dress'd. The Dutch cut off the Fat, and cut the Lean in thin flices, and dry it in the Sun like Fish. No Butter is to be made here, because

the Milk turns to Curds immediately; The Dutch Butter is drawn out of a Vessel like Oil.

Their Hogs are finall and black, but very well tafted and wholesome; there Crickets; I have been very curious to (is another kind of amphibious Hogs, by good Food.

> There is another four legg'd Creature in Brasil, called by the Inhabitants Taperete, and by the Portugueses, Antes; its Ar. Flesh has the taste of Beef, but somewhat finer. It is about the bigness of a Calf, but shaped like a Hog; it Sleeps all day among the Woods, and feeks for Belly-Timber in the night: Its Food is Grass. Sugar-Reeds, Cabbages, and such like. They have likewife good store of Goats. call'd by them Pakas and Korius, and Hares and Rabbits, which don't give way in goodness to those of Europe. There is also an excellent kind of Lizards, calld, by the Inhabitants, Vuano and Teju, which are accounted a dainty Bit.

The Fish in Brasil are no less consider- Fish. able for the supply of our Plantations, than the Cattel, which are on the Coasts of Brasil, but especially in Pernambuko, where they are found in fuch Plenty, that at one Draught they catch fometimes 2 or 3000 fine Fifth in the four or five Summer Months; for, during the rainy Scason, they catch but few. There are certain Districts along the Sea-Coast whither the Fish most resort; some of those belong to the Inhabitants, the rest to the Company, and are Farm'd at a certain Rate per Annum. The Lakes, as well as the Bays, are stor'd with an incredible multitude of Fish; the first are by the Portugueses call'd Alagoas; and the best they produce, are the Sindia, Queba, and Noja, all without Scales. And tho the Fish, which are catcht in the Lakes are not so much esteemed as the River-Fish, nevertheless are they not much behind them in goodness, because these Lakes are not always standing Waters, but intermix'd with several Rivers. Some of these Fish they dry in the Sun. The chiefest of this kind, are those called by the Brasilians, Kurima Parati, and by the Dutch Inhabitants Herders. They abound no less in Sea-Fish of all forts. The Fish call'd by the Brasilians, Karapantangele, which is not unlike our Perch, has the Preference among them. And as the Rivers furnish infinite numbers of Fish, so they are generally fatter, and better tasted than the Sea-Fish. Those which are catcht in those Fisheries near

Mr. John Nieuhoff's Voyages

the Sea-shore, are for the most part Salt-16+3. ed, and carried from thence into the Country, for the use of the Sugar-Mills, which cause great Plenty among them.

The Craw-Fish, which are in great quantities near the Rivers and in the to the Brafil are and Nervo's, and fome of our People like them telerably weil.

It is further to be observed, that whereas a confiderable number of Cattel, during the War, was i'm aftray out of the Parks into the Forests and Woods beyond the leaver of St. Francis, it was thought convenient by the great Conneil of the Company here, to agree with certain Persons to catch this Cattle, and being it to the Receif, in order to be kill'd for the ofe of the Inhabitants. The time of the fill Contract being expired, it was coundted, whether the fame should be jee ... id; but it being apparent, that there were not enough left, to quit Colerathe fame was laid afide, and this Refolution fent to the Council of XIX. For, in the mean while, the Inhabitants near Kio Sr. Franc fo and Rio Grande, having applied themselves with great Industry to the Breeding of Cattle, their Parks were fo well flockt by this time, that they not only furnish'd the Inhabicants of the Receif, but also the Sugar-Mills, with plenty of Meat, which was bought at the rate of three and four Pence per Pound in the Country; besides, that they provided the Garifons with the fame for a Twelve-Month, after the Store-Houses of the Receif were emptied;

notwithstanding this, the Inhabi-11 its of those Parts were not out of Fight, when those of Pernambuko and

nta, were involved over Head and bars; witch shows what Advantage they reapt from the Breeding of Cattle; and that if the Dutch Brafit had contireacd in Peace, those Parks might have ternished all the Garifons with Meat, without impairing their flock for Breedian; which, together with the great i lenty of Fish, are the two main Pillars of the State of Brafil.

Notwithstanding all which, it is certain, that the Inhabitants of the Dutch Brasu cannot be provided with sufficient Maintenance, without a yearly Supply from Europe, as well of Eatables as other Commodities, as has been found by experience, to the great Detriment of the Company; after our Store-Houses were exhausted by the several Expeditions against Angola, Maranham and other Places.

In the Rivers and Lakes here, are also 5 ~ tound Crocodiles, by the Brafilians, cil- 1643 le Viak ie, and in the I fi-Indies, Kayi m. They are like the Arican Crocodiles, but not quite fo big, feldom exmarfuy Grounds, ferve likewife for Feed 20 or 30 Ergs biogen the They lay to the Brath are in 1 Now. 20 or 30 Eggs bigger than Geefe-Eggs; which are Faten by the Brofilians, Portig-ejes, and Dutel, as well as the Fleih.

> In the Seas, near the Coast of Brasil, they meet also sometimes with great Lampreys. Before the Bridge from the Rea; to Mourice-Town was built, one of this kind of a confiderable bigness did lurk near that Paffage, where the Boats used to pass over from one side to the other, and matcht all that fell in his was, (both Men or Dogs, that Iwam fometimes after the Loat) into the Witer. But at a certain time, by the fudden falling of the Tide, being got aground with the foremost part of the Lody, he was with much ado brought athore.

> The District of Irrnanbuke does also abound in various forts of Fruits, as well as all the other Parts of Brafil, of which we shall say more hereafter.

Upon the Captainship of Pernambuko. Borders to the North, the Captainflup of Tamarika, which owes its Name to an Ille of the same Name, being the chiefcft part of this District, which however extends near 35 Leagues along the Sea-Coast on the Continent.

The Island of Tamarika Hes two Leagues to the North of Po zerello, in the Sea; being parted from the Continent by the River Tamarka, its most Southern Point lying under the 7th Degree 58 Minutes Southern Latitude. It is from South to North about two Leagues long, and its Circuit near feven. To the Junisdiction of this Isle did alfo belong Goyana, Kapivaribi, Ternkupa, and Abray on the Continent. Formerly it had but few Inhabitants, and scarce any Houses, tho' it is a very pleasant lile, and tolerably fertile, producing Brafil-Wood, Coco-Nuts, Cotton, Sugar-Reeds, Melons, and fuch like; belides Wood for Firing, and fresh Water for the conveniency of the Receif: It abounds likewise in Wood both for Building of Houses and Shipping. This Island was much infested with Wild-Beasts, which did great mischief to the Sugar-Reeds: This moved Peter Pas, Director of the Captainship of Itamarika, to make his Application to Count Maurice, and the Great Council, 1647, to know the Pleasyre,

Pleasure, whether they should dispose i 6 4 3. of those Beasts by Contract to such as would be at the Charge of catching of them, or whether they should be taken and kill'd for the use of the Garrisons; But this was rejected by the Council, who enjoyn'd the Inhabitants, not to kill those Beasts in the open Fields, unless they should break into their Plantations, it being for the Interest of the Company to preserve them in case of a The Damage which from necessity: thence might accrue to the Sugar-Reeds, being to be prevented by furrounding their Plantations with Pales and Stakes.

The Confe-

The Island is look'd upon as of the greatest Consequence to us, it having been propos'd by some to transfer the Seat of the Dutch Brasil from the Receif thither; but the Directors of the Company did not agree to it, considering that at that time this Island was quite desolate; whereas upon the Receif were Store-Houses, Magazines, Ware-Houses, and such like Buildings ready to their Hands, besides that the Place was much more pleasant, fertile, and stronger; and the Harbour much more convenient for Ships: The River Tamarika on the other hand being not Navigable, but for fmall Vessels, by reason of the shallowness of the Harbour, which was noted The Defect of fresh for Shipwracks. Water in the Receif, in which this lile abounds, may be supplied from the Riy-niby bi; belides that, they had several Basons with fresh Water within the Receif for their present use. During the War with the Portugueses we were fensible of the Conveniencies we received from this Island, by reason of its strength both by Art and Nature, which might serve as a safe Retreat upon all Emergencies; belides, that its prefervation was absolutely necessary for the Receif, which was supplied from thence with Fish, and several other forts of Provifions.

Upon the Banks of the River at the South Entrance of the Harbour, we had built a Quadrangular Fort, called Orange. It was provided with a goodly Wall, but the Ditch was not very deep, and for the most part without Water, for which reason it was strengthned with Pallisadoes. On the Northside we had a Hornwork, but much decay'd; within the Body of the Fort was a Powder-Vault, and other Conveniencies for the Bedding of Soldiers. Several Batteries were raised upon the Walls, mounted upon ax Brass and as many iron great Nol. II.

Guns. In the Island near the entrance of of the River close by a Morass, full of 16. Thorn-Bushes, was a small Town, most inhabited by Soldiers, called by the Portuguefes, Nostra Senhora de la Conceptiano. Lipon a hanging Rock, just by, was an Hangi. ald Redoubt erected by the Portuguefes, Rock. called by the same Names, which together with the whole Island, was taken by the Dutch, under the Command of Colonel Schop from the Portugueses, and the Place after his Name, called Schop's Town. This Fort was afterwards by the Dutch closed up on the backfide towards the Church, so that it afterwards served both for the Defence of the Town and the Harbour, as the Blockhouse on the Northfide covered the Gates. There were then 11 pieces of Cannon mounted upon it. At the North Entrance of the Harbour was another Redoubt, which defended that passage on that side, with three iron Cannon. One Mr. Dorney of Governor of Itamarika, found under the before mentioned Rock, in 1645. as he was digging a Well, a Spring of fresh Water, which proved very useful for the Garrison, because it could not be cut off by the Enemy.

Somewhat higher up the River Tamarika, lies an Island called Magioppe, where are found abundance of Mandshoka Roots. You may go quite round this Island in Barks; it having a kind of a Harbour on both ends, viz. to the South and North, but the first is the best; because there rises from the Northern shore of the Continent, a Shelf, which reaches very close to the Island, the Channel betwixt both not having above 10 or 12 Foot Water. The only Harbour fit for use thereabouts is the South-Entrance of the River, which makes Tamarika an Island, where Ships, that drew 14 or 15 Foot Water, may pass through; There is no convenient Anchorage. That end, where the River returns into the Sea, is by the Dutch called the North-Entrance, and by the Portugueles, Katuamma.

Betwixt Pomerello, and the River Tama-The River rika, a River comes from the Continent Marafafit for Barges, called Marafarinha; and Garafou. half a League within the Mouth of the River Tamarika, another falls likewise from the Continent, called Garaffou, but is of little moment. From thence to the North, are feveral other Rivers near the Sea-shore, which are Navigable with Barges for the conveniency of the Sugar-Milla, of which there are several thereabouts.

Goyana.

A League and an half further to the North of the North-Entrance of Tamarika, is a noted point of Land called by unto Pe the Portugueses, Punto Pedra, surrounded with a Receif, betwixt which you may

pass with Barges and Yachts.

A League further to the North from this Point, and three Leagues to the North-West of Tamarika, is the small The River River Goyana, under 7 Deg. and 46 Min. which difembogues in two Branches in the Bay; At the entrance lies a great Rock, where is great store of Sea-Fowl. Before it lies a great Receif, but within it are fo many Shelves that renders the passage very dangerous.

About two Leagues and a half beyond the River Goyana, to the North, is a The River great River, called Anyay, but the Entrance is so choak'd up with Sands, that there is scarce any passage for Barges. This River fends forth several Branches into the Country, upon one of which to the North, lies the Village of Maurice,

and apon the Southern Branch the Village Auyay.

I'arto Among others, Porto Francisco lies in Irancisco. a Creek three long Leagues to the North of the River Anyay; and five Leagues to the North-West of the same River, an Unnavigable River called Grammana,

besides several other Rivulets.

About a League and a half to the North-West of the River Grammana, is the Cabo Blanco, or White Cape, and three Leagues from thence to the North-West, the Cape of Parayba, being a long point of Land, with a large adjacent Bay. The whole Coast from Pomerello to the Cape of Parayba, is covered with Receifs or Rocks, which lying for the most part about half a League from the Shore, and the Water betwirt them being generally very smooth, affords an easie passage to Barges, even in tempestuous Weather; when it is almost impossible for Ships to pass without the Rocks, by reason of the violence of the Current from the Northern, and the Southern Winds, which blow there continually.

The Town

Parayba.

Three Leagues within the Mouth of of Goyana. the River Goyana is a Town of the same Name, where is kept the Court of Judicature of this Captainship. There are five or fix Sugar-Mills thereabouts, fituated upon the Banks of the River, for the more commodious Transportation of Sugar in Barges to Pernambuko. Country produces likewife Brafile Wood, Ginger, Cotton, and Indian Nots; The People called Petigueves Inhabit here;

tho' this whole Tract of Land, as far as Cabo Blanco, is not very populous, ha- 164 ving only a few Villages, inhabited by

the Brasilians.

The life of Tamarika has several landing Places on the River-side, the chiefest are: Os Markos and Pedreiros; where the River is narrowest; Tapasima and Kamboa of Domingos Rebeyro; the great Makqueira and Kamboa of Conrad Pauli: in which Places the Enemy landed in that Island. The Pass near the North-Entrance of Tapowa, and the Island, Tapofoka, where with one fingle Ship you may defend the passage from the Rivers Tujukapape and Masserandaku, as likewise from the Sca. For the rest the Shore all along the River being very marshy and full of Manga's Trees, is of a very difficult access. The Shore towards the Sea-fide is very flat, but Woody, which together with the Sands, that are at some distance in the Sea, makes the approach of Ships very dangerous on that fide. Formerly the Court of Judicature of the Captainship was kept in this Island, but was afterwards transferred from thence, as we told you before, to the Town of Goyana and Kapivaribi on the Continent, because these Places were both more populous, and more Sugar-Mills were built thereabouts, the Ground being much better here than in the Island. In my time there were five Judges belonging to this Court, three of which lived at Goyana, the other two in the file of Ipanie ka. However, this Court was afterwards likewise removed from Goyan . In the year 1641. Mr. Peter Pas wis Director of the Captainship of Itamarika for the West-India Company, and Captain Sluster Commander in Chief over the Soldiers.

This Captainship has derived its Name from the Capital City, which has borrowed hers of the River Parayba, upon Parayba which it is situate. It is one of the most Northerly Captainships, about five Leagues distant from the Sea. It was formerly in the Possession of the French, who were 1585. chased from thence, and several other Harbours, by the Portuguese Gene-

ral Martin Leytan.

Five Leagues upwards the River Parayba, is a City founded by the Portugueses, and after Philip King of Spain, called Filippen and Nossa Senhora de Nives, otherwise Parayba, from the River Pa-122 Com rayba; which Name was by the Dutch, after they had in November 1633. conquered the whole Caprainship, changed into that of Frederick's Town, after Frederick Henry Prince of Orange. This

C'ty

City had been but lately built by the 1643. Portugueses, and had several stately Houses with Marble Pillars, the rest being only of Stone. Here is kept the Court of Judicature of this Captainsup. Before the time of the Rebellion of the Portugueses, this Place was Inhabited as well by the Portugueses as Dutch, being much frequented by the Inhabitants of the circumjacent Country, was used to Exchange their Sugar for what other Commodities they stood in need of, which was afterwards from thence transported to other Places.

Within the Mouth of the River Parayba, were three very considerable Forts.
One on the South-Point, by the Portaguese called Catharine, but by Count Fort Mar. Maurice, afterwards named Margaret, garet.

after his Sister. It was defended with five goodly Bastions, and a Hornwork

without.

Forts.An- The

The Fort called St. Antonio by the Portugueses, was built upon a small Island, which by a narrow Branch was separated from the North-Point. This is only the Remainder of a large four square Fort, formerly erected by the Portugueses, which was afterwards Rafed by the Dutch, part of it having been washed away by the River. It is surrounded with Pallisadoes and a good Ditch, supplied with Water from the beforenamed Branch of the River: The Walls are very ftrong, and upon a Battery are mounted 6 Iron pieces of Gaiman. It may be defended by the Cannon, ooth from the City of Parayba, and from the Fort Margaret lying just opposite to it on the South-side, which is the reason it was always but carelesly guarded by the Portuguefes.

The Third Fort lies upon a Triangular Island, called Restinga, not far from theace, more upwards the River. It was frengthned with Pallisadoes, and upon the Batteries, were mounted five Brass, and as many Iron pieces of Cannon.

non.

The Captainship of Parayba is watered and divided by two considerable Rivers, viz. the Parayba, and Mongoapa, otherwise called St. Domingo. The great River ver of Parayba lies under the 6th Deg. 24 Min. four Leagues to the North of of Cabo Blanco, and discharges it self in two Branches into the Sea, being separated by a large Sand Bank: One is called the Northern, and the other the Southern Entrance. From the last extends a Rocky-ridge as far as Cabo Blanco, and within the River lies a Sand Bank quit cross to the Fort Margaret. This

River is very shallow during the Summer time, but in the Winter Scason, the Waters rise to that heigh, that they overflow all the adjacent Country, sometimes to the great loss of Men and Cattle.

Two Leagues beyond this River to the North, is a Bay, which affords a very Lafe Station to the largest Ships. It is by the Portugueses called Porto Lucena, and Porto by the Dutch, the Red Land, the Grounds Lucen being Red hereabouts. There is very good Anchorage here at 5 and 6 Fathom Water, and the Country near it affords very good fresh Water; which is the reason why the Dutch Ships bound for Holland from the Recess, used to stay for one anothers coming in this Bay, and to provide themselves with fresh Water.

Half a League further to the North, under 6 Deg. 34 Min. is the River Mon-River Megograf, or Mongoanamaly, exoner ares it fell goapa. into the Sea: This River is much larger towards its Source than at the Mouty; the Banks on both fides being full of Briars, Bushes, and Manga Trees. Before its Entrance, lies a Recoss, and at the very Mouth two dangerous Sand-Banks; It has three Fathom Water at low I ide.

About two small Leagues to the North of the River Mongoapa, is a Bay, called by the Portugueses, Bahna de Treyçano, or Treesson, where, at about a Leagues distance from the Shore, is 11 or 12 Fathom Water. Five Leagues to the North of this Bay, you meet with the River Barra Korguon or Konayo, which is scarce passable for Yachts. About a League and a half from thence is a large Bay of about two Leagues in length, called Pernambuko; and sive Leagues beyond it to the North, the River Jan de Sta, or Estan.

The Natives of Parayba inhabit about 7 Villages, the chiefest of which is called Pinda Una, which in 1634. contained about 1500 Inhabitants, whereas each of the others had scarce 300; each of these comprehending not above 5 or 6 very long Buildings, with a great many Doors, but very small ones.

The chief Commodities of this Captainship, are Sugar, Brasil-Wood, Tobacco, Hides, Cotton, and such like. The Sugar-Reeds did bear extreamly well, because they were transplanted into fresh Grounds Whilst the District of Parayba was under our Jurisdiction, there were above 21 Sugar-Mills on both sides of the Banks of the River, 18 of which sent away every year 2000 Chests of Sugar. Near the River-side, the

be Third

Country is low and plain, but not far 16 4 3. from thence rifes by degrees, and affords 2 very agreeable variety of Hills and Valleys. The flat Country, which is also the most tertile, is distinguish'd into leveral Divisions, some of which have borrowed their Names from small Right vers which run through them, as for instance: Gramamma, Tapoa, Tibery, Ingely, Monguappe, Increry, Kamaratuba, and feveral more. All those Countries are extreamly fertile, occasioned by the 'ts I crtioverflowing of the River Parayba. Their Products are: Sugar, Barley, Turky Wheat, Potatoes, Anana's, Coco-Nuts, Melons, Oranges, Citrons, Banana's, Pakova's, Markoma's, Cucumbers, and all other Necessaries for the Sustenance of Men and Beafts. They have here a kind of wild Pears, called Kajou's, which are very Juicy and well-tafted; within is a certain Bean or small Nutt. the Rind of which is bitter, but the Bernel sweet if roasted in the Ashes. The Pear is very cooling, but the Nutt

has a contrary quality. Towards the end of November 1634. the Dutch undertook the Expedition against Parayba, their Forces being Embarked in 32 Ships under the Command of Colonal Schoppe, Artisjoski, Hinder fon, Stachouwer, and Carpentier. The whole Fleet was divided into 2 Squadrons, the first consisted of 21 Ships, in which were 1945. the other of 11 Yachts, with 409 Men. Schoppe was the first that landed 600 Men, and advanced towards the Enemy, who betook themselves to their Heels, leaving their Arms and Cloaths behind them; Anthony Albuquerque their General, himself scarce escaping their hands. In the mean while, the rest being likewise got a Shore, 3 Companies, under the Conduct of Galper Ley, marched directly to the Fort of Margaret, and intrencht himself near the Fort, whilst Schoppe kept all along the Shore, and Artisjoski, posted mimself on the right side in sight of the Garrison : At the same time Mr. Lichthart attackt the Fort in the small Island Restinga, which The Dutch he took by force, and put the Garrison to the Sword. By this time, Schoppe had Parayba. raised a Battery against the Fort, from whence he fo forely gall'd the Besieged, that their Commander Simon d'Albuquerque surrendred the Place. Hereupon the Fort of St. Antonio was summoned to furrender, Maglianes the Governor defired three days delay, which being denied, he marched away febreily by

Night, leaving the Place to Liebthart,

who found there 5 great Brass Pieces, c and 19 Iron Pieces of Cannon.

The same Night our Forces marched towards the City of Parayba, being 1600 strong, and having pass'd a small Branch of the River called Tambra Grande, made themselves Masters of it without any opposition: The Spanish General Banjola, who commanded there with 250 Men only, having left the Place before, and being retired to Goyana, after he had either funk or nail'd up the Cannon, and fet fire to three Ships, and two Warehouses, in which were confumed 3000 Chefts with Sugar. The Fort of St. Catharine being much decay'd, was ordered by Count Maurice to be repaired, and the Ditch to be enlarged and deepned; giving it the Name of Margaret after his Sister. The Fort of St. Antonio was rased for the greatest part, there being only one Bulwark left for the Defence of the North-point of the River. The Fort Restingus was ordered to be furrounded with new Pallisadoes, and the Convent of Parayba fortified with a Wall and Outwork; and the Command thereof given to Elias Harkman, together with the Government of the whole Captainship.

The Captainship of Potigi, or Potingi, Potigi, or or Poteings, is otherwise by the Portu-RioGranquefes called Rio Grande, from a River of de. the same Name : The Dutch call it North Brasil, in respect of the more Southern Captainships of Brasil. It Bordons to the South upon Parayba, and to the North upon the Captainship of Stare; tho' the Portuguese Geographers extend its Bounds as far as the Island Maranhaon.

The French were once Masters of this Captainship, till 1597. they were Chased from thence by the Spanish Commander, Feliciano Creça de Karvalasho. It has four Divisions, named after so many Rivers, that run through them; viz. Kunhae, Goyana, Mumpobu, and Potegy. And tho this District has been much neglected by the Portugueses, yet does it produce plenty of Wild-Fowl, and Fish, which are fo luscious, that they commonly Eat them only with Lemon-Juice or Vinegar, without Oil. There is an incredible number of Fish in the Lake Goraires, befides which, abundance of Farinha is planted here. This part of the Country stood us in good stead during the late Rebellion of the Portugueses, our Garrisons in Parayba, and other Places, being supplied from thence with good store of Flesh and Fish.

Above the River Rio Grande, is a 1643. Town of no great moment, called Am-River Rio ing Farinha and Tobacco, and Fishing. Higher up in the Country live fome Moradores, or Husbandmen, who cultivate the Grounds; but on the North-side of Rio Grande are but few Inhabitants.

The River Rio Grande, i. e. the Great River, is so called by the Portugueses from its bigness; but by the Brafil ans, Porigi, or Poteingi. The Mouth of this River lies under 50 Deg. 42 Min. Southern Latitude, 3 Leagues from Punto Negro, coming from the West-side of the Continent. It disembogues 4 Leagues above the Fort Kenlen, call'd by the Portugueles, Tres Royos: It bears Ships of great Burthen; But the River Kunhao in the fame Captainship is only Navigable with Parges and Yachts. The Bays of this Captainship are, Bahia Formosa, Punto Negro, Ponto de Pipas, and the Bay of Martin Tuffen. The Bay of Ginapabo lies beyond Rio Grande to the North; and beyond that a River called Guafiavi, upon which near the Mouth lies the Village Atape Wappa. Near to the North you meet with the River Siria Mixin; and near the Village of Natal, and the Fort of Tres Reyos, passes a River called the Cross River, which arises out of a small Lake in Rio Grande. Over against the same Fort, a fresh River falls into the Great River, betwixt two Land-Banks, and not far from thence another Salt-Water River.

The Fort Keulen.

The Fort Keulen was foursquare, built upon a Rock or Point of a Receif, at some distance from the Shore, at the Mouth of the River Receif; being furrounded with Water as often as it's flowing Water, so that at high-Tide there is no coming at it but with Boats. In the midst of this Fort is a small Chapel, where in 1645, and 1646, our People found a Wall about a Foot and a half wide on the top, but at the bottom 3 feet, cut within a Rock, which brings fresh Supplies of good and sweet Water every Tide; with an ordinary Tide, 225, and at Spring-Tide, about 350 Quarts; which is more than sufficient tor the use of the Garison, in case of a Siege. The Fort is built of square Stone; being towards the Shore defended with two half Bastions, in form of Hornworks. In the year 1646, there was an Artillery of 29, as well Brass as Iron pieces of Cannon in the Place, and ·provided with a good under-Vault, and confenient Lodgements for the Sol-Hier

This Fort was in 1633, taken by the Durch under the Command of Meth as 1643 van Kerlen, one of the Governors of the his cor-Company, who being affilted by feveral quell b, noted Captains, viz. Byma, Kloppenbu gli, ike Dutch Luchthart, Garftman, and Mansfeldt van Feilen, fet Sail thither with 808 Men, embarked in 4 Ships, and 7 Yachts, and made himself Master of it, and the whole Captainship at the same time; fince which it changed its Name Tres Keyor into that of Keulen, from the Commander in chief of this Expedition.

The Tapoyers, (or Mountaineers) use commonly twice a year, especially when the dry Season puts them in want of fresh Water, to make an Inioad into this Captainflup; there being a constant Enmity betwirt them and the Portugues. It happen'd in July 1645, that these Tapoyers being advertised that the Portuguefes intended to Revolt from us, and had actually begun the fame in Pernambuke, did, under the Conduct of one of their Leaders, called Jacob Rabbi, after several Provocations given them by the Portugueles, make an Incursion into Kunhao, where they killed 36 Persons in a Sugar-Mill, belonging to one Gon-Salvo d'Olivera. From thence they marched to a certain Place, where the Porsugueses had cast up a Line for their Defence, which they made themselves Masters of, and put the Portugueses to the Sword. The Brafil. ans told us, that this had been done in requital of what had been done to some of those Mountaincers by one Andrew Vidal in Serinhaim, after quarter given them before, of which we shall say more hereafter. Since which time, the Portuguefes have laid this Tract desolate, which the Dutch once had a mind to Re-people, and to put it in the fame Condition as the Portugueses had posses'd it, but for want of People that design was fain to be laid aside.

The Captainship of Stara is one of the Stara. most Northerly Districts of Brasil, bordering upon Maranhaon to the North upon the River Siara. It is of no great extent, its whole Compass being not above 10 or 12 Leagues.

The River Stara, which rifes deep in The River the Continent, disembogues about seven Sura. Leagues and a half to the North of the Bay Mangorypa, under 3 Deg. 40 Min. Southern Latitude.

The Native Inhabitants of this Captainship, according to the Report of those that have frequently visited it, are very large of Stature, with ugly Features, long Hair, and black Skin ; ex-

cept the space betwixt the Eyes and 1 6 4 3. Mouth. They have holes in their Ears, which hang downwards upon the Shoulders; some make holes in their Lips, some in their Noses, in which they wear Stones as an Ornament. Their Food is Farinha, Wild-Fowls, Fish, and Fruit. They Drink most Water, but make likewise a certain Liquor out of Farinha; and of late began to be used to Drink good store of Brandy, tho' it was expressly forbidden to bring it into the Villages, to keep them from the excesfive use of strong Liquors. The Country produces Sugar-Reeds, Chrystal, Cotton, Pearls, Salt, and several other Commodities. Ambergreese is also found on the Sea-shore.

The Inland part of the Country was in 1630. govern'd by one of their own Kings, call'd Algodo: ; in some respect Tributary to the Porengueses, who had built a Fort upon the River Siara, and made themselves Masters of the whole Sea-Coast thereabouts; notwithstanding which they were in continual Broils with one another till 1638. This Fort and the whole Country was taken by the Dutch from the Portugueses in the

Siara conquered y she Dutch.

following manner. Count Maurice, and the Council, being follicited by the Natives of that Country to make themselves Masters of the Pertuguese Fort on that side, and to deliver them from the Oppression they lay under at that time, they offering their Affiftance, and giving two young Lads of their best Families, as Pledges of their Fidelity, this Expedition was resolved upon. The chief Command over the Troops defign'd for this Exploit, was conferr'd upon Colonel John Garstman, a Man of more than ordinary Conduct in Martial Affairs, tho' as the case then stood, this Enterprise was not likely to meet with any considerable Difficulties; being asfured of the Assistance of the Brasilians, who bore an old hatred to the Portuguefes, and were acquainted with the Strength and Condition both of their Forces and Places. Garstman being provided with Ships, Men, Ammunition, and all other Necessaries requisite for such an Expedition, set sail towards the River Siara; where being met by the Algodoi, or King, with white Enfigns in token of Peace, and having landed his Men, 200 of the Natives joyned with them. With those he marched directly to the Folk which after a brave Relistance from the Portugueses, who killed some of his Men, he

took by Storm; and made most of the ~ Garrison Prisoners, among whom were fome Commanders of Note: They found good store of Cannon and Artillery in the Place.

Since that time, the Dutch built a The Ic fmall Fort upon the Siara, unto which Siara. they gave likewise the Name of Siara, which was provided with a Garrison of betwixt 30 and 40 Soldiers only; not fo much for the defence of the Country, as to maintain a good correspondency with the Brafilians, who being very numerous in those Parts, might do us considerable Service in time of War. It was upon this Confideration, that the great Council always commanded their Officers, fent thither, to cultivate a good Understanding with them; and at several times fent them some small Presents, which, however proved ineffectual in the end. for in 1644. they attackt and killed feveral of our Men at Komefy, (a Place about 30 Leagues from Siara) as we shall hear anon.

For, the Brasilians, being in 1641. increased to such a number in Stare, that the Villages thereabouts were not able to contain them without great inconveniency whereas the Diftrict of Rio Grande, was almost destitute of Inhabitants, and consequently not in a Condition to oppose an Enemy, one Andrew Uliifs, proposed to the great Council, to build a Village in Rio Grande, for the use of such as intended to fettle there out of Siara, defiring to be constituted. Chief of the faid Village: Count Meurice, and the Great Council, being informed of the Inclinations of those of Siara, who were willing to Settle in Rio Grande, their ancient Place of abode, and confidering the Benefit that was likely to accrue to the Company, from the Settlement of those Brasilians, so near at hand, granted "Ulufs's Request, wishing him to bring thither as many of the Brafilians of Siara as he thought convenient, for the compais of a Village of which he was made Chief or Captain. Things being thus fettled, they chose, with the Approbation of our Directors, certain Chiefs or Heads out of the most antient Families of each Division, called Residoor by the Portugueses, and certain Judges; as for instance in Goyana, Domingoi, Fernandes, and Kara-peva; in Parayba, Peter Potty; and in Rio Grande, Amonio Perapeva. Notwithstanding all this, the Brafilians of Stara revolted against the Dutch in 1644. surprized the Garrison in the Fort, which they razed, and killed the Commander

and Travels to BRASII.

in Chief, Gideon Morritz, with the whole 1643. Garrison, besides all the Workmen belonging to the Salt-Pits near the River Upanemma, who were all cut in pieces by

these Barbarians.

A certain Master of a Ship, with a Captain, Lieutenant, and fome Soldiers, who happened to come ashore in a Boat to fetch some fresh Provisions, being ignorant of their Treachery, were also put to the Slaughter, three Seamen having the good fortune to escape with their Lives into the Wood.

Some laid the Cause of this Rebellion at the door of the Portugueles and Brafilians of Maranhaon, bordering upon them; but if we fearch into the true Sourse of this Evil, it must be attribu-

ted to the Miscarriage of our own Officers, who by their hard-usage, had forced the Inhabitants to revenge themselves for the Injuries received at their hands.

Thus much concerning the Captainthips of the Dutch Brasil; we will in the next Place give you an Account of all the memorable Transactions that happened betwixt the Dutch and Portugueses in Brasil during our stay there; after I have represented to you the Excellency, and convenient Situation of this Country,together with the Ecclesiastical State

of the Dutch Brafil.

The Excellency of Brafil.

Brasil is a Country excellently wellqualified by Nature for the producing of all Things, which are generally found in the West-Indies, under or near the fame Climate; except, that hitherto no Gold or Silver-Mines have been discovered here worth taking notice of. But next to Gold and Silver, the Sugar claims the precedency here before all other Commodities. Among all the Harbours and Places of the West-Indies, there is not one that can compare with Brafil, either for the Product, or Conveniency of Transportation of Sugar; the whole Coast of Brasil being full of finall Rivers, which flowing through the adjacent Valleys, disembogues in the Sea; from whence the Sugar-Mills built in the Valleys reap the Benefit of faving vast Charges, which else must be beflowed upon Labourers and Carriages? whereas these Rivers drive the Mills, ferve for the Transportation of Sugar to other Places, and furnish them at an easie rate with what Commodities they stand in need of; all which Conveniencies, as they are not to be met with in any other Place of the West-Indies; so, no Sugar-Mills could be erected there with any prespect of Profit. The Exportation of

Sugar from Brafil into Europe and Africa is likewise performed with much more 16 Ease than from any other Places in the West-Indies; for the Situation of Brafil, (being the most Eastern part of all America) is such as could not be more conveniently contrived by human Art or Nature for the Transportation of so general and agreeable a Commodity, as Sugar, into all the other Parts of the World; confidering those two Excellencies of Brafil, together with its vast extent, it is most certain, that, provided it were well peopled, it might Command both the North and Athropian Seas, and spread its Commerce over all Parts of the World; nay, it might extend its Conquests both to the East and West. or at least establish Factories there for the Conveniency of Traffick. To prove which, it is to be observed,

That all East-India Ships both going and coming, must pass by the Coast of Brasi!; and, as those Ships in their Voyage thither, are often forced to touch upon this Coast, so in their return, nothing could be more commodious for them, than to be supplied with fresh Provisions here. From Brasil you may fail in 14 days to the Caribbee Islands. and in the same time, or a little longer, to Sierra Leona on the Coast of Guinea. It is impossible to enter deep into the great South Sea, (whereabouts a great part of the Terrestrial Globe remains as yet undiscovered) unless you take in fresh Provisions and Firing in Brafil, or expose your self to the greatest Hazards imaginable in fo long a Voyage; as is fufficiently evident from the Journals of Oliver Van North, Spilbergen, le Maire, and John l'Heremite. And Experience has taught us, fince Mr. Brewer's Voyage to Chili, how easie the passage is betwixt Brafil and the South Sea; for he lost not fo much as one Ship out of four, and very few died in the whole Voyage.

Brefil enjoys likewise the advantage The wholiof a very wholfome Climate; for tho fomenefs it lies betwixt the Equinoctial Line and of its the Tropick of Capricorn, and confequently is subject to burning heats, yet are the same much allayed by the Winds, that blow out of the East from the Sea, their free passage being not interrupted by any Mountains or Islands; which is the reason, that in Brasil the same Di ftempers are rarely to be met with which things fo frequently in Angola. Guines, St. Thomas, and feveral other places, where the East-Winds cannot afford them the same advantage.

Mr. John Nieuhoff's Voyages

Plugue is a thing unknown in Brasil, in , 43. which it excels all other Countries; tho' they are not free from continual putrid Fevers, caused by the hot and moist Air, and the excessive use of raw

Those that are bound for the Coast of Brasil ought to have a special regard to the Seafon of the Year, which regulates the Winds and Stream thereabouts; and to be very careful to Sail above the Harbour whither they are bound; for if they mifs, and come below it, they lofe their aim, and must stay till the next turn of the Wind and Stream. For it is observable, that on the Coast of Brasil, the Stream runs from February till past July, constantly Northerly, during which time there is no passing from the North to the South; but after those Months are past the Stream turns, and from the beginning of September to the latter end of November, runs as violently to the South as it did to the North before, and consequently there is no sailing from the North to the South, no more than before from the South to the North. The Winds here turn with the Stream; and at the beginning of March blow South, South-East, and South-East. And like the Stream changes its Current till September, so the Winds continue in the East, and blow till that time out of the East South-East. For there are but two Winds that reign along this Coast, 112. the South East and North-East Winds; according to which Ships must regulate their Course here. The Ecclesiastical State of the Dutch

The Tulefiaftical State of the Dutch Braul.

Brufil was in my time thus ordered: Before the Infurrection of the Portuqueles there were to the South of the Recief five Protestant Churches; viz. in Kio St. Francisco, Porto Calvo, Serinbaim, the Cape St. Austin, and St. Anthony; tho' these were seldom altogether provided with Ministers; because that some or other of them returned into Holland, after their limited time was expired. In the Isle Tamarika and Fort Orange was at that time, a Minister one John Offringe, who lived formerly in the Town of Schop, and at the same time Preached in the Church of Igaraffu, which was afterwards left by the Dutch and posses'd by the Partugueses. In To Grande Preached one John Theodore Polheim. In Parayba were formerly two ministers, whilst the Town of frederica was as yet under the Dutch jup sicion, but after the revolt of the Fartiquefes the place was left by the Inhabitants.

and Henry Harman was the only Mini-fter in those Parts. In the Recief, Man- 1 6 4 3. rice's Town and the Circumjacent Forts. which contained about 400 Protestants, Dutch, French and English, were three Ministers, who Preach'd in the Dutch Tongue; Nicholas Vogel, Peter Ongena, and Peter Grib. Besides these there was a fourth called Jodocus After, who formerly had been Minister of the Cape of St. Auftin, but now was employed either aboard our Fleet, or upon any Land Expedition. The French Church here remained without a Minister, after the departure of Joachim Solaer, fo that they were forced to be contented with the reading of certain Chapters of the Bible, and Prayers every Sunday Morning. The English Minister was one Samuel Batchelour, who 1646 return'd likewise to England; about which time there were seven Dutch Ministers in the Dutch Brasil. Our Religious Worship was both in its Doctrine and Practice regulated exactly according to the Prescription of the Synod of Dort, and peculiar care was taken for the Education of the Youth, for which purpose the Catechism was every Sunday in the Afternoon explained both in the Recief and Maurice's Town. Four times in the Year the Holy Sacrament was Administred, those who defired to be partakers of it, being obliged to make their Confession, before the Church-Council, or the Ministers, who entred their Names in a Book; and if they came from abroad, published their Names to the Congregation; and in all other respects the Church Discipline was carefully obferved. The Church Council was com- Their

poled of fix Church-Wardens, belides Church the Minister; these met duly once a Council. Week, and if any business of moment happen'd, fuch as chofing a Minister, &c. they called the Deacons, who were likewise six in number, to their assistance. Out of the Deacons were every Month chosen two, who (besides their ordinary buliness) were to vilit the Sick and Wounded, and to provide for them if necessity required. They also took care of the Orphans, to have them instructed in reading and writing. In the same manner the other Churches were regulated, with this difference only, that the number of Church-Wardens and Deacons was less, in proportion to the number of their respective Congregations. Thus much of the Eccleliastical

and Travels to BRASII.

Belides those living Creatures we have given you a description of before, there are divers forts of Bees in Brafil, call'd · Eiruku's, which fettle upon the Tices in a most surprising manner. They are not unlike our Bees, but somewhat smaller, and fwarm chiefly among the Woods. The Brofilians distinguish them into 12 different kinds; viz. Amanakay-Miri, Amanakay-Veu, Aibu, Mumbuka, Pixuna, Urutuetra, Tubuna, Tuguba, Eiruku, Eixu, Krbiara and Kurupireira; the last of which are in no efteem among them.

The Bees Eirnku are the largest of all, and produce a very good Houcy, tho' it is not commonly used. They make their Combs within the hallowness of Trees, which the Brafil and draw from thence by the means of a hallow Pipe. The Bees called Fike and Kepy, are fmaller and of a blackish Colour; they make holes from without, in the Bark of the Trees, in the nature of Bee-hives; and the Comb within is all of white Wax; this is now counted the best thing, but is not gathered in the same quantity as the former; besides that these Bees sting very furiously. Bees Thanbuka, are likewise small, of a Yellowish Colour, they fix their Combs on the top of the highest Trees, and afford the best Honey, which is in great quantities transported from hence to Europe, where it is fold very cheap. It is little inferiour in goodness to the European Honey, and of a good substance, transparent and of an agreeable scent. It is accounted very Balfamick, corrects the sharp humours in the Intestines, and especially in the Kidneys, and provokes Urin. They make of this Honey Metheglin, which is very strong, and will keep a great while: You may also make Meath with this Honey without boiling; only mix'd with fome Spring-water and exposed to the weather.

Brafil produces likewife feveral forts of Balfams; the best of which is called by the Brafilians Kopaiba, from the Trees from whence it comes. Kopaiba is a very high wild Tree, with an Ash colour'd Bank, which spreads at the top, into many Branches. The Leaves are about half a Foot long, fometimes larger, fometimes leffer, which in the midft ob the Branches stand opposite to one another, but on the end like other Leaves. At the end of the great Branches are · abundance of lesser Sprouts full of Leaves, out of which comes forth the Bloffom, and afterwards Berries, not unlike . They are Green

at first, but as they Ripen turn Black o. and fweet. Within is a round held Stone, the Kernel of which is White, but Mealy, and not fit to be Later. The Berries ripen in Time, when the Brafilians fuck the Juice out of them, and throw away the Stone and Skin The Aties take great delight in this

The Oily and Odoriferous Ballam, in which this Tree abounds, drops every Full-Moon, provided you cut a flit thro' the Bark as deep as to the Pith, in fuch quantity, that in three Hours time you may gather about twelve Alergeln. But A No if that does not drop immediately, the 8th of flit is made up with Way; and within 30 m Fourteen Days after they are fure the Balfam will come in great quentity. This Tree does not grow so plantfully in the Caprainship of Pernanduko, as in the Isle Maranham, from whence this Balfam is transported into Europe. The Balfam is hot in the fecond degree, of a thick Oleaginous and Relinous substance It is very Stomachick, and a good remedy against the Colick, occasion'd by Cold, externally applied to the affected Parts; some few Drops taken inwardly ftrengthen the Bowels, and ftop the overflowing in Women, the loofeness and involuntary emission of Seed in Men; against which Distempers it likewise is used in Clysters or by Syringing. far concerning the fole Durch Brafil; we will now proceed to give you an account of what paffed during our abode

there. In the Year 1640, Mr. Henry Hand, New L one of the Directors of the West-India recors Company for the Chamber of Amfrer - fint to dam, and Mr. Duck Kodde Vander Bingh Bia A. (both Persons excellently well qualified for the management of the Dutch Brafil, and of great Experience in Affairs of Commerce) were at the request of the Council of XIX ient to Brafil, and arriving there on the 8th of August, the two preceeding Directors or Councellors, Matthias Van Keulen and John Guseling, religied their places to them, and with them the chief management of the Dutch Brasil, under the Government of John Man ice Count Naffarp.

At the time of their arrival in Erafil, Dutch there were under the Jurisdiction of the Brahl. States the following Captainships: Pernambuko, Itamarika (unto which belongs Goiana) Parayba, Rio Grande and Stara, being the Northern part of Brajil: The Southern part, which contained the Commentary Rabia, Ilous, Porto Jocuro, K. Spir.se.

643. ortu-Finele 74 -irani.

Sp.rito Santo, Rio Janeiro and St. Vincent, remained under the Portugueses, who Inhabited the Country as far as Rio de Plate. Not many Months after the Island of Maranhan was joined with the Dutch Brafil, but the charges we were fain to be at to defend it against the Portugueses, those of Para and the Natives, which over balancing the profit, the Company was likely to reap from thence, it was thought most expedient to quit the fame; which was done accordingly, in the Year 1644, or rather to confess the truth, by the Combination of the Portugueses, those of Grand Para and the Natives, we were forced to abandon it.

Before the arrival of those new Directors, a Fleet had been fent to the Babia, to Land some Men there, and to Destroy all with Fire and Sword; which after they had put in Execution, and returned to the Recesf, the same Fleet under Command of Admiral Fol and The Dutch Cornelius Lichthart, was by special Command from the Council of XIX in Holland ordered to the West-Indies, to lay in wait for the Spanish Plate Fleet of Terra fiuma and new Spain; but they returned without doing any thing, 1640 in December, having lost four or five Ships in this Voyage. Colonel Koin was much about the same time sent with a Body of Souldiers, into the Captainthe of Real, to bridle the Portigueles, by making a diversion in their own Territories; but those Troops being but indifferently supplied with Necessaries in an Enemies Country, and forced to undergo great fatigues; they were fo much weakned that it was thought adviscable to recall them out of Rio Real, and to affign them Quarters of refreshment in the Garrisons. Major Van Brande had worse Success than all the rest, for being sent abroad with a Party to fetch in some Cattle, was put to the Rout, and he himself taken Prisoner.

In the mean while that our whole Fleet was waiting for the Spanish Plate Fleet on the Coast of America, and we confequently were not in a condition to undertake any thing at Sea; Our Directors had all the reason in the world to fear, that the Portugueses would take this opportunity to revenge their loss, by destroying our Sugar-Mills, which made them leave no Stone unturn'd to cure the Dutch Brafil and its Inhabints, against the attempts of the Eney: and considering that a great part our Security depended on the good

inclinations of the Portugueses living among us, it was thought convenient, 164 to call an Assembly of the chiefest Portuguese Inhabitants of the three Captain-Ships of Pernambuko, Itamarika and Parayba, towards the latter end of August, to concert measures, how to defend their Sugar-Mills and Fields against the

Incursions of the Enemy. The most effectual means that could be pitched upon in this Assembly were, to provide their Forts with good Garrisons on the borders, and to secure the Sugar-Mills, by putting a certain number of Soldiers in or near them, for the fecurity of the adjacent Fields. This was put in Execution accordingly, and the Officers had strict charge to keep a watchful Eye upon the least motion of the Portugueses, notwithstanding which it had not the desired effect; because those Portugueses who lived at a considerable distance from us, and near the Enemies Frontiers, durst not give timely notice of their approach; besides that many among them having a constant hatred, to our Nation, did favour the Enterprises of those Parties that burnt the Sugar-Fields, and plundered the Mills, served them sometimes for Guides. and had their share in the Booty; which obliged our People to be at a constant Charge of a strong Guard to conduct their Goods, and defend them against any fudden attempts. Such an Incursion was not long after made by the Portuqueses into our Territories. For in November the Viceroy, the Marquis of Montelvano fent two Barges full of Soldiers, to burn our Sugar-Reeds in the Plains, which they effected, but durst not go too far, or attempt any thing against our Mills, for fear of the Soldiers quartered thereabouts; who could not prevent their burning in the Fields, as being done in the Night-time. The Dutch were the greatest losers by it, because they had generally the greatest fhare in those Fields and Mills; besides that the Portugueses spared those of their own Country-Men; all which brought a great damp upon Trade, every one being afraid to venture in any bufiness, where he might lofe all his Substance in one Night, and that perhaps by the Hand of a fingle Person; whereby the Revenues of the Company were greatly impaired, and their Charges increased, being forced to maintain 20 or 30 Soldiers for the Defence of any confiderable Plantation or Sugar-Mills; which prevented them from bringing a sufficient

mifariy m their delign upon the Spanish-Tlate-Il ct.

dered to

Body of Men into the Field, to make 1643. head against the Enemy. This was the State of the Dutch Brafil towards the latter end of 1640.

The 22d of Decemb. in the same Year, Mr. Adrian van Bullestraete, arrived at the Receif from Middeleburgh, in the Quality of Director of Biafil, so that now the Great Council being compleat, the best expedient to obviate all these difficulties, was judged to confift in our Fleet, Purfuant to this Resolution, all our Ships were ordered to the Bahia, to make the Enemy fensible, that we were in a a condition to be even with them, and thereby to facilitate the Negotiation that was in hand, for the furcealing of The Dutch burning on both sides. The Council of XIX having also sent express orders, to the Bahia. Cruife with fome Ships before Rio Janeiro, from whence the Spanish Ships used generally to return into Spain, about the Month of May or June, some of the biggest Ships were ordered that way to intercept if possible the Flora, the rest being left near the Bahra.

But whilst our Commissioners were treating with the Viceroy about the furceating, of burning and plundering, a certain Portuguese, Paulo de Kunha by Name, committed unheard-of Cruelties, with Muithering, Plundering and Burning, in the open Country, which made Count Manice Write the tollowing

Letter to the Viceroy.

Count Maurice's Letter to the Viceroy.

He Barbarities lately committed by Paulo d'Kunha, with Burning, Murthe Viceroy, thering, and Plendering in the open Country, gives me great Reason to fear, that your last obliging Letter was designed for a Compliment, without any Reality. The Confidence I had in your Excellencies Sincerity, made me recal our Ships and Forces from your Territories, to take away all means of Offence: But the long stay of our Deputies, affords great occasion of Suspecion, that your Intent.on is only to annuse us; which has obliged me to dispatch a Veffel to let them know, That in case the Treaty is not brought to a Conclusion, to return without delay; it being our Intention, that the fa.d Negotiation should not be continued longer. Your Excellency will there dismiss them, together with our Two Hostages, as we are resolved to send back to you Martin Feirera, left with us see from your Excellency, his Com-

Hereupon, by the Mediation of the ~ Clergy, living under our Jurisdiction, 16 but especially by the indefatigable Care of Dirk Kodde vander Burgh, who was fent thither for that purpose, the Treaty was brought to a happy Conclusion in February 1641. by Virtue of which, all Destructions by Burning and Plundering were to Surcease on both sides; which being published by Proclamation, the Portugueses were ordered to quit our Dominions; whereby we reapt this Advantage, that now we might turn all our Forces where we found it most expe-

In June 1641. Count Maurice and the The Tira Great Council received Advice of the against Ten Years Truce concluded betwixt the Burning States of Holland, and the King of Por-concluder tugal, with all the Articles thereunto belonging, which were published by Proclamation in all our Captainships, and all Acts of Hostilities ceased on both sides; the Dutch living in good Understanding with the Inhabitants of the Bahra, giving them all the Demonstrations of Friendthip, sufficient to convince the Portuguefes, that they had not the least reason to fear any Infraction on their fide.

The Great Council being willing to Improve this Interval of Peace for the Advancement of Traffick, and the Benefit of the Company, gave all imaginable Encouragement, (in proportion to the Circumstances of time and place) to all the Inhabitants of what Nation foever, for the Cultivating the Lands; which had this good effect, That the Masters of the Sugar-Mills rebuilt their Mills, and the Husbandmen betook themfelves with fo much eagerness to the Cultivating of their Sugar-Fields, that they borrow'd considerable Sums, upon a prospect of sure gain, which would over-pay their Debts; as without queftion it would have done in a short time, if by the Treachery of the Portugueses they had not been disappointed in their Hopes. The next thing to be taken in hand, was, to make fuch wholfome Laws as were thought most Expedient for the Establishment and Increase of Commerce both in the Receif and other Places, and to improve the Domains and other Revenues belonging to the Company during this time of Truce.

Trade then began to flourish apace fo that some time after the Truce, the Merchants and Factors fold more Com modities, than had ever been known ci ther before or fince. Many Million were qual for in a little time, the Mer

11

chants and Factors being contented to 16 6 4 3. Sell to those, who would Pay some Mooney in part, the' there were Buyers enough who would and could Buy for

ready Cash.

The Finances of the Company in Brafil were in fo good a State, by the extraordinary Care of the Great Council, that in 1640, and 1641. they bought confidetable quantities of Sugar upon the publick Account, which they fent to Itolland. In the Receif and Maurice's Town, we faw several goodly Structures creded by the Inhabitants, who lived in great Plenty and Magnificence, every one looking upon his Debts as fecure, and having a fair prospect to encrease 1.3 Riches, by the flourishing State of Commerce, and Improvement of the

But this was of no long continuance; for in the beginning of 1643 things began to appear with a quite different face. For the Magazines of the Company being exhausted by several Expeditions against Argola, Crc. and having received no Supplies in their flead out of Holland, as they used to do before, the Great Coun-Its d car, cil was obliged to make use of what was due to the Company, for the payment of the Garrisons, and other Officers, and consequently to force their Debtors

to prompt Payments.

For at the beginning of the Government of the new Directors, the Company had a confiderable Naval Force upon the Coast of Brasil, their Magazines were well provided with Provision and Ammunition, and they maintained a good number of Soldiers. The Great Council of the Dutch Brafil relying upon their Strength, did with Consent of Count Maur.ce, fend in 1641. several Fleets with Soldiers to Spirito Santo, Rio de Janeiro, the Isle of Maranhaon, Angola, St. Thomas, and other Places thereahouts, to attack the same, which succeeded according to Expectation; but their Magazines were greatly exhausted by those Expeditions. Besides this, the Merchants in Holland began to call upon their Servants and Factors for confiderable Sums of Money, in Return of what they had received from them; who being obliged to fend all the Money they could bring together from their Creditors, to their Matters in Holland, this occasioned great scarcity of ready Money, and con-Sequently no small Detriment in Trafick; which continuing thus from time to time, there arose such a general scarcity of Money, as is scarce to be imagined; many of the Masters of the Sugar-Mills, that had no ready Money to 1643. fatisfie their Debts at the appointed 🗸 time, being forced to take up Money upon Credit, and to pay 3 or 4 per Cent per Month; which reduced many of them to fuch an extremity in a little time, that they were neither able to pay the

Principal nor Interest. Upon the arrival of the three new TheReason.

Directors, or Members of the Great Council in 1640. viz. Henry Hamel, Kodde, and Bullestracte, they found, that the Inhabitants, but especially the Portugueles of the Dutch Brafil, by Buying of Sugar-Mille, and Plantations, as well as Negro's, and other Commodities, had run themselves much in Debt; having bought their Negro's, not only at 300 pieces of Eight per Head; but also given most extravagant Prices for all other forts of Commodities, and purchased whole Warehouses without making a just account how to be able to pay for them. This was done by the Portugueles in hopes of the good Success of those great Fleets they understood were Equipping in Spain to reduce Brasil under the King's Obedience, which they supposed would free them from their Debts; which the Factors not being aware of, and blinded with the prospect of vast Prosit, fold their Goods to the Portugueses without Reluctancy. But the defign of the Portugueses vanishing into Smoak for that time, they were forced to Pay; But new Supplies of all forts of Commodities being fent out of Holland, they bought on a-fresh, heaping Debts upon Debts; till failing in their Payments, their Credit began also to fail with rile Merchant, who now began to urge for Satisfaction of their Debts. For the Country Traders, being urged by the Factors and Merchants, who received those Commodities from their Correspondents in Holland, was obliged to call to an Account the Portugueses unto whom he had Sold the Goods. And because the Portugueses had not bought those Commodities from the Dutch, but with an Intention never to Pay for them, the Country Trader, who was obliged to Pay the Merchants in the Receif, faw himself reduced to Ruin, the Portugueses having not wherewithal to fatisfie their Debts.

Thus through the unwariness and mismanagement of those Factors, whom the Merchants in Holland had intrusted with Great their Goods, such a Confusion was intro-fusions. duced, as tended to the great Detriment Traffit *f*of

and Travels to BRASIL

I

of their Correspondents in Holland. All 1643. the Business at that time lay among the Lawyers, and in the Courts of Judicature, which confidering the Chargeableness of Law-Suits in Brasil, tended to their farther Ruin; for, when they had obtained Sentence and Execution against the Debtors, the greatest difficulty was, how and which way to lay the Execution; most of the Perengueses Suing for Protection from the Regency, which, if they could not obtain, they lived incogn to; especially those who had no Lands or Effects, or if they had, it was no case matter to find out where they were. Belides that, if the Creditors executed their Executions upon the Lands, they were forced to be the Buyers themselves, and to live in the Country to manage the Lands; a thing altogether inconvenient to the Merchants, who had other Business upon their Hands in the Recos. Such as were cast in Prison must be maintained there at the Charge of the Creditor; which in process of time, amounted to such a Sum, that they themselves were fain to sollicite the Releasement of their Debtors, and to make the best Composition with them they

Mortality

Besides these Inconveniences there have happened of late several others. ung the viz. A great Mortality of the Negro's Negro's. and Brasilians, by a certain infectious Distemper, incident to the Natives, called Bexigos, refembling our Small-Pox in Europe. Most of these Negroes were bought at the rate of 300 pieces of Eight, and confequently their lofs drew after it the Ruin of the Planters, who also graplained much of Vermin, and feveral Inundations that had done confiderable Damage to the Sugar-Fields. This Confusion in Traffick introduced no small Broils among the Inhabitants themselves, who, in case of Non-payment, threw one another in Prison without Mercy, and endeavoured to prevent one another by Clandestine Means, to get in their Debts before the rest; offering considerable Abatements and Rewards, to fuch as would underhand furrender or transport their Effects; and those Divisions were not a little fomented by fome illminded Persons, to the prejudice of the Government; many of those, who either by Unwariness or other Mismanagement lost the r Debts, laying the fault thereof at the Door of the Regency, and of the Courts of Justice, vainly ima-that what they had lost by their own that or want of Care, should

be made good by the publick Purfe; especially if it happened so, that the same 161 Persons were indebted to the Company, as well as private Perlons, there arise great Contests about the Preference.

The Debts of the Company did also increase every day, which at last amounted to some Millions: For the Directors, which before the year 1640. had the Management of Affairs in Brafil, did Sell most of the Confiscated Estates, Sugar-Mills, and Merchandices, as well as the Negro's bought on Account of the Company in Africk, upon Credit, to that their Books were filled with Debts, but their Cash empty of Money. The succeeding Members of the Great Council: Mi. Hamel, Bulleftract, and Kodde, did leave no Stone unturn'd to correct this Custom, and to Sell their Commodities for ready Money, or otherwise to Exchange them for Sugars, thereby to Ease the Company in the great Charge they were forced to be at in their several Expeditions; and it is certain; that in 1540, 1641, and 1642. they fent such vast Cargo's of Sugar to Holland, that the like had never been known before in Brafil. Notwithstanding which, by the vast numbers of Negro's that were Imported, after our Conquest of Angela, the Company fell more and more in Debt by reason their Debtors were very dilatory in their Payments. The Council of XIX. fent express Orders, to Remedy this Evil, by Selling the Negro's for ready Money, or Exchanging them for Sugar; but this could not be put in Practice, because there was no Body who would Buy upon those Conditions, so that the Price of the Negro's falling daily lower and lower, and these being a great Burthen to the Company, and subject to Distempers and Mortality, this order was fain to be Revoked, unless they would see the Negro-Trade dwin-

Labour. The Members of the Great Council did therefore take all imaginable Care, to call upon their Debtors exactly at the time of their Sugar-Harvest, and ordered their Officers in the Country to feize upon some of them on account of the Company.

dle away to nothing; for the Inhabitants being for the most part such as had

bestowed most of their Substance in

their Sugar-Mills, Plantations, and Negro's, they could not pay ready Money,

but were forced to deal upon Credit,

till they could resp the Benefit of their

164

From hence arose nothing but Lawsuits, Sentences, Executions, and Imprisonments: The Members of the Great Council thinking it not below their Station, to go sometimes in Person into the Country to promote the Payment of the Debts owing to the Company. But this had a contrary Effect; for the Merchants and Factors began to be extreamly dissatisfied, that the Company should feize upon the Sugars in the Mills, without letting them, who were Creditors as well as they, have their share in them. This occasioned not only Murmurings, but also Threats; and Complaints to the Council of XIX. where they mifreprefented thefe Transactions under the worst Colours they could, hoping thereby to deter the Officers of the Company from doing their Duty. The Great Council having taken the matter into mature Deliberation, and fearing, not without Reason, that in time it might occasion a general Discontent, they left no stone unturn'd to satisfie the Minds of the People, by finding out means to have their Debts satisfied. It was proposed by feveral Understanding Persons, that the Company should undertake to satisfie the Debts of private Persons, either by way of Phyment or Exchange, in lieu of which the Masters of the Sugar-Mills should forrender to the Company every year, the whole Product of these Milk. till they had fatisfied all their Debts; and to make the same the more effectual, for the general Benefit as well of the Company and Sugar-Mills, as the Merchants and Factors, it was agreed, That certain Articles should be agreed upon for that purpose; the greatest Advantage the Company pretended to reap by it, being, That they should have a fair opportunity of recovering some of their Debts, which were given over for lost. These Agreements were wonderfully pleasing to the Council of XIX. who in the year 1645. on the 16th of June, fent their Approbation of a second Agreement made with one George Home Pinto. (which indeed was of as great Confequence, as all the other Contracts together) to the Great Council, as follows:

Approbation of the Agreements.

Oncerming the Agreement by you (meaning the Conneil) on the 14th of December luft, made with George Homo Pines; we have had feveral Debates; which we find to have been brought to a Conclusion, with the previous Advice and Topyobation of the Connections of Justice, and of the First nances: so, that both in respect of the same, and of the great Benesis that is likely to Active theorety to the Company, we have thought sit to approve of the said Agreement; Recommending to you the Execution of it, with the same Zeal, as you have shown your Condust and Circumspection in the whole Management of these Contrasts.

That these Agreements were by all People, that had any Knowledge of those Affairs, looked upon as greatly for the Interest of the Company, is most Evident from hence, that several other Merchants, that were sensible of this Advantage, made Agreements with their Debtors, much upon the same Terms, as the Company had done; which that it may be put beyond all doubt, we will give you a Copy of one of those Agreements, from whence it will plainly appear, with how much Circumspection the Council proceeded in this matter, betwixt the Company, the Masters of the Sugar-Mills, and their Debtors.

The COPY of an Agreement.

R. Peter John Bas, and John van The C Ratsfield, Councellors of Justice of of an Brafil, by Special Commission from the West- green India Company, and John van Walbeeck, Affesfor of the Great Council, did appear before us on one fide; and Manuel Fernando Cruz, Sieur d'Ingenho Tapicura in behalf of himself and his Heirs; as also Benjamin de Pina, for 10600 Gilders; Isaac de Costa, for 13108; Joseph Abenacar, for 490; Symon de Vale, for 325; Gasper Francisco and David Brandoa, for 1133; Abraham de Tovaer, for 1640; John Parente, for 350; John Mendonça de Moeribeca, for 4350; James Gabay, for 1050; More de Leon, for 600; Balthasar de Fonseca, for 600; Simon Gomes de Lisboa, for 5910; Bartholomew Rodrigues, for 900; and Daniel Cardosa, for 910 Gilders; the whole amounting to 40526 Gilders, being all Creditors of the faid Manuel Fernando Cruz, and for the most part Debters to the Company, on the other side, who profess and declare, to have Agreed among themselves, that the beforementioned Manuel Fernando `Cruz, shall pay to the Cempany the full Sum of 6079 Gilders, VIZ. 19269 Gilders upon his own Account, being by him Owing to the faid Company, and the remaining Sum on the Account of his Creditors, which propertiemably to their respective Debes, to be discounsed for with him by ti Conspetty, squat the fullersing Condition

and Travels to BRASIL.

I. That the whole Debt is to be fatisfied in the Three next following Years, the first Payment to begin in January 1645, and if it happen, that in one Year a left Share be paid than in the other, the whole is to be made good in the last year.

II. That no Discounts shall be entred in the Books of the Company, till after the Payment of the due Preportion appointed for each respective term or time.

III. That the Creditor's of those with whom they have entred into Articles of Agreement, as well as the Debtors of the Company, finall not be discharged of their Debts in the Books of the Company, but in case of failure or delay of Payment, either of the whole Sum or part thereof, all the respective appointed times, shall stand engaged and answerable, each for his respective Debt, unless they give other Security to the Company; But those Creditors who have no Debts in the Books of the Company, shall have liberty to transfer other Debis, or else to receive their share in two years time, either by Assignments or in Negro's; but not in any Commodities imported, from abroad, or Sugar to be exported; provided nevertheless that the Articles of Agreement be fulfilled; or otherwise the Sum be put to their own Account immediately, in which case they are to allow 181. per Cent. and nevertheless be liable to see the Agreement put in Execution.

IV. Those who are entred into Articles of Agreement shall be obliged to Engage both their Body and Goods for the performance thereof, but especially to deliver an Invenious of their Personal Estates, confirmed by Bath; besides which, they are to give such Securities as shall be approved of by the Greek Council; with renouncing, the beneficium ordinis, divisionis & excusationis, as well for each respective Payment at the appointed times, as the vobole Sum in general.

V. These before-mentioned Securities are to be Persons well-qualified, of good Substance, not involved in Debts, but especially in the Companies; and shall be warranted by the Magistraics of their respective Places of Abode.

VI. Publick morrer is to be given to all Persons, who have any Bonds, Bills, or Accounts, or osher Engagements, relating to the Personal Estates (which shall be manned or critical) of such as are Entred into the force of the processing of the statements within the space of

Three Weeks they are to produce the same, or else to be excluded from the benefit there- 1643. of, till after the Expration of the timementuned and appointed in the said Agreement.

VII. That he, who has engaged himself in such an Agreement or Contract, shall not be permitted to Contract new Debis, unless with the Consent of the Great Council; otherwise the same to be word and null, of which publick notice shall be given. Neither shall be abalienate any Sugars by Land as remains, under the Penalty of Restitution to be made with sull Interest and Charges.

The Creditors shall be obliged to surrender and renounce all their Pretensions, Engagements and Actions to the Company; neither shall they lay any claim upon that score of precedence or otherwise.

Whenever it shall be judged requisite by the Great Council, to send a certar Person to the lingenho of any person entred in so such an Agreement, for the better security of their Debt, and the receiving and sending away the Sugar, allot d to the Company, he shall be obliged to find him with Victuals and Lodgings in his lingenho; but the Company shall pay him for his Paint.

Pursuant to which, the before named Manuel Fernando Cruz, with the Advice and Consent of his before-mentioned Creditors, has obliged himself in general, and by these Presents, Obliges and Engages his Person and Estate, both Real and Personal, without any Reservation or Exception; but especially the before-named Ingenho Tapicura, with all its Appurtenances, according to the Inventory thereunto affixed and confirmed by Oath; which Ingenho Tapicura, he declares to be free from any pre-engagements, with all the Grounds, Sugar-Fields, Passurages, Woods, and other things thereunto belonging; viz. Eight Brass Calderns, Ten Tachoos and Ten Parvos; besides several other Copper Vessels belonging to the Said Ingenho; Twenty Slaves, belonging to the Said Ingenho, and Manuel Fernando Cruz, his House, and Sixty Oxen. And for the better performance of this Agreenent, Senhor John de Mendole dwelling at Moeribeca, and Manuel Gomes de Lisboa living in Moquiaxe, have, after Certificates obtained from the Magistrates of their respective dwelling places, engaged thomselves, and do by these Presents engage shemfelves as Securities of the whole Debt, and as Debters for each and every part thereof, promising to Indemnise the Confpany of all Actions, Suiss, or other

Mr. John Nieuhoff's Voyages

Pretensions which may be made against them

1643. on the account of any other Creditors of the faid Manuel Fernando Cruz, not mentioned or engaged in this Agreement; as likewife, that no Sugar shall be surrep-Ditioufly conveyed away or abalienated: That in case of non Payment, the Company shall be hereby fully empowered to recover their Damages with Interest and Charges, upon their l'ersons and Estates; they renouncing by thefe Presents all Exceptions, Ordinis, divisionis & excusationis, as likewise all other pretensions of Privileges tending to the Invalidity of this Contract. The befor e-named Creditors also, in general, and every one of them in particular, declare that they have given in a true account of all their respective pretensions upon the said Manuel Fernando Cruz, neither that they do demand any other Summer Sums of him, but what have been specified there under their respective names; promising to be well fatisfied with what has been Stipulated, and, of put in Execution accordingly, to renounce all Actions, or private Engagements, Discontents or Preference, in favour of the Company; and that in case of non Payment they will be obliged to make good and restore to the Said Company, not only each particular Summ paid at certain limitted rimes, but also the whole, in the same manner, as if the faid agreement had never been made betwixt them; leaving it to the difcretion of the Company, whether they will lay their Actions against Manuel Fernando Cruz and his Securities, or against them-Selves and their Estates; under the condition, they were in before the Conclusion of this Agreement; the benefit of Actionem cessam being allowed them against the Said Cruz and his Securities, for the recovery of their just Debts. In witness and confirmation of which we have granted these our Letters, as usual in such cases, sealed with the ordinary Seal of the Court of Justice. and signed by the Secretary of the Council. Translated in the Receif 23. September 1644.

> In the same manner all the other Contracts were made and penn'd; the Contents of which amounted in the whole to 2125807 Gilders, which were due from the Farmers to the Masters of the Sugar-Mills, and from those again to the Company.

The chief, if not the only reason. why these Agreements were resolved theje A- upon, was, (as we faid before) the ingreements tolerable Vexations and Exactions put mercentude. upon the Masters of the Sugar-Mills by their Creditors, who, unless, these Ma-

fters paid them at the Rate of 2 or 3 per Cent. Interest per Month, made imme- 16 43. diate Seizure of their Negroes, Oxen, Coppers, and other Necessaries belonging to the Sugar-Mills; fo, that the Masters of these Sugar-Mills being reduced to a necessity of paying such exorbitant Exactions, or else to see themselves entirely ruined, began to defend their Plantations and Mills by force, fo that things feemed to tend at that time to a general Insurrection, if the same had not been prevented, by entring into those Contracts; by which means the Masters of the Sugar-Mills, being freed from the Oppressions of their Creditors, and in lieu thereof now become Debtors to the Company, and time given them to employ their Mills for the Payment of their Debts, at certain limited times, and that at the Rate of 1 per Cent. Interest per Month only, all Pretensions and Occasions of a Revolt were thereby removed at least for that time; the first term of Payment being fet out for a considerable time.

To make this the more Evident, thefe following Heads deserve our particular Observation: That the Company and the Merchants, being Creditors of the Masters of the Sugar-Mills, endeavouring at the same time to force them to the Payment of their Debts, by Executions. This occasioned from the year 1647. to the time of the making of those Contracts, such a Confusion, as must needs have tended to the total Destruction of the Sugar-Mills, and consequently of the Merchants and Company; which induced them to apply themselves to the Great Council, to find out some mont, by way of Discount, or otherwise, to put these Debts into the Company's Hands.

The Councellors of Justice did not at first agree in all Points to these Propofals, but at their meeting on the 12th of August 1644. being better convinced of the matter, and that the Company was fufficiently fecured and benefitted thereby, the next following day did not only approve of the same, but also were of Opinion, That fome things might be rather mitigated for the Advantage of the Masters of Mills and their Creditors. than not to relieve them at this juncture; so that the Conditions were the 10th of Nevember 1644. agreed unto with the Confent of the Councellors of the Count of Instice and the Finances.

tor whis

and Travels to BR ASIL:

Pursuant to these, the Great Council took care that publick notice should be given of these Agreements made betwixt the Company, and certain private Perfons, by which every one was forewarned not to Sell any thing upon Credit to them without the Confent of the Great Council; and their Creditors summoned to make good their Debts within three Weekstime, or else to be excluded from the Benefit of the Contract, till after the time therein limitted was expired. From all which it is fufficiently demonstrable, with how little appearance of Truth some have attempted to infinuate, that these Contracts were prejudicial to the Company, and had given no small occasion to the ensuing Revolt of the Portugues, when it is beyond all queftion, from what has been faid before, that these were the only means to prevent those Calamities, wherewith the Masters of the Sugar-Mills, and the Farmers, or Country Planters, were overwhelmed all that time, who were forced to let their Mills flund flill, and leave the Ground Uncultivated; All which, as it tended to the utter Destruction of the Sugar-Mills, fo the Company sustained an irreparable loss, viz. 38 l. per Cent. yearly in Brafil, and 37 1. per Cent. in Holland, which being 75 1. per Cent. did altogether arise from the use of the Sugar-Mills.

Belides this there were not a few of those Merchants that were Creditors of the Sugar-Mills, that were confiderably indebted to the Company, who pleading infolvency, by reason of the non-payment of their Debtors, the Company would have been confiderable lofers by them, unless by this way of discounting they had found means to recover those desperate Debts. All which moved the Great Council to make a vertue of neceffity, and with the Advice of the Mafters of the Sugar-Mills and their Creditors, and the Approbation of the Council of XIX, to enter upon those Articles; which could not be in any wife detrimental to the Company: tho' fome malicious Persons have objected against them, that (supposing there had been no Revolt) these Masters would not in 20 Years, nay, perhaps never have been in a Condition, to wrong the Company what they had laid out upon their Account; when it is sufficiently known that the Great Council never one Farthing of ready Money for then on the account of the Company; befices that for the fatisfaction of the Com-.Val. 11.

pany 25 Sugar-Mills were engaged, which one with another, affording from 230 to ! 250 Chests of Sugar Yearly, if the Company had drawn but 140 or 113 Chefts from each, the same would ha e amounted to 420000 Gilders; from whence it is evident, that, not o include the Sugar-Mills, their Co, pers, Oxen, and other Instruments thereunto belonging, the Summ of 2125816 Gilders, being the Total Summ of the Debt owing to the Company by Vertue of these Contracts, might have been fatisfied without much hazard; the Portuguese Masters of the Sugar-Mills, being by this expedient, left in the quiet possession of their Mills, and eased from the oppressions of their Creditors, and our hopes were not a little increased by the industry of the Inhabitants of the Country, who finding themselves now at ease applied themfelves with fo much affiduity to the improvement of their Plantations, for the better satisfying of their Debts, that in 1645 there was fuch a fair prospect of a plentiful Harvest of Sugar, as had not been known in many Years before.

But it feems as if the Portugueses out R. 21 of an in-born hatred to our Nation, the who had conquered them, were refol of il ved not to rest satisfied, till by under-tugi hand Practices and Plots they had undermined our Government. Add to this that many of them having involved themselves over Head and Ears in Debt, and sceing no way to satisfie then Creditors, were become desperate, and more forward to run the hazard of an open Revolt (in hopes of affiftance from Port. cal) than to undergo the unavoidable necessities of Poverty; which made fome of them frankly tell our People afterwards, that in case they were disappointed in their hopes of Succours from the Bahia, they would feek for aid in Spain or Turkey.

Towards the latter end of the Year 1642, there were rumours foread abroad of a Plot contrived by the Portugueses against the State, when they were disarmed, and their Arms brought into the Magazines, which however they got again under some pretence or other atterwards, they living very quietly among us, for sear, as I suppose, of our Garrisons, and that they were not then sufficiently assume that they were not then sufficiently assume of Succours from the Babia. But it will not be amis to trace

the true Origin of this Revolt.

luspicion

The 13th Decemb. 1642, one John Fernandes Vierra, Alderman of Maurice's Town, appear'd in the Great Council, Count Maurice being present, where he told them, that he had been informed by certain Jews, how he and his Father-in-Law Beringel were suspected in Holland, of having fent Letters by a Son of the said Beringel to the King of Portugal, tending to the detriment of the State. He did not deny to have fent a Letter by the faid Person to the King of Portugal, but containing no more than a recommendation of the faid Beringel's Person, to help him to fome Employment under the King: This he offered to prove by his Copy, which being produced there was found nothing material in it, but a Congratulation to the King upon his Accession to the Crown, and a recommendation of the faid Beringel; Vierra further proposed, that he thought it absolutely necessary for the safety of the Estate, to have the Portuguejes disarmed, as likewise the Captains de Campo, with those under their Jurisdiction, the Negroes, Brasilians, Mulatts and Mamalukes.

There was also a Letter sent by the Council of XIX, Dated 1. June, 1642. to Count Maurice, containing in sub-stance, that one John Van North who had served for 14 Months in the Quality of a Cadee in Brasil, had declared to them at Amsterdam, that he had been a Servant in a Sugar-Mill, belonging to John Fernandes Vierra, where after a stay of two Months, he was entreated by Francisco Beringel Labrador, to go with his Son Antonio Dandrado Beringel, as an Interpreter to Holland, and from thence to Portugal; which upon great Promises he accepted of, and they set Sail on board the Ship called the Love from Brasil for Zeeland, and afterwards from Ulissimen went to Lisbon. He said, That this Antonio Dandrado Beringel, after a familiar Conversation of three Weeks, had told him that he was fent with a Letter Sign'd by John Fernandes Vieira, Francisco Beringel, Bernardin Karvailho, John Biserro and Lewis Bras Biserro, in which they gave to understand to the King of Portugal, that they were well provided with Men, Money and Arms, for the reducing Brafit under his Obedience. The Council added, that the King of Portugal had made the faid Beringel a Captain for this piece of 1 Service, and that therefore they defired Count Maurice and the Great Council

fensible what an aversion the Portugueses did bear to the Dutch.

At the meeting of the Great Council L of Brasil 16. February, 1643. Count Is encrea Maurice affured them, that he had re- fed by Les ceived Intelligence, that some of the ters from chiefest of the Portugueses had resolved to Surprise our Garrisons in the Country, at Moribeca, St. Anthony, and some other places, and to put them to the Sword, which was to be put in Execution upon one of their Saints Days, when they used to meet in considerable Numbers. Those who had the chief management of this Affair, had their dwelling places in the Vargea, who had proposed to surprise likewise the Receif, not questioning that if they could make themselves Masters of it, the other Garrisons in the Country, would be easily reduced, and confequently the Company not able to fubfift long in Brafil, without Soldiers and

Hereupon it was taken into delibera- una getion, whether twere best to secure the bilaton heads of this Rebellion immediately, or taken to delay it till a more convenient time, thereupon for fear of allarming the whole Country by their Imprisonment: The last was resolved upon, because they did not

think themselves as yet sufficiently asfured of their Designs, and did not question, but that by the secret Intelli-

gence Count Maurice was to receive of

was however judged adviseable to draw

the Garrisons out of the Country into the

Receif, which was strengthened with

new Pallisadoes, and the old Wooden

dered with feveral great Chaloops, the

first on the Sea-side, the others in the

River, to defend the Avenues of the

Receif with their Cannon. There were

likewise divers Letters sent by private

Persons, some without Names, to Count

Maurice and the Great Council, con-

firming the Traiterous deligns of the

Portugueses; among others one Mr. Van

Els sent a Letter to Count Maurice,

Dated at Serinhaim, the 20th of March, 1643. importing, That he had it from

fure hands, that a certain Mular, of the

Company of Augustin Hardese being

asked by certain Inhabitants of that

Fregesie, what business they had there-

abouts, had told them, That they had

been to carry Letters to some rarious

living near the Receif, adding that ig

j

twist them and the Inhabitants of Bonas Aires.

VI. In what Condition their Places were thefeabouts; of all which they were to give the best account they were able to get, after their return to the Great Council; They were also charged by word of Mouth, to make d ligent Enquiry, who were the Persons, that underhand encouraged the so much feared Revolt of the Portugueses in the Dutch Brasil, and what A.d or Affistance they were to have from them; and to defire the Governour, not to permit for the future, that such of the Dutch Soldiers as Deserted out of the Receif, and went by Land to the Bahia, might from thence he transforted into Portugal, but be stope, and fent back to the Receif.

These Envoys arrived safely the 8th of February 1644. in the Bubia, and dropt their Anchor towards the Evening near Then arri- the City of St. Salvador, and the Castle Salvador, of St. Antonio, where two Officers came on Board them, to enquire from whence they came, and by whom, and to whom they were sent, in order to give an Account thereof to the Governor Amonio Telles da Sylva. The next following day they were Complimented in the Name of the Governor, by Major Domingo Delgade, and Captain Parid Ventura, who told them, That he intended to fend his Chaloop with the first opportunity to fetch them ashore. About three a clock in the Atternoon, the same Officers with three or four more, came with the Chaloop to fetch them; and they were no fooner landed, but found feveral Horses ready for them to mount upon, which Tey did, and were conducted up a high Hill, all over covered with Spectators, to the Governor's Palace. In the outward Hall was a strong guard of Soldiers; in the fecond, feveral Enfigns and other inferiour Officers; in the third Apartment they met with nothing but Captains and Lieutenants; and in the fourth with Colonels, General Officers, some Clergymen, and the Governor himfelt; who after having received them at the Door, desired them to Sit down next to him, upon Chairs fet for that purpose. The Envoys then begun their Harangue, in which they told him, That they were extreamly glad to find him in good Health at this time, when they were fent by the Great Council of the Dutch Brafil, to affure him of their good Incliand Friendship with him, and ot ons, to maintain a good Correspon-

their hearty Wishes for his Majesty's his own, and the Governments Prosperity; to preserve which, they were ready to contribute all what lay in their power. Then they told him, That they had several Things to propose to him, when he should think convenient to receive them; The rest of the Discourse run upon mutualCompliments and News. After which, the Envoys were again accompanied by the Governour to the Door of the Apartment, where he ordered the beforementioned Domingo Delgades and David Ventura, to conduct them to a certain large House finely furnished. in Bishops-street, and to Entertain them at his Charge; which, tho' the Envoys refused, alledging it to be contrary to the Intentions of their Masters, yet were they forced to accept of the same, and were very magnificently Entertained at Supper.

The next Morning about 11 a Clock Their they went again to the Palace, and after one A. having defired a fecond Audience, were lunce. received in the fame manner as before. Every one being ordered to withdraw, belides the Secretary of the Governor, the Envoys made their Propositions to the laft, which they delivered to him in Writing in Portuguese, recommending the fame to his Confideration, as tending towards the maintaining a good and firm Correspondency betwixt them. which the Governor gave this general Answer; That he should always endeavour to Cultivate a good Under standing and Correspondency with us, pursuant to the strict and resterated Orders he had received for that purpose from the King his Master. And that concerning the Propositions made by them to him, he would affemble his Council of War and Justice, and afterwards Impart to them his Answer. Then they were by Domingo Delgados reconducted to his own House, where they were very well Entertained the same Day at Dinner, and the next by the Governor himfelf.

The 17th, They had another Audi-Their thir ence from the Governor, who told them Audience in very obliging Terms; That he had co. filted the matter with his Council, and could give them no other Answer, but what was contained in this Letter, which he delivered to them, and told them the Contents thereof; whereupon our Envoys told him, That fince thereby a Door was left open for Rogues and Vagabonds, they hoped he would at least order that the Names of fuch as fled to the Bahra, might be taken notice of, that the Great Council of the Dutch Brafil, might not

N

Mr. John Nieuhoff's Voyages

remain quite unsatisfied, whither they of 3. were fled; which he promised to do. After some further Compliments, and mutual Assurance of Friendship, they

parted for this time.

The 22d, They took their Leave from the Bishop, and several other Perfons of Note, unto whom they owed any Obligations, and last of all from the Governor himself, being conducted thither by many Persons of Quality and Officers; They return'd him Thanks for the Civilities and Respect he had been pleased to shew them; wishing both him and his Fortuguese Majesty a long and happy Reign, and Victory against the Castilians. The Governor returned their Compliments and Conducted them out of the Room, ordering several Negro's to attend them down the Precipice of the Hill, upon which the City is built, with Chairs; but the Envoy's choosing rather to go on foot, they were in the same Chaloop they came in ashore, carried back under the found of Musick, on Board their Yacht. The Portuguese Officers, after having taken their Leave, returned turn to the to the City, and ours made the best of their way to the Receif, where they arrived fafely not long after.

Receif.

The Letter delivered to them by the Governor, was as follows.

The Governours Letter.

The Governors Letter.

Ilbert de Wit Councellor of your Cours I of Justice, and Dirk Hoogstraten Commander in Chief on the Cape of St. Auftin, your Lordships Deputies, whom I recerved according to their Quality and Merits, have delivered your Letter to me, and proposed such other Matters, as they were impowered to Treat with me about. Tho' I endeavour nothing fo much, as to cultivate and maintain in the strictest manner our neighbourly good Correspondency, yet am I constrained at this time frankly to Acknowledge, That it is not in my Power to give your Lordships any more Satisfactory Answer than this; in hopes, that the many Proofs you have had of my fincere Inclinations, will ferve as a Plea with your Lordships, to afsure you, That I shall always be ready in all Points depending on my Government, to give the same Proofs both of Obedience and Fidelity to the King my Master, whose Plea-sure is, That the Truce should be observed inviolably; and of my sincere Intentions, and the Esteem I have for your Lordships Friendship, desiring nothing more, than that you furnish me with an opportunity of gi-

ving real Demonstrations of my readiness to ferve you; whom I recommend to the Pritellion of God Almighty.

Bahia, Feb. 14. 1645.

Signed,

Antonio Telles da Silva.

Concerning the fix Points mentioned in their secret Instructions, they made the following Report to the Great Council.

I. THAT the Portuguele Forces in Report of those Parts, were generally e-the Enveys steemed to be less or more between 3000 Countil. and 4000 Men, without the Brafilians and Negroes. But that upon the most exact enquiry they could make, they had found them to be not above 3000, including the Brasilians and Negro's, and their Garrisons both to the North and South, as far as Rio laneiro. Thefe consisted of five Regiments; viz. three of Portugueles, under the Colonels John Darauge, Martin Soares and N. N. the fourth of Brasilians under a Brasilian Colonel, Antonio Philippo Camarao; and the fifth of Negro's, under the Command of a Neger Henricio Dyas. These two last Regiments, amounting both not to above 300 Men, were divided in the Garrisons to the North, about Rio Real, on our Frontiers; they being the Journ and off-casts of all their Territories, and confequently not to be quartered near the Capital City, there having of late been some broils among them in the Garrisons. whither Officers were dispatch'd, to compose them. The three Portuguele Regiments confisting of about 2700 Men, kept Garrifon in St. Salvador, and the circumjacent Forts, except two Companies, one of williag was quartered about Rio Real, the other in the Island Morro St. Paulo; and about 150 more, which were disposed in the Captainships of Os Ilheos Porto Seguro and Spirito Sancto; so that the Garrisons of St. Salvador and the circumfacent Forts, consisted in at least 2300, each Company consisting of 100 Men less or more; all chosen Men and well Cloathed; four Companies mounted the Guard every Night; one at the Palace, at each of the two Gates one; and the fourth in the Water-forts without the City.

II. Of their Naval strength they gave a very slender account, being more considerable in Number than Force, as s only on 50 Small Vessels and Taches the least sitted for War, moither " observe the least show of preparate

and Travels to BRASIL

In December, 1643. Don Michael de Krasto, Don Rastian Manduba de Sonho, and Don Amonio Ferdinandes, three Ambaffadours from the Count Sonbo, in Angola, arrived in the Receif, in the Ship called the Arms of Dort; They had but one Servant each, but brought along with them feveral Negroes with Golden Collars, as a Present to Count Maurice, belides a great number of other Negroes for the Company.

dors from admitted to Audi-

Being admitted to Audience by Count Maurice and the Great Council, they the Count defired in the Name of their Mafter, not to fend any Assistance to the King of Congo, whom they feared would attack them before long, notwithstanding they were at that time both engaged in a War against the Portugueses; They received for Answer, That the Council would write to Mr. Niewland, their Director there, to interpose his Authority and Mediation, in order to maintain a good Correspondency, and remove all Occafion of Contest betwixt the King of Congo, and their Master, they being both Confederates of the States: The faid Earl sent likewise a Letter to Count Maurice, in which he defired leave to buy a Chair, a Cloak, some Ensigns of War, some Apparel, and such like things. The Great Council writ also a Letter, as well to the King of Congo as to the Count of Sonho, exhorting them to Peace, and fent them the following Prefents in the Name of the Company.

To the KING:

- Iong Black Velvet Cloak, with Silver Galloons.

A Scarf edged with Silver Lace. A Velvet Coat.

And a Castor-Hatt with a Silver Hathand.

To the Count :

A Red Velvet Elbow-Chair, with Gold Fringes.

A large Velvet Cloak, with Gold and Silver Galloons.

A Scarf, with a Gold and Silver Lace. fract return'd the 26th to the Receif. A Velvet Coat.

And a Castor-Hatt with a Gold and Silver Hatband.

They were entertained with all imaginable Civility during their stay here:
The were very Skillful in playing with
the Beck-Sword; in the management of
which they made most terrible Postures

and Faces. They understood Laun very well, and made feveral learned Ha- 16. rangues in the same.

The 13th of October 1644. a certain Jew, called Gaspar Francisco de Kunha, Iresh ! with two others of the Chief of the picton fame Fraternity, gave notice to the Great Council, that they had been credibly informed by some Jews, who conversed and kept frequent Correspondence in the Country, That the Portugueses were Plotting against the Dutch Brasil, telling the Council the Reasons upon which they founded this Suspicion. The Council, after having returned Thanks to these Elders for their Care, resolved to leave no Stone unturned to discover the Designs of the Portugueses; and having received certain Intelligence, that they expected fome Arms and Ammunition to be brought them by Sea, they ordered the 12th of October 1644. the Yacht called Niewhouse, with a Galliot, and a Challoop, to Cruife along the Coast of Durch Brafil, to observe what Vessels did approach the Shore.

The 11th of May 1644. Count Manrice left the Re cif in order to his return to Holland, after he had been 8 years Governor of the Duich Brasil. All the Citizens and chief Inhabitants, both of the Receif and Murice's Town, appeared in Arms, making a Lane from the Old Town to the Water-gate, from whom, as he pass'd by, he took his leave with all imaginable Demonstrations of Kindness: At the Gate he mounted on Horseback, and being accompanied by the Great Council, the Countellors of Justice, and all the Military Officers, as far as Olinda, he there once more took his leave of them in particular, the Sieur Bullestraet remaining only with him, being Deputed by the Regency to Conduct him on Board the Ships delign'd for his Transportation. They did not set Sail from the Red-Land till the 22d of May, with a Fleet of 13 Ships, on board of which were a good number of Soldiers, leaving only 18 Companies for the Defence of the Duich Brasil. Mr. Bulle-

On the 22d of April, not long before the Departure of Count Maurice, the Commission from the Governors of the Well-India Company, according to a Resolution taken at their Meeting the first of July 1642. concerning the Government of Dutch Brasil, and dated the 22d of May 1643. was read in the Great Council, by which the Members

thereof were to have the Administration 6 = 3. of the Government till further Orders. Accordingly Count Maurice having appointed a Day to Invest them with the Administration of the Government, he ordered (with the Confent of the faid Council) an Assembly to be called on the 5th of May of the Counsellors of Inflice, of the Magistrates, the Ecclefinitical Council and Ministers of Manrice's Town; of the Commanders in Chief both by Sea and Land, the chief Officers of the Company, the Officers of the Militia, and the Chief Men among the Jews.

All these being at the appointed time met in the great Hall of the Stadthur, he told them, That fince their High and Mightinesses the States, his Highness the Prince of Orange, and the Council of XIX. had been pleafed to Grant him I cave, after a fray of 8 years among

them, in the Quality of Governor of the D wir Brafil, to return into Holland, he had no me called them together, to return them Thanks, for the many Services, each in his Station, had done to the Company; as linewife for the Obedience, Fidelity, and Respect, they had always shewn to his Perion; tening them, That from this Minute he relign'd the Government into the Hands of the Great Council, Requing and Deliting them, in the Name of the States, the Prince of Orange, and the Cruncil of XIX. to shew them the finie Obedience, Fidelity and Respect, they had done before; whereupon Count Marice having Congratulited the Council, and the rest there prefert done the fame, he took his leave of them in the Hall, and immediately after in the Council Chamber, of the Members of the Great Council, giving them melt hearty Thanks for their faithtul Counfel and Affiftance upon all Occasions, and for the Respect and Deference they had always shewn to his Perlakes lis fon; telling them, That fince this would be the last time of his appearing in their Affembly, he had drawn up a Memorial, which might ferve them as a Guide, for the better Administration of the Government; and that, if they thought it convenient, he should be ready to Discourse ' with them, and enlarge further upon that Subject. The Members of the Great Council returned him their un-

> feigned Thanks, withing him a happy Voyage, and good Success in all his Un-

dertakings, and recommended them-

felves and the whole Dutch Brafil to his Gare hereafter. Before the breaking up

of the Assembly, it was debated in the presence of Count Maurice, which of the Members should have the Precedency there as President, or whether the same thould be taken by turns, the fame being not determined in their Commission: After several Arguments pro and con, it was agreed, That things should remain in respect of this Point, in the same Condition, as had been usual before, in the absence of Count Maurice, viz. for every one to keep his Rank without any Priority till further Orders from the Council of XIX. to wit ; first Mr. Dirk Hamel, then Mr. Bullestraete, Mr. Kodde Vander

Burgh, Oc.

The next thing the Great Council took in hand, was to inquire more narrowly into the Designs of the Portuguese against the Government; to effect which, it was refolved in January 1644. to fend Gilbert de Wit, Councellor of the Court of Justice, and Captain Dirk Hoogstrate, then Commander in Chief in the Cape of St. Austin, to Antonio Telles de Sylva, then Governor of the Babia, with the following Instructions, dated the 15th of the same month; to Compliment the Governor (after the delivery of their Credentials) in the Name of the Great Council, with a fincere Promise and Affurance of Friendship, and good neighbourly Correspondency. After this. they were to represent to him, that many of the Subjects of the Dutch Brafil, after having contracted considerable. Debts there, both with the Company, and other Inhabitants, did retire into the Bahia; wherefore they defired, that for the promoting of Justice, they ward the either detain those Bankrupts in Prison , the Por or at least give timely notice of their guest coming thither, to the Dutch Govern-Brain ment, whereby their Subjects might be there enabled to profecute them at Law: But #1" their real Errant was to be instructed underhand in the following Points.

I. That Forces the Portugueses had at that time in the Bahia, and the other Southern Provinces.

- 11. What number of Ships.
- III. What number of Ships were expected there out of Portugal.
- IV. How the Negro's Trade free world. and from what Places they were breight thither.

V. Whether there war any Co.

leave.

and Travels to BRASII.

that way; their aim being only, to protect their Ships bound to the Portuguese Coasts, against the insults of the Castilian and Denmark Privateers, and the Tutkish Rovers. It was as they faid upon this account, that, during our stay there, two stout Portuguese Ships fit for War, Manned with 600 Men, and provided with good store of Ammunition, arrived in the Bahia; under the Command of Salvador Correada-sa, with Orders, to go directly from thence to Rio de Janeiro, and to fetch all Ships ready loaden from thence to the Bahia, from whence they were to Convoy these as well as such other Vessels as they found ready there, to the Coast of Portugal; for which reason also all the Vessel, which otherwise used to go according to their own conveniency, were ordered to stay for the faid Convoy. That News was bought by the faid imo Ships, that the King of Portugal had forbid the building of Caravels and other such like small Vessels, instead of which they were to build Ships of better defence, against the Insults of an Inemy at Sea. From whence the Envoys faid, they supposed would arise this inconveniency to the Portugueses, that the Freights and Convoy Money paid for the Commodities transpo ted from Portugal to the Portuguese Brail, and for the Sugar transported from thence to Portugal, must encrease, and confequently would not be able to fell the last at the same price the Dutch did, considering especially that they must be considerable losers both in their Interest and time, where they were forced to tarry for their Convoys, whereas they used for merly to make the best of their way home.

III. They had observed, that, tho' the and hoad tants of the Bahia expected the coming of those Ships, at their first arrival, yet several Vessels arrived there both from the Portuguese Coast and the Islands, before the reft.

IV. They concluded the Negro-Trade to be very inconsiderable there, they having scarce ever heard it as much as mentioned; but because the price of a good Negro did not at that time amount to above 300 Gilders, they supposed them pretty well stockt with them; those which were of late Bought there Arder. They further reported, That when on Wednesday being the 8th of February, they entred the Bahia, they met two Ships of good Bulk, carrying about 20 Guns each, and well Mann'd, going out, which (upon enmere told them to be bound for Portogall but could not learn to what Harbour

there, which together with some other Rea Sons, made them suspect, that they were intended another way, in which we found our selves not deceived; when on the 22d of February, just as they were ready for their Departure, they understood from the Mulat Juliana, and of two Monks, that thefe two Ships were fent with Men to Angola, for the Security of the Inhabitants of Masagao, who being but small in number, were forely afraid to be fet upon by the Negro's of the Country, and having defired the Governors Assistance, who ordered those Ships, and the Men, to go in the Night time, and to endeavour to reach Masagao unperceived by any, and without committing any Hostilities against the Dutch; Whether and how far this might be true, time would shew; but they had all the reason in the World to believe, that it was upon their Score of concealing this Expedition, as well as some other Matters from them, that immediately after their arrival, (though they were not informed of it till near the time of their departure) That no Dutch or Germans should appear, as much as in the fight of the Envoys, much less Discourse with them; which was observed with that strictness, that they really imagined there had been no Dutch there, but found afterwards that they had been all (how many they knew not) carried on Board the Portuguele Vessels, to prevent their keeping any Corre-Spondency with us and our Ships Crew; to which end also, fix Centinels were placed in two Boats lying near our Yacht, during the time of our stay here; under pretence of protesting our Vessel, but in effect to prevent any Body from coming on Board us, pursuant to the Orders of the Governor.

V. That the Inhabitants of the Bahia, and the other Portuguese Captainships, had not the least Commerce at this time with those of Bonas Aires. That immediately after the Revolution in Portugal, those of the Bahia had attempted to go thither, but were treated as Enemies by them; so that it was their Opinion, the place would either foon, or was already totally ruin'd for want of Commerce; all their Livelihood confifting in the traffick from the Coast of Brail thether; which falling away no Solver could be transported thither from Peru; it being not probable that the Spaniards would being brought thither from Cape Verde and vin the hazard of passing along an Enemy's Coast, when they had a safer way to tranfort their Treasures from the West-

> VI. That they could not get the leaft certain Information concerning the Designs carried on betweet some of the Inhabitants

Mr. John Nieuhoff's Voyages

Not the Bahia, and those of the Dutch-4 3. Brasil, against the last; besides which they gave them a general relation of what they had been able to learn, concerning the Condition of the City of St. Salvador, its Inhabitants, Governour, and some other matters relating to the Country thei cabouts.

Por-

The rumours which in 1640 were volt of noised about concerning the treacherous defigns of the Portuguese Inhabitants against us, being for that time vanished into Smoak, the fame was revived, and their designs began to be discovered in Febr. 1645. viz. That confiding in the promifed Succours from Bahia, they intended to rise in Arms against us; looking upon this juncture as the most favourable for their purpose, since Count Maurice with the greatest part of our Fleet, and a good number of Soldiers were returned to Holland, from whence no fresh supplies were come of late into Brasil. The Great Council not being ignorant of this, were indefatigable in their care, to leave no Stone unturned to find out the Ring-leaders of this Rebellion, so as to charge them effectually with this Crime, and find out sufficient cause for their Commitment. They fent out several of their Officers into the Country, as Spies, to found the Inclinations of the People, and whether they could meet with any who incited the rest to an insurrection. The like he did on the other side of the River of St. Francis, and in Kamaron's Camp, whither they had fent certain Persons to Investigate their Designs, and to learn what preparations they made for War, and whether they were intended against Pernambuko, but were not able to find out any thing, upon which they could make any fure account. Being nevertheless sensible that those forewarnings were not altogether groundless, and knowing the Portugueses to be of so haughty a temper, (besides the difference in Religion) that they would scarce let any opportunity flip of withdrawing themselves from the obedience of their Conquerors; they writ the 13th of Febr. 1645. the following Letter, concerning the Designs of the Portugueses, to the Council of XIX.

A Letter from the Great Council to the West-India Company.

Most Noble and Right Honourable,

pary

Uring the Government of his Exethe Westcellency Count Maurice, there were India com-

already several of the Inhabitants of this State entred into secret Cabals, to tife in 16 Mutiny against us, in hopes of assistance from the Bahia; their bufiness was to insinuate into those that were well affected to them, after their good success in Maranhaon, that our Forces being considerably weakned by the strong Detachments sent to the Garrisons of Angola, St. Thomas and others, a fair opportunity was offered them, to withdraw themselves from our obedience, and to enjoy their former Liberty under their own King. They were not a little encouraged in their Design, smagining the same might be carried on without any great difficulty, when they found that of late we had received no Supplies either of Meat or other Provisions, or of Soldiers from Holland, whereby the Store-houses of the Company here being exhausted, the Garrison of the Forts were forced to be supplied from time to time with Farinha and fresh Meats out of the Country, they judged, if they coild once be Masters in the Field, they must of necessity fall into their Hands; as it haffered in 1640 to the Spanish Carrifous in Portugal, who for the fance reason were not in a condition to hold out aganst ile Portugueses; being besides that sensible, that, unless me would coo much weaken our Garrisons, we had no sufficient number of Troops left to appear formidable in the Field. Thefe and other fuch like infinuations have been frequently spread among the Portuguefes by thofe, who finding themselves most uneasie under our Government, hoped for a change of their Affairs, by changing their Masters; which however prought no considerable effect, as long as h.s Excellency continued in the Government, partly because we being soremarned of their Designs, kept a watchful I ye over all their actions, partly, because our Sea and Land Forces being much more considerable at that time, than they are now, they had but little prospect of succeeding in then Enterprife, which therefore they judged most convenient to defer, till after his Excellenty's departure; which, as it was sufficiently known before-hand, so they were sensible that thereby our Forces both by Sca and Land must be considerably weakned, and consequently would furnish them with a fairer opportunity, of putting their fo long rejected Design in Execution; the more, because that many of the Portugueses who relying bitherto upon the Authority of Count Maurice, as the only means to keep the Soldiers in awe, being now put in fear of the Executions and Exorbitances likely to be committed by the covetous Officers and rapacious Souldiers, would be forced to join them against us. After the departure of his Exdellenev

Excellency for Holland, those Cabals have instead of Divine things encreased every Day; they have been very diligent in getting information concerning the Strength of all our Garrisons, with an intention, to carry on their Designs before we could be reinforced with Supplies of Men and Provisions from Holland; to effect which, they have by Messengers sent to the Bahia, Sollicited for Succours of Men and Arms, of which as it seems they have no small hopes. There is great reason to believe, that the Journey of Andrew Vidal from the Bahia hither, in August last, undertaken under pretence of taking his leave before his return to Portugal, in order to ferve the King there, was founded upon no other motive, than to inform himself most narrowly concerning the true State of affairs here, in order to give a verbal account the cof in the Bahia and afterwards in Postugal; as likewife to found the Inclinations of the Inhabitants, and to unimate such as he found well disposed for his Interest, with hopes of speedy succours from the Bahia; we having fince received fecret intelligence, that he has been present at several of these Cabals. But the they were greatly encouraged with these hopes of good Juccess, by reason of the diminution of our Forces, and scarcity of Provisions, they were not very forward in venturing upon this Enterprise, being sensible, that their Design having taken vent, we made all neceffary preparations against them; besides that many of the Pottuguele Inhabitants, being beyond their expectation, well fatisfied with the Government of the Great Council, did rather chiefe to live quietly and securely, than to engage in so dangerous an Enterprise. So that things remained without any confiderable alteration at prefent; and as matters Mand now we are not able to find out fufficient cause to satisfie our selves whether they proceed in the same Delign. Their chief Design as we are credibly informed was laid against the Receif, which they intended to surprise, upon a certain Day appointed for the Sale of Negro's, when the Inhabitants of the Country flocking thither in great numbers, they did not doubt, but with the affistance of our own Negro's (who are for the most part Papists) to make ther selves masters of the place, not questioning, but if this succeeded, the rest would soon be forced to yesld. But in this they were prevented, by the strong Guards we took care to post in the Receif, on those Fair Days. The thief Ringleaders, as they are specified to us, are John Fernandes Vieira, and his Father-in-Law Francisco Beringel, with several others, whom we Vol. II.

would have committed to Prison, if we could have had more certain information against them; but, the' we left no Stone unturned to find out the truth, yet could we not meet with sufficient motives to induce us, either to emprison them, or to proceed again to the general disarming of the Inhabitants, we having received certain Intelligence, that so soon as me should attempt it, we must expett notes, than a general Insurrection, which, considering our own Magazines and Store-Houses were so ill provided, and no sufficient Force could be drawn out of the Garrison to secure the open Country, would have drawn after it very ill consequences for our Nation, especially those living at some distance from our Forts, who thereby (as we had reason to fear) might have been exposed to the danger of being massacred by the Portugueles. It is evident from the Information given to your Lordships in Holland, and transmitted to us, that the Subjects of the King of Portugal themselves are encouraged and animated against us; wherefore it will be absolutely necessary to be very cantious, and to hasten the supplies, we so often have requested at your hands. Upon the first information we received, that towards the South of the Receif the Portugueles intended to land some Men or Arms, we sent the 13th of Octob. a Mucht, the Enckhuy sen with another Galliot and Chaloop to Cruse thereabouts, but they returned after some time without being able to difcover any such thing. The next Intelligence we had was that a Fleet was Equipping in the Bahia, to transport some Forces, for the affistance of our Rebellions Subjects; to find out the bottom of this Design, we thought we could pitch upon no better expedient than to fend thither Mr. Gilbert de Witt, and Dirk Hoogstraten with certain Instructions; of which we have enclosed the Copy; who set Sail the 25th of the last Month. Being further informed that a certain Portuguele Captain with an Ensign and three Soldiers have been lately dispatch'd from the Bahia to our Captainships, to endeavour to ster up our Subjects to Rebellion, with assurance of Succours from thence; we have employed all necessary means to find them out and get them into our hands. We shall not be wanting in any thing, which, according as occasion presents, may contri-*bute to the preservation of this State.

Receif 3. February 1645.

The 4th, the Great Council were informed by Letter from Isaac Rasiere, and Captain Blewbeck, written at Parayba,

O That

Mr. John Nieuhoff's Voyages

lat a Rumour was spread thereabouts, it Kamaron, Chief Commander of the afilians in the Bahra, was on his march m Sertao to Stara, to joyn with the afilians inhabiting thereabouts, to atk with their United Forces the Inhaants of the Captainship of Rio Grande. hereupon the Council fent Orders to ins Vogel, Governor of Scregippo del y, to get Intelligence, and fend them edy word, whether Kamar on with his mp were still in Rio Reael; and if t, whither he had taken his march: whither he intended to take it. ney also sent word to the Inhabitants Parayba, that they should be very dient in inquiring after the Cause of this imour, and fend them Intelligence acrdingly. The 15th of May they rewed an Answer from Hans Vogel, dated 2 25th of April at Seregippo del Rey, ierein he told them, That pursuant to eir Orders he had fent a Serjeant with me Soldiers to Kamaron's Head-Quarcs, about 10 Leagues from Seregippo del y, under pretence of looking for some escreens; who after their return rerted, That his Forces, confisting of o Portugueses and 1200 Brasilians, were ll in the same place, busied for the oft part in Cultivating some Plantaons, Kamaron himself being then in the thia, to affift at the Solemnity of their Laster; from whence they conjectured, that the Rumour concerning his march was only a Fiction. But two days after the same Rumous was renewed by two Passengers coming from Rio St. Francisco, and being landed by one John Hoen, a Master of a Vessel, near Kandelaria; but upon a more fluct Enquiry made by the Council, the faid Matter of the Vessel declared, that on the eighth of the same month, when he left R.o St. Francisco, there was no News of Kamaron's

The 30th of May 1645. a Letter, without a Name was delivered to the Great Council, by one Abraham Markado, a Jew, subscribed only Plus Ultra. This Letter being Translated out of the Portuguese the same Night, the Contents thereof were, That three unknown Persons, gave them notice, that a good Bood into Farayba, with an Intention to join with a Discontented Party there, and to seize upon the Person of John Fermandes Vieira, their Chief Ringleader.

not redound to your Disladvantage. We consult of the your Lordships to take care of this poor Nation, for sear they should be forced to you with the Rebels against you. We judge to the Essense without delay, with all imaginable Secressi; for if they find themselves diately; so, that strong Guards ought to be put in the Out-works, and in the Harbours of Kandelaria, and the Receif. We Advise to Seize upon the Person of John Fermandes Vieira, their Chief Ringleader.

The Letter is as follows.

A Letter of Intelligence to the Council.

TE stand amazed you are so secure. when it is reported, That the Matta of Parayba is full of Soldiers, come ibither lately from Rio Reael; who confifting in a good number of Negro's, Mulats, and Portugueses, with Kamaron at the Head of them, began their march in the month of March, expetting now to be joyned by other Troops, which bitherto were flopt by the overflowing of the Rivers. Their aim is to encourage the Inhabitants to take up Arms, which done, they expect considerable Succours from the Bahia, both by Sea and Land, wherewith they pretend to block you up in the Receif; intending to fix their Camp either at Olinda, or in the Vergea, and Onarter the Soldiers in the Fregelies thereabouts. They boast that their Forces are already con-siderably encreased by those who are Indebted to the Company, and other Vagabonds; and threatned to Maffacre all fich of your Subjests as refuse to joyn with them. A certain Person of Note and Reputation belonging to the Jame Camp, has given us this Information, in order to Communicate it to your Lordships to be upon your Guard, which we do accordingly by these Presents. The same Person told us, That John Fernandes View was the Cheef Ringleader of this Infurrestion, who maintains the Rebellions Crew in the Matta, as they meet together, till a certain day appointed for their Rendezvons. when they are with their joynt Forces to attack all the Dutch Forts and Out-Guards at once. We were alfo told, That the fud Vieira does not fleep in his House, and is always upon his Gita. d; to try which, you have no more to do than to fend fome to take hime with his Servants and Factors; which if you could do, they would be all amazed, and make an open Confession; which may be done without the least hazard; for if you miscarry in the Attempt, it will nevertheless not redound to your Disadvantage. We conthre your Lordships to take care of this poor Nation, for fear they should be forced to join with the Rebels against you. We judge it ilicrefore absolutely necessary to undertake the Be finess without delay, with all imaginable Sccrefie; for if they find themselves diately; fo, that strong Guards ought to be put in the Out-works, and in the Harbours We Adof Kandelaria, and the Receif. vise your Lordships, to oblige the Inhaba-tants forthwith to Surrender their Arms, to order all the Masters of the Sugar-Mills with their Planters, to appear in the Receif; especially those of the Fregelies of Vergea, d araflu,

and Travels to BRASII.

Garallu, St. Lorenzo, St. Amaro, Mo-1643, ribeca, de Cabo, Pojuka, and Serinhaim, with Assurance that they shall not be molested with Assurance that they shall not be molested for any Debts there; and when they are come, to detain them till they fee what is further to be done, under pretence of securing them against the Attempts of the Rebels in the Country; by which means you will both secure the Government, and oblige runmy private Persons. The same Method ought to be used with those of Parayba, where they may be detained in the Fort, as well as thoje of Porto Calvo in that Place. Thus if you can get the Chiefest into your Hands, the Design will dwindle away to nothing. We befeech you not to fend away any more Soldiers, before you have made a full Dilicvery of the Rebellion, and provide your Foits with good Garrifons; whither we would alto have all the Dutch Inhabitants to retire for fear of being Massacred. We Three, being faithful Subjets of your Lordships, have now fatisfied our Consciences in propofing your Remedy, which confifts in the taking of Vieira, which must be undertaken with great Secrety and Foresight, he being as it is faid, continually upon his Guard. Your Lordships will be sensible without our Advice, how much it concerns them, not to divulge to any, from whom they have received this Information; And we affure you, that we will not fail to give further Intelli-gence of what we are able to learn, by way of Letters; and one time or other, we shall make no difficulty to let you know, who thefe Three Faithful Subjects are. If we had been prefent, we could have declared no more than we have done in this Letter. Your Lord lips mift take effectual Care against their A:tempts without Delay; the approaching Fiast heing the time appointed for the putting it in Execution. We have fent you immediate notice after it came to our knowledge. We Advise you likewije to Si ze upon Francisco Beringel, Vieira's Father-in-Law, and Antonio Kavalkanti; and in short, all the Chiefest of the Vergeas, and other Places.

Signed,

A. Verdade. Plus Ultra.

Hereupon the Great Council called Paul de Linge, President of the Council of Justice, Vice-Admiral Cornelius Lichthart, and Lieutenant Colonel Garstman, into their Assembly, to Consult unanimously, what were best to be done at this Juncture for the Preservation of the Dutch Braft: when by this, as well as Letters and Intelligences,

they were forewarned of the approaching Danger; and notwithstanding they 164 were much in doubt, whether they ought to make any certain Account upon a Letter written without a Name; yet confidering all the Circumstances of this as well as feveral other Informations, it was judged absolutely necessary to provide for the Safety of the Dutch Brafil. against any Attempts of an Enemy.

I. By providing all the Forts with Meal tor Two Months.

11. By giving immediate Notice to all Commanders of Forts, to be constantly upon their Guard.

111. To write to John Liftry, Chief Commander of the Brafilians, to keep his People in readinc's with their Aims in the Villages, to be ready to march upon the first Orders from the Council, we being not in a Condition to take the Field without them.

IV. To fend abroad their Spies, in all Corners, even into the Woods, to get Intelligence whereabouts the Enemies Troops are; and to give timely notice of what they are able to learn, to the

V. It was agreed, to Summon John Ternandes Vieira, the Chief Ringleader or the intended Rebellion, and his Secu-Titles, Francisco Beringel, Vieira's Fatherin-Law, and Bernardin Karvalho, unto the Receif, under pretence of making a fecond Agreement with him, which he earneftly defired; by which means they should secure his Person, know the whole bottom of the Portuguese Delign, and confequently be the better able to prevent it. A certain Broker called Koin, who follicited this Agreement for Vicina, was prevailed upon to undertake this Task, which he might do without the least Suspicion; but the Whitsontide Holidays put some stop to it for the pre-With the same Care the Great Council employed all possible Means to get the other Persons of the Vergea, suspected to have a Hand in this Rebellious Design, into their Hands, under fome pretence or other, they being not likely to be taken by force, because they did not lodge in their Mills and Houses in the Night time, and by Day were fo strictly upon their guard, that they could not possibly be surprized.

The 31st of May, Vice-Admiral Lich-6 4 3. there, and Henry Hans a Lieutenant, offered to undertake the delivering of John Fernandes Vieira to the Council, which they intended to Effect, under pretence of giving him a Visit, and going a Fishing with him in the Lake Lewis Bras Biserra.

h Furtber The 9th of July, the Great Council received Advice by a Letter from Advice b concerning Mr. Koin, Governour of Rio St. Francisco, t the Infurdated the 1st of June, That Kamaron, redion. with a small Body was passed the River Sr. Francis; therefore he defired fome Affiftance of Men, with fuitable Ammu-

nition.

The same was confirmed by another Letter, dated the 27th of June, with Advice, That as yet no Enemy had appeared within fight of the Fort.

Frequent Intelligence being likewise fent to the Council, That in the Matta of St. Lawrence, and some other distant Places, confiderable numbers of Soldiers from the Bahra, of Mulats and Negro's, were gathering in a Body, they fent feveral small Bodies thither, under Command of fuch as were well acquainted with that Country, who all unanimously reported, That they could meet with no Soldiers, Mulats, or any other Va-

gabonds thereabouts.

The 12th of June, the Director Moucheron sent further Advice, that he had been credibly informed by Letters dated the 8th of the same month, from Rio St. Francisco, That Kamaron and Henrico Dias, with fix Companies of Brasilians, Mulats, and Negro's, were pass'd the faid River; and that just as he was concluding his Letter, two Inhabitants of the Algors had given him to understand, that some of them had been at their Houses for some Meal; the Copies of which Letters he fent to the Council, who did now not in the least question, but that their Aim was upon the Dutch Brafil; especially since they were forewarned by several Letters from St. Antomo, That the Inhabitants thereabouts feem'd to prepare for a Revolt.

The Council finding their Project of taking Vierra by Craft, not to succeed, because he and the Securities of his Father-in-Law, Francisco Beringel, and Bernardino Karvalho, could not be Cajoled into the Receif, under pretence of Renewing their former Contract; and looking upon him as the Chief Ringleader of this Revolt, they ordered Jonchim Denniger, a Lieutenant, with a good number of Soldiers, to the Mill and

House of the said John Fernandes Vieira, 1 to bring his Person from thence to the Receif. Accordingly Denniger advanced with his Soldiers towards the Evening near the Mills, which he furrounded, and about Midnight unexpectedly entred both the House and Mills, making a most strict search throughout all the Rooms and Corners, but to no purpose. In the Morning he withdrew at some distance. but return'd the next Night, when after having made another fearch, but in vain, he was informed by one of his Turkifle Slaves, and some Negro's, That neither Vieira, nor his Father-in-Law Beringel had slept in their Houses these last Three Weeks; that fometimes they came thither on Horseback, but after a very fhort flay, went their ways again. Denninger likewise search'd the Houses of Antonio Kavalkanti and Antonio Biserra. but to as little purpele as those of the former, being informed by their Negro's, that they had absconded for some Weeks before.

In the mean while, the Council fent divers Parties abroad, under the Command of Hans Katner, Slodiniski, and Cunraed Hilt, all which, after their return, agreed in this, That there were no Enemies there as yet, especially not in the Matta, where they met with no Body but those that were employed in Manu-

ring the Grounds.

The Great Council finding themselves altogether disappointed in their hopes of taking Vierra, refolved to secure immediately the Persons of Francisco Beringel, Vieira's Father in Law; Bernardino Kaivalbo, and his Brother Sebastian Karvalho, Lewis Bar, Amaro Lopes, and John Pelloa, being Persons suspected to have a hand in the Conspiracy, inhabiting the Vergea. In the more distant Provinces were ordered to be feized

His Confession agreeing in all points with what Fernando Vale had deposed before, and being all that time forely afflicted with the Gravel, he was difpenfed with from any further Examina-

The Council being by this Deposition of Karvalho fully convinced of the Treachery of Vieira and his adherents, it was resolved to attempt once more the taking of the faid Viena, if perhaps he might as yet luck somewhere or other near the Receif, and of his Factor Mor Mannel ae Soufa engaged in the fame Design; as likewise of Antonio Bezerra and Amaro Lopes, both Inhabitants of the Fergea. But in vain, those who were fent upon that Errant, bringing back no other satisfaction, than that they were not to be met with thereabouts, and that belides that, Antonio and Mastel Kavalkanti, Auton o Bezerra, John Peffor and Cofmo de Krafto were the same Day retired out of the Vergea to the Marta. The same Day Captain Wilefel in was ordered to feize the publick Notary, Calpur Persera, dwelling in St. Laurence, who was supposed to have drawn the before mentioned Affociation; and it was resolved to send a Pardon to Antonio Kavalkanti, and John Pais Kaeral, who having a great Family at home, might thereby be prevailed upon to quit the Party of the Rebels, whereby we should both weaken that of the Enemy, and get a further inlight into their Defigns, Anton.o de Rulhous being Examined at the same time, ingenuously confessed that he had not the least knowledge of the Conspiracy; Sebastian Karvalho being notwithstanding his former Confession. detained Prisoner upon Suspicion till the 4th of August, was at his request dismissed by the Great Council, after having given sufficient proof that he was one of the three who writ the Letter concerning the intended Conspiracy, to the

Karvalho 41sebarged Council.

The 14th of June, Orders were given The Receif to all the Inhabitants of the Receif, and ened with those living upon the back of the River, Pallifade's, to furround their dwelling places with Pallisado's, under Forseiture of 200 Gilders. And to render the Companies the more compleat, and expose our Men to as little danger as might be of being furprifed by the Enemy; all the Safe-Guards were commanded to be withdrawn, by M. Haus, near the Receif, and in Serinhaim by Captain Falls, who was likewise ordered to remove the Garrison of Huna, to another place, of

The better to supply ~~ more strength. the scarcity of Provisions in the Forts, & 64; which for want thereof might be in danger of falling into the Enemy's hands Orders were dispatch'd to the Chief Commanders, to seize upon what quantity of Farinha (or Meal) they stood in need of for theuse of their respective Garrisons. among the Inhabitants of the Country, which they were to be paid for by the Commissaries of the Company. It was allo thought necessary that for the greater fecurity of Maurice's Town, the Ditches of the Fort Ernestus should be made larger, as likewise the Quinqueregular Fort, which was put in execution by Hans, as Vice Admiral Liebthart took care to have two Spy-Ships posted.

one betwist the Quinque-ungular Fort and the Fort Bruin, the other beyond Baretra, fi atom to prevent any surprise on that side, at of Maulow Tide; it was also resolved not to let rice Town any Ships or Boats go out of the Receif, enlarged. without a Pass from the Great Council.

The Major of the City Militia was ordered to keep the rest of his Officers with the Soldiery in readiness against the 17th to pass the Review, the same Day being also appointed to the Garrison for that purpose; several new Commanders were also chosen for the Militia, instead of those that were ready to return into Holland. The same Day Paul Linge set out on his Journey into Parayba, being furnished with 1500 Soldiers for necesfary occasions; and Bernardino Karvalho, who had abiconded for fome time, had, at his request, leave granted him, to come to the Rece f, to answer for him-

The 15th John Peffor Master of the Sugar-Mill Pantel o, one of those that were ordered to be secured, desired also leave in a Letter to the Council, to appear before them, his flight being occasioned not by his guilt, but only fear, which was granted him, as well as the request of Father Lawrence Alkunba, up-

on the same account. On the 16th early in the Morning we received secret Intelligence, that Andrew Vidal at the Head of 1000 Portugueses, and Kamaron with d' Indeos Rondelas, and Henry Dias with a Body of armed Negro's had posted themselves above St. Anthony, near the Sugar-Mill Topekura. The same Day John Karnero de Maris, and Francisco Dias del Gado both Masters of Sugar-Mills in the diftrict of Pojuka, ordered to be apprehended, were brought Prisoners to the Receif, and Amador da Ronje, and Pero Marinha Falkan, Inha-

tonio de Bulbous, were brought in Pri-Karvall y unknown Persons that way.

bitants of St. Anthony, who had hitherto 6 4 3. absconded, did ask permission to come to the Receif, to answer for themselves,

which was eafily granted.

It was then taken into Deliberation, removed to by the Great Council, whether, accord-Moribeka ing to the last Intelligences received of the Enemies Designs, it were not most Expedient to remove our small Camp from St. Lawrence to Morsbeka, which atter some Debates, was Agreed upon accordingly, thereby to secure the Passage of the River Sangea, and confequently to remain Masters of the Country as far as the Cape of St. A. ftm, from whence, both the Camp and the Receif might conveniently be supplied both with Farmha and Cattle; whereas on the contrary, if the Enemy should be possessed of it, he m ght (as had been done in their former Wars) cut off all Supplies coming from the South to the Receif.

> Pursuant to this Resolution, Orders were fent to Captain Wiltschut, to march immediately to Montheka, to expect there the coming of the Brafil ans, and some further Succours: In the mean while to Post himself in the Church, and to fortifie the same against any sudden Attack: And the Aldermen of Maurice's Town were ordered to Buy up the necessary Provisions, both of Famba and Cattle, about Moribeka, for their Use. clamation was also issued, Commanding all the Inhabitants of Serinbaim, Pojuka, St. Antonio, and Moribeka, without any Exception, to repair well-armed, both Horse and Foot, with all possible speed, to Sr. Antonio; there to List themselves for the Defence of the open Country, under the Command of Colonel Galpar Vander Ley, and Lieutenant Colonel John Heck: Those that were not able to maintain themselves at their own Charge, being to receive their Provision from the Company, like other Soldiers: The faid Colonel and Lieutenant Colonel offering at the same time, to furnish 1500 Alinera's or Measures of Farinha, for the use of our Garrisons, for ready Money.

The same day the Great Council received a Letter from Antonio Kavalkanti, (unto whom they had lately fent his Pardon) in which he protested, That nei-. ther he, nor the rest of the Inhabitants of the Vergea, were concerned in any Cabals against the State, their flight being occasioned only by Fear, of being Imprisoned upon Suspicion, raised against them by their Enemies. The Answer of the Council was to this Effect, That if he knew himself Innocent, he should return to his Mill, this being the only means, to recover his former Reputa- 164;

The Great Council having great reafon to suspect, That Kamaron would endeavour to bring the Brafilians under their Iurisdiction over to his Party, refolved, in order to secure them in their Interest, to Treat with Listry, their Commander in Chief, to perswade them, to fend their Wives and Children into the Isle of Tamaika, under pretence of fecuring them against any Attempts of the Enemy; to which they might in all probability be exposed in the open Villages; but in effect, to keep them as Pledges of their Fidelity.

The same day the Council received se- Number cret Intelligence from Amonio d'Olivera, of thoje That the Succours fent to the Rebels fint from from the Babia, confifted in a confiderative Bihi. ble number of Portugueses, under the Rebells. Command of the Brother of Kavalkanti, of 400 Brafilians, under the Command of Kamaron; 300 Indees Rondelas from Sertoa; and 50 Negro's, under Com-

mand of Henry Dias.

On the same 16th of June, Mr. Slote- Enfign. misks, Enfign of the Guards, was fent a- Slotenis broad to be at the Campagne, with a 11 ki fent Firelocks, and 12 Brafilians, who return- abroad, ing the 24th of June, gave the follow- and bis ing Account to the Great Council. Account. That he took his way from the Receif directly to St. Lawrence, and from thence directly to the Village of St. Michael; where being joined by his Brasilians, he marched through St. Francisco to Kasura. from thence to Geyta, and so further through the Mait, to Sr. Sebastian, where all the Inhabitants had left their Houses. At St. Schastian he passed the River Topskura, and coming to John Fernandes Vierra's Park, met there with good The Negro's told him, able Horses. They had Orders from their Master, to fly from before the Dutch, but to furnish the Portugueses with what they desired. From thence he marched to St. Antonio, and in his way thither did light upon a House belonging likewise to John Fernandes Vieira, where he found about 50 or 60 Sheep, with good Store of Poultry, intended for the use of the Sick, belonging to those Rebels, or those come to their Affiftance from the Bahia. They forewarned him not to Advance too far, he being likely to meet with some Troops in the Park belonging to the Fathers of Sr. Bento; but coming thither found both the Pertugueses and Negro's fled. From thence he marched to a House belonging

to Michael Fernandes, who above three 1643. Months before had been ordered by John Fernandes Viena, to provide a sufficient quantity of Farinha for the use of the Succours expected from the Bahia; which he lately had transported from thence to Pedro de Alkunha; where was the Rendezvous of two Companies of the Rebellious Inhabitants, where the faid Michael expected a good flore of Cattel, bought up by Viena for their Use, according to the Information of a Negro, brought by Slorenicki to the Rece.f. Near the Park of Don Pedro d'Alkunha, he met with the same Mulat who had shot Captain Waldeck, and with two Hollander who had committed Murther, and were never Pardoned. John Fernandes V. e.ra had promised to be with them against Mid-Summer-Day. From thence Sloteniski marched directly to Una, and fo further to St. Luce, but met with no Body there except one Monk, and so returned to the

> On the 17th of June it was resolved by the Great Council, with Consent of the Council of Justice, to Issue a Proclamation for a general Pardon, except some few of the Ringleaders of the Rebellion.

The Proclamation was as follows.

A Proclamation for a General Pardon.

"He Great Council of Brasil makes known to every Body, whom it may Concern, That they being fenfible, to their Grief, how many of their Subjects, having been missed by some of the Ringleaders of the Rebellion, have left their Mills, Wives, and Children, for fear, as has been infinuated to them, of being disturbed, plundered, and killed by our stragling Parties: We being w lling to provide against it, and to contribute as much as in Us lies, to the Prosperity of Our Subjects, and their Estates, have thought fit to publish their Intention, to be, to Defend and Protect the Inhabitants of the open Country, against all evil Intention'd Persons to the utmost of their Power. And to Reduce those who have left their Habitations, to Obedience, and prevent their utter Destruction, We promise our Pardon to all such as shall within Five Days after fight of this our Proclamation, make their Personal Appearance in the Receif, not excepting those who have been actually engaged in the faid Rebellion (unless they are among the number of the Chief Ringleaders) provided they leave the Rebellions Party, and return to their former Obedience; and that they shall Enjoy the quiet Possession of their

Mills and Lands as before under our Prote-Etion; under Condition however, that they 1 0 4 shall be obliged to take a new Oath of Allegiance to the State. Those on the contrary, who shall persist in their Rebellion, or shall assist the Rebels under what pretence soever, are hereby declared Enemies of the State, who have forfested their Lives and Estates, whose Persons and Estates shall be liable to be profecuted with Fire and Sword, &c.

This Proclamation being immediately Translated into the Portuguese Tongue, was fent the next morning to St. Antonio and the Terges to be published there; Several Copics were also distributed among the Friars, in order to publish them from the Pulpits, and cause them to be affixed to the Church-Doors.

The 18th, good Store of Provision and Ammunition was fent to the Fort Keulen, and Rio Grande, and the Garrifons of both these Places forewarned to keep upon their Guard. At the same time the Proclamation of Pardon was fent thither to be published; And Antonio Pa auba, Chief of the Brasil.ans in those Parts, was Summon'd to keep his Brafilians in readinels with their Arms, whenever they should be Commanded to give Proofs of their Fidelity to the Company.

The 19th of June, two Inhabitants of Porto Calzo, that were landed but the fime Morning in a finall Boat on the Receif, brought News to the Great Conncil, That Kamason at the Head of the Brafilians, and Henry Dias, with his armed Negroes, confifting in 7 Companies, had posted themselves in the Alcgoas near the Sugar-Mill Velho; that their number was increased since to 4 or 5000 Men, by the Conjunction of those who were passed the River St. Francisco through the Matta, and that they had begun to commit open Hostilities, so that now the Council had not the least reason to doubt any further of the Delign of The Commander of the Portugueses. Porto Calvo fent word much to the same purpose, and that he prepared for a vigorous Defence. The first Effects of this Insurrection broke out in the Di- open to ftrict of Pojuka, and considering that belion in our whole Force there confifted only in Popula-30 Men, under Jacob Flemming a Lieutenant, Orders were fent him to Retreat. to St. Antenie, there to defend themselves with their Joint-Forces. The first beginning of Hostilities was made by those . of the Pojuka, by seizing upon two Boats,

all the Passengers of which they took Prisoners, and slew them afterwards, except one Seaman who had the good For tune to escape. This done, The Inhabitants both of the Village and the open Country, chose for their Head, Tabatinga Amader d'Arravio, whereby they cut off our Communication with the Cape Austin by Land, and all about to the South, belides that the Fort on the faid Cape, could not, but with great difficulty be supplied with Water from the River.

The 20th of June, a Brafil an arrived very early in the morning in the Receif; his Errand to the Conneil was, That he being fent by John Blaar, from Porto Calvo, with Letters to the Great Council. was fet upon by those of Poj.ka, near Kamboa, who took from him the faid Letters, and kill'd his Companion. For the rest he told them, That Kamaron was posted in the District of Porto Calvo, and that Captain John Bluur was in the Fort. A Council being call'd to confider of the best means to secure the Dutch Brasil against any Attempts of the Enemy, the first thing that fell under Debate, was, Whether, according to the general Advice of those of the Inhabitants, who wished well to our Government, it were not most Expedient for our Defence, to form a Camp to make Head against the Enemy in the Field; who, if once Mafter of the open Country, would force the Inhabitants to join with him, and cut off our Provisions, without which we could not sublift long. The next thing to be taken into Consideration, was, Where to find Forces for this Camp, the Garrisons being so weakly Mann'd, as not to be able to spare any, and the body under Captain Wiltschut consisting only of 120 Men, besides the 300 Brasilians, to be joined with him. Considering therefore that the whole Force in the Allegeas confifted only of two Companies under the Command of Mucheron, a number not any ways proportionable to the Extent of so large a Tract of Ground; it was judged most convenient to make a Virtue of Necessity, and to draw them from thence to the Receif, as indeed they had been ordered before. But their way by Land being cut off by the Rebels of Pojuka, a Vessel, which lay ready to go out a Cruising, was ordered to Porto Francisco, with Orders to Mucheron, to Embark forthwith those Forces aboard her, without having any regard to the Baggage; but the rest, which could not be put aboard the Ves-Val. II.

fel, should be fent by Land to R.o Fran. cifco, to Reinforce Captain Kein, for the better Defence of that Place. Captain Fallo was likewise ordered to march with the Garrison of Serinbain to St, Antonio; it being not likely that the Troops in Serinhaim should be able to make Head there, after the coming of Kamaron into Porto Calvo, it being an Inland Country.

The same day, 40 new-listed Soldiers A Edir-were sent to Tamarika, under Command forciment of Captain Peter Seulin, Mafter of the fre te Sugar-Mill Harlem; because this Mand ! amar to was of the greatest Consequence to us; and the Garrisons of the Fort Orange, and the Town of S. hop, confifting each of one Company, were very weak, and the armed Inhabitants did not amount to

above one Company more.

The same day, Mr. Bas, and Mr. Van de Voer de, Counsellors of the Court of Justice, were ordered to examine Gospar Pricing the Publick Notary, concerning his Drawing of the Instrument of Association ; as likewise John Kariero, de Maris, Francisco Dias Delgado Masters of Sugar-Mills, in the District of Pojuka, and Sebastian Karvalho, concerning what they knew of the intended Conspiracy.

Karvalho declared a fecond time, at the second House of Lieutenant Colonel Haus, That Confession fome days ago, (he could not remember of Kar-exactly which) a certain Portuguese Ser-vallo. vant, whom he knew not, did come to him in the Name of John Fernandes Vieira, with a Letter, in which the said Vieira defired him to Sign the enclosed Writing drawn in Form of an Affociation, to take up Arms against the Government, as foon as they should receive any Succours from the Babia; which at that time was Subscribed only by John Fernandes Vieira, and Lewis da Costa Sepulpeda; but, as he supposed, was to be carried to most of the Inhabitants. He further declared, That he refused to Sign the said Writing upon the bare Letter of John Fernandes Vierra, and the Hand-Writing being unknown to him, he fent both the Letter and Instrument of Association back by the same Lad that brought it, with his Answer by way of Mouth, That he Answer by way of Mouth, could not Subscribe it. Having more maturely weighed the matter, he fent the same Evening to his Friend Fernande Vale, to desire him to give him a meeting the next morning upon the Hills of Garapes, which being done accordingly, it was agreed among them to give Notice of this Conspiracy to the Great Council in a Letter without a Name. This Letter, with the Subscription, of

Plus Ultra, was writ by Vale, and about 1 6 4 3. Ten Days after given him to Read in a Bakers House in the Pontstreet, and afterwards given to Abraham Merkado the Physician, who delivered it to the Great

Council. The same day, the 20th of June, the Great Council received a Letter from Mr. Ley and Hoek, dated at St. Antonio, importing, That the whole Fregesie had taken up Arms, and made 16 or 18 Dutch Inhabitants Prisoners; That they had fortified the Church against those of Pojuka, whom they did not question to force from thence, provided they received any Succours from the Receif. The Council having taken the whole matter into serious Deliberation, and confidering with themselves, that, as the Case then stood, they had no great reason to fear any Rebellion in the North, in Parayba, and Rie Grande, as long as our Fleet remained near the Red-Land, and judging it highly necessary to bring the Rebels in Pojuka to Reason, and by their Punishment to deter the rest from attempting the like; they ordered Lieutenant Colonel Hans, with a Detachment of 100 Men, to march the next Morning to Moribeka, there to joyn with Captain Wiltschut, and the Brasilians, and so continue their march to St. Anton o;

juka.

from whence they were with their joint Forces to go directly against the Rebels Succours of Pojuka, to reduce them to Obedience; fent to Po- it being otherwise to be feared that they would cut off all Communication betwixt the Receif and the Garrisons to the This Expedition proved fo fuc-South. cessful, that the Rebels were put to flight, and Lieutenant Colonel Haus made himself Master both of the Town and Convent, forcing them to quit all the Passes thereabouts; and 40 Prisoners were released, whom they had loaded with Irons in the faid Monastery. But having received Intelligence of the approach of Kamaron with his whole Body, against him, he defired further Succours from the Great Council, to keep the Field; but the Garrison of the Receif being too much weakened already, they could fend him no other Reinforcement till the expected Succours should arrive from Holland. The 21st, It was refolved by the

A Faft. Great Council, to proclaim a General Fast all over Dutch Brafil, to be kept the 28th of June, to return Thanks to God Almighty for the great Mercy shewn to them on feveral Occasions, but especially of late in the timely discovery of the treacherous Deligns of their Endmies, who intended to have limpilled them when they were leaft aware of "

The Delign of this Conspiracy was laid thus by the Portuguefes: They in the Portuguefes They in the Portuguefes tended in the Whitfuntide Helinays to guefe Ples. make Solemn Rejoycings, with Feathing, Tournaments, and fuch like, on occasion of feveral Weddings appointed for that purpose, unto which were to be invited all the Chief Men of Durch Brafil, both Civil and Military; whom, after they were flush'd with Wine, they intended to Murther, in Imitation of the Seil an Veliers, or the noted Parifian Wedding; not questioning, but that, when the Heads of the Dutch Brafil were cut off, the rest, when attack'd at once in divers Places, would fall an easie Prey into their Hands. But being prevented in this bloody Design for that time, M.djummer-Day was pitcht upon, as most proper for the Execution of it, when the Ships were departed out of the Harbour of the Receif. For the Portugueses wore not ignorant, that we having received no fresh Supplies, especially of Gun-Powder, for a confiderable time out of Holland, our Magazines were but very indifferently supplied both with Ammunition and Provisions; and that consequently we must soon be reduced to great Extremity, if they were Masters of the Field: They knew also. That all our Ships, except two, were ready to fail with the first fair Wind, being already fallen down to the Red-Land; Thus being sensible of our Weakness, the Porengueses proposed to themselves no leis than the Conquest of the whole Desch Brafil at one stroke. But the whole Defign being discovered before Midsummici-Day, it vanish'd into Smoak, both sides betaking themselves to Decide the Matter by Arms.

The Portugueses pretended not so much the Allegiance due to their King, as praired Liberty of Conscience; notwithstanding of the l'or which, we have all the Reason in the tug, is. World to imagine, That this Infurrection was undertaken not only with the Knowledge, but also at the instigation of the Court of Portugal, and of those of the Bahia; it being very improbable, That Kamaron, Henry Dias, and the rest of the Ring-leaders, should without the Approbation of the King of Portugal, have attempted to attack us by open Force. Besides this, Mucheron declares to have Read in a Portuguefe Commission thele Words: This Revelt and Warymaer-

raken

laken for the Honour of God, the propaand a gating of the Roman Catholick Faith, for the service of the King and common Liberty: He further adds, that he has heard feveral Persugueses fay, That if they miscarried in their Delign of chaling us out of Brasil, to destroy all with Fire and Sword, thereby to bereave us of all future prospect of receiving any benefit from those Lands; which done, they would retire with their Wives and Children to the Bahia, or fettle in some more remote place, where they might be secure against any attempts of the There have indeed been some, Dutch. who, considering the unsettled Estate of the King of Pertugal, and the odd fancy of his Reign, have thought it very improbable, he should involve himself in a War with us, or have given his confent to this infinuation, but the Event has

fufficiently contradicted that Opinion.

The 22d of June a Letter was delivered to the Great Council, Signed by John Fernandes Viewa, Antonio Kavalkanti, sbe Rebels John Pescoa, Manuel Kavalkanti, Antonio Bezerra and Cosmo de Crasto Pasos; in which they complained, That they being a confiderable time ago accused by the Tows of a treacherous Delign against the Government, had been great sufferers upon that score; That now they being informed by the same Jews that they were in danger of losing all their Mills and Lands, to be given to certain Hollanders, who were fent for, for that purpose, they desired that the time of five Days appointed in the last Pardon might be prolonged, as being too short for a buliness of such moment, and that the faid Pardon might be granted without exception; which they refuling to grant, they did hereby protest before God and all the Roman Catholick Princes, that they thought themselves Innocent and not in the least guilty of all those miseries, which might enfue from this refusal hereafter.

A Letter

from the

beads of

10 1be

Council.

The 23d in the Morning the Council The Counthe matter. Letter; where after several harangues upon the present State of our Affairs and the Enemy's Design against us, they were divided in their Opinions, some being for granting a general Pardon, without the least exception, as the case stood with us at present, when we were , destitute of sufficient Provision, Ammunition and Men; others maintained, that a Letter which contained so many notorious untruths deserved not the least Answer; others were of ano-

ther opinion. Whilst they were thus debating the matter, Letters were brought 1643. to the Council, written by Licutenant Colonel Haus from St. Antonio, that he was ready to attack the Rebels of Pojuka the next Day, not without hopes of good fuccess, so that the Council confidering of what moment the Event of this Action was to their Affairs, resolved to adjourn the said debate till the next Day, when they hoped to know the iffue of the whole Enterprise.

The 28th of June, Mucheron arrived with his two Companies in the Recesf from the Allegous; where it was refolved to dispose his own Company in the Quinqueregular Fort, of which, as a place of great consequence, he was made Commander in Chief; the other of Captain Will. Lambers was put in the Fort Ernestus.

By Letters from Paul Linge, Gover-Good news nour of Parayba, Dated the 25th of June, out of Pawe received Advice, that the Inhabitants thereabouts offered to give him fresh assurance of their Fidelity, by taking a new Oath of Allegiance, and that he did not observe the least motion towards an Infurrection.

Jacob Dasime Master of the Sugar-Mill Supaperma, who had been abroad with a good Party, made his report to the Council, that he had been at several Sugar-Mills, where he had met with about 200 of the Enemies Troops divided into divers small bodies, composed of Portugueses, Mulats and Negro's, under the Command of Amador de Araouje, Antonio de Crasto, one Taborda and Henry Dias.

The 29th of June, by special Commission from the Council, Balthasar Vander Voerden examined Antonio d' Oliveira, concerning the Design of the Portugueses formed against our Government. He declared, That about the beginning of this present June, being then at the House of Sebastian de Karvalho, together with Francisco d' Oliveira, Bernardin Karvalho, and the before-named Sebastian de Karvalho, a certain Portuguese very well known to them all, delivered to him a Letter, directed to all the Persons Beforethere present, with another piece of named Ex-Writing unfealed, which he began to amination read; but finding the Contents to be, and Conthat the underwritten Persons promised fession of to be and declare themselves faithful Oliveira. Subjects of the King of Portugal, and that Jahn Fernandes Fieira, Francisco Beringel, Amonio de Sylva, and several

more.

more, whose Names he would not look 643. upon, had figned the fame, he returned the said Writing, and resused to subscribe the same, telling his Son at the fame time, You ought rather to Suffer your Hand to be cut off, than Sign this Paper; and so went his way immediately, not any one of all there present having Subscribed their Names at that time: He protested he knew not the Hand-Writing. After a more serious consideration, he thought it requisite to make a discovery of it, which he did accordingly within two Days after, to Matthew Reex, defiring him, to give an account of it to the Great Council; He declared further that the faid writing was figned by above 100 of the Inhabitants.

D.go:

The 30th of June one Digos Lopes Leyte, who was not long ago taken Pri-Leyte Ex- soner by the Brasilians, was examined by Mr. Bulleft ate, Doren one and some other Military Officers. His Confession was, that at the first beginning of the Defign of the Portuguefes against this State, they had fent a Letter to the Governour of the Bahia, Antonio Telles de Silva, to crave assistance from him, which if he refused, they would seek for aid in Spain; and if they did not succeed there, they would father furrender themselves to the Turks, than endure any longer the ill treatment they met with from the Hollanders. That nevertheless he had heard many dire imprecations made against John Fernandes Viewa; that he deferved no less than the Gallows, he having raifed this Rebellion for no other end, than thereby to free himself from the vast Debts he owed to the Com-

The same Day it was agreed to send abroad a Party of Twelve Soldiers and Eight Brasilians, to fetch a good quantity of Farinha from St. Lawrence, who were put to the rout near that place, so that very few escaped. At the same time the Council received the unwelcome news, that some of the Inhabitants of Iguarasu had taken up Arms against them.

In the beginning of July it was resolved to draw the Fortifications of Maurice's Town into a narrower compass, and to add a new Line with a Breast-work. This task was performed by the Negro's belonging to the Inhabitants of Maurice's Town and the Receif; under the Conduct of Vice Admiral Lichthart, who took care to have the same perfected, according to the Model drawn by the Engi-"DECT.

The fame Day Advice was brought, ~ That John Lawrence Frances, and John 1 Dias Leyte, Inhabitants of Iguaralu, made it their business to incite the Inhabitants to an Insurrection. Captain Slayter fent also word from Tamarika, that about 80 Men, and 110 Women and Children, all Brashians of the Villages of St. Michael and Nassau, were come into that Island for shelter, and that the Brasilians of Otta intended to do the like. The Magistrates and chief Portigueses of Goyana, gave the Council fresh assurances of their Fidelity, provided they might in case of necessity be allowed to retire into the faid Island, which was granted, and thanks given them for their Loyalty. The Magistrates of Iguarasu advised, that Vieira had caused a Declaration to be affixed in the Sugar-Mills of Gonfalvo Nove de Lira, which they had ordered to be torn down, and fent a Copy of it to the Council; assuring them, that they would take all possible care to keep the Inhabitants thereabouts under Obedience, tho' they found some of them much inclined to a Revolt.

At the same time Fernandes Vale was Fernandes examined by Mr. Vander Voerde and Mr. Vale A Bas; He declar'd, That having received amined, a Letter from Sebastian de Karvalho, to meet him the next Morning upon the Hills Garapes, because he had something to communicate to him, concerning no less than their Estates, Lives and Honour, he without mentioning any thing of it to his Wife, or Brother, went thither on Horse-back, accompanied only by a Boy: notwithstanding he hapned at that time to be afflicted with the Gravel; There he met Sebastian Karvalho, with one Boy only, who told him, That he having received a Letter, with another writing, containing a Project of an Infurrection to be undertaken against the Government, he thought it absolutely necessary, to give notice thereof to the Great Council; and that he defired him to write a Letter accordingly, to the Council, he being pretty well versed in the Dutch Tongue. That Vale ask'd him, whether any body besides himself knew of the matter, unto which he answered, That his Brother Bernardin did, whose Opinion was likewise to disclose it to the Council; Hereupon they returning each to their respective homes, Vale writ a Letter in Portuguese, pursuant to the Instructions he had received from Karvalhe, for whom the faid Letter was left to peruse in a Bakers House, on a publick Fair Day for the Sale of Negro's; after

7be Coun-

which he had fent the faid Letter in-4 3. closed in another, to Dr. Markado, defiring him to fce the same carefully difparcht to the Great Council, without mentioning the Contents thereof.

The Great Council receiving frequent Intelligence, That the Peringueses from the Bahra intended to fend a Fleet to the Assistance of the Rebels, it was resolved cilveed to send Orders to the four Ships, the their Ships Amfterdam, the Blackmore, the Northfrom the Holland, and Groningen, then at Anchor RedLand, near the Red-Land, in order to their return to Holland, to return forthwith to the Receif; the Government standing in great need of their Assistance, to prevent the Conjunction of the Forces from the Bahra with the Rebels. They received also Letters from Lieutenant Colonel Haus, dated at Pojuka the 26th of fune, affuring them, That he had granted Passes to above 200 Persons that were returned to their Duty; That two or three of the Ringleaders, excepted in the last Pardon, Jued for the same fayour; and that he had caused one Francho Godinho, one of the Chief of the Rebels, taken by his People, to be hanged on the Gallows he had erected himself; That Amador d'Argouje being gone from thence with 150 Men, to the Vergea to join with Vicira, he expected their Orders whether he should follow him, he looking upon it as a faint to draw him from thence. He further told them, That with the Brafilians, and their Wives and Children, he was above 500 strong, and that unless they were foon supplied with Provitions from the Receif, they should consume all the Cattle thereabouts.

> The Great Council sent an Answer the same Night to Lieutenant Colonel Haus, requiring him, to Grant free Pardon to all who should defire it, not excepting the Ringleaders themselves, thereby to weaken Amador d'Araouje, and his Party. That with what Forces he could spare in Pojuka, (after sufficient Provision made for the Defence of the Garrisons, according to their own Discretion) he should march to the Receif, in order to attack Vieira, where they need not fear but to be able to fubfift, upon what the faid Viera had laid up for the use of the expected Succours from the Bahia, and the Cattle belong-, ing to the Rebels.

But whilst Lieutenant Colonel Hans was employed in securing Pojuka against their Attempts, those of the Vergea ftrengthned themselves with all possible Vol. II.

diligence; to further which, John Fernandes Vieira, and Antonio Kavalkanti, who 1643 stiled themselves the Heads of this War. did not only affix their Declarations round about Maurice's Town, and in Iguarasu, inciting the Inhabitants to Rebellion, by promising them considerable Succours from the Bahia; but their Parties also, which they fent frequently 3broad, forced those of the open Country to take up Arms, killing fuch as refused. The same was practised by Amador d'Araouje in Pojuka; fo, that what with Provisions, what with Threats and Force, they got together a considerable Body in the Vergea, we being not in a capacity to prevent it, because what Forces we had were in Poluka.

But judging it absolutely for our Interest to stop as much as possible these Proceedings, it was refolved to arm fome of the lufty young Fellows with Firelocks, which they were furnished withal by the Citizens, (there being none in Magazines) and to join with them a Detachment of the Garrison, besides 100 Brasil.ans, that were lately arrived under Peter Potts.

Pursuant to this Resolution, Captain John Blaar received Orders to put him Baar fet felf at the head of 300 Men, with whom abroad he was to march with all imaginable Se-with form cresie from the Receif; and by lying in Truops. Ambush near the Passes, to endeavour to intercept some of the Enemies Troops, not questioning, but that out of the Prifoners, they should be able to learn where Vie.ra was posted with his main Body, and of what Strength, both he, and the Succours from the Rabia was reputed to be among them. He had strict Orders not to molest any of the Inhabitants, who were not in Arms, but to protect them and their Estates; and to receive those who sought for Mercy, and bring them into the Receif. were also sent to Lieutenant Colonel Haus to march with what Forces could possibly be spared out of the Garrisons to the South, to the Verges, in order to joyn with Captain Blasr, and endeavour to attack the Heads of the Rebels, which if they could once put to the rout, might be a means to fquench the whole fire of Rebellion, and to restore Peace to the Dutch Brasil.

The first of July, it was debated in Council, Whether all fuch Persons as were suspected to have a hand in the Conspiracy, ought not to be granted to all that defired it, without Exception. The last was resolved upon as conducing

most

Mr. John Nieuhoff's Voyages

most to the quieting of the Subjects 543. Minds.

The 2d in the Evening, the Council received Advice from Captain Blast, That he was posted at Mongroppe, with an Intention to Attack the Enemy, whereever he met them.

The 3d he marched to Iguarahi.

The 4th they received Letters from Lieutenant Colonel Haus, from St. Antonio, importing, That after having left a Garrison in Pojuka under Lieutenant Hemming, and 100 Brafilians in St. Antonio, he was ready to march to the Sugar-Mill Velho, and from thence to Moribeka; where he would expect their further Orders.

At the same time the Inhabitants of be Condi. At the lame the first of Goyana having fortified themselves in a Joyana. certain House, belonging to Listry their Chief Magistrate, they desired the Council to furnish them with 40 Musquets, for the use of such among them as were unprovided with Arms. Their Request was granted, and politive Orders fent at the same time to Servaes Karpentier, to take this opportunity to disarm all the Portugueses, either by fair or foul means; to effect which, He should keep the Dutch together in a Body as much as possibly he could; his Answer was, He would endeavour to Disarm the Portugueses by fair means, he wanting power to do it by force. Besides which, he gave notice in his Letter dated the 11th of July, That every thing remained quiet hitherto in Goyana, but that the Brasilians, (contrary to his express Orders) claiming a Prerogative to be Commanded by none but their own Officers, pursuant to a Decree of the Council of XIX. had in their Passage to Tamarika, plundered several of the Portuguese Inhabitants.

Most of the Rebellious Portugueses had left their Wives and Children in their Houses and Mills, which as it tended to their no small conveniency, fo some of the faithful Portuguese Inhabitants did propose on the 3d of July to the Great Council, Whether it would not be for our Interest to oblige those Wives and Children to quit their Houses and Mills, and to fend them after their Husbands. Several Reasons were alledged for it.

I. Because the Rebels being encumbred with their Families, must of necesfity make greater Confumption of Farinha, and other Provisions; which would oblige them the fooner to after their Measures, and to change their Places.

II. That thereby they would be much. disheartned, for fear of a vigorous At- 164

III. That they would not be able to march or to change their Camp fo conveniently as before, or to lurk in unhabitable Places.

IV. That by the removal of these Women, who ferved them as Spies by the help of their Negro's, we should take away all opportunity from them, to be informed of our Deligns.

All which Reasons being well weighed, the following Proclamation was pub-

A Proclamation for the Removal of the Rebels Wives, and Children.

THE Great Council of Brasil, by the Authority of the States General of the United Provinces, his Highness the Frince of Orange, and the West-India Company, make known unto every Body, That whereas many of those, who have sided with the Three Head Repels, John Fernandes Vicira, Antonio Kavalkanti, and Amador d'Araouje, against this State, have left behind them their Wives, Children, and Families, which hitherto continue in their former dwelling Places; We do by these Prefents strictly Command all the Wives and Children, whether Male or Female, whose . Husbands and Fathers are engaged with the Rebels, to leave their respective Houses within fix Days after the publication of this Proclamation; and to repair to their respective Husbands and Fathers, or else to incur the Penalties due to Rebels; it being Our Refolution not to take the Same into Our Protection on; nay, to take away Our Safe-Guards from all Such of Our Subjects as shall be found to Harbour or Conceal these before said Wives. Children, and their Effects; unless the Husbands and Fathers of these Wives and Chila dren shall within the limited time of fix days. return to their Dwelling Places, and Sue for Parden to the Council.

Thus Decreed in the Assembly of the Great Council of Brafil.

About this time, near 1000 Brasilians, among whom were 369 Men, the rest Women and Children, being retired to the lile Tamarika, to sheker themselves against the Rebellions Portugueles, Mr. Derment Counsellor of the Binances, was fent-thither in the beginning of July, at Supretiff

in of

>> Supream Director of the Territory 3. of Iguarafu, to secure that Island, which was of so great consequence to the State, in our Interest.

The 5th of July, a Proclamation was issued against the Three Chief Rebels. John Fernandes Vieira, Antonio Kavalkanti. and Amader d'Araouje, declaring their Lives and Estates to be Forseited, offering a Reward for the Apprehending of them, as follows.

A Proclamation for Apprehending the Three Head Rebels.

"HE Great Conneil of Brasil, by Authorsty of the States General of the United Provinces, his Highness the Prince of Orange, and the West-India Company, 'end Greeting: Be it known by all, That whereas we are fully satisfied, That John ernandes Vieira, Antonio Kavalkanti, end Amador d'Araouje, setting aside their Allegiance, have a considerable time ago entred into a Conspiracy against the State, fending their Letters throughout feveral Fregesies of our Jurisdiction, to Excite our Subjects to a Revolt; That they have gathered and still are gathering Forces to maintain their treacherous Designs against this State, forcing our faithful Subjects to joyn with them, threatning with Death such as refused to enter into this Rebellion; nay, having caused several, as well Hollanders, as Brasilians, to be Murthered upon that score : That they have affixed and published Declarations in several Places, tending to the Disquieting and Disturbing the Minds of the Subjects of this State, with the Name and Title of Governours of this War, (whereas they ought to have stilled themselves saithless Traitors) covering their villanous Designs under the Name of the Divine Majesty, besides many other Misdemeanors, whereby they have rendred themselves guilty of High Treason. It is for these Reasons, that we thought it our Duty to Declare, the abovenamed John Fernandes Vieira, Autonio Kavalkanti, and Amador d'Araouje, and by these Presents do Declare them Enemies of this State, Disturbers of the publick Peace, and Our good Subjects, Rebels and Trastors against their Lawful Magistrates; and to have Forfeited all their Privileges, Rights, Lives and Estates; and as such, We grant not only free leave to every one to Apprehind or to Kill the Said John Fernandes Vieira, Antonio Kavalkanti, and Ama-dor d'Araonje; but also promise a Remard of 1000 Charles's Gilders, to such or such Persons as shall do so signal a piece of Ser-

vice to the Company, as to Affichend either of those Persons, so as they may be brought to Justice; And the like Remard to any Person who shall Kill either of the Said Traitors, besides his Pardon for any Offence he may have committed before; and if he be a Slave, his Liberty, together with the Reward. We also strictly Command by these Presents, all the Inhabitants of this State, of what Quality, Degree, or Nation soever, That they shall not presume to Assist the said Rebels with Arms, Provisions, Money, Men, and Ammunition, or Harbour, Conceal, or Advise them in any Respect, or keep the least Correspondence with them; under pain of being declared Traitors, and to be punished as fuch with the utmost rigour, &c.

Whilst the Great Council were thus endeavouring to quench the Flame of itebellion, they received frequent Intelligence, That belides the Succours already come to the Rebels from the Bahia by Land, by way of Rio St. Francisco, they expected a confiderableFleet from thence; it was refolved to fend once more some Deputies, to the Governour Amonio Telles da Silva, to represent to him, That Kamaron and Henry Dias being under his Jurisdiction, their entring in an Hostile manner into the Dutch Brafil, could not be interpreted otherwise than a Breach of the Truce concluded betwixt the King of Portugal and their High and Mightinesles the States General.

The Persons pitch'd upon for this Deputies purpose were Bulthasar Vander Voerde, sent to the Counsellor of the Court of Justice, and of the Dirk Van Hoog strate, then Commander in Bahia. Chief to the Cape of St. Austin, who, being look'd upon at that time as a very Loyal Person, was sent for the 4th of July, leaving Barent Van Tichlenborgh to Command in his absence. Francis Krynen Springapple was appointed their Secretary, and Gerrard Dirk Laet, Alexander Sylve, and Jacob Sweares, to attend them as Gentlemen.

Their Instructions were: To lay open Their Into the Governour the true Reason and structions. Occasion of this Insurrection, and the Ringleaders thereof, who would never have dared to attempt it without the Hopes of Succours, which was fent them by Land through Rio Sr. Francisco: They were to fearch into his Intentions as near as possibly they could, and to defire him to recal Kinnin on and Hemy Dias with their Proops out of the Dutch Brafil, and to punish them according to their Deferts. If they found the Governor

onot inclined to give them due Satisfacti-3. on, by recalling those Troops either by v publick Proclamation, or fending some Person of Authority to bring them back, or by giving them some other real Demonstrations of his sincere Intention before their Departure, they were to protest to, and to Declare themselves innocent of all the Damages, Murthers, and Rapines, committed as well against the Hollanders, as Portugueses and Brasilians, already committed or to be committed by those Forces. They were to Declare to the Governour, That they would look upon it as an open Breach of Peace, and Act of Holtility, of which they must give an Account to their Masters, who, without question would know how to make themselves amends for the Damages sustained; and to Protest once more, That the Dutch declared themfelves Innocent of all the Miferies which must ensue from their taking up Arms for their own Defence, after their fo reafonable Request had been rejected.

Accordingly they set Sail the 9th of Arrive in July 1645, from the Receif, in the Ship the Bahia, called the Roebuck, and coming to an Anchor the 17th in the Bahia, were in the Name of the Governour Antonio Telles da Silva, Complimented aboard their Ships, by several Portuguese Gentlemen, from whom they asked leave to come ashore, having several Matters of moment to propose to him, in the Name of the Great Council of Brasil.

Are admitted to Audience.

The next day being the 18th of July, about Noon, Lieutenant Colonel Andrew Vidal, and Captain Pedro Kavalkants, with some other Officers, came in a Brigantine to fetch them to the Palace: where, after the first Compliments, they delivered their Credentials, telling the Governour, That out of those he would understand, that they were sent to Treat with him of certain Points; which they were ready to propose, either now, or whenever he should be disposed to receive them. The Governour, after the usual return of Compliments, and perusal of the Credentials, told them, That he was ready to hear them whenever they pleased; whereupon they proposed,

That some Portugueses Subjects of their positions.

High and Mightinesses the States General of the United Provinces, have entred into a Cabal, in order to take up Arms, and Attack Pernambuka; to effect which,

they have by certain Letters, folicited their Fellow Subjects, to enter into a Rebellion, and provided themselves with

Arms in hopes of Succours from abroad. That in the beginning of May, Kamaren and Henry Dias with their Brafilians and Negro's, and some Portugueses, being on their march in an Hostile manner to Pernambuko, John Fernandes Vieira, Antonio Kavalkanti, and Amador & Araonje, with other Portugueses their Accomplices had no fooner notice of their coming, but they absconded from their Houses, gathered what Forces they could, some by force, some otherwise, publish'd their Declarations, stiling themselves, Governors of this War for the publick Liberty; all which they undertook upon hopes of being backt by Foreign Troops. That through God's Mercy, their Mafters did not want Power to protect their faithful Subjects, and to punish the Rebels according to their Deferts: But as they could not comprehend, what it was that could induce these Foreign Troops to enter their Territories in time of Peace, in order to Aid their Rebellious Subjects against them; so they were at a stand, how to deal with them. That the Great Council, as well as all the rest of the Inhabitants, being too well acquainted with his Excellencies Extraction, exquisite Knowledge in State Affairs, and the good Neighbourly Correspondency he had always cultivated with our Government, than to harbour the least thought, that he should give the least Encouragement to any of his Subjects, to Aid Rebellious Subjects against their Soveraigns: That they were sensible he would use all possible means to prevent it. It was for this Reason, that they were fent by the GreatCouncil, to give his Excellency notice of the Hostilities committed by Kamaron and Henry Dias, defiring that he would be pleased not only to Command them not to affift the Rebels with their Troops, but also to retire out of Pernambuko and the other Captainships under the Dutch Jurisdiction; that so the Rebels being disappointed of their Assistance, might be sooner reduced to their former Obedience, and our Subjects enjoy the benefit of the Truces stipulated betwixt his present Majesty of Pertugal, Don John IV. and their High and Mightinesses the States General. All which, the Great Council of Brafil, highly recommended to his Excellencies Confideration, in a Letter which was then delivered by the Deputies to the Governour, which is as follows:

A Letter from the Great Council to the Governour of the BAHIA.

> T is sufficiently known to your Excellency with what strictness the Truce between Majesty of Portugal, and the High and Mighty the States General of the Un.ted Previnces, has been observed in all its circumstances by the Inhabitants of the Dutch Brasil; even according to the constitution of those of the Bahia, and other places, who have of late passed through our Captainships; neither have we ever received the least complaints upon that account, either from the King your Muster, or from your Excellency, all which gave us fi flicient reafon to believe, that you would not in the least confent, that your Subjects should attempt any thing contrary to the faid Truce. And, the fome of the Portuguese Inhabitants, Subjects of the States, laying afide their Allegiance, have taken up Aims, and foon as Kamaron and Henry Dias at the head of their Brasilians and Negro's, besides some Portugueses, did, without Licence, or the least encouragement from us, enter our Territories, contrary to the Law of Nations, and joining with the Rebels, exercised open Hostilities against our Subjects, not like Soldiers, but Rubbers and Thieves; yet can we not be perswaded, that those Troops should have made this attempt by Order or Confent of his Majesty of Portugal, or your Excellency, against us your Confederates.

Thanks be to God we don't want means to bring our revolted Subjects to reason, and to destroy those Fore gn Troops; but to form to all the World, how ready me are to fulfill the resterated Command of our Masters, to maintain inviolately the Truce betweet his Majesty and them; and to remove all sunster Interpretations, which might be made in Foreign Courts upon this head, as also to give Sufficient opportunity to his Majesty of Portugal and your Excellency to convince the World, that you have neither confented to, neither abetted this Confpiracy; We in the Name of their High and Al ghitineffes the States General, his Highnifs the Prince of Orange, and the Governours of the West-India Company, have fent Mir. Balthafar Van Voerden, Councellor of the Court of Justice, and Dirk Van Hoogstrate, Commander in chief on the Cape of St. Austin, es our Deputies to you, with full power to you forthwith to recall the faid Kamaron, Henry Dias and other Leaders, with their Hollanders, and they and the Ship brought Vol. II.

Troops, within a limited time out of our Territories, either by publick Proclamation 1543 or fuch other means, as your Lacellere, shall ww think most forcible or expedient; and to punish them according to their deferts; and of they refuse to obey, to declare them open Enemies of his Majesty; it being impossible for us to conceive, how due fatisfattion car be given without it, to their Hoh and Mightineffes, to the Prince of Orange, and the West-India Company, which nevertheless we ought and do expect from your Ex-

Subfiribed, Your Excellencies.

Well mean ng Friends,

On the fide flood, From the Receif, July 7. 1640.

Henry Hamel, A. Van Bulleitraten, P. J. Bas, J. Van Walbeek, and Henry deMucheron.

The Governour gave immediate An- Tie Go.

fwer to the Deputies Propositions, That vernous: he was fo far from fending any Succours Anja. to the Rebels, that he had not had the tel. Deep least knowledge of it. That the Fr. least knowledge of it. That the Brafilians and Negro's were disbanded by his Majesty's Order, and that these as well as the Portugueses among them that were come to the affiftance of the Rebels, could be in no great numbers (confifting) as he supposed in some Vagabonds, or others, who having committed mifdemeanours in the Bah.a, had taken this opportunity to shelter themselves and flee from punishment; as it frequently happened that fuch like Persons did come to the Bahia from Pernanbuke, which nevertheless had given him not the least fuspicion of the Councils uncerity. He told them that he was extreamly glad to understand the good Confidence, their Masters reposed in him, of maintaining the Truce concluded betwixt his Majesty of Portugal and their High and Mightinesses the States General, fining them, that he never should be prevailed upon, to act contrary to it; for fear of hazarding his Life. And, that if he had any such intention, he did not want means to attempt it, by the assistance of the Brajilians. But that he had never had any thoughts that way, notwitstanding he had been provoked. to it by the Dutch, who fince the Truce had taken a Portuguese Ship, and carried propose these Foints to you; and, to define it to the Recenf; which by the bravery of the Portugueles was delivered from the

to the Babia; the Dutch Mariners being 1643 dismissed without any punishment. He told them further, That he was not infensible what an opinion their Masters entertained of his Sincerity; and that he had reason to believe, that they had at this time, as they had done before, fent their Deputies chiefly to feel his Pulse, to enquire into his Strength, and to dive into his Deligns That however he would communicate the Letter to his Council, and give them a speedy Answer, in order to their return home, pursuant to the request of their Masters. Then the Governour arising from his Seat, the Deputy's took their leave and returned aboard.

Theiriecond

The 10th in the Morning they were Authence. fent for a shoar by a Lieutenant, and brought to the House of Lieutenant Colone! Pedro Kerea de Gama, where they dined in Company of Andrew Vidal and Paulo de Kunha. Towards the Evening they were again conducted to the Palace, where the Secretary defired them to tarry a Minute, because his Excellency was buile with closing his Letters; After some stay they were introduced to the Governour, who told them: That he had understood the Contents of the Letter, which he found altogether agreeable to the Propositions made to him the Day before, by way of Mouth, by them; which confifted chiefly in two Points.

The Gafwer.

First, The good Opinion their Masters had of his fincere intention, in mainfecond An taining a good correspondency with them; in order to maintain the Truce betwixt his Majesty and the States General; and the confidence they had, of his not being concerned in the Rebellion, either by encouraging or affifting the same. Wherefore he desired, they would continue in the same Sentiments, because he never had made the least infraction of the said Truce, neither ever thought of any thing like it, nor suffered any of his Subjects, to act contrary to it; notwithstanding said he, the Hollanders have broke the same in feveral respects, viz. in their Expeditions against Angola, St. Thomas, and Marinho; by the plundering of Pedro. Cefar Mines, who had been basely used during his imprisonment, not like a Man of Quality, being forced to shelter himself among the Woods, after his escape. They had also taken a Portuguefe Ship in his own Harbour. Neither did the Inhabitants of Pernambuko

want reasons of complaint as vell as the other Captainships; H. h. v Jer- 16.4 flood out of feveral Letters ! i thence, 🔨 how the Jews were always bulle in forging Accusations against them, which were taken for truth, and when the Portugueses had thereupon absconded themselves out of fear, the Tapeyers or Mountaineers were arm 'against them; among the rest they had caused a poor Hermit to be Hanged. The Great Council had always given him fufficient proofs of their Suspicion, in the last Ambally, being intended to no other purpose, (as Captain Hoogstrate could testifie) than to dive into his Designs and Strength. Thus it was reported and believed, that Andrew Vidal and Faulo Kunha, with several other Officers were fent by him into Pernambuko, tho' they faw them here before their Eyes.

Upon the Second Point, concerning the Troops, said to be sent to Pernambuke, he gave for Answer, That they must be some Brasilians and Negro's, lately disbanded; who were of little account, as we were fensible our selves: That if a few Portugueses were among them, they must be supposed to be Criminals who were fled from Justice; That he was not unwilling to call them back by Proclamation, but feared that he should be but slenderly obeyed by a fort of People, who could not be kept in obedience within his own Jurisdiction. That to satisfie our request, and to remove all reasons of complaint, he intended to fend his Deputies shortly to Pernambuko; all which he had more clearly exprest in his Letter to the Great Council, wherewith he would, according to the request of our Masters, dispatch us with all imaginable speed.

The Deputies replied, That their A Replie Masters had never entertained any suf- the Dena picion of his Excellency, neither had they ties. given any Orders to dive into his Defigns; but always had a favourable Opinion of his firm adherence to the Truce; as might be evidenced by Mr. Andrew Vidal, who during his stay with them, had liberty to go where he pleased, without any attendance but his own. That what he objected concerning the Accusations of the Jews was of no moment, the fame being never hearkned to, the intended infurrection being difcovered by Persons of unquestionable Credit. That John Fernandes Vieira, Amonio Kavalkami, and others their adherents, had always been protected

against

1

against any false Accusations, and had 1 6 4 3. frema inis trail the Councellors of the Court usbillustice, and those of other Colonies, as well as the Chiefest among the Dutch; fo that they had no reason to abscond out of fear for the Tapoyers, who never were intended to be employed against them. That they did not know of any Hermit that was Hanged by them, but remembred that in an Engagement with Amador d' Araouse, such a one was Shot by the Brafilians as he was Ringing the Bell to give the Alarum.

> They further told him, That tho' they had no orders to treat with his Excellency upon any other Points, than those that concern the Rebellion, they could easily make it out before all the World that Angola, and the other places, were conquered according to the Rules of War, without the least infraction of the Truce, it having been expresly stipulated, that the War should continue in those Parts, till the same was published there. The Brafilians, Negro's and Portugueses were come in considerable numbers into our Territories, not like disbanded Soldiers, but well armed, and their coming was not unexpected, but well known to the Rebels; But the Council was not fo much concerned for their number, as to be fatisfied, under whose Authority they had taken up Arms against them, that they might deal with them accordingly But however it was, they defired his Excellency to believe, that their Masters would be extreamly glad to understand his good Inclinations, that thereby the effution of humane Blood might be faved; intreating him, to fend his Deputies forthwith with the necessary Instructions.

> The Governour promised to send his Deputies foon after their return to Pernambuko, telling them, that, as he thought himselt secure of the good Neighbourly correspondency of their Masters, so he was resolved to continue in the same on his side. What he had proposed for the rest, had been only by way of Discourse, not with an intention to enter into a dispute concerning the legality or illegality of it; tho' it appear'd very odd to him, that they should assist his Master at home, and at the same time wage War with him in other Parts, under pretence, that the Peace was not published there; and what had passed with Pedro Cefar de Mines was a thing not justifiable in his understanding.

After the usual Compliments he arose ~ from his Seat, telling them, That he 164 2. would find the Letter directed to the Council, to them about the next Day; they rate and fo our Deputies returned about their Ship. The 20th in the Morning the Secretary of the Governour came aboard our Vessel, with the Governours Letter to the Council, which he delivered to the Deputies, requesting in his Masters Name, to send him a Translation of the Letter from the Council to the Governour out of the Dutch into Portuguese, Subscribed with their own Hands; which they did, and having delivered the fame to the Secretary, he took his leave and returned a Shoar.

Our People set Sail the same Day a- Theirrebout Noon from the B. bis to Pernam- turn to the bulo, where they arrived the 28th in the Recent. Afternoon before the Receif, and gave an account the same Day of their Nenotiation to the Great Council, unto whom they also delivered the Letter Written by Antonio Telles de Silva, and directed to them. The Contents of which were as follows.

The Governours Letter to the Council.

R. Balthasar Vander Voerden The Go-Councellor of Justice, and Captain vernours Dirk Van Hoogstrate Commander in Letter to Chief on the Cape of St. Austin, your the Lordships Deputies have delivered your Letter to me, in which you are pleased to give me notice of the revolt of some of your Subjects against you. I received this News a. I ought to do, and should not have been able to receive it without the greatest surprise and discomposure of Mind, if I had not been assured in my Conscience, that your Lord hips did not in the least imagine, that this Insurrection could derive its scource from our Government; And, tho' I could upon this occasion enter upon a long recital, of the proceedings of my Government, tending from its beginning till now, to a sufficient Justification, in the Eyes of all the World, and of the greatest Kings and Princes of Christendom, that the said good correspon-dency has been maintained as strictly on our fide, as the same is promised in your Lordships Letter: But rather than give , the least occasion of disgust or difference, by enlarging my self upon those Heads, in which your Subjects have expressy and manifestly violated the Truce concluded and ratified betwixt the King my Mafter, and the States General of the United Provinces, I will Sacrifice the Same to the Interest of dar common Neighbourhood, than to enter

Mr. John Nieuhoff's Voyages

upon a particular attant of those miscarri-643. ages, in the Expedition of Angola, at a vime, when the States General did affift the Crown of Portugal with their Naval Force, when our Ambassadours residing in the Receif, were told, That these Troops were not intended to be employed against any of his Majesty's Harbours, but in the West-Indies ; though at the same time they were Finbarked for the Conquest of Angola. The same may be faid of the taking of the Iile of St. Thomas, and the City Luy de Mapanha, and the Seizing of a Portuguese Ship upon our Coast, loaden with Sugar from Spiritu Sancto. The Commiffary Greening was dispatch'd bither, under a present of Biging of Farinha, but in effect to found In Inclinations, as he himself confesses, when be fays in a certain Letter of bis, I was fent thither with this Commission, but ratner to feel his Pulse and try his Friendship, than that we were in want. The unfaithful Dealings of the Directors of Angola in the Capitulation with the Governour Pedro Cefar de Mines; the Razeing of our Fort Araval in Bengo; the base Treatment put upon the faid Governour, being a Perfon of Quality, and a General of his Majesty's, are Matters altogether Inconsistent with the Rules of War, nay, with Humanity it felf; and contrary to the practife not only of the more Civilized Nations of Europe, but also the Barbarians themselves. Of the same stamp was the Answer given your Council to our Ambassador, who urging a Cessation of Arms in the Kingdom of Angula, was answered, That the same had no Dependency on our Jurisdistion; quite contrary to the sincere Intentions always observed by me in all our Transastions with you; For no sooner did your Lordships make Complaints to me against one Captain Augustino Condago, and one Domingo de Kocha, who having carried away a Barge with Sugar, had brought her into the Harbour of our City; I fent back the faid Veffel immediately, and put the Captain in Prison till he was fent over to his Majesty. And that time being informed, That two Soldiers living under my Jurisdiction, whose Names were, John de Campos, and Domingo Velho Sigifmundo, had committed some Insolencies in your Captainship of Pernambuko, I caused them to be hanged immediately, looking upon it as a Duty not to be dispensed with by me, for the maintaining of our mutual good Correspondency: All these before-ment.oned Infractions having never been able to make me forgetful of the reiterated Orders of his Majesty, VIZ. To Improve the Effects of the Peace and Alliances made between him and the States General, to our both sides Sa-

tisfallion: I must at the same time confess, and That looking upon my stif as a Soldier, (ab- 1643. straited from the Consideration of the Inte- . rest of the State, and the Duty of a Subject) I thought I ought not to take tamely fo many Affionis, and to let sup so many fair Opportunities of doing my felf Justice; much beyond what can be supposed to arise from the Conjunction of a few unarmed Portugueles, a discontented Negro, and some Kebels, whose Protection cannot, as I said before, come in any Competition, with the jeveral Opportunities and Provocations pals'd by on our fide before, for the common Intireft; and that confequently our Government cannot as murb as be concerved to be the b dden Caufe of this Rebellion, as your Lordships themselves are pleased to confest; nerther would I have entired upon a Recital of those Farticularities, if I had not thought my felf obliged both in Duty and Affection, to give this Satisfaction to you. To give you the true Account of the Absence of Henry Dias, you must know, That one Night he left his Guard in Rio Reael, and passed over to your side; Don Antonio Philippo Kamaron, Captain of the Bratilians, being feut after him, and not returning, I judged, that they were gone towards Mocambo, to Attack the Palmairas of Rio St. Francisco; which made me (10 avoid all Suspicion of being concerned in any th ng that might tend to the Breach of l'eace) fend two Jesuits, to perswade them to return, but in vain, they refusing to Obey, either for fear of Punishment, or that they were already engaged with the Rebels, (as I now am att to believe they were) so that I have heard nothing from them fince, except what I have under stood out of your Lordships Letter. The Portugueses under your jurisdiction have fent to me the Reasons which moved them to this Infurrection, imploring my Affistance, as Subjects of the King my Master; they told me, That they stood is fear of being Sacrificed to the fury of 4000 Tapoyers, fent for that purpose from R10 Grande; to avoid which, and dreading your Lordships Anger, awakened ag ainst them by the false Accusations of the Jews, (the most perfidious and irreconcileable Enemies of Christendom) had rather chosen to expose themselves to a nuserable flight, leaving behind them their Wives and Children, than to endure the Hardsh ps of a ted out Imprisonment. I could fearce have imagin'd, that you could be so far m. sled by the Fictions o; a People to much despited by all other Nations, as to be perswaded by them, that certain Persons were sent from hence into your Territories, who have been feen here by your Deputies. And though I am apt to per swade

my self, that some of the Portugueses would, 643. as the case now stands, be glad to Embrace our Protection, it being much more Natural to be Oppressed by ones own King or Prince, than by Foreigners: Tet when I seriously reflect upon your Lordsh ps Proposals, made by your Deputies, viz. To Oblige Captain Kamaron and Henry Dias, to teturn to the Bahia, and to afe all other proper means to bring the Revolted Portugueses to Reason; when I fay, I feriously reflect upon the pub-Lick Calamities on one fide, and how destitute I am of furtable means at prefent, to fatisfie your Defires, I cannot but be infinitely concerned thereat; being sensible that these Captains will not be brought over by Persmafions; and wanting means to Reduce them to Oi chience, who have now fettled themselves at so great a distance among the Woods and Forests. But, as I am ready to conform my felf in all Respects to your Lordships Desires, to convince you of the Sincerity of the Portuguese Nation, which is such, that no opportunity, the never so great of promoting their own Interest, does ever stand in Competitionwith what they think they owe to their Confederates : I am willing to take upon ne the Office of a Mediator, in order to endeavour to Appeale these Troubles by my Autherity; for which end I intend to send to you with all possible freed, certain Persons of known Ability, with Sufficient Instructions and Power, to the Rebellions to return to their Duty; which, if they Decline, such Measures may be taken as will force them to it; which, as I hope, may serve as the most effectual means to restore Tranquillity to your Dominions, and to Cultivate the good Ofinion and Correspondency between us; which I wish God Almighty will be pleased to continue between these two Nations, by a perretualty of Amity.

Bahia, July 19. Signed,

Antonio Telles da Silva.

Mr. Hoogstrate at the same time gave a fecret verbal Account to the Great Council, That foon after their arrival there, Andrew Vidal, Captain Paulo Kunha, and John de Soufa, came to them, the last of whom sat himself down near him, (Mr. Hoogstraten) enquiring secretly after his Uncle I'bilip Pays Baretto, whether he was among the Mutineers; whom he gave for Answer, That he was still in his Mill. After which, the Table-I loth being laid, Soufa was invited to flay at Dinner with them; which he retused, because as he said, he was upon the Guard: Before Dinner was ended Vol. II.

Sousa came back, and after the Table-Cloth was taken away, invited Mr. Hoogstrate and Kunha, to Smoke a Pipe with him in a back Room; whither they went but were followed by the Secretary, Mr. Springapple. As they passed through a Gallery, Paulo da Kunha took Springapple a little on one tide; and in the mean while, Sousa told Hoogstrate with a loud Voice, that he was surprised to hear, That his Uncle Philip Pays had not fided with the rest: Unto which Hoogstrate answered, That he thought he did very m fely, to keep himfelf quier, because it was likely to turn to no good Account. your Opinion, reply'd Soufa, But have a little Patience; and, Because I know you Hoogto have always been a Friend to the Portu-firate n gueses, I can affine you it will turn to a Tempted to considerable Account. And it is upon this tuguese, Some Ladgue you has a Francisco. Score, Ladvise you, l. ke a Friend, to provide Sousa. for your own Safety, and your Samily.
You may rest assured, That if you will Engage to do a piece of good Service to the King my Master, and to the Governour, you Shall want neither Money, Sugar-Mills, Places, nor Preserments. Mr. Hoogstrate appearing somewhat discomposed at this Discourse, told him, That though he was not unwilling to do the King and Governour what Service he could, he did not know what fort of Service he meant: Unto which. Soufa replied, I am sure you are able to do good Service to the King; But then, says Hoogstrate, You must tell me how: That I will, answered Sousa; Are you not Governour on the Cape of St. Austin? Unto which Mr. Hoog strate said, Yes, I am; Then replied Soufa, All what is defired of you, is, To Surrender the Said Fort, with all its Works, into the King's Hands, that we may Land our Menthereabouts: If you will promile to do it, you shall have a very ample Reward, and be made Commander in Chief of our Forces. Mr. Hoogstrate gave for Answer, That theje were I hings of such a Nature, as were not confiftent with his Outh and Honour. Their Discourse being interrupted at that time, by the coming of another Person into the Gallery, John Soula and Paulo Kunha, went out another way. Mr. Hoogstrate told his Secretary Mr. Springapple with a discomposed look, What is the meaning of these Dogs, do they take me for a Traytor? He was going on to fay more, when Soufa and Kunha seturning into the Gallery, took him aside, and told him, That he night be sure every thing should be perfo med, what had been promised him; that if he wanted any Moncy he should have it immediately; and for the reft, they would introduce him alone to

the Governour, to receive the Confirmation 6 43. of it from his own Mouth. Mr. Hoogstrate replied, What you Desire is not in my Power to perform, if I would never fo fain; because I am promised to have a Commission of Major immediately after my return, and then I shall certainly be employed in another Place. During this Parley, Mr. Vander Voerde entred the Gallery in Company with Mr. Andrew Vidal, who entertained him all the while the others were talking together, till Hoogstrate taking his opportunity as they were walking together, whispered Mr. Vander Voerde in the Ear; I wish I was well rid of them, to talk a little with you in private; for I know not what their design is; I am afraid they will either kill, or detain me here. Mr. Vander Voerde would willingly have made a Reply, but could not, by reason Sousa and Kunha, and Piedro Korre de Gama, (the last of which understood Dutch) were fo near them; fo that he thought it the fafest way to Dissemble, and to pretend as if they had been talking about fome indifferent Matter. Mr. Hoogstrate then told Sonfa, That he had a great mind to pay a Visit to Donna Katharine de Melo, Mother-in-Law of Philip Pays Soula, he answered him, That he would ask the Governour; who having given his Confent, Hoog frate went thitherward with Soufa, and at his going out of the Gallery, whispered Vander Voerde again in the Ear, They have catch'd a Mackrel, for I intend to Act the Hypocrite to the Life. As they were walking along the Street to Madam de Melo's House, Sonsa and Kunha repeated their former Discourse, endeavouring to Encourage Mr. Hoogstrate, by Hopes and Promises of great Reward, both from the King and Governor; with whom they faid he should Confer in private, concerning the Point in Hand; and that in the following manner.

After their return from Madam de Melo's, to the House of Piedro Korre de Gama, where Vander Voorde expected their coming, Kunha was to go privately to the Governour, to agree with him, that when Mr. Vander Voerde, Hoog frate, Soula, and Kunha, should come to speak with him, he should by his Secretary, defire them to stay a little while. In the mean while, Soufa was to ask Mr. Hoogstrate to take a Glass of Wine with him, and under that pretence bring him to the Chamber of the Confessor of the Governour, where they were to have this private Enterview. Accordingly Paulo de Kunha went to the Governour, whilst

Hoop strate and Soula were returning to Piedro Korre de Gama's House; when 1643. Soula entertained him with nothing else, & but the probability of succeeding in their Enterprise against the Dutch Brasil, telling him, That the Governour staid only for the coming of Salvador Komea de Saa and Benevides, who were expected with four Galleons from Rio Janeiro, besides fome other Ships; and that 2900 Men were deligned for this Expedition, befides those already in Arms in Pernambuke, who were to be fent from the Babia, and to be landed on the Cape of St. Arftin; This is, faid Soufa, the Governours Request to you.

Scarce were they returned to the House of Piccho Korrea de Gama, when Andrew Vidal came and told them, That the Governour was ready to receive them; fo they went to the Palace, where they were no fooner come within the Anti-Chamber, but the Governour's Secretary came to defire them to tarry a little, the Governour being busie with closing some Letters. So, whilst some Portugueses were entertaining Mr. Vander Voerde near the Window, says Sousa to Mr. Hoogstrate, Come, Shall you and I take a Glass of Wine in the mean while? Which Mr. Springapple the Secretary of the Embaffy understanding, told him, That he would go along with them; But Paulo de Kunha, and some other Portugueses taking him aside, kept him in Discourse, whilst Mr. Hoogstrate was conducted by Soula into the Confessors Chamber.

Within a few Minutes after, the Go- Mr. Hoog vernor Antonio Telles da Silva, entring the firate's Room, faluted Mr. Hoog frate very cur- enterview teously; and fetting himself in a Chair with the near him, ordered the Chamber to be Goverlock'd, no body being present besides nour. themselves, but Sonsa. The Governour then told Mr. Hoogstrate, That he had always taken a particular notice of his Character, of his being a Friend to the Portugueses, that he hoped he would continue in the fame Opinion, and would not refuse the Offer made him by Don John de Sousa, in the King's and his Name; their Intention being not to enter into a War with the Dutch, but only to Reposses sthemselves of what of Right belonged to the present King of Portugal, Don John IV. and that if Count Maurice of Naffan had staid any longer in this Country, he himself would have been Instrumental in bringing this matter about. Mr. Hongstrate answered the Governour, That he should be glad to understand, what it was he could serve

him in; You have, fays he, understood 1643: that from Mr. Soula; and I desire you, to turn absolute Portuguese. Mr. Hoogstrate told him it was beyond his Power, becanse immediately after his return, he should be provided with a Majors Commission, and consequently not be employed in the same place: Unto which the Governour replied : You need not question any place of Honour or Profit among us; But it will perhaps not be convenient to discourse together upon this point at present, for fear Mr. Vander Voerde, should sistpect us : But I intend to fend two Ambiffitdours, (of which Alr. Paulo de Kunha is to be one) to your Covernment, who shall be empowered to treat with you firther upon this account. And, fays he, giving his Hand to Mr. Hoogstrate, rest off ned in the Name of the King my Master, that, whatever Mr. Paulo de Kunha shall promife you, will be puntinally objerved and performed.

> Then the Governour took his leave, telling him that he would not decain him any longer, for fear of creating a Sufpicion in his Collegue, and fo retired into his own Appartment. But Mr. Hoogstrate and John de Sousa were no fooner return'd from thence, but the Governour fent for the faid Mr. Hongftrate and his Collegue Mr. Vander Voerden to confer with them, concerning their Proposals, made in the Name of the Council of the Dutch Brasil: As they were walking thither, Mr. John de Soula told again to Mr. Hoog frate, with a low Voice, And, why are you obliged to accept of the Majors Commission; it is an easie matter for you to tell them, that you would tather continue Governour of the place where you now are; and be fatisfied that when you come among us, that you will not want any employment, fit for a good Soldier as you are. Mr. Hong frate being not a little moved with this Discourse, was more desirous to get aboard their Vessel, as foon as possible he might, to get an opportunity of Communicating the whole matter to Mr. Vander Voerde; which he did accordingly, as foon as they were entred the Cabin, the Door of which he ordered to be Lock'd immediately.

In the mean while, viz. The 5th of July, it was debated in the Council of the Dutch Brasil, whether for the fecurity of the Country, they should not want the assistance of the Tapoyers, under their King John Dury, dwelling in Rio Crande; who for that purpofe

had gathered a good Body near Kunhan, especially since the Portugueses committed all manner of Barbarities against the Dutch, and had fummon'd the Barbarians call'd Rondelas, from the Bahia. But confidering the devastations which must needs ensue upon the March of those Barbarous People in the flat Country, it was thought convenient, not to come to any certain Resolution upon this Point, till they had advised with Lieutenant Colonel Hans, to whom a Letter was diffratched, immediately upon that account

On the 7th of 7. %, the faid Mr. Hase fent word to the Concell, that he in tended to Mirch the fant Day from Morebeka, and after leing joined with Captain John Blaur, to attack the Faciny at St. Lawrence; But by another latter of the 16th, written by Caprain Blow, they were informed that the Rebels continued very firong at St. Laurence, expecting a certain reinforcement from the Matta, where they had forced the People to take up Arms for them; defiring a Succour of Fifty Men, to drive them from thence. Hercupon the Council dispatched Messengers both to Blaar and Hans, ordering them to join their Haw and Troops, and to rout the Rebels near Blaar or-St. Latrence, on which in a great mea- dered to fure depended the preservation of the join.

Dutch Brafil. The 7th of the same Month the Council received also a Letter from Lieutenant Flemning, dated at Pojuka, in which he advertised them, that he had received certain Intelligence, that Kamar on was marching against him, and that two Companies were already come to the Sugar-Mill of Pikdora. Hereupon Or- Lieutenans ders were fent him, that if he found Hemming himself not in a Condition to keep the retriets Monastery for want of Provisions, he Antonio. should at the approach of Kamaron's Troops retire to St Antonio, the better to make head against the Enemy. fame Day Enfign Hartflein marched with a Detachment of 90 Soldiers and 30 Brafil.ans, of the Garrisons of the Receif and lamarika, to Ajama and Jegoaribi, in quest of the Rebels, but meeting with none returned about Noon, and the same Evening directed his March to-

wards Hates. The 8th of July the Council having received Advice from Han that they intended the fame Day to March from the Sugar Mill of St. John Ferdinando Vieirs to attack the Robels at St. Lawrence, if they would abide his coming,

Mr. John Nieuhoff's Voyages

Succours to Haus.

Hans or-

dered to

iend Re-

let to St.

Antonio.

it was resolved to send as many Forces 4 6 4 3. as possibly they could spare to his Relief, confidering that the preservation of the Count the whole Dutch Brasil depended on the Success of this Expedition; and accordingly two Companies of Foot, of Mucheron and Blast were ordered to March thither, not questioning but that before their arrival Haus would be join'd by Captain John Blaar; and in effect the next following Day they received Advice from Mr. Haus, that he was ready

to join with the faid Black.

The 10th of July, the Council gave an Account by Letters to Hans, what Intelligence they had received concerning the posture of Affairs in St. Anton.o and Pojuka, with Orders to fend as many Firelocks and Brafilians as he could poffibly spare to their Relief, to keep the passage from St. Amon o to Pojuka and Serenhain open; without which all communication betwixt them and the Receif would be cut off by the Enemy. Two Letters of John Fernando Vicira and Antonio Kavalkanti were the same Day read in Council, in which they complained of the Severity of the two last Proclamations, but were not thought fit to be answered; especially since Amador d' Araonje had about the same time retired from the Pass of Pinderama.

Two Days before, v.z. that the Council had received Letters from Mr. Hock, dated the 25th of June, at Rio Grande, intimating that, hitherto there had not happened any commotions in those parts, that however he had disaimed the Toringueses, and that the Tatoyers appear'd to be well inclined to the Government. Orders were fent him, to cultivate a good understanding with the Tapoyers, for which purpole they fent some Presents to John Duvy, their King, and that the Council approved his disarming of the Portugueses. On the same Day Father Imanuel, Lewis Bras, Imanuel Ferd.nand de Sa, Kuspar de Mendoza, Furtado and Jerorymo de Focha, all Portuguese Inhabitants of the Dutch Erafil delivered their Petition to the Council, requesting, that the time of fix Days appointed by the last Proclamation, for the Wives and Children of the revolted Portugueses, to leave the Country, being expired, they might be allowed to stay in their Habitations at least, till the ways, which at that time were rendred unpassable, by the overflowing of the Rivers, were somewhat mended. But confidering that the Perenguese Rebels forced the Inhabitants

by threats and other unufual methods to take up Arms against the Government, 1643 their request was not granted.

The 13th of July the Council were The Peritiadvertised by Letters from Haus, dated on of the the 12th, that he had passed the River Portu-Kapronibi, and marching thro' the just re-Ollanda, had met with 400 Rebels, who, at the approach of his Troops were fled to Morsbeka, with the loss of some of their Men; from whence they might without any opposition march to the Matta of Brasil, and that he was ready to march directly to St. Lawrence, where

he would expect the further Orders of the Council. They immediately dispatched their Orders to him, to pursue The Rebels and rout the flying Rebels with all pof-flee before fible speed, before they could make Haushead again, which done, he should fix his head Quarters, in fuch a place where

he was fure he might be supplied with Provisions out of the adjacent Country;

their Magazines being so exhausted, as not to be in a condition to supply his Troops. Hans had already in some measure taken effectual care of this point, having in the mean while fent a Reinforcement of 100 Foot, and a Company of Brasilians, under the Command of Captain Tallo, to Mr. Ley Governor of Moribeka and St. Antonio. The Council also ordered the Governour of the Cape of St. Austin to strengthen the Fort with Pallisado's; and at the same time received Advice from Mr. Ley from St. Anton o, that the Rebels under Amador d' Araouje, and Pedro Marinha Falkao, had posted themselves within fight of them in the new Sugar-Mill, but as foon as he received the expected Succours, he did not question Revolute to chase them from thence, Amador a Pojuka.

Araouse having in vain attempted to force those of Pojuka to take up Arms against the Government.

He received also Intelligence from Mr. Carpentier out of Goyana, that things remained in quiet there as yet: But whilst Haus was butte in making head against the Rebels in the Vergea, Pedro Marinho Falkao having declared himfelt Head of the Rebels of Pojuka, had gathered a Body sufficient to block up the Garrison of St. Amon o, who had no other supplies of Provision, but what they received from the circumjacent Country; fo that the Council bemediately Orders to Hans, to hasten to the Relief of that place; who, ac-

cordingly.

cordingly directed his march the same 4 3. Night to the Sugar-Mill of Lewis Bras, leaving Captain Weltschut with a Com-

pany of Soldiers, and all the Sick, be-

hind, at St. Lawrence.

The Council received also Advice by Letters from Paul de Linge, dated the 12th of July at Parayba, That things were as yet quiet thereabouts, but that with much ado he had hitherto kept the Brasilians, inhabiting the Villages, from plundering the Fortuguese Inhabitants; who were extreamly diffatisfied, because fome of the Brasilians and Tajoyers, that had done them confiderable mischief. were discharged out of Custody. They ordered him to take all possible Care to keep both the Brasilians and Dutch Inhabitants, who were both for plundering the Portugueses, from doing any mischief to them; for which reason the Council fent the following Proclamation to be published there.

PROCLAMATION.

WE the Members of the Great Counc l, having received frequent Complaints, That many of the faithful Inhabi-tants of the Country, who lutely have taken a new Oath of Allegiance to the Government, are plundred and robb'd by the Soldiers and Volunteers; and being resolved to maintain them in the Possession of their Estates and Goods, have for that reason granted them Safeguards, and taken them into Our peculiar Protection; Do hereby forbid all our Officers and Soldiers, as well as the other Inhabitants under our Jurisdiction, to attempt to plunder any of the Inhabitants, provided with such Safeguards, or to Endamage them any other wife, either in their Goods or Persons, upon pain of Corporeal Pun shment.

The 15th of July in the Evening the Council was advertised by Mr. Ley, That the Rebels had kill'd some Soldiers of the Garrison of St. Antonio, that were fent abroad to fetch some Cattle from the Sugar-Mill Gurapou, and had so closely blockt up the Place, that no Provision could be brought thither; and as they were not provided with Necessaries, for above a few days longer, they were in the utmost danger of being lost. Lieutenant Colonel Hans being expected the , fame Evening with his Troops at St Laurence, Orders were dispatcht thither for him to go either in Person, or at least to fend as many able Soldiers as he could bring together, under the Command of Vol. II.

Captain John Bladr, to the Rellef of St. Antomo, the Council being of Opi- 16 a nion, That the Safety of the Cape of St. Auftin, and of all the Southern Provinces, depended on the Preservation of this Place; for which reason, they also ordered Captain Fallo, who was expected about the fame time with a Company of Soldiers, and as many Brafilians, at Moribeka, to march directly to St. Amonio, and to stay there till further Orders, of all which they lent Advice to Mr. Ley, and Mr. Heck. Hars, having, purfuant to these Orders, directed his march to St. The Elich Antonio, (notwithstanding the weariness ale of of his Soldiers tired by a tedious march) St. An-Pedro Marinho Falkao had no fooner no- - ali di tice of his approach, but he raifed the Blockade of St. Amonio, and with his Body of Rebels gathered out of the Three Diffricts of St. Antonio, Pojuka, and Moribeka, to the number of 600.

The 17th of July the Council were advertised by Haus in a Letter dated at Moribeka, that having received a Meffage from Mr. Ley and Mr. Heck out of St. Amonio, with Advice, That in Puerto de Gallinas, two Boats with Ammunition were landed by Pedro de Runha, he had fent thither Captain John Blaar, and Enfign Hartstein, with a good Body of his ablest Soldiers and Brasilians, he himfelf not being in a Condition to follow with the rest, disabled by their late marches; for which reason he had put them into Quarters of Refreshment in Moribeka, where he would expect their further Orders, as not judging his Prefence necessary at the Recess, now the Enemies were fled before him.

joined with the Rebels in the Vergea of

Moribeka.

Orders were thereupon Dispatcht to Orders sent him by the Council the 19th of July, to J. Haus by keep his head quarters in Morsbeka, the cil. better to keep a watchful Eye over the Rebels that were retired into the Woods; and to be the nearer at hand to fuccour either St. Antonio or Pojuka, for which Moribeka lay very convenient; but if the Enemy should become too strong for him, he should retreat towards the Receif. Advice also was sent him. That Amador d' Araouje, Pedro Marinho Falkao; John Pais, and Kabral, were with the Rebels they had gathered in St. Antonio and Pojuka, marched the day before in the Morning from d'Ingenio Moreno Gardo, to join their Troops with those of John Fernand Vierra.

The Council likewise received several Letters from John Hock, Rudolph Baro,

and James Rabbi, dated the 5th, 6th, 3. and 7th of July, concerning the present State of Affairs in Rio Grande, and that they being threatned with an Invation by Kamaren on the Southlide, and by the Brasilians of Siara and Maranhaon from the North, they had disarmed all the Portugueses and laid up their Arms in the Fort of Keulen. They had also by the Advice of King John Duny, taken into Custody a certain Portuguese call'd Antonio Vetello, with his Son, being accufed by the faid King Dury of having had a hand in the Murther committed upon the Dutch in Siara, and in the Conspiracy of the Rebels. They further complained of the ill Practices of the Portugueses, who fought by all means possible to oppress the Dutch thereabouts; adding withal, That King Dumy was ready with his Tapoyers to fall upon the Portugueses, as foon as he received Orders for that purpose, which had made many of the Porinqueses fly out of Parayba.

About the same time near 1000 Brasilians, viz. 369 Men, the rest Women and Children, being fled for shelter into the life of Itamarika, where they were maintained out of the Magazines, it was resolved the 21st of July by the Council, to fend thither Mr. Liftry, to take effectual Care, to Ease the Company of that Burthen, they might be engaged to provide themselves out of their respective Aldeas. Things were as yet quiet about that time in Itamarika, Goyana, and Parayba, by the good Conduct of Mr. Paul Vander Linge, Governour of the last. For as soon as the Fire of Rebellion began to break out in the Vergea, Pojuka, and in Olinda, the Council being advertised that they ought to keep a watchful Eye over those of Parayba, where several were suspected of being Conscious of the Design, they fent the 13th of July, Paul de Linge, one of the Assessors in the Court of Justice, thither, with an ample Commission, to endeavour to keep the Inhabitants in Obedience, and to act for that purpole, as he should find it most conducing to the publick Security. He was no fooner arrived there, but he made it his chiefest Care to provide the Forts with sufficient Garrisons, Ammunition and Provisions, which he took from the Ships then lying in the Road, behind the Red-Land: He further took Care to fecure all the fufpected Persons, and summoned the rest to take a new Oath of Allegiance to the Government, which they did accordingly.

The Council used the same Precaution in the District of Pojuka, in the Vergea, 1,6 4 3: Garassu, and Goyana, where they obliged fuch of the Inhabitants as had not left their dwelling Places, to take a new Oath of Obedience. But the late Succours fent thither from the Babia fruftrated all these Endcavours.

On the 24th of July, Mr. Ley come Propolitiwith Credentials from St. Antonio to the Trapopulate Council, unto whom he made the follow- by Mr. Ley ing Propositions.

to the Council.

- 1. That whereas feveral young and able Men, living near St. Antonio, had not listed themselves pursuant to the Proclamation iffued for that purpose, they defired Orders might be fent for all those living in the Jurisdiction of Manrice's Town and St. Antonio in the open Country, to be obliged to take up Arms for the Defence of the Country.
- II. To Oblige all fuch young Men as were not able to ferve as Volunteers, at their own Charge, to List themselves for Soldiers, and to instruct them in Martial Discipline.
- III. That perhaps it might not be unadviseable to draw the Garrison out of Porto Calvo, to appear the more formidable in the Field.
- IV. To divide our Land Forces into two Bodies, the better to maintain themfelves in the open Country; whereas now upon the least motion of the Enemy, our whole Force was obliged to follow them; and that the Garrison of Sr. Antonio should be Reinforced with such a number, as to be able to fend abroad a good Party, for the conveniency of fetching the necessary Provisions out of the Country.

After mature Deliberation, the Council was of Opinion as to the

- I. That the young Inhabitants of St. 1km & Antonio, Pojuka, and Meribeka, ought foliation not to be forced to serve in the Fort St. Antonio.
- II. That they would Empower Mr. Ley and Mr. Heck, to take as many of the young Men as voluntarily offered themselves into the Service for four Months, at Nine Gilders per Month, and one Months Advance Money.

leaving of the Fort Porto Calvo, but that

IV. What concern'd the dividing of their Land Forces in two Bodies, they would Advise with Colonel Hans, but they approved of the proposed Reinforcement of the Garrison of St. Antonio, for Reasons by them alledged.

Lieutenant Hans Fogel by his Letters dated the 18th, and 27th of July, at Seregippo del Rey advised the Council, That he had fent a Detachment towards Kamaron, who could not get fight either of any Portugueles or Brafilians, but that they had taken a fingle Fortuguefe, who was charged with Letters to be carried to Rio St. Francisco: He told them, I hat Kamaron with some Troops was marched through Rio St. Francisco into the Captainship of Seregippo del Rey; and that three or four small Vessels, or Caravans, with some Troops under the Command of Andrew Vidal, were fail'd from the Bahia, to Maranhaon and Siara. He likewife fent the Letters found upon the faid Fortuguese to the Council, by which it appear'd, That the first Foundation of this Revolt had been laid among those lessed and of the Bahra, or at least that they had communi- been made privy to it, and that they had ated to the provided these Succours. For among Council. others, there was a Letter from the Bishop of that Place, to a certain Friar of the Receif, in which he told him, That

> he hoped to be with him before long; whereupon the Fi/cal was ordered to Examine the matter, in order to find at the bottom of this Correspondency

etwixt these two Clergymen.

In the mean while the Tapoyers of R.o. irande (according to Mr. Linge's Letter of the 19th of July) had Murthered 35 Portugueses in the Sugar-Mills of Kunha, who being of the number of those that sad Surrendred their Asms, purfuant to the Proclamation, this caused no small Terror among the rest of the Formguefes thereabouts, and especially in Parayba, where they left their Habitations, fo that it being to be feared they would affociate with the Robels, under pretence ot Self-Detence, Mr. Linge defired a Reinforcement of Soldiers to keep the Tapoyers in awe. The Council theretore commanded Mr. Aftellen and Captain William Lambert with his Company of Foot, besides 20 Fusileers, and a De-Jachement of 50 Men out of the Gari-

fons of Parayba and Rio Grande, to take Care of the Tapoyers, and to Conduct 1643 them to the Receif; Jacob Rabbi their Commander was ordered to march along with them, and Rudolph Baro appointed to provide them Quarters upon the Road.

Haus having by this time sufficiently refresht his Troops, writ a Letter dated the first of Angust to the Council, in which he defined their Orders to go in quest of the Rebels, and to attack them before they could be reinforced with their expected Succours; which being granted him, he attackt them in d'Inge- Haus enmo of Balthafar Morceo, with fuch Suc- Eages to cess, that he beat them from Place to hebels. Place; till on the 3d of Argust they retired to their Entrenchment upon a high steep Hill, accessible only in one Place. Notwithstanding which, he relying upon the Bravery of his Soldiers, and hopeing thereby to put an end to the War, attackt them vigorously in this advantageous Post; but the Rebels being Superiour to him both in number, and in the strength of their Camp, his Forces were repulsed with the loss of 100 men, (some say of 500) among whom was Is worst Captain Lor. After this Defeat, Haus and rein being fensible that the Enemy expecting to the Ri daily a fresh Reinforcement from the Bahia, retired to the Receif, where he knew his Troops were absolutely necesfary for the Defence of the Place.

On the first of August, Gonsalvo Kabral de Kaldor, was by the Court of Justice Two Por-

Condemned to Death, having at the In- condemned stigation of John Fernando Vierra, under- 10 Death. taken to Head theRebels in the Captainship of Goyana. The same Fate attended one Thomas Pais an Inhabitant of Tienpio, who had endeavoured to raife some Troops for the faid John Fernand Vieira. The fame day the Great Council received Advice out of Serinhaim, (the Letters being fent privately in the Night time in a fmall Boat down the River to the Sca-side) That the Rebels began to be Rebelion very numerous thereabouts, that they in Serm-were Masters of the River, had staved all the Boats, and plundered d'Ingenio Formofa, where they carried away the Negro's, and kill'd the Beafts belonging to the Dutch, but spared those of the Portugueses. The Council being sensible that nothing but force would be able to reduce these Rebels to their Duty, and that they were from time to time Reinforced from the Bahia, whereas the Dutch Troops diminish'd daily, they refolved the first of August, to send Mr. Bal-

1 10 a fat

thasar Vander Voerden Councellor of 1643. Justice to Holland, to represent to the Ocuncil of XIX, there the true state of Affairs of the Dutch Brafil, and to follicit prompt Succours. Accordingly the faid Mr. Vander Voerden having taken his leave of the Council, fet Sail the next Day, with the rest of the Ships that lay ready to Sail for Holland, being instructed with sufficient Power and Credentials from the Council; as fol-

> Mr. Vander Voerden sent with a Credential into HOLLAND.

Most Noble, Honourable, and most Prudent

Otwithstanding the Rebels make not the least wise of the Royal Authority, but cover their Revolt with the cloak of Godly Liberty, we were always of Opinion, that this Rebellion of our Portuguese Inhabitants has not only been undertaken with the confent of the King of Portugal, or at least of his Governour of the Bahia, but also encouraged and somented by his Authority and Conduct. For how can it be supposed that Kamaron, Henry Dias, and the other Ringleaders, should have dared to attempt to attack us by force of Arms without his approbation? It was likewise our constant Opinion, (considering the present unsettled state of Portugal, and the Aliance between that King and the States of Holland against Spain) that he would be sure never to acknowledge the transactions of the heads of the Rebellion, and the Succours sent them, to have been done by his Authority, lest the breach of faith and all sts ill consequences might be one time or other laid at his door, till he thought himfelf sure in the entire Conquest of the Dutch Brafil. Our guess has since proved more than too true, for Antonio Telles de la Sylva, Governour of the Bahia (as 15 evident from his Answer to our Letters here anclosed) denies to have had the least knowledge, much less any hand in the contrivance or conduct of this Conspiracy; laying the blame of this Insurrection upon their Ringleaders, who refused to obey his Orders; and offering to fend certain Commissioners, to appease the fury of the Rebels; and in case they should resuse to comply, to force them by the Kings Authority to lay down their Arms. But how little agreeable this offer of putting an end to this Rebellion, is to his real Intention, is apparent out of the report made by Mr. Vander Voerden and Captain Dieterick Hoogstrate, underwritten by their own hands; in which you

will find thefe express Words of the Governour: That the Brasilians and Negro's 1 64 were disbanded by his Majesty of Poringal's particular Order. The Abstracts of the several enclosed Letters sent from the Bahia and taken from the Messenger by our Forces in Seregippo, will put it beyond all doubt, that several Inhabitants of the Bahia, and among them the Bishop himself, had already in May last some knowledge of the Intentions of John Fernando Vieira. and his Accomplices; Add to this the Deposurons of Captain Dieterick Hoogstrate Subjerished by himself, concerning the Propositions made to him in private, whilf he was managing the Company's business there, in the quality of one of our Deputies; which as it directly contradicts the Governours Answer to us, so it unravels the whole secret of his real Intentions. And for as much as all thefe things are sufficient forewarnings to us, that the Rebels will be constantly supplied from the Bahia, whereas we on the contrary must expect to be weakned more and more in every respect, we judged it absolutely necessary and requisite for the Service of our State, to fend to you the Members of the Council of XIX. Mr. Balthafar Vander Voerden, Councellor in our Court of Justice, to give you a verbal Achere, in a more ample manner, than the same may be express'd in Writing, not questioning, but your Lordships will thereby be encouraged to send us a speedy and sujficient Succour, to Re-establish our Affairs here, and to deliver your faithful Subjects from the imminent Danger, that threatens no less than the ruin and loss of their Lices and Estates; and desiring you to give a favourable reception to the faid Mr. Balthafar Vander Voerden.

Receif, the 2d of Aug. 1645.

Immediately after the departure of The Porthe two before-mentioned Envoys, Mr. tugueses Vander Voerden and Captain Hoogstrate, the Inveout of the Bahia, being the 20th of July, sion of the the Governour Antonio Telles de Silva, Duich ordered all the Sea and Land Men that Brafil. could be got together in hafte, to be Embark'd in twelve Ships ready fitted out for that purpole; with necessary Ammunition, Arms and Provision, for the intended Invalion. Hieronymo Serrao de Payva had the Supream Command over the Fleet, as tho' Colonel Martin, Soares, Moreno, and Andrew Vidal de Nigreiros had over the Land Forces, both Officers in the Service of the King of Portugal. The Orders given to the Admiral by the Governour, dated the

dated the 20 July, contained in Substance, 543. That the Great Council of the Detch Brafil having notified to him the Insurrection of the Portuguese Inhabitants of Pernambuke, he had judged it expedient, to exences Equip this Fleet, in order to put a speedy thu In ftop to those disorders; because he was willing to comply with the faid Councils request, in respect of the sincere Friendship and Correspondency betwixt the Crown of Portugal and them, which he had strict Orders from his Majesty to observe; whereas it is evident, that the Great Council of the Dutch Brasil in their Letter to Salvador Korrea de Saa Benavides, of the 13th of August exprefly declare, never to have defired any affistance from the Governour of the Bahia, against the Rebellious Portuquese Inhabitants.

e Por-

guele

The further Instructions given to the fruits- faid Admiral Payva were, That he sof the should directly Steer his Course from ese Ad. the Bahia to Pernambuko, keeping about 20 or 30 Leagues distance at Sea, from the Shoar; that coming to the 10th Degree he should approach the Shoar, and if he found the Wind to blow hard from the South, before he came to the before mentioned height, he should be very careful not to pais beyond the Lands point in the Night time. After having taken a view of the Country, he should with the advice of his best Pilots, endeavour to Land his Men, in the most secure place he could meet with thereabouts, either at Una, Lagamar or Tamandare; heing three Leagues to the South of the Isle of Alexo. if they could not make any of these Harbours, they should enter at Porto Dosser, Nambous or Lagamar of Marakaije, lying two Leagues to the North of Alexe. But if notwithstanding all their endeavours, they also should miss their aim in those places, to make themselves Masters of Porto de Gallinhas, and to land their Men betwixt that place and Barra Grande. After they had landed their Men, with the necessary Ammunition and Provisions, he should set Sail to the Bay of Pernambuko, in order to deliver with his own Hands the Governours Letter to the Lords of the Great Council.

Accordingly the faid Fleet set Sail towards the latter end of July, from the Bahia, and in few Days after arrived in the Bay of Tamandare, betwixt the Rivers Olna and Formofa, about four or five Leagues beyond Aleve and Serinbaim. They were no fooner come to Vol. II.

an anchor there, but the Colonel Martin Seares Moreno, and Andrew Vidal 164: de Nigreiros landed the 28th of July, W 1800 or 2000 Land-Men, among whom were many reformed Officers well appointed, and great store of Arms, Ammunition, and other necessaries.

The ist of August, towards Even-Land thei ing, three Ships with five small Vessels Mer. appeared in fight of the Receif, Steering their course to the North, whereupon the Council dispatch'd their immediate Orders to the two Ships, the Zoutlandia and the Zealandia, to make all the Sail they could after them, to observe what course they Steered, and to prevent their Landing of Men. About the same time an Advice-Boat arrived from Admiral Lichthart, with Letters to the Council, intimating, that he had feen the faid Ships, and that he supposed their intent to be, to land some Men on the South of the Cape of St. Auftin, for which reason he desired them to fend him some Ships, and grant him leave to take as many of the Garrison of St. Antonio as he should judge necesfary to attack the Enemy; of all which immediate notice was given to the Northern parts, to be upon their guard against any suddain surprise.

But the next following Day those Afall Ships being got out of fight, feveral la Masters of small Vessels, that had been the Re near them at Sea, reported, that they were heavy freighted Ships, which by the strong North-Winds were forced near the Shoar, so that it was concluded that they had Steered their course to-

wards Portugal.

Immediately after Admiral Payva fet The P Sail from the Bay of Tamandare, and tugue meeting with the Fleet under the Com- Fleet mand of Admiral Salvad, or Kerrea de buko. Saa de Benavides, which was latterly failed out of the Port of Rio Janeiro, he returned with him into the faidHarbour, and on St. Lawrence's Day with their joint Forces failed from thence towards the Bay of Pernambuko.

The first News the Council received of it was on the 11th of August, by a Master of a small Vessel, call'd John Hoen, bound for Seregippo del Rey, and by Commissary John Barentz; with Advice that they had feen a Fleet of 28 or 30 Ships, off of Una, or Rie Ferme a, and that three of them, had pursued them, and discharged some of their Guns upon them. Much about the fame time they received Letters from Major Hoogfirme, from the Cape of St. Auftin, and

on the Fort Vander Dussen, intimating, That 643. Andrew Vidal, Henry Dias and Paul de ~ Kunha were landed at Una, and marchbe Can ing to Serinbain, had made themselves advised Masters of the place, where they had the Receif Masters of the Place, but cut to given Quarter to the Dutch, but cut to pieces all the Brafilians. The Council hereupon took immediate care to fend some Ammunition and Provisions to the faid Cape, having already for the better Security of that place ordered Mr. Ley and Mr. Hock, two Days before, to leave the Fort of St. Antonie, and to retire with the Garrison to the Cape of St. Austin, before they were enclosed by the Enemy. That two Ships, the Deventer and the Elias, which were in the Harbour unlading their Goods, and Provisions brought along with them for the Service of the Company, were ordered to be Equipp'd immediately, in order to join with the other five Ships that lay at Anchor in the Road, viz.

They equip the Direcht, the Zealandia, Ser Veer, the some Ships. Zonelandia, and the Golden Doe. The fame Night, Advice of all what pass'd was sent to Colonel Haus, with Orders to be upon his guard, and to retire with his Troops to the Sugar-Mill belonging to Mr. Hoek, or any other convenient place, from whence he might be able to maintain a communication with the Receif. Letters were also dispatch'd to Mr. Doremone in Itamarika, to Mr. Carpentier in Goyana, and Mr. de Linge in Parayba, to advertise them of the Enemies arrival.

To supply the want of Sea Men, many Labourers were Imprest aboard the Ships, as were likewise 35 Land Soldiers of Moncheron's Company, who had spoil'd their Feet, by their last long March; and out of the Ship Eliau were 1000 Pounds of Gunpowder, and out of the Douchter 600, sent a shoar for the use of the Garrison.

Not long after dinner time the Enemies Fleet, confifting of 28 or 30 Ships, appear'd in fight of the Receif, where they cast Anchor to the North of four of our Ships and a Yacht, which lay in that Road; so that the next following Night was spent in ballasting the two Ships, the Elias and Deventer, and in fitting them for the Sea. The next Morning with break of Day the Portuguese Admiral, who carried the white Flag, sent Martinho de Rebeira and Balthasar de Castilho, as his Deputy's aboard the Dutch Admiral Cornelius Lichthart, who brought four Letters, viz. two from the Governour of the Bahia, Amenio

Telles de Sylva, the first Dated the 21st, and the second the 22d of July; the 1643. third from the Portuguese Admiral, Salvador Korrea de Saa Benavides, and the Letters fourth from Jeronymo Sarrao de Pavia, sent to the Dated the 12th of August; besidesano-Council. ther Letter from the before-mentioned Governour, directed to John Fernando Viesra, Anthony Kavalkants, and the other

Heads of the Portuguese Rebels.

Admiral Liehthart carried the said Deputy's ashoar, in order to deliver the Letters to the Council; which being translated, were read at the meeting of the Council, the 14th of August, as well those of the Governour, from the 21st, 22d, and 24th of July; as from Salvador Korrea de Saa Benavides, Commodore of the Portuguese Fleets, and Jeronymo Sarrao de Pavia, who had landed Andrew Vidal with his Men near Rio Fermosa.

The First Letter was as follows.

The First Letter.

Orsuant to your Lordships Letter, and the Propositions made in your behalf by your Deputies, Mr. Balthafar Vander Voerden Councellor of Justice, and Dieterick Hoogstrate Governour of the Cape of St. Austin, in which you requested, the recalling of the Troops under Henry Dias: I being desirous to fulfill my Promise, sent to you in my Answer, by the most effectual means that I could possibly think of ; have sent the two Colonels, Martin Soares Moreno, and Andrew Vidal de Negreiros (both Per-Sons of unquestionable Conduct and Prudence) to the Captainship of Pernambuko, with full Power and Instructions, to reduce the revolted Portugueses to their due Obedience, for which reason also I have fent a Letter to the fasd Rebels, to exhort them to the remembrance of their Duty, and to lay down their Arms. Which that it might prove the more effectual, I have sent thither sufficient Force, which may be Serviceable to your Lordships, to reduce these that remain obstinate, to Reason, and to chase the Rebellious Troops out of your Dominions. I hope that with God's assistance this may prove an effectual means to squench the Fire of Rebellion, to restore the Peace of Brasil, and to encrease the good under-standing and Friendship which has been established betwixt both these Nations. We recommend you to God's Protestion, Remaining

Bahia, 21. July, 1645. Your Lordships Assectionate Servant, Antonie Telles de Sylva.

I he

ジ

The Second Letter of the faid Governour to the Council, runs thus:

The Second Letter.

Have Dispatche my Orders to Colonel Jeronymo Sarrao de Pavia, Captain-Major of our Fleet, (which I have fent to your Assistance) to deliver these Presents to you, immediately after the landing of the Forces about the faid Fleet, and to Offer in my Name, all the Assistance he is able to give you, pursuant to my Command, and your Lordships Request. I am very ready to Embrace this opportunity, to give you thefe Marks of my Zeal for your Welfare, especially in Contributing what in me lies to the Reducing of your Revolted Subjests to their Neither do I in the least que-Obedience. ftion, But that by this Expedient, the Flames of an intestine War will be quencht, beyond all hopes of being ever Rekindled hereafter; and that I shall have the Satisfaction of having been Instrumental to Answer the Expettation of your Loraships, pursuant to the Proposals made to me upon that Account in your behalf. So recommending you to God's Protection, Ireft,

Your Lordships,

Bahia, July 22. Affectionate Servant, 1645.

Antonio Telles de Sylva.

Besides these, he sent another Letter by Don Salvador Korrea de Saa Benavides, Admiral of the Porsuguese Fleet, directed to the Council of Dutch Brasil, as follows:

The Third Letter.

Hilft I was endeavouring to satisfie the Request made to me by your Ambassadours, and busied in Enbarking the Forces design'd for your Service, under the Command of the two Colonels Martin Soares Moreno and Andrew Vidal de Nigreiros, togesher with Colonel Jeronymo de Payva, Captain-Major of the said Forces, Salvador Korrea de Saa Benavides Admiral of this State, and a Member of the Council of Transmarine Affairs, established by Authority of the King my Master, happened to arrive by God's peculiar Direction, with his Fleet from Rio de Janeiro, in the Bahia, in order to conduct them to Portugal. But being desirous to redouble my Eforts, as well in the Conduct of his Person as in the Strength of his Fleet, to render the

whole the more serviceable to your Lordships, I thought convenient to send the said 1643.
Admiral with the Fleet under his Command,
in Conjunction with the rest to the Revolved
Captainship, not questioning, but that by his
prudent Conduct and Authority, he will be
very Instrumental in restoring the Peace in
your Dominions, according to our utmost
Wishes; and I live in hopes, that this may
serve as real Demonstrations of the good Understanding and Friendship, I am willing to
Cultivate betwint these two States, both as a
just Friend and good Neighbour. I recommend you to God's Protestion.

Your Affectionate Servant, Bahia, July 25.

1645. Antonio Telles de Silva.

The chief Contents of these Letters tended to perswade the Great Council of the Dutch Brafil, That the Governous of the Babia had pursuant to the Request made by the Deputies of the faid Council, to him, fent certain Land Forces under the Command of the two Colonels, Martin Soures Moreno, and Andrew Vidal de Nigreiros, aboard the Fleet, Com-The Commanded by Jeronymo Sarrao de Payva, in tents of Conjunction with the whole Fleet of Rioskese Leede Janeiro, under the Conduct of Ad-ters. miral Korrea, to affift them both by Sea and Land, as is Evident from the Words of the preceding Letters: He also requested by his Deputies, viz. Captain Martinho de Rebeira, and Auditor General Balthafar de Kastilbo, That the Great Council would be pleased to acquaint the King his Master with it, in a particular Letter from them to his Majesty.

What deserves our particular Observation in his Letter to John Fernand Vieira, and the rest of the Rebels, is, that he calls them, The King's Subjects, unto whom he has fent this Succour for their Defence; yet with this Restriction, in order to reduce them by all gentle means to their former Obedience to the Dutch Government. It being Evident, That the Propositions made by our Deputies to the Governour Telles, tended to no other purpose, than to Engage him to recall Kamaron and Dias, and fuch others as were come to join with the Rebellious Portugueses, out of the Dutch Brasil, and in case of refusal, to declare them Rebels and Enemies of the King of Portugal; But he, directly contrary to the Intention and Request of the said Council, had instead of recalling them, sent these Forces to their Succours; and instead of leaving them to the Disposal of

the

Mr. John Nieuhoff's Voyages

the Council, had canfed them to be land-1643 ed in a remote Place, where the faid Kamaron and Dias were with their Forces at that time. Neither was the Council ignorant of their Intention, in fending a Fleet into the Road of the Receif at this juncture; tending to no other end than to back the Revolted Rebels in their Defign, and to Encourage the rest to take

up Arms against them.

the Councel upon them.

The Council was fully satisfied as to this Point, when they received Advice from the Cape of St. Austin, That the Garrison of Serinhaim had been forced to Surrender to Andrew Vidal after his landing thereabouts. Their chief Debate then turn'd upon this Point, By what means this Fleet might be removed from the Road of the Receif and our Coasts; considering that the whole Naval Force of the Dutch, then ready to Sail, confifted only in Five Ships, viz. the Utrecht, Zelandia, Ter Veere, Zoutlandia, and the Golden Doe, not very well Mann'd, and but indifferently provided with Ammunition, especially with Gunpowder, and few Soldiers could be drawn out of the Neighbouring Garrifons; whereas the Portuguese Fleet confifted at least in 8 or 10 stout Ships; the Admiral being a two-deckt Ship, refembling at a distance one of their large Galeons; so that the Attacking of them appear'd to be a hazardous Enterprise. After mature Deliberation, it was unanimoufly resolved in the said Council, to return Thanks to the Admiral Salvador Korrea de Saa Benavides, for the offered Succours against the Rebels; and to tell him the Reasons that obliged us to Defire him to retire with his Fleet out of our Road, as will more at large appear out of the following Letter: It was thought convenient to Dispatch the said Letter immediately, and whilst we staid for his Answer, to use all possible diligence in Equipping the two before-mentioned Ships, the Deventer and Elias; that if the Portugueses refused to comply with the Councils Request, we might be in a Condition to Attack them, and to drive their Fleet from our Coast, without which we faw but little probability to make our Party good against the Rehels, as long as they were back'd by constant Supplies from the Babia. It was also taken into Consideration, Whether it were not Expedient to Detain one of the Portuguese Deputies, till such time that Jeronymo Sarrao de Payva, should, according to the Request of the Council, come ashore in the Receif; but this Proposition

was rejected, for fear of furnishing the Portuguese with a new pretence of staying in our Road : Mr. Gilbert de Wit and & Henry Moucheron, both Members of the Council of Justice, being ordered to carry the faid Letter, they went aboard the Portuguele Admiral the same Evening. unto whom they delivered the following Letter to Salvador Korrea de sau Benavides.

A Letter from the Council to the Portuguese Admiral.

WE understand both out of your Lordships Letter, and those of the Governour Antonio Telles de Sylva, del .-. vered to us by Captain Martin de Rebeira, and the Auditor-General Balthasar de Castilho, as also by the verbal Assurances given to us by them in your behalf, that your coming with the Fleet into our Road is with no other Design, than to assist us with your Authority and Council in bringing the Rebels to Reason; for all which we return our hearty Thanks to your Lordship. But at the same time we cannot forbear to represent to you, That the coming with so considerable a Fleet in this juncture, gives us no small Cause of Jealousie, not only, because we never Requested any such Assistance; but also, by reason, That instead of Recalling Kamaron and Henry Dias with their Troops, the two Colonels Andrew Vidal and Martin Soares Moreno, have under pretence of Reducing the Rebels to Obedsence, landed their Men and Ammunition without our Knowledge, in a far distant Place, and consequently for the Defence of the Revolted Portugueses; whereas, (pursuant to his Excellency the Governours promise to us) this Reduction might have been much better obtained by a severe Proclamation, to oblige them to return to the Bahia; or at least, the before-mentioned Colonels ought to have made their first Addreffes to ms. These Proceeding , have contrary to your Lordships Intention, drawn this ill Consequence after them, that many of the Inhabitants, imagining no otherwise than this Fleet was intended for the Affiftance of the Revolted Portugueses, have also begun to take up Arms, in order to joyn with them; which obliges us to return our Thanks to your Lordship for the offered Succours, desiring you will be pleased with all possible Speed to retire with the Fleet out of the Road; which, as it will undeceive the Inhabitants concern ing the sinister Interpretations of your Lord-Ships Intentions; so it will serve as an effe-Etual means to keep them in greet, which at this Juneture will work upon us a fingular Obligation. What relates to your Lordships Request, to take in fresh Water and Fuel here,

being ill provided with both ly reason of your 5 + 3 · Sudden departure from the Bahia, we should for the before alledged Reasons, and the badness of the Scason, which would make it very tedious; which obliges us to beg your Excuse for this time upon that Account. His Excellency Antonio Telles de Silva having told us in his Letter, that he had ordered Jeronymo Sarrao de Paiva, immediately after the Landing of the Infantry, under Martin Soares Moreno and Andrew Vidal, to give us in Person a full Account, with what Power he was instructed by his Excellency, we defire your Lordship to fend the faid Jeronymo Sarrao de Paiva muhout delity to us, to Confer with him concerning the Instruction he has received from his Excellency in relation to the fending, and landing of these Officers and Lund Forces. For the reft, we refer our selves to our Deputies, Counsellors in our Court of Justice here, unto whom, we desire your Lordship to give full Credit, proportionable to their own Merus, and the trust we have reposed in them. God Protect your Lordship.

Signed by,

Receif, Aug.1 3. 1645.

Road.

Henry Hamel, A. Van Bullestrate. P. J. Bas, J. Van Walbeck, G. de Wit. I. Albrecht, Henry de Moucheron, I. Van Raesvelt, and J. C. Lichthart.

This Letter was pitcht upon by the before-mentioned Great Council, as the best Expedient at this Juncture, till, by the Conjunction of the Deventer and Elas, we might be put in a probability of Dislodging them by Force, if they refused to retire, at the Council's Request.

The 14th by break of Day we saw the gueicFleet whole Portuguese Fleet under Sail, and leave the for the most part out of fight; and confidering that the two Boats, which carried both ours, and the two Portuguese Deputies, would scarce be able to overtake them, and that our Deputies in their return were to give an Account to our Admiral on Board his Ship, whether, pursuant to the Council's Letter, the Portuguese Admiral had consented to send Jeronymo Sarrao de Paiva to the Receif, in order to open his Instructions to the Great Council; which they had now all

the reason to believe he would not, they

dispatcht immediate Orders to our Admiral Lichibart, to make all the Sail he 1643. could with the Ships under his Command after the Portugueses, to observe their Motions, and to endeavour to come up with the Flag-Ship, on Board of which was the said Jeronymo Sarrao, to desire him to return with his Ships to the Road of the Receif, in order to Confer with the Council in Person, concerning his Instructions. But after mature Deliberation, the whole Proceedings of the Portugueses, and the Letters of the Governour of the Bahia, concerning the pretended Reduction of the Rebels, being look'd upon as meer Amusements, Orders were fent to our Admiral Lichthart, to oblige all the Portuguese Ships he could meet with to Strike, and to Treat them for the future like Enemies.

The 28th of August, the Council was A Letter advertised by Letters dated the 20th, at 10 the the Fort of St. Margaret in Rio Grande, Council from the Governour de Linge, 7 hat 12 from Rio of the Enemies Ships, after having landed Grande. some Forces near Tamandare, were come into the Bay of Trackona; and that according to the Deposition of a certain Portuguese Prisoner, from on Board the faid Fleet, they intended to Land likewife some Men thereabouts, provided they might be join'd by the Rebels from the Matta; but if they fail'd to come, they would return to the Bahia. Whereupon Orders were fent to Mr. de Linge, to bring what Forces he was able together, either of Soldiers, Tapoyers, or Brasilians, to prevent their Landing, and their Conjunction with the Rebels in that Captainship.

The next thing under Debate, was, Whether it were not convenient to fend some Ships under the Command of Admiral Lichthart that way, to attack the Portugueses; after various Consultations, it was agreed, To stay till all the Ships might be got ready for that Service, to fupply the want of Seamen by good able Labourers from the Receif, and so to render our selves as formidable at Sea as

possible could be.

In the mean while, the faid Admiral The Dutch Lichthart fet Sail the first of September Admual with four Ships and a Yacht only; he fets Sait himself being in the Utrecht, but was from the forced by stress of weather, (in which Receif. the Zealandia lost a Mast) and for fear of the Rocks, to come to an Anchor not far from the Portugues, who endea-voured to gain the Wind of him Mr. de Wit and Moncheren return'd alsc with their Boat, having not been able.

by reason of the violent Winds, to over-1 6 4 3. take the Portuguefer; but had put their Deputies on Board a small Vessel, to Sail after their Flect.

> The fame Day, the Council received Letters from Mr. Hoogstrate, Ley, and Heck, from the Cape of St. Auftin, That the Enemies had posted themselves in the Sugar-Mills Salgado, Surbague, and other Places thereabouts; and because the Portuguese Fleet, which had been feen off of the Bay of Traikona, appear'd again in fight of the Receif the fame Evening, it was thought Expedient to order Admiral Lubibart immediately to go on Board the Virechi, and with that and the Ship Ter Veere, and two finaller Veffels, to keep a watchful Eye over the Porenqueses: Care was also taken to get the Ship the Overyffel ready against next day, not questioning, that when join'd by this, and the Zoutlandia, and Golden Doc, which were fent abroad for Intelligence, they fhould be able to cope with the Fortugueses, or at least to force them out of the Road. The next Morning early, the Portuguese Fleet might be plainly discovered from the Receif, but our Admiral was not able to stir, by reason of the contrary Winds; nevertheless, the Zouthandia, and the Ter Veere, which came from the South, a Cruiting, made all the Sail they could to Escape the Portugueser, which they did, being much the nimbler Sailors, and join'd our

The 4th of September, Major Bayert and Mr. Volbergen, complained to the Council, That Mr. Vierbergen, Count Maurice's Steward, had made it his Bufiness to give it out, that they being empowered to cut down certain Trees, and fome part of the Stabling and Gardens, for the better fortifying of the Fort Erreftus, had transgress'd their Commission, in cutting down many of the great Trees, with an Intention, as he faid, to Ruin the whole Plantation; whereas they declared, That they had been very careful in preferving as much as possibly could he all the largest Cocoe-Trees that stood not in their way; That by these Rumours, the Rage of the populace had been raised to that pitch, that they had much ado to appeare them, they being . for the cutting down not only of all the Trees, but also for the pulling down of the whole Palace of Count Maurice; All which they defired to be Registred in the publick Records, to ferve them for a legal Defence in due Time and Place.

In the mean time, our Admiral Lichthart being gone out in pursuit of the 1643. Portuguese Fleet, met with them in the Bay of Tamandare, confisting of seven Ships, three smaller Vessels, and four Barks, the rest being sent loaden with Sugar, to Portugal. He was not as yet join'd by all the Ships from the Receif; but being resolved not to let slip this opportunity of Attacking the Enemy, fent the 7th of September Advice to the Great Council, That being come in fight of the Enemies Fleet, near the Bay of Tamandare, confifting in all of Eleven Vessels, he was resolved to Attack them there, defiring them to fend as many Ships as possible they could immediately. Hereupon it was resolved to join the two Ships the Deventer and Elias, with the Unicorn and Leyden, then lying ready in the Road, and bound for Holland, and fuch Tenders as were at hand, and to fend them forthwith to the Admiral Lichthart. Pursuant to these Resolutions, the whole next, following night was fpent in Manning the faid Ships, but were the next morning detained for fome time by the contrary Winds.

The fame day Orders were given to all the Soldiers and Inhabitants of the Isle called Antonio Vaez, to provide themfelves with Baskets fill'd with Earth; and Pallifadoes were planted from the Point of the Receif next to the River, to the utmost Point near the Sea-side; and five great Guns were planted upon a certain Wreck, from whence they could Command the Seashore as far as to the Fort of five Bastions.

miral having ordered the red Flag to be Fight and put up, boarded the Portuguese Admiral worst it. carrying 60 Guns and 300 Men: He beguele
haved himfelf very valuantly, having pofleet. fted himself at the Entrance of his Cabin with a flaming Sword in his hand, wherewith he kill'd three or four, but having received feveral Wounds, was at last forced to yield. The rest of the Ships following the Example of their Admiral, had likewife Boarded the Por-

tuguese Ships; but these seeing the Flag taken down from the Admiral, (a difmal fignal of her Misfortune) they loft all hopes, and threw themselves headlong into the Sea, to escape the fury of the Fire and Sword; whither being purfued by the Dutch in their Boats, many perished before they could reach the Shore. Above 700 Portugueses were kill'd in this Action, besides a great num-

ber of Prisoners, among whom was the

Admiral .

and Travels to BRASIL.

Admiral himself: Three Ships were ta-6 4.3. ken and fent to the Receif, the rest were • fer on Fire; being not in a Condition to be carried off, because they had cut their Cables, and were run ashore, where the Portuguefer had planted fome Cannon upon Batteries, which fo annoyed our People, that fearing they might run aground within the reach of the Enemies Cannon, they fetFire to them, and with much adogot their Ships clear from among the Shelves. After this Engagement, I return'd to the Receif to take care of my Affairs there; and the Admiral fent an Express in a Fisher-Boat, with the following Letter to the Council of the Dutch Brafu.

A Letter from the Dutch Admiral to the Council.

O sooner were the Ships Leyden, the Yacht, and the Doc arrived last Night, near the Tornt of Tamandare, but pursuant to the result of a Council of War it was resolved to enter the next Morning within the Bar, which was performed in the following order. First the Ship, Utrecht Admiral, Second the Ter Veere, Thirdthe Zealandia, Fourth the Overyssel, and Fish the Zoutlandia, followed by the Doe and Leyden, and the Yacht, the Unicorn, the Tenders being ordered to be at hand, as occasion should require. Being come within the Bar, me found the Enemy seven Sail-frong; besides three small Vessels and sour Barks; and that they had planted several pieces of Camon upon two Batteries on the Sca-shoar. We received a very warm falute both from their Ships and Batteries, and several Volleys of Small Shot; notwith. flanding which the Ship the Utrecht couragionsly laid the Portuguese Admiral on board, after a short but sharp d spute took the Ship and the Admirals Flag; To be short, the rest of our Ships behaved theniselves so well, that foon after they forced the Portugueles to just their Ships; God be prafed for this Villery. Jeronymo Sarrao de Paiva the Portuguese Admiral is our Prisoner; and at present in my Ship, being forely wounded; whom I intend to deliver up to your Lordships, so soon as I stall come to the Receif; in the mean while I intend to fend back the Leyden and the Unicorn to norrow Morning, according to your Lordships directions. And, for asmuch as there is I kely to be no more action hereabouts, the Luciny having strengthned them-Jelves near the Sea-shoar, I will with the first opportunity return to the Receif, where I hope to give in Person a more ample account of the whole Action; I recommend your Lordfhips to God's Protection. In hafte, From the Ship, the Utrecht, muthin the Bay of Taniandaic, Sept. 9. 1645.

Your Lordships Servant.

Cornclus Lichthart.

The Portuguese Admiral Sarrao de Paiva in his Letter, Dated the 18th of Septemb. gave the following Account of his Engagement, to the two Colonels, Martin Soares Moreno and Andrew Vidal Neer c. 105.

The Portuguese Admiral's Letter to Andrew Vidal.

There the general I scourse here in the Recent, which is I kenise come to my Early that it is eported by you there, how the Dutch Admiral John Cornelius Lichthart, did before the beginning of the last Engagerier senter the Bay with a white Flag. thus Ju, afre our People, killed many of them in cool Blood. I thought my fell obliged to decumm you, that indeed two Days before the faid Fngagen ent a Yacht and a Bark with white Haggs appeared at the Entrance of the Bay, at which one of our small Vessels and a Bark shot three Cannon Shot. But that Day when the Admir al entred the faid Bay, he had jut up both the Dutch and red Flagge. Neither is it true what had been faid of their killing our Men in cool Blood, there being not one Man flain aboard my Ship, but during the heat of the Engagement, five or fix that had hid themselves below deck having received quarter, and a Soldier forely wounded ordered immediately to be look d'after with all care imaginable. Neuber was there a stroke given after the yielding of the Ship, but every body treated and provided for according to his quality and present necessity. The reason why so few had quarter given them, was, because mest leapt over-board, the Sea-Men sirst, and then the Soldiers : I being not able with Sword in Hand to keep them from chusing rather to perish in the Sea than to stand it out aboard the Ship. Two or three Persons of Note seeing me sorely wounded, freely gave me quarter, without knowing either my Person, or being asked it by me; a convincing Argument, that they would not have refused the same to all the rest, that would have begg'd quarter. I must confess my self so much obliged to the humanity and generosity of the Admiral, that it is not to be exprest in Writing. Besides that it is unquestionable, That we first Shot at them,

Mr. John Nieuhoff's Voyages

both from our Ships and Batteries, near the 1643. Sea-floar. I have given you a true Account of the whole matter, of which as I have been an Eye-wilnefs ny felf, so I don't question you will give an entire Credit to what I have Written to you upon this Account. God protect you for many Years.

Receif, Sept. 18. Jeronymo Sarrao da Paiva. 1645.

Andrew Vidal fent a Letter in Anfwer to this by one of our Drummers (fent to the Enemy upon some Errant) Dated the 25th of September as follows:

His Answer to the Admiral's Letter.

TE are sufficiently satisfied by your Lordibups Letter, that, instead of being enterta ned according to your Merits, you receive the fame ill Treatment with the rest of our Countrymen; the' considering, that your Case is different from the rest, you ought to have been treated in another manner, your Lordship, being come thither without the least Intention of waging War against them, (which they ought to have made due Reflection upon) but only as you were going to Convoy Some Ships homeward, did at their own Request, land our Forces in that Captainship; Considering the ill Usage and Tyrannies our Subjects have received at their Hunds, we are afraid, we cannot promise your Lordslup a much better Entertainment; of all which Murthers committed in cool Blood, we have taken fo Circumstantial an Account, that we are sure, we shall be able to justifie our Cause, and our selves, both to the States of the United Netherlands, and the rest of our Allies; for we have Fisht up many of our Portugueses with Bullets and Stones tied to their Legs and Necks; some had the good fortune to be faved, as they were for mming ashore, but many were burnt alive in the Wrecks of the Ships; the intention of these Gentlemen, being without question, by making so general a Slaughter amone their Fellow-Christians, to cut off from us all hopes of returning home; of all which they will be obliged to give one day a severe Account, both to God Almighty, and those who shall require Satisfaction for it at their' Hands, it being our constant Opinion, that they never will be able to justifie their Cruelties, and the Mischief done to our People, e ther before God, or the King our Master: We hope your Lordship will rest saisfied in this present Condition, and put your trust in God and our King, who are still alive to

Demand a severe Satisfast on from them. Cod protect your Lordship. 1643.

From our Quarters at St. John in the Vergea, Sept. 29. 1645.

Signed,

Andrew Vidal de Negreiros.

A certain Licutenant belonging to the Enemy, called Francisco Guomes, came along with the same Drummer, with a Letter from the said Andrew Vidal, directed to the Great Council, the Contents of which were as follows:

Andrew Vidal de Negreiros's Letter to the Great Council.

Received your Lordships Letter at Iguaracu, where n you feem to be extreamly Difgusted, at the killing of some Brasilians, with their Wives, by our Soldiers; under presence that the absolute Command our them belongs only to you, which I cannot but be much surprised at, when I consider, that your Lordships in your Proclamation, wherein you Command not to give Quarter to any Portuguese Inhabitants, (the natural Subjetts of the King my Master) you alledge among other Reasons, Because they had received their Birth and Education in this Captainship, (which however was fir & conquered by the Portuguele Kings, at the Expence of many of their Subjects) whereas now you would Impose this Hardship upon the same Inhabitants, to give Quarter to those Brafilians, who not long ago have been maintain'd and instructed in the Catholick Faith, as being their Vassals, and consequently not yours, but the King my Master's Subjects. Your Lordships ought to remember, That you are not in Fossession of this Country by Right of Succession, or any other legal Pretension, but basely by force of Arms. Desire your Lordships to take effectual Meafures concerning the Methods to be observed in the carrying on of this War, which we hope will be managed fo by your Trudence, as that Quarter may be allowed to the Inhabitants of our Nation; if not, I shall be obliged to act, as I find it most consistent with my Honour, to take Satisfaction for these Injuries. We desire also to put a stop to the Murthering of the Women, Children, and Antient People in Cool Blood, as has been done lately at Tihicupapo, Rio Grande, and Parayba. God protect your Lord-

and Travels to BRASIL.

The Great Council returned with the Confent of the Members of the Court of luftice, and Colonel Garfman, an immeliate Answer to the faid Letter, wherevith they fent the faid Lieutenant, in Company of the Drummer, back, the ame Evening.

But we must look back to their Proceedings: After Andrew Vidal de Negresos and Marin Soa es Moreno had landed heir Men to the number of 1800 or 2000, the 28th of July 1645. with good itore of Arms and Ammunition, near mandare, betwist Olna and Formosa, hey were 1900 after join'd, not only by our Companies, which had taken their way by Land from the Bab a, but also by he 1100ps under the Command of Kanara and Hemy Dias, who had hitherto

Perto Calvo blockt up by their Fores. From thence they directed their march to the City of Sermain, and laid siege to the Fort in which there was ony a Garrison of 80 Dutch Soldiers and B assuans, Commanded by Samuel Lam-ner and Cosmo de Moucheron. Two days ifter their arrival near Serinhaim, the Enemy posted themselves in the 2º Ingenio of Daniel Holm; about which time Henry Dias was feen in Serinhaim, notwithstandng the Portuguese Commanders Andrew Vidal and Moreno difown'd to have any Correspondence with them at that time: The faid Commanders had also sent the Captain Major Pavlo de Kunha before to summon the faid Fort, which he did accordingly by his Letter dated the 2d of A gost, at the Sugar-Mill of James Poies, and directed to Samuel Lambert.

The Summons fent to the Fort of Scrinhaim.

An come to this Sugar-Mill by siccial Orders from Martin Soares Moreno and Andrew Vidal de Negreiros, our Gottonor, they being very busie at present in landing their Men; they have sent me before, to prevent all Mischest that otherwise might happen betwent you and us; and, if in the mean while you will joyn your Forces with ours, or retire with them to some other Place, you may safely do it, I being ready to sumsh you with Passes for that purpose, the before-mentioned Governours being come with an Intention to put a stop to the present Insurection. God Protect you.

From the Sugar-Mill in St. Antonio, Aug. 2. 1645.

Paulo de Kunha.

Two days after the before-mentioned Commanders in Chief fent another Letter to Samuel Lambert, very little different from this.

A Second Summons from the Portuguese Commanders.

WE suppose you not to be acquainted with the Intention of our coning, which makes us to be the left furprised at your standing upon your Defence. The Great Council of the Dutch Brasil, have fent an Embassy to our Governour General by Sea and Land, Antonio Telles da Sylva, to desire his Excellency to make use of his Authority and Forces, to appeale the In-Surrection in this Captainship; which Request being readily granted, in order to be Serviceable to the Council, and to free the Portugueles from the Outrages they Juffered in their Houses and Families, we were fent to Land our Forces near these Sugar-Mills of Rio Formosa; which having been done accordingly, and ready to march further into the Country; we thought fit to acquaint you with our Intentions, which in all probability may have reacht your Ears, the same having been published in several Places by our Proclamations, of which we Send you one, desiring it may be affixt on the Church of Serinhaim. We define you therefore to lay by your Arms, to remove all Sufficion; not questioning, but that we shall meet with a favourable Reception, on your side, as we on the other hand shall make it our mun Endeavours to restore Transpullity among the Revolted Portuguescs by all gentle mean that possibly may be used; assuring you, as the same time, that in case you refuse to Concur with us in this Defign, you will caufe no Small Displeasure to the Great Council o the Dutch Brafil. God Protest you.

From the Sugar-Mill of Formofa, Aug. 4. 1645.

Martin Soares Moreno, Andrew Vidal de Negreiros.

The next following day, Paulo da Kunha came in Person before the Place with a Body of Soldiers and Boors, provided with Arms from on Board the Fleet; and after having Invested the Place, cut off the Water of the Fountains and Rivers from the Besieged. In the mean while, Row land Carpenter and Daniel Hohn had been sent away with Passes by the Comman ders of the Portuguese Forces, who Embark'd their heavy Cannon on Board Carpenter's Vessel, in order to carry it up

the River Formofa. Within five days of 1 0 4 5. the arrival of Paula da Kunha, the whole Force of the Enemy appear'd in fight of Scrinhaim, in Battle Array, and closely blockt up the Fort : The Dutch Garrison was inconsiderable in proportion of the Enemies Strength, who had fo well guarded all the Avenues leading to the Place, that they were foon reduced to want all manner of Necessaries, especially of Water. Besides this, many of the circumjacent Inhabitants and Volunteers, went daily over to the Enemy, who gave them an Account of the Condition of the Fort; and notwithstanding they had fent feveral Messengers to the Receif, they had heard nothing from the Council for two Months last past; fo that being without all Hopes of main-

ferve the Garrison, which might be SerIle Fort of viceable in other Places, where there
was sufficient want of good Soldiers, than
rashly to expose themselves to the sury of
the Enemies Sword: Accordingly Sajurrendred muel Lambert, Cosmo de Moncher on, and La
to the Port
tuguesis.

Whose agrey, who commanded in the Fort,
upon the second Summons made by the
Enemy, entred the 6th of August into a

Capitulation with the Portugues, of which Moncheron gave an Account in Perfon the 15th of August to the Council, and delivered it the 2cth of August to them in Writing.

taining their Post, they judged it more

for the Interest of the Company, to pre-

W E the Postings of Commanders "make known to every body, that we were fent into this "Country at the request of the Great "Council of the Dutch B. afil, to appeale " the Revolt and Troubles arisen among "the l'ortuguese Inhabitants. But at " our Landing here, being informed, "that notwithstanding this request, and "our good intention, the Dutch had "Murther'd many Portugueses in cool "Blood, (it being evident that they had "cut to pieces several Portugueses, who " were enticed into a Church for that " purpose) and that they had form'd a " Camp to oppose us, which ought to " be a caution to us, not to leave any " strong holds behind us, whilst we are " marching towards the Receif, we have "thought it necessary to enter into this " Capitulation, till fuch time, that we " may have the opportunity of concert-"ing new measures with the Great "Council, of which the Articles are as " follows:

I. The Commanders Sanuel Lambert, and Cosmo de Moncher on shall have leave to march out of the Fort and Castle, with the Garrison, with Ensigns display'd, all their Arms, Matches burning, &c.

II. They shall be permitted to march along the Road with their Ensigns, and Swords drawn, and shall be safely conducted by One or more Captains, who shall also be obliged to provide them Carriages and Boats, for the Transportation of their Persons and Goods to the Recess.

III. The Portugueses oblige themselves to restore to Montheron all what has been taken from him, and belonged to him before the Siege.

IV. They also oblige themschies to engage the Inhabitants of the City as well as those of Kamara, to pass by all past injuries either by word or deed; and that such of the Dutch as are willing to continue there, shall be maintain'd in their Possessions in the same manner as the Porsugueses are; and shall enjoy the same Privileges, and their own Religion, provided they don't Preach in publick, and pay due reverence to Confecrated places. They shall be at liberty to Trafick with the Portuguefer, and call in their Debts, as before, neither shall they be obliged to take up Arms against the States of the United Provinces.

V. The Dutch Officers shall restore to the Portugueses all their Brasslians with their Wives and Children, as being Subjects of King John IV. whom God preferve; and what relates to their reception and Entertainment, is to be lest to the discretion of the Chief Commanders of the Portugueses.

Upon these Conditions they shall be obliged to surrender the Fort, with every thing thereunto belonging, this Afternoon, but are permitted to provide themselves with necessaries for their Journey, which they shall have liberty to perform at their own leifure.

and Travels to BRASIL.

Evilions jugueles.

Immediately after the furrender of 645. the Fort, Moucheron entred into a long Discourse with the Portuguese Commanders, about their proceedings; which he told them, were far different, of the Por- from what the Governour pretended in his Letters, to wit, the appealing of the Revolt of the Portuguele Inhabitants, according to the request of the Great Council. They answered him with Tergiversations, telling him that they would be very careful not to act contrary to the Peace established betwixt the King his Master and the States General. But it was not long, before they began to Lord it over the Country, by taking, fuch as were in the least suspected to them into Custody, and taking an account of those of the Dutch that had Married Portuguese Women; nay they erected a Court of Justice of their own, and forced Moucheron to fell his Slaves for the Fourth part of what they were worth. They had so little regard to the late Articles, that they caused 30 Brafilians, part of that Garrison to be tied to the Palifado's, where they were ftrangled; The Portugueses alledged in their behalf, that they had fuffer'd Death for certain Crimes, they had confessed themfelves, tho' it is more probable, they were made Sacrifices to the discontented Portuguese Inhabitants, that had made heavy Complaints at the Brafilians. However about Thirty of them were spared, and bestowed upon the Officers, to carry their Baggage, and their Wives given to the Inhabitants. The Portugueses made Alvaro Fregoso d' Albuquerque Governor of the City and Fort, and made one Francis de la Tour, a French Deferter, Captain over 40 Deferters, who had taken fervice among them.

They also raised three Companies out of the Portuguese Boors, or Inhabitants, Commanded by l'edro Fregoso, Ignatius Ferrere and Immanuel de Mello, which were put into Serinhaim for the defence of that place, where they also caused two Jews to be Baptized, call'd Jacquo Franco and Isaac Navare. Most of the Dutch who had any Possessions or Sugar-Mills thereabouts had Safe-guards allow'd them, fo that none, except two. who came to the Receif, left that Captainship, of which they had sufficient reason to repent afterwards, being very ill treated by the Portugueses, as shall be shewn more at large hereafter.

The 15th of August, in the Afternoon, the Garrison of Serinhaim consisting only of 32 Men (the rest having staid be-

hind) arrived in a Bark at the Keceif; and their Commander in Chief appear'd the same Day before the Council, where he gave an account of the Reasons that moved him to furrender the Place, notwithstanding which he was ordered to be examined by a Court-Marfchal to answer the same; The Ensign who had conducted the Garrison to the Recodelivered the same Day a Letter to the faid Council, from Martin Somes Movene. and Andrew Vidal, Dated the Sth of August, intimating that they were come into the Dutch B. ofil, by special Command from the Governour of the Baha, and exasperating the outrages, they faid were committed by the Hallanders against the Portugueses. This Letter had another enclosed from the faid Governour, Dated the 30th of July, with a Proclamation, to be published in the Captainship of Pernambulo, whereby all the inhabitants were fimmon'd to appear Peremptorily before them, within the space of Eight Days, to receive their directions, for refloring tranquility among them. The Letter from Marin Source Moreno and And wy V.dal was as follows.

A Letter from the Portuguese Commanders to the Council.

Hen your Lordships found your selves entargled by a dangerous Conspiracy among the Portuguele Landutants of this Cartainfing, you made your applications to Antonio Telles da Sylva, Covernour General of Brahl, defiring him, to make use of the most effectual numbe could to appeafe this Rebellion. About the same time the Inhabitants of this Country by one unan mous Voice implored his aid and protection against those many Affionts, Plunderings, Murthers and Ravishments of Women, they groaned under; being resolved with joint confent to Arm themselves with Sticks (the 1-se of Arms being taken away from them by their Tyrannical Governours) agairst those ofpressions, and to defend their honour to the last gasp; not questioning but that God Almighty would take vengeance for the Blood of so many innocent People. They represented to his Excellency, that he was obliged by his Station to affift them in this extremity, as they were his Countrymen; but, if that Should not be prevailing enough; Reasons of State would induce him, not to force them to Despair by denying them his ad; which if he did it should be at the peril of his Head, and that he must give a severe atcount of it, before God Almignty, and other

The Porngueles lay the Master.

Mr. John Nieuhoff's Voyages

if they should be constrained to beg that · from a Foreign Power, which they could not obtain from their Countrymen. The Governour having taken all these pressing reasons into mature consideration, and in respect both of your Lordships request, and the heavy complaints of the Portugueles, made it his chief care, to find out the most effectual means (which your Lordships seem'd to leave to his discretion) to appeale this Revolt. Being sensible that the Revolt of the Portuguese Inhabitants had taken deep root among them, and was likely to prove more universal against your Government, he judged it most expedient, to send buther certain Persons with such Forces, as he thought ninght either by their Prudence, and, if that fail'd, by force of Arms, restore the so much defired tranquility. It is upon this account, my Lords, we are come to this place, in order to employ all our force and affiftance, according to your request, pursuant to the Peace established between these two Nat.ons, in regard of which we value not the exfences we have been put to upon this occasion. But we scarce had set foot ashoar, when our Ears and Hearts were struck with the doleful outcries of 40 Innocent Catholick Portugueses, murthered in the Church of Rio Formoso, whither they were enticed for that purpose, by those that were in your Service; without the least respect of Age or Sex, the very Babes being by the Natives barbaroufly musthered, as they were lying on their Mothers Breasts. Neither have the Sighs and Groans of many noble Maids escaped our Ears, that were ravish'd in the Vargea and St. Lawrence by the Brasilians, not to mention here, what barbarities have been committed in Pojuka, where is the fight of many a Hermit and innocent Babe who were slaughter'd in a Cave. Neither have they abstained from Holy and Consecrated places; they have cut to pieces the Images of the Saints, and stripp'd the Queen of Heavens, the Virgin Mary our bleffed Lady, of all her Apparel; Things so enormous, and never heard of before, enough to create horror and astonishment in a generous Heart. And notwithstanding your Lordships had desired the Governour General to interpose his Authority, you did form a Camp, which continues in the Field to this Day; and we being obliged by our Orders to come to you upon the Receif, we judged it not convenient to leave any armed power behind us, which in time might prove the occasion of great inconveniences to us; we shall endeavour to Show all due respect and kindness to your Subjetts, and carry the Garrison of Serinhaim along with us, till matters may be concerted betwixt your Lordships and us, for the Ser-

vice of God and the State. In the mean while, we most earnestly desire a stop may 1645. be put to the outrages committed by your Soldiers hitherto, to avoid all occasion of a Rupture on your side; We protest on the other band, in the Name of God, and John IV. the King our Master, whom God preserve, as also in the name of the States General, whose Power God encrease, that we desire nothing so much, as the continuation of the late established Peace, which shall be the guide of all our Actions; of which we have brought along with us an Authentick Copy, to serve us as a sufficient justification by all the Princes of Europe. And that your Lordships may be satisfied in the reality of st, we have fent you enclosed a Copy of the Proclamation, published by us, at our landing in this Captainship.

God preferve your Lordship.

Serinhaim , Mant & Somes Moneno, 2004 Aug. 8 1645. Andical dal de Negicuo.

The before-mentioned Proclamation runs thus:

Their PROCLAMATION.

WE the Commanders in Chief of the Portuguese Forces, Martin Soares Moreno, and Andrew Vidal de Negreiros, make known to all Persons, and Inhabitants of the Captainship of Pernambuko; That, the Great Council of the Dutch Brasil, having by a Letter sent to the Governour and Captain General of Brafil, given advice of the Revolt artsen among the Portugueses of this Place; defiring to endeavour the appeasing of this Rebellion by his Assistance; For which purpose the Said Governour now baving fent us with a sufficient Force into this Captainfinp, we command all the Portugueles, of what condition and quality soever, to appear peremptorily within Eight Days after the publication of these presents, before us, in order to restore tranquility among them, pursuant to the request of the Lords of the Council of the Dutch Brail. We also hereby intreat the said Lords, in the most friendly manner that can be, purfuant to the Tenour of the strict Alliance there is between both these Nations, ito stop the further persecution of the Portugueses, or any other Warlike Executions; and that if any of their Soldiers presume to act contrary to it, they may upon complaint made thereof to them, be severely punished.

I Alexes Autunes have Penn'd this Proclamation, and I Franco Bravo Desembarquador have approved st.

> Martin Soares Moreno. Andrew Vidal de Negreiros The

The Great Council resolved to give 5 a short Answer to the said Letter, and to Resute the Proclamation by another; and considering, that the Origin and Cause of all those Troubles and Missemeanours were laid at the door of the Council, they ordered the two Councellours of the Court of Justice De Witt and Moucheron, in conjunction with Mr. Walbeck Assessment in the same Court, to answer the same, and thereby to represent to the Council of XIX in Holland, that they were occasioned by the Rebels and their adherents.

In the Month of Angust the Troops lately come from the Bahia marched from Serinhaim to Pojuka, and so tothe Cape of St. Anslim, where being join'd by the Forces under the Command of Kameron and Dia, and the Inhabitants, they resolved (after our Men had quittugures) being to attack the Fort Vander Dussen on the the Cone of Cape of St. Austin, from the Landside; St. Austin. pur suantto which resolution, they posted their Troops all along both sides the River.

The Council in the mean while being forewarned of the Enemies design, had ordered the 2d of August, Mr. Adrian Bullestrate one of their own Members, and Admiral Luchthare, to go thither with all speed, and to take effectual care that nothing might be wanting for the Desence of the Place. They were for 500. Bull that end to take a full view of the Fort shade and Winder Dussen and all its Out-Works, and

to confider whether the Redoubt upon fair the Hill call'd Nate to you. It the Battery to the hetter Defence of the For Accordingly Mi. Bullefleate and Admiral Luchthart left the Receif, the 5th of A guft, and arrived the fame Evening in the Fort Vander Duffen, where having executed their Commission, Mr. Bullefleate returned the 9th of August to the Receif, where he gave the following Account to the Council.

That he left the Receif the 5th of August, in the Morning about Nine a Clock, and came the same Evening to the Fort Vander Dussien on the Cape of St. Austin.

That the 6th of August, after Forenoon Sermon was ended he rid with he Admiral, and some other Officers, 6 the Hill of the Cape of St. Austin; where having taken a view of the Harion, he found the Stone-Redoubt in a condition to be repaired, without any charge, the Cannon upon the Bat-

teries nail'd up, but the Works towards the Scaside in pretty good Order.

That he had ordered a Draught to be made, to surround the Redoubt with Pallisadoes, to raise a Battery within it, to build a Guard-House, and to widen the Ditches: He also had ordered a Stone Breast-Work, (for want of Wood) to be made on the backside of the Battery, with a row of Pallisadoes, and a Guard House; and that with the first fair weather, they should set on Fire all the Bushes and Brambles on the said Hill, and clear the Ground round about the Church Nazareth.

Upon View of the Fort Vander Dessen, he had Commanded the Major Hoogstrate with all possible speed, to put it in a good possure of Desence, the Admiral having already taken Care to have it surrounded with Pallisadoes: That on the 7th of August, having paid off the Garrison, and those belonging to the Artillery, he passed through very difficult Ways to St. Amono, where he likewise paid off the Soldiery, visited the Retrenchment, and put every thing in the best order he could.

That he had Bargained with certain Persons to repair the said Redoubt on the Hill called Nazarcib, and the Stone Breast-Work, the Building of two Guard-Houses, and surrounding both the Works with Pallisadoes, according to his Draught, for 900 Gilders, the whole to be compleated within three Weeks time. Here it was he had the first Notice of the Landing of some Forces from the Bahia, near Rio Formofa, by the same Fleet which the Week before was seen off of the Receif: But not being able to get any fure Intelligence, he had fent a Messenger to Lieutenant Montangie, then Commander in Serinbaim, to give him a true Account of the matter, and in what Condition he and his Garrison were at that time; encouraging him by fair Promises, all Communication by Land being already Here he also cut off betwixt them. Listed 38 Volunteers that offered their Service.

That the 8th of Argust he left the said Place, and notwithstanding the badness. of the Weather, rid cross the Hills of Higgendos, to the Sea-shore, where meeting with the Admiral, they went together up the River Sangado with the Tide, as far as Calendaria, where they staid for some time, and received the News, that in the last Encounter betwixt Colonel Haus and the Rebels near that Hill, above 200 of the last, among whom were

~~~

fome Officers, were flain, and about 40 6 6 4 5. or 50 on our lide. One Melchior Alvares came on purpole to tell them, That about 300 of the Revolted Inhabitants were inclined to accept of a Pardon, which he referred to the Council.

That being ready to take Horse in order to his return to the Receif, a certain Soldier of our Troops, that had been left behind, complain'd that he had been fleipt flack naked by the Servants of the Ferryman of the River Sangada, who had wounded and beat him miserably. Melchior Alvares was ordered to take care of his Wounds, and Captain Piffor to go with 20 of his Men in quest of these Villains; who, coming to the Ferry, befet the House, took the Ferryman and his three Sons, Prisoners, but the Mulat, who had committed the Fact, escaped their Hands.

That he pursued his Journey on Horseback towards the Rece f, notwithstanding the violent Rains, and not without great danger pass'd the River the same

night near the Fort Amilia.

That on the 9th of August, he was advertised by some Negro's belonging to Moses Navarre, whom he had fent with Letters to d'Ingenio Sursacque, that an Ambush had been laid for them near Candelaria, but the Enemy durst not attack them, their Negro's being all such as were taken Prisoners, and afterwards made their escape to us.

AL VICE from the

Major Hoogstrate sent Advice by his Letters on the 13th of August, to the St. Austin. Council, That the Garrison and Volunteers of St. Actonio being fafely arrived on the Cape of St. Austin, they were now about 285 strong, viz. 217 Soldiers and Gunners, and 63 Volunteers. That immediately after our Garrison had left St. Antonio, Kamaron and Hemy Deas had posted themselves with their Troops in the Sugar-Mill Algodais, near that place, where they expected to be join'd by Martin Soares and Andrew Vidal's Forces fafely arrived from the Babia. That he expected every day to be Besieged, and fear'd nothing so much as want of fresh Water, the Spring being cut off by the Enemy. Hercupon immediate Orders were given by the Council to fend thither 30 Barrels of Water, some Ammunition and Provision, and what else should be requilite for a vigorous Defence of the Place, which was sufficiently provided before with Soldiers. The next following Day they received Intelligence from Major Hoogstrate, Mr. Ley, and Mr. Heck, That the Enemies Troops had taken Post

in the Sugar-Mill Salgado Zuvisiaque and other circumjacent Places. The Coun- 1644. cil rely'd much upon the Bravery and Fidelity of the Officers within the Fort, from whom they promifed themselves a very vigorous Defence, they being all Persons who had advanced themselves in their Services, and were in expectation of better Preferments, viz. Major Hoogstrate, Caspar Vander Ley formerly a Captain of Horse, John Hick, and Albert Gerrisson Weada an old Captain, belonging to the Company; But their unfaithfulness and covetous Temper over-balanced all these Considerations; for the faid Major Hoogstrate Commander in Chief, with the Consent of Caspar Vander Ley, and Albert Gerrifon Wedda, treacherously and villanously Sold and Surrendred the faid Fort to the Portugueles the 23th of August for the Sum of 18000 Gilders, belides fonte other Kewird itomifed them upon that Account. They went over with the whole Garrison to the Enemy, who made Hoog strate Colonel of a Dutch Regiment, raised out of these and other Soldiers of several Nations, that had Deferted our Service. Thus this strong hold was betray'd to the Portugueses, by a Person who owed his whole Fortune to our Company.

Martin Soares Moreno gave the following Account of the Surrender of this Fort to the Governour Amonto Telles da Sylva, in his Letter dated from the Hill of Nazareth, Aug. 26. 1645.

A Letter to the Governour of the Bahia, concerning the taking of the Cape of Puntael.

CUnday the 23th of this month, God Almighty, through his Mercy, has put me into the Possession of the Fort of the Cape of Puntael, which was Besieged by Andrew Vidal de Negreiros: The next day we were rejoyced with the Money fint to us by your Lordship; and the Wine presented to me in particular, part of which I have bestowed upon Enterta ning some of our Friends, who are merry with me at this time.

We have made an excellent Bargan; for besides the Importance of the Place, and its Artillery, we have got the very flower of their Soldiers; besides, that this will be like a figual to the rest to follow their Footsteps.

John Fernand Vieira has raised on Saturday last the Sum of 4000 Ducats for our Ufe, though not without Force, but it was very welcome to us at this time, when we were upon striking up the Bargain for soe.

## and Travels to BRASIL.

~ better fortifying of this Place, the Harbour 6 45 of which is not inferiour to that of the Receit: But I will not trouble your Lordship

any longer with this point.

Not long after the Surrender of the Fort. a Bark appeared in fight fent to its Relief from the Receif. We fent Captain Barreiros with a well-arm'd Bark out against her, who took her with 35 Men, and good Store of Gunpowder and Bullets, all which will prove very serviceable to us.

I kindly desire your Lordship, that in case you fend a Messenger with this News to his Majesty, Captain Damian de Lankois may be employed upon that Errand, it being very probable, that the King, besides a good Present, will Reward him with some honour-

able Employment.

Last Night we received Advice. That the Fleet under Jeronymo de Paiva was entred the Bay of Tamandare; I am forely fent this per from the Receif, notwithstanding we have desired him several times to come into our Road.

Kapivara is gone from that Place by Land to the Bahia, perhaps he has given him notice that we are Masters of the Cape; if he thinks fit to bring his Fleet to this Flace, he is safe, if not, it hes at his door. 'Tis discoursed here, that the Ship the Bishop is missing, perhaps he has a fancy to Convoy Salvador Korrca some part of the way.

I cannot forbear to let your Lordship know hore much you stand Indebted to Major Dieterick Hoogstrate, and the rest of the Commanders of the Fort. We have promised to the first a Commandery of Christ. I beg of your Lordship to make my Promise good to him in his Majesty's Name, as soon as possible may be, he being a Person, who will be ready to do us all the further Service be can. We have for the present engaged him with some Presents of less moment, of which we shall give an Account to you hereafter. Captain Vander Ley has likewise deserved well of us, and so have all the rest that had Married Portuguese Women: It is reported here, That he is a Person of Note in his Country: We have likewise promised to him a Commandery of Christ, and a yearly Pen-sion for one of his Sons: We hope your Lordship will not refuse to make good our Promise, because his Sons are Born of a Portuguese Woman: The name of the Eldest being John, and the Youngest Caspar Vander .ey. The rest are at present at their Hautations, as soon as they return, we must Engage them with some Promises, of which ve will give an Account to your Lordship. They are all of Consequence to us, having Warried Portuguese Women. I hope your

Lordship will be well satisfied with this piece ~ of Service; for John Fernand Vieira 164 Sometimes brings us more Money in an hour, than the Conquest of the Cape costs us. He is at present in the Vargea among the Barbarians, and we in the Fort on the Cape, till we have got every thing in readiness. Kapivara is about three days ago, gone by Land, possibly he may be with you before the Bark which carries this Letter; I will it may arrive in safety, and to your Lordship, a long Life for the Defence of this

> Signed, Martin Soares Moreno.

Martin Soures Moreno, and Andrew Vidal de Negreiros, had in the mean while fent 7 or 8 Letters from the Cape of St. Auftin, dated the 23d, 30th, and 31ft of August, and the 2d and 6th of Sep. tember, in which they advertised the Admiral Paiva, That they were in possession of that Cape, defiring him, by all means to come with his Fleet into that Harbour. The first of the two last Letters was thus written.

Letter from the Portuguese Commanders to Admiral Paiva.

My Lord,

E are got now into the Possession of the Harbour of Nazareth, and that as the saying is, without casting an Anchor; which is the reason we intreat you likewise to come with your Fleet bither; where you may Careen your Ships, and provide your selves with fresh Provisions, Men, Ammunition, and all other Necessaries, till such time we shall mutually Agree in what is further to be undertaken for the Service of God and his Majesty. The Enemy has hitherto but one Ship of Strength at Sea, the rest being of no Consequence; neither are they for Engaging with you at this time, but Endeavour to cut off your Communication with the Sea-Coast. My Lord, You have given so many Proofs of your Courage before this time, that this Retreat will not abate any thing from the Fame of your Victories: On the other band, You have to consider, that you are answerable for so many thousand Lives, of those that are in your Fleet; wherefore we desire you once more to come hither with the Fleet, and such Officers as are under your Command, where you will meet with a very kind and comfortable Reception. But being fenfible, that it would be a gross Error in Min to urge a matter so Evident in it self, any further, to so great a Commander as you,

we live in hopes of your conting, where we a 645 intend in the House of Nazareth, to reretive the blessed Sacrament, which name we have given to the Fort, having among other things sound a Mass-Book here, which is of no small service to its.

God preserve your Lordship.

Puntael, the 2d of Sept. 1645.

Martin Sources Moreno, and
Andrew Vidal de Negresros.

The Contents of the Second Letter to the same Admiral are as follows:

Our Lordship being already acquainted with our being Musters of the Puntael (Cape) we hope you will take the first opportunity of coming to us; The Enemies having two Squadrons of Shirs at Sea, with one Fire-Ship, to force you from this Coast, which has been discovered to us, by a Letter writ at the Receif, and directed to the Governour, and taken by us in a Bark design'd for the relief of that place. Of which we thought fit to give you immediate notice, that you might take your measures according to your wonted Prudence. These Dutch Gentlemen have by their treacherous dealings obliged us to have recourse to open Force; and we desire your Lordship to repay them in their own Coin, with Fire and Sword, as they do to us. If you design to come hither, it must be done speedily, all delay being dangerous at this time. We have a true Copy of this Letter in our Journal, to serve for our justification hereafter.

God preserve your Lordship

Dated in the Puntael of the blessed Sacrament, September the 6th, 1645.

Martin Soares Moreno, and Andrew Vidal de Negreiros.

An account of the Surrender of the Cape of St. Austin, and of the further Transactions betwixt us and the Portugueses, was sent in a Letter by Caspar da Kosta D' Abreu, from the said Cape to his Friend Domingos da Kosta, an Inhabitant of the Babia, which runs thus:

Wish this Letter may find you in good Health, as I who am your faithful Comrade desire; I am in a tolerable good condition in the Puntael of Nazareth, which after a Siege of 20 Days was surrendered to us, at an easie rate, because those who commanded within the Fort, had Portuguese Wrues, and their Estates thereabouts. The Captain

of Herse, was the most forward of all in c Surrendering the Place; They have obtained 1,645 what Conditions they demanded, and a grathity of 4000 Ducats besides. We found in the Fort 300 Dutch, of their best Troops, and twelve Brass Pieces of Cannon, four of which were four and twenty Ponnders, and Provisions for three Months, so that, if they had not come with us to a Composition, it would have cost us abundance of Men. whereas now we have gain'd the place, with the loss of one single Man, who was kill'd by a random Cannon shot. We made our selves Masters of a Bark, siring from the Puntael, before sts Surrender, in which was a Genileman with several 100 Men, that were going to the Receif. This Gentleman and another of Serinhaim (being both Magistrates in their respective places) we delivered up to the Inhabitants, who foon kill'd them, notwithstanding one was Married with a Portuguele Woman; for they having be not in d to Jay, That they hoped to wall their Hands in the Blood of the Portugueles, the Women were so much exasperated against them. that they foon dispatch'd them, according to their desires. The Prisoners are for the most part detained at St. Anthony, in order to be sent to the Bahia; but many among them have taken Service with us. We suppose the number of the Dead and Dutch Priseners amount to near 1300; We have not seen the Squadron under Salvador Korrea de Saa; we are afraid some missortune has befallen him; some of our Ships were cruising hereabouts, but within these three or four Days, none of them have appear'd on this Coast. The Dutch have a Fleet of 12 Ships at Sea; it is well, if they don't venture a brufh with us. The Receif with all its Forts are invested, Lawrence Karneiro is at Porto Calvo; The lews report. that orders are come, to take all the Dutch Forces out of Rio Grande, Paraiba and St. Francis, in order to transport them to the Receif. There is no great harmony betwint the Jews and Dutch, the first pretending that the others intend to fell the Country Four of their head Officers, which are our Prisoners, are ordered to be sent to the Bahia, and among them their Master of the Artillery. The same Day that we were become Masters of Puntael, a Bark arrived there from the Receif, with orders to keep st to the last extremity; we took the Bark with good store of Ammunition and Provision, worth in all about 1500 Ducats.

Sept. the 5th, Caspar da Kosta d'Abreu.

From this and the following Letters, 45. it is apparent, that Major Hooghstraten had laid the foundation of his Treacherous Delign of betraying the Cape of St. Austin to the Portugueses, long before; to wit, ever fince he with Mr. Balthafar Vander Voorde was sent to the Governour of the Babia, Antonio Telles da Sylva. Thus a certain Serjeant fold a Redoubt near the City of Olinda to the Enemy for 300 Gilders.

At the beginning of the Siege of the Cape of St. Auftin, Andrew Vidal de Negreiros, fent two Letters to Major Hoog-Strate, Ley and Hick, by one John Guomes de Mello, Dated the 13th of August; in the first of which the said Vidal complains of the ill treatment and Murthers committed upon the Portugueses by the Durch; in the second he requests them, re-declars, pursuant to the promises made ty Hoog strate in the Bah.a, for the King of Portugal, and to deliver the Fort Into their hands.

Two Letters from Vidal to Hoogffrate.

The First was as follows:

Am come this Morning to the Village of St. Antonio de Cabo, in hopes of receiving news from you and Captain Ley. I give by these presents notice to you, that we are sent hither by order from the Governour Antonio Telles da Sylva, with no other intention than to appeale the Troubles lately arisen in this Country, pursuant to the request of the Council, of which you are a sufficient Wilness. No sooner, were we arrived at Tamandare, but we received many Informations directly contrary to what we expe fed to meet with here; viz. That in Rio Giande 37 Inhabitants bad been murthered, many V.rgins deflower'd, and the Image of the Virgin Mary grosly mis-used by the Dutch; things so abominable in themselves, that it is scarce to be imagined so brave a Nation should be guilty of such enormaties. Whalft I am writing this Letter, news is brought me, that the Dutch have caused many of the Inhabitants of Goyana to be murthered; tho' I can scarce give Credit to it; for supposing this to be true, we could not avoid giving affiftance to these miserable People, the they were the most despiseable of all Nations; considering they crave our help, and are not only Christians, but also Subjects of the King our Master. whom God preserve. Whilit the Council was in expectation of the Iffues of the inscholed accommodation, they have susprised Vol. II.

and killed many of the Inhabitants, which o obliges us, to require you in the name of 1 645. God, of his Majesty, his Highness and the States General, not to give any occasion for a Papture, but to maintain the late concluded Peace to the utmost of your Power, as we are ready on our side, to concert all possible mea-Junes with the Commander in chief of this place; Which may tend to the tranquility of both Parties. The Bearers hereof are Captain John Guomes de Mello, and Liertenant Francis Guomes; who, we defire, may be dispatched back with all possible speed. God preserve you for many Years.

August 13. 1645.

Andrew Vidal.

The Second Letter was written thas:

The Second Letter.

YOUR promise made to us in the Bahia, and what has fince been told by Captain Ley to John Fernandes Vieira. and Captain John Gnomes de Mello, encourages us, to proceed in our former design, not questioning but that both you and Captain Ley will not in the least recede from the engagement you have been pleased to oblige us with, and to tie us to your Service. We are come into this Country at the head of 3000 chosen Men, back'd by two Squadrons of Men of War, well Equip'd, one of which has not as yet appear'd on this Coast, the other you have seen your self pass by the other Day. I hope this may ferve as a means to set the poor iniserable Inhabitants at liberty; and as both they and we wish for nothing more, than to see you embrace our side, that we may not want an opportunity to give you more evident proofs of our respect and affection towards you, so, we desire you not to entertain the least sinister suspiction of us; we being ready (for the persormance of which we by these presents give you our words) to accomplish in every point, what has been promised to you, by John Fernandes Vieira, and John Guomes de Mello. And I for my part assure you that I will not fail to perform and agree to, whatever you shall further demand upon this occasion.

The Inhabitants of the place shall be provided with Pass-Ports, and protetted by us, in the same manner as the Commander of Serinhaim, Carpenter, and some others were; and we expect the same at your hand. And that you may be sure whom to treat with upon this account, we have fent to you John Guomes de Mello, who is intrusted with the whole matter; which if you refuse to do ВЬ

# Mr. John Nieuhoff's Voyages

we must take such measures, as we shall 1 6 4 5. judge most expedient for m. In the mean while God preserve you for many Years.

Your affectionate Friend St. Antonio de Cabo. and Servant. Aug. 13. 1645.

Andrew Vidal de Negreiros.

Major Hoogstrate, Mr. Hick and Ley fent an Answer to this Letter immediately, containing in substance, that they were not in the least concerned in the outrages committed by the Tapoyers against the Portugueses, and seemingly refused to treat with de Mello.

It runs thus:

### His Answer to them.

WE have received your Letter fent by John Guomes de Mello, out of which we understand, that you are come to St. Antonio. We are extreamly well fatiffied, that the Governour Antonio Telles da Sylva has undertaken to appease the tumults arisen in these parts, and don't question but that your presence will contribute much towards the accomplishment of st. The affronts and outrages you speak of by the Tapoyers and Dutch Soldiers put upon the Inhabitants, as they were committed forely against our will, so I can assure you that no body not so much as the least Child has been suffer'd to be misused upon our accounts. , so that these Complaints must not be made to us, but ought to be referr'd to the Council. The Treaty you protose with Captain John Guoines de Mello, and Lieutenant Francis Guomes, is beyond our Province and Power, so that we earnestly desire you, not to use any further follicitations to us, upon that account. So we kifs your Hands, recommending you to God's protection.

We rest your Servants and good Friends,

Caspar Vander Ley, D. Van Hoogstrate, John Hick.

Major Hoogstrate took care to send these two Letters together with their Answer to the Council, with repeated Assurances of their constant Fidelity; whereupon the Great Council confirm'd Hoog strate in his Government, and exfirate dif horted Ley and Hick to persevere in their brave Resolution, which they would in due time take care to reward with better preferments. This dif-

covery of the Enemies Letters being look'd upon as an undeniable proof of 1.545. Mr. Hoog strate's fincere Intentions bed . fuch an influence upon the generality of the People, that there was scarce any body but what thought himself secure of his Fidelity and Duty. Nevertheless as these Temptations could not but raise fome jealousie in the Minds of the Council, they thought fit to fend Collonel Haus to the Receif, to order him to the Cape of St. Austin.

The Council in the mean while being by Vidal's Letters to Hoogstrate sufficiently convinced, that the intended recalling of the Rebellious Troops were nothing but amusements, sent immediate orders to their Admiral Lichthart, that for the future he should treat all the Portuguese Ships he could meet with as Enemies.

The 15th of Aug. Colonel Have being come to the Receif propoled to the Council, that he judged it absolutely necessary for the Service of the State, that fince by the Succours come from the Ba- Confuliahia to the assistance of the Rebels under tions abou Martin Soares Moreno, and Andrew Vidal, drawing they were grown very ftrong and nu- Forces in merous; the Troops encamped in the to the Re Field should be drawn into the Receif, ceif. because they being besides the Brasilians,

not above 300 strong, they might easily be cut off in a place, where they could not be seconded from the Receif; where they were wanting for the defence of that place, which being the Capital of the whole Dutch Brafil, would in all likelyhood be attack'd with the utmost vigour, by the Enemy.

Against this Opinion many Reasons were alledged too.

I. By fo doing they must quit all the open Country, from whence they were now supplied with Cattle and Meal, which they stood highly in need of, till fuch time, that they could receive new Supplies from Holland, and that in fuch a case they must expect the Enemy immediately at their Gates.

II. That thereby the number of the Enemy would be increased, the Inhabitants of the Country being freed from the dread of our Troops, would join

with them against us.

III. That by so doing we must leave the Tapeyers, that had taken up Arms at our request, and were to be joined by our Troops near Machiape or St. Antonio, must be left to the Enemies Mercy. To this it was Answer'd,

1. That as to the Supplies of Caple and Meal from the Country, they should

covers thef ...

> be in a much better Condition to be furnished withall, when their Forces could be fent abroad into all circumjacent Parts of the Country, whereas now they were forced to remain in one certain place. Belides that, we being Masters at Sea, might Embark at any time a certain number of Men, and Land them where we found it most convenient; which would oblige the Enemy, instead of Besieging the Receif, to divide his Forces for the Defence of the Country. What related to the increase of the Encmy's Forces, by the Accession of the Portuguese Inhabitants of the Country, was to be look'd upon as of no great Consequence against us; it being more for our Interest, to see them appear as declared Enemies, than dissembling Friends; it being generally known, that their leclinations were bent for their conservmen, and that notwithstanding all their specious Pretences, they miss'd no Opportunity of giving Intelligence to the Enemy of what pass'd among us; whereas, if they were once declared Enemies of the States, we should have a fair opportunity of seizing upon their Cattel, Provisions, and other Moveables, for the use of the Receif; which being thus provided, would discourage the Enemy from attempting to reduce it by

What was alledged concerning the Danger of the Tapoyers, was acknowledged to be of no small moment; but confidering they had received no News as yet of their Motion, it was not judged of such vast Consequence, as to be put in Balance with the Welfare of the whole Dutch Brasil, which depended in a great measure on the Safety of these Troops.

After mature Deliberation of the whole matter, it was refolved, on the 15th of August, by the Council, with the Approbation of the Members of the Court of Justice, That considering the Danger the Troops were exposed to, and that on their Safety depended the Preservation of the Receif, they should with all possible speed march thither; and that only so Men should be left in the House of De Wit, under Captain Weltschut, in order to Command some? part of the circumjacent Country, and to serve as a Retreat for our Parties that should be sent abroad to fetch in Cattle and Farinha, or Meal.

Pursuant to this Resolution, Colonel Haus went thither on Horseback the same day, to put it in Execution the same evening, if possible he could, or at fur-

theft the next morning. But it feems Colonel Haus was fo neglectful, as to de- 1 6 lay the march of these Troops not only that afternoon, but also the whole next Haus following day; and instead of retreat-to the ing towards the Recenf, tarried in the fame Sugar-Mill without having the least Intelligence of the Enemies approach; fo that on the 17th of August, being furprised by the Troops of Andrew Vidal, much more numerous than his, before they could betake themselves to their Arms, they were put to the Rout. The Council being advertised, That Colonel Haus with his Troops were attack'd by the Enemy in the Sugar-Mill of Mr. De Wit, they call'd the City Militia to their Arms. Mr. Bulleftrate and de Bas went to the House Bavista; from whence, as being nearer at hand, they might give the necessary Orders, according as they should receive Advice from Haus: And 12 Firelocks were posted in this House for the better Security of the Bridge cross the River. Dieterick Hamel, and the Councellors of Justice, took care to look after the Receif. Immediately after Word being brought to the Council. that Colonel Haus had been overthrown, and was retired to the House of de Wit belonging to the Sugar-Mill, it was confulted whether by any means they might be able to relieve him; and, tho' by reason of the weakness of the Garrison, it was no easie matter to do it; nevertheless, it was resolved, with 100 Volunteers of the Inhabitants, and 150 Soldiers, to attempt his Relief. before this could be put in Execution, a certain Brasilian, that had been present at the whole Action, and having, by changing his Cloaths with a Portuguele, found means to escape to the Receif, brought the unwelcome News, That Colonel Haus, with the Forces under his Command, had Surrendred the House Colon belonging to the Sugar-Mill, and them- Haus felves, upon promise of Quarters, at rende Discretion.

It was generally believed, that this Misfortune was chiefly occasioned by Colonel Haus's own neglect, who did not, till it was too late, put the Soldiers into a posture of Defence; which was afterwards confirmed by the Deposition of William Jacobson, late Captain Lieutenant of Colonel Haus's own Company, made before the Great Council, the 6th of July 1646.

It was not till the Night before our Defeat that Colonel Hans received the first Intelligences from a Prisoner a Ne-

# Mr. John Nieuhoff's Voyages

gro, That the Enemy, with a strong Bo-Up 4 5. dy, were broke up from Moribeka. The next Morning one of our Safe-guards furiber brought Word to the Colonel, that the the De. Enemy was passing the River; and soon lut of Co- after, the Colonel's Groom, who had snel Haus been to Water his Master's Horse in the Gaptam said River, came in a full Gallop, telling him likewife, that the Rebels were paffing the River; fo that we foon after heard them Fire upon our advanced Guard; who retired immediately to the main Body. Colonel Haus did not call the Soldiers to their Arms, or caufed the Alarum to be given, until the Enemy came within fight of us, and charged our Out-guard; when we first began to Skirmish with them: But they charging us with their more numerous Forces in the Front; whilft Kameron with his Troops endeavoured to cut off our Retreat to the Receif, which we were not able to prevent, by reason of the smallness of our number, Haus ask'd Captain Wiltschut, Bluer and Listry, What was best to be done? Wiltschut answered, You never ask'd our Advice before, do what you think best. Whereupon Hans ordered to Retreat to the House of Mr. de Wit : Captain Bluer, who expected no Quarter, being on the other hand for Fighting our way through to the Recuf. House was bravely defended for 4 hours, but at last Powder and Ball beginning to fail, because halt a Barrel of Gunpowder, (which was all they had left) blew up by Accident, they Surrendred at Discretion to Andrew Vidal, under Condition to have their Lives faved, as well for themselves as the Brasilians among them; which Agreement being figured by Vidal, and 2 or 3 more of the Chief Commanders of the Portugueles, was delivered to Colonel Haus. Notwithstanding which, the Brasilians were cut to pieces by the Inhabitants with Confent of the Portuguese Commanders, as foon as we had quitted our Post in the House. The Brafilian Women feeing their Husbands Murthered before their Faces, dash'd most of their Childrens Brains against the Walls, for fear they should fall alive into the hands of the Loringueses. All the Dutch, about 250 strong, among whom were Colonel Hans, Captain Blaer and Listry, were made Pritoners of War, and were for the first tour or five days kept in the Sugar-Mill of Hacq; when John Fernandes Vierra, and many of the Inhabitants follicited Andrew Vidal, to deliver the faid Prisoners up into their Hands, with an Intention to kill them; but Vidal refused to grant a their Request, and caused them forthwith to be fent by Land to the Babia: They were indifferently well treated in their Journey thither; but fuch as either by reason of Sickness, or any other Accident, were left behind, fell into the Inhabitants hands, who cut them to pieces, and would have done the fame with all the rest, had it not been for their Convoy. After their arrival in the Babia, an Account being taken of their Names, they had certain Quarters affign'd them, and Thirty one Pence Halfpeny per Week for their Pay, and a Measure of Meal for every Ten days.

They had liberty to walk up and down within the City where they pleased, except Colonel Haus, Captain Wiltschut, and Lifting, who were confined to their Lodgings, and durft not, without for cial leave, talk with any Body. Colonel Haus was at last fent to Portugal, and Wilischut and Listry, in June 1647. put on Board a Ship, with 230 Duich Prisoners; about 60 of our Men took Service among them there, but they refused the Natives of Holland.

The Enemies being greatly incouraged by these Successes, and their Strength increasing daily by the great Concourse of the Poringuese Inhabitants, who in the Captainships of Parayba and Goyana, which hitherto had remained in quiet, and engaged themselves to the Government by a new Oath of Allegiance, now also took up Arms against us; so, that it was thought convenient to recall our Garrifons out of those Parts.

But to return to the Cape of St. Austin; What I after the Surrender of which the Garri- came of fon was carried to St. Antonio, where Garrie they were forced to deliver up their of the c Arms. Among the rest of our Priso-stin. ners there was Isaac Zweers, afterwards Vice-Admiral of Holland and Westfriseland, Abraham Van Millingen, and John Broeckhusen, both still living in Holland. Major Hoogstrate address'd himself to them, endeavouring to bring them over to the Portuguese side, by the Allurements of Captain, Lieutenant, and Enlign's Places, telling them, That it would now be in his Power to promote them to much higher Imployments; but when he faw them refuse his Offer, he swore, They should repent it. At the same time he preferr'd three Dutch Men, to wit, Winfel Smith, formerly his Lieutenant; Alexander Bonckolt, and Claes Clacfen, a Native of Amfterdam, to Captains Places; the last of these three being an intimate "

Friend of Zweers and Brockhusen, told them, and confirmed it by many Oaths, That he had taken Service among them for no other end, than to get an opportunity of returning to us. They had alfo liberty given them to walk abroad, but not without a Guard to keep a watchful Eye over all their Actions.

Not long after the Portuguese Providor Mer fent for John Brockhusen, and after the first Complements were pais'd, told him, That if he would ferve the King of Portugal in the quality of Commissary-General, he should go along with him to the Camp, where he should receive 100 Gilders per month, and be wellcome to his Table besides; and that if he refused his Offer, and staid behind. He would be in danger of being Murthered by the Inhabitants. He 1c-

ly'd, That being engaged by his Oath the Company, he could not break it, the with the hazard of his Life. And, (faid the Provider) will you chife rather to serve a Company of Mob than a King? Weate just now upon the point of executing a Defign, which is infallible; and then you will begin to fee that the King's Caufe is the justest, and will be crown'd with Success for Then he gave him a Cup, with Brandy, of which after Mr. Brocklinfen had taken a good Draught, he took his leave, and return'd to his Comerades, unto whom he gave an Account of what had pass'd betwixt them.

These had in the mean while been inform'd by fome Portugueses, that this Defign was upon the Isle Itamarika; and being certain, that the Council did not foresee this Danger, they were contriving all possible means, to give them notice of it; but could not pitch upon any Person fitly qualified for this Undertaking. At last, Isaac Zweers, by vast Promifes of Reward, prevailed fo far upon a Dutch Trumpeter, call'd Martin Stomp, that he undertook to carry this piece of News in Person to the Council, and at the same time to Request the Releasing of the Dutch Prisoners still remaining at St. Antonio. Every thing being Agreed upon betwixt them, the Trumpeter took his leave of neter Mr. Zweers, and set out on his Journey Ene. to the Receif about Midnight, leaving dign his Wife and Children behind him. 1 - Mr. Zween's and Mr. Brockhuson appear'd k to very well fatisfied, but nevertheless were in their Hearts not a little concerned for the issue of this Enterprise.

They would often call upon the Trumpeter's Wife to Enjoyn her Silence, and Vol. II

ordered her, that if any enquired after c him, to tell them, That he was run 1 6 away from her in order to take Service in the Camp, in the Vagea.

Some days after they met with one Peter Rufaur, formerly Baker to the Garison of the Cape of St. Austin , Brockbufen having a mind to feel his Pulfe, and finding him not averte to fuch a task, he at last with fair Words prevail'd upon him to undertake the fame lourney the I rumpeter had done before; that, in case he should miscarry, which they much feated he might, the Council might nevertheless be advertised of the Euemies intended Expedition against Itaniarika. The Baker having debred a Certi- A 1 ficate from them, tellitying, That he Jent never had taken Service among the Por-the togueses, prepared himselt for his journey, which he intended to begin with the first dark Night.

The fame Night they were forewarn'd of a Delign against their Lives, by a certain Italian call'd Jacomo da Perugalho, fo that Zweers and Brockbufen gueffing, not without reason, that some of the Portsguefes had got Scent of their fending away the Trumpeter and Baker, thought it not adviscable to flay longer in this place, but to ask leave from Colonel Pedro Maunha Falkalo, to go to the Algodais, where they could not want Conveniency to go along with the rest of the Prisoners, that were intended to be sent to the Bahia, which was readily granted.

In the mean while, the Baker having taken the first opportunity to set out on his Journey, was met by two Portuguejes in the Sugar-Mill Trapicha, who having found the before-mentioned Certificate about him, carried him Prisoner to St. Antonio de Cabo, where being put to I. fele. I the Torture, it made such a noise among the Inhabitants, that they all rife up in Arms, protesting, They would not be fatisfied, till they had fetcht Zwee and Brockhusen from the Algodais, and cut them to pieces; for which purpose they also obtained seven Soldiers from Pedro Marinha, and had certainly put it in Execution, if Captain Ley had not opposed it; for as good luck would have it, they happened at that time to be in his Sugar-Mill, and the Baker had stood it out bravely, without discovering the matter. The next morning Captain Les gave them a Visit, telling them what had happened, and fays he, to Brockhulo. What is your meaning by this? but he having no great confidence in Ley, denied every thing to the utmost.

But the second of October the whole 45. Design was likely to have been discovered by the Imprudence of the beforementioned Trumpeter's Wife, who being got drunk, told fome of her Accovered, quaintance, That her Husband was gone to the Receif. She was carried a Prisoner to the Cape of St. Auftin, where she was miscrably tortured, but being a refolute Woman, would not confess any thing: It was however Major Hoogstrate's Advice, That the Portugueses ought not to keep the Dutch any longer in Pernambuke, but that all fuch as refused to take Service among them, ought to be fent to the Rabia. Accordingly all the Dutch Prisoners then about the Cape and St. Anthony, were fent to the Algodais, where every one was ask'd by Colonel Pedro Marinha, Whether they would take Service under the King of Portugal; and that fuch as would not, should be fent forthwith by Land to the Bahia, a tedious Journey; besides, that they ran the hazard of being Murthered by the way. Many took Service, for fear, but Zweers and Brockhirfen being ask'd again, Whether they were not willing to serve the King; they answered, They would rather Die, than bear Arms against their own Nation.

The 5th of October, All the Prisoners under a Convoy, both of Soldiers and Boors, were carried from the Algodais to Pojuka. But scarce were they come thither, when Zmeers was ordered to be ient back to the Cape of St. Auftin, where he was put to the Rack, to Extort from him a Confession concerning the Trumpeters Journey to the Receif, who, as they supposed had discovered their Detign upon Itamarika; but not being able to bring him to make the least discovery, they feut him, after an Imprisonment of

five Weeks, to the Bahia.

The Dutch Bahua.

en twel-

In the mean while Mr. Broekhusen. Pryoners with the rest of the Dutch Prisoners, had come to the been forced to Travel day and night, till the 28th of November 1645, when they came to a Castle call'd Tapuao on the Seashore of the Bahra, about half a League from the City of St. Salvador, after a dangerous Journey: They were carried in Ten Boats, to the City, on that side, where it is best fortified, the Portugueses being not willing to let them have a fight of the Fortifications on the Land fide, Mr. Brockhusen was by order from the Governor Amonio Telles da Sylva, made a Prisoner in a Citizens House, and the Soldiers disposed into Quarters.

beat up for Volunteers, every one being Invited to Serve the King of Portugal, 1 of what Nation foever, except the Dutch.

The next following year, on the 18th 1646. of January 1646. Zweers and Brockhusen A Letter Intercepted a Letter writ by Hoogstrate intercepted to Hondius, concerning several Transa-andBrock ctions to be communicated to the Go-hujen. vernors, of which Captain Ley having got scent, gave immediately notice thereof to the Governor the first of February, who threatning them with no less than the Gallows, fent them to a loathsome Prison; with firich Orders that no Body should be permitted to Speal with them. nor that Pen, Ink, or Paper, should be allowed them; nay, whilst the Clerk was fetting down their Names, a Captain came and told them from the Governor, That they were the Traytors who kept Correspondence with the Duction in the Receif; and ordered, that a Cen-Are comtined should be set at the Prison-Doon, musted to to keep the inhabitants from laying vio- Prifon. lent hands upon them; for as they were carrying to Prison, they made a horrible Noise, crying, To the Gallows with these Imposters and Traytors. They remained five whole days in this Prison, without Suffer for any Victuals or Drink, till being almost want of Vi-Spent with Hunger and Thirst, they got anals. leave to write to the Governor, reprefenting to him their deplorable Condition; who gave immediate Orders that Victuals should be given them for the future: The Portuguese-Keeper being a- Arepio. fraid, that if they should give them ded with Plenty of Victuals at first, it might turn Viduals. to the Danger of their Lives, was fo cautious, as to fend them no more than each a piece of Bread well dipt in Wine at first, and after some hours, such another, but something bigger, till by degrees their Stomachs were restored to their former digestive Faculty.

The last day of February, the Gover- 11126 nor gave publick Audience (which is dience done three times every year) for the the G Releating of those, that are Prisoners on nor. the King's Account. Upon this Occasion a free Access was likewise granted to our People to the Governor: They pass'd through the Anti-Chamber, lined on both iides with his Guards, into the Room of Audience, adorned with Damask Hangings of divers Colours: Here they found the Governor fitting in an Elbow-Chair, on the right-side of which stood the Royal Throne, raised four Steps higher from the Ground than the The next day, they heard the Drums Governors Seat, which was furrounded

### and Travels to BRASII.

upon the Floor with very fine Tapestry. Just behind him stood his Secretary, and some Halbardiers; on both sides fat feveral Councellours and Lawyers, their heads covered, and behind them the Officers of the Army, all uncover-The Governour, as foon as he faw our Prisoners, gave them a sign to come nearer, which they having done accordingly, Mr. Brockbusen upon his Knees, spoke to him thus: We suppose your Lordship not to be Ignorant, that now for a whole Month we have been detained in a miserable Prison; without being conscious of any Crime committed against you, sinless it were, that we have detained the Letter, your Lordfup knows of; If in this we have committed a fault, we beg your Lor aships Pardon.

And (replied the Governour) suppofing you had done fuch a thing in Holland; .Upo. which Brockhusen answering, That his Liveling would be pleased to remember, shall it has no more than a private Letter, and no directed to his Lording; The Governour after having paused for a little while, gave immediate Order for their Discharge; From that time they had liberty given them of walking abroad, but were fain to carry themselves very fwimmingly, for fear of the Inhabitants, who kept a watchful Eye over them.

The 7th of May, Isaac Zweers and John Brockhusen were carried on board a Yacht call'd the St. Francis, in order to be conveyed to the Isle of Terceira; and, as they were the first Dutch Prifoners that were fent to that I fland, every body look'd upon it no otherwise than a pretence to throw them over-board, after they were come at Sea. Here they met with worse treatment, than before, being forced to fland to the Pump, during the whole Voyage, and yet were ready to be flarved, notwithstanding the Sea-Men catch'd more Fish, than they could confume. At last the 28 being arrived in the Road near Terceira, they faw within an Hour after a Dutch Ship coming to Anchor near them; they call'd to the Ship till the Master sent fome of his People aboard them, unto whom they made their Complaints, and understanding that the Master was a Native of Wiemendam, call'd Martin Peter Homng, they began to be a little chearful, tho' the Portigueses would not allow them to go aboard the Dutch Ship. But the 29 being left alone with the Steer-Man and only one Boy in the Vessel, they found means to go in spite of their Keepers, aboard Martin Peter Honing,

who promised to see them delivered. ~ The same Afternoon Moor the Govern- 16. our of this and the adjacent Islands, residing in Terceira sent for Zweers and Broekhusen, and told them that he had received a Letter from the Governour Antonso Telles da Sylva, in which he desired him, to detain them Prisoners in the Castle for a Twelve Month; but that he did not think himself obliged to follow his directions, he having no other dependance but on the King, who being not concerned in this War, his Orders were to fend all the Prisoners brought thither to Portugal; That they might rely upon it, and for their present Sustenance, till a Ship should be ready to go, ordered them Nine Rix Dollars.

The 13th of June they met with a Master of a French Vessel, who offered And to carry them without any reward to thence Portugal, which they willingly accepted Portu of: Here they met with many of their fellow Prisoners, who had imagined no otherwise, but that the Portugueles had thrown them over-board. They continued here till the 10th of September, when Mr. Zweers and Broekhusen embark'd themselves at Lusbon aboard a Man of War, call'd the Prince Henry, and at last the 4th of December, after a thousand Dangers and Miseries, which they had fustained since their departure from the Dutch Brafil, arrived fafely in the Maele.

But we must return towards the Re- Arie ceif; The unexpected defeat of Colonel lafely Hans, put all the Inhabitants of the Re- Holla ceif under a great Consternation; But the Council left no Stone unturn'd to put the place with all the adjacent Forts in a condition to make a vigorous defence, in case it should be attack'd by the Enemy; And that every thing might be performed with the best order that could be, Peter Bas was constituted Com- Prepamander in Chief in the Receif. Admiral ons in Lichthart was to take care of the Batteries and Artillery thereunto belonging; Henry Moucheron was made Commander in Maurice's Town, all their thoughts being now bent upon the Defence of these Places, which before they judged out of Danger.

The Stables and out Houses for the use of the Negro's, as likewise the Walks and Gardens belonging to Count Manrice's House, being no small impediment to the Fort Ernestus, it being to be teared that under favour of these Houses and Trees the Enemy might unexpectedly surprise the Fort, and Maurice's

Town

Nown, and the Inhabitants earnestly re-545 questing the pulling down of those Stables, out Houses and Trees, and what else might prove dangerous to the Place; Orders were given to Mr. Valbergen and Major Bayert, Commanding in the Fort Ernestus, to see the same but in execution, with as little damage to the House, as possibly could be. The Houses near the Fort Bruin were likewife ordered to be pull'd down, and the Horn-work belonging to it, to be levell'd at the request of the Citizens. Many Negro's were also employed under the Conduct of Major Bek, and the Captain of the City Militia, to break down all the Houses in Muurice's Town, which lay too near the new Retrenchments. All Imtuguese Prisoners were ordered to be distributed in the Ships, and feveral Volunteers who had committed many outrages in the Country, and were detained in Custody, were taken into Service for three Months. A Rumour being spread abroad that 18 of the Enemy were come into the Affagados, a Company of Citizens, were got in readiness to assist them, but it proved not true.

The same Day the Ship call'd the Orange-tree arrived near the Receif, being come out of the Maese, the 21 ft of May, with 35 Soldiers for Recruits. The Watches were so disposed, that in Maurue s Town Mr. de Wit and Ractfield, (befides the ordinary Officers) and in the Receit Mr. Aldrich and Valbergen should

go the rounds.

Balthafar Dortmund, Governour of Itamarika fent Advice to the Council the 17th of Aug. that Kavalkanti was with fome Troops come to Iguar ake, and had summon'd the Brafilians to join with him in four Days, under Forfeiture of

their Lives.

The 19th, The Citizens presented a Petition, shewing the necessity of having the House of Count Maurice pull'd down, re pulling as hindring the Prospect from the Fort Ernestus, and if once posses'd by the Maurice's Enemy, they might from thence annoy both the Fort and the Receif it felf with their Cannon. But the Council having advised with Mr. Walbeck, Admiral Luchthart, Aldrich, de Wit, Raetfield, Moucheron and Valbergen, thought fit not to agree to it for that time, being in hopes that it might be made useful for their Defence. Mr. de Wit and Haniel were commanded, to go from hence to each House in Maurice's Town, and to take an exact account of what Negro's were

able to bear Arms, and to furnish them, with Musquets and Pikes; The same 1 6 charge was given to Admiral Lichtbart, and Captain Bartholomen Van Collen, for Negro's the Receif. All the Sick that were in a state of reconvalescency, in the Castle were likewise ordered to be Armed for its Defence.

At the same time an Answer was sent orders sem to Mr. Dortmund, with Orders to draw to Mr. as many Brafilians as possibly he could Do into the Isle of Itamarika, and to provide himself with as much Cattle and Meal (Farinha) as he was able to get out of the adjacent Places; But that, if he found himself not in a condition to maintain the whole Illand, or the City of Schop, he should retire into the Fort Orange, where he might be supplied by Sea, and confequently make a Vigorous Defence. Mr. Carpenter was likewise to retire in time into the Isle of samarika, with his Soldiers and Brafillans, if he found the Inhabitants ready take np Arms against him.

The 19th at Night, a Party went abroad to get Intelligence, but met with no Enemy. Some Negro's were also fent towards the Enemies Quarters, to know their Strength. The fame Evening the Council received a Letter by Lieutenant Francis Meades from Andrew Vidal, in which he testified his readiness still to maintain the Peace, complaining at the same time of Outrages committed by our Soldiers, as may be feen out of

the following Letter.

### A Letter from Vidal to the Council.

E have fent you Advice before by Lieutenant Manuel Antonio, of our arrivalin this Captainship, by Orders from the Governor Antonio Telles da Sylva, and at your own Request; in order to restore Tranquillity here by the most effectual means we could Devise. We also did represent to your Lordships, the many Innovations, and unaccountable Proceedings, which had reacht our Ears, by the lamentable cries of several Noble ravished Virgins, and the doleful complaints of the Inhabitants of Rio Grande, where 40 Persons of Note, together with a Priest, and the other Day two more in the Salinas, were murthered in cool Blood. I can't scarce mention without borror, (and the respect every one ought to have to Sacred places, forbids me to particularize ) the outrages committed against the Images of Saints, and especially that of the Mother of God, and Sacrileges committed by your Soldiers: .

he LIUen Peitien for

Houje.

Soldiers : All which Considerations, together 5. with that we found you in a Warlike Condition, with your Troops in the Field, Natural right of self Defence established by the constant custom of War, did teach us, not to leave an armed Power behind our backs. which upon occasion might have proved fatal to us, before we could come to a Resolution, in conjunction with your Lordships, what measures were best to be taken, for the reestablishment of that tranquility, which was the only aim of our coming into these Parts; according to which we have regulated our Dives in our march towards the Receif. till we come to the Town of St. Antonio de Cabo; where, having caused John Fernandes Vieira to be taken into Custody. under a Guard of twelve Soldiers, we were surprised at the wast numbers of Inhabitants, : Children, Women, and Religious Men, who to shel: 'r themselves from the Outrages and Robber'es committed against them, by Captain Blacr in the Vargea, came to feek for Berer among us. They gave us an Account, how that the faid Captain not fatisfied. with having plundered their Houses, had carried away three of the Noblest Ladies of the Country after they had been grievously difgraced before; The Inhabitants being exasperated by these Violences, did (against our will) leave our Camp so suddenly, that whatever hafte we made to march after them. we could not overtake them, before they were engaged with some of your Troops, in the Sugar-Mill of Isabel Gonsalves, which they intended to have fet on fire, had it not been for our Men, who were forced to interpose between them and your Soldiers, to their no small danger and our loss, as being exposed to the Volleys of your Small Shot, which consisted for the most part of Bullets, cut in pieces, and made four square. As the Ho-Stilities committed daily against our Troops, afford fresh occasions of Revolt among the Inhabitants; fo we can't but lay before your Lordships the late Proclamation, and Ratification of Peace betwixt us, protesting now and for ever in the Name of God, John IV. our King, as also in the Name of the States General and all our Allies, that your Lord-Thips will not let things come to a Rupture, and not give us new cause of acting offenfively, or to declare War against you. We can't longer dissemble our Opinion, that the reiterated complaints of the Inhabitants, may at least in some measure serve for an excuse, if not a sustification of the proceedings of John Fernandes Vieira, concerning whom we are sufficiently satisfied, that his first intentions were only to afford protestion . to some Innocent Persons, threatned with de-Brustion; which the it was in his Power to Vol. II.

do, yet did he retire from place to place with his Forces, in hopes of avoiding any 164 Engagement, till forced thereumo by ne-vellity, he was confirmed to repel Force by Force. We beg of your Lordfhips to take this Letter into serious consideration, being of so much consequence, to our both sides safeties; for it seems as if Heaven it self were offended at our proceedings.

God preferve your Lordships.

From de Ingenio of St. John Baptist de Venies, August 19. 1645.

Andrew Vidal de Negreiros.

An Answer from the Council was sent the next following Day by the same Lieutenant.

### The Councils Answer.

UT of our Answer to your Letter, August, you may sufficiently see, that the Protestations made both by the Governour Antonio Telles da Sylva, and by your felf, concerning the maintaining of the Peace betwixt his Majesty of Portugal and the States General of the United Provinces, were never look'd upon by us, as fincere, or to be relied upon, since your actions did in no wife agree with your words. The treacherous Froposals made to one of our Deputies, to betray one of our best strong-holds into your Hands; The landing of so formidable a Force in our Territories, without any knowledge, under presence of a misinterpresed Sense of our Letter to his Excellency; The coming with a strong Fleet into our Road: The taking of the Fort of Serinhaim; the flaughter of so many Brasilians, our Subjects. in cool Blood; the Summons fent to the Cape of St. Austin, for a Surrender, nay the attacking and surprising of our Troops, who were forced to keep in the Field, for the bridling of our Rebellious Inhabitants; all these, we say, can't by any unbias'd Persons be looked pon otherwise, than manifest Infractions of the faid Treaty, and open Hostilities. We on our fide, can without the least contradiction to truth positively declare, that our Armament was not in the least intended against his Majesty of Portugal, but against the Rebels and their Adherems; which we were compelled to, when we faw many armed Troops to penetrate into our Territories cross the River St. Francisco. The surprising of some of our Barks in the Salgados; the taking of the House Marecape, and making our Safeguards Presoners there, as well as at ĎΦ Cambao\_

Cambao, and several other Places; The 6 4 3. Gallows that were erected on purpoje toterrinoting our Inhabitants into a compliance with the revolted Party; the killing of three of the faid Inhabitants of Pojuka in cool Blood, and the surprising of several of our Soldiers and Brafilians fent to St. Lawrence to fetch Farinha; the plundering of the Houses and Shops of Several Trades-Men in the Country, with many fuch like violences committed by the revolved I arty, and what is the worff, before ezer me appear'd in Arms, but endeavo red by Proclamations of Pardon and of maintaining them in their Poffessions, to destit the danger, all these actions we say, will not adout of any other Interpretation, but of open Hostilities.

How can it be supposed, that in the Station we are, we could after all those provocations and flights of our kind offers, defift any longer from drawing the Sword. Whatever in the mean time has been transacted contrary to the custom of War, has been done without our knowledge and intention, being occasioned by the treacherous dealings of the Rebels, and confequently to be look'd upon as deferved punishments rather, than the consequences of a just War; Besides, that nes-ther his Excellency Antonio Telles da Sylva, neither you nor any body else has any legal Power to call us to an Account concerning the Government or punishment of the Subjects of the States General, no more, than the King of Portugal 1. anfmerable to us, for what is transacted upon that account in his Kingdom or other Domimons.

Notwithstanding which we would have you not in the least lay the before-mentioned Crimes and Violences at our Door; we are so far from having encouraged or commanded the Tapoyars, to Kill the Portuguese Inhabitants in Cunhao, that for thefe feveral Years last past, we have endeavoured to prevent it; for having, by the ill treatment they had received from the Portugueles been extreamly exasperated against them, they were for ailling most of the Inhabitants of that Captainship, and had actually put st in execution, had we not interposed our Authority, and ordered our, Garrisons to take them into their particular protection. What you say of ravishing of Women, is not only beyond our knowledge, but even beyond whatever we heard of before, having taken all imaginable care to prevent such Violences by our Proclamation, published for that purpose. It is known to all the World that we afforded our peculiar protellion to the Women of de Ingenio, of St. Arnout d' Orlanda, and what concerns the saking of the Ladies by Captain John Blaer,

was, as we are informed, done with no other intention, than to exchange them for his 1645. Wife, or at least to keep them as Hostages W for her, he having received Intelligence, that she was very ill treated by you at Scrinhaim. The Rebels themselves made the first step towards those Robberies and Rap.nes that have been committed by our Soldiers since; which however, cannot come into balance with those Cheats, Frauds and Rapines, wherewith those Rebels have defrauded and robbed their Creditors of their Debts and Goods; notwithstanding which we have by granting fafeguards and otherwife done all what in us lay, to prevent the lame.

The late Murther upon the Person of the Salinhas was committed the 17th of Auguft, mithout our Knowledge, to our great diffatisfaction, by the flying Brafilians, who being emaged at the salling of their Men. Women and Children, at Serinhaim without any distinstion of Age or Sex, thok this opportunity of Revenging themselves. Tou may easily guess that the Papers dispersed by Anthony Kavalkanti at Iguaracu, have also contributed not a little to this Enter-

Of the Bullets mentioned by you to have been used in the last Encounter, we have more reason to complain than you, it being our constant Order, not to recede from what is the custom of War in these Cases.

The Courtesse shewn in the saving and receiving our Soldiers, we are ready to Acknowledge, and to return upon the like Occasion, desiring you would send us back your Resolution upon this Point, by the Same

It being evident from what has been alledged. That all the past Missortunes ought to be imputed to the Rebels, unto whom we endeavoured by all requisite means to restore Tranquillity and Peace; but they persisting in their Rebellious Designs, deserve rather condign Punishment, then the least Excuse at your Hands. For which reason it is, That we protest before God, and the whole World, against the Proceedings of his Excellency Antonio Telles da Sylva, and what else has been committed by your self contrary to the Treaty concluded betweet his .Majesty of Portugal and the States General of the United Provinces; not questioning, but that upon the receipt of these Presents, you will retire with your Forces to the Bahia, and thereby put an end to the further Viola-tion of the faid Treaty. Thus, expecting your Answer, we rest,

Sir, Receif, Ang. 20

1645.

Tours, &c.

645. eparans dinst she ning to · Re-

The fame Night word being brought that some of the Enemies Troops were advanced to Olinda, Notice was given to all the circumjacent Forts, to prepare for a vigorous Defence, and two Batteries ordered to be raifed on the backfide of the dwelling Place of the Negroes, from whence they might Command the Avenues to the Receif along the River-Several Volunteers lately come from the flat Country, were Incorporated into one Company, under the Command of Secretary Hamel, as Captain, 2 Jecony mo Holman their Lieutenant : wo advanced Guards were placed; ie betwixt the Fort Brim and the Triangular Fort; the fecond, betwixt the lift and Count Manice's Plantation: Part of the Bridge of Boavifta was broken down, to hinder the Enemies paffage that way; and confidering the Importance of the Triangular Fort, a Detachment of 26 Soldiers out of several Companies was ordered to reinforce the Garrilon there. The fame Care was Mau- taken for the Security of Maurice's Town, n and Antonio, Vacz, the Fort Lrneftus, the rforts, Quinquangular Fort, and all the rest.

Major Bayert was ordered to have the remaining Walls of Count Manice's Stables pull'd down, because they hindred the prospect from the Fort Emelius; and Henry Vermeulen, was commanded to employ 30 Negroes in clearing the Plantation of Count Mannee and the Ditches from all Rubb.sh; and the before-mentioned Bayers, ordered to remove the Pallifadoes from the faid Gardens, and to put them round his Fort. The Engineer Tiftion had Orders given him to fet a row of Pallisadoes on that side of the Fort of Irneflus, where it front the before-mentioned Gardens, and to extend them five Rods into the River. And, this Fort being not fufficiently stored with heavy Cannon, Commissary Sticke was to carry thither two great pieces, then planted at the Bridge-foot, and in-Atead of them to place there two Culverins; likewise the Entrance of the Channel of Maurice's Town was stopt by a double row of Pallisadoes. The Members of the Council, in Conjunction with , Iramarika, dated the 18th and 19th of those of the Court of Justice, took another view of the Suburbs of Maurice's Town, to confult whether it were best to maintain, or to defert that Polt, but the Resolution thereof deferr'd till the next day. Iwo great Cannon were planted in the Quinquangular Fort, to Command the River-fide; and, in conliferation, that the Hornworks belong-

ing to that Fort, required a confiderable number of Men for their Defence, the 164 Governor of the Fort was ordered to have the same levell'd by his Brafil ans and Soldiers, and 100 Negroes; And the Woods betwixt the faid Fort and the Affagados, were ordered to be cut down by the Brafilians belonging to the Fort, when it was also resolved to draw the lortifications of Maurice's Town into a narrower compass, and to repair the Walls round the Receif; fo that by the indefatigable Care of the Council, all the Fortifications both of the Recof, and the other advacent Places, were put into fuch a good posture of Defence, that the Enemy, tho' very ftrong, durft not attempt any thing thereabouts for that time. Mr. Dortmind had drawn near 1400 Persons into Itamarika, 700 of which being Wemen and Children. he defined fome Supplies of Providous, but for the rest, had put the Island in a good pollure.

Mr. Linge by his Letter, dated in Tarails the 22d of Anough, fent Advice to Letters the Conneil, That after Notice given the Coun him of the Defeat of Colonel Haus, he cal out of Paraiba. had judged it most convenient to remove the Garrison and Inhabitants of Fredericia into the Foits; that however the Portugueles were pretty quiet as yet, notwithstanding his whole force confisted not in above 400 Soldiers, 100 Inhabitants, and 50 Brafitians, among whom were a good number of fick and maimed Men, and that the Tapayers had flain about 12 or 14 labouring Countrymen. Major Hoog frate, Ley, and Heck, had not long before given notice to the Council. That they had burnt all the Houses, but especially the Magazine and Church without the Fort, for its better Defence, and that the Enemy had posted themsclves on the Hill of the Cape, and on the Southern Island.

On the 25th of August, upon another review of the Fortifications of Maurice's Town, the same were ordered to be brought forthwith to Pertection.

The same day the Council received Letters from Mr. Large, by the way of August, in Paraiba, That William Binents had fent him Advice from Kunhau, the 14th of August, That he and Rudolph Bamn had a Troop of Tapoyars ready for our Service, every thing being very quiet thereabouts; but that the faid Tajoyers had carried away all the Cattle belonging to Peter Farcharfon, which had occafioned no fmall scarcity of fresh Flesh ١ţ thereabouts.

ceif.

It was also judged absolutely necesfary by the Council, to take into their ferious Confideration the present Condition of the Forts in Rio St. Francisco and Seregippo del Rey, which being provided but with slender Garrisons, and all Communication cut off betwixt them and the Confultati- Receif, and in great danger of being loft; ons about it was judged absolutely necessary, after removing the Defeat of Colonel Haus, to endeavour the preservation of them, and conto the Re- fequently of the whole Dutch Brafil, by removing them from thence to the Re-

> To accomplish this with all imaginable fecurity, Mr. Walbeck was deputed by the Great Council to the Council of War, to know their Opinion, by what means these Garrisons, as well as that of Porto Calvo, might be with fafety brought to the Receif; or whether, considering that they would be forced to leave their Cannon behind them, they should be ordered to defend themselves to the last Extremity, in hopes of receiving speedy Succours from Holland for their Relief.

The Council of War, having well weighed the whole Matter, unanimously agreed upon the following Resolution.

### The Resolution of the Council of War.

THat it was their Opinion, considering the Capital City was in danger for want of a sufficient Garrison, the Garrisons of the before-mentioned Forts, which in all probability could not make any long Resistance, ought to be taken from thence with as much Ammunition and Cannon, as could be done, and carried to the Receif. But in regard that the Fort of Porto Calvo lay pretty deep into the Country, where the River was very narrow and shallow, the Garrisons of Rio St. Francisco, and Seregippo del Rey, were to pass that way in order to join them, and that they should bury or break their

By Order from the Council of War, Augnst 24. 1645.

Signed. Kornelis Bayer, Albertus Oofterman. L. Van Harkema. John Denning. Samuel Lambartz. Henry Advecaet. Frederick Piftoor. Captain Haelmeister. Rene de Monchy.

Accordingly, two Barks, with the Ship Zelandia, were ordered for the Execution of this Enterprize, to Rie 1 St. Francisco.

The last day of Angust, one of the Captains of these two Barks retuenta, 1645. and gave an Account, That he being advanced into the River of Rio St. Francifco, within a League of the faid Fort, he received so warm a Salute of small that from a Portuguese Vessel full of Firelocks, that he was forced to return. without being able to penetrate any further up the River; that the other Bark being discouraged thereat, durst not venture to go to Seregippo, but that they thought fit to retreat back with the ship Zelandia; He further added, That it would be very difficult to put this Defign in Execution, unless they were provided with some Galliots and Yachts well armed.

Pursuant to this Advice, the Council ordered the Yacht called the Sprew, with three other Barks chither, to join with the Ship Zelandia, for the more effectual Execution of this Design.

They fet Sail from the Receif the 2d of fent to kin Seprember , Captain William Lambartz St. Fran-Commodore. He return'd with the faid cisco under Yacht, and the Zelandia, the first of William October, to the Receif, where he gave Lambart. the following Account of his Expedition to the Council.

We came the 22d of September within a half League of the Fort of St. Man- He gives rice, where we met with a Bark, which an Account at the discharge of one of our Cannon, pedition fail'd away before us up the River. we were in pursuit of her, we espied another small Vessel, in company of the Bark belonging to John Hock, both full of Soldiers: We saw the first of these two run ashore, and the Soldiers landing, who skirmished with an opposite Party for the Defence of the Vessel: Our Yacht under favour of our Cannon, boarded the faid Vessel, with an Intention to fet it on Fire; but finding it loaden with the Baggage of our Soldiers, fell to plundring first; and soon after espied a Boat with a White Flag, making all the Sail they could towards them: Major Pappenheim, late Commander of the Fort of Rio St. Francisco, and Mr. Hock, were in this Boat, being fent by the Enemy to let us know, That if we fet Fire to the Vessel, he would cut all the Prisoners with their Wives and Children to pieces, so that we desisted from it. They gave us an Account. That the faid Fort had been forced to furrender three days before, for want of Wood and Provisions, after a Siege of 26 days. That the Pertugueses having taken a Serjeant

withfour Soldiers of the Garrison of 6 4 5. Seregippo had kill'd the Soldiers, and fent the Serjeant back with a Convoy of 200 Men, to fetch the Garrison of Seregippo, which had not above four days Provision left, from thence. That about eight days before the Surrender of the Fort, Colonel Haus, Captain Liftry, and Captain Wiltschut pass'd by that way in their Journey to the Bahia, whither they, purfuant to their Capitulation, were to be catried with the rest of the Prisoners, and from thence to Portugal, and so furher to Holland, without any other loss except their Baggage, being for the rest paifferently well treated. They further added, That the Portugueses not long ago detach'd 200 Men to the Island of Melibior Alvares, in hopes to cut off the Retreat of our Men, and to prevent their Excursions, but came too late, our People being retired before. That the Encmy had likewise made themselves Masters of the Fort dos Affagados, where Mr. Bullestrate being made a Prisoner, was now on his way to the Bahra. Captain Lambartz hearing this Account, thought it his best way to Retreat towards the Mouth of the River, where having spent two days in refitting his Ships, he return'd the first of October to the Receif.

The same ill Success attended us at of the Seregippo and Porto Calvo; For the Coun-· Forts cil having fent a Bark with Provisions to their Relief, the same, contrary to her mender. Orders, came to Anchor before Rio St. Francisco, where being seized by the Enemy, the Garrison of Scregippo being thereby disappointed in their Hopes, were forced to furrender, after they had fpeut all their Provisions. After this Misfortune, there was not the least probability lett of faving the Garrison of Porto Calvo, which lying deep into the Country, the River was not Navigable thereabouts by eason of its narrowness, and that the Enemy was Master of the Freld on both sides, so that they were likewife obliged to Surrender for want of Necessaries. The Garrisons of these three Forts, were contrary to their Capitulation, (by Virtue of which they were to be conducted to the Receif) carried Prisoners to the Bahra; but those that could or otherwise, were cut to pieces by the Portugueses.

Many of the Soldiers belonging to these as well as other Garrisons, and of the Troops under Colonel Haus, dreading the danger of the Land-Journey to the Bahia, did take Service among the Vol. II.

Portugueses; But Captain Nicholas Nicholfon being fent with 64 of these Durch 1 64 to prepare an Ambush, for some of our Forces, took this opportunity to joyn with us, which exasperated the Enemy to that Degree, that they disarmed all The Port the Dutch that had taken Service there, all the and Murthered them in cool Blood; the Durch a like they did with the Dutch Inhabitants their Se that had staid behind in the Country.

In the mean while, the Captainship of Paraiba, through the good Conduct of their Governor Paul de Linge, remained in Obedience, at least in ontward Appearance, till the 25th of August 1645. when the Inhabitants, having received Intelligence of the Defeat of Colonel Haus, and the Surrender of the Cape of St Auftin, and being at the same time encouraged by the Succours of five Companies, and good Store of Arms, fent to them by Vidal from Pernan buko, they hegan also to take up Arms, with an Intention to cut off the Communication betwixt the Garrison in the Monastery of St. Francisco, as the Inhabitants of Fredericia, (a place of no strength) and the Forts near the Sca shore; But Mr. Revolt Linge shrewdly suspecting their Design, Peralb. did with Confent of the rest of the Osiicers there, order all the Citizens with their Effects, and the before-mentioned Garrison to withdraw within these Forts, to prevent their being furprifed by the Portugueses, and to serve as an additional Strength for the Defence of the Forts; for which reason also the Brasilians Inhabiting with their Families in those Parts, were commanded to entrench themselves under the Cannon, which served for Outworks to them. The Enemy finding themselves by the Conjunction of these Forces, disappointed in their delign of making themselves Masters of Paraba by force, had recourse to their wonted Artifice, not questioning, but they might have the same Success in purchasing the Forts of Paraba, as they had had at the Cape of St. Aust.n. To encompass which, they fent in September 1645. one Ferdinand Rodrigo de Bulbaus, Clerk of the Court of Justice of Paraiba, with a Letter directed to the Commander in Chief, Paul Vander Linge, offering him the Sum not follow the rest, by reason of Sickness, of 19000 Gilders, if he would Surrender the faid Fort into their Hands. this Messenger had not the desired effect; the Message being by Order from Mr. de Linge, taken into Custody, and Their Mef-Hanged the next day; of which he fent fenger

notice to the Council the 16th of Septem- banged. ber. In the mean while, (according to

Mr. de Linge's Letter from the 6th of 5 45. September) five Companies more of the Enemies Troops, making in all about 300 Men, were arrived in l'araiba, which being join'd by the ablest of the Inhabitants, had posted themselves near Tibery, where they had published by Proclamation for every one to repair to his Sugar-Mill, under pain of forfeiting the same.

The Passage betwixt the Affagados and the Quinquangular Fort, where the Cattle belonging to the Recof were kept at Pasture, being much infested by the Enemies Parties, one of which had taken good part of it, a small Wooden Fort was ordered to be erected in the most convenient Post, for the security of the

Meadows thereabouts.

Sometime before, viz. the 26th of July Orders were fent from the Council to Servaes Carpenter, to disarm the Inhabitants of Goyana, who thereupon Petitioned the faid Council, to be excused from furrendring their Arms, confidering that 37 Portugueses of Kunhao, who had been difarmed, were murthered by the Tapoyers, and that they were daily in fear of the same treatment, till they were further removed from their borders. The Council answered, That the Murther committed upon these Portugueles had been done without their Knowledge and contrary to their Orders; that in case they persisted in their Allegiance, they had nothing to fear from the Tapoyer, whilft they were under their protection; neither ought they to imagine that the difarming of them, was done with an intention to leave them a Prey to the Tapoyers, but for our own fecurity, and to furnish them with a plaulible excuse not to join with the Rebels, whenever they should be prompted thereunto by them. At the same time they repeated their Orders to Mr. Carpenter, not to delift from disarming those of Goyana, notwithstanding their Petition to the contrary; but that he should be very careful, that neither the Soldiers, nor Brafilians of Marm might be burthensome to them. The Council also deputed Mr. Astelle, and Captain Will. Lanbariz, with Letters to John Duny, and Karakara, the first King, and Troop of the Tapoyers, with presents to all the rest of their Commanders, in order to engage them to join with us, they having complained of their not having been presented, like as John Durry was before; Accordingly the faid Mr. taken their leave the 28th of Anguil of c the Council, took Shipping for Paraiba, 1 in order to go from thence to Kunhao to 🖈 treat with the Tapoyers.

The Members of the Court of Justice and the Council of War, in conjunction with the Magistrates having represented to the Great Council, the absolute necessity of having the Houses in Maurice's Town pull'd down, and laid level with the ground; an Order of the faid Council was publish'd the 29th of August by beat of Drum, enjoining the Inhabitants to pull down fuch Houses, withou the space of two Days, and in casellof failure, every body to be at liberty break down the same for his use; The House of Mr Rechteren only excepted, which was to be converted into a Redoubt for the Detence of the adjacent The same Day John Denninger Plain. lately Lieutenant to Colonel Han, fucceeded Captain Blarr, now a Prisoner with the Enemy, in his Command; and many Negro's offer'd to ferve the Company under a Captain of their own choofing.

The 30th of August, Captain William

Lambartz, with part of his Forces return'd to the Receif from Paraiba, where he gave the Council an Account of his Negotiation: That not without a great The Sucdeal of trouble they at last obtained 200 unfire of Tapoyers from their King John Dimy, manor. who pretended that he dreaded an Incursion from one of his Neighbours, who in the absence of his Troops might perhaps Kill him with all his Family, and demanded at the same time, that all the Portuguese might be kill'd in Paraiba That he marching with these Tapoyer; into the faid Captainship of Paraiba, they actually flew all the Portuguefes they met with in their way, to the number of 100 Persons, and plunder'd their Houses; and as foon as they found him prepared to appeale them, one halt of them, with what Negro's and other Booty they had got, returned home; but continuing his March with the rest thro' Goyana towards the Receif, the Tapoyers did no fooner The Ta understand, that they were likely to feet. meet with fome opposition by the way, but they followed the tootiteps of the the second Commander in chief of a rest homewards; so that he was forced to retire with all speed to the Fort of St. Margaret in Paraulus, from whence he returned by Sea to the Accest. Hereupon the Council dispatch'd some Letters the 16th of September for Rio Grande, directed to King John Duny, Jacob Kabbi Tapoyers. Aftelle and Captain Will. Lambartz having and Rudolf Baro, exhorting them to join

their Arms with ours, for our mutual 544. Defence, and to chase the Portuguefes that were on their March thither, from Monce.

The 13th of Septemb. 1685. Jeranymo Serrao da Paiva, late Admiral of the Portuguese Fleet, (made Prisoners in the late Sea Engagement in the Bay of Tamandare) appear'd before the Council, where being examined concerning the Designs of the Governour of the Bahra in fending a Fleet, and landing his Forces in the Bay of Tamandare, as likewise concerning the Fleet under the Command of Salvador Korrea de Saa, he 1er. full to give any other Answer, or to make the least Confession, except that he was fent with the faid Fleet and Forces to offer his Affiftance to appeafe the Revolt arisen among us. He defired also leave to fend a Letter by a Drummer to the Colonels, Marin Somes Moreno and Andrew Vedal, about the exchanging of his Person, and some other Portuguese Prisoners, which was granted.

Some of the Citizens having conceived a scalousie, as if their pressing circumstances and the need they stood in of present Relief, had not been sufficiently represented to the Council of XIX in Holland, it was thought fit by the Council to Communicate the Contents of the two last Letters to them for their Satisfaction.

The 19th of September, about Noon, our whole Fleet retired from the Pay of Tan and use into the Road of the Reco with two Men of War, and two small Veffels taken from the Enemy; where I was arrived long before, having left them, immediately after the Engagement. The fame Night Servaes Carpenter who died the Day before, was In--terr'd. The fame Day the Yacht call'd the Doe, and one of the small Vessels taken from the Enemy, and call'd by us the Receif, were fent out a Crufing to the Cape of St. Aufter, to prevent the Enemies receiving any Supplies by Sea thereabonts.

The Council being fensible that the Enemy made it his chiefest endeavour, to drive away their Cattle, and to prevent them, by strong Parties from fetching of Wood and Fishing, a Company of Fusileers was order'd to be erected, out of other Companies, who were to be commanded by Captain Renbagh, and to ferve as a conflant Guard against the Enemy's flying Parties. The 21st of of Pardon, for fuch as had taken Service with the Enemy, was publiflied.

### A Pardon Publish'd.

HE Great Council of the Dutch Brasil being made sensible, that many of their Subjects being fall into the Fnemics hands, have either for fear of being killed or transported, and out of other Considerations, taken Service among the Incrices Troops, and considering that must of them have been inveigled by their Commanders, and perhaps are in a fair may of repeating of their Error; have thought fit, by these Presents to grant our Pardon to all Juch as shall return to our Service, for all paft Offences; with our Provide, that they Thall receive the advantage of the Jame Stiltion they were possessed of among us begune; and fuch as are willing to return to the Native Country, shall have Pals-Ports granted them for that purpole; from the benefit of which l'ardon, are however excepted Dick Hoogstrate, and the other Traytors, who being Commanders of Forts, have tientheroughy delivered up the fame to the Fnemy.

By this time the Fnemy had block'd up all the Avenues by Land, leading to the Receif, in hopes to reduce us by Famine; having posted both all the Portugue/e Forces fent to their aid from the Babia, and the Rebellious Troops, from the City of Olinda to the Riverta, in the form of a Half-Moon; and made about half a League from the Fort of Alfagados an Entrenchment provided with Six pieces of heavy Cannon; brought hither from Porto Calvo; but durft not attack us by force, knowing we were prepared for their Recep-

Mr. Dortmund having by his Letters represented to the Council, the neces- on Bulfity there was of fending one of their leftides Members to provide for the feculity of next to 1-Itamarika, and to keep the Brafilians, tamarika. (confifting of 1500 Men, Women and Children) by his Authority in their Duty, against the Solicitations of Kamaion, who left no Stone unturn'd to bring them over to his fide; they defried Mr. Bullestrate to take upon him this Province; who accordingly the 23d of September, fet Sail thither in the Ship the Deventer, and returning the 29th of September, to the Rucet, gave the following Account to the Council.

He arrived about Noon at the En-September, the following Proclamation trance of the River Maria Farinha, where

being informed by John Voc, Master of a 16+5. Bark, That the Enemy had twice attackt the City of Shorpe, and continued before it still, he went into a Challop, with five or fix Seamen to the Fort Orange, but was no fooner espied by the Garrison, but they defined him not to come nearer, they being still smartly engaged with the Enemy upon the Hill, and doubtful of Success: Whereupon he sent two Seamen, with a Letter to Mr. Portnurd, who being encouraged by the Reward of two Reals, brought an Answer from him the same Night, intimating that the Enemy had been forced to retire.

> The 25th of August, by break of day, he went in a Challop to the City of Shoppe, and finding that the Enemy, what with the brave resistance made by the Garrison, what with fear of this Ship, had abandon'd not only the City, but also the whole Island, he ordered the Fortifications to be forthwith repaired, and to be put into a good posture of Defence.

For the Enemy perceiving that it was in vain to attack us upon the Receif, fent anack Ita- great part of their Forces, Embarkd in 8 Boats and a Bark, against Itamarika, the 20th of September; where having furprized, and vigoroully attackt our Forces pufted on the Hill near the City, (our Deferters making the first attack) that they the third time made themselves Masters of it, forcing our Troops to Retreat into their Entrenchment of the Church.

> About three days after, viz. the 23th, Mr. Bullestrate, as we told you, arrived in the Ship Devemer, to give the necesfary Orders for the Defence of the Place, and to keep the Brafilians in awe, he brought along with him some Volunteers chosen from among the Citizens, the Garrison of the Receit being so weak as not to be rendred uscless by any further Detachments, besides that there were 400 Brafilians capable of bearing Arms at Itamarika. He was charged by the Great Council, and the Members of the Council of War, to watch above all things for the Defence of the Fort Orange, which was to be maintain'd to the last, if they were not able to keep the whole Island on the Hill.

Mr. Bulleftrate, after his arrival there, found it absolutely necessary to preserve likewise the City of Shoppe, from whence the faid Fort must be supplied with Wood, its situation being such, as that so long as we were Masters at Sea, we could maintain a Correspondence betwixt the

faid Fort and City; For which purpose also, the Yacht call'd the Golden Doe, had 1 6 4 her Station appointed betwixt the Fort Orange and the Hill, to maintain-the passage of the River between both. But to return to the Siege of the City: The Enemy made three vigorous Attacks upon the Entrenchment on the Hill, but was repulfed with the loss of 150 kill'd; tho' a Barber, who after the fight, deferted them, made their loss amount to 450. Kamar on and Hoog strate were wounded, and we had only 15 kill'd and 16 The Brasilians lately transwounded. ported thither, from the Villages of Foyana, Iguarucu, and other Places, behaved themselves to a Miracle upon this occasion, tho' it must be allowed, that the arrival of Mr. Bullest are did not a little Abandon cool their Courage, which made them it again. abandon the Island in the night betwixt Sunday and Monday.

The 2d of October, the Great Council Further

entred upon a fecond Debate concerning Confultathe Prefervation of Itamarika, they hations ving received certain Intelligence, that Safety of the Enemy had undertaken the last Expe-Itamarik dition against that Island, upon hopes of being seconded therein by certain Persons of our Party, with whom they kept a fecret Correspondency; and tho' they were in the dark upon whom in particular to fix the intended Treachery, yet did they think it conducing to the fafety of that so important Place, to remove Captain Sluyter with his Company from thence, and in their flead to fend thither the Company commanded by Captain William Lambartz, and to entrust him with the Supream Command of all their Forces there, which was put in Execution accordingly the next day. The Entrenchment round the Church, and the Fort Orange, were also ordered to be strengthned with Pallisadoes; and the first, (pursuant to the Advice of Garstman and Dortmund, I ordered to be furrounded with a Counterscarp, within the compass of which a Company of Brafilians were lodged, with their Wives and Children, and the rest to be employed in the Defence of the Fort Orange; fo the Redoubt which commanded the Place, from which the Foot was supplied with Water, was ordered to be repaired against a sudden Attack, without which the Fort could not long fublift, or hold

Letters were about the same time delivered to the Council, dated the 5th of Ottober, by Major Arftin de Magethaes, fent by Andrew Vidal, to Treat about the

out against an Enemy.

Exchange

Exchange of Prisoners; he told them, that fince Admiral Serrao de Paiva, had by two feveral Letters follicited his Releasement, he desired that the same might be Exchanged for other Soldiers, of or be Ransomed by Amonio Telles da Sylrs. va. Governor of the Babia. He desired alfo, That a Cartel might be Agreed upon for the Exchange of the Soldiers; and that in the mean while such of the Portuguele Inhabitants, as were Prisoners with us, might be Released for reasonable Ransom, which was not accepted of by the Council.

In the mean while, (pursuant to the Letters from the Commander in Chief of Rio Grande, and John Hoek of the 6th of Ollober) Jacob Rabbi, with a small Troop of Tapoyare and Brafilians, in conjunction with 30 Dutch Inhabitants, made themselves Masters of the Scat of John Lestan, with the Slaughter of 15 Portkbe gueles. But they had not the fame Sucs. cess, at Feinandes Menda's House in Porigi, which being defended by 50 Portugueles, they were repulsed with some

· lofs

The Enemies finding themselves disappointed in their design of gaining Parayba by Treachery, did again apply all their care to block up all the Avenues leading to the Recesf, in hopes of reducing it by Famine. This occasioned many Skirmishes, in which the Brasilians, who got the greatest part of their Provision out of the Country, did a considerable mischief to the Portugueses; who, for their greater security, built a Fort in Pernambuko, (as they likewife did in the Vargea of Parayba) near the Sugar-Mill of George Huomo Pinto, but flightly fortified and not able to hold out against any vigorous attack. In Rio Grande, the Tapoyars plaid the Masters over the Portugueses; for, as we told you before, that according to their Custom, they entred the faid Captainship in July 1645. when being inform'd of the Rebellion of the I'or ingueses in Pernambuko, they, out of an Inborn Hatred to that Nation, attackt 16th of July, some of them in the Sugar-Mill of Kunhao, and kill'd every Soul of them, the Dutch Inhabitants thereabouts not being strong enough to Men, most Pikes; the second by Edward From thence the Tapoyars prevent it. march'd to Monpobu, Goyana, and Potofi, Places belonging likewife to Rio Grande, where finding a Body of Portugueses entrench'd with Pallisadoes in the nature of a Palanka, they forced them in Conjunction with some Brasilians, to surrender, under Condition, That their Lives should Vol II.

be faved, provided they did not give any ~ further occasion of Disturbance. But 164 fome of the Portugueses flying afterwards The Tainto Parayba, the Tapoyars looking upon poyens this as a Breach of the late Ticaty, did clear Ric with the beforementioned Brafil.ans, a- Grand: gree, to put the rest to the Sword where- of the Po ever they met with them, which they tuguefes aid accordingly, the Brofilians exclaiming against the Tyranny committed upon 30 or 40 of their Comrades, who by Andrew Vidal's order, were tied to Pallisadoes in Serinhaim, and strangled, which had this good effect, that Rio Grande for that time was entirely purged of the Rebellious Crew, except fome few, who escaped their Hands. Their Estates and Cattle were afterwards difposed for the Benefit of the Company, and others their Cieditors, which turnished the publick Magazines with good Store of Flesh, at a very seasonable time. The Portugueses being sensible that we drew confiderable Supplies of Provisions from that Country, endeavoured to prevent it by fending feveral Bodies of their Troops thither, but were always forced to retire to Parayba, whether they carried as much Cattle along with them as they could.

According to the Deposition of Cap- An Actain Nicholas Nicholfon, (who came over count of to us the 12th of November, as we shall the Enefce anon) the four Companies of Dutch miestore

quartered in the Vargea, were as follows.
The Company of Nicholas Nicholfon, 63 Men, and among them 23 Musquets. The Company of Alexander Buchhali,

of 43 Men, among whom 36 Musquets. The Company of Captain Anthony, who was mortally wounded in a late Engagement, confilling of 36 Men, and among them 32 Musquets.

The Company of John de Witt, of 40 Men, but miserable Wretches, and a-

mong them only 12 Musquets.

Belides these, they had two other Dutch Companies in Goyana, one Com-manded by George Peterson of 17 Men all Pikes; the other by La Cour of 19 Men, likewise most Pikes. They had also two more in Parayba, one under the Command of Captain Peter Gendre of 19 Versiman of 20 Men, among whom was but one Musqueteer: So that the whole number of these Eight Companies, amounted to no more than 257Men; their Colonel was Hoogstrate, and Francis la Tour late Aldermen of Serinhaim, Major, a profest Enemy to the Hollanders. Most of the Dutch Prisoners were put under a necellity necessity of taking Service with the Ene-5. my, being otherwise in danger of being Murthered in their way to the Bahia, as it happened to 42 Prisoners taken at the Cape of St. Auslin, who were all flain in the Sugar-Mill Konjan, near Serinhaim. He further declared, That the Enemies Forces in the Vergea, consisted of about 700 Men fent from the Bahia, divided into 9 Companies, well-arm'd with Musquets and Firelocks. That besides these, they had about 100 Men, gathered from a-mong the Portuguese Inhabitants, they having forced all the young Men from the South of Huma, as far as St. Lawrence, to take up Arms; some being armed with Firelocks others with Musquets they had taken from us; They were for the most part Mulars, and an undisciplin'd Rabble, Commanded by John Fernand Viera, as Colonel, and Anthony Dias, (who came from the Bahia) their Major. Their Captains, most in Esteem among them, were, Simon Mendes, Domingos Fagundos, and John d'Albuquerque. Kamaron Commanded 100 Brafilians arm'd with Blunderbusses, and Dias 200 Negroes, (among whom so were ours) provided with very good Guns; besides some Tapeyars. Each Soldier had for his daily Allowance, a Pound of Meat, and about a Pint of Farinha or Meal, and 12 Gilders per Month; a Captain 120 Gilders, and F. Con 12, a Serjeant 21, and a Corpor 115 Gillers per Month. But they only jaid the Dutch Troops with ready Money, the Account with the Porsugueses from the B. Lina being made up but once a year. They were at that time busie in raising of a Fort with four fmall Bastions, and a Powder-House, betwixt Bierbroms Sugar-Mill, and Cafa de Sabrodo, upon each of which were to be mounted 3 pieces of Cannon, 8 pieces having been brought for that purpose from I'orto Calvo, among which were five of Metal. Round about this Fort the Soldiers from the Bahia had their Quarters assigned them, except the Company commanded by John de Magehaus, which was Quartered in the Baretta, with four Dutch Companies, viz. The Dutch that were in the Sugar-Mill of Bierbrom, and those Commanded by Captain Peter Kavalkanti, and Antony Jaconio, and two or three Companies of the Portugueses come from the Bahia, in the Sugar-Mill Brite; the rest being Portugueses, Mulats, and other idle Fellows they had forced to follow them from the South. These were armed for the most part with Firelocks and Musquets, the rest with Pikes.

Andrew Vidal, John Fernand Viena, and Major Hoogstrate, were at that time is 1 64 the Casa de Sabrodo: All these consisted not in above 600 Men. About the Sugar-Mill of John de Mendonce were quartered three Companies, two at the House of Sebastian Carvalho, and two more in the Sugar Mill of Mengao. The rest were posted in the Salines, Baretta, and the City of Olinda. Some of Kamaron's Troops were in the Sugar-Mill of Van Scholl, and in the House of John Korder. de Mendoje, upon the Bank of the River, being their advanced Guard; Hemy as, with his Troops, had his Post in the House of Mr. Luffelen. The Redoubts belonging to the City of Olinda, were manned only with 17 Soldiers.

In November, the Great Council received Intelligence, both by Letters from Paulo de Linge out of Parayba, as also by several Deserters, That the Enemy had fent 400 Men, 200 of which were Soldiers, the rest Inhabitants, from Rio Grande into Parayba, to make themselves Masters of the open Country, or at least to drive away the Cattle; whereupon it was refolved, with confent of Colonel Garsman, to endeavour to hinder the Execution of the Enemies Design.

The 12th of November, Captain No- Captain cholas Nicholson, a Native of Anisterdam, Nicholas came, as we told you before, over to us to Nicholfon the Receif. He wisamong other Prisoners Deferts of the Cape of St. Auft.n, carried from the Enemy. thence to St. Antonio, where he took Service among the Portugueses, but with no other Intention, than to Defert them upon the first opportunity; he being intrusted with a Captain's Commission, to Command a Company of Dutch Soldiers forced to List themselves from among the Prisoners they had taken, was ordered, at the Recommendation of Hoogstrate, and Albert Genitz Weddo, with the Approbation of Vidal and John Vierra, to lay in Ambulh for some of our People in the Salines, with a Detachement of 60 Men, out of the four Dutch Companies in their Service; and four moreCompanies were ordered for a Reserve, to affift him upon all Occasions. The Supream Command of the whole Body being committed to him, he approached as near as he could with his Dutch to the Fort Bruin, where he took the opportunity to pass the River by break of day. and to go with them (they being all willing to follow) over to us to the faid Fort. Captain Nucholas Nucholfon had the Command over the faid Company confirmed to him by the Council, they be-

ing all willing to enter into their Ser-[45 vice: But the Enemy had no fooner notice of it, but they difarmed all the Dutch, and under pretence of fending them to the Bahia, caused them to be Murthered by the way, with their Wives and Children.

The 2d of November, the Council had received Advice from Mr. Linge from Parayba, That Andrew Vidal had entred that Captainship with 200 Men, and that Kamaren had by Letters strongly follici ed Peter Potty, to Desert our Service in his Brasilians, but had received a art Refusal; the Council sent him two pieces of fine Linnen Cloth as a Reward of his Fidelity. For, it ought to be obferved, That the Portugueses, when they first began to take up Arms against the Government, did with Letters and great Promifes tempt the Regiders or Commanders of the Brafilians, to joyn with them, but they were so far from hearkning to them, that they fent all the Letters written upon that Account, both by Kamaron and the rest of the Rebellious Ringleaders, without opening, to the Council, thereby to avoid all suspicion of keeping any Correspondence with the Enemy, Peter Porty being a near Kinfman of Kameron; and ever fince that time they have behaved themselves so well upon all occasions, and have done such considerable Mischiefs to the Portigueses, by plundring and killing them, that whereever they could meet with them, that we had not the least neason to mistrust the Sincerity of their Intentions.

The faid Mr. Linge did also send word Novemb. the 4th. That the Enemy had attempted nothing as yet; and from November 14. That a Party of 300 of our People being join'd by some Brasilians of Parayba, had engaged 800 of the Enemies Troops, whom after a fmart Engagement they put to the Ront, with the flaughter of a good number of their men. The Brasilians being encouraged by this Success, did over run all the flat Country, and meeting with a good number of Portugueses, who were metry-making upon St. Martin's Eve in the Sugar-Mill of Andrew Dias de Tigeireda, they attackt them so furiously, that after a slender Resistance, they put them all to the Sword, even the Son of the said Tigering reda himself, and a Priest, without giving Quarter to any Body, except to a very beautiful Maiden; who, tho' almost Distracted at the Death of her Father, and fome of her other Relations, that hay wallowing in their own Blood, had

fuch a powerful Influence upon the Hearts of these Barbarians, that they brought 1645 her a Prisoner safely to the Fort of Pa-

The 21st of November towards the The Dutch Evening, 360 Soldiers, (20 of whom attack the were taken from the Receif) fet Sail in Portufmall Boats to the Bay of Traican, and gueles continued their march the same night, hao withunder the Command of Lieutenant Berge, out fuccefs. Justice Hoek, and the Receiver-General

of Pernambuko, towards Kunhao, in order to attack the Enemy that were lately come into Rio Grande, from Parayba; But these Enemies having got some Intelligence of our Defigns, were retired from Kunhao, to a Retrenchment among the Bogs, which being accessible but in one place, they fo warmly faluted our Forces, that would have forced them from thence, with their Shot, that they were obliged to retreat with the loss of some dead and wounded, to the Castle of Kerlen, partly to refresh their Men, partly to prevent their penetrating deeper into the Council.

The 4th of December it was resolved to fend the Ship the Overyssel, and the Yacht call'd the Sprem, towards the Bahia, a Civiling, to get Intelligence of their Naval Strength thereabouts, and to endeavour to take some Prizes. 5th of December, the Great Council fent The Brafor all the Commanders of the Brafili- ilian comans, to inform them, That they had re-manders ceived confiderable Supplies of Powder. Jummen'd. Ball, and all other forts of Ammunition, by the Ship call'd the Swan, with Letters from Holland, that they were Equipping a considerable Fleet for their Relief; at which the Brafilians were extreamly rejoyced; the Portuguele Commanders having made it their Business to perswade them, that no fuch thing was expected from Holland.

The same Evening a Brafilian Deserter Advice declared, That all the Dutch were killed that all the by the Rebellious Inhabitants, and their Dutch Wives and Children made Slaves. The were kill. fame thing was confirmed by a Negro by the Por Deferter, concerning Captain Bockholt; tugueles. who having taken Service with the Enemy, and being afterwards suspected by them, had caused him to be Murthered. as they had done with all the rest of the Dutch in their Service, who were flain in their way to the Bahia.

The 7th of December it was resolved Four Com in Council, to erect four Companies of panies of Fusiliers, the same being found by Ex- Tufileers perience to be more Serviceable at this ereded. juncture, for which purpose the Compa-

nies of Colonel Garsman, Captain Ju-6 45. rian Remberger, Captain Nicholas Nicholon, and Captain John Taylor were pitcht

upon before all the rest.

In the same month of December, a certain Portuguese, Gaspar Gonsalves, was taken by the Brafilians in the Island of Itamarika, fent on purpose to perswade the Brasilians, That the Dutch intended to deliver them up to the Portugueses for a certain Sum of Moncy, and they to retire with their Effects into Holland, which caused no small Commotion among the Brasilians, who began to give credit to the Relation. And because Gonsalves had spread this Rumour abroad some time before the arrival of Caspar Honyhouse, (who the 28th of August was appointed Commander in Chief of the Brafilians of Itamarika instead of Listry taken Prisoner by the Enemy) he was hardly put to it, how to 1 emove this Jealousie from among them, Jacob Rabbi, pursuant to his Letters of the 11th of December, was about the same time preparing to enter 80 Leagues further into the Country towards the Tapoyars, to folicite their Assistance: He at last came to Oyepe, Son-in-Law of King Duny, who promised, in case those of Sara would fend their Troops to us, he would endeavour to raise as many of his Vassals as he could; but King Dumy excused himself, under pretence that many of his Troops died by Sickness in the Sartan.

The Night before the 27th of December, the Enemy had by means of a Boat, fastned two Puppets with Fireworks to the Ship, call'd the Swan; but being discovered as soon as it took Fire, was foon fquencht, without doing any damage to the Vessel; which made the Ships to be constantly upon their guard

for the future.

7bc Portugueles Dutch Ships.

The 30th of December, two fuch Puppets found by two Soldiers in a small to Fire the Boat near the Fort Bruin, were presented to the Council. This Boat, which questionless was sent on purpose to fasten these Puppets to some Ship or other, being discovered by the Centinels, the Men quitted the Boat, leaving the faid Puppets behind them.

> Mr. De Linge, by his Letters dated the 30th of December from the Fort St. Margaret in Parayba, advised, That a certain Negro, who had Deferted the Enemies Quarter of St. Andrew, had declared, That the Enemy had built two large Barks in order to transport 300 Men in each, in order to attack Peter Potty Commander of the Brasilians in his Entrench-

That Kumaron had been near ments. three Weeks in Paraiba, the Enemies 1645. Troops confisting thereabouts in 16 Companies; But that they had many fick among them, for want of Provisions, and that they had drawn all their Forces out of Rio Grande.

The 6th of January 1646, Peter Bas 1 6 4 6. one of the Members of the Great Council, did by order from the faid Council. fet Sail with the two Ships the Lichthart and the Receif, and a Bark call'd the Blug-Boar, towards the Captainships of raiba and Rio Grande. His Instructions were: To Confult with Mr. Lange Commander in Chief in Paraiba, and the rest of the Officers there, how to put the Entrenchments and other Works of the Braphans into a posture of Defence. From thence he was to go to Rio Grande, there to take an exact Account, both of the real Estates and Chattels of such Por- Mr. bass inqueses, as by reason of their being en. Commission gaged with the Rebels, were forfeited to the Company; He was also to use his Endeavours to have those Goods which were upon that Account concealed or embezled, restored for the benefit of the faid Company. He was also ordered, to act in all other Respects, but especially in providing for the Security of the Captainship and the Fort, as he found it most consistent with our present Interest, and to exhort the Inhabitants to remain stedfast in their Duty, and not to negleft the Cultivating of the Grounds and Breeding of Cattle.

The 12th of January, Teter Dunkerke arrived from Paraiba, where he had been a Cruifing before the Receif in the Ship Hamel; he brought a Letter from An Ac. Mr. Linge, dated in the Fort St. Marga- count of ret, the 11th of January, who fent also the Ene one Mr. Steenbuisen to the Council, he mier De having Deferted the Enemy when they fign. began to kill the Datch in their Service. This Sceenhuisen brought Advice to the Council, That Kamaron with 500 wellappointed Soldiers, was marched out of Paraiba into Rio Grande to be Master of the Field there; and consequently to keep our Garrisons from being supplied with Cattle and Farinha from thence. further added, That the Enemy were in want of Meat, Oil, and other Necessaries; but that the Inhabitants flattered themselves, that for want of Provisions, ... we should shortly be obliged to Surrender our Forts into the hands of the Portugueses. This being likewise confirmed by Mr. Linge's Letter dated the 10th of January, a Council was call'd against the

13th of January, Dirk Hamel and Mr. Bulle-45. strate being present, both Members of

the Great Council, besides the Assessor uta-beld Walbeck, as likewise Lieutenant Colonel spon. Garfman, Mr. Raetsfield, Mr. de With. Alich, Volbergen, and Sams, in order to deliberate concerning the prefent Exigency, confidering, that in case we should, by the Enemies being Masters of the Field, be bereaved of the Supplies of Cattle and Farinha of Rio Grande, at a juncture, when Itamarika and Paba, are closely beset by their Troops, it would be next to an impossibility, to mantain our selves in the possession of the Datch Brafil, till the arrival of the expected Succours from Holland. It was the lifere taken into Confideration, Whethat this Captainship might be best secreat by a powerfull Diversion, or by en wouring to drive him from thence. Bet being senible that the Enemy were fo moverful near the Recoif, Paraba, and It is ar ka, as not to be attackt in any of their Places, without expoling the whole 1 14 Brafil to an imminent Danger, it was refelved, I hat in order to attempt the Rever of the Cap ainship of Rio Can't, Mr Dortmont fould be ordered to fe id 60 Soldiers under the Command of Caption Welling, and 100 Brafilians, in the Barks fent him for that purpose, fi it himu. ka to Rio Grande: At the same tone Orders were dispatcht to Mr Linci Commander in the Fort St. Ma paret in Paraiba, to fend the fame number of Soldiers under Lieutenant Brefman, and of Brafilians, to Rio Grande, to join with the rest that were to Rendezvous there. Thele Forces confisting of 120 Soldiers, and 200 Brasilians, set fail the 19th of January for Rio Grande, and were thought sufficient to oppose the Enemies Designs on that side.

Mr. Portmont and William Lambariz, by a Letter dated the 15th of January, gave notice to the Council, That they had fent a Body of 60 Soldiers and 100 Brasilians abroad, as far in the Aldea by Oubus, and from thence to the Sugar-Mill Arraripe, but did not meet with any Enemies in that part of the Country, tho' they had feveral Guns discharged at them from among the Woods; so that they return'd to Itamarika by the way of

Tapasima.

Mr. Linge not long after fent Advice by.his Letter dated the 22d of January, at the Fort of St. Margaret in Paor raiba, to the Council, That Peter Potty bde With 150 Brasilians had attackt the Enemy 400 strong in the Aldea of Magrebbe, or Paraiba, without running a manifest Vol ,II.

and put them to flight with the loss of o 20 kill'd, and many wounded, whereas 1649 they lost but one Brasilian.

The 29th of Junuary it was resolved in Council, to bring the Ships, the Elias, Orange Tree, Deventer, Omlandia, and the Swan, into the Road of the Receif, to be ready upon all Occasions, in case

the Enemy should again appear at Sea. Mr. Bas, pursuant to his Letter from the Castle of Keulen in Rio Grande dated the 23th of January, could not, by rea-fon of a Tempest, land his Forces at gives an Kunhao, in order to join them with those Account of under Captain Rhinebergh; but was for- his Froced to land his Forces the 14th and 15th ceedings. near Peringi. In the mean while Kamaron having found means, to break in

through the Matta, had furprised many of the Inhabitants in their Fazendas, and kill'd them without distinction of Age or Sex: He had fince posted himself with his Forces, confifting of 400 Soldiers, as many Brasilians, and 80 Tapoyars, under the Command of Antonio Jacomo Referro, at a House of Henry Hamme in Mor pabon, to cut off the Provisions from us. Our Forces confifting of about 1000 Soldiers, Brasilians and Tapoyars, marched the 23th of January to a House of John Lestan Navaire, to attack the Enemy, and to force them to quit the Captainthip of Rio Grande. Belides thefe, Jacob Kalibi, and the Sons of King Dumy, were the 19th past, by the Fort Keulen, at the Head of oo Tapoyars, and were daily followed by others, that came to our A stiftance. Mr. Bas follicited also some Supplies of Provisions, of which they stood in great want, there being above Confulta-1500 E. afil ans, Men, Women, and wors beld Children, lodged under the Callle. He thereupon defired also some Money, Ammunition, Linen and Silks to prefent to the Brafi-Lans and Tapoyars; all which, together with some pieces of Red-Cloth, was sent

him by the Council. According to this Advice, it being much to be feared, the Enemy would fearce stand the brunt in R.o Grande, but ietire into l'araiba, it was taken into serious Confideration the 29th of January, Whether it would be adviseable, in case the Enemy should be forced by our Troops, or voluntarily retreat into Paraiba, to purfue them thither, and thereby endeavour the recovery likewise of that Captainship: But considering that by reason of the weakness of our Garrisons, we were not in a Condition to fend any further Succours from the Receif, Itamarika,

illeir re-

falt.

hazard to our Troops there; whereas, 645. on the contrary, the Enemies did not want opportunity to relieve theirs from the adjacent Places of Para.ba, and that we lived in daily hopes of Succours from Holland, it was judged the best way, that the welfare of the whole Dutch Brafil ought not to be put to the hazard by fuch an Enterprize as this.

Accordingly Orders were fent to Mr. Bar and the 1est of the Commanders of our Troops there, to act with all imaginable Caution, and rather than expose our Men, in following the Enemy into Paraba, to be contented with the Recovery of the Captainship of Rio

Grande.

The 30th of March, Colonel Garf-( alar . )

Garinaa man was by special Order from the I m to Rio Council, fent a second time with some Grande. Troops to the Captainship of Reo Grande, to inform himfelf, whether any Troops of the Enemy were posted in that Captainship, and in what number; His Instructions were: That so soon as he had received Intelligence of the Enemy, he should with what Forces he was able to bring together, endeavour to stop their Progress. But, if he found himself not strong enough to oppose them, he should fend speedy Advice thereof to the Council, that they might fend him speedy Succours, and that he was to take all imaginable care not to engage the Enemy, before the arrival of the faid Succours. But if he found the Enemy already fo strongly Entrencht as to be Master of the Country, without any hopes of forcing them from thence, the Defence of the Fort Keulen should be his chiefest Care, as likewise of the Brasil ans, with their Wives and Children; and fince, in cafe the faid Fort of Keulen should be in danger of being attackt by the Enemy, it would be of ill Consequence, to have these Women and Children enclosed within the Fortifications, for fear of want of Provisions, he was strictly ordered, to transport them in time, to some place of fecurity, fuch as Siara, or the like, where they might be able to subsist, and be secure against any attempt from the Enemy. He was ordered also in his return to the Recest, to take en passant (if it could be done without inconveniency) a view of the Fortifications of Iramarika and Paraiba, in order to give an account of their condition to the Council.

> But to return to Mr. Bas: According to his Letters dated the 30th of January, from the Fort Kenlen, Captain Rhinebergh had with his body made fix feveral at-

tacks upon the Enemy, who was retired c from Mompabou and Kinhao into a Bogg, 1 6 4 5 without being able to force their Entrenchments; we lost about a 100 kill'd The Dutch and wounded in this Action, and retreat- arrack the ed to the House of John Leytan; with without order to get some Cattle, which was success. very scarce thereabouts, our Forces feeding most upon Fishes, which they caught by the help of two large Nets: 28 of our wounded Men were brought to the Receif, with Advice that notwithstanding this unsuccessful attack on optide, the Enemy were retreated if to Para ba, Mr. Bas also sollicited some fresh supplies of Men and Ammunition, in order to pursue them into Paraiba, but the resolution upon this head was deferr'd till they should hear further from Mr. Bas. The 7th of February it was refolved by the Council with the approbation of Admiral Luchthart to Equip the Hollandia and the Swan together with the Yachts, the Flight, the Hamel, Bullestrate and Lichthert, for cruifing. By Letters from Mr. Linge, dated the 11th Advice of February, at the Fort Margaret in Pa- from Mr. raiba the Council was advised, how Linge. that, according to the Deposition of a Negro Deferter, Kamaron was come with all his Troops into the City of Paraiba, with an intention to attack our Forts on that side; an Answer, with what was thought necessary for this present purpose was immediately sent back in a Bark by the Council. By another Bark fent by Mr. Bas from R.o Grande, they were advertised, that he lay still encamped with his Troops, near the House of John Lestan, where with much ado he could get Provisions for them; the Enemy being still posted at Monguappe, and guarding all the Avenues into the Country; that he had fent feveral Spies a broad, to get Intelligence concerning the present posture of the Enemy. The 17th of February the Ship the Swan and the Yacht call'd Bullestrate were ordered to go out a Cruising; the 18th the Yacht the Flight, and the 20th the Ship Hollandia set Sail for the same purpose. The Ship the Overyssel was also ordered to go out, to serve for a Spie Ship on the Coast of Paraiba.

The 21st of February the Council received a Letter from Mr. de Linge, dated the 18th, in the Fort of St. Margaret, intimating that he had heard nothing . fince of the Enemy. Yet that he wish'd, the Forces he had fent to Rio Grande might be returned with all convenient speed, to make use of them for the de-

feace of his Forts, in case of an attack. 45. The 24th of February a Party under Command of Captain Killion Taylor and Captain Nicholas Nicholson, were fent dwith abroad towards the Island of the Barette faceefs, to get fome Prisoners, but they return'd the 20th to the Receif, having met with no body except with a Man, at a confiderable distance. Another Party which had taken their way towards Olinda and Bracco de St. Jago, but with the same success, the Enemy hawing only shown himself at a distance, they were returning to the Fort Bruin. The 27th of February the Enemy apbear'd with a strong body in the Salinas, but being faluted by some Cannon-shot from the Fort Brun, retired without

attempting any thing.

In the mean while, according to Mr. wifrom Linge's Letter, from the 2d of March, three Barks with Soldiers were arrived in Parasba from Rio Grande, so that the rest under the Command of Mr. Bas being 500 in number might be hourly expected at the Receif. He further advised, that he had seen no Enemy of late, but being informed that a confiderable body lay encamp'd in a Valley near the Village of Magarebbe, he had order'd thither 120 Soldiers, and 100 Brafilians, to beat up their Quarters, and to get some Prisoners. In effect the 4th of March, he, with his Troops confisting in 500 Men, arrived from Rio Grande at the Receif, and the 5th of March gave the Council an account of his Expedition.

"UPTA"

The 9th of March in the Night, the traushes. Enemy appear'd in three bodies near the Fort Prince William, and gave us several Volleys of small Shot, but being anfwered with our Cannon retired immediately. The same Day a Party of so Men were fent abroad under Lieutenant Mos, to get Intelligence; being met by two Companies of the Enemy, a sharp Encounter ensued, our Forces retiring without any confiderable loss, under the Fort Wardenburgh, and the Enemy retreated at the discharge of fome of our Cannon. By Letters from Mr. Linge, dated the 8th of March at Fort St. Margaret in Paraiba, the Council received the unwelcome News that the Enemy in Rio Grande had by a pretended flight drawn the 5th of March Lieutenant John de Wael with 48 Soldiers, who were too eager in the pursuit of them, into an Ambush, where they had kill'd 30 of them, tho', according to

present at the Engagement, not without considerable loss also on their side; 164 Kameron, Andrew Vidal and some other Portuguele Officers of note were also present. About the same time 15 Brafilians surprised five Men, six Women and eight Children, in an Entrenchment feven Leagues above Ignaracu, call'd Рарски.

In the mean while the Tapovers, who according to their custom, come once a Year, about Midsummer, from among the Mountains, some hundreds strong into the Captainship of Rio Grande, were, after they had carried away all the Horses and Mares they could light on, retired to the Hills; a thing very fortunate for us, for without it our Garrisons would not have been able to sublist there. Provisions growing every day scarcer in the Receif, it was agreed the oth of March by the Council, to fend the Biufilians raised in Rio Grande with a Company of Fusileers to Itamarika, to ease our Magazines of that burthen, whilst they might provide themselves with Farinha Roots in that Island. Much about the same time the two Majors Bayert and Piftoor, appear'd before the Council, intimating, that, being informed that the Citizens began to Murmur at their staying at home, pretending that they were sufficient to guard the Forts, for which purpose, as it was reported Admiral Lichthart had offered propositi-300 Men, they were come on purpose ons about to offer their Service, and were ready the taken to take the Field with those few Forces Field. they had left in the Garrisons; tho' they at the same time protested, that they were of the same opinion, which had been approved some days before, to wit, That this undertaking, by reason of their small number, would be full of

could spare no Men for any other Service. The Night before, the 13th of March, the Enemy appear'd both on the other fide of the River and the Dike leading to the Fort Bruin, discharging their Musquets and Blunderbusses at our Centinels, but upon the first salute from the Cannon of the Fort retired. fame they did near the Fort of Affagados. The same Evening betwixt Nine and Ten a Clock they made an attack upon the report of some Deserters that were the Wooden Fort, built betwixt the

danger, and yet not answer the end,

of bringing Provisions into the Receif.

Admiral Lichthart being thereupon ask'd

whether he had made any fuch offer, he de-

clared, not to have spoken any thing like

it, his Ships being fo ill mann'd, that he

Anados and the Quinquangular Fort, for the defence of the Plain, which they atinued till one a Clock, cutting down iome Palisado's, and bringing great store of dry Reeds, in order to fet it on fire, out in vain, being forced to retreat with the loss of some of their Men; On our lide two were kill'd, and four or five wounded, mong the lift was Lientenant Calpar bera and von Gool, who received two dankstous wounds. The next Morning the broken Palifado's were repared at 1 mether row ordered to be fet be, . . the first, and footangles to be like a twist both. The 17th of March: Bark called the Parabacoming from Siara brought Advice, that the B indians were gone from Siara to Kommefi, having ichifed to return to Rio Grande, for fear, they should be call'd to a fevere account there for the Murther of feveral Inhabitants, committed by them before.

By the fame Bark, Mr. Lage fent Advice from the 14th of March, That the Enemy had appeared of late in a confiderable Body near the Northern Fort, but was retired now, but whether to Rio Grande or St. Andre, he was not able to tell. Trey had spoil'd all the Farinba-Root Fields in the Aldeas Magarebbe, and thereabouts: fo that the Brasilians, being for the tuture to be furnished with Provinors out of the Magazines, he defired a a Sapple of Wine and Oil: Immediately Advice hereof was fent to Doren one Commarder in Chief of Itamarika, and fome Arthur mon, belides 1000 Gilders in 1 cad Marke The fame Sum was tranfmother to be Lange in Paraiba, and a Bard and formula, a Pipe of Wine, a E flica! with Oil, and another fill'd with invibrate, belides good Store of Arragantion. He was also ordered to Heafiliants back to Pio Grande for Determine that Captamble, and to get Interpretace, whether the Enemy had direded his march thither in order to oppole has Deligus.

In the mean while Admiral Liebthart (fi mant to his Letter of the 21st of Maken to the Conneil) had Embark'd tome Soldiers and Brafil ans in Itan.arika, and taking his Courie to the North En-Good fire trance of the River, was got up as far as

the life of Lapeleo, from whence they had brought back a great quantity of less hete Farmba-Roots, for the use of the Brasi-Itamorikas hans in hamacika, and of the Magazines there.

1:00

The 30th of March it was resolved, with the Approbation of Admiral Lichthart, to fend the following Ships a Grufing before the Babia; the Uliffingen, the 1645 Ter Veer, and the Yachts, the Greybound, the Heemstede, Sprew, and Bullestrate; Ships fem And on the 6th of April, the Swan, the out a Crui-Zouteland, the Flight, and the Yacht the fing. Lichthart, were ordered to go a Cruising before the Cape of St. Auftin, and fet full the 10th of April accordingly.

The 31 st Letters were brought to the Council, dated the 25th of March in Rio Grande, intimating, That Paulo de Kunha and Kameran, were entred Kunha with 800 Men, among whom were 400 Musqueteers, to carry away the Catle from thence to Para.ba.

But, according to Colonel Garsman's Newsfron Letters to the Council, upon his arrival, Garlinan which was the 4th of April, the Enemy were already retired out of Rio Grande, without undertaking any thing against our People, who confifting only in 400 Soldiers and 300 Brafilians lay encamp'd near the House of John Lestan, yet they carried of some Cattle.

About the same time they received Letters from Mr. Linge, That the Enemy had made feveral false Alarms near the Forts, without attempting any thing. And in effect in June, they did not ap-

pear any more thereabouts.

In the year 1646, the 5th of April in the Night, Jacob Rabbi was at the In- 1 64 fligation of Licutenant Colonel Garsman, Rabbi near Potofi, about three Leagues distant treachefrom the Castle of the same Name, villai- roufly nously shot with two Bullets, as he was killed. going home from one John Miller's House, where he had been entertained that Evening in Company with Colonel Garsman. Rabbi had a confiderable time before (as he had declared to his Friends) fufpected the treachery of Garsman, and was for that reason just upon his departure out of R.o Grande, in order to shelter himself among the Tapoyars. Council referted this Villainy to the highest acgree, since, considering that this Jacob Rabbi was in great Esteem among the Tapoyars, and his Wife a Brasilian, it was to be feared, that this would exafperate both the Tapoyars and Brasilians against us. So that Garsman returning the 19th of March to the Recesf, after he had given an Account of his Expedition to the Council, was by their particular Order, the 24th of March, taken into Custody, and fent on Board the Holland:a, Major Bayert being ordered in the mean time to supply his Place. This Jacob Rabbi a Native of Germany, had been employed by Authority of the States

Gene-

General, his Highness the Prince of O-16. range, and the Company, to engage and keep the Tapoyars in the Interest of our Government; in which Commission he had acquitted himself so well, that he brought these Tapoyars several times, out of the Mountains (their Habitations) to our Assistance. His dwelling Place was in the Fort Keulen in Rio Grande, where he had Married a Brasilian Woman. Gaspar Honyhouse, Commander of the Brasilians in Itamarika being slain in the Last Engagement in that Island, Mr. Vincent van Drillenbergh, was, at their Requet, constituted their Commander by

The 17th of April, some Papers were delivered to the Council, which had been dispersed by the Enemy, to debauch our Soldiery; in return of which, they fent abroad their Summons, upbraiding such of their Subjects as were in the Enemy's Service, with Treachery, and exhorting them to return to their Duty. It was also agreed to publish a Copy of a Letter delivered by the Populatese Ambassador at the Hague to the States General from the King his Master; with the Answer of the States to the faid Letter: For fince the King of Portugal in this Letter did disown the War, and the Proceedings of Antonio Telles da Sylva, and his fending of his Troops into the Dutch Brafil, they did not question but by this means to open the Eyes of the Portuguese Inhabitants, not to flatter themselves with vain hopes of Affiftance from Portugal; besides, that we were in hopes thereby to fow the Seeds of Mistrust betwixt them and the Portuguese Commanders from the Bahia.

The 24th of April, two Portuguese Companies commanded by Captain Lawrence Karnero and Peter Kavalkanti, confifting of about 40 men each, marched from the Vargea and the City of Olinda to Ignarasu. They were headed by Vidal and Hoogstrate in Person, who having got Intelligence, that Admiral Lichthart and John Nicholson were gone to Itamarika, to get some Farinha-Roots. Mars The 25th of April, as they were marchg from Ignarasu, a certain Ge man Chiirgeon, named Christopher Mars, who as formerly taken Prisoner by them, ippening to stay somewhat behind, whilst : was Piffing, was furprized by one of ir Parties near Tapasino. llpon Exnination by Mr. Walbeck, he declared, hat not long ago there were nine Cominies of the Enemies Forces quartered

the Baretta, the City of Ohnda, and in

Vol. II.

the Mills of Bierboom and Boro; each ~~ Company confisting of betwire 40 and 1646.

50 Men. That there were five Companies more, much of the same strength, Hu Depoposted in the Salinas, and Henry Dias with 200 Mulats and Negroes in Gaspar Cox's House, but they had then no Forces in the Vargea.

That after Nicholas Nicholson was come over to us with his Troops, Marin Soares Moreno had caused 260 Dutch, both Soldiers and Inhabitants, (among whom were fix Women and two Children) to be kill'd by a Company of the Country Militia, in the Woods of Tabatinga, betwixt S.bero and Deriba, in their way to the Bahia, befides those kill'd by his Order in other Places, amounting in all to

By this time there began to be great scarcity of Meat in the Rece f, notwithstanding which, the Garrisons in the Outworks, as well as the Brafilians in Itamarika, with their Wives and Children, were to be supplied from thence; and the Farinha-Roots being either all taken up before by our own People, or else destroyed by the Enemy, in the Ifland Itamarika: To supply this pressing necessity, it was resolved by the Great Council, to fend a Detachement of 400

Men in Barks to St. Lawrence de Praja or The Dutch Tujukapa, to fetch Mandinka, or Farinha-go out for Roots from thence. This Detachment fome Farinha was composed out of these following without Troops.

Out of Captain Nicholas Nicholson's Company 9 men.

From the Quinquangular Fort 25. From the Affagados 25.

Out of the Company of Captain William Lambartz 50.

Volunteers from Itamarika 30.

Brafiliars 150.

The 29th of Ard the Council was by Letters from Itamarika, advertised, That our Forces being fent abroad to fetch some Farinha, had chased the Enemy out of two or three Entreuchments; but they retiring into another, furrounded with a deep Ditch, they were there also with more Courage than Conduct attackt by our Troops, being forced to retire with the loss of 16 kill'd and 26 wounded, among whom was Captain William Lambariz: The Enemy had likewise not a few kill'd on their side. Mr. Doren.on', Commander in Chief of Itamarika, therefore deliring to be supplied with Meal, his Magazines being quite Exhausted, the Council sent thither the first of May, 20 Barrels with Meal,

two with Oatmeal, two with dry Pease, 6 4 6. besides a Pipe of Wine and Brandy, and 1000 Gilders in Money, for the use of

the Brasilians.

The 3d of May, the Council received Advice by a Letter dated the 2d of May from Mr. Dortmont, That the Enemy had carried away ten Negroes, tour belonging to the Company, the rest to one Mr. See lin, and four other Men from hamarika; and that the Brafil ans there had been fo tai Debauched by their Intreagues, that they is ned into a Wood, and being twice Summon'd to rejoyn our Troops had refused so to do. That at last, Mr. Apprefices, (Minister of the Bra-Many of fil airs) having been fent to reduce them to their Duty, either by Perswasions or Threats, his Arguments were fo prevailing, that they return'd quietly, alledging for their Evense, That they were forced to fly thither for want of Subfistance. Hereupon Dortmont desired fresh Supplies for his Magazines, that a Person of Authority might be fent thither, and that another Company might be put in Place of that of Captain Vosterman, his men being ready to Revolt.

Mr. Buller ika.

Brafi

1 105 20-

1.11.1.

To remove all these Obstacles, it was Arate fent resolved immediately to dispatch thither to Itama- Mr. Bulleftrate, a Member of the Great Council, who was to agree with certain private Perfons, to provide our Garrifons with Fish, and to act in every thing there, as he should find it most expedient for the Service of the Company.

Accordingly Mr. Bullefrace fet fail the 4th of May, in the Yacht the Greybound, and arrived the fame day in the atternoon in hamarika; where having exccuted his Commission, he return'd the 10th of May to the Receif, and gave the following Account to the Council: That he had taken a view of the City of count of his Shoppe, and the Fort Orange, both which he had ordered to be fliengthened; as alfo, to fortifie the old Brick-House formerly the Stadthouse, with Pallisadoes against any sudden Attempt; That he having coal'd before him all the Commanders of the Biafilians, had reprefented to them that we were in daily expectation of a powerful Succour from Holland, exhorting them to remain stedfalt in their Duty, and to keep their Soldiers under the best Discipline they could; He had also presented their Commander with Cloth for a Suit of Cloths, and the rest with some Wine and Money, which they very thankfully accepted; He had En l'assant taken a view of the Plantations of Conradt Pauli, where he

had found about 160 Cocoe Trees cut o down by the Brasilians, being forced by 1 6 4 6, Famine to Feed upon the Fruit; the like they had done in feveral other Places; That he had endeavoured to treat with several private Persons, for a certain quantity of Fish to be delivered at the Receif; but could meet with none that would accept his Offers; they alledging that most of their Negroes being cither run away or taken by the Enemy, they did catch no more Fish, but what they could readily Sell in the Island, without the Charge of Salt and Transportation; That he had likewife proposed to the Commander in Chief of the B. afileand, to give them for the future Money instead of Meal; and that they were to be furnished with three Nets to catch Fish for their own use, that the Commander promised to propose it to the rest, and gave him some hopes, that they would accept of the faid Offer.

To Supply the present want of Provifions, which began to be scarcer and scarcer every day in Itamarika, Paraiba, Rio Grande, and the Receif; by reason that the expected Supplies from Holland were not as yet arrived, and we were closely block'd up by Land; it was thought fit to give all imaginable Encouragement to the Fishing Trade; for which purpose the two Members of the Great Council, Mr. Hamel and Mr. Bas, ordered the 7th of May, to Buy up as Fishery i much Yain as possible could be got to couragea make Fishing Netts of, which afterwards

flood us in good flead.

A certain lortiguese, who had committed Manslaughter in Angola, and was fled from thence to the Receif, having ac- John Vi cused John Vicina d'Alicgons, he was by Or- ra a cuij der from the Council taken into Custody. of Ireal

This Fortuguese declared, That the faid Viera had delivered to him a certain piece of Parchment, written in Characters, and a Box, wherein were feveral other Papers, in order to carry them to the Enemy, which Pachment and Box he produced in the presence of the Members of the Council. John Vierra denying the matter, was put to the Rack, but continued resolute in his denial; till at last, the Key of these Characters being found among his Papers, and a certai Jew having Uncyphered these Letters it appear'd, That he had given an Ac count of the whole posture of our As fairs, to the Enemy, with Directions how to make themselves Masters of the Recest so that finding himself discovered, h confest that he had written and deli

An Ac-Proceedmes.

vered these cyphered Papers to the Por-4 6. tuguese, and was executed the 29th of May.

The Magazines being by this time almost exhausted, there being scarce Provisions left for a few Weeks, it was proposed by the Council to the Majors, Beyert and Piftoor, that confidering it was not adviseable to exasperate the Soldiery at this juncture, by retrench-'s con- ing their allowance of Bread, and other nothe eatables, whether instead of a pound of bunce hight her might not be prevailed upon to take Six-pence, by this means to preferve that finall flore of Flesh they had left, which these two Majors undertook to propose to the soldiers, not without hopes of fucceeding in their project, And, that no body might be excepted from bearing his there in the publick Calamity, it was ordered that the Loaves which used before to weigh a pound and half, should be reduced to one pound weight, and that each Citizen and others depending on the Company, nay the Members of the Great Council themselves, should have an allowance only of two I oaves per Week; the fame was to be given to all Seamen, Captains, Lieutenants and Enligns; but the rest, from the Serjeant to the common Soldier should have three pounds of Bread allow'd them per Week.

Mr. Linge advised from the 1st of May, out of Paraiba, that the Enemy had not attempted any thing against the Forts, and that a Party of Brafilian, was gone abroad towards Tapoa, in hopes to take some Prisoners. Much about the fame time the Council received Advice that Colonel Gas for an without O1ders from the Council, had endeavoured by fome Presents, to draw the Tapoyers into Fro Grande, under pretence of keeping them at hand, to enter into a Confederacy with the new Members of the Great Council, that were expected from Holland. The Council being not a little furprised at this undertaking, fince by the coming of the Tapoyers into that Captainship, they should be disappointcd of a confiderable part of those Supplies they received from thence; they ient word to Rudolph Barro to leave no - Stone unturned to draw the Tapoyers by fair means back to their Habitations, but that if they would fend some of their Commanders to the Recerf, all ımaginable satisfaction should be given them concerning the Murther of Jacob Rabb:; and the more to engage Barro to do his utmost, a present of Wine, Brandy

and some Toys was ordered to be fent him. For as the cafe then flood, it was 1,646 absolutely necessary for us to remain Masters of Rio Grande, till the arrival The confeof the Succours from Holland; the vast Rio Gren. numbers of Brafilians, that were fled to de to the hamar ka, having confumed all forts of Doch. Provisions there to that degree, that that Island could not only not fend any Supplies to the Receif, but most of the Women and Children of the Brafinans must be supplied out of the Magazines there; fo that Ro Grande was the only place left from whence they received a confiderable quantity of Jarinha and Cattle, which in fone measure abated the scarcity of Provisions in the Rece.f. and by the prudent Conduct of the Council, was the chief means that the place continued in tolerable good Health till the arrival of the Succours, which without it, it would in all humane probability have been impossible to be done; And no question but this Captainship might for a confiderable time after, have furnished the Garrisons to the South with necessaries, had it not been for the following accident.

The expected Succours from Holland being detained by the Winter Scason and contrary Winds, the Brafilians of Gojana, who with their Wives and Children, had sheltred themselves in Itamarika; were reduced to the greatest extremity for want of Food; for, after they had confumed all what the Island could afford for their Subliftance, and all the Avenues by Land being block'd up by the Enemy, they had no other Supplies but what they received from our Magazines: These being now exhausted to fuch a degree, that each Citizen had but one pound of Bread allowed him per Weck (which however at that rate would not hold out above tourteen Days longer) the Council was under an absolute necessity, to have it proposed to the Brafilians, to retire with their Wives and Children (in all about 1200) to Rio Grande, where they might fublish some time upon what the Country afforded. Accordingly they writ to Mr. Doctmend the 1st of May, and fent M1. Walbeck thither in Person, to perfwade the R. afthans to fend at least 500 Women and Children, with a certain number of their Men, to Siara and Rio Grande; there being at that time in all near 1500 Brafilians, Men, Women and Children in that Island; among whom were only 500 fit to bear Arms, under the Command of Caspar Honyhouse, who

# Mr. John Nieuhoff's Voyages

had each scarce a pound of Bread allow'd 1646. them per Week.

Provisions as I told you before grow-Con fultaing daily scarcer and scarcer, by reason 110HS 4the Succours from Holland was detained, if femily of beyond all expectation, by contrary 1 Provisions. Winds; a General Council was call'd, where the three Numbers of the Great Council Mr. Hamel, Mr. B. llestrate and Mr. Bas, being present, as likewise Admiral Lichthart and the two Majors Beyert and Piftoor, the following Points

were taken into debate.

First of all, the sending of the Brafilian from Itamarika to Rio Grande being look'd upon as unavoidable, immediate Orders were given to get the necessary Transport Vessels ready for that purpose. It was also taken into consideration, whether it were not feisible to gather a sufficient Force out of the Forts, who in conjunction, with the Brafilians, might attack ionic place or other, from whence to provide our felves with Farinha; but to this it was objected by the Majors Beyers and P. floor, that the Garrisons of the Forts could not be weaked by any Deteachment, without in ing a great hazard; befides that it was a hard matter to pitch upon any place, where there was any store of Farma, the Enemy having either confumed, spoiled or carried it away before; so that we must expose our Men to an apparent danger, without a fure prospect of Interest; for, supposing we should be successful, the quantity that might be got, would not be sufficient to maintain our Garrisons for any confiderable time. It was however agreed to take an exact Account of all the Garrisons, to see whether upon an occasion fomething might be undertaken for the Service of the State. Accordingly these two Majors Beyers and Pistoor having presented a List of these Forces the next Day to the Council, it was concluded that no Troops could be spared out of the Forts, except it were out of the Affagados, but they were but few in nomber. At the same time it was resolved to send Captain Niger with his Company of Brasilians to Rio Grande, and the Omlandia and Greyhound Yacht were ordered forthwith to Sail to Itaz marika, to Transport the Brasilians to Rio Grande.

Further The 30th of May the Council, the debises a-Admiral, and two Majors entred into a second debate, whether it were possible to attack the Enemy, and in what place: Against which it was alledged, that their chiefest Force was at present in the

Vargea; but supposing, it was not, no. Farinha was to be got there, because 1645 they were supplied with it themselves from far distant places. That the Farinha Fields nearest to the Receif were about St. Lawrence, at least five Leagues from thence; that the nearest Farinha Fields to the South were about St. Antomo and Moribeka, where by reason of the Strength of the Enemy, and the great distance from us, there was no probability of encompassing our delign; and that the Farinha Fields to the North were likewise at such a distance som the Sea-fide, as could not in any likelyhood answer our expectation. It was tarther taken into confideration, whether some Forces might not be spared in Itamarika, but it was carried in the Negative, because since the Brasilians were ready to depart for Rio Grande, it was not adviseable to expose the rest of our Troops there to a hazard. After ferious deliberation, what Forces possibly could be raifed out of the Forts, (their places being in the meanwhile to be supplied by the Inhabitants) it was found that the Affagado could furnish about 70 or 80 Men, the Quinquangular Fort, and Maurice's Town the same number, and that of St. Antonio Vaez. about 50. But, considering that the City Militia of the Recest consisted only of 6 Companies, of 70, or at the most 80 Men each, and that they were obliged to be upon the guard every Night there (the place being without a Garrison) if a confiderable number of them should be imployed in the Forts, this must needs expose the Capital Place, which the Enemy chiefly aimed at, to an imminent danger. The Seamen being not above 250 in all could likewise not be employed in that Service, unless we could leave our Ships quite unman'd and useless. So that after many arguments on both sides, it was agreed to choose the fecurest way, and according to the orders of the Council of XIX.in Holland, to expect the succours from thence with patience, and in the mean while to provide for the security of our Forts.

The same Day the Council received Letters from Mr. Walbeck, that some of the Brasilians of Itamarika had deserted, a rumour being spread among them, that we intended to leave them to the mercy of the Portugueses, which had put . all the rest into a great consternation, but that Mr. Dortmund had convinced them to the contrary. Mr. Walbeck and Dortmand had in the mean while repre-

fented

bout the attacking of the Enemy.

fented to the Brasilians, that they being 46. many in number, and confequently very ill provided for at this juncture, whether it were not best, for them, to go for fome time to Rio Grande. They were at first averse to his Proposals, for fear of being deserted by us, nevertheless the Brafi- urgent necessity of providing for their re- fustenance, and to shew their compliance with the Governments Orders, were fo Lave Itareconciled with them, as to refolve to go to Rio Grande, provided they might be furnished with convenient Transport-Ships, Provisions and some Ammunition for their Defence, and 50 Men of regular Troops. Mr. Dortmund having again follicited for Provisions, some were fent (sufficient for 14 Days) immediately, with some Gunpowder, Bullets and other Ammunition.

> Accordingly above 1200 Brafilians. most Women and Children, whose Husbands and Fathers had been flain in our Service, embark'd a board the Omlandia and some Yachts a pound of Salt-Codfish being allow'd to each for the whole Voyage, without Bread. At their arrival in 370 Grande they were so emaciated by Famine, that they appear'd more like dead Carcasses, than living bodies, and laid hold of every thing they could meet with, to fatisfie their greedy Stomachs, fo that in a little time they confumed all the Farinha that was left there.

> Mr. Linge by his Letters from the 25th of June fent advice to the Council. that there appear'd no Enemy at that time in Paraiba, but that Ten Tapoyers, Vassals of King John Duny, being come into Rio Grande, had shewn themselves extreamly distaissied at the Murther of Jacob Rabbis whereupon it was resolved to Reconcile that King to our Interest by the following presents:

200 Gilders in ready Money.

1000 Ells of Ofnabrugh Linen Cloath. 100 Gallons of Spanish Wine.

Two Casks of Brandy.

40 Gallons of Oil, and a Barrel with powdered Beef.

The Brasilians in Garrison in the Fort, the Bruin, the Quinquangular and Brasi- some other Forts, being dissatisfied at This proposition being approved of by Months last past, petitioned the Council new the tath of Tune to be Council their being detained there for Eight Rio Grande.

The Opinion of the two Majors being ask'd thereupon, they advised, that considering they did no extraordinary Service there, they might well be spared; V-01. II.

so that it was resolved the 14th of June - N in Council, to pay them their Arrears, 1646 and to fend them back to Paraiba and Rio Grande, to Inhabit their Villages as before.

In the Quinquangular Fort the Company of Immanuel Barros was order'd to keep guard, instead of the Brasilians, who were commanded to depart the 20th of June. The 11, 12, 13th and 14th of Jine, the Enemy Shot in the Night time very fiercely against the Fort de Affagados, a redoubt call d Kirk and the House Roavista.

The 15th of June it was proposed to the Council by Admiral Lichthart, and the two Majors, Bayert and Peffoor, to beat up the Enemies Quarters in the House of Immanuel Kavalkanu, and in the Barctta, with the following Troops.

The Company of Captain Killian Tay-

lor, 40 Men.
The Company of Captain Nicholas Nicholfon, of 70 Men, which were to be joined by Captain de Niger with Thirty Men out of the Fort Frederick, with Lieutenant Mor, from the Fort Ernestus with 10 Men, and Lieutenant Katnar from the Fort Prince William with 20 Men.

In all 200 Men.

About a 100 Voluntiers were fupposed to be raised from among the Citizens, under the Colonel Walbeck, and A Projet Immaniel Baros with his Negro's, con-to best u fifting in 50 Men, these joined with the the Encother 200, would make up a body of mies yuar 350 Men, to be commanded in chief by Major Piftoor; and to be conducted by Sea by Admiral Lubthart to their landing place; viz. the Regular Troops to the South of the Baretta, and the Negro's upon the Island on the North side, from whence they might break thro' the Marshes to the Affagados, and so further to the House cross the River, where they were to make a false attack, whilst the Troops landed at the Baretta allaulted them from before; the Admiral with his Transport Vessels to lay ready all this while to receive them, and to fecure their retreat upon all occasions. the Council, partly to animate our Soldiers, partly to get at least some Provisions for the Sick, it was refolved to be put in Execution the next Day, but the Wind proving contrary, and afterwards the Tides being unfeafonable for the convenient landing of our Men, this project was laid aside, is laid if especially

. recent.

especially when instead of 100 Volun-1646. tiers, scarce 25 offered themselves for this Service, notwithstanding the Council gave them all imaginable encouragement, by promising them to receive the same treatment as the other Servants of the Company had, in case they should be wounded or come to fome other mif-

> In the mean while the Enemy having been informed by fome of our Deferters. that by the departure of the Brafilians from Itamiika, the Garrisons there were much weakned, they thought fit to lay hold of this opportunity, to land fuch a Force there, as should be beyoud our power to drive from thence. The 15th of June, with the break of Day they surprised our Spie Ship there, call'd the Spiere, with several Barks and Boats at the Entrance call'd Paffoos, (Markers) they got three Prisoners, the rest escaping with the loss of two of their Comrades kill'd.

The Ship before Tapasima was set on Fire by our own People, leaving the Galeot, that lay hard by to the Enemy, after they had taken out all her Men, who went aboard the Yacht call'd The Portu- the Golden Doe, lying before the North Entrance. They landed with about landon I- 2000 Men in Chaloops and other Trantamarika. sport Vessels, and Andrew Vidal and John Ferdinand Vieira writ the same

Night the following Letter to Mr. Doilmund Commander in chief of Itamarika, which they fent by a Boy they had taken

#### Their Letter to Mr. Dortmund.

Most Honourable and most Brave;

TOV are doubtless not unacquainted with the Refolution of the Inhabitants of this Country to retreive their former Liberty; to effect which they neither want power nor any other means; but their chief a.m. being to encompass their design, without Fffusion of Blood, we thought fit to let you know that we are ready to attack you in this Island with all our Forces, unless you will prevent it by a Treaty. For being sensible that you are pass'd all hopes of Relief, we were w lling to advise you, to treat with us, according to the custom of War, used in Such cases; that, in case bereaster things Should fall out contrary to your expellation by the fury of the conquering Sword, you may not lay the fault thereof at our Doors; For which reason it is, that we offer to you and the rest of the Commanders there, all their Arrears due to them from the Company.

Whereupon we expelt your Answer to } Morrow.

From our Head Quarter, June 15. 1646.

> Andrew Vidal de Negreiros. John Ferdinand Vierra.

The 17th of June the Council received Advice from Mr. Dortmund of their Landing, defiring prompt Succours without which he would not be in condition to maintain the Island against them. It was therefore taken into debate, whether it were possible for us to bring together fuch a Force, as without much hazard might be able to force the Enemy from thence, but 'twas carried in

the Negative.

For it was alledged, that without manifest danger net above 200 Soldiers Confultat

could be taken out of the Forts of the ons about Receif, which number was not sufficient of Itama to attack the Enemy, who had already rika. entrench'd himself thei, with hopes of fuccess: And, considering that these Forces must be transported thither by Sea, we wanted Ships (there being at that time not above two Barks at the Receif) both to Convoy them thither, and to cut off the communication with the Continent, to the Enemy. Besides, that at least 14 Days Provisions were required for this Expedition, in case the Enemy should stand his ground, which at this juncture was not to be done, unless we would leave the Magazines of the Receif quite empty; There being then no possibility of attempting its relief, the next thing under confideration was whether the Entrenchments on the Hill might be defended or not? Against whether the maintaining of it was objected; That the Furtor without fresh supplies of Provisions this the Hill Fort could not hold out a Week, espe-was to he cially fince the Enemy by cutting off the defended Pipes of the Spring, that furnished them with fresh Water, would soon put them under a necessity of coming to Surrender; when it was evident, that they might post themselves betwixt the Fort of Orange and this Hill, and conse-

plies from thence. Besides that the Hill being of a considerable compass, was the more difficult to be mention'd by our Forces, the Fort it self being irregular and but ilightly fortified, on that side especially where the old Church-Wall, making up part of the Courtain, would not be proof

quently prevent their receiving any sup-

against .

against the Enemies Cannon, and confequently expose the whole Fort, with the Garrison, to the Mercy of the Enemy: . So that it being beyond all dispute in the Enemies Power to cut off all Communication with the Fort Orange, it was unanimously resolved and ordered, to leave the faid Entrenchments, and to retire with the Garrison, and what Provisions and Ammunition they had, into the Fort Orange, before their Retreat was stopt by the Enemies Troops; it being past all doubt, that in case they could maintain themselves in that Fort. they could at all times, if they were Masters of the Field, recover the Hill, and the whole Island.

The Council were the more forward

in coming to this Refolution, because they had received certain Information, e Gun- that the Enemy, who knew the Imporsturn'd tance of the Fort Osange, had gain'd iters. fome of the Gunners and Volunteers of the Fort by Presents, who had engaged to allign them a place where it was called to be attack'd, whereabouts they were to Change the Caunca with Gunpowder only, to facilitate ther attack: Two of the Gunners were King'd the 23d of June for this Treachery, the rest made their escape to the Enemy. For the better preservation therefore of this Fort, our People left the Entrenchments upon the Hill the 21st of June, where the Enemy posted a strong Body of their Troops immediately after. The Council likewise ordered the Yacht the Heenstede to Cruise in Conjunction with the Golden Doe, before the North Entrance of the Island, to keep open free Communication for us with our Garrison, and to prevent the Enemy from receiving any Succoms that way; and at the same time fome Provisions were fent thither for the use of the Garrison.

zed.

But whilst things were thus transacting with various Fortune, the' for the most part to our Disadvantage, and the fo long expected Succours from Holland not arriving, the want of Necessaries encreased more and more every day in the Rece.f, to fuch a degree, that whatever was found fit for Sustenance, either in the publick Magazines, or with private Persons, was apply'd to the common Use; which however amounting to no more than one Pound of Bread a Week for each fingle Person, many died for Hunger; their Legs beginning to swell first, which was the fore-runner of certain Death: Cats and Dogs, of which we had great quantities, were look'd up-

on as Dainties at that time; and you -\_\_\_ might fee the Negroes digging the half- 164 rotten Bones of Dead Horses out of the Ground, and to Gnaw them with incredible Eagerness; Neither was the month want of fresh Water less insupportable, by reason of the heat of the Climate, and the constant use of Salt-Meats, all Springs that were dug, being brackish. The poor Slaves, who had the leaft that e of what was left, look'd fo gashly and wild with their Eyes and Jaws fork, et appear'd terrible to the most undannted of Men. At last (notwithstanding all the care taken by the Council) things came to that pass, that the Allowance of one Pound of Bread per Week was fain to be taken away from the Inhabitants, and allotted the Soldiers; who, by the Earnements of the Portuguese beginning to Defert apace, had two Pound of Breat allow'd them, as long as there was any left; But when a'l was speat, and no remedy was to be found against this lingting Evil, it was proposed by the Council, and unanimously resilved, rather to Die bravely, than to Starve, and to Fight their way through the Enemy. The Soldiers were to lead the Van, the Women, Children, fick and other urable People to keep in the middle, and the Members of the Great Council, with the Inhabitants to defend the Rear: The Tems were above all the rest in a desperate Condition, and therefore refolved rather to Die with Sword in Hand, than be Burnt alive, which is their Doom in Portugal.

But when we were just reduced to the last Gasp, all Horses, Cats, Dogs, and Rats being confumed, and a few Quarterns of Farinha fold at the Rate of betwixt 80 or 90 Gilders per Quartern, which however could not fuffice f r above two days longer, on the 22d of June, (a day never to be forgotten) we faw two Vessels with Datch Colours making all the Sail they could towards the Recat: They had no fooner cast their Anchors, and giving us the fignal by the Discharge of three Guns each, that they came from Holland; but you might have read in all our Faces the fudden Joy we conceived at this Relief in our last Ex-tremity: There was no body that could stand upon his Legs for want of Bread, relieved, but did crawl to the Harbour, where you might hear the crys of the People weeping for Joy at a great distance. These two Ships, calld the Falcon and Elizabeth, were freighted for the Chamber of Amsterdam, and had left the

Titel the 26th of April; they brought us 4 6. the welcome News, that we might hourv ly expect the whole Convoy. The Captain of the Elizabeth told me himself. that having a very fair Wind one day, he faid to his Crew, I am fure they are in great I xti emity at the Receif, God fend is tair Wind and Weather to relieve them intime, which happened thus accordingly. The Captains were each presented with a Golden Medal, with the following Inscription, The Falcon and Elizabeth did relieve the Receif.

le. Bas iai ika.

The 23d of June, Mr. Bas, a Memnitralia- ber of the Council was fent to Itamarika, to affift in the Defence of the Fort; by his Letters of the 28th he advised, That the Enemy continued still in his Post on the Hill, and that he had fent abroad, fome Spies to get Intelligence. The 7th of July, the faid Mi Bar return'd to the Receif with the Companies commanded by Captain Blemcock and Cuncad Held, leaving the two Companies of Remard Sikkema and Dignus Bysterman there in Garrison. The Enemy had some days before, after having blown up the Fort on the Hill, and fet fire to their Camp, left the Island, carrying along with them ail the Cannon, and among them two Brass ones. For, when they saw that we were reinforced with feveral Ships from Holland, they did not think fit to abide there, till we should stop their Passage back by our Vessels; Neither were they insensible, that without being Masters of the Fort Orange they could not promise themselves the possession of the Island, the South-Entrance being commanded by the faid Fort, and the North-Passage by our Yachts.

The 29th of June, the Council received Advice from our Head-quarter at the House of John Lestan, in Rio Grande, That two Sons of King John Dumy, with 23 Tapoyars, were fent thither by their Father, to assure our People of his good Inclination and Service; but they refused to come into the Fort Keulen, before they had spoken with Rudolph Baro, who had been fent for upon that Account. About this time feveral Merchants fet out some Privateers, but as this could not be done without great Charge, and there were but few Ships at Sea of the Portugueses, this turn'd to no great Account, and consequently continued not long. A very odd Accident happened to me much at the fame time: For, some of the Labourers, who were employed to unload a Vessel belonging to the Company, were got so Drunk, that

they had kill'd a Man, and hurt feveral others, by letting a Pipe of Wine fall 1646. upon them: I went thither to prevent upon any further disorder, but was no sooner An Accientred the Ship, when on a fudden I dent bapfound the Silver Galoons upon my Coat pens to the turn black, and my self bereaved of my Sight, which however I recovered by degrees in a few days after; the cause of which I attributed to the strong Exhalations of the Wine, that had been closed up for a considerable time before. Much about the same time a difference arose betwixt the Officers of the Army and the City Militia, about the Chief Command of the Head-Guard in the Receif, which the City Officers laid claim

But to return to our fo long expected Succours.

The reiterated Letters from the Council of the Dutch Brasil to the States General, and the Directors of our Company, wherein they presented their dangerous Condition to them, had had fuch an Influence upon the first, that they advised the Directors of the Company, to fend us a Reinforcemunt or 5 or 6000 Men, and a good Fleet; for which purpose they sent them 25 Companies of their regular Troops, and gave leave for the railing as many more, as in all mounted to 4000 Land Soldiers, besides Seamen and Volunteers.

This Fleet confifting of a good num-ber of brave Ships, was ready to fet quipt in fail in November 1645. but by reason of Holland a sudden and hard Frost were detained for th. in the Road of Vliessingen, till Februage uet of 1646. One Mr. Bankert Admiral of Zar Brasil. land, had the Chief Command of this Fleet, and at the same time the following five Gentlemen, who were appointed Members of the Great Council of the Dutch Brafil, and were to relieve the old ones, were fent to their Statiol: there; to wit, Walter Schonenburgh Profident, Michael Van Goch Pensionary of Vliessingen, Simon Van Beaumont Fiscal of the City of Dort, Henry Hacks, and Mr. Trowens, two great Merchants of Amsterdam, and Mr. Heremite a Lawyer of Dort, their Secretary. One Sigismund Shoppe, formerly under Count Maurice, and had Commanded the Land Forces of Dutch Brafil, was now fent in the Quality of Commander in Chief of these Forces; He was a ,\ most experienced Captain, and who always kept a strict Discipline among the

Never did any Fleet fent from Holland to Brasil meet with so many unfortunate Accidents

7/11/01ruguele least liamarika.

ccidents, as this, during the 6 months ey were at Sea. For within two days ter they had left the Dutch Coast, they were forced to cast Anchor in the Downs opposite to Newport, where they lost two of their Ships by stress of Weather. After a stay of three Days, the Winds being fomewhat allay'd, the Squadron under Mr. Van Goch, fet fail again, but was in two days after again forced into St. Helens in the Isle of Wight: Three days before their arrival, a rich Dutch Ship, valued at two Millions of Livers, then lately come from Brafil, was lost among the Rocks, so that of 300 Perfons, no more than 30 were saved. Here they were detained by foul Weather and contrary Winds seven Weeks, when another Dutch Ship coming from Brasil, chanced to cast Anchor near them, and told them, That their Countrymen in the Receif were drove to the last Extremity; nay, that perhaps the Place was surrendred by this time, they having no more than two Months Provifions left at the time of his departure. Hereupon it was resolved to continue their Voyage with the whole Fleet, not-withstanding the Winds were against them; but on the Coast near Portland were again overtaken by a violent Storm, in which they faw a Scotch Ship with 200 The Fleet under Persons in her perish. Mr. Van Goch came with much ado to an Anchor behind a Rock, where they staid till the fierceness of the Tempest being allay'd, they profecuted their Voyage. But scarce were they got through the Channel, just as they were entring the Spanish Sea, but a difference arise betwixt Ir. Van Goch and Mr. Beaumont about the Flag, the Zealanders (in a Council of War field for that purpose) allotting the precedency to Mr. Van Goch; whereas the Hollanders pretended the same to belong to Mr. Beakmont; But Mr. Van Goch peristing notwithstanding to Claim the Precedency, Mr. Beaumont gave a signal to the folland Ships to follow him, and so bid adieu to Mr. Van Goth, who after a troublesome and tedious Voyage, in which he loft many of his Men by ficknefs, and especially the Scurvy, he arrived the 14th of July with his Ship in the Road of the Receif, being the first of the five new Lords of the Council that arrived in the Dutch Brasil. The 31 st of July 1646, the Ship the Bluecock, and the Vieffingen of Zealand, came likewise to an Anchor there; in the first came Mr. Trowens, and in the last Colonel Siži∫mund Sboppe. Vol. II.

The 6th of August the said Colonel gave an Account to the Members of the 1646 Council, how pursuant to their Orders. he was advanced with 450 Men as far as the Fort of Olinda, to discover the Countenance of the Enemy, and to take some Prisoners; That they had made a shew of attacking us, but after some slight Skirmishes retired, and with a Body of their Troops marched through Bracer de St. Jago, to cut off our Retreat; but our People forced them to Retreat again with the loss of several of their Men killed and wounded; whereas, we had but one wounded during the whole Aaion, besides Colonel Shoppe himself. who received a flight hurt on his Leg.

The 8th of August, the Arms of Dort and in it Mr. Beaumont, arrived before the Recof, he was conducted the next day, with all imaginable Respect, to the

Receif.

The 12th late in the Evening Mr. Waliter Schonenbergh, President of the new Council, and Henry Hacks, arrived in a Bark from the North in the Receif, where More Ships they were received by all the Citizens arrive and Soldiers in Arms; They had been from Holforced to leave their Ship, call'd the Middleburgh, before the North-Entrance of Itamarika, as likewise the Dolphin, loaden with Provisions on Account of the Chamber of Zealand, both which were feen the 30th of July off of Olinda, but being forced back by contrary Winds, the last of these two did not come to an Anchor near the Receif till the 13th of August.

The same day a certain Negro Deserter coming to the Receif, brought Information, That the Enemy intended to erect a Fort on the Pass of the Baretta, to prevent our Excursions into the open Country; whereupon it was refolved, with unanimous Confent of Mr. Schonenbergh, and the whole Council, as likewise with the Approbation of Colonel Shoppe and Admiral Lichthart, to prevent the Enemies Delign, by fortifying and maintaining the faid Pass, as being the only Inlett we had left for the Recovery of the whole Dutch Brafil, all the other Passes being so strongly fortified by the Enemy, as not to be attempted without great hazard.

Accordingly the faid Colonel Shoppe Colonel march'd the same Night with all the Shoppe Forces he could bring together, order-marches to ing the Boats laden with Materials for theBaretta the intended Fortifications, to follow him the next Tide. The Colonel at his arrival, having foon Chafed the Enemy

K k

of from thence, and possess'd himself of the 6 4 6. House of the Baretta, fent for immediate Orders to the Council, to know, whether he should continue in that Post all Night; who, with the approbation of the new President Schonenbergh, disparcht Wir. Bullestrate thither immediately to take a view of it, and to make his Re-port accordingly; He returned the 14th against Night, and reported to the Council, that he had found the work there very far advanced already, and the Fortifications in fuch a flate, that they would foon be in a posture of Desence against any Attempts from the Enemy.

The 13th of August, Rudolph Baro, who, as we told you was sent with some Presents to John Dumy, King of the Tapoyars, brought a Letter from the faid King dated the first of July, to the Council: wherein he thankt them for their Presents; and desired they would be pleased to fend him some Iron Weapons, he being then in War with the Pojnku's, and that after he had humbled them, he would march with all his Forces against

the Portuguefes.

By this time, the President Walter Schonenburgh, and the other Members of the new Great Council, being arrived at the Receif, and having delivered their Commissions from their High and Mightinesses the States General, his Highness the Prince of Orange, and the Council of XIX. constituting them joynt Governours of the Dutch Brafil, the late Members of the faid Council, to wit, Hemy Hamel, Bullestrate, and I eter Bas, ordied all the Colleges, and other Persons of Note to be call'd together to be present at the Installment of the future Lords of the Council.

Accordingly all the Members of the Court of Justice, and of the Finances, next the Magistrates and Commissaries of Maurice's Town; then the Ministers and Church Council, together with the Sea and Land Officers, the Heads of the Jews, and last of all the Factors and Bookkeepers of the Company being assembled, Mr. Walbeck told them in the Name of the Council, That Mr. Henry Hamel, Mr. Bullestrate, and Peter Bas, had call'd them together, to lay down in their Presence, the Reins of the Government. 'and to Surrender the same to Mr. Scho-

The Mem-neiburgh, and the rest of the Lords, apbers of the pointed by their High and Mightinelles, OldCouncil by his Highness the Prince of Orange, surrender and the Council of XIX. for the Supream Management of the Government ment. of the Dutch Brafil; returning them their

hearty Thanks for the Services, each his respective Station, had done to the Government, and for their constant Fidelity during these intestine Commotions, exhorting them, to perfevere in the fame Obedience to the new Council; Whereupon the new President and other Members, having received the Congratulations first of the old Council, and then of the other Colleges, they from thence forward transacted every thing by their own Authority, tho' they in all Affairs of Moment took the Advice of the faid Members of the old Council, during their stay in Brafil; for which purpose they desired them the 20th of Angust, to appear every day at Eight a Clock at their Assembly, and to assist them with their Council for the better Management of the Affairs of the Company. The 19th of August Mr. Trowens died late at Night.

The 3d of September was appointed Agent for a General Muster of all the Forces Review in Garrison in the Forts that the Receif. Mr. Heck and Come ills 1 Znews, were ordered to take a Review of those in the Fort Ernestus, Wardinbergh and Boavista. Mr. Beaumont and arrencheron in A genthe Fort of Authory Vall and Maurice's Review Town, Mr. Van Goek, Famel, and Al-rich, at the Receif, and of the E belonging to the Artillery. Mr. Raetsfield and Cropranger at the Baretta and adjacent Quarters. Mr. Volbergen and Commiffary Stricht in the Forts William and Frederick Henry. Mr. Bullefir ate and de Witt in the Fort Bi uin and the Land and Sea Fort.

The 4th of September, a Pardon being agreed upon by joint Confent of thi old and new Council, the same was the 6th fent by a Drummer to the Entity, with a Letter to the Portuguese Commanders from the Bahia, deliring them

to withdraw their Forces.

The 10th of September being appointed for a Review of the Milhia of the Receif and Maurice's Town, 'the same was found to confift of 700 Mer; They received the Thanks of the old Council for their Faithful Services, during the present Intestine War, and then returned their Thanks to them for their prudent Management of the Government.

The 13th of September the Letters written by the Portuguese Colonel, the 11th of September, in Answer to ours of the 6th, were read in the Great Council, fill'd with untruths and Fictions of their own invention. They pretended that they were prevented by the Inhabitants from retiring to the Bahia,

belides

Velicia that they wanted Transport Velicia their Ships being detained in the Bay of Timendare, and that they must expect the Kings orders for that

purpose.

They took also a great deal of pains, to magnifie their Strength, The 12th and 13th of September several Letters were dispersed abroad by the Portugueses, directed to Justice Daems to Mathew Bek, Balthafar de Fonscea, Duarte Sarayva, Cuspur Francis da Costa, being all Merchants, and written by John Fernand Vierra: In which they again exaggerated their own number, and spoke very despifably of ours, threatning, that in case they should be forced to quit the Country, they would deftroy all with Fire and Sword, as they had already done in some parts of Paraiba. The Contents of these Letters were as follows.

### A Letter from Vicira to some Merchants in the Dutch Brasil.

Xperience has without question con-vinced you distinctly of the reasons than moved us to muletrake this War, and the successions have mut with it an ample seftimony, this Golf was pleafed to inflice shis punifomone woon our Enemies, for the many outrages committed against the Inbabitants of this Country. This is however in a great measure to be attributed to the general confent of the faid Inhabitants, who having now forced themselves from the tyranical Yoak of their Oppressors, ought to expect from me, who, tho unworthy, am appointed the chief manager of this War, ro be back'd in fo brave a resolution. I would not have you be Ignorant, of our swentth, which, in comparison of yours, exceed at what can be said upon that head; I will only sell you that as by our quitting the Captainships of Paruiba and Goiana, we are considerably encreased in number, so, it is most wy dem from thence, that the Inhastants drofe rather to lose their Possessions, han the stant and longer the Indignities hat the pure upon them, which was the rue confe of their Insurrection, and not as it is given one among you) because they rere unable to savissic their Creditors; besufe they left more than what would have aid their Debts. But if it should happen , that the suid Inhabitants should not be ble to maintain themselves by force of Irms, they are resolved to lay all the other eptainships desolate in the same manner.

Having therefore well weighed the reasons bitch seem to promise us a good issue of this Var, I shought my self obliged as a Friend,

to advise you that that Party which is back'd by Reason and the unanimous Resolution of so 1 6 4 6 many thousands; for, I can affure you, me are at least 14000 strong besides the Negro's and Tapoyers, differsed in several places from Rio Grande as far as Rio St. Francisco. Kameron commands 600 Musqueters, Henry Dias 800 Negro's, 200 Minos and 700 Tapoyers; and those of the Sertan are at our devotion, whenever we are pleased to call for them; but above all the rest we have God on our side. We are not ignorant, that before the arrival of Mr. Sigismund Shoppe your whole Force confisted not in above 600 Men, and thus the Succours come along with him does not umount to above 1200 more; most of which are Boys, and the rest either Dead or Sick. You fee I am well arquainted with your Strength, having kill'd and taken Prisoners about 2600 of your best Soldiers, and 900 Brafilians, besider the wounded that were carried to the Receif; when our Troops had no other Arms than pointed Sticks and Clibs. These are bleffings from Heaven, for . we were able to perform these things we mount o der and Ball, what more needs erouse -ciell, here they are three day t rod Troops, and provide with 1 " re Arms and Ammunition? all which is outsirm to you upon my word, to be noth my but the real truth, and had it not been in respect of those Coronels sent from the Bahia, and of his Majety of Portugal, I had by the time been Master of the Receif. or some of the Forts, or at least I might have done much greater mischief : But if matters are not brought to a happy conclusion, I am resolved to act like a desperate Man, and not to leave any Sugar-Mills, Cattel or Negro's in the Country, but will rather turn all to Ruin and Destruction, before we will be compelled to submit again to your Obedience.

As these presents may serve as warning to you, so, I hope you, and the rest of the Merchants will not delay to enter with us into such Articles of Agreement, as may be most conducing to the preservation of your Possession; for I would have you call to mind that there are many Ingenio's (Mills) reduced at present to such a state, as not to be likely to be in a condition, to be used these Ten Years next to come. The Vargea is in no better conduction than Paraiba and Golana, and the Cartel (without which the Mills cannot subsisted in most

Colonel Sigismund Shoppe I suppose pretends to keep the Field against us, as he did in the last War, but he will find himself egregiously mistaken, because the Inhabitants

piaces.

net be of his side, for if I should bear of one that was, I would cause him to be hanged immediately. You alledge that we are Vallals of the Company, but when was ever any conquered Nation treated thus as we were, worse than the vilest Slaves, of which you are sensible as well as we; so that being forced to break our Chains, we don't owe you any further Obedience. we had not been in hopes of this opportunity, we would long before have implored the affiftance of the King of Spain or France; and of those had failed me, to have had recourse to the Turks and Moors. I defire you not to throw away this Letter, because experience will convince you of the truth of it; and that we shall pursue the same methods here, as we have done in other places; wherefore I would have you not give Credit to any body, except to those that come in Person from those places; I having told them nothing but the bare truth, which you will find in effect thus: In the projecution of this War, I hope you will consider, what is nost for your Interest, in which I am ready to serve you; for the your Governours don't direct their Letters to me, 'tis I that have the chief management of this War, and under my Command the power of the Colonels came from the Bahia, extending no further, than over those Troops, they have brought along

tember 11. 1646. On the 10th of this Month, the beforementioned Colonels baving fent an Answer to a Letter directed to them from your Council, by one of our Captains; several ensnaring questions were ask'd him concerning the present War, which he perhaps not answering according to their expellation, they replied more like drunken Cowards than Soldiers; If they will be pleased to come out and tell me these things, I will try whether their Swords are as nimble as their Tongues are, and teach them what respect is due, to the Messengers of those Persons, who have the supream Command here. This I write to you at present, but shall not fail in due time, to make my words good by the Sword, of which your People feel the daily effects as often as they dare to come out of their Forts. Pray be not deceived, for Braill is not allotted to you; not questioning but that God will bless our Arms, and if we happen to Die, we shall lose our Lives in the Defence of our Holy Religion and Liberty; and all those that have refused to accept of our Offers, will pay for it with the less of their Lives, Poffessions and Debts.

with them. A Reyal de bon Jesus, Sep-

A Reyal, Sept. 12. 1646. Signed,

John Fernand Vieira.

The 14th of September a Man of War. call'd the Ter Veer, Equipp'd by the Chamber of Zealand, (aboard of which was Colonel Hinderson) arrived before the Receif, after a Voyage of 14 Weeks. The 24th of September the Enemy caused fome Pamphlets to be dispersed, promifing in very haughty terms, a general Pardon, and a Composition of their Debts, in case we would leave the Island. The 27th of September Colonel Shoppe re- Colonel turn'd with some Troops from Goiana, Shoppe by the way of Itamarika; I had not met returns with any Enemy, but had found all the road to Sugar-Mills burnt in the first place, but the Sugar-Reed and Farinha Fields in a pretty good condition; we received afterwards further Information, that the Sugar Mills of Goiana, were not quite burnt down. The 27th October a Conference was held betwixt the Old A Con-Council and Mr. Van Goch, unto whom ference b they imparted their Advice concerning oldCounce feveral matters relating to the State of and Mr. the Dutch Brasil, and especially to the Goch. Planting of the Mandioka or Farinha Roots, and the killing of Cattle, which they advised to be don't with great circumspection, Brasil being not able to subsist without a consider of number of Oxen, which were continually employed in carrying of Sugar-Reeds, Wood and other necessaries to the Mills.

For the planting of Farinha Roots they proposed Iramerika, Rio Grande and Paraiba, which Countries were thought sufficient to supply their present occasions; provided it were done before the Season was elapsed.

In the mean while Colonel Shoppe having made several, but for the most part, unsuccessful attempts upon the Enemy; our Forces were the Dy so diminished that we were not in condition to make head against the Portugueses near the Recess; which made our Council take a resolution, to endeavour the recovery of Rio St. Francisco, the execution of which being committed to the management of Colonel Hindersexproved more fortunate for us, he meeting with little resistance thereabouts.

Accordingly the 24th of October the The Jun following Ships; Count Eano Admiral, attention, Loanda Vice Admiral, The Arms of the reco Dort Rear Admiral, the Bluecock, the Rio St. Watchful Dog, the Greybound, Eagle, the Francis Star, Heemftede and the Flight, with Eight Barks, set Sail under the Command of Admiral Lichtbart, and Colonel Hinderson to the South. The 17th of November the Council received Advice,

tha

that our Troops under Colonel Hinderfon were fafely landed at Korasippa, and marching from thence to Rio St. Francisco and the Fort St. Maurice had met with no opposition from the Enemy, who had begun to rase the said Fort. That they had been seconded by the small Vessels, which had followed them up the River, which our Forces had passed, and were marched to Seregippe del Rey, having left fome behind to repair the Fort; and that four Portuguefes had requested their Pardon, which was promised them. Whilst our Forces were employed thereabouts, I was ordered thither to take care of the necessary Provisions (of which there was great plenty) for our Troops; having accordingly caused my Cargo to be embarked, aboard a Ship call'd the Brownfish, Francis Frantz Master.

I set Sail the 24th of November. We Mr. Nicu-hoff order-were carried with a brisk Gale as far as non orace, the Mountains call'd by our People the Saddle-Hills from their shape, the Coast all thereabouts being white Sand Downs. About half an bour after Sun-fet we faw our felves off it the Bay of Tamandare, and from the ce continued our Course with a fall Vind, which in two Days after brought us happily to the Entrance of that great River, which is so broad at the beginning that a Sixpounder can carce reach cross it; it falls with a very oft Current into the Sea, its Waters seing low in the Winter, but encrease n the Summer, perhaps by reason of he Snows that are melted by the heat of the Sun. About 50 Leagues from its nouth is a great Cataract or Water-fall, urrounded by a great many Islands; The Sea at its Entrance meeting in Tem estucus Weather with the Current, re so boistrous, that they strike Terour into the Stoutest Mariners, arry away great pieces of the Continent long with them. We entered the said liver but were forced to cast Anchor nmediately after Sunfet, for want of n Ear Wind to carry us higher up, thich commonly begins to blow therebouts at three in the Morning. The ountry appear'd very pleasant on both des, and we saw abundance of Wild easts near the River side, and several uts made of Straw. We were detined near 24 Hours upon a Sand bank, hich after we had passed, we came at It to the Village call'd Penedos, lituate on a high Hill; Here we landed with ir Boats, and found a few Houses hich were rebuilt by our People, the It being burnt by the Enemy before Vol. II.

their flight. In the Fort was formerly, (in the time of the Portuguefes) a Church, which we turn'd into a Magazine; it was furrounded with a goodly Wall, the River passing by it on the Northside. where the Hill is very Steep.

The 30th of November Admiral Lich Admiral thart was feized with a fudden and violent Lichthart illness, occasioned by his drinking too dies. much cold Water, after he had overheated himself before; He was carried into a Boat, with Three Soldiers under the Command of an Officer, lower down the River, but soon after lost his Senses, and in my presence expired. The next Day his Corps being put in a Coffin was carried aboard the Golden Star, being conducted by the Chief Officers there present, and Four Companies of Soldiers to the River side, who gave Three Salvo's with their Musquets, as did the Cannon from the Fort and Ships, in order to his Interment at the Receif.

Towards Evening as I was going a- Mr. Nicus board our Ship the Boat overturned by hoff in the swiftness of the Current, and had I danger of not been a good Swimmer, I had in-being fallibly been drowned. The Master threw out a great Cable over-board, by the help of which, and God's Mercy I got fafely into the Ship. The Soldiers in the mean while fcowr'd the Country, and brought 700 Oxen, (of which there was great plenty) and 300 Calves into our Quarters, having been at Pasture in one of the adjacent islands of the River, under the guard of some Soldiers; they were not extraordinary Fat, but tolcrable good Meat. The Soldiers Huts were for the most part planted on the North-side of the Hill, which being composed of Branches and Leaves of Trees took Fire accidentally the 3d of December, with fuch fury, that in a quarter of an Hour the whole Quarter was in a flame, notwithstanding that the alarum was given immediately, by the beating of Drums and the founding of Trumpets; some Soldiers that were then fwimming in the River, lost all their Cloaths by this accident. It was well it A Fire in happened by Day; for if it had been in the Soldithe Night it would have put us under ers Quaa great consternation, it being generally ters. reported, that it had been done by Treachery. There was at that time a plentiful crop of Tobacco upon the circumjacent Fields, but was not quite fit for reaping, which must be done at a certain Scason, before the low Grounds are overflow'd. The Golonel defired me to

provide those who had lost all, with

LI

# Mr. John Nieuhoff's Voyages

new Cloaths, and to deduct it out of their Pay; but I told him, that I being only a Factor could not do it without fpecial Order from the Council, some having but little Pay due to them. The having but little Pay due to them. 25th of December we received Intelli-gence that the Enemy began to appear in a considerable Body, whereupon the Companies of Captain Confin, Schut, Gyseling, La Montayne, and of a Brasilian Captain call'd Tomee, were fent in quest of them, with Orders, to fet their Stables on Fire, and bring the Caftle to our Quarters. The next following Monday word was brought us, that our Troops were so narrowly enclosed by the Enemy, that it was feared scarce one of them would escape with Life. Whilst we were in a great Consternation, not knowing what Resolution to take, a Brasilian brought us the unwelcome News, that our whole Body was routed and dispersed, and Captain Schut, Consin and La Montayne, kill'd upon the spot. He had scarce finished his doleful Relation before a German Soldier, who had escaped the Fight, by his bleeding Wounds, and his words gave us a Confirmation of what had been told us before, with this addition, that Captain Gyseling's Lieutenant, La Montaynes Enfign, and one Kilmet, belonging to Captain Schut, had fought their way through the Enemy, with about 30 Soldiers, and would foon be here. This mishap was chiefly attributed to the Fool-hardiness of our Troops, who contrary to Colonel Hindersons Command, having at once discharged all their Musquets against the Enemy, fell in Pell-Mall without any regular Order, with Sword in Hand upon the Enemy, which the Enemy perceiving, retreated back and drew them into an Ambush. Towards Night we saw several Soldiers miserably wounded with Darts come to our Quarters, some who The Dutch had thrown away their Arms, were defensed forced to cast Lots for their Lives, the in Rio St- misfortune of which fell upon a Dutch-Francisco. Man and a Brasilian, who being tied to a Stake to be Shot to Death, were, however pardon'd by the Colonel. Captain Gyseling's Lieutenant who came without his Arms to the Fort, was sent immedi-, three Prisoners; yet not without the loss ately to the Receif, where his Sword was broke over his Head, and he declared incapable of ferving the Company for the future, notwithstanding he had done them faithful Service for feven years laft

By this time I was fent for to the Receif, so, that after having taken my leave

of the Colonel and Mr. Dames, I ent bark'd a board the Bar the 16th of De- 10404 cember, and we were the same Evening with a fair Wind and Stream carried, to the mouth of the River. It being a fine Moon light Night, we catch'd abundance of Zaggers as we call them, a Fish of a very good tafte, and continued our course with a brisk Gale: Not far from Mr. Nieuthe Rivers Mouth we met with four of hoff's reour Ships, who told us, they were to turn to the fetch Provisions, but in case they could Receif. not, were to return forthwith to the Receif. The 18th we advanced but little, the Ships being not out of fight of us, near the Rivers Mouth; but did catch more Fish than we were able to Eat. The 20th we were likewise becalmed, and we perceived the Moon to be half Eclipsed for the space of two Hours. The next following Day we failed fo near to St. Amonio, that we could fee them walking along the Seashoar: Towards Night we discovered Porto Calvo, about 30 Leagues from Rio St. Francisco. We were riten becalmed, but catch'd abundance of Kings-Fish, and Codds, and saw Fires in heart places along the Coast. The 24th of December we came so near to the Cape of St. Austin that we discovered five Ships and seven Row-Barges in the Harbour; we might have reach'd some of those that went a shoar with our Shot, had it not been for the Sand bank, which hinderd our nearer approach. About Noon we came before the Receif, but it was so Foggy that we scarce could discover the Water-Fort, nevertheless we ventured in, and I got ashoar immediately, with an intention to give an account of the State of Affairs in Rio St. Francisco, to Mr. Schonenbergh, being conducted thither by Colonel Shoppe, who happened to meet me immediately after my landing.

The 27th of Offober the Enemy had The Ene laid two Ambushes in the way to the lay an A Fort Prince William, beyond the Radoubt Kiik. They did not ftir, till towards Noon, when perceiving a Company of our Soldiers marching along the Dike, they fired so briskly upon them, that they killed 11, wounded 12, and took of some on their side.

In the mean while the Tapoyars being The Ta much exasperated at the Murther of the poyarbefore-mentioned Jacob Rabbi their Com- leave mander, had left our Party; The Coun-Party. cil did what they could to appeale them, imprison'd and banish'd Garsman the Author of it, and confiscated his Effate, .

ethithstanding which, the Tapoyars not be prevailed upon to join with us, as before.

Suemy.

The 18th of November, Mr. Van Goch oncerning entred into a Conference with the Memm Enter- bers of the Old Council, whether it rife a- might not be fellible to Embark what sinft the Forces we were able to spare on Board might not be feifible to Embark what our great Ships, and to attempt to make a powerful Diversion to the Enemy by attacking him in some Place or other. But those of the Old Council having represented to him the danger of this Enterprise, if it should miscarry, whilst they were blockt up in the Receif, the further Debate thereof was deferred till the next day. It was then proposed, upon second Thoughts, That in case we could bring all our Forces together, fomething of moment might be undertaken without manifest hazard, whereby to oblige the Enemy to withdraw his Forces from the Receif; but Mr. Van Goch apprehending no small danger in case we miscarried they came to no resolution for that time.

uarter.

inother a It being tonor by Experience, that all our refuse our Promise of Pardon had proved ing of effectual; it was proposed by Mr. Van Gech the first of December, Whether it were not most Expedient to give no Quarter for the future; unto which it was answered, That very seldom Quarter had been given by us, and few Prifoners were taken, and that the Enemy had likewise kill'd most of our People that were faln into their Hands, but they judged it not convenient to refuse Quarter to all without Distinction, which ald induce such of the Inhabitants as had remained quiet hitherto, to betake themselves likewise to their Arms.

> The 23d of November we laid an Ambush for the Enemy near the Fort of Affagades, who being by some sew, sent out for that purpose, engaged in a Skirmish, and pursuing our Men with great Eagerness under the Cannon of the Fort, were fet upon by those lying in Ambush, who killed and wounded many of them.

The 12th of December, the Corps of the late Admiral Lichthart was Interr'd, one Company of the City Militia, and two of Soldiers appearing in Arms upon that Occasion, gave him three Salvoes with their Muskets.

The 30th of Decemb. the Eagle Yacht brought Letters to the Council, dated trancisco in Rie St. Francisco the 4th of December, intimating,. That in an island a little above the Fort, one Colonel Rebellia was serviced with 200 men from the Babia; and that they expected another Reinforcement, as well from thence, as from 1646. the Pargea; That our People being fent higher up the River, had attackt some of the Enemies Troops, but they made their escape to the other side, leaving their Arms and Clothes behind them.

The 2d of January 1647. Colonel 1647. Shoppe, who had been with 300 Fufileers in Goiana, return'd to the Receif, giving an Account, That he had taken a View of all the Rivers thereabouts, but met

with no Enemy.

The 5th of January, the Council re- Shoppereceived an Account of the beforementi-turns from oned Action in R.o St. Francisco, viz. Five Goiana. Companies of our Forces being fent to Orambon, to beat up the Enemies Quarters, they met with a Body of 100 Men. whom they attackt and put to flight; but soon after our Forces were attackt by a much stronger Body, who put them to the Rout, with the loss of 150 Men; of our Officers, one Captain was kill'd, and five taken Prisoners, viz. Captain Samuel Lambart, La Montagne, Gerrit Schut, Kilian Taylor, Daniel Koin, and three Lieutenants, Joost Koyman, Anthony Baltart, Jeronymus Helleman, and one Enlign.

The 8th of January, Mr. Fan Goch, in

the Name of the New Council, advised

with those of the Old Council, that it being refolved among them, to fend for a considerable number of their Forces out of Parayba; in order to gather a Body of Troops for fome important defign, they defired to be inform'd concerning the present Condition of the Confultafaid Captainship; and whether the City tions confaid Captaininip; and whether the city corning the of Paraiba and St Andrew might be de-State of fended by a small Garrison; whereupon Paraiba. those of the Old Council reply'd, That the Town of Fredericia had no fresh Water but what they must fetch at a miles distance, and consequently might be cut off by the Enemy; the fame thing might be done at the Passage leading to the Riverside; besides, that there was no Fortifications belonging to the place but the Monastery, which was of no great consequence, and the Guarte Domarges Church which had been fortified by the Enemy in this War. St. Andrew, it was no more than a Sugar-Mill about four hours distant from the City of Paraiba, lituate upon the Bank of the River; that the Communication of this Place with the Fort of St. Marfaret might eafily be cut off by the Ene-

my, as being likewife about four Leagues

from thence, but it might be relieved

News from

from the Water-side, and yet not with1647. out great difficulty. Mr. Van Goeb told
them, he would make his Report thereof to the Council.

The 12th of January, the Council received Advice, That the Enemy were with a strong Body of Troops entred Paraiba, and advancing very near to the Sugar-Mill of St. Andrews, had in the Night time surprised some Dutch and Brasslians, to the number of 50 Men, Women and Children, of which they had kill'd some, and ript up the Womens Bellies.

The 13th of January, some Pamphlets were again dispersed by the Enemy, containing in Substance, That tince the Inhabitants of the Recof were now beyond all hopes of further Reliciat would be their furest way to come to an Accommodation; for they were refolved to venture al' before they would lay afide their Defign, but if all rail d they would destroy the whole Country, and so leave it: They Exhorted them not to be deceived by the Infinuations of those who belonged to the Company; and call'd them Rebels; they being no more to be stiled fo, than the Dutch themselves, who had afferted their Liberty against Spain.

Advice from Paraiba. The 17th of January, four Negroes belonging to one Isaac de Rasser, who had been taken Prisoners some days before in Paraiba, came over to us into the Receif, and brought Advice, That the Enemy, after having tarried but a little time in that Captainship, where they had kill'd five Datch Men and some Brassilians, were retired from thence.

The Wooden Fort battered.

The 22d of January early in the morning, the Enemy began to batter the Wooden Fort near the Baretta from a Battery on the Bank of the Southfide of the River, which he continued the whole day, but delifted at night; the Garrison having been reinforced about Noon with five Companies of Soldiers, and some Provisions; because Mr. Hamel one of the Members of the Old Council, did represent to Mr. Van Goch, that though the Fort it felf was so inconsiderable, as scarce to be worth the trouble of defending it, by a good Garrison, yet at this juncture, when the Enemy had made hir first attempt upon it; it would not be adviscable to desert it, for fear of giving Encouragement to the Enemy to attack the other Forts; But, that on the contrary, as long as they did meet with a brave Relistance here, they would not be so forward to attempt others; especially fince we had the conveniency of relieving them with Boats at HighWates, with Low-Tide by Land by the way of the Sandridge; and that we might annoy the Enemy with the Cannon from our Yachts, in his Trenches, as we had done that day. About the fame time, a Map was ordered to be made, shewing the true Situation of the Receif, with the Turnings and Windings of the adjacent Rivers and Marshes, as far as the Bartia, for the better Instruction of the Council.

The 24th of January in the morning, News was brought, That the Enemy had Siege raised the Siege of the Fort of the Baretta the Night before, and carried off all their Cannon, being fenfible, that as long as they could be annoy'd from the Seafide, and we be able to reinforce them daily with fresh Troops, they could promise themselves but slender success : But besides, that our People were to struggle against the Enemy and Famine, they were frequently troubled with Defertions, many of our Soldiers, nay even to the Serjeants, and other Officers, who begun to Despair of our Ease, runing over to the Energy, even at that time when the before-nentioned Ships the Faulcon and Elizabeth more in fight of the Receif.

Now the Members of the Old Council began to prepare in good earnest for their return to Holland, they had already in December 1646. follicited Mr. Schenenbergh President of the New Council, to order some Ships to be got ready to Transport them thither, and the Vlieffingen had been appointed for that purpose; But the same being not as yet return'd from Cruising, they apply'd themselves the 25th of January 1647. to Mr. Va Goch, and told him, That whereas according to their Commission, one of them should return after the Expiration of three years, they had continued in Brafil these six years: Mr. Kodde having indeed been ordered to return about that time, but his Place not being fupplied by another, he died, before his departure: That they had for these The M three years last past, sollicited their re- bers of turn, and had two years ago received old four Promises of being relieved by others: Jolly which had not been performed till within these few Months, to the great prejudice of themselves and their Families: Mr. Van Goeb promised them to take effectual Care to have the Ships got ready, and to lead for the Ship the Vilefinger, in order to their return home. time of the Accession of the New Council to the Government, and the depar-

ture of Henry Hand, Adrian Bulle

The 23d of January, Mr. Beaumont was fent by the New Council to Confer A Confewith the late Members concerning the sense thous present Condition of Rio St. Francisco, Rio St. and what was best to be done there. Francisco,

and what was best to be done there: They answered him as before, That the Fort, as it was now, could do but little Service, and that therefore it would be worth our Consideration, Whether the Proposals made by them in Writing, might not now be put in practice. The faid Mr. Beaumont further proposed, Whether it would not be requifite to erect an Earthen Redoubt for the De- And the

fence of the Baretta; unto which those Barettas of the Old Council reply'd, That confidering the vast Charge, and the small Benefit which could be expected from it, the fame might be more conveniently built in some Place or other, to facilitate our passage into the open Country. Beaumont was of Opinion, That thereby the Enemy would be prevented from advancing to the Fort Frederick Heary; but the Old Members told him, That notwithstanding we had now a Fort on the Baretta, we could not hinder the Enemics coming upon that Island near the Fort, unless we would keep a confiderable Force there for that purpose; That we need not fear their Transporting any Cannon thither, because their Retreat might be cut off at high Tide; neither could they from thence do any mischief to the Receif, it being evident, that the Shot of our biggest Cannon in the Fort Frederick William could not reach the faid Island. The same Evening Mr. Van Goch and Hack, came to tell the Members of the Old Council, That the Hollandia and Fliesfingen would be ready in a little time, in order to conduct them to Holland, the Pheffinger being ordered forthwith to return from the Babia, whither

the was fent a Cruifing. By this time the Enemy had blockt us up fo closely in the Receif, that on the The Receif land fide we durft fearce look without closely the Gates; and a certain Portuguese had blackt up. prepared us a worfe Entertainment having invited all our Chief Commanders abroad to his Daughters Wedding, during which time the Enemy were to have furprised the City; but this design being timely discovered by some Intuguefer and Jews, miscarried.

M m

About

guele Re-build a Fort.

1 6 4 7. tugueses began to Rebuild the Fort Bon The Portu- Jesus, as it is call'd by them, but by us Altena, on the other side of the River. We had some notice of it by Deserters, but could not discover the Truth of it, because they kept us from advancing that way by their Cannon, and the place was furrounded on all fides with Woods; but as foon as they had caused them to be cut down, we discovered it both by fight and the roaring of their Cannon, which thundring incessantly against the City, caused such a Consternation, as is not caue to be express'd, most People fheltring themselves in Vaults, to avoid the fury of the Enemies Cannon. Of A milera this I faw a most miserable Spectacle in ble spellera certain young Lady, a Niece of the late Admiral Lichthart, who being come to visit one of her Acquaintance lately Married, had both her Legs shot off by a Cannon Bullet, which at the same time kill'd the new Married Woman upon the spot. At the outcry of these miserable

Wretches I ran thither instantly, my

to being just by, where I was an Eye-

About the 1sth of October, the Por-

es of their Misery, the poor young Facilities my Legs with fuch an Agony, that the could scarce be pull'd a most deleful Spectacle for me to fee the Floor covered with the Legs and Arms of thele milerable Wretches; the poor young Lady died likewise within three days after. It was not long after that I narrowly escaped the same Misfortune; for whilst I was Talking with some of the Inhabitants of the City, as I was going the Rounds, two of them were kill'd by a Cannon Bullet, and another had both his Hands shot of as he was lighting his Pipe. Nay, we were forced to remove all the Ships ont of the Harbour for fear of being Sunk. Colonel Shoppe in the mean while had made himself Master of, and destroyed Taperika, 2000 Portugueses only having faved themselves by flight; But by the many unfuccessful Encounters we had with the Portugueses, our Forces decreafing daily, whereas theirs encreased, Colonel Shoppe was ordered to Command Colonel Hinderson to leave Rio St. Francifco, and to join him in Taperika; but this stood us but in little stead, being not long after obliged to leave likewise Taperika for the Relief of the Receif. All our force confisting of about 1800 men, being now come to the Receif, (where they had not Provisions for above seven months left) it was several times taken

into Consideration, what was best to be done at this juncture. Colonel Shoppe 1 6 4 with some other Officers were of Opinion not to hazard an Engagement, our Forces being fo much inferiour to the Enemy, but to flay for a more favourable opportunity; But it was carried by the majority to venture a general Salley for A gene the relief of the Recesf, the chief Com- Salley m. mand thereof being given to Colonel by the Brink, because Colonel Shappe was not as yet cured of his Wounds he had received in a late Encounter. Our Forces marched towards Evening as far as Guerapes, a place fatal to us the year before by the defeat of our People, the Fields thereabouts being as yet covered with their Bones. The Portuguefes no fooner perceived us to be upon the march, but they left the Fort Altena, of which we having got notice, posses'd our selves of it immediately; and thus drew the Thorn out of our Foot. But the 16th of May prov'd the most fatal of all we had feen for many years before in Brasil. For, though our Force attackt the Enemy with bravery, and maintained the Fight with great obstinate for some time, yet the Enemy flush'd with their number and late Success, with 2500 of their best Men, at last forced our Men to give way. and afterwards to fly, being purfued by 150 Portuguese Horse; so that both in the Fight and Flight, we lost above 1100 Are's Men. among whom were Colonel Brink. and almost all the rest of our Commanders: We lost also 19 Colours, and all our Cannon and Ammunition, we had, carried along with us. It was not till five days after before leave could be obtained to bury our Dead, which began to corrupt and stink most nauseously, by reason of the burning heat of the Sun. This was the last Effort we were likely to make in the Field; all our future care being for the Preservation and Defence of the Receif, unless we should be supplied with fresh Succours from Holland; but the same arriving but slowly, most People began to fear, that in case God Almighty did not fend us some unexpected Relief, we should be at last forced to leave that Place likewise to the Mercy of the Enemy: The Great Council laying the Fault of our late Misfortunes upon the Council of War, and these again upon them, alledging, That the Soldiers were ill provided for, and wanted their Pay. As for my felf, being fensible that things would be worse and worse every day, thought it the fafest way for me also, to defire a Passport for my return to Holland, which at last, with much 64.7. ado I obtained, and so prepared every thing for my Voyage. But before I leave Brasil, I ought to give you a short account of the Products of the said Country.

The Captainship of Pernambuko and Strass in general being not only well 1647 stored with Cattle, but also with several forts of Herbs, Trees and Fruits, we Mandiok will give you a short view of them, and begin with the Mandiiba, and its Root.

tall'd Mindioka, unto which the Brasilians stand chiefly Indebted for their Suilenance. The most parts of America are ignorant hitherto of Wheat or any other Grain, instead of which Nature has furnished them with a certain Shrub, the Root of which dried and powdred, and afterwards Boil'd and Bak'd as we do our Bread, is the common Food of the Inhabitants of America. This Shrub grows in Van Plenty every where, being by the Bralilian, called Manuba and Manduba, and its Root Mandioka. There are divers kinds of it, diftinguished by the Brasilians by different Names, but the Root is in general called Mandioka. Their Leaves are small, green, and long, pointed at the end, which grow upon large stalks or Branches, each of which has five, fix, or feven Leaves, growing in a Cluster, resembling a Star, call'd by the Brasilians, Manikoba. The Stock or Stem is distinguished by certain Knots, notabove an Inch thick, but generally,

fix, fometimes feven foot high; from whence, Sprout forth feveral Branches, which producing again leffer Stalk, bears the before-mentioned Leaves; It bears a finall Flower of a pale yellow colours and of five Leaves only, with small Stalks within, which at last turn to Seed. The Root Mandioka resembles our Parship in shape, being two or three foot long, and about a Man's Arm thick, but grows thinner towards the bottom. Its outward Rind resembles that of a Hasel-Tree, but its substance is white, affording a Milky sharp Juice, which is pernicious to Beafts. This Shrub grows in dry, barren and fandy Ground, its Nature being so averse to Moisture, that they are obliged to Plant it only in the Summei Months, where it is most exposed to the Sun. For this purpose it is, that the Inhabitants cut down the Woods on the Hills and in the Plains, which they burn, and so prepare the Ground for the Production of this Root; These

## Mr. John Nieuhoff's Voyages

Fields are by the Brafil ans called Ko, by the Portugueses, Roza, or Chokas, and by our People Roffen. These Fields are turn'd up into small round Hills, like Mole-Hills; the Portugueses call them, Montes de Terra Cavada, or Hollowed Hills, the Brafilians, Kirjo. These Hills they make about two foot and an half afunder, each being about three foot in Circumference, and half a foot high, that the Rain Water may be carried of with the more cafe. In each of these Hills they commonly Plant three small Taks of this Shrub, of about nine, ten Inches, or a foot long, without Leaves, notwithstanding which they grow and foon bear fresh Leaves, and in time produce new Roots; which cannot be transplanted, because no sooner are they taken out of the Ground, but they begin to putrifie and flink. After these Taks have been about ten days in the ground, they begin to bud and produce as many fresh Taks as they have Knots; Each of these Taks is about a Finger long, from whence sprout forth many leffer ones of a Purple colour. The Fields must be three or four times a year cleared of the Weeds, which grow in great plenty amongst it, and choaks it up, be-fore it comes to its full growth. The fore it comes to its full growth. finall Taks and Leaves of these Shrubs are mightily intested by the Pilimres, and likewise coveted by the Wild-Goats, Oxen, Horses, and Sheep, for which reason they are very careful to Fence there Plantations, with Stalks and Branthes of Trees. The Bees, Coneys, and fome other Brafilian Creatures are mighty fond of the Root, which takes no harm, tho' the Shrub be stript of all the ovided the Root it felf be not touch'd. This Root does not come to its full Pertection till a year after the Planting of the Taks, tho' in case of neceflity they may be drawn in fix months, but afford but little Farinha. Each Shrub produces, two, three, four, nay fometimes twenty Roots, according to the goodness of the Ground, and after they are come to full maturity, will keep two or three years under ground; but it is much more fate to take them up at the or Farinha de Guerra, War-Meal; be-years end; for else many of them will, cause it is most used in time of War. rot; nay, if the Season happens to prove very wet, they must of necessity he drawn tho' they are but half ripe. The Root, after it is taken out of the Ground, will not keep above three days, but stinks, take what care you can; for which reason, they seldom draw more

ly into Farinha or Meal. That kind of Mandioka, commonly called Mandibuka, 1647 grows faster and ripens sooner than any other, and affords the best Farinha: It thrives best in sandy and hot Grounds. But that kind which is most generally used is called Mandrikparata, and grows indifferently in all Grounds. The Farin- How the ha is prepared thus: The Root after it Farmha i is taken out of the Ground is purged prepared. from its outward Rind by a Knife, and wash'd in fair Water: Then the end of the Root is held close to a Wheel of about four or five foot Diameter, which being covered round the edges with a Copper or Tin Plate full of sharp small holes, not unlike a Nutmeg-grater, and the Wheel being turn'd round continually, grates the faid Root into small Particles which fall into a Trough underneath. The Wheel is by the Brafilians called Ibecem Babake, and by the Portuquesis Roda de Farinha, or the Flower Wheat; The Trough the Brafilians call M. Luba, and the Portugueles, Kochi de rater Mandiboka. But the poorer fort are fain to be contented with a H: !-Grater, called Tapiti. The Real aus Grated is put into a Bag made or the Rinds of Trees about four Inches wide, called by the Portugueses, Espremendouro de, Mandihoka. This Bag with the Root is put into a Press, and all the Juice prest out, (it having a venomous quality) which is by the Brasilians called Manpoera, or Munipuera, and by the Portugueses, Agoa de Mandioka, i. c. The Water of Mandioka. The next thing to be done is to beat the Root through a Sievecalled by the Brasilians, Urupema; and then to lay it upon a Copper-Plate, or Earthen-Pan, over the Fire, and to stir it continually with a Wooden-Spoon or Spattle till it be quite dry. This Pan or Vessel the Brasilians call Vimovipaba, and the Slice, Vipucuitaba. The Farinha before it being quite dry is called by the Brafilians, Vitinga, and by the Portu-guefes, Farinha Kelada; But when it is compleatly dried, and fit for keeping, the Brafilians call it Viata or Viccia, and the Portugueses Farinha Secasor Dry Meal: For the more it is dried the better it keeps, but never keeps good above a year; the least moisture being apt to taint it; which is the reason, that both the Portugueses and we, in imitation of the Brasilians, bake Biskets of it, upon a Grate Iron, with hot Coals underat a time than they can make immediate- neath, for the Magazines.

The

The Juice Manipuera, which is press'd ont of the Root Mandioka, put into a Vessel, gets in two hours time a white Settlement at the bottom, call'd by the Brasilians, Tipioja, Tipiaka, and Tipiabika: This dry'd affords a very White-Meal, called Tipiocus, which Bak'd into Cakes as before, call'd by them Tipiacika, Taste as well as Wheaten Bread. Juice is also boil'd to Pap, and Eaten, and serves likewise instead of Starch or Paste. The Portugueses take this Pap, mix it with Sugar, Rice, and Orange-Flower-Water, which they make into a Conserve of a delicious Taste; they The call it Marmelada de Mandihoka. Juice Mandiga or Manipuera, is of a sweetish Taste, which is the reason the Beasts covet it, but commonly Die soon after they have Drunk of it; it being pernicious, nay mortal, both to Man and Beast. If the Juice be kept twice 24 hours, it produces Worms, called by the Brasilians, Tapucu; yet it has been found by Experience, that this Juice loses its pernicipus Quality after it has frod 24 hours, there being many of the an, arm. The Root Mandioka is likewise immediately after it is taken out of the Ground, fliced in pieces, and laid in fresh Water for four or five days, when It begins to be foft, it is called Puba, or Mandiopuba and Mandiopubo. This the wild Brasilians Inhabiting the Deserts and Woods, Roast in the Ashes and Eat; because it is done without much trouble. The same Mandiopuba Toasted before the Fire, is called Kaarima, which being afterwards beat to Powder with a Wooden Pestel in a Mortar, they call Kaarimaciu; of this they make a Pap with boiling Water, which feafoned with some Brasilian Pepper, or Nhambi Flowers, affords a very good Dish, especially with the addition of some Fish or Meat, when it is called Minguipitinga by the Brasilians, who look upon it as one of their best Dainties. It is also very wholsome, for this Kaarima, and the Flower Tipiaka, boil'd in Orange Flower-Water, and Sugar to the confiftency of a Syrup, affords a very good Antidote. They make also a kind of Starch of the Flower called Kaarima, which they call Mingaupomonga; as likewise very fine Cakes, by mixing it with Water, Butter, and Sugar. There is a kind of Meal prepared from the Dregs of the Mandioka, or Mandiepubo Root, thus steept in Water, call'd by the Brafilians, Vipuba, and Viabiruru, and by the Portugueses, Farinha Vol. II.

Fresca, or fresh Flour, and Farinha d'Agoa, or Water-Flouer. It is very well 164
Tasted, but will not keep' above 24
hours. But if you make it up with
Water into Balls or Rolls, and let them
dry in the Sun, they will keep good for
a considerable time: These they call
Viapua and Miapeteka. The Tapoyars
and almost all the other Brassleans prepare it thus, and afterwards mix it with
another Meal, called Viata, which affords it a more agreeable Taste.

The Mandioka-Root is likewise prepared thus: After it has been cleanfed and cut in thin flices, they beat it with a Wooden Pestel, and squeeze the Juice of it out with their Hands only, which being dried they call Tina and Mixakuruba; Another way of preparing the Mandioka-Root is, to cut it into pieces, of about two Fingers long, and two lnches thick, which without being squeesed, is exposed to the Sun, and afterwards beat to Powder in a Wooden Mortar, call'd by the Brasilians Tipirati, by the Portugueses Farinha de Mandioka crua, or the Flour of raw Mandioka: The pieces before they are beaten to Powder are very white, and may be used instead of Chaulk. Out of this Flour they make very good White Bread, and Bishkets, call'd Miapera, the last of which are chiefly used in the Camp; because they will keep a great while.

Out of the Root Apimakaxera, the Brafilams boil a certain pleasant Liquor not unlike our Whey, call u by them Kavimakaxera. The same Root chaw'd and mixed with Water furnishes them with another Liquor, they call Kaon Karaxa. The Cakes made from the Flour of this Root, laid in a Cask with Water, till it ferments together, affords them likewise a sort of Strong and very good Beer.

All these different kinds of Mand.oka Roots, if they be eaten fresh prove mortal to Mankind, except that call'd Aipiamkaxera, which roafted may be caten without danger, and is of a good taste. But all forts of Beasts both wild and tame ones, don't only feed upon the faid Roots and Leaves, without the least hurt, but also grow Fat with them, not-\*withstanding that the Juice of both is mortiferous as well to Men as Beafts. The Negro's and Brafilians bruise the Leaves of the Mandina in a Wooden-Mortar, which being boil'd they put Oil or Butter, over it and cat it like as we do our Spinage, this is sometimes done by the Portuguese likewise and the Dutch.

hefore ours, but is not fo natural to the Europeans, it being, if used in a great quantity, pernicious to the Nerves and Stomach, and corrupts the Blood. About three Bushels of this Meal, (at the rate of two Gilders per Bushel) will fuffice a strong labouring Man, for a whole Month, and a piece of Ground planted with this Root, produces four times the quantity, as if it had been fown with Wheat. There is a certain kind of Mandioka-Root call'd Pitinga, by the Brufdians, the Flour of which cleanses and heals old Ulcers. This Root is likewise found in the Isle of St. Thomas; and in those of Hispaniola, Cuba and others thereabouts, and in most parts of the Continent of America; the Inhabitants of which call it Tuka and Kaffave, and those of Mexico Quanhkamoth, and the Bread which is made of the Flour, Kazabi, Kazabi, or Kakavi. The Mandioka-Root is originally the natural product of Brafil, and from thence transplanted into other parts of America and Africk. Its Flour furnishes all the Inhabitants of Brafil, as well the Portuquefes and Dutch as the Natives and Negro's with Bread, which next to Wheat is the best of all, so, that our Soldiers would rather choose to have their al-Iowance in Farinba, than Wheaten Bread out of the Magazines. Since the War in 1645, the price of the Farinha was rifen to three or four Gilders per Bushel, which, as it tended to the utter destruction of the Sugar-Mills, fo, by special Orders from the Great Council of the Dutch Brafil, all the Inhabitants of the open Country were enjoined under a severe penalty to plant a certain quantity of Mandioka Yearly, in proportion to their Abilities; by which means the price of the Farinha was fo confiderably abated, that three Bushels were Sold for two Shillings ready Money, at the Receif, and for less in the Country.

Kaaco or Herba viva.

Brasil produces a certain Herb call'd Kaaco by the Brasilians, by the Europeans in Latin Herba viva, because it seems to shrink, when you touch it, and so it does likewise about Sunset; its Seed has ! been transmitted into Europe, where it grows to its full pertection.

The Kalabaffes are a kind of Pompions. their Rind, it dried, being so thick and strong, as to serve for materials for Cups, Porringers, and fuch like Utenfils. But what is most surprising, is, that they

Dutch who make a kind of Sallet of always grow of a different shape, some 1647. the she Leaves. The Brasilian prefer being long, others round, others oval, 16. the Bread made of the Mandioka-Root some thick before, others at the end. being long, others round, others oval, I fome thick before, others at the end.

They Bloffom and bear Fruit once a Month, the Blossom being Yellow mix'd with Green; the Pulp is white at first, but turns to a Violet colour; They are of a tolerable pleasant taste, but very unwholesome, by reason they are too astringent.

> The Tree, call'd Imakaru by the Bra- The Tree filians, is of a middle fize, its Trunk Imaraku round and its Bark Grey, covered with finall Thiftles of the fame colour. Its Branches sprout forth on the top, with broad Leaves of an Oval Figure, edged likewise with small Thistles or Thorns. There is also another kind of Imakaru, much larger than the former, call'd Kakabu by the Brasilians, and Kardon by the Portugueses. This sprouts forth first of all in the form of a large Octangular Leaf; upon which grow crosswife many Thorns; This produces other Leaves of the same kind, each being three, may fometimes fix Foot lang, and of the thickness of a Mans Arn. By degrees the first Leaf turns into a Woody sib. stance, of a greenish colour, but some. what Spungy; those Leaves that grow next to this Stem are instead of Branches, which produce other Leaves. The Sten bears only one large white Flower, the Fruit of which is of an Oval Figure, and of about twice the bigness of a Hens-Egg, of a dark brown colour, and fit for use. This Tree grows to a great hight, There is also another kind of Imaraku, being altogether the same with the former in respect of its largeness, Blott in and Fruit, except that its Leaves are of

a Triangular Figure. What the Brasilians call Pako Kaatinga, the Portugueses commonly call Canodo Mato; or Wild Reed or Canes. The Stemm or Stalk is like that of other Canes, about an Inch thick, containing a white Marrow or Pith, of a sweetish tafte; on which grow Leaves of Eight or Nine Inches long and Three Inches broad, shaped like a Tongue, smooth and pale Green on one, and covered with a white woolly substance on the other side. The Fruit of which is not unlike a Pine-Apple, about Ten Inches long, grows on the top of the Stemm: it is divided into feveral partitions which opening by degrees, a pale Grey Flower appears betwixt each, containing underneath Twenty or more Grains of a black shining Seed. The Stalk chaw'd draws the Rheum from the Head, and breaks

Kalaballes.

the Stone in the Bladder. It is look'd 1647 upon as an excellent Remedy against the involuntary emission of the Seed, throughout Brasil, and cures it in Eight Davs time.

The Tree Kasjou.

All over Brafil, but especially in the and Fruit Isle of Itamarika grows a certain Tree call'd Kasjui or Kasjou, bearing a Fruit of the same name. Its Leaves are dark Green, broad and round, interspersed with many small Veins. It bears two different Blossoms and Fruits. The white Blossom which appears in the lower Branches, produces a Juicy Spungy Fruit like an Apple; of a very cooling and aftringent quality: But the red Blossom on the top a kind of Chesnut. The Brasilians draw no small advantage from this Tree; out of the Apples they make a very good Cyder, call'd by them Karjoumy, which is fowrish, but if mix'd with Sugar makes it as pleafant as Rhenish Wine, and has this excellency, that tho' it foon fiezes the Head. yet it passes off without any harm. The other Fruit they eat like as we do our Chesnuts.

pay.

Among the products of the West and rinogua-cu or Pa- East-Indies is a Tree call'd Papay by the Javaneses and Durch, and Pinognacu or Mamoesra by the Americans; and sometimes intitled with the Name of the Melontree by our People, by reason of the resemblance of its Fruit to our Melons. This Tree is of two different kinds, to wit, the Male and Female. It grows and perishes again in a short time; its Trunk being fo spungy that it may be cut as easie as a Cabbage Stalk; The Leaves it bears are very large and broad, not unlike our Vine Leaves, growing on long Stalks round the top of the Tree, and covering the Fruit, which hangs in a knot, and is Green at the first, but turns Yellow at last, resembling in shape a Pear, but of the bigness of our small Melons, unto which its Pulp resembles both in colour and tafte, when come to maturity, but whilst they are Green, they are boil'd with Meat, and give it a tart tafte.

The Red Pepper, known by the dated Bld. Name of Brafil Pepper, and call'd Chile il Pepper. Lada by the Brafilians grows on knotty Stalks of about five or fix Foot high; the Rind being a dark Green, diftiuguished with white rings; from whence · shoot forth small crooked Branches of a Hands breadth in length, bearing a small white Flower; which produces a Green Husk, and turns Red by degrees as it Ripens, with a certain Seed within it,

being as hot and biting upon the Tongue ~ as the common brown Pepper, and fo 1647 does the Husk. In the East-Inder they w preserve it and call it Aetzar; and use it raw in their Fish Sawces. In Brafil they cut two or three of these Husks whilst they are Green in Slices, and mix them with Oyl and Vinegar, or fome Limon Juice, to acuate their Appetite; but it is too hot for those that are not used to it; which is allayed by a good quantity of Salt. This kind of Pepper grows likewise in the East-Indies in the Island of Java, in Bengala and feveral other places. Thave feen it also in some of our Gardens in Holland. There is another Shrub which grows frequently in the I aft-Indies, not unlike this in shape and bigness, which bears a Yellow Flower; it is call'd Halika Kaber by the Acabiens or Alkekenge, and fufficiently known in these Parts. The Flower produces a fmall Bladder which contains the Fruit and Seed, they are not fo big as ours. The Indians and Chinefes mix it with a certain Fruit call'd by them Poma d' Oro, Tamatas by the Fortigreses, and Melanfina by the Italians; they also eat it with Chili Lada or Brasilian Pepper. Portugueles cut the Poma d' Oco and the Husk of the Beafilean Pepper in thin Slices, which being mix'd with Oyl and Vinegar they cat as a Sallat, and look upon it as a proper Remedy to cut the rough Flegm of the Stomach, a diftemper very common in those Parts. The Brafilians as well as the Purch chaw this Pepper for the fame purpose, but it is very burning upon the Tongue.

The Sugar-Canes or Reeds, call'd by Sugarthe Brasilians Viba, are the product both Cine or of the West and Fast-Indies; but grow Reds in great plenty throughout all Brafil, but especially in the Captainship of Pernambuko. They are of two different kinds: One bearing finall, the other larger Leaves. The last, which is accounted the best, sprouts up into a long Stem of the thickness of a Child's Arm, the Leaves growing all on the top in a cluster, being of an Oval Figure, and a dark Blue colour. The Rind is distinguished by certain joints or knots; The other kind bears small Leaves from the top to the bottom. The Sugar-Canes are propagated from their finall Sprouts, which being put in the Ground like our Vines, grow up to the height of Twelve Foot; if they are planted in good Soil, and are kept free from Weeds. Six Months after they have been plant. ed, a brown Seed appears on the top,

then it is fit to be cut, for if they stand 6 + 7. longer in the Ground, their Juice diminishes, dries up, and turns sowre. The Juice if taken immediately after it The low is drawn, causes a looseness. Grounds are much more convenient for the planting of Sugar-Reeds than the Hills, especially near the River side, where the Banks are often over-flown by the Stream. There are a certain kind of winged Worms, call'd Guirapeakoka by the Brafilians, and Pao de Galinha by the Portugueles, which are great Enemies to the Sugar-Canes, especially in moist Grounds, where they gnaw and confume the Roots. The Sugar, which is the product of these Canes, is not procured without a great deal of toil and labour, in which for the most part are employed Slaves, under the tuition of certain Overseers, appointed by the Masters of the Sugar-Mills; who were for the most part Portugueses, the Dutch being hitherto not arrived to the utmost perfection in that Art. In the Captainthip of Pernambuko, many fine Ingenho's or Sugar-Mills, with their adjacent Plantations were erected for this purpose, amounting in all to above 100 in number, and the Labourers, Negro's and other African Slaves, thereunto belonging, to near 40000. The whole Yearly product of Sugar of the Dutch Brafil, is computed to be betwixt 200000 and 250000 Chests.

in the year 1642, one Gillin Venant brought some Indigo-Seed from the American Islands into Brasil, who having certain Lands affigned him near the small River Mercera; and being provided with all other Conveniencies by the special Command of the Great Council, erected feveral Plantations for the producing of An.el or Indigo: But it being found by Experience, That the Pilmires confumed most of the Leaves, the said Mr. Venant, by employing many Labourers and Negroes to destroy these Pismires with Burning and Digging, at last so well cleared the Ground, that the Indigo came to its full Perfection, several Patterns of which were fent into Holland. Mr. Venant having made an Agreement with Mr. Chr. flopher Lyershettel to instruct him in the most necessary Points relating to the Coagulating the Indigo, he was treating with the Great Council concerning certain Grounds for the Planting of Indigo, so that there was a fair prospect of bringing this Delign to a confiderable Pertection here, it the same had not been prevented by the intestine War.

The Wild Aniel, which grows in Bra ~ fl in great Plenty, has a great resem- 164 blance to the true Indigo in outward appearance, but affords no good Colours. Some pretend to have seen also a kind of Wild-Cochenille in Brafil, and the Ground would produce good store of Cotton, but that the Inhabitants draw much more Profit from the Sugar-Plantations.

Some Ginger is likewise planted in Drugs. Brasil, but not in such quantities as to be Transported into other Parts, no more than the Mechoaconna, China, and fome other Medicinal Roots; and the Herba de Cubra or Herba de Nossa Senhora, which is lookt upon as an infallible Remedy against the Gravel; and the Root called Paquoquanha, which is the Universal Medicine of the Brasilians. There are also many transplanted hither from other Parts, as Ginger, Tobacco, Rice, Cotton, Turkey-Wheat, Aniel, or Indigo, and the Sugar-Reeds were first of all transported by the Portugueses from the Canary Islands. The Fruits in daily use among the Inhabitants, are, Ananas, Bananas, Mangaba, Akaju, Arakon great and small, Guajaba, divers kinds of Murukuja, Ibapiranga, Mazaxanduba, Akaja, Aratiku, Guitakori, Biringela, Mamaon, Coco-Nuts, and several forts of Indian Figs. The Roots chiefly in use, are, the Batatas, Nhambi, and Umbi, and the Indian Acrons, called Tembi, which are of a delicious Taste.

The whole Country of Brafil is ex- Fertili treamly Fertile and pleafant, being wa- of Brat tered by many Rivers and standing Waters, most of which arise from the Hills. and pass through spacious Plains, the last of which are clayey and marshy Grounds, (called Vargea's by the Portuguefes) which produce all forts of Fruit: but especially Sugar-Canes in great Plenty. Their Meadows and Pasture Grounds do not appear so pleasant in the Summer, as in the Rainy Scason, when they are very green; Wheat and Rye grow foon Rank here, which is occasioned partly by the Nature of the Soil, partly by the heat of the Sun; to prevent which they never let their Grounds lie Fallow, and Manure them with Sand instead of Dung; The same must be obferved with all other Foreign Seeds here, that require to be kept a confiderable time under Ground. In February and March (which is the Rainy and Winter-Season of this Climate) they Sow their Seeds, and that towards Evening, not by Day time, or about Midnight. They take great care not to Plant any thing

### and Travels to BRASTI.

no deep under Ground; for whatever 1647. is Planted beyond the Sun-Beams, selom produces any Fruit, which our People have learned to their Cost. is a remarkable difference betwixt the Seeds and Fruits which are produced on the Hills, and those of the marshy Grounds, as to their time of Ripening; tho' the Coco and Palm-Trees are transplanted here without the least regard to their Age, Bigness, or the Season, and grow very well. Most of their own Trees and Shrubs bear Flowers and Fruit the oughout the whole year, fo that at one and the same time, you enjoy the Benefit of the Spring, Summer, and Winter; The like is observable in the Vines, Citron, Limon, and other Trees, brought by the Portugueses from Angola into Brafil, and in several Roots, Pot-Herbs, and other Fruits, transplanted thither by the Dutch. Those who covet Ripe-Grapes throughout the whole year, do only Prune their Vines at divers times, which produce a fine Grape, and a Wine as sweet as Molosses. The worst is, that they are much infested by the Pismires, which suck all the Juice, and leave nothing but the Husks to the Owners; Several other forts of Trees have been transplanted thither from Holland, which thrive extreamly, and bear very good Fruit.

The standing Waters of Brasil are for the most part covered on the Surface with green Shrubs and Herbs, that they appear rather like Land than Water, and Feed both Land and Water Fowl. At the Entrance of most of their Rivers, (where you meet with vast quantities of Oisters and Crabs) the Country is so overstockt with a certain kind of a Tree, call'd Guaparaba, or Mangle, by the Brafilians, that they render it impassable for Travellers. In short, the whole Brasil is well stor'd with Trees, Shrubs, and useful Woods, there being scarce a place, either in the Vallies, or Rifing Grounds, which are Clayey, or among the Hills, -which don't produce fomething that is useful, and that in such Plenty, that the Portugueses after their first arrival here, were forced to cut their way through these Trees with incredible Pains and The Hills furnish also great Charge. store of Wood, which is of a very good Scent, and is used by the Dyers; as for instance the Brasil Wood, which is from hence transported into Europe.

The Stem or Trunk of this Tree is knotty, of a very agreeable Scent, and femetimes two or three Fathoms thick: Val . 11

Its Leaves are dark-green, and small Thorny at the end, and grows on small 164 Stalks; the Bark, which is about three Inches thick, is generally taken from the Trunk, before it is fitted for Sale: It sprouts from its own Root, and produces neither Blossom nor Fruit. Most of these Trees grow about 10 or 12 Leagues from the Sea side, where they cut them down, take off the Bark, and carry them upon Waggons to the Seashore, from whence they are transported into Europe for the use of the Dyers chiefly; The Brasilians call this Tree for its Excellency's fake, Ibirapitanga. After the Datch had conquered part of Brafil, they found great store of this Wood ready cut and fitted for use by the Portuguefes, who fold it to the Dutch Company; fince which time it was cut down promiscuously by the Portugueses as well as the Dutch, and fuch vast quantities of it were transported in 1646, and 1647, that the Members of the Great Council of the Dutch Brafil, Mr. Henry Hamel, Bullestrate, and Codd, being made sensible of the destructive Methods that were made use of in cutting this Wood, which must in time have tended to the utter Extirpation of these Trees, didby their Proclamation regulate these Abuses. They have another kind of very fine Wood in Brasil, called by the Portugueses, Pao Santo, as likewise those call'd Gitayba, Vio Wood, Massaranduba, Cedar, and divers other Woods fit for Cabinet-Work. The Tree called Tataiba by the Portugueles, the Wood of which, the Portugueses call Pao Amaretto, affords a yellow colour for the Dyers. The Bark of the Tree Araiba is of an Ash-colour, but boil'd in Water gives a Red Tincture. The Tree Jakauranda, or Jaturiba, or the White-Cedar; as well as several other Trees, furnish the Inhabitants with Materials for Building, being very hard and durable. The Brafilians make also Matches and a kind of Hemp out of the Bark of some Trees.

The most Barren Places of Brasil do The Ti produce a certain kind of Trees without bo, or Leaves, which they call Timbe or Tibe; Tipo. out of these they make Hoops, by reason of their Flexibility, and the Bark serves the Ship Carpenters instead of Hemp.

The Brasilians light their Fires by striking two pieces of Wood, of the Trees Their Fi Karaguata Guacu and Imbaiba together, as we do with our Flint-Stones and Iron. The first is a Tree of an admirable Nature: Its Stem grows 14 or 15 foot high, which being come to its full Perfection,

rafil-

bears yellow Flowers on the top, and abundance of large, long and thick Leaver. Out of the Stem they make Sticks to hang their Matrasses on, the Leaves afford the Fishermen stuff for Yarn to make Nets of; and out of the Leaves issues a certain unctuous Liquor, which serves instead of Soap. The Trees and Woods of Brafil are never feen to be covered all over with Leaves at a time; but whilst some cast their Leaves, you see others bring forth new ones; nay, fometimes one Tree is half covered with Leaves, and bare on the other fide. Brafil likewife abounds in Shrubs and Reeds, fome of which creep along the Grounds, whilst others Twist themselves up to the top of the highest Trees; which affords a very agrecable Spectacle at a distance, and a pleasing shadow to Men and Beasts, tired with the Heat, Hunting, or any other Exercise.

Oranges.

Among other Fruits, Brafil produces very fine Oranges of divers Kinds; The other Vegetables, which belides the Mandioka Root, serve for the Sustenance of the Inhabitants, are, Rice, Millet, Patara, Ananas, Bananas, Melons, Pompions, Water-Melons, Cucumbers, Beans, Figs, Bahovas, Marakuja, Mangavas, A-rasaku, Ape, Cabbages, Radih, Lettuce, Pursley, Parsley, Chervel, Car-

The Akani.

rots, C. Nothing is so much in request among the Brasilians, as the Akaju, a kind of Wild Apple, which furnish them both with Food and Drink, being very Juicy; so that this Tree seems by kind Nature to have been Planted here for the peculiar Comfort of the Inhabitants: It spreads its Branches round about in a great compais, but does not grow to that height as many other Trees in this Country: Its Wood, which is very folid, is very fit for the Building of Ships, from whence issues a very clear Gum in the Summer-Season. Its Leaves which are 1ed, resemble those of our Walnut-Trees, especially when they first sprout forth in the Spring, but are of a much finer Scent, which they never lofe but by being Distilled. The Blossom is a Flower confisting of five small Leaves, which grow to the number of about a hundred in one cluster; each of these Flowers has a stalk, with a small head in the middle. At their first coming out. which is in September, they are very white, but turn foon after to a Rose colour; They are very odoriferous, and fill all the circumjacent Grounds with their agreeable smell. This Tree bears a dou-

ble Fruit; viz. an Apple, and a Chefnut: The Apple is of an oval Figure, very Juicy; its Pulp spungy, full of Kernels, and of a tartish Taste. The Juice taints Linen with a certain colour, such as we call Iron-Molds, which is never to be taken out, but returns as often as these Trees stand in Blossoms; It is of a whitish colour after it is first prest out, and tartish, but changes both its colour and taffe by Fermentation, and becomes very strong. The Rind of the Apple. which is very thin, is white, mixt with red. The Chesnut, which grows on the top of the Apple in the shape of a Lambs Kidney, is covered with a thin Skin, over which grows a thick ash-colour'd Shell, full of a hot, sharp, and burning Oil, which bites the Tongue; To correct which, they Roast the Chesnut in the Ashes, break the Shell with a Hammer, and Bat the Pit or Kernel, which tastes better than a common Chesnut, and will keep good for several years. The Brafilians are so fond of this Fruit. that they often fight for it; then they encamp among these Trees, and remove not till they have confumed all thereabouts, unless they are forced thereunto by the Enemy. They number the years of their Ages by this Tree, because it bears Fruit but once a year, which ripens towards the latter end of December or in January, there being none to be found on the Trees after February in Pernambuke. About the time the Sun returns back from the Tropick of Capricorn, it commonly Rains in Brasil, which the Inhabitants call the Rains of Akaju; for, if the same happens to be moderate, they promise themselves great plenty of this Fruit. The Chesnuts are hot in the second degree; if Eaten raw, with Wine and Salt, they taste like Walnuts; but if Roafted or Preserved with Sugar, they are of a delicious taste. The Oil which is taken out of the Shell, is an excellent Remedy against the Hair-Worm; It is hot in the third and fourth degree, and frequently applied to Cancers and other malignant Ulcers. The Gum, powdred and taken in a convenient Vehicle, opens the Obstructions of the Womb. The Juice of the Apple furnishes them with good Cyder.

There are many forts of Palm-Trees Paln to be met with in Brafil, some of which grow wild, some are planted and cultivated by the Inhabitants. Among the first the Palm-Tree call'd Pindava by the Brafilians, which grows very tall, claims the preference, of which there

are whole Woods to be feen in the open 1647. Country. In the more remote and unfrequented places, grows a certain Palm-Tree, called Karanatham and Anachekairi by the Brasilians, and by an Arabick word among the Portugueses Tamar, or Date, which this Fruit resembles. The Tree grows as high as a common Date-Tree, its Wood is Red and very folid, but of no great use. The Bark is Grey, which from the ground upwards to a certain part of the Tree is distinguished by many Scales, which are largest at the bottom, and small by degrees, till about the middle of the Tree they quite disappear; these Scales being nothing else but the remnants of the Branches, which fall off by degrees, as the Tree grows higher; and continue only towards the top, spread round about the Stemm, like the African Date-Tree, but much fine?. Each of these Branches is about two or three Foot long, flat on two sides, and covered with fmall Thorns, they grow to a vast thicknels. At the end of each Branch grows one fingle Leaf, which is very large and Green, pleated like a Fan, and about the middle divided into several other Leaves, like those of the common Date-Tree; each of these last is about two Foot long. Betwixt those Branches, on which grow the Leaves, spring forth other Branches of four or five Foot in length, and these again are full of other white Sprouts, which bear flowers, with three pale Yellow Leaves; These

produce a Fruit of the bigness of an

Olive, which is Green, bitter and not catable, but turn black when they ripen,

which is in February. The Brafilians call this Fruit Trade, and cat it raw; but

our People never took any fancy to it.

With the Leaves they cover their Huts, and make Baskets of them. The Palin-

Tree called Pindava by the Brafilians, has

instead of the Bark a white and rough

Wooden substance, which contains a

Spungy, Sulphurous fubstance, out of

which the Brafilians prepare a strong

Lee. This Tree is for the rest but of

small use, being rather esteemed for Ornaments fake, by reason of its heighth

and fine spreading Branches, which

however furnish the Inhabitants with

Leaves to cover their Hutts, and to make

near their Walks and Arbours, and

round their Churches. The Leaves of

this Tree do not hang downwards like

those of the Coco-Tree, but stand up-

. Baskets of; The Portugueses Plant them

certain Branches, on which hang bunches of Flowers, which produce the Fruit, 1647. refembling in shipe and bigness one of our largest Hen-Eggs, being sharp at the end, and fastned to the bunch on the other like the Pine-Apple The outside is of a Green Yellow colour, inclining to a Chesnut; being composed of a hairy substance like that of the Coconuts, but not near fo thick, scarce exceeding in thickness two Egg-Shells. Under this Shell is an infipid Saffion Yellow Pulp, which however is used by the Negro's, who eat it with Farinha. Within this Pulp is a hard Nut, of an Oval Figure, not unlike the Coco-nut, of the same thickness, but without holes; it contains a Pith or Kernel, as white and big as a Walnut, but is not near fo fweet as the Coco-nut; they are eaten both by the Natives and Strangers, who are furnished with them throughout the whole Year; and called by the Brafilians Inajamiri, i.e. the finall Coco-nut. The Kernels of these Nuts furnish them likewife with a white cooling Oil, which is used instead of our Oil of Roses, and when fresh drawn mix'd among their Sallets, but when decay'd in their Lamps. The Shell affords an Oil of the same nature, but not altogether fo cooling. Out of the top of the Tree flows a fine and Odoriferous Gum, used here instead of Ginn Arabek; They also pick a certain Pith or Marrow out of the top, which has a tafte like our Walnuts, and, when eaten with Bread and Salt, is accounted very nourifhing.

There also grow Coco-Trees in Brafil, Cu call d by the Natives Inapagnara ba, and I. the Fruit Inajaguacu. They are very different from the just now mentioned Pindava Tree, their Trunk or Stem being feldom fliaight, but commonly crooked, fometimes from Seven to Fomteen Foot thick, and Fifty Foot high; it is without Branches, having only litteen or Twenty Leaves round the top, each of Fifteen Foot long. They have also good store of the common Date-Trees both Male and Female. The vast quantity of Pilmires wherewith Erafilabounds, are great Enemies to all the products of Their Grounds, which they endeavour to destroy by Fire and Water; it is turther to be observed, that some Fruits as well as Creatures, which are accounted Venomous in Europe, are commonly eaten in Brafil, as on the other hand certain things are Poisonous there, which are not in Europe. For they have a kind of wight. Just by these Leaves sprout forth Froggs and some Fishes which are ex-

treamly

treamly Poisonous; whereas a certain 647. fort of great Pismires and Adders, Toads, Worms and wild Rats are eaten by the

Natives, without any harm.

The Food of the

The most universal Food of the Brafilians, is the Flour made of the Man-Braitians. dioka Root, call'd by them Vi, and Farinha de Mandioka by the Portugueses, as has been shewn more at large before. They feed also upon the Flesh of several wild Beafts and Birds; Crabs, Crawfishes, Fruits, Herbage; Their Meat whether boil'd or roasted they eat half raw. They boil in Earthen Pots, call'd Kana, which they make themselves. Their Flesh they Roast thus: They dig a hole in the Ground, the bottom of which they cover with Leaves of Trees, and upon them lay the Meat to be roafted, which being covered with the same Leaves they throw Sand or Earth upon them. Upon this they light a good Fire. which they continue till they think it fufficiently roafted. If they hit it right, it eats very well, exceeding in goodness all other roafted Meats, they call it Their Fishes whether roasted Biaribi. or boiled they eat with Inquitaya, that is Salt and Pepper. They boil their Crabs or Crawfishes without Salt, and eat them with Inquiraya. Small Fishes they wrap in Leaves, and Roast them in the Ashes. They take the Flour of the Mand oka Root with their three hindermost Fingers of the Right Hand, and fo throw it into the Mouth; in the fame manner they do with Beans and fuch like things; They eat often, both by Day and Night; they having no fet times for their Meals, without the least noise, or any Drink, which they reserve till after they have done. They feldom use any Spoons, but instead of that their Fingers, or fome Oyster-Shell or other ferves their turn. The Flesh of several wild Beafts is much in efteem among the Brasilians; as for instance, that of the great and lesser Wild-Boars; they have Bakovas, Ananas, Mangaba, Janipaba, a bunch like a Camel on their backs, and are very good Food, as well as the Flesh of the River Pigs, call'd Kapiverres by the Porengueses, which is of a very agreeable tafte.

1 beir Drink.

The most general and most wholsome Liquor used among the Brasilians, is their River, or Fountain-Water, which by reason of its coolness is a great refreshment to fuch as are tired by the Heat. or the Fatigues of other Exercises: This is chiefly to be understood of their to seise the Head, if drunk in any quan-Spring-Water, which, tho' used here in tity; after some time it turns sowre,

in the Guts, or other inconveniencies in the Bowels, but on the contrary occasions a good Appetite, and is soon we evacuated by sweating.

The Waters of the Rivers Paray and Paratybi, are accounted a good Remedy against the Stone and Gout, which is the reason that many arrive to the Age of above 100 Years, who Drink nothing but those Waters, and are never troubled with any of those Distempers: For those who are advanced in Age, are as nice in the different taftes of those Waters, as the Europeans in their Wines; and they look upon those as indiscreet, who use the Waters without distinction. For, fince most of their Springs arise among the high Eastern Hills, they receive no addition either from the Snows, or any Metallick bodies, and being well digested and purged from their Dregs by the heat of the Sun-beams, they are very clear and wholfome; tho' it must be confes'd, that, in the Winter Months some Waters, by reason of the Rains, are not fine and cool, as during the Summer-Season. The Negro's make sometimes a nasty mixture of black Sugar and Water only, without the least fermentation, which they call Garapa; This as it is very cheap, so both Men and Women fit at it for 24 Hours together, spending their time in Drinking, Singing and Dancing, but seldom Quarrel, unless they have conceived some jealouse of one another. Sometimes they add to it some Leaves of the Akaju-Tree, which by reason of their hot quality make it the more heady. The Portugueses and Dutch frequently make a kind of Sorbette of Water, Sugar and Limons. Others pour Water upon certain Herbs, others put a Limon only in Water. But besides these, the Brasilians know how to make Wines or Cyder out of feveral Roots and Fruits, which they Drink at their Merry meetings; especially of the Karaguata, &c. For tho' the Vines here bear Grapes three times a Year, nevertheless are they not sufficient to furnish them with Wine. They make a kind of Cyder, call'd by them Kooi, of the Apple Akaju; These they Stamp in a Wooden Mortar, and squeese the Juice out with their Hands, which, after it is fettled, they strain; it appears at first like Milk, but turns to a pale colour in a few Days; its taste is tartish, and apt great quantities, never causes any griping and makes very good Vinegar.

Wine or Liquor call'd by the Bialilians 1 6 4 7. Apy, is made two different ways: First. the Slices of the Root Apimakakara (a kind of Madioka) are chaw'd by Old Women; till they are as fluid as a Pap; which they call Karaku; This they put in a Pot, and boil it with a good quantity of Water, stirring it continually till they think it fit for expression, which done, they call it Kaviaraku, and drink it luke-warm. Or elfe they take the same Root purged and fliced in thin pieces, which they flamp and boil with Water as before, which produces a whitish Liquor, not unlike our Butter Milk or Whey; They drink it likewise warm. its tafte being agreeable enough; they call it Kacimakaxera; tho' both kinds are generally comprehended under the name of Apy. . The Liquor call'd Pakoby is made out of the Fiuit of the Tree Pakobere. What the l'oyugueles call Vinho da M llo, is a I iquot call'd Abaty by the Brasil ans and mide of Barley or Turkey Wheat, can'd Muz by the Indians; The Liquor Nandi has also derived its name from that excellent Fruit call'd Nana of Ananas, being the strongest of all their Wines or Cyders. There is another fort of Liquor call'd Vinho da Batatas by the Portugueses, because it is made of the Root Baiatas: The Natives call it Jetici. Thus the Liquors call'd Beentingui and Tipiaci are both made out of the Farinha of the Mandioka-Root; viz. of the Bein and Tepiona.

The Brafilians are also great admirers of French or Rhenish Brandy, call'd by them Kacstata, and swallow it very greedily as often as they can come at it. They are no less fond of Tobacco, the Herb of which they call Petima, and the Leaves Petimaoba. After they have dried the Leaves in the Air, they lay them before the Fire, to render them the more fit for cutting. They Smoak in Pipes made of the Shell of the Nut Pindeba, or of the Urukuru.ba, Jocara, Aqua or fuch like; to wit, they cut a hole in one end of the Shell, take out the Kernel, and after they have polish'd them, put a Wooden Pipe, or a piece of Reed in the hole. The Tapoyers use very large Pipes made of Stone, Wood, or Clay, the holes of which are fo big that they contain a handful of Tobacco at a time. Sometimes the Brasilians make use of our European Pipes, call'd by them Amrupetunbuaba, and Broken Katunbaba by the Portugueses, and Katgebouw by the Dutch. Whenever the Ta-Poyers (especially those inhabiting the Vol. 11.

Villages, descended from the Tapoyers call'd Kariri) prepare the Liquors Akavi 1647 and Apy, it is done at the same time: Then a Day being appointed for a general merry meeting, they meet early in the Morning at the first House of the Village they belong to, where they confume most of the Liquor, and make themselves merry with Dancing; This done they go to the next House, where they play the same Game, and so from House to House, till nothing be left or they can Drink no longer. When they find themselves overcharged with Liquor, they Spew, and fall to drinking again, and thus he who can Spew and Drink most, is accounted the bravest Fellow of the Company.

On the Coast of Brasil.

On the North-West Coast of Brasil, Salt-Pitt. are feveral confiderable Salt-Pits: That near the House, called the Defert is about three or four Leagues distant from the River Aguarama, of which one Branch extends to the East, and discharges its Water in this Salt-Pit with a Spring-tide, which is here commonly with the New Moon. It is about 550 Paces from the Sea-shore, and receives no other Water but from the River Aguarama. There is no Bay or Harbour near it, but only a flat fandy bottom for about half a League distance from the Shore, where you may Anchor at three Fathom deep. Land-Wind which constantly blows on this Coast, c.mmonly ceases towards evening, so that the Vessels take the opportunity of the night to Load Salt. This Salt-Pit produces every month a certain quantity of Salt, provided they be careful to thut their Sluces as foon as the same is fill'd with Water, for else they are in danger of losing what they had got before, by the next high-Tide. To the East of this Salt-Pit are the famous Rocks call'd Baxos, which at low Water may be feen from thence; they extend about three Leagues deep in the Sea, but don't begin till about a League from the Shoar, betwixt which and the Rocks, there is a passage, where you have ten foot depth at low Water. It Ebbs here with the lowest Tide about eight Foot, and a West-South-West-Wind raifes the Water to the highest.

About five or fix Leagues to the West of the House call'd the Desert, is the great Salt-Pit Karwaratama, which receiving its Water from the Sea, and being detained by Sluices, produces very good Salt in three Weeks time. Five Leagues further to the West is the River

Maritou: 4,

Maritonva, the fecond in rank in those Western Parts, but has not above twelve Foot Water at high Tide. On its East point, not above half a League within the Mouth, is a very convenient Salt-Pit: These Salt-Pits are computed to be manageable with the assistance only of 10 or 12 Negroes, 10 Christians, and about 30 Brafileurs, and to afford 2000 Tuns of Salt per Annur, which may be traniported from thence into the other Parts of the Dutch Brafil, in Small Barks, during the Summer feason. About half way betwirt Rio Grande and Stara, as likewife in Siana, near the River II at :nien, are likewise several Salma's or Sait-Pits.

Ir Askel F Braitl.

The chief Traffick of Brafil confifts in Sugar, Brafil-Wood, and fuch like; as alfo in Tobacco, Hides, Preferres, Ginger, and Cotton, which grows Wild here; Some Indigo was likewise planted there before my departure; but among thefe, the Sugar and Brafil-Wood are Staple Commodities. For fince the Tobacco began to be transported into Holland from the American Islands, the Planting of it was neglected in Brafil, where Labourers Wages being excessive high, they could draw much more profit from the Sugar, of which, according to computation, betwixt 20000 and 25000 Chests were yearly made only in the Sugar-Mills of the Dutch Brafil, if the Harvest proves very good.

711 1 0pling of Brant.

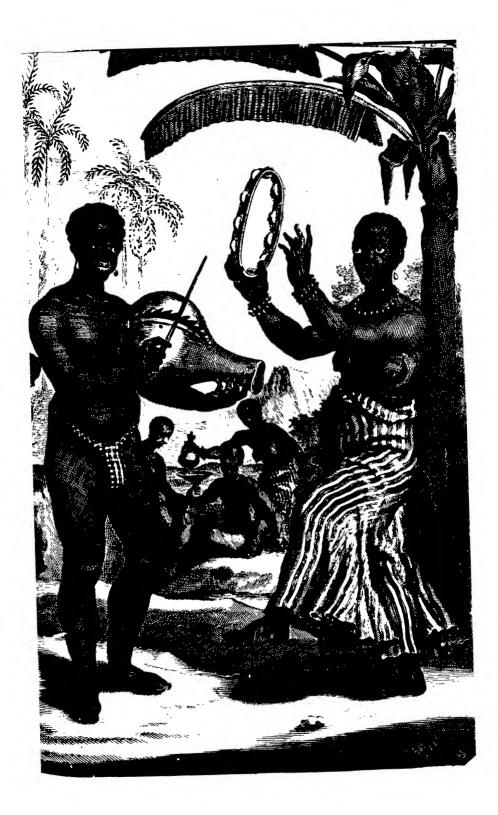

The Inhabitants of Brafil may at prefent be divided into Free-born Subjects and Slaves; and these again consist of divers Nations, both Natives and Foreigners. The Free Inhabitants of Brafil were the Dutch, Portuguefes, and Brafilians, the last the Natives of the Country. But the Portugueses did not only furpass all the rest, at least ten to one in number, during my abode in Brafil, but also were in possession of all the Sugar-Mills and Lands, except what was possess'd by a very few Dutch, who had applied themselves to Sugar Planting, but were for the most part ruin'd by the intestine War, being forced to leave all Lee Inha- behind them in the Country: Besides in all of those of the Free Inhabitants, who made it their Business to Manure the Grounds, there were many Merchants, Factors, and Handycrafts Men: The Merchants fold their Commodities generally with vast profit, and would have questionless been Rich Men, had they not vented their Goods upon Credit to the Portuqueses, who were resolved never to Pay them, as the event has sufficiently shewn. The Handicrafts Men were able to get ~ three, four, five, nay fix Gilders a day, 164 fo that many return'd very rich to Holland. Those that kept Publick Houses and Chandlers Shops were likewife great Gainers here, and carried off abundance of ready Money. The Officers in the Company's Service, whether Civil or Military, were likewise punctually paid, which made many who had lived in the Country, before the beginning of the Civil War, and had ferved the Company before, take Service again, who were all entertained according to their refpedive Qualities, and former Stations.

Among the Free-Inhabitants of Brafil that were not in the Companies Service, The Ich the Jews were the most considerable in number, who had transplanted themselves thither from Helland. They had a vaft Traffick, beyond all the reft, they purchased Sugar-Mills, and built stately Houses in the Receif. They were all Traders, which would have been of great Confequence to the Dutch Brafil. had they kept themselves within the due Bounds of Traffick.

The Slaves of Dutch Brafil were either The Sl Negroes of Natives of the Country; the of Bra last of which were either bought in Maranhaon, being Prisoners of War, or from the Tapoyars, who likewise had made them Captives, and otherwise, according to their Custom, would have put them to Death. For, it being resolved immediately, at the first Entrance of the Dutch in Brafil, that none of the Natives should be made Slaves, (except they were either Bought from the Tapoya's, or brought trom Maranhaon) the Brafilians were fettled in certain Villages to enjoy their own Liberty, under certain Limitations, and Permission was given them, to assist the Portugueses in the Management of their Mills and Grounds, for certain Wages appointed for that purpose; by which means many Alicas or Villages were fill'd with Brafiliars in Parayba, and Rio Grande, who during the time of our Government enjoyed the Sweets of a perfect liberty.

Vast Numbers of Negroes of divers Nations were entertained in the Recesf, and the open Country, for the Manuring of the Ground, and Working in the Sugar-Mills of the Portuguefes, which couldnot be done without them, by reason of the extremity of the Heat of the Climate, and the incredible Toils they are fain to undergo; fo that in my time near 40000 Negroes were employed in the Sugar-Mills betwixt Kio Grande and St. Francisco. Most of these Negroes

Brant.

are brought hither from the Kingdoms of Congo, Angola, and Guinea; A black I fhining Skin, flat Nofe, thick Lips, and fhort curl'd Hair, is their chief Beauty. The luftieft and most laborious used in time of good Trade, to be Sold in Brafil for 70, 80, or 100 pieces of Eight, nay fometimes for 1400 or 1500 Gilders, but these understood something more than ordinary: But when Trade began to decay, they were Sold for 40 pieces of Eight. There was scarce a Hollander of any Substance, but what had several of They are most miserably these Slaves. and beaftly treated by the Portuguefes, tho' at the same time it must be confes'd that it is absolutely necessary, they should be kept under a strict Discipline: For they are full of Rogueries, Superstitious to the highest Degree, and Sorcerers. they would often pretend to tell us what Ships were at Sea from Holland bound for Brafil, tho' they were yet on the other side of the Line, and how to recover stolen Goods. I remember, 1 happened once to be at a Friends House of mine, when I saw an old Negro enter the Kitchen, who came thither to Cure a Negro Slave of his Illness, which he told us was occasioned by Witchcraft. He made the Patient rife from his Chair, and taking a piece of Wood from the Fire-Hearth, he ordered him to lick three times with his Tongue, that end which was burning Hot with the glowing Coals. The same end of the Wood he afterwards extinguish'd in a Bason of Water, and rubb'd the Coals in it, till it turn'd as black as lnk. This he ordered the Sick Negro to drink off at a Draught, which he did accordingly, and was immediately scized with a slight Griping in the Guts. This done he rubbed both his sides, and taking hold with his Hand of a piece of Flesh and Fat above the Hip, he made an Incision there, with a Knife, he pull d out of his Pocket, of two Inches deep, out of which he drew a Bundle of Hair and Rags, with a little of the black Water that was left, he washed the Wound, which foon after was healed, and the Patient Cured. They are very dextrous at Swimming and Diving, and will fetch a single piece of Eight from the bottom of the Sea, where it is very deep. They are also excellent Fishermen, and get a great deal of Money by it. They tie three or four great pieces of Wood together, this they mannage with one Oar, and upon it go a good way into the Sea, where they catch great quantities of Fish

with their Hooks, and fo return. It ~ happened in my time, that a certain Ne- 1647. gro, who was very expert in Fishing. was Sold three times, in a little while; This he took so much to Heart, that the next time he went thus out a Fifhing, he tied a Stone to his Leg and drowned himself. Another Negro having conceived a hatred against his Master, cut his Throat, cut out his Tongue, and made a House-of-Office of his Mouth; according to his own Confession; he was broken alive upon the Wheel, which he endured with an incredible obstinacy. A Negro Woman was brought to Bed in my time, of a Child, the Hair and Skin of which were not black, but Red. I faw also a Young Lad, Born from Negro Parents, whose Skin was white, and his Hair and Eye-brows the like, but curl'd, with a flat Nose, like the other Negro's. Sometimes I have feen Old Negro's with long Grey Beards, and Hair, which looks very fine.

per Names, to wit; The Tubinambos,

The Natives of Brafil confift of di- Iha Brafivers Nations, distinguished by their Pro- hans.

Tobajaras, Petiguaras and Tapuijas, or Tapuyers, or Tapoyers. The three first use one and the same Language, and differ only in the Dialect; but the last are fubdivided into several Nations, differing both in manners and Tongue. The Brafilian-Men, which lived among us and the Portuguejes, are middle-fized, ftrong and well made, with broad Shoulders. They have black Eyes, a wide Mouth, with black cuil'd Hair, and a flat Nose; the last of which is not natural to them, but the Parents, looking upon it as a great Beauty, squeeze their Childrens Nofes flat, whilft they are very Young. They Paint their Bodies, and some likewise their faces with divers Colours, they have generally no Hair about the Mouth; the' fome have black Beards. Their Women are likewise of a middle Stature, well Limb'd, and not ill featur'd; they have likewife a black Hair, but are not Born black, but by the heat of the Sun-beams, acquire by degrees, a Yellow Brown Colour. The Brafilians come foon to maturity, and arrive to a great Age, and that without Diftempers; they also seldom become Grey; which is likewise observable in many European Inhabitants here, who come to the Age of 100 or 120

Years. This must be chiefly attributed to the temperature of the Climate,

which is such, that in former times many

Spaniards that laboured under some ling-

ning Diftemper, whether in Spain or the 1647. East-Indies, used to come to Brasil to partake of the benefit of that excellent Air and Water; 'Tis true, most of the Children of Foreigners are troubled with lingring Sicknesses, fo that scarce one in three arrives to a state of Manhood; but this must not be attributed to the Air, but rather to the bad non-Few Criples' or crooked People are to be met with among the Brasilians, they being generally very Braight and nimble, which is the more admirable; because they never do their Children up in Swathling Cloaths, except their Feet, looking upon it as unwholfome.

> Before the Dutch got footing in Brasil, the Fortugueles had made all the Natives their Slaves, and look'd upon it as the greatest piece of Policy, quite to extirpate them; which they did fo effectually, that whereas about 100 Years ago the Captai: ships of Rio Grande alone, could raise cococo Fighting Men, scarce 300 were to be met with in 1645, and 1646. which had created a mortal hatred in the Brasilians against the Portuguefes; tho' it must also be confess'd that the late War, and some Epidemical Distempers did sweep away many of the Natives. The remainders of them liv'd in certain .-Idens or Villages, assigned them for that purpose, where they had their Plantations; besides which they ferved the Portugueses in their Sugar-Mills, for a certain Monthly Pay, which furnished them with Clothes and other Necessaries. Their Huts are made only of Wooden Stalks, covered with Palm-Tree Leaves. They can't endure the Yoak of Slavery, nor any toil, especially the Tapoyers; They live very quietly among one another, unless they get Drunk, when they fometimes Sing and Dance Day and Night. Drunkenness is a Vice belonging to both Sexes here, of which they are so fond, as to be past remedy; tho' this occasions often Quarrels and other chormous Vices among them. They are likewise much addicted to Dancing, which they call Guan; they have several ways of Dancing, one of which is call'd Urukapi; they commonly another Guarbipaie, and a third Guaibiguaibibuku. They will Sleep sometimes

keep a Fire Day and Night, in the Day to dress their Victuals, in the Night, to 164 allay the rawness of the Air, which here is colder than in most parts of Europe, because Day and Night is almost of an equal length here, throughout the Year.

The Inland Brafilians of both Sexes, Their go quite naked without the least cover-Clearbi ing. But those inhabiting nearer to the Sea-shoar, who converse with the Dutch and Pertugueses, wear only a Shirt of Linnen or Callico; tho' in my time, fome of the chiefest among them, began to take a Pride to Cloath themselves after the European manner. The Wife constantly follows her Husband, whereever he goes, even in the War. He carries nothing but his Arms, but the poor Woman is loaden like a Mule or Sumpter-Horse. For, besides a great Basket which is tied to her back, (call'd by them Parigua) she has another upon her Head, with all the Houshold Stuff in it; or a great Basket with Flour; befides which feveral other smaller Vessels hang on both fides, wherewith they take up Water for their Drinking. The Child is carried in a piece of Callico, which is fastned to her, and hangs down from her Right Shoulder. It lies there with its Legs wide open, one being stretch'd cross the Mothers Belly, the other over her Shoulder. After all this she carries a Parrot or Ape in one Hand, and leads a Dog in a String with the other. Thus they proceed on their Journey, without any further Provision, except a fmall quantity of Farinha; The Hedge or open Fields serve instead of Inns, which furnish them with necessary Food, as the Rivers and Springs with Drink; and so does the Tree call'd Karageata, which contains always fome Rain-water within the hallowness of its Leaves, to the great Relief of Travellers, who in some barren places, do often not meet with a River or Spring for twelve Leagues together. Towards Night they hang their Hammocks on Trees, or else fasten them to Stalks ;... Neatly they make a Fire to Dress their Victuals, and against the Rain defend themselves with Palm-Tree Leaves: When they are at home, the Husband Sing whilst they are Dancing. The goes commonly in the Morning abroad, Children divert themselves with divers with his Bow and Arrow, to Shoot forts of Games, one is call'd Kurupirara, some Wild-Beast or catch Birds, or else to the Sea-fide or next River a Fishing, whilst the Women are employed in the a whole Day and Night, and would Plantations; some Women go abroad not fir then, if they did not want with their Husbands and carry home Victuals. Near their Hammocks they the Prey. The Wild-Beafts are caught

by them in a different maner; some they 47. Kill with Arrows, others they catch in Pits dug for that purpose, and covered with the Leaves of Trees, under which is hidden some Carrion, the scent of which draws them to the Pit; This they call Petaku. They make also certain Wooden Traps, and use divers other ways of catching the Wild-Beasts, each of which they distinguish by their proper names. To catch Birds they use three forts of Snares or Nets; call'd by them Jukana; The first fort catches the Birds by the Feet, this they call Jukanabiprara; The fecond entangles them by the Neck; which they call Jukanajuprara; The third ensnares their Bodies, call'd by them Jukanapitereba. They kill the . Fishes with Arrows, or catch them with Fishing-Hooks, their baits being commonly Worms, Crabs or some small Fishes. I hey bait the Water where they intend to Fish, with the Leaves of Japikai, or with Timpotiana, Tingny, or with Tin- . guiri; sometimes with the Fruit call'd Kururuage, the Root Magui, or the Bark of the Tree Anda, which make the Fish fwim on the furface of the Water, like dead, when they take them with a kind of a Sieve, call'd by them Urupema, Vol. II.

made of Cane, or Reed, which they call Uruguiboandipia. Their Sea-Fish 164 they catch with Iron Hooks, the bait ova being some Carrion; they go a good way into the Sea, only upon three pieces of Wood, fastened together, which they call Igapeda, and the Portugueses Jangada; The Wood is commonly of the Tree Apiba.

The Brasilians are not burthened with Their much Houshold-Stuff; Their Hammocks Houshola being their chiefest care in this kind; stuff. they call them Ini, are wrought of Cot-

ton, like Net-work, of about fix or feven Foot long and four broad. When they are going to Sleep, they fasten them either to two Beams of their Huts, or else in the open Air, to two Trees, and some distance from the Ground, for scar of some obnoxious Creatures, and to avoid the pestiferous exhalations of the Earth. The Tupoyers, call'd Kurirs have very large Hammocks, of twelve or fourteen Foot long, which contain four Perions at a time. The Portuguese Women make fome very fine Hammocks, wrought with divers Figures in them. In lieu of Difhes and Cups they use the Kalabaffek, cut in the middle, which are painted without, with a certain Red colour. Qq

call'd Uruku, and within with black. Their Cans. Cups and Mugs, are likewife Kalabaffes of divers kinds called Kuite, Jaroba, and Kribuka. One of the biggest of these Kalabasses hold 30 or 35 Quarts; this the Brafilians call Kuyaba; but when cut through the middle, it is called Kuipeba. The poorer fort make certain Knives, they call Iruque, of Stone, as also of Cane, which they call Taqueaquia; but the better fort use Ducch Knives. Their Baskets they make of Palm-Tree Leaves, they call them Patigua; they have also some made of Reed or Cane, these are with one general Name call'd Karamemea. They make also large broad Baskets of Reeds and Branches twisted together: These they call Panaku, and are chiefly used for the carrying of the Mandioka Root. In their Journeys they always make use of the Patigua, but the Panaku is used by the Slaves and Negroes in the Receif, for the conveniency of Carriage.

ir WeaThe Arms of the Brasilians are only
Bows, Arrows, and Wooden Clubs.
Their Bows, which they call Gurapara
and Virapara, are made of very hard
Wood, called Guraparaba and Virapariba: The Bow-strings are made of
Cotton twisted, and by them call'd Guirapakuma; The Darts they call Uba, and
are made of Wild-Cane. The Points of
these Darts are either of Wood hardned,
or of Fish Teeth call'd Jacru, or of
Bones or Cane well sharpned; some
have several Points, others but one.

Being not in the least acquainted with uccounts. Arithmetick, they compute the number of their Years and Age by the Chefnuts which Grow on the Fruit Akaju, which Chefnuts they call Akajuakaya, as likewife Akajuti and Itimahara, of which they lay one by every year, this Tree producing Fruit but once each Season, viz. in December and January. They begin the Computation of their Years with the Rise of a certain Star, call'd by them Taku, or the Rain-Star, which is always there in May; they also call

the Year by the same Name.

The most barbarous of the Brasilians inhabiting the Inland Countries, scarce know any thing of Religion, or an Almighty Being. They have some Knowledge remaining of a general Deluge, it being their Opinion, That the whole Race of Mankind were extirpated by a general Deluge, except one Man and his own Sifter, who being with Child before, they by degrees repeopled the World. They know not what God is,

nay, they have no Word expressing the same, unless it be Tuba, which signifies 1 6 as much as fomething most Excellent above the reft; Thus they call the Thunder Tubakununga, i. . A noise made by the Supream Excellency; for Akununga implies as much as a Noise. They are unacquainted with Heaven or Hell, tho' they have a Tradition among them. That the Souls don't Die with the Bodies, but that they are either transplanted into Devils or Spirits, or elfe enjoy a great deal of Pleasure with Dancing and Singing, in some pleasant Fields, which they fay are behind the Mountains. These Fields are enjoyed, by all the brave Men and Women, who have kill'd and eaten many of their Enemies; but fuch as have been Idle, and never did any thing of moment, are tortured by the Devil, unto whom they give many Names, viz. Anhanga, Jurupari, Kurupaci, Taguaiba, Te-moti, Taubimama. They have however fome fort of Priests among them, whose Business is to Sacrifice, and to foretell things to come, these are especially confulted when they are to undertake a War or Journey: They call them Paye and Pey. They dread Spirits to the highest degree; they call them, Kuripira, Taguat, Macachara, Anhanga, Jurupari, and Marangigona, tho' under different Significations: For Kuripari implies as much as the God of the Mind or Heart. Macachara the God or Patron of Travellers: Jurupari and Anhanga, lignifie the Devil; Marangigona implies as much as the Manes or Remainders of the Soul after Death; which are fo much dreaded by the Brasilians, that some of them apon an imaginary Apparition of them, have been struck with sudden Death. They don't perform any Worship or Ceremony to those Spirits, except that some pretend to appeale their Wrath by certain Prefents they fasten to certain Stakes fixt in the Ground for that purpole. Some of the Brasilians acknowledge the Thunder for the Supream Being, others the Leffer Bear in the Firmament, others some o-The Posignaras, a Nation ther Stars. among the Brafilians, are accounted fuch Sorcerers, that they Bewitch their Enemies even to Death: They call this manner of Witchcraft Anhamombikeab. The Brasilians that lived among the Portugueses and Dutch, did in some measure tollow the Christian Doctrine, but so coldly, that few, when they come to an advanced Age, shew much Zeal for it; because the Fundamental Articles of our Faith, are not cally imprinted in them,

ir Reion.

unless in their tender years, and when 4647. they are remote from their Parents. However feveral of the Dutch Ministers, viz. Mr. Dorefleer, and after him Mr. Thomas Kemp, have had good success in converting many of the Brasilians in the Aldeas or Villages, where they Preached, the last of these two being well versed in the Brasilian Tongue. Neither were Dionysius Biskareta, an honest old Castilian, and Johannes Apricius, less remiss in performing their Duty, to instruct these Infidels. There were likewise three Durch Schoolmasters among them, who taught their young People to Read and to Write, but these were forced to leave their Aldeas or Villages during the last intestine Commotions raised by the Portuqueses.

Their Drftempers.

Many Distempers which are common and Reme- in Europe are unknown in Brafil: They use nothing but simple Remedies, and laugh at our Compositions. They are very deatrous in applying their Remedies, especially their Antidotes: They draw Blood by Suction with Horn Cups, by Scarification, or opening a Vein; instead of a Lancet, they use the Tooth of a Lamprey, call'd by them Kakaon; without which no body stirs abroad. So foon as any one of their Acquaintance is faln ill, they all meet, each offering his Remedy, which he has found good by his own Experience: Then they begin to cut and flice the most musculous Parts of the Body, either with the Thorns of the Tree Karnaiba, or with Fishes Teeth, till they have drawn as much Blood as they think fit; and for that purpose fuck the Wounds with their Mouths, by which means they pretend to draw all ill Humours from the affected part. miting they procure by means of the Leaves Karnaiba, which being twifted together, they force down the Patients Throat. When all these pretended Remedies prove ineffectual, they proceed to no others; but after some Consultations, quite despairing of his recovery, knock him on the Head with their Clubs, dooking upon it more glorious, to be thus bravely delivered from their Mifery, than to expect Death till the last gaip. They Exercise as much Barbarity upon the Dead Carcasses of their Friends as of their Enemies; upon the first out of Love, against the last out of Revenge; for, they tear them to pieces with their Teeth, and Eat the Flesh like a dainty

The Brasilian Women are extreamly Fruitful, have very easig Labours, and

rarely Miscarry: For no sooner is a Woman delivered, but up the gets to the 1647. next River, and without any further U help, Walhes her felf there: In the Their mean while the Husband keeps the Bed bearing. for the first 24 Hours, and is made as much of as if he had been lately brought to Bed. The Mothers lament the Death of their Infants, with Howling and Crying for three or four days.

They receive their Friends after a long How they Journey with open Arms and Tears, and welcome beating their Foreheads against their their Breasts, in remembrance of the Missor- Friends. tunes they have undergone during their absence. Tho' the Brasilians were always supposed to be descended from the Race of Men Eaters, yet by their Conversation with us, and other Nations, many of them have laid afide their Barbarity, and are become as affable and civilized as

most of the European Nations.

The Tap yars inhabit the Inland Coun-The Ta try of Brafil to the West of these Coun-povare. tries in the possession of the Portugueles and Duich, betwixt Rio Grande, and the River Stara, as far as Rio St. Francisco. They are divided into feveral Nations, distinguished both by their Language and Names: For the Ta oyars bordering upon the utmost Confines of Pernambeko, are called Kariri, under their King Cerioukejou; the next to them the Karirivalu, whose King was Karapeto; then the Kariryon, and so further the Tararyon: the last of which were best known unto us, Janday or John Dumy being their King; tho' fome of them lived under the Jurisdiction of one Karakara. vers were govern'd by other Kings. viz. Prityaba, Arigpayen, Wahasewajae, Tsering, and Dremenge. Those under King John Dawy inhabit to the West beyoud Rio Grande, but change their Habitations pretty often : About November. December, and January, when the Fruit Kajon's begins to ripen, to come towards the Seafide, because little of it is to be met with in the Inland Countries. The Tapeyars are very tall and strong of Body, exceeding both the Brasilians and Dutch both in Strength, and Tallness by the Head and Shoulders. They are of a dark brown colour, black Hair, which hangs all over their Shoulders, they only Shaving it on the Forehead as far as to the Ears. Some are Shaved according to the European Fashion; the rest of their Bodies they keep without Hair, even without Eye-brows. Their Kings and great Men are diftinguished from the vulgar by the Hair of their Heads, and

o their Nails; the first their Kings wear 5. Shaved in the shape of a Crown, and have very long Nails on their Thumbs; but the Kings Relations or other Officers of Note, wear long Nails on all their Fingers, except the Thumbs; for long Nails is accounted a peculiar Ornament The Tapovars are very among them. strong; Prince Maurice being one time in a Humour to try their Strength and Skill in Fighting with a Wild Bull caused one to be brought within his outward Court, which was furrounded with Pallisadoes, in order to engage two Tapoyars appointed for that purpote. There was a great Concourse of People to see this Spectacle, when on a sudden two Tapoyars (the rest with their Wives being only Spectators) came in stark-naked, without any other Arms but their Bows and Arrows. The Bull faw them no fooner

enter, but he made towards them, who c being extreamly nimble, avoided the 164' ftroaks he made at them with great dexterity, and in the mean while so gall'd his Flanks with their Arrows, that the Beaft roar'd most terribly, and being all in a Foam, fet upon them with all his vigour; which they avoided by retiring every foot behind a Tree that stood in the middle of the Court, and from thence continued to pierce his sides with their Darts, till finding the Beaft begin to languish by the loss of Blood, one of the Tapoyan got upon his Back, and laying hold of his Horns, threw him upon the Ground; and being seconded by his Comrade, they both kill'd the Bull, roasted him under-ground, with a Fire above it, according to their Custom, and feasted upon the Meat, with the other Tapoyars there prefent

The Tapoyars of both Sexes, from the thing. King to the common Fellow, go quite, the rest of the Brasilians inhabiting the naked; only that the Men hide their Privities, by tying the Yard in a little Bag or Net made of the Bark of Trees; This they close up with a small Ribon, call'd Takeaynhaa; when they want to Pifs they untie it, and are more Cautious in exposing their Privities, than some of

the Europeans: In the fame manner du Inland Countries. The Women of the Tapoyers cover their Privities only with a handful of Herbs, or a small Branch of a Tree with the Leaves on them: This they thrust barely under a small Cord or Rope which is fastned round their middle like Girdles: In the same manner

7

they cover their Backlides, but so care-7. lefly, that both before and behind, great part of both is exposed to view; they change it every day. The Men wear also a kind of Garland made of the Feathers of the Bird Guara or Kaninde, upon their Heads, from which certain Feathers of the Tail of the Bird Arara, or Kamud, hang down behind upon the Back; Some only tie a Cotton string round their Hands, in which some red or blue Feathers are fastned behind; this they call Akanbuasaba. They have also Cloaks made of Cotton-Thread, and Woven like a Net; in each of the holes they stick a red Feather of the Bird Guara, and intermix them with black, green, and yellow Feathers of the Birds Aakukaru, Kazınde, and Arara, which lie as close together as Fish Scales: There is a kind of Cap on the infide of this Cloak, which with the rest covers the Head, Shoulde: s, and the Body, fomewhat below the middle; so that it is worn both for Ornament and Conveniencies fake, it being proof against the Rain; they call these Cloaks in their Tongue, Guara Abuku. They also fasten certain Combs of Birds, with Wild Honey, to their Foreheads; these they call Aguana.

If their Fathers or Mothers die, they pull every Hair out of their Heads; They have holes in their Ears, so big, that you may thrust a Finger into them; in this they wear either a Bone of an Ape, call'd Nambipaya, or else a piece of Wood, wrapt up in Cotton-Thread. The Men have holes in their under Lips, in which they wear either a Crystal, Smaragd or Jasper of the bigness of a Hasel-Nut: This Stone they call Metara, and if it be green or blue, Metarobi; but they are most fond of the green ones: They have also holes in their Cheeks on each side of the Mouth; in these the Married Men wear a piece of Wood of the bigness and thicknels of a good Goofe-Quill: Sometimes they wear a Stone in it, called Tembekea-reta: In the holes of their Nostrils, fome have also such like sticks of Wood, which they call Apiyati: Their Bodies are all over painted with a certain Juice of brown colour, squeezed out of the Apple Janipapa; this is even used among the Women and Children. Besides this, they stick Feathers of divers colours, with Wild-Honey or Mastick, to the Skin of their Bodies, which make them appear at a distance like large Birds; this they call Akamengui. Thus they adorn their Arms with Garlands made of red and yellow Feathers of Several Birds. Vol. II.

call'd Aguamiranga; sometimes they mix ~ Corals among them, which they call A- 1647 They make also a kind of V rakoaya. Bracelets of the Rind of the Fruit Agnay, these they wear round their Legs, and make a noise when they are a Dancing. Their Shooes are made of the Bark Kuragua, and call them Mapakabas. Some Nations of the Tapoyars use no Bows or Arrows, but throw their Darts with their hands, but the Kariri have Bows. Their Clubs are made of very hard Wood, are broad on the top, and full of Teeth or Bones, well sharpned at the end. Round the handle they wind a piece of Callicoe, or fome other Stuff, and at the end a bufh of Feathers of the Tail of the Bird Arara; fuch another bush is fastned round the middle; they call them Aurabebe, and Jutirabebe. Their Trumpets, which they call Kanguenka, are made of Mens Bones; but those called Noumbugaku, which are much larger, are of Horn ; they have also another fort made of Cane, called Meumbrapara. The Tapopars are not fo good Soldiers as the rest of the Brasilians, for upon any smart Encounter, they train so their Feet, and run away with ness. They neither Sowia much e emmon as the Mandioka Food being Fru Wild-Beasts, an

Among all only fond of a certain kind of wild Mandoka-Root, which tries up to the height of a small Tree. It stem and Leaves resemble the other Mandoka-Root, but it is not near to good; The island Bradians call it Cagangar and but those interest ting near the Scathore Cangangardiba.

They cat also Mens Field a for if a Wo-

which they t

They eat also Mens Fleth, for if a Woman happens to Miscarry they eat the Child immediately, alledging, that they cannot bestow a better Grave agon it, than the Belly, from whence it came. The Tappyrs lead a kind of Vagabond Life, like some of the Arabasi, though they always remain within their certain bounds, within the compass of which they change their Habitations according to the different Seasons of the Year; they dwell for the most part among the Woods, and live upon Hunting, in which perhaps they excel all other Nations; for they will Shoot a Bird slying with their Arrows. So soon as a Woman has Conceived, she abstains from her Husband; after she is brought to Bed, she goes into the next Wood, where she cuts the Childs Navil string,

W

with a Shell, boils it afterwards with 647. the After-burthen, and eats them both. She washes her self and the Child every Morning and Evening, neither does her Husband keep her Company, as long as she gives Suck, unless he has but one Wife. If a Woman be discovered to have had an unlawful commerce with another Man, her Husband turns her away, but if they are catch'd in the act. he may kill them both. The Mothers take extraordinary care, that the Nuptials of their Daughters are not confummated till after they have had their Monthly times, which they give notice of to their Physicians, and these to the King, who then gives them License to go to Bed with the Bridegroom, who pays his acknowledgment to her Mother, for the care she has taken of her Daughter. If a Young Maiden be Marriageable, and yet not courted by any, the Mother Paints her with some red Colour about the Eyes, and thus carries her to the King, who orders her to fit down near him upon a Carpet, and blows the Smoak of Tobacco in her Face. After which he thrusts his Yard into the Womans Privities, and if any Blood comes forth, he licks it up, which is esteem'd a singular Honour among them. For the rest of the Tapoyers, are the worst of all the other Brasilians, being ignorant of any thing that relates to God or Religion; neither will they receive any Instruction of that kind. They have certain Priess or ratherSorcerers, who pretend to foretel things to come, and to raise Spirits, which they say appear to them in the shape of a Flye, or any such like Insect: When these Spirits disappear, the Women make most horrible cries and lamentations, in which confifts the main point of their Devotion. They avoid Night journies, for fear of Serpents and other Venomous Creatures, neither will they fet on a Journey till the Dew be dried up by the Sun-beams. Several Nations of the Tapoyers, especially those under King John Durry, liv'd always in a good correspondence with the Dutch, unto whom they afforded at divers times confiderable Assistance; they did not submit to their Jurisdiction, but were governed by their own Kings. King John Duny had Sixty Children by Fifty Wives, tho' iometimes he had not above Fourteen Wives at a time; These Tapoyers having a mortal hatred to the Portugueses, used to kill them wherever they could meet with them. And thus much may suffice concerning the Manners, way of Living,

Cloaths, &c. of the Natives of Brasil; I will now proceed to give you an account 1 6 of my Voyage back into Holland.

Being sensible, as I told you before, The that things grew worse and worse every stors Day with us, here, I with much ado got turn leave to depart, and accordingly the Holl 23d of July, 1649. I went aboard the Ship call'd the Union, Mann'd with 80 Sailors, under the Command of Captain Albert Jants, a Native of Groningen. We fet Sail the same Day in Company of the Blue Eagle, and a Yacht call'd the Brafilian. We left the City of Olinda to the South-West in the evening; the 25th we were under three Degrees fix Min. with a North-North-East Course, we fail'd that Day about 28 Leagues. The next Day we pass'd the Line, with veryfair Weather and Wind; we continued our course without any remarkable accident till the first of August, when about Noon, we found our selves under o De, having sail'd 20 Leagues in the last 24 Hours. The same Evening we saw the first time the North-Pole-Star, after we had pass'd the Line. The 2d of August we fail'd 23 Leagues with a fresh gale. and found our selves under the 11th Deg. 13 Min. We continued this our course with a fair Wind, till the 16th of August when we were becalmed, we did not advance above 60 Leagues that Day, being under the 26 Degr. we found it exceeding The 20th of August we had but a flender South-East-Wind, we found our felves under 29 Degr. 45 Min. we were much troubled with heat, for want of the cool Land Winds, that the Knives in the Cabin were so hot, that no body could hold them in his bare Hands, nor any one could touch the Deck of the Ship with his Hands or Feet. We continued our course thus till the 29th, when being under 38 Deg. 46 Min. we made about Eight Leagues that Day. The 3d of Sepr. being under the 40th Degr. 18. Min. we espied a Sail which we found to be a Vessel bound for Virginia. Towards Evening we were forced to stay sometime for the Bras filian Yacht, she having lost one of her Masts. The next following Day in the Morning we discovered the Island of Corfu, whither we directed our Course.

Corfu and Floris are two of the Nine The Islands, the Dutch commonly call the mir Flemming Islands. The biggest is Tercera, being about 16 Leagues in compass. It is very Rocky, but fruitful, producing a confiderable quantity of Oxen, and abounding in Canary and other Birds. Here is a Spring that turns Wood into Stone,

be Au-IVES AL

and feveral Hot-Springs, in which you 69. may boil an Egg. The Ground feems to be full of Concavities, which is the reafon of the many Earthquakes here, which over-surn and destroy Houses, Men and Beafts. The Island call'd the Peake, has a Rock, which reaches to the very Clouds, and which as some suppose, may be parallell'd for its heighth to the Peake of the Canary Island it self. Betwixt the Coast of Brasil and the said Islands the Compass bears due South and North. We were gone Eight degrees further to the West, than we intended. About Noon, we found our felves under 40 Deg. and 34 Min. We continued our course without any remarkable accident, till the 16th of Sept. when we supposed our selves to be not far from Land, which we discovered the same Evening to the North, North-East of us. The 17th we were becalmed, and catch'd r ore Fish than we were able to 8th we discovered the lsle of Wight to the North of us, whereabouts one of our Ships was separated from us; not long after we saw the Point of Dover. The 19th we pass'd by Dunkerk and Ostend with a brisk gale, and about Noon safely arrived in the Road of Flussingen. I got immediately ashoar, and after having refreshed my self for five Days, I went to Middleburgh, where I likewise continued five Days. From thence I continued my Journey over Dort, Rotterdam, Delft, and Harlem to the famous City of Amsteldam, from whence I undertook this West-Ind.a le grives Voyage 1640. From Amfieldam I went to Zwell, the Birth-place of my Father John Nieuhoff; and fo to Benthem, my Native Countiy, where I met with my Parents in good health, after so many fatigues of a tedious Voyage; whilst I was at Benthem my Father Died 1651, the 15th of May, in the 85th Year of his Age, being lamented by all, by reason of his good Qualifications.

Some troublesome People laid the loss of the Dutch Brasil at the door of the Members of the Great Council, viz. Henry Hamel, Adrian Bullestrate, and Peter Jande Bas, who left Brasil 1647. It was alledged that the before mentioned Contracts made with the Portugueses had given them great opportunity of a Revolt; for which it was said the said Members had received great Sums of Money; but it being evident, that the fucceeding Members of the Great Council having taken Cognisance of that Affair before their departure, Nov. 6. 1646. and in March 1647. they were fully cleared of these Accusations, the same

having been transacted by special Orders of the Council of XIX. in Holland; be- 1649. fides, that the Revolts which were about the same time in agitation, in Angola, Africa, and the Island of Ceylon in the East-Indies, where no such Contracts were made, do sufficiently testifie that the foundation of this intestine War, was laid in Portugal, long before the Contracts were set on foot. What is more furprising, is, how the Portugueses, confidering we were pretty well provided with Forts and Garrisons, durst think of such an Attempt; but the reafon is plain, for what they wanted in strength or otherwise, they were supplied with from the Bahia.

The Motives that induced the Portu-What in. guefes to this Revolt, were the recovery of dued the Portuguetheir Liberty, the difference of their fes to Re-Language and Manners from ours; but bel. especially of Religion, which, our People endeavoured to establish in Brasil; these with some other concurring circumstances, such as our present weakness, and the disposition the States were in at that time, to be fairly rid of Brafil, gave them sufficient encouragement for this attempt. It has been the opinion of some that the first sparks of this Rebellion might foon have been quench'd by feifing some of the heads of the Portuguese Faction; but it being apparent from the Records, that nothing was left unattempted upon that account, tho' without any confiderable fuccefs, the fame cannot be imputed to the neglect of the Government; The true reasons of the loss of Brasil were the slender Garrison, and the inconsiderable number of Dutch inhabiting there; nothing being more obvious, that a conquered Country must be maintained, either by a sufficient Military Force, or strong Colonies; the last of which was the constant practice of the Ancient Romans, who besides this back them with good Armies to keep the conquered Nations in Obedience. Another way of establishing themselves in a conquered Country, tho' a very Barbarous one, was introduced by the Spaniards and Portugueses in America, who by destroying the Ancient Inhabitants, and planting Colonies of their own, faved themselves the charge of keeping many Forts and Garrisons for their Defence. Neither of these was sufficiently obser- regions ved by the Dutch after their Conquest of why Brasil

Agreement made with the Portuguese, the pupiled by last were left in the entire and quiet pol- the Dutch session of all the Sugar-Mills, Plantations,

the Dutch Brasil; For, according to their wis not

and Grounds thereunto belonging, 1649 whereby the Dutch Subjects were in a manner excluded from getting any considerable footing in the open Country, especially, since such of the Sugar-Mills as happened to fall into the Companies hands, by Forfeitures or otherwise, were Sold promiscuously to both Nations, and commonly at such excessive Rates, that the Dutch durst seldom venture upon them; The Taxes laid upon every thing belonging to the Sugar-Mills, and upon the Sugar it felf, being so great, that little profit was to be reapt from thence, unless the Sugar sold at a very dear Rate; whereas on the contrary, we ought after the Example of the Spaniards, to have endeavoured to draw our Subjects into Brafil, by the granting of confiderable Immunities of Honour and other Advantages. The Military force of the Dutch in Brafil, was likewise not duely regarded; for whereas according to a just Estimate made in 1641. by Count Maurice, 7076 Men were absolutely requisite to main-

tain the Dutch Garrisons there, the States Their want of Holland instead of following his Direof Forces. Ations, did after the Conclusion of the ten years Truce with Portugal, order the Great Council of the Dutch Brafil, to reduce their Forces there to 18 Companies of 150 Men each; and tho' several Remonstrances were made upon that head to the contrary, the truth of which was

verified by the event; yet the Succours fent from Helland arrived so slowly, that 164 after my departure things grew worse and worse every Day, and the Durch had lost all their strong holds, 1654! For the Portugueses began to blow up the Recesf by Sea, with Sixteen Ships, and to besiege it by Land, 1653, in December with fuch fuccess, that our People being constrained by Hunger, and the Gar- Lose rison refusing to Fight, were forced to Brasi furrender the place with all its circumiacent Forts to the Enemy; fince which time the Portugueles have remained in the entire Possession of Brasil; the same being confirmed to them by the Peace made the 6th of Aug. 1660, betwixt Portugal and the States of the United Provinces, in which, among others these following Points were agreed upon.

That the Crown of Portugal shall be obliged to pay to the States the Sum of Eighty Tuns of Gold, either : ready Money, or Sugar, Tobacco or Salt, or elfe Affign the faid Money upon the

Portugue/e Customs.

That the places taken on each fide. should remain to those, who were then in Possession of them.

And that a free Trade should be allowed to the Dutch in Portugal, Africa and Brafil; without paying any more Customs than the Native Portugueses.

## Mr. 70 HN NIEUHOFFs

REMARKABLE

# Voyages and Travels

TO THE

## EAST-INDIES.

FTER a short stay in my Native Country, I refolved to take a view of the East-Indies; and accordingly Embarked at Amsterdam, on Board the Ship call'd the Calf; carrying 24 Guns, under the Command of Cornelius Just. The 23d of August 1653 we fer Sail from the Texel, in Company of tour Ships more, viz. The Peace, the Lamb, the Golden Drake, and the Naerden, Steering our Course towards the North of Ireland, not thinking it fafe to pass thro' the Chan-The Au-thor's de- nel of England. The 24th we Steer'd our parture to Course North by West, under 54 deg. 56 the East- min. towards Evening we cast Anchor at 13 and in the Night found 17 Fathom Water. We continued the fame Coast the 25th, under 55 deg. 59 min. 23 Fathoms Water; and from thence further till the Then we 29th, under 28 deg. 24 min. took a North East Course with a brisk Gale. The acth with break of day, we discover'd at about 6 Leagues distance Hestand lying at the Northern Point of Scotland, and found our selves about Noon under 60 deg. 3 min Latitude, and 18 deg. 49 min. Longirude. The 1st of September we were under the Latitude of 62 deg. 40 min. and 19 deg. 2 min. Longitude: We Steer'd our Courle with a brisk Gale to South West by West, betwixt the Fairo Islands and Hetland. 4th, being overtaken by a violent Storm, we lott fight of one of our Ships call'd the Lamb, under 60 deg. 11 min. We continued the same Course till next day, when a-The Isle of bout Noon we discovered the Isle of Kilda, finder 59 deg. at 6 Leagues distance to the South West of us, the Illand lying to the West of Scotland. Thus we pursued our Voyage, for the most part with stormy Weather till the 13th, when we lost our small Sail at the Prow of the Ship: We found our

Vol. II.

felves about Noon, under 50 deg. 1 min the Weather continuing very Stormy, but on 165 the 17th under 46 deg. 27 min. all our Rig-

ging was torn to pieces by a violent Storm, in which we got out of fight of all our Company. The 19th we descryed two Sail which we guess'd to be our own, as one of them prov'd afterwards to be the Lamb. The 20th we continued our Course with a brisk Wind to the South Welt, and under 43 deg. 25 min. discovered the Cabo Finis terre, or the point of the Lands end of Spain; ar about 5 Leagues distance, as we supposed. The same Evening we met with the Ship the Lamb, which as the Master inform'd us, had loft fight of the Ship the Perce, in the last Storm; and had her Main-mast and all her Sails brought by the Board. Thus we Sailed forward with a strong Gale till the 30th, when we found our selves under the 30 deg. 20 min. and discovered the African Coall about five Leagues to the South-West of us, with a variable Wind. The second of Ottober, we continued the same Course under the 28 deg. 51 min. of Latitude, and 57 deg. of Longitude; all a-long the lile of I ancerotta one of the Canary Islands, we defery'd a Ship, but were not near enough to fee what she was. The next day we found our felves about 40 Leagues to the North North-East of the MandsFretevanture or Forterentum under 27 deg. 45 min. and fail'd thus in 24 hours, 40 Leagues among the Canary Hlands. The 7th a brisk North Wind carryed us near 20 Leagues forwards to the 19 deg. 14 min. In the Evening we found but 14 Fathoms Water, and a small Bird scitled upon our Ship, tho' we judged our felves above 100 Leagues from Land. we were under 17 deg. 41 min. and towards Evening faw Land to the South-West of us. The 10th with break of day, we discover'd Aaa

nthe Isle of St. Vincent, one of the Salt Islands, about 5 Leagues to the South-West; we le of Steering our Courle South-Welt, betwist Noon we call Anchor in the Bay of St. Vincent at four Fathom Water, in a Sandy Bottom; and provided our felves the same day with a whole Boat full of fresh Water and 7 Goats; I went in another Boat to the lile of St. Anthony, to fetch some fresh Provisions, but could get none. The 15thour Ships Crew catch'd 10 Tortoises, and those of the Drake as many. The 18th I was fent a fhoar to Complement the Governour of St. Vincent, who received us very kindly, and furnish'd us with an Ass to carry us back to the Harbour. All this while we catch'd abundance of Fish; and the 20th fent some on Shoar with fome Toys, which they exchanged with the Inhabitants of St. Vincent, for Oranges, Limons, Bakora's and Pompions. The fame day the Ship the Rofe! bound for Brafil, came to an Anchor in the fame Bay. Mr. Wilefeliut the Elder Commander in Chief of the Land Forces came on Board us, being much surprised to meet with me there. Being by this time provided with as many necessaries as we were able to get, we were ready to fet Sail, but were detained by contrary Winds till the 25th. The Isle of St. Vincent is a Rocky and Barren Island, affording nothing but a little Grais for the fullenance of wild Goats. is about 5 Leagues in Circuit, under the Command of a Portuguese Governour, who was then a Mulat, one born of a Christi an Father and a Negro Mother-

The Inhabitants here are Negros, transplanted hither from several Parts to catch wild Goats, the Skins of which they send to Portugal, and the Flesh they can't consume they throw away. They lead a wretched Life without Women. All their Water is brackish, and of a tast-like Salt-peter, except what they gather at the Foot of the biologic Rock in Barres of Gost-skins, which

being always covered with Clouds on the top, sends a considerable quantity of Rain Water down to the bottom by small natural Channels. The Governours Residence is on the other side of the great Rock, not far from the Sea shoar, near 3 Leagues from the Harbour. His Officers live in Hutts covered with Tortoise-shells, among Trees, the shadow of which defends them against the

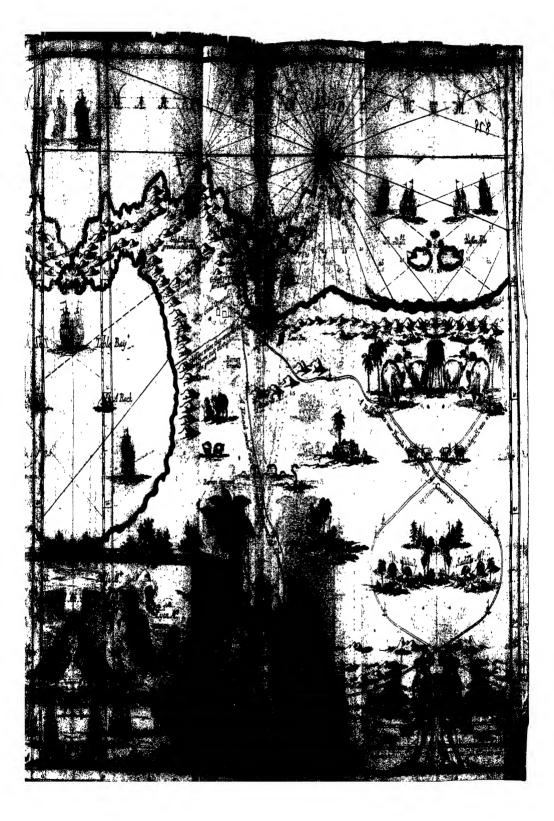

Violent Scurvy.

great diffatisfaction, being so disabled by lickness, and especially the Scurvy, that we had fearce hands enough left to manage our Ship; Our Surgeon was a German by Birth, a very able Person, but never used to the Sea before, was to much furprifed at it, that he confess'd he never had seen tir like, and that few of them would recover; but I told him, that in Cale we could make the Cape, he would find a remarkable alteration in a weeks time, as how as they touch d the Land, and receives totals c refreshment, which accordingly proved true. The 29th and 30th it was very tempeltuous weather, when we loft fight again of the D ake; we were forced to keep the open Sca till the 2d of February; when we found our selves under 34 deg. 39 min. Southern Latitude, and 36 deg. 32 min. Longitude. The 3d being overtaken by a florm from the South-East, we were forced to leave the shoar again, which continued the next day with such violence that we loft our Main-fail. The 4th we purfued our Course with a brisk Gale under 33 deg. 40 min. when we again difcovered Land at about 6 or 7 Leagues diflance. Towards Evening we came within a League of Daffen ( Doc Island ) at 60 Fathoms depth, but were forced to put to Sea again, the shoar being all a-long very Rocky here: Thus we made To and From the shoar till the 8th, when we saw the Table Mountain about 9 Leagues to the South-West of us, and the lile of Daffen 2 or 3 Leagues to the N. W. we found hereabouts 30, 36 and 40 Fathoms water, about half a League from the shoar in a Sandy bottom; we did all we could to make the Robben Island (Rabbet Island) but being becalmed, were fain to put to Sea again. The 9th we were not above 2 or 3 Leagues from the Table Mountain, and about Noon being favoured with a brisk S. W. Wind got happily into the Table Bay, where we cast Anchor at 5 Farive in the thoms depth in a Sandy bottom. Here we Table Bay. met with the Galliot the Fox, John Zymentz Master. Mr. Rietbeck, Dutch Governour of the Cape of good Hope, fent us immediately a Chaloop with Fish on Board, and a Pilot to conduct us into the Harbour. We had loft 8 of our Ships Crew in this Voyage, and had about 40 fick, befides which the rest were so much afflicted with the Scurvy, that unless we had received some scasonable refreshments, we could scarce have held it out much longer. I went immediately a shoar in Company of the Captain Cornelius Just, and brought back good store of Mustardleaves which were dress'd for the Ship's Crew. Much about the same time the Fiscal came a-board us, to forbid all Commerce with

the Horsensoses or Natives, and to tarry a

shoar, without special leave from the Governour; we were also supply'd with more fresh water, which is very good and easie to be got thereabouts. The 12th we faw the The Ship Ship the Drake making the Bay, but was the Dra forced to cast Anchor behind the Robben Ist nd, enters, by reason of the violence of the Wind; we B = 1were then bufie in fishing, but the Wind blowing hard from the Land fide, could c tch none. The 14th the Tempest being somewhat allay'd, we approach'd as near the shoar as we could; when we got fight, of. the Top of the Table Mountain, which is very often covered with fmall Clouds, a certain prefige of Tempeltuous weather. The fame day we went to our former Employment of fishing, and catch'd as much in one draught as the Chaloop was able to cary, the Governous having 14 Wheelbarrows full for his share. They were for the most part Mullets, which fixim in fhoals along the fhoar of this Bay It was not till the the Drake came into the Harbour, having little 20 of her Crew and 50 fick, and the reft being so much disabled by the Scurvy, that according to their own confession, if it had lasted thus 14 days longer, they must have left the Ship to the mercy of the Wind and Sea: we were all this while very busic in fishing as often as the Weather would permit; but the 19th it blew so hard, that we were forced to make use of all our Anchors. The 22d we fpent in providing our felves with fresh Water and fewel, the last of which our Carpenters cut down near the banks of the Salt River. The 23d. I in 7byt. Company of some others went cross the vilve Mountain as far as the Fresh River, to see Count whether we could meet with some Wild-foul, we saw some Negros with about 300 head of Cattel, but at the first fight of us they retired. The Fields hereabouts were all covered with white Lilies and Tulips; we faw also abundance of Partridges. Being informed that a Rhinoceros was fallen into the Boggs, Like s. the Governour Rietbeck sent some Fusileers thither to kill him, but the Musquet ball no being able to penetrate his thick hide, they were forced to cut a hole in it first, and to to shoot it to death; the Horn is pre'erved there to this day, and fometimes used instead of a Cup. The 1st of March we had very fair Weather, notwithstanding which, few of our Ship's Crew were fond to go on shoar, every thing being there at an excellive rate; as for instance, a quartern of Arack was sold for Six pence; of Brandy for Twelve pence; a Water-melon about the bigness of a Coco-Nutt for half a Crown. The next day by ing informed that a Whale was got on Indar in the Salt River, the Governour and his Lady, our Master of the Ship and I, went

thither to fee it, it was a very large one; 5 3. we got upon the back of it whilft the Trumpet founded merrily, and the Negros were bufied in cutting great pieces of the Flesh which they buried in the Sand in order to eat them. The 6th the Governour sent fome of his Soldiers to the Hottentots, to endeavour to exchange some of their Cattelfor Y Copper, Tobacco-pipes and fuch like baubles, but they retired at first fight. The 9th it was very calm and fair Weather, which made most of our Ciew go on shoar to wash their Linen, having received orders to be ready to fail the next day; for which reason alfo good ftore of Cabbage and two Sleep were brought a Board, a flender Provision for fuch a number of Men, but it was impossible to get more for that time. During bur stay here, we fetch'd daily two sacks full of Cabbage and Muftard-leaves, which being boiled with Bacon, was terved twice a The Cape day, this being the best refieshment we were of Good able to get. The Cape of Good Hope is fituruate under 34 deg 20 min. Southern Latirude, which jetts out into the Sea like a Demi-Island being to the North joined to the Continent by a strait neck of Land, with a Bay on each fide, very convenient Table Bay, for Anchorage. The Table Bay, which has borrow'd its Name from the Table Mountain; is about 4 Leagues in compass, so that a whole Fleet of Ships may fafely enter, or go out with any Wind, except the North-West Wind. Near the shoar of this Bay upon the Banks of the Fielb River, the Dutch Eaft-India Company has erected a Quadrangular Fort, call d the Good Hope, well provided with Artillery and a good Garrison, in which, at this time Mr. Rietbeck was Commander in chief; and had his Habitation there, with a well-planted Garden of about 15 Acres round about it. Upon the banks of the Salt River is likewife a finall Redoubt. Behind the Port of Good Hope, all a-long the banks of the River, are many fine Plantations or Gardens, which produce Cabbages and fuch-like Herbages, being cultivated by certain Hollanders who have fettled there, and bay only a finall annual acknowledgment to the Governous for the use of their Grounds, which are for the most part Clay, and cont lequently fruitful, tho' in some parts they are likewile Rocky and Sandy. Near the . Sea shoar is great store of small Wood, tho' the Natives affure us, that deeper in the Country they have Trees of a valt biggness. Their Gardens produce likewise Olives, Oranges, Apricocks, and Peaches; the Fields Grais and some Herbs and Flowers; nay, they would bear very good Wheat, Rye, Rice, and Barly were they manuf d as they ought to Ke. Their Field herbs are great and small,

Hope.

fome with knotty roots, Housleck and some ~ other Pot-herbs, befides Tulips and Whitelilies, &c. They have also here a certain Root which the Hottentots roaft and eat instead of Bread, and sometimes make Flower of them; fome tafte like our Poritos or Chefnuts, tho' they have others that are much fweeter, not unlike our Annifeed. The Dutch have planted many Thousand, of Vines on a Hill adjacent to the Fort, they bear very plentifully, but the Wine is of a Crab-like taft. The worst of all is, That the Winds which arife from the Clouds in the Mountains, blow in the Summer, especially about July, with fuch violence, that they tear up all by the Roots, at which time it is very dangerous Landing at the Cape For the rest the Air is very wholesom here, being always clear, and neither too hot nor too cold. Their Winter is in June and July, when it Freezes fometimes, that you may fee lee of the thickness of the back of a large Knife. In October, November and December, there blows always a South Wind, which produces a cool Air, as the North Wind does in Holland; and in this Scafon they are troubled with violent Rains, which however renders their Ground very Fruitful.

This Country likewise abounds in all forts Whate of Wild and Tame Creatures: They have tures here Birds they call Pingunyns, Ilamingos, asthet Antenayas, Alkatraces, Fayfons, Gavoytoyns, Garagians, &c The Pingunyns are short legged and may foon be taken, but are not to be forced from their Nest without a good ttick, because they will bite and defend themfelves there to the utmost. They abound also in Partridges and Pheasants, Geese, Quails, Crows, Sparrows of divers kinds; Rock-ducks with yellow necks, Teal, Wood and Water Snipes, and a kind of Demi-Ducks, there is also a fort of black Birds here of the bigness of a finall Goose or large Duck, call'd by us Cormorants, wild Peacocks, blew, white and black Cranes. The white ones are indifferently large, the black ones of the bigness of our Sea Gulls, living for the most part in the Marshes; they have a kind of reed Birds with red necks and legs, Monkeys, Hawks of divers kinds, Ravens, Magpies and very large Offriches, which can reach with their long necks a man on Horie-back. They are gray, and run with their Wings spread as swift as a Horse; they live upon herbs, but sometimes devour likewise Stones, Copper and Iron. have likewise certain Birds not unlike our Geek, which lay eggs without yelks, as big as a common Goofe egg. They are fo full, and tafte so much like Fish, that they are Another kind of Geefe they not eatable. have somewhat less than ours, tho' their legg1653

are larger, with gray spots all over their Bodie , they are not to be tam'd, because they kill any other Bird that comes within their

Ibe Pintuwyns.

Formerly the Sea shoar used to abound with certain Birds call'd Pingnayns both black and white; their skin is very hard and are of the bigness of an ordinary Goofe. live both upon Land and in the Water; they have a fin on each Foot, which makes them fivin very swiftly after their Prey the small hish, which is the reason their Flesh is of a rank talle, and scarce eatable, unless it be feven times boil'd in fresh Water and afterwards fry'd with butter, they make their neft and lay their eggs in hallow places in the Sand.

The Hamingos.

The Flamingos is a very fine Bird, refembling a Crane, but with a Crooked bill. They are l'ale red, tho' fome of their Feathers are half white and half black, but the uppermost Feathers which cover the rell, are of a Rofy colour.

Their Oxen are very fat and thick fet,

with long crooked horns, tho' fome have their horns bent back close to the neck; others have no horns at all, they are generally a foot and a half taller than our Oxen. Among other Creatures they have here those they call Sea Cows, being much bulkier than an European Oa. They are without Horns, but have long ears and round eyes, with a short tail, thick legs and feet like an Elephant. They have no hair upon their Bodies, but prodigious large Teeth. feed upon Grafs, which they find in the Maishes near the Lakes, where they duck under Water as long as they please; so that they are feldom to be feen or catch'd. flesh is like other Beef, but somewhat Courser, when it is falted, it appears and keeps like the ordinary Dutch falted Beef.

They have likewife here what they commonly call Iron Piggs, with long spikes, which by drawing the skin together, can shoot at those that come too near them, with fuch force, as to wound them Mortally. A dead Lyon was once found here, with fuch a spike sticking in the breast, which had queftionless caused his death. The skin is hung up, and to be feen in the Fort to this day. They abound also in Hares, Wild-Goats and Rabbets; and deeper into the Country they have Tygers, Lyons, Wolves, Leopards, Rhinoceros's, Deer, Cows, Calves and Rock-Does. They have plenty of Sheep which the Inhabitants exchange for Copper, Tobacco, Tobacco-pipes, and fuch-like Baubles. They bear no wool, but hair like ourGoats; their leggs are long and the Tail confifts of one long and thick piece of fat which weighs sometimes 20 pound and above.

On this Cape is also a certain Creature call'd a Fackal, being betwixt a Fox and a 1653 Dog, with gray hair, it roat frightfully in The Backmen's flesh, so that it will digg some times' ten foot deep to come at a dead Carcals: It is faid to be the most quick-scented of all Crea tures, and by its fcent to discover any Carri on that is near at hand to the Lyon. Among others they have likewife a certain wild Beaft in shape and bigness like an Elephant, but with two horns on the top of the noie; its tail is likewise like that of an Elephant, but has a bush of black hair on the head where it joins to the neck, with two ftreight and rounce horns, with short Mouse-coloured hair all o ver the Body On the top of the Lyon. Meuntain, (to call'd from its refemblance to a fleeping Lyon) are great numbers of Baboons, which are to unlucky, that they will fometimes with flones, force those who afcend the Mountain, to turn back. However moll of your ravenous beafts, flich as Lyons, Leopards, Wolves, Jackalls and Tygers, are but rarely to be met with near the Sea-shoar, where they are almost rooted out by the Inhabitants; a certain reward being fet for every one that kills any of these beasts, of which several skins hang up in a Gallery of They have also Sea and Land the Fort. Tortoiles in great quantities, and the Woods furnish them with plenty of Hony, which the Bees hide in the deepest hollowness of the Trees. Neither are they without Dogs which are commonly of a red Colour, and have short tails.

There is here a certain kind of Fish call'd The Hotby the Dutch the Horsentors Lift, because the tentor's Hottentots are very dextrous in taking them. 例. They are very fine Fishes and tast like our Codds. Formerly they used to catch abundance of Seols, but now most of their Fishes are unknown to us. In the Table Bay are alfo Whales in abundance, but they are too lean to afford any confiderable quantity of Oyl. Near the Sea shoar you meet with The fifth the Fish call'd by the Latines Torpedo, by the Greeks in the same sence Naroc, by the Spaniards Hugia, and by the Dutch Kirch Fish or Lazie Fish; not because of its laziness in fwimming, but of its hidden qualities, which as its reported, confilts in this, that when it finds it felf in diffress, it fends forth a certain juice, which feizes the Fisher-men with a Cramp in all their Limbs. The Inhabitants here are call'd Hottentots by the Dutch, by reason of their stammering.

The men here appear for the most part The Hotnaked, having only a kind of a Cloak made tentots of Doe, Sheep, or Rabbet skins fower and their gether, hanging from their shoulders, to their buttocks, fastned under the thi

a ribbond, with the rough fide outward in the Summer, and the same turn'd inside in the Winter. When they are Travelling t' wear over this another Cloak with the o Phinoceros skin without any heels, tyed together on the middle of the feet with two leather straps. In the night time, or in rainy weather, they wear Caps of Lamb skins with the woolly fide inwards. Their Privities they caves with a piece of Tygers skin or fuch like, which is ty'd behind with two leather flrings. In their hair, which is shaved in some places of the head, they twist small e pper plates, Horns, and pieces of Coral. Women wear Cloaks of Lamb skins the Men, with the rough fide inwards, u, s' fornewhat longer; befides which they cover their Bellies and Buttocks, as also their Univities with another four-square skin. On their heads they wear Caps of Doe, Sheep, and Rabbet skins, ty'd round about with a broad Sheep skin thrap. Their shooes are the fame with the Men Such Men or Women as are rich in Cattel, greate not only their Bodies and Faces, but likewife their Cloaks and Caps with Suct, but the Poor wear no Cloaks at all, so that greafiness is among them both an Ornament, and a token of Riches. In both cars they wear strings of Coral each weighing commonly four Ounces; about their Necks Copper-Beads, round the Arms they wear an Ivory ring, and a streight Copper ring about their Wrists. When the Women go a-broad, they commonly have an empty leather bagg hanging down from their shoulders, in which are only some baubles, but if they have a young Child it is carried in this bagg. They wear stinking guts twifted twice or thrice round their legs for an Ornament, or elfe dry'd guts, which ferve them as a defence against pricking of Thorns, and make a rathing noise when they are dancing and merry making. The Men wear them likewife about the neck, and hang their Tobacco/pipes and other Toys in them. The Arms/chiefly used among the Hotten-

tors are Jayelins, being sticks of 3, 4, or 5 foot long, pointed at the end with a fharp broad piece of fron; these they make themselves, and use them with great dexterity. They have also ome Bows and Arrows, but are as yet quite ignorant of the use of fire Arms. When they go abroad they carry this Javelin, call'd by them Assaye in one, and an Offrich Feather, or a small stick with a wild Cat's tail on the end, in the other hand, wherewith they defend themselves against the Gnats and

other Infects.

The Hottentots are very nasty and aukward ting; for they are ignorant of any thing ke relates to Cookery, but devour raw pieces

of flesh or carrion, as greedy as dogs. The guts themselves they swallow down without 1653 washing or dresting, after they have only fqueezedthem a little For want of carrion they cat dead flinking Fish, such as they meet with near the Sea fide, Muffels and fuch like. They kill no Cattle except it be rendered ulclels by Sickness or Age, except it be a sheep against a Wedding Dinner. The slesh of Sca-dogs or Rubbets is a dainty with them, which they devour either quite 12w without cleanling, or fometimes broil it a little upon Coals. They cut and eat the Bucon of deed Whales which happen to be cast a shoar with great cagernels, nay they drink the Oyl which is drawn from thence by the heat of the Sun, like Water. Some bury pieces of this Bacon in the Sand for their future use However their best and daily food are certain roots, not unlike our large Potato's, which the Women digg up near the Rivers and in fome other places, those they cat either brould or boild. They are very eager after our Wheat or Rice bread which is baked there, and willingly exchange it for Cattle.

Their chief drink is Water, or Milk which Their their Cattle affords them. Tis incredible how fond they are of Brandy or Spanish Wine, but a Imall quantity makes them drunk, when they baul out fearfully and are

very unruly.

Those Inhabitants near the Cape are of Their Coma brown Olive Colour, like the Mulats, plexion. which however is not their natural Complection, but acquired by Art, for they broil certain herbs with greafe, wherewith they befinear their bodies and faces, to make them Iwarthy, it having been found by experience, that a Girl, which was carried into the Fort immediately after she was born and brought up there, proved of the same Complexion with the best of our European Wo They are of Opinion, that in case they don't frequently befinear themselves thus from that time of their birth, they shall be subject to the Dropsie, a distemper to which many of the Africans are most subject, as the Abyfines have one thigh swell'd twice as thick as the other. Upon the arrival of our Ships on the Cape, they get into the Cooks room, and with the fat and black of the Kettle, befmear their hair and faces to make them thine the better; this being look'd upon as a great piece of Beauty among them. tho' it makes them smell very rank, especially if they put greate into the gathes which they make in their skin for that purpofe, when you may finell them at 100 yards distance.

They are generally lean, short and ugly s stitution yet they have black quick eyes and very and Habis good white Teeth. Their Notes are somewhat of Body.

flat, tho' not always, and the Lips, especi-5 3. ally the uppermost, very thick Their Fore-heads are broad, but wrinkled; and the hair of the Men is curl'd and short like Lambs wool, but very naily and greafy. The Women have thicker hair than the men, the last of which pull out all their hair upon their chin. The Men have very well niade Legs, but flender Calfs, and are to nimble as to be able to out-run a strong Bull, and stop him in his full career. The Women especially have very fine and finall feet, with flat Bellies and round Buttocks; their hands are very well shaped, but their fingers and nails very long. The Mens Privities or Yards are very large, but have only one flone; for to foon as a Male Child is born, the Mother cuts out the right stone to make it the more fit for running, and afterwards gives it fome Sea water and Tobacco. The Women, especially those that are married, have long breafts which are always bare, and when they are tuckling their Infants, hang backwards over their shoulders. The inside of the Womens Privities are fo relaxed, that they hang out. Their chiefest Riches confift in their Cattle, which they never kill,

but when forced thereunto, either by fick-

ness or age of the Beast.

Their Tongue.

Their Stupidity.

They frammer much in their speech, and bluster out their words like a Turky-Cock; they make use of no letters, neither do they know what writing and reading is; fome however have been taught to speak, read and write Dutch, which shews them to be apprehensive enough. For the rest of the Hottentots are so very stupid, that they are not able to form to themselves the least Idea of attacking or defending a strong hold, a House of Brick, such as is proof against fire, being as profitable against them as the best Fort, for if you enclose them in a House, and only thut the doors and windows fast, they are as fafe here as in the strongest Priion, having not the least sense to open them for their deliverance; in which they are inferior to Beafts, which commonly endeavour to deliver themselves from Bondage. Notwithstanding the Hottentots are so stupid, and in my Judgment, the most wretched Nation upon Earth, there are fome among them, that want not cunning, especially if they are brought up to it; an inflance of which we faw in our time, in two young fellows, who being carried from hence to Baravia, where they were instructed in speaking, reading and writing of Durch. One of them was employed as a Servant by the General Director, John Maet Zuicker, and after some time was fent back to the Cape to ferve as an Interpreter there. I met with him at my first resum from the East-Indies, among

the Hottentots and ask'd him whether he would not rather be with us where he lived much 165 better? he told me, he would rather be with his own Country men. I understood afterwards, that this fellow had proved the ochafion of great milchief and differences arreng the Hottentors, and that feveral had been kill'd in the Quarrel on both fides. At laft / he fell again into the hands of the Commander of the Cape, who banish'd him to the Robben Island, where he dyed. Theft they punish with a Bastinado, and so they do Murther, not out of any regard to God Almighty, but for customs sake. They tall of one Humanna, who has the disposal of Ra us and Fair Weather, but they pay no aderation to him.

Marriage is in pretty good efteem among Their N them, tho' a Man Marries as many Wives riage. as he pleates The Maid as foon as she is bethrothed performs the Oath of Fidelity in the following manner The Mother cuts off the first joint of her Daughters little singer, which is tied to her future Husband's singer, this they bury, and afterwards kill a Cow for their Wedding dinner. The Maids are distinguish'd from the Married Women, by green twiggs which are twisted round their leggs; these are taken off at the Wedding day, and instead of them the dry'd guts of the Cow kill'd for the Wedding dinner, put on; these when they Dance make a noise,

which feem very agreeable to them.

Tis true, the Hottentots are the most Bar- They be barous upon Earth; notwithstanding which, fomethin I can't agree with those that will not allow of Rely of any religious Worship among them; it onbeing the opinion of all Learned men, that no Nation is fo Barbarous, but what has fomething of Religion, be it True or Falle. For they adore the Moon with unufual outcrys, and it is not improbable but that they pay the time devotion to the sun, because they follow its Course as much as is possible, by changing the Pasture of their Cattle; for when the Sun comes to the Tropick of Capricorn; it has been observed that they feed their Cattle on the South-East ide of the Rivulet, but when the Sun returns to the Tropick of Cancer, they go to the North fide, if it happens to rain very hard, they shelter themselves in their Huts, seem to be fearful, and don't creep out till it be fair weather. Then they begin to be very merry, lifting up their heads and eyes to Heaven, which is Interpreted by us as a kind of thanksgiving; for, when they are asked why they hide themselves during the rain; they answer, That the Great Captain being incented against them, does punish them with this lement, which he knows to be conti their Nature. By this Great Captain

questionless understand the Supream Being; 1653. for if you speak to them of God, they are unwilling to hear it, and Punish such among them as make use of it; alledging that it is not fufficient to express the Glory of the Supream Reinge If you talk of the Devil, they point northe Ground. Concerning the Refurre-Etion, they are of opinion, that those that die near the Cape, shall a-rise again behind the Mountains: But perhaps all this they may have learned from the Portuguefes and Dutch. They frequently skirmish with one another, commonly for the conveniency of Pastorage, so that sometimes 6 or 7 are left lead upon the fpot.

Divers

The Hottentots are divided into several Nations of Nations, known by different Names. Those the Hot- Inhabiting near our Fort, are by the Dutch call'd Cape-men, but in their own Tongue Chourseque, they are the most cunning of all the rest, by their frequent Commerce with the Dutch and other Europeans, they live for the most part upon Roots, Fish and Mussels. Somewhat deeper in the Country live those, commonly call'd Tobacco Thieves, because they used to steal the Tobacco out of the Fields, which is the reason the Dutch plant no more Tobacco there; in their own Tongue they are call'd Korrochaukon. There is another fort call'd Chemakwa, much more Potent 'and Richer than the Cape-men, yet don't approach in Power to the Kochukwas, who living still deeper in the Country, are accounted many thousand strong, and have vast herds of Cows and Sheep; they were then under the jurisdiction of two Captains, the first call'd Odosoy, the other Monomana. The first of these two had Married the Sister of our Interpreter's Wife in the Fort; and being invited thither by Mr. Rietbeck, the Governour, he at last, after much inquiry concerning his Quality, for fear of demeaning himself, gave him a visit. They rid out together a Hunting, when Odofoy had the misfortune to be fet upon by a fierce Lyon, who tertainly would have torn him to pieces, /had not his followers kill'd the Lyon with their Javelins; however he did not scape without being forely wounded on the neck, the flesh was all torn from one of his shoulder blades, and his face all miferably maul'd: Being judged past recovery, the Governor offered him his own Surgeon, but he would not accept of him, tru-Iting more to those of his own Nation; tho the skill of these Surgeons among the Hortentors reaches no farther than to cure a green wound, which they scarce ever perform without leaving a great dent or feam. They can their remedies about them, and comly have a Parrot or some such Creature unlike our Mountebanks) a-long with

them. Their herbs they keep in Tortoneshells, but the roots, claws, teeth, and horns 16. of Beafts (these being the Ingredients of their U Physical Preparations) are faltned to a string which they in the far e manner as our Tooth-

drawers hang about the neck

There is another Nation of the Hottentors call'd by the Dutch Sardinia-men or Saldan-Las (from a Bay of that Name) the Natives call them Krijegoekwa. Some of the Hottentots relate, that to the North-East of thole call'd Kochukas, there is a Potent Nation dwelling in stone-houses, that they are not as black, and governed by the fame Laws we are. Some suppose them to be a People inhabing the Mountains of the Moon, but confidering they are faid to understand Gold and Silver, and to agree in many other things with the Europeans, our People judge them to be a Colony of the Portugueses that have Transplanted themselves thither from Mozambique. The Dutch have feveral times attempted to find out a passage thither by Land, but without Success, having always been forc'd to turn back for want of Water. They also talk much of two other Nations call'd Heukumqua and Grocman. The Hottentors or Inhabitants here are not subject to one Head, and what reverence they pay to their Captains, is more out of custom than any sense of Duty, they have no fixt Habitations, but lead a vagabond life like the antient Schytes and Arabians, carrying their Wives and Children a-long with them. They are not very defirous of Gold and Silver, unless some few that Converse with the Dutch, and know the conveniency of buying from them what they stand in need of; for otherwife Copper is in greatest esteem with them. Boats they have none, being extreamly fearful of Water, and therefore venture feldom further than to their knees. They are of a very lazy temper; most of their Trasfick confifts in Cows and Sheep, which they exchange for Copper and Corals; but after the bargain is struck, they expect an additional Present of Tobacco, Pipes and Brandy, which has been introduced among them by Foreigners. The Sea-men do also sometimes swap with them for Ostrich Feathers, and small Tortoise-shells, call'd Harego. It is to be admired how they should make so much account of Copper, which they daily tread under their feet, it being certain that very good Copper-Mines are to be found herea-The Dutch have at divers times attempted several Land Journeys into the Country; as for instance, in the Year 1660 when they discovered two new Nations, vi The Illunha and Namakkawa; they supposed to have not been very far from the Portuguefes, because they thought to have heard

Ccc

2 Cannon-shot at a distance. The Inland Country swarms with wild Foul, such as wild Geefe, Ducks and Teal, but they are fo shie, as not to come within reach of a Gun, which is the reason that the Governour's Hunts-man fets up fmall Huts of green boughs, from whence he shoots them; this being the only way to come at them. Among the Mountains are abundance of Rocks, and some of them contain Fiesh water in their Concavities. Several of our People as they were going one day up the Mountains to take a view of the circumiacent Country, found a Certain Rock-stone of 4 Fathoni long, and one and a half Broad, being hollow in the middle, of the depth of a quarter of a Yard, where they met with good store of fine fresh Water. Here are Offriches of an extraordinary bigness; they are so fwift as to out-run a Horse when they fet up their Wings, and thus by the help of the Wind are forced forward, no other-wife than a Ship under fail. Their large leggs and feet are a great addition to them, by the help of which they trot on with such a force and nimbleness that like a Horic running dawn a Hill, they are scarce to be stopt. The time way of fetting up their wings, has liken observed in the tame Swans But before we leave this Cape, I will give you a thort account of the Lyons Mountain, the Table Mountain and Table Bay, as likewise of the Rolben Ifle.

The Table

There are two very high Mountains near Mountain. this Cape, viz. The Table Mountain and the Lyons Mountain. The first is so call'd from its flatness on the top like a Table, being about two Leagues high, but finall in Circumference, and for that reason of very dis-It is divided from another ficult access. adjacent Mountain, call'd the Devil's Mountain by a vast Cliff. Towards the Sca side it is bare, without any Grass or Trees, but on the Land fide you fee very agreeable Woods, with many tall streight Trees sit for Building; and towards the foot abundance of leffer Trees for Fuel. Among the rest are great store of wild Almond-Trees, but the Fruit is very bitter; and if we may believe the Hostentots, Poilonous; wild Pine-Trees are here likewife in abundance, they grow very tall, but bear nothing but a husk

Table Bay.

The Table Bay is situate under 34 deg. and fome min. about 5 Leagues more to North, this being the most Southern Point of Africa It is a very fine Bay, tho' on the South lide of the Robben Island are fome rocks call d the Whale; a large Ship may Anchor in this Bay, from 9 to 7 Fathom Water, but Yachts at 4 or 5 Fa-thom in a good Sandy Ground There

is however no trufting to a fingle Anchor, by reason of the blustring South-East Winds which blow often here.

At the entrance of the Table Bay you fer the Robben Island, thus call'd from the va quantity of Sca Robben (Sea Rabbets) (white are found here. It is not very high, area bout two Leagues in Circumference. In the Towns fome Rabbets have been put by the Inhabitants which thrive very well. The ground produces a certain herb in great plenty; it has yellow leaves almost like Cowslips

which fatten the sheep exceedingly.

To the North-East of the R 'en Island Dassen lies the Daffen Island, under 34 deg. 33 mi It has got its name from the valt numbers Daffen (Does) which formerly were found ther ; but are of late Years much diminish'd. is about a League in Compass, and produces likewite many Sea-Rabbets and Pinguwyns. It is Inhabited by four Families only with their Slaves, whose chief employment it is, to bread Piggs and Poultry, and to draw Oil from the Sea-Rabbets, which they fell to the Inhabitants living in and near the Fort. Before the Bay of Saldanha are teveral finall Islands, where those of the Daffen Island have their liberty of Fishing and I funting; they catch valt quantities of Partrages, Mullets and other Fish. The two chief Rivers of this Cape, are the Salt and Fresh Rivers. Belides thele, there is another Rivulet which arifing from among a Neighbouring wood, exonerates it left in the Salt River. is not above 12 or 14 foot broad, but very's deep Not tar from the Source of this, and rifes another Rivulet among the Marshes near the Wood Bay. It runs South-East thro' the Downs, (which extend as far as Cabo fal-(a) and disembogues it telf into the Sea.

No place in the World is more subject to The Cape ftorms than the Cape of good Hope, so that it subject to would be impossible for Ships to abide here, ftorms. had not Nature provided against plese inconveniences by the feveral commodious Bays that are here. Among those the Bay of Saldanha, commonly call'd Sardin a is none of the least Consequence, where Ships may ride fafely at Anchor without the least danger. and were it not for the want of fresh Water, it might claim the preference before the Table The Winds blow generally Bay it felf. throughout the Year very hard here; but especially the South-East Wind which blows from October to April (call'd the South-East Munzon) and tears so terribly thro' the Clift, (betwixt the Table and the Devil's Mountain) that except the Country and Ground were very smooth and hard here, it would be impothble for any Ship to ride it out; From April until Ottober, the North-West Wir blows with not much less violence, (ca

the North-West Mongon) but yet not altogether so fierce as the South-East Wind, there its violence is more observable on the Landfide of the Clift. The main difference betwixt these two Winds here, is, that the South-Balt Wind always produces dry weasher whereas the North-West Wind brings rains which are very pernicious to the Fruit.

So foon as you come near the fight of the : Cape, under the 34 deg. of Southern Latitude, you meet with certain Signs and Tokens, by which you may discover whether you are far from Land or not. I don't much wonder that some of the Ancient Aut1 ors who have given us an account of the In es, affirm, that when they were at a lois to nd out whether they were near Land or ne; they used to let fly some Birds, and according to their flight, to direct their Course. Tho' this is out of date now, yet certain it is that the Birds are the best guide as to those who fail to the East-Indies: For at a great distance from the Cape, whilst you are yet in the open Sea; you meet with a peculiar kind of small Sea-Gulls, which foretel you your approach to this Cape. But as these some a-broad fornetimes above 100 Leagues r more at Sea, they are but uncertain forerunners, but when you see another kind of large spotted Sea-Gulls appear, by those that are acquainted in these Seas call'd Cape-Birds, with speckled wings, you may hope to fee Land in a very short time, and if You meet with some Turtle Doves, this pats it beyond all doubt. If you had An-chorage at 40 or 50 Fathoms depth, in a white Sandy Ground mixt with red, you may conclude your felf to be upon the Sandridge of the Cape d'Aguillas, tho' you see no Land. If you come to the Welt of the Cape of good Hope, you will find, befides the aforementioned Cape Birds, certain hollow roots growing among the Rocks in the Sea. the leaves of which fwim upon the Water; the Portugueses call them Trombas, and they are to be met with in vast quantities in the Table Bay, just under the Fort, which the Chaloops and Boats are very careful to avoid, they king to entangled together, that there is no breaking thro' them with oars: is likewife found in the Seas of Japan and in great effects among the Inhabitants, who make Pickles of these leaves, and use them as the Europeans do Cucumbers, or the Indians their Attspar.

The Hottentots, a barbarous Generation, were so ill-natur'd at that time, that they would not exchange an Ox or any other fort of Fresh Provisions with us, nay they made the ipring or places where we used to fetch our Water, muddy; we fell rough upon is. of them, but they being much strong- age with a good brisk Gale till the 3d, when

er than we, pelted us with stone, and made us retire; I was at that time with a Gun 165 upon the Table Mountain, but could not come time enough to their allifance; but the next day leveral of us went well arm'd to give them another vifit, and to fire at them in case they pretended to make any oppolition, but they no fooner discovered our Arms, but fled with Wife, Children and their Cattle.

After we had flay'd there about three days Their dea-shoar, we set sail the 13th of March printing from the Cape, steering our Course West-from the ward, in hopes to get fight of the Ship the Cape. Drake; but not meeting with her, we chose the open Sea, and advanced about 60 Leagues from the Table-Bay, under 34 deg. 20 min. Southern Latitude: We continued our Voyage with pretty good faccels till the 18th. when about Noon we found our felves under 38 deg. 26 min. Southern Latitude, and 33 deg. 27 min. Longitude. The Conpass shew'd due South and North. two next following days proved very rainy and bluftry, and the 27th, it Thundred and Lightned very hard, with strong Winds and much Rain, which ending at last in a violent from, oblig'd us to take in all our Sails. under 39 deg. 20 min. Southern Latitude: The 1st of April we found our selves far to the North, being forced by the stream, and the weather continued windy and rainy, as it had been ever fince the 27th of March, we found our felves then under 29 deg. 21 min. of Latitude, and 95 deg 30 min. of Longitude, and had fail d 36 League, in the laft 24 hours. The same Night the Winds began to rife to that degree, that we were fain to take in our main fail, which continued to the 3d. when the Compais was changed to 15 deg. N. W. The 7th we fail'd 44 Leagues with a moderate Gale, under 38 deg. 13 min: The Rains and ftrong Winds continued till the 13th in the morning, when it began to clear up, and fail'd that day and night 46 Leagues under 36 deg. 30 min. Luitude, and 98 deg. 42 min. Longitude. Then it began to be bluftery weather again. The 15th we found the Rifing of the Sun at 24 deg. N. W. this being the first time since the 4th of the last Month, by reason of the strong weather. About Noon we were under 35 deg. 14 min. of Latitude, and 104 deg. 40 min. Longitude; having fail'd 34 Leagues in 24 hours. Towards Evening it began to be calm, but continued not long, the Winds and Rains infelling us by turns, till the 1st of May, when we found our felves under 12 deg. 18 min. Latitude, and 124 deg. 46 min. Longitude: We then proceeded in our VoyThey per

in the night we were overtaken with a violent Travado with Thunder and Lightning which continued till the next following day. The 6th of May, early in the Morning, we difery'd the Coast of the Isle of Sumatra, about 4 or 5 Leagues from us, and to the Leward, a fail under 5 deg. 22 min. In the night the Wind blowing from the Land fide we were forced to take our Course to the South. By the 9th we had not advanc'd above 6 or 7 Leagues a-long the Coast of Sumaria, being continually pelfred with Travado's, Thunder and Lightning; all our endeavours were to get above the flat point of the Streights of Sunda. The 12th we had pretty fair Wind and Weather, and about Noon found our selves under 6 deg. 5 minuted in the Afternoon we fail'd forward with tanderate Gale, within a League and half of forementioned Point to the N. N. E. of where we found 16 Fathom Water a next day we found our felves about the rules from the Lid Point. The 14th the Imperial Illand, at a the Imperial Illand, at a the Imperial Illand, at a the Imperial Illand.

about the tree the Imperial Illand, at areal Illand. bout three difference, and the next
following a treed to the South East
to East, the Prince of Common The Printers where we describe all all the rest of the cessistants, day.

The cestis and our selves under 17 decrease in the Evening saw the stand the Evening saw the utmost and of the self area, at 4 or 5 like self the self wing day advanced to the point of 3 ava; and the control of the point of 3 ava; and the control of the possible possible printers. We see the control of the possible possible possible provents them. As the control of the possible possibl twixt them, but were prevented by a Trava-" do from the East. The 20th being under 60 deg. 41 min, we were at 6 Leagues diilance from the faid Islands, and kept in fight of them the 2 rft and 22d, with an intent to pair by them on the 23d; but being becalm'd came to an Anchor the same night at 30 lathoms depth; the stream did run here very strong to the S. W. The 24th we were directly opposite N. N. E. to the Isle of Java, and the same Evening, a Boat with all forts of refreshments came a-board us from thence, which was very welcome to us, after to redious a Voyage. We came foon after to an Anchor at 30 Fathoms Water, the stream running so strong here, that we were forc'd to remain here this and the next following day, during which time feveral other Boat, with fresh Provisions came 2-board us The 26th we fet fail again, but by reason of the violence of the stream could not advance tar, to that we were forceed to cast Anchor again, at 25 Fathoms depth, where we continued all the next day.

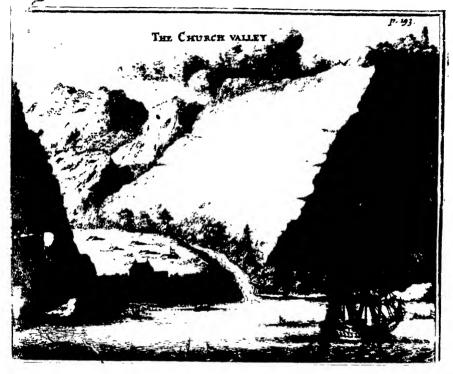

The 28th we fet up our fails again; but were forced foon after to cast Anchor, have- 1 65 ing the Iulo (the Isle) Bely to the N. E. Great Pulo mode to the E. and the Leffer Puto modi to the South of us. Towards Ev ning we let fail again, but whatever we lid could not reach the road of the fo long wifn'd \ for City of Batavia, being forced to come to an Anchor about half a League from the lile of Rotterdam at 11 Fathoms Water. the 30th we put up our Sails once more, but with no better fucces, being oblig'd to cast Anchor again; which put us in mind of what befel us lately on the Cape of good Hope, where we met with the same ill ficcess before we could double the Cape. He wever, the Wind turning fair in the Afternoon, we arrived the same Afternoon about 4 a Clock, (after a very tedious Voyage in which we had many fick) before the City of Bata-Theyari, where we cast Anchor at 4 Fathoms at Bat and a half depth. The next day I went a-via. shoar, and took up my lodgings in that famous City, at one Mr. Gerard Utsens, till further Orders. In the mean time I was very curious in taking an exact view of this City and the circumjacent Country: Whilft I tarried at Batavia, an Embassy was sense from the General Director John Maetzuither and the other Directors of the East-India Company, to the Cham of Tartary, who forms few Years before, had Conquered the most Potent Empire of China, to treat about & Tree Commerce betwixt the two Nations, which had several times before, been attempted and fought for by the Dutch, but was as often refused by the Chineses. Jacob de Keisar and Peter de Goyer being appointed Ambassadors, two Yachts, viz. the Kaukerk and Bleemendael, Man'd with 90 men, and provided with feveral fine Prefents for the Emperor were got ready for their Transport, and I was ordered to go a-board the Bloemendsel in the quality of Steward.

The Ambaffadors Embark'd the 14th of Mr. N July 1655, and fet fail the fame day from hoff fe the Road of Batavia, The 4th of September to Ch they arrived in the City of Annon, and the 4th of May 1656, in the City of Nanking and the 16th of July at Peking. After Jome stay there, they returned the 21st of Novem ber to Nanking, to Kanton the 28th of February 1657, and came into the Road of Batavia the 21st of March, where they gave an account of their Negotiation to the Dutch Council of the Indies Of all which I have given you an ample account in my Chinefe Voyage, Publish'd hest in Low-Durch, and fince Translated into several other Languages, and Printed at Amsterdam for Jacob Meurs, with many Cutts and Draughts of Pla es. living Creatures, Fruits and other Rer ark-

able things.

After my Return from thence, eight Ships · were ordered to be equip'd and loaden for · Halland, vit. The Pearl, Prince William. the Oragge, the Crowned Lyon, Achilles, Malaced the Theffor and Hellor. The Command in Chief of this Fleet was conferred upon Mr Koenes, then first Director of the Council of the Indies, who Embark'd a-board the Pearl of 700 Tuns, man'd with 180 Men, and provided with 26 Guns At his

request I went a-board a-long with him in the Pearl, which carried the Flag, in order 1658 to my return into Helland, tho my appoint to my return into Helland, tho my appoint the editine was not expired here. We fet the last day of via the 22d of December; and the last day of via to March 1658, arrived fafely without any re wards Hol markable accident, (except that we met with land. fome Travados, which foundly toft our Ship) Arrival a at the lile of St Helens.

be Ifte of The life of St. Helens is fituate under 16 Helens deg. 15 man of Southern Latitude, at a great dilance from the Continent; lying at tent 350 Leagues from Augusta, the next place of all. It is very furpriling to conceive so small an Island at so vast a distance at Sea, round about which there is scarce any Anchorage, by reason of the vall depth of the Seas. It is about 7 Leagues in Circumference, covered all over with rocky Hills, which in a clear day may be feen 14 Leagues at Sea; the Valleys being flor'd with all forts of Trees: fo that the this Island is not very large in its compass, yet it compic ids a large tract of Ground by reason of . fe Hills. It has many fine Valleys, 'iich the Church-Valley and the Apple-/ol. II.

Valley are the most remarkable. Church-Valley, you see to this day the ruins of a Chappel, formerly belonging to the Portuguejes, the whole Valleys are Planted with Lemons, Oranges, and Pomegranatetrees. At that time the Island was deslitute of Inhabitants, but fince the English have made a fettlement there. After the Portugusfes left it, a certain Hermit, under pretence of devotion, used to kill great numbers of wild Goats here, and fell their skins, which the Portugueses having got notice of, they removed him from thence. At another time certain Negroes with two Female Slaves were got into the Mountains, where they encreafed to the number 20, till they at last were likewife forc'd from thence. The Valleys are

Dad

cxcerlive hot, but on the Hills it is cool e-1658, nough; the the Heat is much tempered by the Winds and frequent Rain showrs, which fall fometimes feveral times in a day; which, with the heat of the Sun-beams, renders the Soil very Fruitful It abounds in fine and cool Springs, which fall down from the tops of the Hills, the Water being as clear as Cryffal, and exoncrating it felf at last into the Sea, it is very pleafant to behold the Sea men at their arrival here, to drink, wash and bath themselves in these Spring Waters. Most of the Fruits and Beasts which are produced here in great plenty, have been full brought buther by the Portuguefes, as for inflance, Orange-trees, (of which you may ice whole Woods) Pomegranate-trees and others, which bear Fruit throughout the whole Year. Here are likewife Multardleaves, Parfly, Sorrel, Purflin, Wintercreffes and other fuch-like herbs, which are very good against the Scurvy; neither is this Island destitute of Trees, but such as are not fit for Timber, but only for Fuel. It abounds likewise in Beatts; wild Goats are here in vast numbers, but very difficult to be taken, by reason of the many Rucks. Tame Hogs were brought hither by the Porsuguefes, which have Multiply'd to Admiration, but are degenerated into wild ones, and are not casie to be kill'd for the aforementioned reason. Thus it is with the Partridges, wild Pigeons and Peacocks, which are here in vast Plenty, but are so shy, that to foon as they fee any one Approach, they fly from one Hill to another cross the Valleys, to that you must be an hour before you can come at them again, which when you have done, you are in danger of loting your labour, for they return commonly from whence they came. The only way to catch the n, is to go a-broad with a good Company. It produces no ravenous or Poilonous Creatures, except large Spiders and Flies. All about the Itland you see vast Multitudes of Sea-Gulls, which feed on the Fishes in which the Sea abounds. Here you meet likewise with feveral Colours fit for Dyers, especially with a most excellent red Colour, and with very tine white Salt, made out of the Sea-water, by the heat of the Sun-beams. By reason of its great distance from the Continent, the Seas hereabouts are covered with Fishes, fuch as Mackarel, Carps, &c. They are not to be catch'd with Nets by reason of the vast depth, but with a Hook, or only an Iron Nail bent, you may catch as many as you pleafe; Craw-fish, Crabs, Oysters, and Muffels are likewife to be found in vaft quande- tities near the Sea shoar. After we had suffrom ficiently refreshed our selves here, and pro-

lens, vided what necessaries we thought fit, or

could get, we left this Island the last day of c May We continued our former Courfe, and 165 without any remarkable accident, came in light of Holland, and the 6th of 3ub, 1078 Hollar arrived happily at Amsterdam. I took up my Lodgings at my Brother Henry Nieuwoff s, whom as well as most of my other Friend, I had the good fortune to find in good health. Many of the most curious Persons of that place came daily to fee me, to take a view of the Chinese Characters, and other draughts " I had brought a-long with me.

After I had tarried for three Months in Holler, and dispatch'd my business both here and in Zeland, I delivered the Journal of my late Voyage into Chira to my Brother, in order to have it review d and Printed, at the request of several Persons of Quality; with in intention to take a fecond Voyage to the Last-Indees, with the first fair opportunity, which was foon after offered me by the Directors of the Feft-India Company. 5 Ships lay then ready for the East Indies, under the Command of Mr. Adrian Aeimonde, 217 the Ambern, butthen 500 Tuns, with 40 Guns and 430 Men, John Tymen/; Mafter; the second the Penil and three Yachts; I was ordered a-board the first. We set fail all together from the Vice the 22d of Dec. Nieuho 1658. The Ship the Arnheim at her en- fecond F trance into the Sea, struck upon the Sands age to and was in some danger of being stave that and another ship run foul upon her, by which the loft part of her Gallery, but by God's fingular Mercy, we got clear again the next

the reft. The 16th of March 1659, we arrived ~ Safely at the Cape of gent Hope, where we call 1650 our Anchor 1 he 22d, the Pearl with the other three Yachts come blewife to Anchor the Cain the fame Bay The first thing we did of good was to take care of our Sick, of which we Hope, had not very many, but 12 died in the Voyage, we went every day a-flyar to fetch fresh Water, Fuel, and what Provisions we were able to get, sometimes we catch'd good store of Fishes. One day several of us went a-shour to shoot some wild Foul', but advancing pretty high up the Table Mountain, we unawares cipy'd a fleeping Lyon, at no great distance from us, which made me soon retreat, telling my Companions it was dangerous to awake a fleeping Lyon, who were glad as well as I, to make the best of their way backwards

After a stay of 14 days at the Cape, we'lle fet fail again, and with a much more profperous Gale, than I had in my last Voyage. arrived safely on the Coast of St. 7a. where just as we got fight of that lil-Mr. Adrian Aelmonde died, to our great g "

high Tide, and continued our Voyage with

### and Travels to the EAST-INDIES.

his Corps was carried to Batavia, where it

59. was honourably inter'd.

The 18th of July 1659, we came to an are Anchor before the City of Batavia, after a Vegage of about 7 Months, during which, there hapned Scarce any thing worth taking notice of. After I had delivered up the Marchandiles under my charge, and my accounts. I took a turn to the Western Coest of Sumatra, viz to Jambe and Padane, which produce abundance of Pepper, tome Gold, and Salt-Peter, and returned the 10th of Deember to Batasia.

Not long after, I was ordered on Board the Ship Henricita I owifa bound for Amboina, Gerard Gerardfon a Native of Pluffingen Mafter laden with Rice and Provitions We fet fail boina. from Batavia the 23d of Dec. 1659, and in a Month after got among the Rocks near the Point of Bimaer, being forced thither by a Whirlpool, which rarn'd our Ship within the Compais of three times the length of the Ship, as twift as the numblest Horse could run; we were within a few Yards of having been struck against a Rock, but had the good fortune to escape without much damage, and after some Travado's at last got into the Road of Amboina not without great difficulty, by reason of the swiftness of the stream there, and cast Anchor at 26 Fathoms depth. We were very kindly received by Mr. Facob Huftard the Governour of Amboina a man of fingular Probity and Conduct. After the Ship was unladen, and I had d livered my Cargo, the Governour and I refoled to take a lower in the small Circumjacent Islands. Among the cit we vitated the Itland of Buero, where the Inhabitants made us heartily welcome after their way, and drunk to us merrily in Cups made of the leaves of Trees.

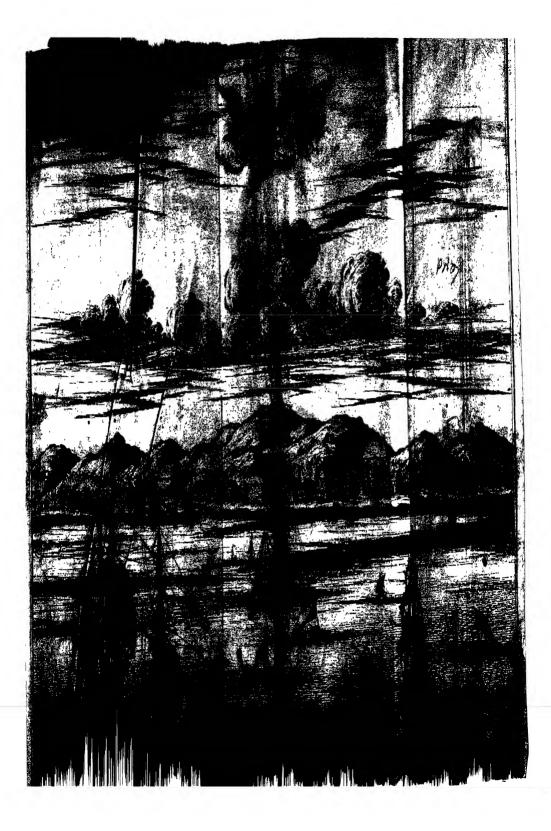

of the Isle of Boure or Bucre, is simuate aor bout 24 Leagues off Amloina, being near 30 League, in Compals. The Sea especially on the South fide, of a vaft depth, from whence the hour rifes by degrees, and furrounds the whole Island like a steep Wall. The South Wind produces both high and low Water here. In the Island of Buero are Mountains which reach to the very skys: Near the Bay of Tamahoo are high Mountains of the same Name, the Blue tops of which, Penetrate thro' the Clouds, and may, be feen at 28 Leagues distance at Sea; tho' it be very difficult to diffinguish them from the Clouds. The Bay of Tamahoo is fur-\*- aunded with these Mountains. Hereabouts you fee neither Houses, Huts, nor Inhabients, but only Woods and Wildernesses. A in River exonerates it felf into this Bay;
anks of which are on both fides full of

Hic Buero in another Bay, coll'd the Bar of Kapelie, which in form Place r two Longon 165 broad. The Sci-fhoar of the Bay 177 Pleat m, by reason of the many Wood and Kayelle Wilder for Here you to great flore green Phys. Woodstrees, but the Wood is forcewant kant, within the Marthy Grounds adjector to the middle of the Bay, is a whole Work of Trees as had as fron, and of a rediffi Colour, the Dutch call them Lay-

The Island Barro is very fertile and at The conft. bounding in 'I' is near the Sea fhoat. It runter of produce C . . . Pr. . stree . Printing, this If and green Ebony Wood-trees, Potatos, Beans, Karpang (a certain kind of l'est , Miller, or Indian-Weat, Tobacco, Lanctures, and divers forts of herbs. In the Mountain are Civet-Cats, and the Inhabitants have a peculiar easie way of taking the Civet from them which they fell very cheap. In flior, the whole Country is fall of Fertile Cround, and Pleafant Woods, and is watered with many fresh Water Rivers, the worst of all is, that it is much subject to Earthquaken

In the lile of Buer. lives among other beafts a Certain strange Creature, which by the Indians is counted among the number of Monsters. It is of the bigness of a large Dog, or of a Roe-buck, of a dark brown and gray colour, the bair life our Grayhounds. The Head and Mouth like at log. with fmall Eyes and Ears, the Tail curls twice of thrice, and the Legs and Claws like thote of a Roe-buck. The field is both by the Inhabitants and Strangers look'd upon as a damiy, and as good as Veniton. The Circumference of its Mouth and Jaws is as lug as a large Calt's Head, with very flrong Jaw-bones; on both fides backwards to the Throat, are about 12 Teeth, but in the fore-part of the undermost Jaw-bone, 6 Teeth and 2 large ones in the upper part, which are covered by the Mouth. From the middle part of the undermost Jaw-bones issue forth two large Teeth which pierce the Mouth They are a Foot long each, about an Inch thick, and fomewhat crooked like those of the wild Boar. Out of the upper Jaw-bones fprink forth two Horns, on each fide one, of an Inch thick, a quarter of a Yard long, fmooth like Teeth, and turn'd like a hook at the end, which makes it appear at first fight, as if it were Armed with 4 Horns

On the North-East of the Isle of Bucie are the following Villages Waifelorga, Fig. Wainite, Tamabou, Palmarte, Heker ima, Bara-Liciela , Waisamma , Ilat and Romeite; The eight first of these Villages were in 1653, burn'd to the Ground by the Daws, with all their Boats, the Inhabitants having 7. n Trees. On the North East fide of the revolted against them This Island is under

the Jurisdiction of the King of Tarnate. 659: the Year 1660, the Du es built a Fort with four fmall Baltions, provided with convenient habitations for the use of the Garrison in this Island, to keep out those of Makassar. It was nam'd Manda shaa after the then King of Tarrate. The Natives of Buero are purfuant to their Capitulation made with the Durce, obliged to inhabit round about the Bay of Kare is where they are possess'd of about 14 Visiage under the Dute! Protestion: Their Hocks are neatly built of Cane, and some have convenient Appartments; and for the improvement of the adjacent Grounds, are oblig d to cut down and burn the Trees and Woods, and to turn them into Fields, Gardens and Orchards. Before that time, they lived only in wretched Huts built along the Sca-shoar among the Woods. They are very black, and like most of the Inhabitants of the other 'eight using Islands, almost maked both Nien and Women, having only a piece of itur to lever their Nakedness, from the Waft days to the Knees; but Girls and novs till they are Twelve Years old, go quite N ked A young fellow that has a mind to Marry a certain Maid, may

foon obtain her, by making a small Present ? of eatables, or any other thing of no value 169 to her Parents. As foon as a Woman is brought to Bed, the goes threight to the next River, where the wathes both her felf and the Child, and to returns to her ufual employments, in the mean while the Husband is attended and made much of in the Wifes flead. They bemoan their dead Neighbours and Friends with Lamertable dut-crys, but after the Corps is buried, they Dance, Sing, Feath and make Merry. Their Seaves are made of Brick-work, with Stone and Clav, to preferve them against the Wild-Beasts. The common food of the Natives is Zagow, Millet, Rice, and dry'd Fish. They are for the most part Mahometans, tho' forme retain much of Paganilm, and adore the Crocodiles. In the Year 1650 one Madira Governour for the King of Ternate in the Ille of Imboine, having taken up Arms against the Dutch in Amboina, the Inhabitants of Buera, as well those under the Kings as Dutch subjection, join'd with Madira with fo much oblinacy, that they choic rather \*; die than to leave Madira; and in 1652 kill four Sea men belonging to a Veffel c

the Goofe, who ventured too far into the Woods. Mr. Arnold Flaming van Ou: shorn being 1652, fent with a strong Squadron of Ships to Batavia, and from thence to Am-Wina and Buero to bring the Inhabitants to ration; having understood their Barbarous proceedings, Din'd all their Boats, and the before mentioned Villages. The King Mandaifban came a-long with him in Person, baying before concluded a Peace with the East-India Company at Baravia.

After we had taken a full view of this Mand, we returned to Amboina, where the Governour gave a Splendid Entertainment to the chiefest Odicers of the Company, and \*fome of the Courtiers belonging to the Kings of Amboina. After dinner we play'd together, and they feem'd so well fatisfied, that it might eafily be teen there was a good Correspondence betwist them and the Company at that time. In the mean while my Ship having been loaden with fixteen Tuns of Cloves and fonie other Commodities, I took my leave from Mr. Huftard the Governour, and the 3d of Man, directed my Course back towards Basacia. Under the Government of this Mr. Huftard were at that time all the Melucco Islands, whose Business it is to keep a om Amthrist eye over them, for fear they should export Cloves. But before I quite leave the IIIe of Amirina, I will give you a description of its Situation, and what elfe is worth our Obfer-

tion there.

be Au-101's de-

rrure

pina.

The Isle of zonleinzor Ambeine is by some mboins. dimbred among the 160 from 15 mas, because f produces great flore of Cloves like the

mee Illands. It is Situate under 3 deg. Southern Latitude, about 24 League, from the Ifle of Banda, and confequently nearer the Coast of Melana, than any of the Molucco lilands. It is 24 Leagues in Circonserence, being divided almost in two Parts, by a vail Bay, or rather Gulph. It has a very time Pay where Ships may ride Lifely at Anchor near the Shoar; about two Leagues within this Bay, is the Datch Fort call'd Pateria. It appears like two Islands joined together by a neck of Land. About 60 or 7. Years ago, there were 57 goodly Villages or great Plantations, Inhabited by Indians and Chaptens, (tome of which were of good strength, but many of them have been laid defolate, or at least are much decay'd by the intelline Wars.

Among the reft 15th was a very fine Plantation on the North fide of the Island, half a League from the Sea-shoar, built upon a Rock, and defended by a good Breaft-work; not withstanding which, it was 1630 surprised by one Kimelaia, the Inhabitants were Chriflians. Near this Village are abundance of Clove and Zague-trees, and all a-long the

Sea-shoar are several other Plantations of less note, all well provided with Clove and Zegue- 1 65 trees. The Vidage of Mar has this conveniency, that it is well provided with fresh Springs, a thing of the utmost contequence in those hot Countries.

The Village Neuffanive was fituate upon a River on the West fide under the Cannon of the Fort Victoria, being divided into three Plantations. The Country thereabouts abounds in Clove-trees; the Plantations of which extend as far as to the utmost Point of the Western Cape, and on the other side, as far a. Ayer Kahoula: The King or Captain of this District used to be formerly Pretident of the Council of Amboing.

The Village of Hirror is very ancient, and built near the Sca fds, under the Redoubt belonging to the Dutch Company, being the Capital of the whole Diffrict of Hi.toc.

Havami the head Village of all, lie above Wawamia League from the Sea shoat, upon a Hill near an Erg je ivlie high, unto which leads but one lahage, which in the midit is defended by trrong Palitado's, and the top of the Hill (which is of an Oval Figure) by a stone Wall. Betwixt the Hill and the Fort flides a-long a pretty River. Formerly this was a noted Place of retreat for the Inhabitants. who used to shelter themselves here.

The Village Meuface is built upon a Moun- Moufala. tain about a League and a half high; teing fo strong by Nature, as to be counted impregnable; notwithstanding which, lit has been reduced by the Victorious Arms of the Dutch East-India Company, under whole jurifdiction they now live.

The following Plantations or Vidages, were in 1630, under the jurisdiction of the Dutch Eaft-India Company.

The District of Regienize which com- Rossenive prehends Roffenive, Amarectee, and Hattue. Roffenive had in 1630, one Annex Roffenice for their King or Captain; Ama ofte one Demingos Cefta Makkake, Peera, and Harrie, one Leffemeffe. Thefe Vidages were better Inhabited than most of the rest, the inhabitants making Profession of the Christian Religion, yet not without Ibme mixture of Mahometanijm, except thole of Amaroche, whose Captain was a good Christian, and lived much better that the rest; which shews that the chief defect lay in their Kings, for undiew Roffenice was none of the beil livers, tho' he could very artificially play the Hypocrite; he had no Wife but many Concubines; and tho' he was often admonished to marry, he continued obstinate in the same course, which gave great feandal as well to the Inhabitants as to the other Kings and Captains. The common People of this Town were al-

ways more ready for the Service of the Com-150 pany than those of the other Villages. For the Villages Refferive, Amaboefoe and Hattoe are obliged to supply and manage one half of the Governours Kerrakeren, (or finall Veffels of War) as the Villages of Kielang, Nakko and Hattela are bound to supply the other

Kiclang.

Kiciang was one of the most considerable Villages on the South fide of the Mountain of Laytimo, not far distant from the Sea shoar, but of no great strength. Near it are very good Springs and great store of Clove-trees. Under the District of Kielang are the Villages of Kielang, Nakko and Hattera. In the Year 1630, Manuel de Silva was King or Captain of Kielang, but furrendered the Government to his eldeft Son; he was a very good natur'd honest Man, and had the tecond Place in the Durch Council. Anthony Pays was Captain of Nakko. and Anthony Lopes of Hattels, they were all three very good Christians.

Under the Diffrict of Ema are the Village. Ockerille, Lewarr, and Routen Lafary; Marue! was Captain of O.kerilla, Siman of Ema, and one Anthony Reuros of Lafary. Their are obliged to furnish a Karrikore of four Nadjos for the Service of the Company. They are very honest and faithful, and profess themlelves of the Tribe of Olilyman, except Routon 1 w, which belongs to the Tribe of the Ordiva.

To the District of Soya belong the Villages of Acocfen, Orritettue and Amantelloe. These are obliged to find a Korrakore of 4 Nadjes, are pretty ready in the Service, and profess all Christianity, and so does the King with all his O, angkays. They are of the Tribe of the Olifican. Laurenzo de Sylva is King of

Sora, Anthony Aboefen of Aboefen, and Feronymo Teholopice of Oeritettoe, and Amantelloe.

Under Hative belong the Villages Taviery, Hekkenatoe and Mardykka. They furnish'd Korrakere with 4 Nadjos. They are good Soldiers and Christians, and their Heads come frequently to the Communion. Their chief Heads are Leurenzo Marcus Captain of Hative. Pedro Anthonio of Taviery. Laurence Mendos, Chieftain of Hokkonaloe and Mardykka. The Inhabitants of Mardykka are the remnants of the Portugueses, and some other Slaves set at Liberty: 1630 they consisted of 100, or 120 Men fit to bear Arms, who did confiderable Service to the State of Amboina; they were very good Christians and Faithful, and furnish'd an extraordinary Kerrakore of 4 Nadios; they accounted themselves to be of the Tribe of the Olifivas, their Chieftain was then Authors de Costo.

To Harou belongs the Village Hative-Kif-

Christians, and furnish a Korrakore of 4 Nadjos; Diego Paty was Captain of Malou, and Adam Marano of Harive Kistilen.

Pouta has only two fmall Villages belong-Pouta ing to it, viz. Kapa and Chery; their Captains were Stephen Terfera of Pouta; Manuel Lopes of Kapa, and Andrey Parata of Chery.

The Inhabitants of Octtomary did revolt Octtom three times, but were in 1626, reduced to Ty. obedience by the then Governour Mr. Gorkum, they were then under the tuition of Don Pedro de Oettomary their Captain, who was a very honest Person, and ever since that time they have adhered faithfully to the Company. They are generally frout Soloiers and good Christians, for they frequent the Christian Congregations, and add more Children to our Schools than the other Villages do. They furnish a Korrakore with 4. Nadjos, and are of the Olifivas. The four Villages of Ourien, Larik, Wakkacsive, and Affelou stand likewife under the Jurisdiction of the Company; they are all Blacks and frout fellows; they belong to the Olifivas, and acknowledge Hittee for their Captain, yet under the Protection of the Company. They furnish a Korrakore of 4. Nadyos. Thus the two Villages of Alang and Lillebay belong to the Company: The Inhabitants are Christians except 3 or 4 Families at Alang. Of the last, one Salvador was Captain, and of Lillebay, Bastiacn Kastango. The Inhab tants are likewise of the Tribe of the Old

These fix Villages are obliged to the Dutch East-India Company with at quantity of Cloves; to wit 300 Babar per Annum: vast numbers of Clove-trees having been Planted hereabouts, about 1630, which are come to full Perfection fince, and produce vast store of Fruit. Thus 1636, the Planting of Clove-trees was fo far encouraged on the South fide of this Island, that each Family was obliged to Plant at least ten Trees every Year, the Ground being very fit hereabouts for this purpose; they were also not negligent in Planting Coco and other Fruit-trees. Kamariay, Seriwawan and Kayrato, are three Villages near the Sea shoar; the Inhabitants are absolutely devoted to the Service of the Company, and appear sometimes with an Orangkay at the head of them at the Fort. They adhere to those of Mardykka, and belong to the Olifivas.

Near the Point of the Bay are four Villages, Quelipapoety, Amasse, Marykgue, and Savoukgue. The first furnishes a Korrahore with 3 Nadjos; the three last a Korrakon of 4 Nadjos. In the Village of Amassee lived at that time two young Lads, Sons of the Orangkay, who formerly had been Hostages chilett, they are pretty well Peopled, and with the Dutch Governours for feven

#### and I ravels to the EAST-INDIES.

years, but now were got into the Govern-659 ment of these Villages, and seem'd well inclin'd to the Company's Interest.

The Isle of Amboina has many high and Mountains, I he life of Ambound has many high and in Amboi-freep Mountains, call'd Gounen by the Natives, which have feveral fair Villages built on the p, and re irrigated with very clear and from Water-springs. The Valleys serve for Walking Places, by reason of the many fine Trees that are planted there, as the Mountains ferve the Inhabitants for a shelter against their Enemies in time of War, being for the most part inaccessible. There is a certain Rock here call'd the Elephants Rock, from its shape and bigness, from whence iffues forth a Rivulet as clear as Chrystal, which flides gently thro' the adjacent verdant Plain, whence is a very pleafant walk up to the Rock.

However the Air of Amboina is none of the amboina. wholfomest. There rages in this and the rest of the Molucco Islands, a certain diftemper, both among the Natives and Strangers, which by its Symptoms refembles altogether the French Pox, (for which reason the Dutch call it the Pox of Amboina) except that this is communicated without any carnal conjunction. In the Face, Arms and Legs, nay all over the Body appear certain crutty Boils, which either turn Schirrous, or if they come to a Suppuration, a flimy tough but fharp matter iffues from thence, retembling in all its circumstances the French Pox, except that they are not to Painful neither corrode the Bones. This Dileate is attributed to a peculiar conflication of the Climate and the Air, and the excessive use of Sca-isshes, and Coco Nuts call'd Zago, and of the Liquor call'd Sazuweer. At first this distemper is easie enough to be cured, but if it takes root, not without great difficulty. They commonly apply the same remedies, as we do in the French Pex, in the Spleen and Dropfie; to wit, The Decoctions of China, Sarfaparilla, and Guajacum, and Purge them foundly betwixt while.

The lile of Amboina is pretty fertile, it produces Millet, Tobacco, Coco-Nuts, Potatos, Pinang, Oranges, Limons, Citrons, Sugar, Bamboo Canes, and feveral other Fruits. Some Places here afford likewite Nutmegs, but in no great quantity, neither nave they to good as those in the lile of Banda, neither do they grow wild here, but the Trees are planted in Orchards. Neither are hey destitute of divers forts of Beasts, espeially Roe-bucks and Hoggs, and have reat store of Fishes; but the chief Products f .. mboina are Cloves which grow wild here. They are call'd Nagelen (Nails) by the Dutch om their shape, being flat on the top, and harp at the end. They call them also Ge-

roffel nagelen, perhaps from the Greek Karne phyllon. In the Molucco Islands they call the 1659 Cloves Caampe or Change; in the Isle of Java Siancke, and in Malacca, Synken or Thinka; the Arabians, Persians, Turks and most of the Indians call them Kalafur.

The Clove-tree grows up in form of a The Clove-Pyramid, its Branches forouting forth close tree. together. This tree is of the bigness of our Cherry-trees, but in the whole refembling most to a large Lawrel-tree, the Leaves being very near of the same shape; the Bark on the Stem is of a grayifh colour like that of the Olive-tree. In the midft of each leat is a large vein which fends forth many leffer Branches; these leaves grow on long stalks, fometimes fingle, but for the most part in clusters; those that grow near the extreamities of the Branches, are of a Purple colour, but the rest dark Green, if they are rubbed betwixt your hands they fcent as ftrong as the Cloves themselves, and so do the Branches. On the extreamities of these Branches grow certain sprouts which produce certain Buds, and those again Flowers, sometimes 10 or 20 in a knott, which at last produce the Fruit, which are tough whilst they are growing, but hard when come to maturity. At first they are Green, then appear of a pale Red colour, as if the Trees were covered with Scarlet, affording a very agreeable fight to the beholders, because there is often more Fruit than Leaves on the Trees. The Bloflom is white at first, not unlike our Cherry bloffom, each leaf of the Flower having three small streaks; then they turn Green, afterwards Red, and last of all dark Yellow inclining to Black. They refemble in fhape a Nail, with a finall hollowness in the head, in which remains a thin skin which falls off as foon as it is touched. The Cloves are very hard of substance: When they more Bloffoms than Leaves foretel great plenty of Fruit. The Blofforn finells much finer and stronger in dry, than in rainy weather, and the first is look'd upon as the most Fruitful, it being common in a dry Scafon, to fee more Blofloms than Leaves; tho' even in fuch a Seafon the Clove-trees don't hit always a-like, for every third or fourth Year, it is observed that they don't bear so plentifully as otherwise, just as if the Tree at that time did remit its vigour, fpent the preceeding Years. The Cloves are gathered once a Year, viz. From the middle of September or beginning of October, till February, this being the best Summer Season here. Some are gathered, the rest beat down with Canes like Flails; but this last way is not so fafe as the other, for unless they be very careful they bruise the tender spriggs of the Tree, which renders it the less fruitful the

next following year, tho' the Scason be never 1659. fo good. Before they begin to gather, the ground under the Tree is cleared of weeds, that they may not look part of the Fruit. What Cloves are left upon the Trees, grow very large, as they ripen, much bigger than the rest, but are not so fit for Use. The next following Year they drop from the Tree, and tho they are not to Aromatickas the others, they are used for Seed, and produce new Trees, for which reason they are call'd the Mother-Cloves; for after they are dropt upon the Ground, they will take Root, and in 8 or 9 Years time it will come to the perfection of a good Tree, and prove as fruitfull as the rest; But if these Sprouts be Transplanted once in two or three Years, they will bear more and better Fruit. They fay the Clove-Tree, will hold good 100 Years; the Fruit immediately after gathering is dark Yellow inclining to Black, but if dry'd, turns quite Black, and if they dip them first in Sea-water, it preserves them from being worm-eaten. Thus prepared they are laid up in Store-houses, and are Transported to other Places, where they are pick'd and the stalks taken from them, which are fold separately. The Dutch call these stalks Nage gruis (the Rubbish of Cloves) and the Portuguese Baston. Cloves are hot and dry, of a bitterish biting tast, but especially when they fre dry'd. They seem to consist of a Gummous Sulphurous substance, with a strong drying and attractive quality, as for instance; when the Indians are to deliver a certain quantity of Cloves, they put in the Ware-house where they are, a Tub full of Water, which is in a short time attracted by the Cloves, to the no small Benefit of the Seller; it being observable that the Cloves weigh as much the heavier, as the Water that was put there weighed before. Dutch put this likewife often in Pra-Aice. Some are of Opinion, that the Cloves by their extraordinary drying and attractive quality, draw all the moifture of the ground round about the Tree to that degree, that no Weeds or Grass can grow there; but this is a vulgar error, the bareness of these fpors of ground being not to be attributed to the Cloves, but to the owners themselves who weed and keep them clear, thereby to afford the more nourishment to the Trees, and not to lose part of the Fruit when they, are gathering or beating them from the

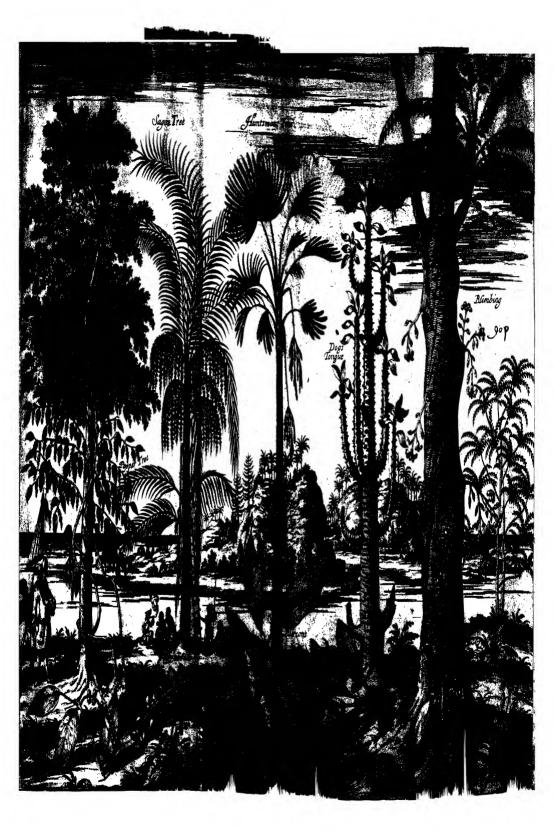

"Tis true, the Clove-trees are planted for the Fruit take, nevertheless the Blossoms, Leaves, Sprigs, nay the Gumm it felf that iftues from the Tree, are not destitute of an aromatick virtue, and afford very good Medi-cines; The Indian and Portuguese Women Distil

out of the green Cloves and Leaves, a Water and a Spirit, which is very Odoriferous and Cephalick; and an excellent Remedy against the Pally, call'd by the Natives Berin bery. Against the same distemper, they preferve also the Gloves with Sugard draw an Oil both of Cloves and Leaves Cloves boil'd in Milk are accounted a great provocative, they are very Cordial, and if chew'd, take away a stinking Breath. They make a pickle of the green Cloves, which are not io hot as the rest, and provoke the Appetite. Persons of Quality put green Cloves in Vinegar, which is a great strengthener of the Stomach. The Indians call the Vinegar diziar.

There is another kind of Cloves but not Royal commonly known, being very scarce and dear, Clove. The Indians call them Toinka Papoba, or curl'd Cloves, tho they might rather be call'd Ear-Cloves, because they sprout forth like the Corn-Ears. The Dutch call them Royal Cloves, because they are in such high esteem among the Kings of the Molucco Islands, not so much for their excellent talk and scent (in which they furpass all others) but for their scarcity's fake; for, if we may believe them, no more than two fuch Clove-trees are as yet found out, and that in the Isle of Makjan only: One of these two Trees exceeds the other in bigness, but both are like the common Clovatrees, except that they are much Taller, and the Cloves bigger and of a different shape from the common Clove, as may be feen by the draught.

In the Island of Ceylon are likewise abundance of wild Clove-trees, but bear no Fruit. It is credibly affirmed, that in former times the Inhabitants of the Molucco Islands were ignorant as to the Use of the Cloves, till fome Chineses coming that Way found out their goodness, and from thence Transported them to China, and fo further to the dies, Persia, Arabia, and other Parts. The Islands Ternate, Makjan, Misser and Batsjan did likewise in former days abound in Clovetrees; but purluant to an agreement made with the Kings of the Islands some Years ago, the same have been rooted out.

In the Isle of Amboina, grows likewise the wild Palm, or Zagou-tree, otherwise call'd Papedo. This Tree resembles the other Palm or Coco-trees, the Leaves hanging downwards on the Branches, the lowermost of which Perish commonly: This Tree bears but one Fruit, which is of no Use. habitants make Bread of the Pith of the young Trees; for on the top of the Tree groy certain head like a Cabbage, in which is iuclosed a certain white Flower, call'd Zagou, and the Bread made of this Flower, Zagou manda. This Flower they mix with Water,

and let it rife a little, then they put it in Earthen Pots, put burning Coals all round about it, and so bake it. This Bread whilst it is onew, taftes very Sweet, and is of a very agreeable Scent, but foon grows dry, and is Brittle and Shin to like Glass. They also mix this with water, and boil it like pap, into which they Squeeze one or two Limons, and so stir it about with a stick; it is very cooling, and of an agreeable tafte. They eat it with a stick, which they put into the pap, and turn it round, till a sufficient quantity of the pap, which is very glutinous, almost like Turpentine, adheres to the flick; and fo put it into the Mouth. Out of these young Trees they draw, like out of the Coco-trees, a Liquor; they cut one of the Branches near the top, and in a hole made for that purpose, put a piece of hollow Bamboo Cane, (which in these parts are used instead of Tubs, Pails and Mugs) thro' which in a fhort time, iffues forth a great quantity of Liquor as fweet as Honey, call'd by the Natives zagouweer or Zageweer, but is somewhat harsher than the Liquor drawn from the true Coco-

In the Isle of Amboina they put a certain bitter Root, call'd by a general name Oubat into this Liquor, which preserves it for some time, for alle this Zagouweer turns quickly as fowre as Vinegar, and is then used for such. They destill also a certain Liquor of it call'd Arak. This Zagouweer is the common drink and fold in Publick Houses for a Farthing a Glass, but used in great quantity, proves very obnoxious to the Nerves, especially whillt you are hot, when it must be taken with great precaution, elfe it will infallibly caufe the Gripes in the Guts and Palfy's, call'd by the Natives Beribery, which leaves a paleness in Peoples Faces for ever after. Sometimes they can draw 30 Quarts of this Liquor in 24 Hours, out of one fingle Tree. In the Isle of 3non, there are likewise some of thele Zagou-trees; but the Liquor, is, as far as I know, not valued at Batavia. They draw the Liquor out of these Trees till they die, and I was told that there was some of these Trees in the Woods of Amboina, which will give as much Liquor in 24 hours, as a Man is able to carry away upon his shoullers. Some other Islands belong to the Isle of Amboina, to wit, the adjacent large County of Ceram; the Isles of Manipa, Quelang, ind Amblau.

The Isle of Amboina is divided into two Parts; one of which is under the jurisdictiin of the Dutch East-India Company; the oher under the King of Ternate. Unto the company belongs the Country of Lairimor, there is the Fort of Victoria, and the Wood-Fort Wantrou, and on the Pass of Bagoale, Vol. II.

the Redoubt call'd Middleburgh. The three ~ Islands Homa, Honomoa, and Nausalaur, 16 9 9 which produce great quantities of Cloves: The whole Coast of Hieroe with the Redoubts; the Amsteldam at Hila, the Rotterdam at Larike, and the Leoden at Hittoe and Lamma; and several small Wooden Forts at Ourien, Lebelehu, Ceit, and Way. Under the Kings jurisdiction are the Country and Coast of Ceram, the Isles Amblau, Manipa, Bonea, and fome others.

The Fort Victoria, (the staple of the Com- The Fors pany here) lies five Leagues deep in the Victoria. Country, being defended by four Pulworks, a good Ditch, and a confiderable Garrison, with fuitable Previsions and Ammunition. During my stay here, there was a large Crocodile in the Ditch, which did vast mischief to the wild Fowl belonging to Mr. Huftard the Governour, who took great delight in them. Some Soldiers and others were ordered to place themselves whereabouts they supposed the Crocodile had his lurking Place, but could not meet with it; till at last the Crocodile on a fuddain leaped towards the Secretary of the Governour, whom he had certainly devoured, had not the rest that were near at hand, with sticks and half Pikes kill'd the Beaft, which was extraordinary large, immediately. Round about the Castle live several Dutch, Chineses and other Nations. Within and without the Fort is a Church, where Divine Service is held both in the Dutch and Malacca Tongue.

sclves with a flight piece of stuff round the stoms Buttocks and Belly. The Women tie their of the Amhair up in many knots: He that intends to marry a young Maid, buys her from her Father for Money; but if the proves Barren, the Marriage is null and void: In former Ages the Natives were a most barbarous People, Men-caters and Pagans. Now a-days they are for the most part Mahometans, the relt are Christians, some Roman Catholicks, such as were converted by the Portuguefes, others profeshing the Protestant Religion, which was first introduced there in 1647. The Dutch have crected Schools in all the Villages, to instruct the Youth in Reading, and Writing, and in the fundamentals of the Christian Religion. The Natives are generally brave, but very Deceitfull and Treacherous; they are naturally addicted to Laziness, and are to obstinate that they choose rather to die, than to leave their Ancient Customs. They make use of certain small Vessels, in time of war. They are very fwift in their motion and managed by Pagagen, or Oars. They call these Vessels Korra-

kore and are shaped like a Dragon, the Head

representing the fore-castle and the Tale the Ff f

The Men wear large Whiskers, but little Manners hair upon their chin; they only cover them- and CuSiérn.

They have also some lesser Boats 6 5 9. call'd Paros. Their Houses are built of Bamboe Canes and Zagou-trees; They fleep likwife in Bediteds made of Bamboe Canes, or fornetimes upon Mats only.

Their Weapons.

Their Weapons are Bows and Arrows, Half-Pikes, Javelins, Cymeters, Targets, and Firelocks, all which they manage with great Dexterity; as well as the Darts. They have also a kind of hollow Pipes, out of which they shoot great Numbers of small poylon'd Arrows; the Wounds made with them prove commonly mortal, unless the Poifon be temoved immediately by cutting it out.

Their Wo. men.

The Women of Amboina are very Lascivious, and extreamly defirous of the Christians; If they find themselves disappointed in their Expectation, or that they are left by their Gallants, they have a way of infecting them with a certain Poylon, the Operation of which is so slow, that they die a lingring Death, neither can they cohabit with any other Woman, unless they receive proper Antidotes from the same Woman that poisoned them. Many Chineses live in Amboing, the' for the most part among the Mahometans at Hittoe, Lochoe and in Ceram. In the Year 1636, at the Request of King Hieroe, three or four Chineses were permitted to fettle under him, with this Limitation however, that they should pay the usual Taxes to the Dutch Receiver General of Amboina; afterwards one Chinese was allow'd to live in each Village, to provide them with distill'd Arak. About the Year 1636. the Slaves belonging to the Dutch had got a Custom to run away from their Masters, and to shelter themselves among the Mahometans, but several being punished with Death, pursuant to a Proclamation published for that purpose, the rest were so terrified thereat, that no fuch thing was heard of for a great while after. Certain Negro Christians dwell likewise in Amboina, commonly call'd Mardiikers.

Courts of

There are three Courts or Councils be-Fustice in longing to the Dutch in Amboina; First the Amboina. Court Martial; Secondly, the Civil Court of Justice, and thirdly, the Great Council, or Council of State.

> The Court Martial used to meet every Monday and Thursday, Composed of the Governor, the Head Factor, and Under Factor of the Company, a Captain, a Lieutenant, one of the Eldest Serjeants, and a Secretary; These took Cognisance of all Matters relating to the Soldiers and Gar-

The Civil Court of Judicature was kept in the Town, confifting of four Officers of the Company, of four of the chiefest Inha-

bitants, and of four or five Orankays of the Council of State; Besides which they had I to 5 two Clerks, one a Dutelman, and the other a Native of Amboina; and two Attendants. The Head Factor in the Castle was President here; they took Cognizance of, and gave Sentence with the Governor's Applation, in all civil and criminal Cafes, neither had the Villages any right of exercising of Justice without them.

The Council of State or the Orangkars of the Chamber, who in Conjunction with the Governor, and his Councellors were to deliberate concerning all publick Affairs, such as the Equipping of Korrakoren, or the Management of a War against an Enemy; had their Seats appointed thus.

Andrea King of Roffenive. Manuel the old King of Kiehang. Laurentz de Sylva King of Soya. Simaon Ema Captain of Ema. Laurenzo Marcus Captain of Harive. Diego Pati Halloc Captain of Halloc, Anthony da Costa Captain of the Mandii-

Don Pedro Captain of Vettomoery. Salvador Paty Alang Captain of Alang. Simon Baguala Captain of Baguala. John Barkabeffier Captain of Way. Stephen Tercera Captain of Pouta. Pedro Anthonio Captain of Tacieri. Fernando Latochalat Captain of Rof-

In former Ages the Island of Amboine How An was subject to its own Kings, till it was under Te

reduced under the Obedience of the Kings nate. of Ternate, which, according to the :Relation of the Inhabitants happened thus:

Many Years ago reign'd a King in Ternate call'd Babou, Son of Chieroen Diamelou, who having been the first that introduced Mahomerism there, was in great Esteem with the Mahometan Priests, who to this Day pay a great Veneration to his Memory. In . the mean while some Differences being ariscn betwixt the Villages of Warnalete and Makarir, belonging to the District of Warnoela, and the last being unable to cope with those of Warnalete, they underhand fought for Aid by King Babeu; who having granted their Request, tent a good Fleet of Korrakoren under the Command of his Councellor Samarou, to the Cape of Seragi, betwixt Erang and Liffidy where they came to an Anchor; The lubabitants of Cambello, who as well as those of Erang and Liffidy had fubmitted to King Babou against those of Makarit, advised the Inhabitants of Warnalese to go to meet Samaroup and to purchase his Favour by some Presents, which being done accordingly, they all attackt in Conjunction With Samarou thole of Makarit,

and

nd forced them to Submittion; but Samanot thus fatisfied, reduced all the ciracent Islands under his Kings Obedi-Liberty to the intestine Divisions of its shebitants; Samarou returning home Vitorious, was received with great Demon-trations of Affection by King Salva, who, in Reward of his Service honour'd his Son Sobolsongy with the Title and Dignity of Salahakkum or Stadtholder of these conquer'd Countries; having before been dignified with the Title of Kimelala, which his Succeffors in the Stadtholdership have retained ever fince, tho' it be certain, that not Kimelaha but Salahakkum fignifics a Stadtholder in their Tongue. After the Death of Rolohongy his Eldest Son Adja Succeeded him in the Stadtholdership, who was Succeeded by his Brother Baffi Frangi. After him came Frangi, who for his Treachery was Beheaded by Sabadiin of Louhou his Brothers Son. Leliatte Son to Baffi Frangi then thrusts himfelf into the Government without Confent of the King, and following the Footsteps of his Predecellor, receiv'd the same Reward. He was Succeeded in the Stadtholdership by Madira Son of Sabadiin the seventh in Order, our Company having made use of all their Interest with Hamsia, King of Ternate, to procure him that Dignity, in Confideration of the fingular Kindnesses they had receiv'd from his Father. But they foon found themselves mistaken in their choice; for this Madira of the antient Race of the Tomogolo's, of which Samarou was the first, rebell'd 1650, against the King, and with the Afdistance of the Inhabitants made himself Master of several strong Holds; to wit: Amblau, Manipa, Lissidy, Hatua the lesser, Affakoudy, Laala and Nouffatelo plunder'd all that opposed him, and kill'd about 80. Persons belonging to the Dutch Company. Ohe John Pays Captain of Hatuwe, Tawiro and Houkonalo, living near the Fort of Amboina, was shrewdly suspected to have had a hand in this Conspiracy, which Simon Kos (who commanded in the Absence of Arnold-Outshoorn, at Amboina) having got notice of, secured him in the Fort, till the Arrival of Mr. Outshoorn, when the War broke out with great Violence on both fides.

The Portugueses made themselves Masters of Ambaina, 1546. in the following manner: At the time when Anthony Galvan was Governor of Ternare, a great Fleet of small Vessels belonging to the Island of 3ava Banda, Macaffar and Amboina was lent to the Molucco Illands to fetch Cloves; Galvan being advertis'd thereof, and fearing lest they should by this means spoil the Spice Trade of the Portugues armed about

25 Korrakoren With 40 Portugueses, and 400 Auxiliaries; These, under the Command of 1 6 5 5. Facob Supi Azevedi Admiral of the Sca, Molukf., steer'd their Course towards Amboing, where meeting with the Indian Fleet, they Attack'd and Routed them, taking many of their Ships with good store of great Cannon, and a confiderable Summ of ready Money; Azevedi willing to improve this Opportunity, Landed in Amboina, the Inhabitants of which being terrifi'd at their last Defeat, did for the most part submit to the Portugueses, and received such Laws as they thought fit to prescribe to them; which done, Azevedi loaden withGlory and Spoils, return'd as a Conqueror to Ternate. After that time the Portugueses used always in their Voyages from Malacca to the Molucco Islands, and in their Return from thence, to provide themselves with fresh Water at Amboina, till 1603. this Isle was taken by the Dutch from the Portuguefes, who got a vast Booty there; tho' the Dutch are not very fond of living in Amboing, being a place of no great Plenty.

We let Sail, as I told you before, the 2d. of May from Amboina, and with a brisk and prosperous Gale arriv'd the 29th. before Ba-

tavia.

No fooner was our Ship unloaden, but I received Orders to go a-board the Ship Achilles, John Vander Werven Master to Japan. Every thing being got in readiness for our intended Voyage, I took my leave from the Directors of the Company, and the 28. of Jul. fet Sail with 15 Ships more, Mr. John Vander Lasn being Commadore, with Orders to Sail to Teywan, to Attack the City Makao, (a populous place, and Defended by a Garrison of 600 Men) and to observe Coxingas. But scarce were we come within fight of the lile of Anyam, when we were overtaken by so terrible a Tempest, that I can safely affirm, I never Amost vib. faw the like in my Life, and that it is palt lent Storm. my Skill to express it; The Waves rising fometimes to that height, that the very Tops of our Masts could not be seen, the Winds fometimes falling flat upon our Ships, and preifing them down flat under the Abyls, lo that we expected every Moment to be swallow'd up by this merciles Element, especially when we faw the Yacht Gorkum (in which was Francis Lausman, formerly my Companion in our China Voyage) in a Moment perish before our Eyes, without the least possibility of faving one Man. At last however thro' God's infinite Mercy the Fury of the Winds began to allay, when with much ado we got with our Ships, which were much damag'd by the Storm, into the Harbour of Trans, the 20th of Sept. The Season for our intended Voyage to Japan being pull, as for-

abroad with a Powerful Force; We set sail with the whole Fleet, for the Islands call'd Piskadores, and came the 3d of Ollober to an Anchor in the Church-Bay: here I received Orders to prepare my self for a Voyage into Perfic, a-board the Ship the Leerdam, loaden with Sugar, which I did accordingly. The Islands call'd Piskadores or Fisher-Islands, of Piskado-res or Pe- and by the Chinefes Pehu, are Situate under 23 and 24 deg. Northern Latitude, about 12 and 13 Leagues from the lile of Teywan. They have feveral good Harbours, and two commodious Bays, where Ships may ride fafely at Anchor at 8 or 9 Fathoms Water. At the entrance of this Bay are the ruines of two ancient Stone Forts, one built by the Dutch, the other by the Chineses; and be-The Country twixt both is another Fort. thereabouts is not Hilly, abounds in Grass, yet pretty strong. It contains many Populous Villages; these Islands being all well ftor'd with Inhabitants, with Fat Cattle, especially Cows, and Birds of all forts, especially with an incredible Number of fine large Cocks. During the Rainy Season they gather fresh Water in Cisterns or Ponds, but in dry Weather the Water is faltish here. The Country produces likewife Potato's, and many other Fruits in abundance, and here are always to be feen great Numbers of Chinese Vessels, which come some for Fishing, some for Traffick. At the entrance of the Church-Bay, stands to the North side a Chinese Pagode, where is very good Anchorage, and a convenient place for Shelter to those that are bound for Teywan, there being no other fafe Harbour for great Ships here-The Islands Piskadores are many in Number; Two are the most Famous; one call'd the Piskadore or Fisher-Island, the second Pehou or Pehu.

ccd against my Will, to unload my Ship

1659 here, and the defign against Makao being

laid aside for that time, because Kaxinga was

The South-East side of the Fisher Island is so Bare, that it produces not a Tree; To the West of it is another small Island, and the Passage betwixt both so shallow, that a Yacht is not able to pass that way. South of this lies another Island, call'd by the Dutch the Troublesome Island, because there is no Anchorage for Ships here. About a League from thence to the West is a Rocky Island, or rather two fmall Rocky Islands, divided by so many Rocks, that there is no Passage or Anchorage near them.

Return to After we had dispatch d our business nere, Teywan, we fet Sail again for the Island of Teywan, After we had dispatch'd our Business here, Mr. Conjett was at that time Governor of this Isle, who having not without Reason conceiv'd a Jealoutie at the vast Number of Ships and Men, the Chineses had brought

together in the River of Quincheu, or in the Isle of Ey and Queymuy, on the Coast of China, I was dispatch'd thither the 31. of Off. with the two Yachts the Graveland and Ma-17, with Express Orders, to demand from Kexinga whether he was for Peace or War; and not to tarry longer than ten Days for a Categorical Answer. I tarried aboard the Nieu Vessels to take care of them, whilst my Col- sente league went to speak with Koxinga: Our li. xings mited time being near expiring, I went ashoar in a Boat, ordering our Vessels to be up-The Banks of the River on their Guard. were so crowded with People, that I had much a do to pass thro' them; by good chance I met with a Chinese, who understood Portuquese, who was so Complaisant as to go a-long with me to the Place, where my Colleague and his attendants lodg'd; but they being gone abroad to see Koxinga muster his Forces; I was obliged to take the same way; we Address'd our selves to him, desiring a speedy and politive Answer; the time of our stay being expired, He gave us for Answer, Koxis That being at present busy in Mustering his Answer Forces, he would give us his resolution to Morrow, in a Letter directed to the Governour of Teywan, which he did accordingly: In this Letter he told him, that he had not the least thoughts of any War against the Company; but that he would cultivate a good Correspondence with them. To remove all occasion of jealousie, he sent several Merchant Ships to Teywan, which however did not remove the fuspicion they had conceived of him there; especially after we on the 22d of December gave a verbal Account of his vast preparations in the Fort of . Teywan.

His Letter was as follows,

#### Koxinga's Letter.

Eing at a great distance from you, I conim not but receive your Letter with a more than ordinary Satisfaction, which I perused more than once, to inform my self the better of your intentions. You mention some false rumours, but at the same time seem to give Credit to them. In my Father Yquam's time, the Dutch pofsefs'd themselves of a certain Place in the Isle of Teywan, with his confent for the convenience of Trade, which I have not in the least interrupted, and therefore judge you to be obliged to me upon that Score. I have of late Tears been fo deeply involved in a War with the Tartars, that I have had no leifure to trouble my head with an inconsiderable Island, that produces nothing but Grass: It being not my custom to disclose my designs, but rather if I aim at the East to point to the West; how can you suppose to be inform d'of them by Rumours? The resson

why to few of our Ships come to that Island; is, 5 9. because they cannot Trade thither with any profit, the Customs being so heavy. It was but this Year the Tartars made a strong Invasion into the low Lands of China, in hopes to put an End to the War with one blow; but they were fo bravely received, that they were forced to Retreat, with the loss of 100 of their Commanders, and a great number of their Men; we then retired into the Islands of Ey and Queymuy, in hopes to draw them thither, and so to catch them in the Trap. Concerning your complaints of having been treated in an hostile manner in the Island of Piskadores, if it be really so, it has been done without our Knowledge. I fent back an immediate Answer, together with your Presents, to the letter fent to me from Batavia four Years ago; by which I understood that you intended us but a very flender satisfaction, for the Joncken, or Ships, and the loading and Money a-board them, detained by you, notwithstanding which, 1 did not think fit to urge this sufiness any further, for fear of occasioning a Rupture betwint us; It shall be my endeavour as soon as the Tartarian War is brought to a conclusion, to accourage Trade as much as peffule may be, and don't question, but you will on the other hand contribute to it, as far as lies in your Power.

Given in the 14th Year, the 19th day of the 10th Month, of the Reign of King Indick.

After the reading of Koxinga's Letter, it was refolved by the Majority of Voices, not to engage in a War against Koxinga; most being of Opinion, that at this juncture he would not undertake any thing against the Company; tho' the Governour Mr. Conjet was of a contrary fentiment, which proved too true afterwards. Thus all the thoughts of War being laid a-fide, the continuation of Commerce with him being judged, as indecd it was, to be of more present advantage to the Company, all the Ships there were ordered to their respective Places, and I among the relt, fet fail aboard the Ship the Leerdam loaden with Sugar for Gamroa in Perfia.

be the sof Quermuy, are high Rocky Islands; The City The before mentioned Islands, Ey and Queymuy of Eymny is Situate upon a high Hill, pretty deep in the Country, being furrounded with a Stone Wall, without which you fee the ruins of an ancient Tower, and a Chinese Pagode or Temple.

The City of Queymuy lies upon a River at a pretty distance from the Sea, being the Capital of the Isle, from whence it has borrowed its Name. It has very large Suburbs, which begin on the River fide. Not far from thence, deeper into the Country, is aftrong Castle, defended by a very high Wall, for-Vol. II

merly the Relidence of Koxinga. The Country round about is Rocky and not very Fertile; except that the Valley's afford a little Grass for Cows; for the rest the Inhabitants feed most upon Fish, and some live by Traf-

It was not long before the Chinefes being the CI forced by the Tartars to quit the Continent neles the of China, and Koxinga strengthned with near ter them 25000 Fugitives, and about 500 Veffels, felves is they resolved to shelter themselves in the two shands. before mentioned Islands of Ey and Queymuy, and finding himfelf in a condition to under-

take fomething against us; he Embark'd 20000 of his best men a-board a great number of Chincse Foncken, or Vessels, and the 30th of May 1661, appeared within a League of the Fort Zelandia in the Isle of Terwan, Koxinga steering his Course directly to the shoar, anacks where his Countrymen living in that Island, Teywan, were ready to receive him, with their Carts and other necessaries; and soon after Posted a confiderable number of his Veflels betwixt the Fort and the Redoubt call'd the Province. This put our People under no fmall confternation, they being not provided either with Veffels or forces, to encounter to formidable The Dutch

a Power. However Captain Pedel and Alderp the endeavour first with 2.40, and the second with a common to prevent first with 240, and the second with 200 men by Landwere fent, out to endeavour to prevent the E- ing. nemics Landing, and 4 Ships, viz. The Hector, the Graveland, the Finel and the Yacht Mary were ordered to fall upon their Fleet, which was put in execution immediately. About Engage-60 of the Chinese Foncken, each with 2 great ment be Guns in the fore-Castle, came up with our Dutch and Veffels, but were to warmly received, that Chineses. two of them were funk, and the rest so much disabled, that they were all glad to retire, except fix only, which kept close together, and that fo furiously upon us, that they feem'd all to be on fire; the Helter took fire by an Accident, and to together with the Joncken that lay aboard her, blew up into the Air. The other three Ships, notwithstanding this fought it out bravely, and killed above a 1000 Chineses besides those wounded, in the Engagement. The Yacht May, was also fet on fire, but was faved by the Indefitigable Care and Labour of the Seamen. On the Land fide, Captain Pedel, having divided his Forces into two Bodies, and exhorted them to stand it out Bravely, gave the Enemy a very warm falute, with his fire Locks, which kill'd many of them, as they were Landing; notwiththanding which, they were to far from giving ground, as we flattered our felves they would have done, that they fent whole showers of arrows among our People, and at the fame time, fent a strong detachment to the Right, The Dutch

diers, that they threw down their Arms, and wading thro' the water got into a Pilots boat, and so ashoar; leaving the Captain with 19 men only, to the Mercy of the Enemies; upon which, immediate orders were fent, to Captain Aldorp to retire with his Forces to the Fort; The Enemy landed without any further opposition, and in 4 hours time, cut off all Communication, betwixt the Redoubt. the Province, and the Fort, and betwixt this, and the open Country; most of the Inhabitants afterwards joining with them against us. Koxinga being foon informed of our prefent condition, in very ignominious terms, fummon'd the Fort, threatning to put all to Fire and Sword, if we did not furrender, immediately. It was then taken into confideration, whether, confidering the Enemy had cut off all communication with the Redoubt the Province, and his great Strength, it were not advisable, to treat with Koxinga and to offer the furrender of one of the Forts, provi-Koxinga. ded we might preferve a free trade, than to lofe all; which being agreed upon, and at our request a Passport granted for that purpose, by Koxinga; we lent Thomas Tperan head Factor of the Fort, and Mr. Leonardus the Fiscal, as our Deputies to him, to falute him, in the Name of the Governour and the Council; and to wish him fuccess, in all his undertakings, previded they were not intended against the Interest of the Company. In their Letter they told him, that they could have wish'd to have seen him in another posture here, and that they were furprised to find him in Arms, without the least declaration of War; That if he had any real cause of being offended, they were ready to give iam Satisfaction, and to cultivate a good understanding with him. The Deputies had express orders, that in case Koxinga would not hearken, to any accommodation, without the furrender of both the Forts, they should treat no further, and tell him that the Company was in a condition to revenge this injury. With these instructions they went the 2d of May to Koxinga's Camp which was then about 12000 strong, and busie in the Seige of the Redoubt Province. They were armed with three different forts of weapons; The first with Bows and Arrows, which they manage with great dexterity; the fecond with Symeters and Targets only wherewith they cover themselves and so break in upon an Enemy, when they are seconded by their Pikemen, whose arms are Backswords and Pikes of three or four foot long with broad and sharp Irons at the End.

The Deputies were at their first Entrance sy's receive into the Camp, received by one of their ed into the Chief Commanders, and conducted into a spacious Tent, where they stay'd till Koxinga was at leifure to admit them to Audience.

Whilst they stay'd there, several of the Enemies Troops march'd by their Tent, and as 1659 far as they could perceive, the same at several times, to make the greater oftentation of their strength. Koxinga was in the mean while employed in combing his black shining hair, a great Ornament among the Chineles, which done, the Deputics were introduced into his Tent, which was all hung with blue, he himself seated in an Elbow Chair, behind a four square Table; round about him attended all the chief Commanders clad in long Robes without Arms, and in great filence, with a most aweful Countenance. On both fides towards the door, his Life-Guards were placed in very good Order. The Deputy's address'd themselves to him in Low Dutch, and delivered their Letter, which being Translated into the Chinese, Koxinga Answered.

#### Koxinga's Answer.

Hat he was sensible that the good Corresponmence the Dutch East-India Company had hitherto cultivated with him, as well as with all the other Indian Princes, was no longer Idurable than they found it consistent with their own Interest; which always ceased, as soon as they found their account in it; That it was contrary to his custom to divulge his Thoughts or Designs, yet he could not diffemble, that it was by reason of the War he was engag'd in against the Tartars, he had taken possession of this Island; which as it always belong d to the Chineses; so it was no injuffice, that now they flood in need of it themselves, they might retake it from Foreigners, who were only fettled there by permiffion. he was not come there to engage in a War with the Chineses, but only to take possession of bis That he was willing they might take away all that belong'd to them, that they might demolish the Forts and carry away their Cannon; for which purpose he was ready to lend them as many of his Ships and Men as they wanted, notwithstanding they had so lately attack'd him both by Sea and Land, when he had given them sufficient proofs of his strength. He told them further; That they were very proud and haughty in pretending to defend so inconsiderable a Fort, (meaning the Redoubt the Province) with fo small a Force against his numerous Army, which be threatned to destroy, so as not to leave one stone upon another: He boasted, that if his Forces were united, he was able to conquer Heaven and Earth; concluding, That they must take a very short resolution.

Our Deputys gave for Answer, That fince the Dutch had left the Piskadore Islands; This Isle was surrendred into their hands by Contract; but that, if he (Koxinga) had any pretentions upon the Company, they were ready to tredt a-

bout it, and give bim satisfaction. But after several Contests, finding him quite averse to hearken to any Accommodation, unless they could furrender all; they departed, protesting that the Company would shew their resentments in due time, and so set up the red

be Depu-

Before their departure from the Camp, ies leave they had obtained leave of Kexinga to go be Camp. thro' the Fort the Province, in their return home; Here they found things in a very indifferent Posture, and the Fort not in a conome into dition to hold out above a Week longer, all ie Fort, their Powder and Ball being spent, there bee Pro- ing not enough left to withstand an Aslault: This with the weakness of the Place, induced the Deputies to consent, that they might capitulate with the Enemy, provided they cou'd get liberty to transferr the Garrison into the Fort

rive at great:

nce.

The Deputies arrived the same day in the great Fort, where having wiven an account of their Transactions, the Governour Conject and the rest of the Commanders seeing all the Communication betwixt them and the Redoubt the Province, nay with the Whole Island entirely cut off by the Enemy, were at a great loss what to resolve upon at such a juncture as this: After mature deliberation, the only hopes they had left, was, To defend the Fort Zelandia till fuch time they could be relieved from Baravia, which confidering alved the Northern Monzon, might perhaps take efend up a whole twelve Months time. However Fort it was resolved to defend this Fort to the last extremity, notwithstanding the Redoubt the Province had been forced to furrender, the Garrison with all the Cannon being faln into the Enemies hands, who had made them Priioners of War.

10.1710

To prepare themselves for a more vigorous defence, all that was able to bear Arms was taken into the Fort, and the City set on fire, which however could not be executed fo speedily, but that the Enemy preserved some ware and other Houses, by timely quenching the Flame, which ferved them thi- for Places of shelter. Soon after they began bat- to batter the Fort with 28 Pieces of Cannon, but their Cannon as well as their Men being exposed to our shot, we ply'd them so warmly with Cartrages and other fuch like materials, that the streets thereabouts were all covered with the dead Carcasses of the Chineses, and the reft were forced to shelter themselves in the By-Lanes, leaving their Cannon to our hi- mercy, some of which were rendred unserviceable. On the other fide of the Fort 6000 Chinefes advanc'd boldly under our Cannon, and attack'd our works hand to hand, but were beaten back with great loss, to an adjacent Hill; upon which the besieged made a

vigorous Sally, and nail'd up all their Cannon. It was then proposed to make a general Sally, but confidering the disproportion betwixt us and the Enemy, who were advanc'd under our Cannon, it was judged too dangerous, for fear, if we should miscarry, the Enemy might force their way at the same time into the Fort. The next day the belieged made another Sally, and carryed off a fix pounder into the Fort. The Enemy finding all his attacks unfuccessfull, kept the Fort close block'd up, and in the mean while made the open Country feel the effects of his Rage; They made all the Durch Inhabitants, especially the Ministers and School-masters Prisoners, because as they pretended, two certain Ministers had under-hand encouraged their Parishioners to kill all the Chinese living among them, not questioning but the rest would follow their Example; but as it commonly happens in things of this Nature where many are privy to a delign, this had been discovered by some, out of fear, or hopes of reward, for which the Ringleaders fuffered a most miserable death, being Crucified by the Chineses, and their Crosses creeted in their respective Villages.

Some Durch Sca-men had no better sacces, Ship taken for thirteen of them being taken in a Dutch by the Chi-Ship by Chingle Veffel, near the Piskadore neles. Islands, these were put a boards Chinese Vesfel man'd with 30 men, who, were to carry them to Koxinga's Camp. So foon as the Dutch Sea-men came within fight of the Dutch Fort, they resolved to fall upon the Chineses The Dutch (not above one half of them being above delign to deck at a time) and to so carry off the Ship carry off a the next following night; but a French man Chinese belonging to our Ships Crew, whether out ship. of fear, or hopes to recover his liberty, did betray their delign to the Chinefes, who immediately gave the fignal to some other ships near them to come a-board, which being done accordingly, they made them all Priso Onifiarry. ners and forthwith fent them to Koxinga's Camp, where they had their Nofes, Ears, and Hands cut off, and in this miferable comdition were fent into the Fort for a Terrour

geons care, who performed his part to well, that not one of them died.

Among the rest of the Dutch Prisoners A Message taken by the Chineses in the open Country, sent from was one Mr. Hambrocock a Minister; this Koxin Man was sent by Koxinga to the Governour sieged. of the Fort to perfwade him to a furrender, upon Condition, viz. That they should depart safely with all that belonged to them, and the Company; but if he refused, he might have a fufficient occasion to repent it at leifure; and that Koxinga would revenge himfelf upon the Dutch Prilomers: With thefein-

to the rest; they were committed to the Sur-

ftructionsMr. Hambrocock came into the Castle. being forced to leave his Wife and Children behind him as Hostages; which being a sufficient Argument to him, that in case he did not fucceed in his Negotiation, they must expect nothing but death from Koxinga's hands, yet was he so far from perswading the Garrifon to a Surrender, that he encouraged them to a brave defence in hopes of relief; and as a further encouragement, affured them that Koxinga had loft many of his best Ships and Souldiers, and began to be weary of the Siege, fearing leaft we should hold it out till we received Succours from Batavia.

Mr. Hambroccok having made an end of what he had to propole, the Council of War left it to his choice, whether he would rather stay with them, or return to the Camp, where he could expect nothing elfe but prefent death; every one entreated him to stay; He had two Daughters within the Caftle, who hung about his neck overwhelm d in grief and tears to fee their Father ready to go, where they were fentible he must be Sacrificed to the rage of a merciels Enemy; he represented to them, that having left his Wife and two other Children as Hoftages in the Comp, nothing but present death could attend them if he returned not; and to untwilting himself from his Daughters-Arms, and exhortisty encrywheedynto a resolute defence, he returned to the Camp, telling them at parting, that he hoped he might prove ferviceable to las poor fellow Prisoners.

Koxinga's returns.

kill'd by

He gave an account to Koxinga of his Messenger Negotiation, and that the besieged were refolved not to treat, unless they were to remain in possession of the Castle, which was not at all relishing to Koxinga, who now began to be afraid of an Uproar; the Inhabitants having flain several of the Chineses, which exasperated him to that degree, that having cauled industriously a Rumour to bespread abroad that the Prifoners did underhand encourage the Inhabitants of Formofa to rebel; he ordered all The Dutch the Dutch Male Priloners to be flain, which was done accordingly; some being beheaded, Prisoners others kill'd in a more barbarous manner. Koxinga. The dead Carcasses after they were striped quite naked, were to the number of 500, thus buried 50 and 60 in a Hole; of all the rest, only the Supervisor of the Country, with 25 others, were faved and carried to China, tho they even did not spare the Women and Children, many of whom were likewise slain, tho' some of the best were preserved for the use of the Commanders, and the rest sold to the Common Soldiers: Happy was she that happened to fall to the Lot of an unmarried Man, being thereby freed from the importunities of the Chinese Women, who are ver-They were ry jealous of their Husbands.

however afterwards pursuant to the Capitulation, fent back to Batavia. Among the flain 1/659 were Mr. Hambrocock, Mr. Mus, and Made nold Winsheim three Ministers, and

School-Masters, who were all behead

Whilst these things were transacting neces the Dutch in Batavia had got notice of this Invasion, by the Mary Yacht, which in spite of the contrary Season, had found means to get thither, and to give them an Account how Matters stood with us. Ten Ships were immediately got ready with 700 Soldiers aboard them, which fet Sail in June 1661. under the Command of Jacob , Kou, and not long after arrived at the Isle This unexpected Relief as it succours of Formola. put the Enemy into no small Consternation, fent to to it Encouraged our Men, to make a more Formola vigorous Defence than ever; and, tho' the Wind blew very hard, these Ships found means to Land some Men and Ammunition; But the Winds encreasing more and more, were forced to choose the Main, to the no fmall Gris of the Besieged, and did not Return til about a Month after; when the Ship called the Urk being forced upon a Rock on the Coast of Formofa was split, and her Men faved, from whom the Enemy having underitood our Strength, and some other Circumstances, they began to be better satisfied, because they had imagined this Succour much more formidable than really it was.

However the Befreged took a Refolution, The Befre by making a vigorous Sally to diflodge the ed make Enemy from the City of Zelandia, and to Sally. destroy their Ships. The 16th. of September was appointed for this Enterprise, but whilft fome Ships were engaged, the Wind beginning to flacken the rest could not come up; Our Men endeavoured to attack the Chinefes in their Boats, but being exposed to their Shot, without being able to do them much harm, ours had the worst on't, some of the Boats being Over-set, others Sunk, the rest faving themselves by Flight. Two of our The Dutt Ships got upon the Sands, and were both worsted. fet on Fire. In this Sea Engagement the Durch lost about 130 Men, but the Enemy a great many more; however this unfortunate Action put a stop to the intended Sally, and Orders were fent to the Garrisons of the two Northern Forts, to withdraw into the Castle; the Garrison of which was considerably Diminished, by the many Skirmishes, in which the Enemy got but little Advantage, and lost many of their best Men; which put a check for some time to their defign, especially when they understood that we had fent all Women, Children and other useless Persons to Batavia, the better to ena-

able us, to make a vigorous Defence.

Much about the same time, the Governour received Letters from the Tartarian Stadtholder of Hock sieu, who requested some Ships and Forces, to drive the remaining Forces of Koxinga out of the Country, promiling to come afterwards with his whole Power to the relief of Formofa. Hereupon Facob Kou was sent thither with five Ships well provided with Men and Ammunition; but being overtaken by a Storm, loft all his Anchors near the Piskadores, which obliged him to fend back three of his Ships to the Isle of Teywan: with the other two he return'd to Batavia, where he met with but an indifferent Reception.

The Besieged finding themselves by this difatter bereaved of a confiderable Number of Men and Ammunition began to Despair of holding it out much longer; so that many Deferted, and among the reft a certain Serjeant, who gave Koxinga, not only an Account of our Weakness, but also encouraged him not to let flip this opportunity to force us to a Surrender. Koxinga having well weigh'd the Matter, attack'd us with his whole Force, more vigoroully than ever, and in Fanuary 1662, railed three Batteries · mounted with 28 great Cannon, upon the Sandy Grounds near the Fort; The Durch forefaw the Danger that must needs ensue, k from this near approach of the Enemys Bate teries, and did all that they could, either with Cannon or Firelocks, to disturb them in their works, but these not hindring, their men continued to batter the Walls, till they had had made a breach; Then they made two feveral Attacks, but were as often repulsed with great loss, the ground being all over cover'd with Dead Carcaffes. distaster taught them to be more cautious, and so instead of storming, they continued to fire incessantly their Guns, with such a fury, that they laid a whole Redoubt level with the Ground, so that our men finding it no longer tenible, nail'd up the Guns, and laid fome Barrels with Gunpowder under it, which blow'd up a confiderable number of Chineses into the Air. Koxinga himself was in danger, of having been among them, had he not been fore-warn'd by the before mentioned Serjeant, who told him that it was too dangerous to venture himself in a Place so lately left by the Enemy. Here Koxinga railed a large Battery upon a rifing Ground, from whence he hoped to lay the Body of the Castle level with the Ground. Dutch on their Side were not Idle to do what possibly could be expected for their Desence, with Cannon Shot, Granados and otherwise; they raised their Breast-works, and put great Packs of Linen and Stuffs into the breach; Notwithstanding which the Enemy played here in great plenty, but the last are some-Vol. II.

inceffantly upon them, and against Night had made so large a Breach, as was judged 1 662. fufficient to make a general Affault. Then it was, the Befieged began to deliberate what The Dutch it was, the Betieged began to denomate what was best to be done in this Exigency, whe Defend the mselves ther, fince there was no longer abiding in to the stthe Castle, they should make a Sally, and most, force their way to the Enemy, or whether they should abide the Affault: The most were for a Capitulation, there being not the least hopes left of making a Sally with any fuccess, and to refult the whole Force of the Chineses in a place without Defence, exposed to the Enemies Shot, was lookt upon no less than to Sacrifice themselves to their Enemies; these Considerations were so prevailing at last, that it was unanimously agreed to Capitulate, and to Surrender the Castle upon Articles; This was put in Execution immediately, a Truce of five days being agreed on for that purpose, at the expiration of which after great conteits it was agreed, That every thing belonging to the company, Should be delivered up to Koxinga. That all Zelandia Sources-That every thing belonging to the Company The Fort of the Inhavitants, Souldiers and Prisoners Should dred. have free Liberty to retire to Batavia, with all their Moveables, for which purpose they should be revided with suitable Conveniencies. The Besieged after having endured a of the Months, with the loss of 1600 returns. Where the Government of the Convenience of the and Members of the Council Formofa, after all the hazards and incredible fatigues they had been forced to undergo, were put in Prison, and their Goods Conficated; the Governour himself being not long after Condemned to a perpetual Imprisonment in the Isle of Ey; But was at the Intercession of his Highness the Prince of Orange, and by Orders from the Directors of the East-India Company in Holland Discharged, and returned

The Isle of Formofa is Situated under the 23 The Isle of deg. 30 min. Northern Latitude. It is of an Formola. oblong Figure, being not very broad in proportion to its length, which is 125 Leagues. It is full of Hills, but intermix'd with many fertile Valleys, producing great store of Grass, and Watered by many fine Rivers. The Country produces abundance of Rice, but especially Sugar, vast quantities of which are Exported from thence. Most of the Indian Fruits are to be seen here, of which more hereafter, as also several forts of Dutch Fruits, Herbs and Roots; transplanted thither from Holland, as Peaches, Apricocks and fuch like; Cows, Oxen, Hogs, wild Goats, Hares and Rabbets, but especially Stags are Hhh

to his native Country 1676. Since we have

had frequent occasion to speak of the Island of Formofa, I will give you a short Account

what of a leffer first than these of Europe, 662. and without Horns; the Inhabitants catch vaft Numbers of them, meerly for their Skills falle, the Flesh being not esteem'd here, except their Tongues. fo great flore of Elks here, which being very strong, they use in their Carts instead of Horses or Oxen. One time the Master of our Ship and I being invited to Dinner at his Silters, that was Married to a Native of Formofa, they lent us a Carr drawn by Bufflers; the Malter of the Ship who understood better how to Govern the Ship than those Beafts, would needs supply the Carr-man's place, but prickt the Bufflers fo unmercifully (according to the Cultom of the Country) that they run away with us; for fometime we kept stedfast in the Carr, which over-turning at last, threw us at a great Distance, but to our great good Fortune, without any confiderable harm; we Walkt the rest of the Way on Foot, leaving the ordinary Carrman, a Native of Formefa, to recover the Bufflers, which he did at laft, and brought them Neither do they want Partridges, Wild Pidgeons and other Wild Fowl; there are also Tygers and Bears to be met with, but I never heard of any other ravenous Will Beats here. The Mountains are ful! of Brin (tone, which questionless occasions to many Karthquakes, unto this Isle is much hoject. Some are of Opinion, that these Modritains contain likewise Gold and Silver, fone Essays of this Nature having been mide with good Success, but was ne-ver attempted to Dig for it. This Island is diffitute of good Harbours for great Ships, which are forced to ride at Anchor in the Road of fome liles about 12 Leagues from The Country is very populous: For befides the Natives of Formefa, above 25000 Chineses forced out of China by the Tartars have at feveral times fettled themselves

The Natives of Formefa, especially the Natives of Men are of an Olive Colour, Fat, Strong, Well-limb'd and Nimble; some being able to out-run a Wild Boar or Stag; they leap upon the Back of them and so cut their Throats. The Mountainers are of a leffer The Women are not altogether to large as the Men, but very strong Bodied, and are Cloathed after the same Fashion; they have black shining Hair, which they tye together in a Knot on the top of the Head.

7beir

The Men throughout the Summer ap-Clearking, pear for the most part quite Naked, but those who do not, especially in the Winter, wear a kind of Silk or Cellico Clerly, which they wrap about their Bedies and button it under the Arms; the Wenters hings forme-

Stuff's what lower down below the Knees. made of Dogs Hair are in great efteem with # 6 them. They cut off the Dogs Hair, like as we do our Sheeps Wooll, Spin and Weeve They are generally very it afterwards. Friendly and Faithful to the Europeans, and don't eafily break a Contract; they are very Apprehentive, and will give a good Judgment of Matters; many of them were already Converted to the Christian Religion, by the Industry of the Ministers and School-Masters, which were planted almost in every Village, there being no small hopes, that the whole Island would in a little time have embraced Christianity, had not the Conquest of Koxinga overturn'd this good Delign.

Their Bread is made of several Roots, Their but Rice is in the greatest esteem; the' they Sow no more than for their own Use, and that scarce sufficient. 'Their Drink is here, like all over the Indies, Water, tho' they prepare likewise a strong Liquour of Rice, in the following manner: They just Parboil the Rice, and then beat it to a Pap; then several old Women chew a certain quantity of Rice, which they spit out into a Vessel, and mix It with the rest, to make it ferment. After they have put it into Earthen Pots, they pour Water upon it, and after they have covered it very well, fet it to ferment for two Months, till it is well Settled and Clear. this produces a very strong Liquor, which will keep good 20 Years, and grow ftronger every Year. When they go abroad into the Fields, they take of this Liquor along with them to Drink, and the Settlement for their Food; most of the Rice here being confumed in these Liquors.

Contrary to the Cultom of most other Theu Nations, the Women cultivate the Grounds the Bian Shan here; and manage the Rice, Sugar, Ginger and other Fruits of the Earth; the Men being employed in nothing but Hunting and Warlike Exploits, unless they be very Old. when tometimes they will give a helping Hand to the Women in the Field. leifure time the Women catch Crabs. Oifters and Shrimps, which they much admire.

The Men are mighty eager in Hunting. The S Whole Villages join together, and furround emple a great tract of Ground, where they Kill in its all they meet with, and divide it; few of ing. the Wild Beafts escaping their Hands at that They also eatch Wild Boars and Staggs with Snares, fastned to Canes; which the Wild Beafts no fooner touches but one or other of the Legs, is intangled in the Snare, where they kill it immediately. They have also remain Cane-Darts of fix Foot long, with feveral bent blooks at the one and a Bell at the other end; this they

throw at the Staggs or other wild Creatures, which being fix'd in the Body, they trace it by the found of the Bell till it begins to lofe its strength by the loss of Blood, and so

Their Houfes.

Their Houses are but one story high, but very large, built of Cane, with many doors looking to all the four corners of the Winds, and fometimes more; They always raife their Houses three or four foot high from the Ground, looking upon it otherwise as unwholefome.

Their Uwells.

Their Houses are adorned with Painted Callico Hangings, with wild Boars and Stags heads; with Bows, Arrows, Clubbs, Pickaxes, and other Warlike Inftruments, but efpecially with the skulls and bones of their Enemies, which they look upon as the chiefelt Ornament of their Houses: They cat and drink for the most part out of Wooden Veffels, or fuch as are made of Bamboo Canes but have tome Earthen Pots to drefs their Victuals in, and for fome wher Particular Ufes.

ir Go-

This Isle has no King or General Government. nour, each Village being a kind of a getty Common-Wealth; their Government confifts of Twelve Persons, which must be at least 40 Years of Age, and are chosen out of the chiefest among them; they continue for Life; all their Power confilts only in confulting what is most expedient for the Common good, the refult of which is propofed to the Affembly of the whole Village, who receive it with a great deal of fedateness, and after the breaking up of the Affembly, they debate among themselves what is bell to be done, if they approve of the proposition made to them; it has the Force of a Law, if not, it is of no confequence. They are also much addicted to follow the directions of their Prophetefies or the Priefts; at a certain scason of the Year, they are obliged to go quite naked for three Months, otherwife (fay they) we shall want Rain. At another certain time they are debarr'd from wearing Silk or other fine Cloths, or if they do, their Council has Power to strip them of them, and to tear them to pieces before their Faces, unless they redeem them by a certain number of Stags skins, Rice, or flrong Liquor. Corporal Punishments are unknown to them; befides this prerogative of Confulting and Punishing, they are upon the fame level with the rest.

Age is the only thing in extraordinary refeet among them; this they show in giving way either in the Streets or at Table to their Elders, who are also first served, and speak betore the rest.

The Men never Marry before they are 5. Years of Age, but the Women as from

as they are Marriageable. The Natives of Formofa don't fuffer their hair to grow below 1 6 6 their Ears, before rhey come to the state of Manhood, when they let it grow as long as it can. If a young Man has a mind to Marry a certain Maid, he fends one of his Friends with the ordinary Marriage presents, which are commonly a Chinese fuit of Cloths, Bracelets of twifted Reeds, some broad Rings of Iron or Brafs, and fuch like Baubles of an inconfiderable value; if the Maid accepts of the Prefents, the match is made. Whilft they are young they don't dwell together in the fam. Hone, make is not allow d of till the Husband be 50 Years of Age. But as foon as the young married Man has an inclination to meet with his Wife, he comes privately into her Hutt, which is commonly in the Field, and lies himself down in the place where the commonly fleeps, where the comes to hirh, but is fure to fend him away again early in the Morning. All the Children begot betwixt them, before both the Husband and Wife be arrived to the Age of 37 years, are kill'd; For, after the Woman is fure she is with Child, one of their she Priests lays the big bellied Woman upon her back, and fqueezes her to long with her hands and feet ill the mifcarries, not without great hexard and pains, which they willingly undergo, because they rector it a great sin, to keep any Children begot before this discuss a live, but preserve them carefully afterwards. The Mother keeps the Infant close by ber, till it be two Years old, when it is fornitimes permitted to fee the Father. Their Marriages are as foon diffolv'd as they are contracted, and that upon very flight occasions, but if the Husband parts from his Wife without any reason, he loses his Marriage Presents; but in case of Adultery, or that the Woman is outrageous, his Marriage Prefents must be reflored unto him, the Women enjoy the fame Prerogative; both Parties being afterwards at liberty to Marry where they pleafe, which fonictimes happens twice or thrice a Year. They make no great account of Fornication, provided it may be done in private, but are very cautious of committing incest.

Here are no Courts of Julice, every one Fuftier. being at liberty to take this faction for Murther, Theft, or Adultery committed against him. If a Man be Rubb'd, and knows who the Thief is, he goes streight to his House and fetches either by fair or foul means as much from thence as he thinks will fufficieatly repay his loss, which however occasions great disputes, nay Murther. He that has kill'd another, flies for it till he has given fatisfaction to the deceased's Kindred, which confifts commonly in forme Hoggs and Staggs skins, then he may remira umpolested

# Mr. John Nieuhoff's Voyages

dultery when discover'd is commonly made up with two or three Hoggs, according to the Ability of the Cuckold-maker, which done, the Cuckold lives both with him and his Wife in good correspondence. Sometimes one or more Villages engage in War against one another, and surprise those that work in the Field, whom they kill, and carry their heads and what booty they can get, to their Houses; this they often do in the night time; If they have had good success, they rejoyce after their return home with eating and drinking to a great excess. Those who have behaved themselves well in such an Expedition, are eftermed before the rest.

Their Weapons are long and broad Shields, instead of Targets, wherewith they cover their Bodies; short and broad Symeters which do great execution, Darts pointed with Iron; they have also Bows and Arrows, but As far as ever I could use no Firelocks. learn, they have no Writings or Books; their Pagan Idolatry is transmitted from the Parents to their Children by word of Mouth; they believe the World to have neither beginning nor end, and that the Souls of fuch as have done well, shall be rewarded hereafter. As foon as they are dead, the Friends erect kind of Scaffold before the door of the Hyuse, where they place the dead Carcass surrounded with small Standards; near by they set a Wellel with Water for the Soul to bath it self it, and to wash away all its Sins; as for Instance, to have brought Children into the World before 37 Years of Age; to have worn rich Cloaths in the forbidden Seafon; to have catch'd Oifters, Crabs and fuch like infignificant things; But Murther, Man-flaughter, Adultery, Fornication, Theft, and fuch like horrid Crimes, they look upon as fmall Trespasses only, which may be expiated by a certain quantity of Rice, Staggs skins and strong Liquors.

They have several Gods, but adore two in particular; When it Thunders they say the Great Man is angry with his Spouse, and for that reason resuses to send them Rain, for which reason they adore his Spouse; the other they fay, is of a malicious nature, and therefore adore him, for fear he should hurt them. They have no other but Female Priests, they Sacrifice Piggs, Staggs, and Fruits; during which, the lhe Priests cry out, and fall into extafies afterwards, with tremblings all over their Bodies, as if they were poffes'd by an Evil Spirit, and then they pretend the Idol discovers his Secrets to them: The standers by which are for the most part Women, in the mean while get drunk with strong Liquors. These Female Priests ascend to the top of their Temples, where they expose themfelves quite Naked, and wath their Bodies in

the fight of the People. They pretend to o foretel good or ill fortune, to banish the ! Devil, and to purge unhallowed places. It was formerly a cultom in some certain Vil lages, that if any of the Natives lay fick, past all hopes of recovery, they used to tie a Rope about his neck, and so pull him up and let him down again, till they had cured his diftemper by a certain death. They dry their dead Carcasses over a fire, which occafions a naufeous scent, whilft the Kindred, Relations and Friends pass away the time with eating, drinking and dancing for several days together. The dry'd Corps is kept two years after, and then buried in the house. This was the Ancient Government of the Isle of Formofa, but fince the Dutch East-India Company has got footing there, they have introduced other Laws among them, and instead of their Councils, constituted one of their Chief Men as Supervisor in every Village who Administered Justice, and was accountable to the Thus much of Governor of the Island. Formosa, As time to return to our Voyage.

After we had left Teyman, the 11th of 7be A:

Afg. we had left Teyman, the 11th of The At Der Inher, we arrived the 30th of the same goes. Month without any remarkable accident, be-Malai fore the City of Malacca, where we dropt Anchor, and found Mr. John Tijs to be Chief Director there for our East-India Com-

pany.

The Kingdom of Malacca, otherwise Ma- The C leja or Maleca, thus called after its Capital 179 at City, is Situate upon the same Tract of lacca. Ground or Demi-Island, which Comprehends the Kingdoms of Martavan, Quedam, Peru and some other Countries extending it self as far as Sumarra, the Streights of which border upon it to the West and South as the Kingdoms of Pan and Johor do to the East. The Kingdom of Malacca is by some Historians taken for the Golden Cherfonese of Prolemy, tho' at present it is no Demi-Island. There are some who affirm, that in former Ages Malacca was joined by a streight neck of Land to the Isle of Sumatra, instead of which you fee now a branch of the Ocean, which divides its felf into two Navigable Channels; the first of which is call'd the Streights of Sinkapura, because it borders on the East side of the Cape of that Name; the other is call'd the Channel of Saban, from an Island that lies to the West of it. This Country extends for about 64. Leagues in length, all along the Sea Coast, beginning at the Island of Cambilan or Zabilan as far as the Isle of Beisan, its utmost Boundary on that side, or rather it ends in the Cape of Sinkapura, 20 Leagues from Malacca.

lis Capital City is likewise call'd Malacca, Iss Ca, being the same, in former time call'd Takola; City. It lies under 2 deg. 30 min. of Northern Ea-

titude

titude opposite to Sumatra in a Bay at the afcent of a Hill, on the West side of the River Muar (otherwise call'd Geze and Tyga and \*Kroisant, or as the Dutch express it, Kriiforant) which having its Rife deep in the Country divides the Castle from the City, and washing its Walls, falls with a rapid Current into the Sca. Cross this River is a strong Bridge built of ftone, with feveral Arches: The City is very large in Compass, being not many Years before surrounded with a Wall of fquare Stones and Baftions by the Dutch. It is very Populous, the Houses being built very close, tho' it has some very broad and handsome streets, which are planted on both fides with Trees. In the midtle of the City is a Hill with a very fair Church dedicated to St. Paul, on the top of it, where divine Service is perform'd in Dutch: The Steeple, Church and Monasteries founded here by the Portugueses are much decay'd. Most of the Houses here are built of frong Bamboo Canes, which are very durable in dry weather, tho there are also some State Houses here; they are generally not very large, and low, provided with small Appartments, and flenderly Furnish'd.

lalacca

The City of Malacca was in 1610 taken bentaken by Albuquerque the Portuguese General in the the Port by Annual or rather sources, following manner; One Manuel or rather sources. Mahomet, an Arabian by birth, being at that time King of Malacca entred into a League with Albuquerque, which he broke foon after, putting all the Portuguese to the Sword. Albuque que foon after appeared before the City and attack'd it unexpectedly, whilst the King and his Courtiers were feafling at the Wedding of his Daughter; The Portugueles let Fire to one end of the City, notwithitanding which, the Inhabitants defended themselves like desperate Men, even the Women untileing the Houses, and giving what affiftance they could for the defence of the Place; but at last the Portugueses having fought their way thro' the armed Elephants, they entred the City, forcing the King to fly into the Wilderness, where he died. They got a vaft Booty and above 200000 Crowns in The Portugueses were very careful to Fortify the Town by a Strong Castle, and built feveral fine Churches and Monasteries; They had five Parochial Churches, and Monasteries in great numbers. Among the rest, the Jesuites had erected a Noble College here, with magnificent appartments; they were very liberal, and received all strangers Travelling in those Parts. There was a Church here, dedicated to our Lady, where they fay Xaverius Preached often, and performed great Miracles. Upon a high Hill within the City, the Capuchins had a Monastery. Whilft the Roman Catholieks were in possesfion of it, it was erected into a Bishoprick

under the Archbishop of Goa. Not many Years before the Portugueses made themselves 1 Masters of it, it was no more than a Village, but by the Favaneses made a City.

The Durch AdmiralCornelius Marclief 1605, Ma appeared with 11 Ships and 1300 Soldiers atta before the City of Maiacca, where at that time Don Furtado de Mendoza a brave Soldier was Commander in Chief: The first thing he did was to fieze upon 4 Ships that lay in the Road, afterwards he let fire to the Subtals, and batter'd the place for two or three Months, which occasioned great Famine and Morrality within the City. But the Portugelie, who were fenfible of the Importance of this Place, tent a confiderable Fleet from Gon to their relief, which engaging with ours a small fight ensued, in which the Portuguses and Durch loft two Ships each; At last the Po rugueles finding the Durch refolved to board them, retired under the Caftle, but were to closely purfued by Matelies, that he runid their whole Fleet, confitting of 16 Galleots, 4 Galeasses, and 14 smaller Vessels, with 2000 Men on board them.

The King of Johor belieged the City of The Du Maineca in 1600, with 6 00 Men, the take M for aguefes having maintained themselves there lacca. is 640, when the Dutch alt 5 fee of the Months made themselves Ministration it: After the seein had been in femon of it 130 ) cers; The Durch found here befides a vait boot, , a great Cannon which carried a fliot of 64 Pounds weight, fince which time the Durch have left no stone unwend to flock this City with all forts of necestaties as well as with Inhabitants, both Detab and Indians. The Origin and Progress of Malacca is this, described by Barros and some other Hittorians.

The Foundation of Malacca was laid a- The Origi bout 250 Years before the arrival of the Por- of Mala rugueses in the todies. About that time one (a. Sangefinga Reign'd in Sinkapura, fituate under 30 min. of Northern Latitude, and in the neighbouring Country of Java, one Paravifa, who at his Death left two Sons under the Guardianship of his own Brother their Uncle; but he having found means to Murther the eldest, usurpid the Throne; at which some of the Noble Javaneles being highly digusted, did with Paramifora their late Kings youngelt Son, fly to Sinkapura, where they met with so kind reception from Sangefinga, but it was not long before Paramifora in combination with his Javaneses, Murthered Sangesinga and put himfelf in possettion of his Kingdom. The King of Siam being highly exasperated at the Treachery committed against Sange-finga, his Vassal and Son-in-Law, forced the Javaneses to quit the Country, who being now obliged to feek for a new Habitati-

## Mr. John Nieuhoff's Voyages

on, settled themselves near the River Muar, where they built a strong Hold, call'd Pagopago; Besides the Javaneses, Paramisora, was followed by 2000 others, such as they call Cellati, who live upon Fishing and Robbing; but the' they had been very Instrumental in refetling him in Sinkapura, he did not think ht to receive them within the Body of his new built City; which made them fettle their Colony about three or four Leagues from the River Muar, not far from whence Malacca now lies; where they joined with the Inhabitants, who were half Savages; fince which time their Language is call'd the Melega Language. But when they began to be streightned for room, some of them fettled themseives about a quarter of a League from thence, on a Hill call'd Bitan, furrounded with a large Plain; Paramifora being taken with the Conveniency and pleafant Situation of this Place, abandon'd Pagopaso and transplanted his Colony near this Place, which afterwards was call'd Malacca, i.e. a banish'd Person, in Memory of the exiled 3aneses, and in process of time, all the Traffick of Sinkapura was transferred to Malacca. Saguan Dorfa Son of Paramifora succeeded himlest as a Vassal to the King of Sin, reduced the whole Country of sinkafura to the East, as far as far on the Isle of Zambitak, which lies West of Malacca, a Tract of Land of forty Leagues in length. The Successors of Saguan Dorsa found means to shake off by degrees the Yeak of the King of Siam, and to make themselves Soveraign Kings, especially after they were by the Persians, and those of Surat brought over to the Mahometan Religion. The King of Siam 1502. about 9 Years before the Pertugueses became Masters of Siam, did Attack the King of Malacca with a Fleet of 200 Sail, aboard of which were 6000 Souldiers; under the Conduct of Laclamava Privan, his Admiral and Governour of Ligoor, but this Fleet was miferably featter'd by a Tempest, and many of his Ships fell into the Hands of the Mahometans, by Treachery.

The Harbour of Malacca, is one of the finest in all the Indies, being Navigable at all the Seasons of the Year; a conveniency belonging scarce to any other in the Indies. It is most conveniently Situated for Traffick, for there you may to this Day fee vast Numbers of Merchants Ships coming from Bengala, Coromandel, Banda, Java, Sumatra, Siam, and in short from all Parts of the Whilst the Portugueses were in postestion of it, this City was very famous for its Traffick and Riches in Gold, precious Stones, and all other Rarities of the Indies; Malacca being the Key of the China and Fapan Trade, and of the Malacca Islands 1 and Sunda. In short Malacca was the Richest City in the Indies, next to Goa and Ormus Before the Dutch had made themselves Masters of Malacca, a Ship was sent every Year thither from Portugal, which setting out a Month before their East-India Fleet, and taking its direct Course thither, without staying in any Place, except in case of Neceifity, used to Freight there, and return with a Richer Cargo, than any other Ship ever did.

All the Ships that came from the North, viz. Great paj-

of China, Japan, Siam, Cambodia, Tonking Sage thro and Manilha, and are bound for the West, to 1th wit to the Coast of Coromandel, Bengale, and o- Streights ther places thereabouts, as likewife those com- ca. ing from the Welt to the North must pass thro' the Streights of Malacca or Sinkapura, and confequently by Malacca, as I told you before. The Portugueses used to take 10 per Cent. Cuftom of all Ships pailing that Way, whereby they got valt Riches, but the Dutch East-India Company has abolish'd this, looking upon it as an unreasonable Imposition, and are contented to Traffick there. Ma-Acca is a Country producing but very little him in the Kingdom, and having submitted it self, but must be lookt upon as the Staple of the Indies, whither all precious Conmodities that are brought from China, the Molucea and other Neighbouring Islands, from Bengal, Coromandel, Banda, Java, Sumatra, Siam, Pegu and other Places. The Island of Sumatra furnishes them with Gold, Pepper and other Merchandises; From Ligoor, Pera, Queda, Oudjung and Salang they have vast quanti-ties of Tin, which is bought up in those Places by the Factors of the Company, and fent to Malacca, from whence it is Transsported to the Coast of Coromandel, to Bengal, Perfia and Surat, and Sold for ready The Chineses bring hither vast Money. flores of Silk and Porcelain, Damasks, Brocados, Sattins, Musk, Rhubarb, Irca, Saltpeter, fine Silver, Pearls great and finall, Ivory, and China Fans; which they exchange for Pepper, Franckincense, Stuffs of Camboya, Coral Wrought, and Unwrought, Painted Callicoes of Palakatte, and White Callicoes of Bengal, Cinnabar, Quick-Silver, and fuch other Drugs as come from Camboya. The Island of Java supplies them with Rice, Oxen, Sheep, Stags-Flesh and Pork; In short there is such a vast Traffick and Concourse of Merchants here, that from thence probably it got the Name of the Golden Chersonesis among the Ancients; Malacca being certainly the Richest Harbour that can be feen; for formerly and even to this Day the Merchants were fo Rich here, that they used to compute by no less than by Bars of Gold; of which a vast quantity is found

found near the Rivers, and in the Mounains, to the West, to wit, on the famous Rivers Kedan and Peren or Peragh. The Mahometans living along the Coast used formerly to Trade hither with Linen and fome other Commodities, but not so much of late Years, neither is the Pepper Trade To confiderable here now, as in former Days, fince the Dutch East-India Company have fettled their Factories, on the Eastern Coast of Sumatra, which produces great quantities of Pepper. However Ships are fometimes detained here for a confiderable time, by reafon of the contrary Monzon or Seafon Winds.

Formerly they had no other Coin but what was made of Tin at Malacca, being of great Weight, but little Value. Or rather they exchanged their Commodities for Gold and Silver by Weight; But now they Coin both Gold and Silver, a Piece of Eight being worth commonly two Guilders, 1 i Stivers. They have two forts of Weights, viz. the great and small Bar: The great Bar consists of 200 Kattys, each Katty containing 26 Tayls, or 38½ Ounces Portuguese Weight, a Tayl being an Ounce and half: The small Bar comprehends likewise 107 Kattys, each Katty comprehending 22 Taylor According to the computation of others, a Bar of Malacca contains 200 Kartys Actibyns, or three Chinese Pikol each Pikol computed at 122 Pound Weight, making all together 366 Pound Weight. The great Bar or Weight is made use of when they Weigh Pepper, Cloves, Nutmeggs, Mace, White and Red Sandals, Indigo, Allum, Eagles-Wood and Civet; with the leffer Weight, Quick-Silver, Copper, Leaf-Gold, Oyl of Nutmeggs, Benzoin, Camphire and fuch like Commodities. The City of Malacca is Inhabited by many Dutch, but for the most part by Meftices and Kastices, some Chineses, Pagans and Jews, for the conveniency of Traffick. The Malayars or Natives of Malacca are Tawny, with long Black Hair, great Eyes and Flat Noses; They deduce their Origin from the Javaneses, but their Eyes are quite different, they are for the most part Naked, wearing only a piece of Stuff wrapt about the Middle, with their Arms and Legs Naked. Their only Ornament being Gold Bracelets and Earings fet with precious Stones. The Women wear Silk Cloaths, and short Skirts, Embroidred with Gold and precious Stones, some of which onuch better and larger than in any other are twisted in their Locks, which are very part of the Indies. They have likewise Aare twisted in their Locks, which are very long. The Women are extravagantly Proud here, expecting more Reverence than any other Indian Women. There is also another peculiar fort of Men in Malacca, call'd by the Dutch Kakerlakken (from a certain Monstrous Creature in the Indies of the same

Name) who are blind by Day and can only fee by Night. They can tell Money, Work, 1662 and do any other thing in the Dark, which they cannot do by Daylight, which they pass away for the most part in Sleeping, and seldom rise till Sun-set. In Shape and Proportion of their Limbs, as well as by their Complection, they refemble the European having commonly Gray Eyes, whereas all the Eastern Nations have black, and dark brown Eyes. Their Hair is inclining to Yellow, and of fuch a length among the Women, what it reaches down to their Hipps; Their Feet are bent inward. The same kind is likewise found in some other Places in the Indies and in Africa.

The Language used at Malacca is call'd The Ma the Malaya Tongue from the Natives of the ya Tong Country, being very famous throughout the East-Indies. For, the general concourse of fo many Nations, different in their Languages, has put them upon a Necessity of Compiling a certain Language, compofed of the best and choicest Words of all the rest, which therefore is accounted the neatest and most agreable of the East-Indies, which is the reason that not only the Neighbouring, but also far distant Nations, that Trade with Malacca, are very defire to men it, and look upon it as a great accomplinment. For the better encouragement . his Language and the benefit of their Officers and Factors, the Dutch Ent-India Company has caused a Dictionary both in the Malaya and Durch Tongues to be Publish'd. Most of the Malayars are either Christians Their or Mahometans, the' there are likewife some Religion. Pagans and Jews settled at Malacca, for the conveniency of Commerce. The Coast of The Coun Malacca is a flat or marshy Country, and try. confequently not extraordinary wholesome; but deeper in the Country, are many Hills and Wilderneffes which are plainly discovered at Sea. It produces but little for the fustenance of Life, except what is brought forth in Gardens, and what grows among the Mountains, where you meet with some Rice and Peafe: The defect of which is supply'd by vast Numbers of small Vessels, which come every day from Bergale and Sumatra, and bring thither Rice and other Eatables. However, they are prety well flored with fuch Fruits as commonly grow in the Indies; The Fruit Durions grows here nanas, Jambos, Mangoes, Karambolas and Pa-pajas; they have Whole Woods of Coco Trees. Here grows a certain Tree call'd the Mourning Tree by the Protugueses, because its Flowers close up in the Night-time. Here you may meet also with Cinamon Trees, but not

very many, neither do they approach in 662. Goodness to those of Ceylon. But of Ka-Imback or Aloes-Wood and Bengoin, they have great plenty. Here are to be found some Indian Fruits, peculiar only to this Place, but no Pears, Apples, Plums, Cherrics, or any fuch like European Fruits. Oxen, Cows, Sheep and Horses are likewise very scarce here, which are brought thither a great way out of the Country, and are feldom very Fat. Formerly the Country hereabouts did abound in Wild Beatts of all forts, fuch as Tygers, Elephants, &c. which were to Ravenous, that they used to break in the Nighttime into the Houses of the Inhabitants who for their better fecurity, used to Sleep upon Trees; But fince it has been to well Peopled by the Dutch, this fort of Wild Beafts are but feldom heard of.

ape Ra-

nado and Land call'd Rachado, and the Cape of Barcelai, being a very High Mountain, near a point of Land. Not far from Malacca is ne Moun- a very large Mountain call'd Madian, which in Ma- by reason of the vast Quantities of Salt-Peter it contains within its Bowels, 1646. did break out with fuch a terrible Noise and Earthquakes, as if the day of Judgment was at Hand.

Just by Malacca is the Cape or point of

nkapura

Sinkbura lies on the most Southern Point of all Sea. About half a degree of the North of the Line and a Leagues from Malacca. This Cape has Imparted its Name to the Streights of Sinkapura. The Country of Sinkapura had before Malacca was built, its own Kings, and was the chiefest Place of Trade on this Coast, being much frequented by the Chinese Merchants, and those of Camboya. The Mountain near the Streights of Sinkapura bearing the same Name, produces most excellent Diamonds. About Sinkapura is a certain Nation, which with their whole Families live always at Sca, in their small Vessels; they are call'd Saletes, live upon Fishing, and are subject to the King of For. About two Leagues beyond the Streights of Sinkapura is the River Johor at the entrance of which you fee two Mountains or rather high Islands shaped like Sugarloaves; one is four times bigger than the other, lying N.N.E. as you enter the River, and the other N.E. On the other fide of the River you Discover a high Hill, tho' the South fide of the River is a Champain Country. There is 10 fathom Water at the mouth of this River.

To the South of Melacen is a small Isle, of about half a League in Compass, by the Portugefes call'd Ilha das Pedras, or the Isle of Rocks, and has very good Fresh-

About half a Cannon Shot from the City,

another finall Island call'd Malacca, 'and by the Portugefes, Ilha das Naos, or the 1562. Ship Island. Two Leagues from Malacca is a pretty large Isle call'd Sapta. That vast Point or Tract of Land on which the Country of Malacca or Malaya lies, being the most Southern of all the East-Indies, comprehends likewife feveral other Kingdoms and Cities; to wit, Patany, Pahan, Pera, Queda, Johor or For, Ligor; and further to the North the Kingdom and City of Tanaffery. We will give you a short account of the Kingdoms of Jobor, Patany, Liguor and Pahan.

The Kingdom of Fer or Foliar stands indebt- The King-cd for its Name to its Capital City, call'd dom of Jer by some Geer or Goera, and Joar or Goar or or Johor. Golor. It is fituate at the very streights of Malacca, bordering in part upon the Kingdom of Malacea; and on the other fide, upon the Kingdom of Pan or Pahan. The ancient City of Johor or For (call'd in some Mapps Guar) was very large and magnificently built, but was in 1603 destroyed by the Portugueses, who left only a for Houses standing, which were immediately inhabited again. The King of Johor puled in 1609 another City to be buil, somewhat higher up the River aove Johor; this he call'd Batusabar, towards the building of which, the Dutch under their Admiral Peter Verboeven contribution 2000 pieces of Eight, out of the booty they had taken from the Portuguese ships coming from Makao near the Cape Rachado. Most of the chief Inhabitants of the old City of For retired from thence to Baty/abar; a Halfday's Journey from whence is Sedalli, near the Sea-fide. It is a very fertile Country, abounding in Lemons, and Citrons as big as a Man's Head, Banana's, Batata's, Anana's, and other Indian Fruits. They have also great store of Pepper, Cinnamon, Pustlers, Cows, Stags, wild Boars, and divers Sorts of Monkeys and Birds, befides fome Sea-Monsters.

The Inhabitants are naturally Brave, but The D. very Lascivious, Lyers, great Disseniblers, fision i and Proud beyond measure. Their Com-the 1 plexion is inclining to a light Blue, with bisants broad Faces, crooked Noses, and very black Teeth, which they acquire by chewing the Weed Berel, black Teeth being accounted a great Ornament among them.

The common People go quite naked, ha- Their ving only a Piece of Stuff to cover their thing. Members, which hangs down to their Toes. The Rich and better Sort wear a kind of Jacquets, made of Blue, Green or Red Callico, or what Colour they please; they are shaped like our Shirts, with wide sleeves, are open before, and reach only to their knees. They have also two filken strings of the same Colour with the Jacquet, one serves

for a Girdle, the other for a Head-string. They Paint their Nails yellow, and the greater quality they pretend to, the longer they The Richer fort commonwear their Nails. ly wear a Ponyard on their fide, enriched with Precious stones. Their King has many other petty Kings, his Vassals, under his Justician. The King of 30r or 30hor in 1606 · attack'd the City of Malacca with 60000 Men, which shews him to be a Potent Prince, and in the taking of the City of For, the Porsugueses got 1500 Brass pieces of Cannon; in 1608, Ratispont the then King of For, see being about 30 Years of Age, came aboard the Dutch Fleet with 30 of his Wives, he had three Gold Chains fet with Precious Stones, about his Neck, and his Poynard was likewise enriched with Sapphires and Diamonds, valued at 50000 Guilders. The Inhabitants are one half Mahometans, the other Pagans: 1609, one John de Paratuan was King of For, he was stilled the Great King, being likewise King of Malacca, and Kong Sybrang, i.e. Prince of the other fide of the Rive In 1611
The King of Azem, fent back the Brother of the King of Jor, with a Fleet of 36 sips, and a Convoy of 2000 Men, with abundant of Cannon and Ammunition, in Order to affift in the rebuilding of the City of For. It was generally reported that the King of Azem having given his Sifter in Marriage to him, did intend to fet him upon the Throne, instead of his Brother, who then Reigned.

Linga is an Island under the jurisdiction of e Ifte of the King of Johor, who has a Governour there; it produces abundance of Zagu but no Rice; in 1606, it had about 3000 Inhabitants.

The Kingdom of Pan or Pahan, is by the nof Pan Portugueses call'd Paon, and by others after the Pahan. Arabians Phaan; it being a Custom among the hometan Arabians, to pronounce phe instead of p. To the North it borders upon the Kingdom of Patane, and adjoins to that of Johor, as well as to the Streights of Malacca. The City of Pahan is fituate about a League from the Sea shoar, being Inhabited only by the Nobility, the common People dwelling in the Suburbs. It is not very large, but furrounded with a Wall, made of the Trunks of Trees joined close together, of about four Fathoms high, strengthned on each corner with a Bastion, but not fill'd with Earth. The streets are enclosed on both sides with Hedges of Reeds, and planted with Coco and other Trees, relembling rather some Gardens adjoining to one another in the Suburbs, than a well regulated City, the Housesbeing generally of Reed and Straw, only the King's Palace is of Wood. The River of Pahan is very broad, but not Navigable by Galleys except at high Water: The Country round about is very low, and produces about 300 Vol. II

Bahars of Pepper; as likewise Palo de Aquila or Eagle-wood, Kalambackwood and Camphire, 1662. but nor to good as that of Bornee, Gold (but very course,) Nutmegs, Mace, Sapan-wood, Diamonds, Pedro de Porco, or Hoggs Stones, which are accounted a greater Antidote than the Bezoar stone. Deeper into the Country are abundance of Elephants. The Inhabitants are the greatest Impostors in the World. The King is Tributary to the King of Siam, but after Albuquerque had conquered Malacia he fent his Deputies to Pahan, to oblige that King to promise fealty to hint. At Pahan great quantities of Baskets are made and fold, they are better than those made in Java but not fo good as the Portuguife. They also cast Great Guns here of 3000 pounds weight. The Inhabitants are partly Mahometans, part-Their King who reigned in ly Pagans. 1612, had Married the Youngest Sister of the Queen of Parane. The two Sifters having not feen one another in 28 Years; the Queen of Parane sent to the King of Palan to defire leave for her Sifter, his Spouse, to come to see her; which the King refusing, She laid an Imbargo upon all the Ships loaden with Rice, and bound from Siam, Campaja, Luger, and other Places to Palian; and imof the were 4000 M, with frie Orders to in a fleet of 70 Ships, on loard
of the were 4000 M, with frie Orders to in a floor with them the ween of
Pahan, whether the King were willing or
not But it was not long before the King of Palan with the Queen his Spoule, and two Young Children, being forced by Famine and a revolt among his Subjects to leave the Country, came to visit the Queen of Patane, where they met at first but with a cold Reception, not one of all the Queen's Court giving the King of Pahan as much as one Vilit, but caused all his Doggs to be kill'd, he being not able to keep them any longer. Some days after matters began however to look with a better Face; for the 1st of August the Queen of Parane invited the King of Pahan to a most sumptuous Feast, where she diverted him with feveral Indian Women Dancers. The King of Pahan returned not long after with his Queen, the Sifter of the Queen of Parane, into his Country, but carried away with him no Presents to make him amends for the charge he had been at, having fpent almost all he had. The King of Pahan who reigned in 1607, was then about 40 Years of Age, and his Son had Married the Daughter of the King of Queda.

The Kingdom of Parany, having dom of Parany, having deriv'd its Name from its Capital City, borders to the South upon Pahan, being fituate upon the same Eastern Coast, to the North upon Siam and the Kingdom of Luger or Liger; these two Kingdoms being incorporated into

# Mr. John Nieuhoff's Voyages

Temper 4

one. The City of Patane is fituate under 7 deg. 56 min. of Northern Latitude, not far from the Sea, and furrounded to the Land-fide by Boggs. The Harbour is about half a League from the City, which is about half a League in length, and very narrow, Fortified with high wooden Pallisado's put close together, according to the custom of these Countries. The Houses are Artificially built of Wood and Canes, and very lightfome. The Suburbs are likewise much longer than broad, and are encompass'd on the back side by a pleasant Rivulet. The Royal Palace and Court, where most Persons of Quality live, are inviron'd with Pallisado-work, in the nature of a Palanck; The Mahometan Church is a stately Edifice of Brick-work, gilt very richly within, and adorned with Pillar, curioufly wrought with Figures. In the midst close to the Wall is the Pulpit, carv'd and gilt all over, unto which the Priests are only permitted to ascend by four large Steps. They have also several Temples Dedicated to their Pagan Idols, among which three excel the rest. When the Dutch in 1602, settled first here, they saw in one of those Temples belonging to the Subjects of the King of Siam, a guilt Statue resembling Man, but of the biggness of a Horse, with Man, but of the biggness of a Horse, with one had down and the other apward. On each fide tood a very less to tragon gilt, with two flore Statues, to the the fide, with two flore Statues, to the other fide, with two flore Statues, to the other fide, with the fame they five in the foothed, with this difference only. That one half of it was only gilt, the fame they five in the foothed, with this difference only. That one half of it was only gilt, the fame they five in the foothed and behind the Aftar of the great Idol. It another leffer Statue, resemblish a Man, with a large horn in the fameward. This idol their frieft fay, represents the first statue of the great Idol. fents the

The C cracerate and wholeare of the forme in Sea near the in Farming till describe rom the Land fide. the is no itirroous till Febraary, when the Wind turning to the East, the Rains cease, and the fair Season returns. The Country of Parane is very Fruitful, abounding in Rice and many other Fruits, the chiefeff of which are; The Durions, Mangestans, Anana, Lancrats, Ramboutans, Pifangs, Pomeates. Oranges, Limons, and a peculiar of Limons, call'd Gibol Limons, being tran-

fplanted hither from China. Each Month here produces its peculiar Fruits, tho' those of certain Months are preferable before the rest. The Grounds are Plowed with Bufflers or Oxen, which they fow with Rice: 'They also plant good flore of Pepper, but cannot fell it so cheap here as in some other parts of them East-Indies. The Woods and Wildernesses are flock'd with wild Creatures, fuch as Hares, Rabbets (but not fo bigg as ours) Staggs, wild Boars, Tygers, Bufflers, Llephants, Apcs, Monkeys, Geefe and Ducks, (which lay eggs twice every day) and Turtle-doves as finely coloured as the best Parrots The wild Hoggs do incredible mischief among the Rice, which obliges the Country men to watch in the Field in the Night time, when they shoot or otherwise kill them, they bury their Carcasses under Ground, the Mahometans (for fuch those of Patan and Malaya are) being forbid the use of Hoggs slesh, neither will they permit any body else to cat it.

The Dephants as I am credibly inform'd, How the are carch'd in the following manner They ride catch the on the back of a tame large Elephant into the Elephans. Woods, whom they let loofe there; as foon as he meets with a wild Elephant he engages him, and whillt their fnouts are entangled, fome come from behind the wild Elephant and twift a Rope round his hind leggs, and so keeps him either to render him useful for the Wars, or else kill him for his Teeths sake, which are in great effcem in China.

The Sea hereabouts produces great store of Craw fishes, Oisters and Tortoifes; and the fame Druggs, Metals, and forms, that are found in the together of Pahan are likewife to be may be here.

tiones, that are found in the Lagrand and Palan are likewife to be may the here.

The Natives of Pasane and an Alexandra of the continuous of Complexion and watch haped, the interpretation of the proposed and conceited; the richer are appearing abroad, without a great with of Servants. They are however very altable and civil in convertation, as well among themselves as to Strangers; But they are no soldiers, nor enclined to War-like exercises, Courage being none of their Talent, bit they are with Pleasures than the use of the best them. Their Cloathing is none of the best. The Men are extreamly addicted to Venery, which renders them jealous above merking, their. Wives and Daughten being her primited to fice, after search and soft schools. They have no sticked at the state of the search and soft schools. They have no state that control of the search at the constantly two or three small Bells made of Gold, Silver or Lead beautiful and the glans, or tery is a Capital Cribe was among the great Officers and

### and Travels to the EAST-INDIES.

Kingdom; The Father of the Person that has committed the Crime, or if he be not living, the next of Kin, is obliged to supply the place of Executioner; but the Miscreant has the liberty to choose what kind of death he pleafes. Notwithstanding this severe Punishment, Adultery is very frequent among them, by reason of the extraordinary Lasciviousness of the Women, who are very defirous, and love to wallow in Pleafures. Fornication betwixt two un-married Persons, is not look'd upon so much as a Trespass. Nothing is more common, than if any Foreign Merchants come to Patane, to ask them whether they don't want some Women for their conveniency; and there is no want of young handfome Women who offer their service, out of whom each may take his choice, and agree with her as he best can, as to what he is to allow her per Month; which done, she immediately repairs to his Lodgings, where in the day time she serves for a Chamber-maid, and in the night for a Bed-follow; and during this agreement, the Man suft be as careful to avoid the Commerce of other Women, as she is on her side, unless he will expose himself to manifest danger. At parting

the Man pays her Her wages, and fo they are both free; and if he has a mind to change, he need not look far for one, it being a cufrom among the Nobles here, to entertain many Female Slaves, whom they lett out for fuch a Use, and gain great profit by them. For the rest the Natives are naturally Lazy and Idle, living for the most part upon fishing, and some handy-craft Trades; the best is, that they can be contented with a little. drink scarce any thing but Water, and have a natural aversion to strong Liquors. Almost all the Traffick and other business, is in the hands of the Chineses, who either themselves or their Factors, continually Trade betwixt this and the Circumjacent Countries, fuch as Siam, Ligor, Kamboya, Kouchinchina, Makas-Sar, Pahan, Jambi, Johor, Bantam and other both Inland and Maritime places, whither they transport all forts of Chinese Commodities from Patane, as Porcelain Potts, Pans, Kettles, and Iron-work of all forts. chief Riches of the Natives confift in their Lands and Slaves, who live upon a fmall allemance of Rice and Fish; but the Foreign Merchants transport thither abundance of Rich Merchandices

From Bengale and Malacea they fent Cloths from Siam the Inhabitants of Parane are furto Pasane; from Java Sandel-wood; from Ber- nished with Gold, Rice; Salt and Lead;

the Camphire, Slaves, Wax and Bezont-Stones; from Siames and Cambris With Slaves, Cot-

### Mr. John Nieuhoff's Voyages

ton, Kalamback, and the finelt Aloes-wood; from China with White and Yellow Silk, Gaufes, Damasks, Sattins, Porcelain, Iron and Copper; from Japan with Scymeters, Copper, and fuch like Commodities. Many things are also transported hither that are bought up in other places by Foreigners; as from Amboyna and Randa, Nutmegs, Mace and Cloves; from Timor Sandel-wood; from Famby and Andragus, Pepper; which they fetch likewise from Champor, Lihor, Pahan, Moraly! ion and Ligor: Pegu Supplies Patane with abundance of Precious Stones; there are also many things Exported from thence by the Foreign Merchants; Those of Labor and Palian provide themselves here with Rice, Salt, Oxen, Fowls and other catables; those of Malacca transport the Bezoar Stones; Those of Borneo, Iron, Steel and Copper; the Siameles all forts of Cloathings and Pepper; The Chineses Pepper, Camphire, White and Yellow Sandel-wood, Skins, Ivory, Bufflers Horns, and fuch like; The Japonefes, Staggs skins, Tin. Lead and Silk.

The Country of Patane is much more Powerful in Shipping than Fobor, Pahan, or any of the Circumscent Kingdoms: They are Governed by a King, who, as well as the King of Malaya is tributary to the King of Simil; their utual Yearly tribute confifting of a Florer wrought with Gold, Some fine Cloaths, Volumes and Starlets; the King's Chief Councellours are call'd Mentary

This Kingdom was in 1602 under the Government of a Queen, after the decease of her Hu band, the being then but 15 Years of Age. Her Name was Pratie, she used to keep constantly within the Court among her Ladies of Honour, of whom she had a great number; She did not allow them to Marry, but connived at their amorous intreagues. Whereever she went abroad to take the Air, (which indeed happened but very feldom,) the was mounted on a very fine Elephant, and attended by 2000 Nobles and great Officers, all clad in her deceased Royal Spouse's Liveries, with his Coat of Arms upon them. Before they returned, the gave them always a fplendid Entertainment, and so came with the same Cavalcade back to her Court. The Country of Parane is fo Populous, as to be able to bring 180000 armed Men into the Field; the City and Suburbs of Parane alone being able to furnish 10000 Men.

Divers Languages are in vogue; viz. the Malayan, Stamele, Paranefe and the Chinefe; but the first is most used bere, as well as in most other Parts of the Indies. The King of Patane Married his Daughter to the eldest Son of the King of Tobor, (he having fix in all) who with his youngest Brother lived at the Court of Parane; but the Youngest being

engaged in an illegal Commerce with his Brothers Spouse, he kill'd them both accord- 1 6.62 ing to the custom of the Country which Punishes Adultery with Death; notwithstand ing which, the King of Patane to revenge his Daughters death, caused his Son-in-Law, the eldest Son of the King of Johor to be flain; John de Paratuan, and Regia Sabrang, two Brothers and both Kings of Johor, being not without reason, highly exasperated at this proceeding, fent one Magat Mangfor Hoch, their Ambassador, along with Admiral Facob Heemskerk to follicit a Powerful aid from the States General against the King of Patane, but the Ambaffadour dying at Sea, put a Hop to that defign.

Having dispatch'd my business here, we The Isle of fet fail the next day to a certain Island call'd Ding. Ding Ding, abounding in Fuel and most excellent Fresh Water. It lies about 30 Leagues to the North of Malacca, being covered all over with very tall Trees, which grow on the falls. We arrived here the 10th of 3 mary 1661, and immediately after our Landing, fell to the cutting down of Trees; among the rest we endeavoured to pick out a certain kind of Trees, the Wood of which is a pale red, but to our great amazement, could meet with none, till at last we discovered our error, to wit, That the Pith only was red, but all the other wood round about it of a different colour. This Wood is much valued by the Indians for its beauty, of which they make many curious Pieces. The Fresh Water which runs down from the Rocks, claims the preference before any in the Indies; and this Isle has likewise the conveniency of a good Bay, where Ships may ride fafely at On the East side, it has another Anchor. Bay, call'd Cox Bay, where we used sometimes to catch as much Fish at a draught, as our Chaloop was able to carry.

It is destitute of Inhabitants, and all forts Isdestinut of wild Creatures, except wild Boars, which of Inhabifwim over thither from the Continent to feed tants. upon a certain Root that grows there, nevertheless it abounds in Water-Fowls, more than any other place of the Indies: Here is a certain kind of Birds call'd by the Dutch Shuies Birds, being of the bigness of a Stores, , the head being without Feathers. Here are also great quantities of Tortolles and Officers, the last of which are often feen fathed to the branches of Trees, which hang fourthines a-bove, sometimes under water.

The clearness of the Water having invi-ted us to take a turn at Swimming, I found fomething sticking to one of my Legs, which when I look'd upon, I found to be a Sea-apple, and struck it of; but the maining in the Flesh occasions. flammation and Pain, which was

16 \$ 2. taken out.

After we had provided our felves with bes leave what this Place could afford us, we fet Sail again the 14th of January; As we were Sailing the same day along the Coast of Sumatra APoisonous our Trumpeter catch'd a Stone-bream of about three Feet long, which appearing very fine to the Eye, we ordered the Cook to dress it for the Table of the Cabin. We were all fo greedy, that when it was brought in, we ask'd the Cook whether he was fure he had kept none behind, which he took fo ill, that he answered us, whether we look'd a upon him as a Thief? But it was not long after Dinner, before all those that had Dined in the Cabin, were feized with fuch a Giddiness in their Heads, that they were not able to fit upright; I was the first who cry'd out, we have certainly eat a Poyfonous Fish; but our Surgeon having no proper Remedies aboard, we tent our Chaloop to the Ship the Leerdam, from whence being furnished with Vomits, we were by the frequency se of them, after a Sickness of 14 Days restored to our former Health. During our Sickness our best Diversion was, that being inform'd, 'now the Cook was as Sick as any of us, we were convinced that notwithstanding his great pretence of Honesty, our Suspicion was not ill ounded, which verified our old Proverb, at the Cook is commonly the last who Dies Two Cats that had want of Victuals. ten the Bones of this Fish, dyed soon after, o' some Tobacco-water had been given them, to occasion a Vomiting; but none of us died, some few however were troubled with a lingering Distemper afterwards.

It is not easie to imagine what could be the reason of this Disaster, the Sea-bream being otherwise a Fish both Toothsome and Wholesome, unless we supposed this Bream to have fed upon some Poylonous Fish, such sof as those call'd by the Durch Seaquallan, which vision are very Poysonous in those hot Countries; for if they touch but your Flesh, they cause an immediate Inflammation; their Flesh is as foft as a Gelly; they are of the bigness of a Trencher, or somewhat lesser; have Red and Purple Spots on their Backs, and eight Teats below on their Bellies, at certain Seafons of the Year, the Seas about Toutekoriin and near other Places on the Coast of Malaber, are so full of them, that they are ged to delift from Fishing. But before we proceed farther in our Voyage, it will be requifite to give you a fhort Account of the life of Sumara.

The large and most potent Island of Sura's matra is by fome Authors call'd Sanatra, Sam.! matrarand Zamatra. Its Situation is to the South West just opposite th Malacca about

eight Leagues from the Continent, the great Is of Java, lying to the South of it. Its 1662. Extent is from the 5th degrees of Northern Latitude, near the Gulph of Bengala, to the South South East, to the 7th degree of Southern Latitude, as far as the Streights of Sunda, beyond the Coast of Malacca; comprehending a vast tract of Ground of 12 degrees from the South to the North, amounting to 130 Leagues. Its whole length is 195 Leagues, its breadth 50, and the whole Circumference

This life was formerly divided by fome into four, by others into 10 Kingdoms, among which Pedir, Pazem, Achem, Kampar, Menankabo, Zunda, Andragide and Auru Were the chiefest. Some there are who mention no less than 30 petty Kingdoms, viz. Daya, Is divided Lambry, Achem or Achen or Achin, Biar, in many Pedir, Lide, Pirada, Pacem, Bara, Daru, Kingdoms Arkat, Irkan, Rupat, Pury, Gaka, Kamper, Kapokan, Andraguery Or Andragide, Jamby, Palimbang, Tana, Malayo, Sakampan, Tulumbavan, Andaloz, Piriaman or Pryaman, Tike, or Tikouw, Barros, Quinchel, and Mankapa, all which have borrowed their Names from their respective Capital Cities; and in antient Times were Govern'd by their own Kings. But in process of time, many of the were swallowed up in the Kingdom of Achin, the most potent in this Island, having under its Jurisdiction the Kingdoms and Citics of Pedir, Pazem, Daya, Barros, Paftaman, Pryaman and Padang, and confequently the greatest part of the lile of Sumatra, befides the Kingdoms of Queda and Pera on the All the other Kingdoms and Continent. Cities of Sumatra were Conquered by Foreign Princes. This the Southern Parts of Sumatra, viz. Sillabar, Dampin, Liampon, l'alimbang, Jamby and some others acknowledge the King of Bantam their Sovereign; or else the Mataram of Java for their Protector. Some will have the lile of Sumatra, to be the same, the Antients call'd Taprobang, tho' in my Opinion that Name belongs more properly to the Isle of Ceylon.

Not many Years ago, one of the chiefest The Inhabi-Cities of Sumatra, Was Palimbang or Palem-tants of Cities of Sumatra, Was Palimoung or Palimbang, Situated near the Western Coast of Palimbang Mur-Sumatra, which on 24 November 1659. Was ther some laid in Ashes by the Dutch Admiral and Ge Dutch. neral 70bn van der Laen, because the Inhabitants had about two Years before surprised by Treachery two of their Yachts call'd the Jankarra and the Watchman, and miserably Murthered the wingle Ships Crew; and in the next following Year had cut to Pieces two other Dutch-men, that were fent ashoar, from aboard the Vessels the Niccoport and the Leerdon (lately come from the Texel) to serve as interpreters, their Heads being

A Fleet of

by special Order from the Orangkey's put upon Lances, and exposed to the View of their

Comrades that were in the Boats. To revenge fo barbarous a Murther, a fhips fens Fleet of eleven Ships fet Sail from Batavia to Palim- the 19 of Oftober 1659. under Command of John vander Laen Admiral, and John Truytsman Vice Admiral, viz. The Orange Admiral, the Postilion, the Molucca, the Arms of Batavia, and the Charles; three Galleots, to wit, the Apple-tree, the Hour-glass and Hammebiel; and the Chaloops, the Crab, the Tronk, and the Flying Dear, Mann'd with 600 Sea-Men and 700 Land-Souldiers. The 30th. they arrived, without any remarkable accident in their Passage before the River of Palimbang, where they met with the Yachts, the Bloemendahl, the Koukerk, and the Cat, and with the Chaloops, the Cony, and the Koclong, that were Crusing thereabouts. fame day they got fight of a Chinese Vessel
They Arri- taking its Course towards Jamby, which they ved before detained till they had enter'd the River, and of Palim on the 3d November sent her in Company of They the Chaloop, the Tronk, to Jamby. entred the River in the following Order. First the Arms of Batavia, next the Postilion, then the Yacht, the Bloemendahl aboard of which was the Admiral, having left the Q range to the Entrance of the River; The Yacht the Konkerk Vice Admiral, the Yacht the Cat, the large Challop the Crab; after these came the three Galleots, the Hourglass, the Apple-tree, and Hammehiel; the Ships. the Charles and the Molucca, brought up the Rear; The other Chaloops were ordered to attack the Admiral Ship. The 3 and 4 November was spent by the Dutch to enter the River, the 9th in the Night-time they were unexpectedly attack'd by forne of the Inhabitants of Palimbang, in which engagement we had four or five wounded; the Commanders not being time enough upon their Come with Guard. The 10th they were advanc'd bein fight of twixt the Isle of Cambira and the opposite Shoar, within fight of the City of Palimbang, where they discovered three of the Enemies Forts; the first call'd Bamagangan, Situate on the Western Point of the River of the Isle of Cambara, the other two upon its East Point, opposite to the other; they were call'd Mathapoura and Menapoura. At our first appearance, the Enemy kept close within their Works, which gave us the more encouragement to penetrate higher up the River with our Ships. But several large Floats, upon which How & till'd with combustible Matter were built, being laid in the Stream, Captain Jurian Paulson was ordered with some Boats and the Yacht, the Hour-glass, to take a view of them, to cut their Cables, and fet them on Fire, which

being put in Execution accordingly, the whole Fleet advanced forward in order to at- 1662 tack the Fort of Bamagangan. But as foon as we came within Cannon Shot of the Fort, the Entailer Enemy gave us a very warm Salute out of Fire En. his Great Cannon, from the Forts both on gines. the East and Western Point, tho' without any confiderable loss on our fide, which gave us sufficient encouragement to fire most furiously upon the first Fort, with such Success, that we set their Magazine of Powder on Fire, which blew up with it the greatest part of the Fort, and all the Circumincenr Houses; Hereupon the Yachts the Bloomendable the Koukerk and the Cate were ordered . to Anchor within Piffol Shot from the Shoar, The Fore from whence we so grievously, galed the E. Bamagan nemy, both with our great and finall Shot, rack'd. that at last we Landed and made our telves Mafters of the Fort, where we found 22 Iron and Brass Cannon, which we immediately turn'd against the Enemy, to the Land Side, and continued in Arms all the Night long, which proved no unneceffary precaution, for the Enemy attack'd us most furioully not long after, in hopes of regaining the place, but were repulfed most coufageously, with the loss of only one Man on our fide.

Then the Enemy fent four or five very large Fire Engines being Floats of Timber with Wood on Houses fill'd with combusti- Fire Enble Matter on the top of them, which took ginesof the up almost the whole breadth of the River; Enemy. The Yachts, the Bloemendah, the Koukerk and the Cat had much ado to escape their Fury, being forc'd to cut their Cables; But the Molucca Yacht had her Fore-castle set on Fire, and was with much adoe faved by the help of many Boats that were fent to her Affistance, without receiving any confiderable Damage; so that these Fire Engines were forced down the River by the Current and foon after vanish'd into Smoak. At the taking of the Fort 30 Javaneses were kill'd, and among them the old Quevy, Tommagen, Nadapen Radja, with his two Sons, who were buried the next day.

The 11th early in the Morning we like- The Fors wife attack'd and took the Fort Mathapoura, Mathawhere we found only four Pieces of Cannon, poura 14the Enemy having thrown four more into the ken. River, which we brought out from thence afterwards; the remaining part of the day was spent in shipping in what Artillery and Ammunition we had got; eight Companies of Soldiers were likewife Landed the forme street noon in the Isle of Cambers, to attack the the steel. the City.

bang.

likewise thrown into the Mudd, but were recovered by our People and carried aboard our Vessels, with a finall quantity of Ammunition: Whilft these things were transacting in fight of the Garrison of Palimbang, they had found means to set fire to the Yacht the Watchman, which they burn'd; and in the Evening those that had deserted the Fort, under favour of a violent Rain, did three several times attempt the Recovering of it, in which Engagement we had two kill'd and ix wounded, and were forced to stand to our Arms all the rest of the Night. The 12th and 13th were spent in Embarking all . the Cannon and Ammunition we had got in the three beforementioned Forts, which done, it was refolved in a Council of War, forthwith to attack the Chinese Quarter, and so to make our selves Masters of the City, before the Enemies could recover themselves from the fright they were put in by the loss of their Forts: As we were passing by the City, we received the fame Salute we had before from the Forts, but without any remarkable harm, or the loss of one of our Vessels. The City of Palimbang was fortify'd with

The Forti. fication of vast Trunks of Trees put close together, upon Palimwhich were planted a vast number of great bang.

Cannon, so that it seem'd impossible to be taken by fo fmall a number, being befides this invironed with a deep and mirie Ditch. We were hard put to it, how to find a fafe Landing place, till at last our Admiral having espy'd at the uttermost point of the Fortification, a small Rivulet, which led up to a place where we perceived very little or none of the Enemy's Fire: we landed thereabouts with all our Forces. and advancing boldly to the very Gun-holes of the Enemy; they threw their Granado's thro' them into the City, which setting the adjacent Houses on Fire, the Enemy were so terrified thereat, that they quitted their Post, and thereby gave opportunity to the Admiral vander Laen, to Mr. Truytsman, and Captain Harman to break thro' the Fortifications into the City by three several ways. Here Anack'd by they met with a brave opposition from the \*Dutch, Inhabitants, who, according to the custom of these Nations, under the sound of their Amock, fell courageously upon these three Bodies, of whom they kill'd 18, among which were a Lieutenant, an Enlign and a Sergeant, but not without a much greater loss on their side; The violent Rains obliged the Dutch Admiral to reconduct his Men on board the Vessels that Night, but the next Morning they and Taken, landed again, and entred the City in the same place, where a doubtful Engagement enfur ill the Inhabitants being at last forced to way, were beat out of the place, and retire, into the open Country. The first 14 ; .

thing that was Sacrificed to the fury of the Flames, was, the Royal Palace, after it had I been dispoiled of all its Riches, and a vast Train of Artillery, which the King and his cowardly Subjects left a Pray to the Dutch, after they had for some time defended themfelves, and fought hand to hand against them; but the Admiral vander Laen having laid two of their Chief or Quey Nabey's dead at his feet, the rest were so terrified thereat, that they fought for their fafety in their heels. It is worth taking notice of, That these Indians feem'd to have paid a peculiar Reverence to their great Cannon, which we found covered with Scarlet Cloath lined with Ramboutins, and so perfumed with Incense, that the smell thereof stuck a great while after to our fingers. All the Artillery and Fifteen Cannon being taken out of the Ciry and from Dutchment the Ramparts, the Admiral ordered likewise found Mur. the Fortifications and adjacent Houses to be thered laid in Ashes; we found 15 of 21 of our People that were Prisoners among them, in the the Prison, on both sides of the Royal Palace, miferably Murthered and Mangled by thele barbarous wretches, among which was Jacob de Groot; one Dutch Boy only, who was not put in Irons, had the good fortune to escape their hands by a timely flight, the remaining fix they had carried along with them: To revenge as much as possible this barbarity, all that remained of the City, was after the Cannon and all the other Booty we got were carried aboard our Veffels, fet on

About the same time, the Enemy fent one The En of his before-mention'd fire Engines, of a mies fit valt bigness, down the River; it consisted of unsucces 20 wooden Houses crected upon Floats of ful. Timber, which almost extended from one fide to the other. But no fooner had the Dutch got fight of this Engine, but they fent out their Long-boats well man'd, who took care to protect our Ships against it, and after it was passed by them, set it on fire in fight of the Enemy, which confumed both the Engines, and a good number of Houses standing on the banks of the River. The 17th and 18th our People were still busie in Embarking the Booty, Artillery and Cannou, and a day of Thanksgiving was appointed to be kept throughout the whole Fleet for this Vi-Ctory against the 23d. In the mean while • we advanced higher up the River, to try whether we could meet with some Vessels or Plantations that way, but faw nothing of any Moment. Mr. John vander Laen, and John Truytsman also write a Letter to the Pangerang or Governour of Palimbang, which was difpatch'd thither the 20th by a Chinese Priloner and an old Woman.

fire and destroyed, the fixteenth of the same

John vander Luen General, and Captain 30hn Truytsman, Commanders in Chief of the Dutch Forces now in the River and the Country of Palimbang, fend this Letter to the Pangerang and all the Chief Councellours of the Country of Palimbang.

#### A Lutter fent to the Pangerang.

Otwithstanding our last Success, we could not but put your Highness in mind of the most abominable Murther committed by your Subjests upon so many Innocent Persons in the Service of the Dutch East-India Company; which barbarous at, the' it was highly referred by the Governour General and Council of the Indies residing at Batavia; yet, to shew their Inclinations to continue in peace with your highness, did at that time for the preventing the effusion of Human Blood, require, and actually demand, a reasonable Satisfaction for these unheard-of barbarities: To accomplish which, they caused certain propofitiens to be made by John Truytiman to your Highness, with strict Orders to insinuate to your Highness all such reasons as might conduce towards the accomplishment of that end, which we don't question would have been sufficiently convincing to your Highness, had not your evil Councellours misguided you and shourted your good intentions. But feeing you flighted thefe conditions, and were very backward in giving due satisfaction, the great God of Heaven and Earth being highly displeased at your Conduct, did so direct the Heart of the before mentioned Lord Governour and his Council, as to have recourfe to Arms, being the only remedy left them, ordained by God Almighty to protect the just cause of their The Great God of Heaven baving Subjects. been pleased to bless their undertaking, for the due Punishment of your malicious Subjects, they are however willing to let your Highness know, That the Hoftilities committed against you and your Suljects, were undertaken with no other intention, than to revenge the Innocent blood of their Subject spand to procure an honourable and reafonable Peace; The faid Governour and bis Council, being always more enclined to Peace than War. if your Highness is of the same sentiment; We expect to hear from you either by your Letter in Answer to this, or by your Deputies, it being our resolution to tarry for that purpose in your Highness's Territories, and these Presents shall be a sufficient Passport to those, whom your Highness shall be pleased to send to treat with us. Given aboard the Bloemendal's the 20th of November 1659.

Signed, Zoon vander Laen. John Truytsman.

The 25th our Ships went further up the lees goes River, and got fometimes fight of three or gher up four Lighters, which served for Ferry-Boats;

and some tew Houses built upon Floats of Timber; the Lighters could not be taken, 1662 because they came not within reach of our shot, and afterwards sheltered themselves in the small Rivulets among the Weeds: The Houses were set on fire and so returned the 26th, before the Fort where we lay at Anchor till next day. In the mean time Peter de Goyer Director of the Dutch Factory of Famby, sent the 11th of November from thence by the Chaloop the Tronk 75 Capons, 100 Pullets, and 5 Goats, for the Use of Mr. John wander Laen and the other Commanders; this being all he was able to get, all eatables being extreamly scarce thereabouts at that time, because the Pangerang of Adrogo-ry, and the Young King of Johor, had lately tarried three Months, with an attendance of 2000 Persons in these Parts; and not long ago, abundance of Cattle and Fowls had been kill'd for the Wedding Feath of his Highnels's Daughter, who was Married to the Young The Admiral and Captain Truytiman received not long after an Answer from the Pangerang of Jamby, to their Letter, dated the 20th of November, which being inclosed in another from Mr. Peter Goger, dated the 26th, was Translated out of the Majayan and runs thus.

This Letter is sent from a sincere Heart, by the Pangerang of Jamby to the Commanders in Chief, John wander Laenand Daman Sittia Bauwa, (meaning Captain Truytsman) Men famous for their Prudence and Courage.

The Pangerang having understood that Mr. John Maetzuicker Governour General of the Dutch East-Indies, has fent 18 Ships against those of Palimbang, has thought fit to declare, that his Sentiments agree with the Governours; and that he is ready to approve all without the least contradiction, what shall be undertaken by the faid Mr. John Maetzuicker, affuring Mr. John vander Lacn and Daman Sittia Bauwa that he will stand strm to this as well as to the other Promises made by him the Pangerang before. Pursuant to this resolution, the Pangerang did upon the receipt of the Letter, fend Zitta Antacca with Some Troops to make War upon those of Palimbang. The Pangerang al-To for ewarns and Commands John vander Laen and Daman Sittia Bauwa to be upon their guard, because those of Palimbang are near at hand; The being all the Pangerang commands at this time, to John vander Laen and Daman Sittia Bauwa.

The 27th, all the Houses that were yet standing near the Fort of Mansapoura were together with the Fort it self, set on fire by special order from the Admiral, and the same day we lifted a great piece of Ordnance out of the Marthes in the Isle of Cambara. And being lensible that either out of an oblimate

temper or out of despair the Pangerang of Pa-16.62. limbang would scarce send any Deputies or Answer to ours of the 20th; we resolved to The Dutch leave that River, and accordingly with the next Tide fet fail and return d thro' the branch of the River call'd Bamarmaffum in order to burn all the Houses and Plantations we should meet with; but having spent 5 days, viz. to the 2d of December in coming down the faid kiver; we met at its en-

trance with the Ship the Orange, which joining with the rest, we continued our Voyage Arrive at the 4th and arrived with the whole Fleet and our Forces the 9th in the Afternoon, in the Road of Batavia. Our Booty confifted chiefly in 75 pieces of great, and 142 leffer Cannon, some of which were of Iron. found no Pepper here, but great store of Rice and Padie, all which was confumed by the fury of the Flames, as likewise a vast number of small Vessels, among which were the King's Pleasure Boats, of which there was a vast number; some few were carried away by our People, to be kept in remembrance of this Action.

The Kingdom of A-

Batavia.

The Kingdom of Achin is situate in the most Northern part of the Isle of Sumatra. Its Capital City bears the same Name, being situated in a Plain upon a Pleasant Rivulet, about half a League distant from the Seashoar. The Royal Palace, which lies in the very Center of the City, is very large, of an Oval Figure, furrounded with a Ditch, and in some places defended by very large Pieces of Ordnance; The Ditch is guarded by Pallisadoes, in which are seven Gates. On the left fide of the River is a Fort to defend its Entrance, and several other Redoubts are crected in the Marshes, round about the City of Achin, for its defence. The Air feems to be much more wholfome here than in the Southern parts of the Isle: The Houses which are covered with Reeds are built upon Posts, so that you must enter them by several steps; the reason of which is, that at certain Seasons the Waters rise to such a height, that the whole City is overflown by The chiefest Riches of the King of Achin confist in Gold, Jewels, and Elephants; He entertains a great number of Concubines which ferve both for his Bed and his Guards in the Antichambers; befides which, he maintains a good number of Eunuchs, who attend his Person. Four Salandars or Nobles have the chief management of the Government under the King. This Kingdom was in 1663 Governed by a Queen, who, as it was reported, had an inclination to be Married to a Hollander, but the Council of Batavia, for weighty Reasons would not consent to the Match. The Inhabitants of Achin were always renown'd for their Courage and Con-Vol. IL 💪

duct beyond all other Neighbouring Nations, and have not only extended their Con- 1662 quests over the Circumjacent Countries of Sumatra, but also made themselves Masters of the Kingdoms of Queda and Pera on the Continent of Malacca; nay, they frequently have belieged the Portugueses in the City of Malacca, they having always been declared Enemies of that Nation.

On the Western Coast, not above 4 Sillebar-Leagues to the South of the Line, is within a Bay upon a very large River, a certain Place call'd Sillebar, being furrounded with craggy Mountains and vast Woods; tho' the Country thereabouts is very fertile in Pepper; it belongs to the King of Bantam. On the same Western Coast is a very large Bay, the shoar of which is all over Woody, as the Bay of Sillebar is surrounded with Mountains; tho' the shoar its self is very green and Pleasant. Immediately after, you come to the Bay, you discover a small Point of Land, behind which, lies the Town of Sillebar.

A few Leagues to the South of the Line, Tikouw. is likewise the City of Tikouw, a Place very flightly built, and some Leagues from thence to the North, is the Town of Passaman, at the Passamar. foot of a high Mountain.

Barros is also fituate on the Western Coast Barros. of Sumarra, about a League from the Seashoar, upon a considerable River, betwixt Passaman and Achin. The Country hereabouts produces Pepper, Camphire and Benzoin. Hereabouts are likewile Sinkel, Labo,

Pedir lies ten Leagues to the East of Achin, Pedir. with a high Mountain betwixt both; the Country, which was formerly a Kingdom, is indifferently fruitful of Rice and other Further to the East on the inward Coast of Sumarra, are Pacem, Dely, Aru, Kampar, Andripouro, Jamby, and Palimbang. Andripouro is situate under 3 deg. 30 min.

Padang lies on a very pleafant River, whi- Padangther a confiderable number of Indian Veffels refort. The Dutch divide the Coast of Sumatra into the outward and inward Coast. The inward Coast is by the Javaneses call'd the Western Coast; as the outward Coast is the Northern Coast, where is the Kingdon of Achin.

The Climate of Sumatra, is, by reason Unreloated of its fituation under the Line, extreamly un- fomness por wholfon, especially for Strangers, and in the the Climus Rainy Season, when scarce a day passes but of Sumathey are afflicted with fudden Showers, Storms, Thunder and Lightnings, which foon after end in a Calm. Besides that the heat of the Sun beams draws up the naufeous vapours of the standing Waters, which infect the Air, and produce Malignant Fe-

vers, and other lingring distempers. This 662. is most visible on the Western Coast of Sumatra, and especially in Tikouw and Pryaman, where the Air is equally obnoxious to the Inhabitants and Foreigners, which makes the Durch Inhabiting there, look bloated and very pale. In the Devil's Isle and near the River Indapura the Air is so Poisonous, that it kills Men and Beast as soon as they set foot on shoar; and if they happen to escape by returning immediately, they certainly die foon after.

7bt Nasure of she Ifle.

The Isle of Sumatra is full of Pleasant Woods, craggy high Mountains, agreeable Valleys, fruitful Plains, very fine Rivers and large Bays affording great store of Fish; belides that the Marshes and Pools are stock'd with young Oak-trees, the Bark whereof gives the Waters a red Tincture. The Its Rivers. chief Rivers here are, the Achin, Andregiri, Jamby, Palimbang, Manancabo, Banjarmaffum, Sillebar, Indapura, and Pryaman, all which have derived their Names from their respective adjacent Cities, or these from them. The Waters of the River Indapura are red for two Leagues at Sca, which proceeds from the great quantity of young Oak-trees growing in the Marshes, the bark of which imparts a red dye to the River, for which reason also the Water is war, unwholfome to drink.

Its Soil-

The Soil produces Rice in abundance, and all other forts of Indian fruits, fuch as Bananas, Potatocs, Coco-Nutts, Oranges, Li-mons, Tamarinds, Sugar, Honey, Ginger, but especially Pepper, of which a great quantity is transported from thence into Foreign Countries. Some Years ago many Plantations of Pepper were destroyed by the Soldiers upon the outward Coast of Sumatra, which were fince replanted, yet in many places Cotton-trees have been planted in their Itead. The fame Coast also produces Camphire, the most durable of all others, which differs from the Japonese Camphire in this particular quality, that whereas in this, the Icent is in the Wood; the Camphire of Sumatra contains it in its own substance, without imparting the least share thereof to the This Island affords likewise white Benzoin, Kalamback or Aloes-wood, Eagleswood, and Sandels-wood. The Forests here feed divers kinds of wild Beafts; viz. Elephants, Bufflers, Tygers, Staggs, Rhinoceros's, wild Boars, Apes, Monkeys and Serpents; the Rivers, Lakes, and Ports abundance of Fishes; in some you meet with Crocodiles. The Woods are full of wild Fowl of all forts, and the Country abounds in tame Fowl. They have Batts here of an exceeding bigness. It is very remarkable, that the Island of Sumatra is the only one throughout the East-Indies, that has Bears.

The Mountains here afford Gold, Silver, Copper, Tin, Iron and Brimstone. The 1662. outward Coast of Sumatra especially, has very Rich Gold Mines, but they are neglected for the most part. However the Queen of Achin drew 1000 Pounds weight out of one Mine, and the Dutch East-India Company 300 in the Year 1665: They also produce Smaragds, Hyacinths and other Precious Stones. On the top of the fiery Mountain Balabam, is a certain Spring of Sulphurous liquor like Oyl; and the like is feen in feveral other parts of this Island, to Iweat out of the Earth or Rocks, not unlike a perruleum: The Indians call this Liquor Minjah Barth Oil Tunnab, i. e. Earth Oyl. This is in fuch effects among the Inhabitants, that the King of Achin has prohibited the Exportation thereof under pain of death, so that what is carried away by the English or Dutch, is brought on board by stealth. It has a very strong fcent, but not naufeous; its vertue is extraordinary in curing Lameness, call'd by the Indians Beribery, if the affected parts be only bathed or anointed with it. This Island has a certain kind of Reed, which grow near 200 Fathom high, and twifts its felf, round the Trees. They make Hops of it.

The most general Language here is the Ma- The laran tho they use likewise several others; They guage of maintain certain Schools for the Young Peo-stants and ple, to be instructed in Reading and Writ-sheir ma ing. The Inhabitants of Sumana are large ners. of Stature, black and brown of Complexion like the Javaneses. The Women are well shaped, and of a fairish Complexion, with very white Teeth, they make no account of Chastity, nor look upon it as a difgrace to expose themselves for Money. For the rest this Nation is extravagantly proud and illnatured, which fets to high a value upon it felf, as to despise all Foreigners; they are very treacherous, and make very little account of their Faith, if they find it confiflent with their Interest. Every body here is like all the Mahometans, does Marry as many Wives as he is able to keep; one however has the precedency before all the reft: Women of any Quality are feldom feen to walk along the streets. In the inland Country lives still the remainders of the ancient Meneaters, call'd Bataches or Batatas, who not only devour strangers, but likewise kill their own Fathers and Brothers, if grown very decrepit, and eat them.

Both Rich and Poor, are continually Their D. chewing the leaves of Bethelmixt with Time and Areka or Faufel. Their Bread is made of Rice, of which they make also a dainty Papp, and Cakes, and eat them with Oyl, They feed likewise upon Fish, Flosh and Herbs. Their ordinary drink is Water; be-

1 tides

fides which, they use Arack destill'd of Rice 1662. and Coco-Nuts, and Palm wine. The Inhabitants of Sumatra are very moderate in their Diet, like all the rest of the Indians.

Mest of the Inhabitants, especially the clostling, poorer fort, go Naked to the middle, where they have only a piece of stuff wrapt about them to cover their Privities; both Sexes go without shoots or stockins. The Richer fort wear a kind of Coat of Silk or Callico, after the Mahometan Fashion; a Linnen Cloth wrap'd about their heads two or three times, serves them for a Cap.

The abjor Kings.

They pay a more than flavish submittion uneness of and Obedience to their Kings, not fo much out of inclination as fear; their Princes or Governours are stiled Pangerang.

Treir Pu- They punish the least Trespass with great nishments. severity, by cutting off their Hands and Feet. Capital Crimes are punish'd after the most dreadful manner that can be invented. In former Ages, the Kings used to surrender the miscreant to the Men-caters, who after they had chop'd of their Hands, Arms and Leggs, threw Pepper upon the Trunk of the Body and devoured it.

Their Religion.

Most of the Inhabitants living near the Sea-Coast are Mahometans now, whereas formerly, both those Inhabiting the Sea-shoar and the Inland Country were Pagans, of which there are still a great number in the Countries remote from the Sea.

Traffick of

The Isle of Sumatra, but especially the thu Island. Kingdom of Achin, are Places of great Traffick, whither refort Merchants from all parts of the Indies, as the Chineses, Malayans, Favancles, Christians and Mahometants. There are certain Places on the Western Coast of the Isle, which are in confederacy, and under the ProteStion of the Dutch East-India Company, unto whom they are obliged to fell all their Pepper and Gold at a certain rate. These are Pryaman, Indapoura, Padang, Tike and Barros. They had also settled a Factoand Barros. ry in 1665 at Andragiry, but the quantity of Pepper and Gold to be transported from thence was so inconsiderable, that it did not Commodia turn to account. The chief Commodities ties of Su- of Sumatra are, Pepper, Gold, Tin and Camphire. The Weltern Coast affords Pedro Porcos, which are fold at 200 Crowns per piece. Jamby and Palimbanz are the chiefest likewise their Factories, and are much cothe Shoulders of which were imbroided steemed by that King. The Foreigners import commonly Pieces of Fig. 1. port commonly Pieces of Eight, Callicoes, Chinese Gold, Iron Wire, Steel, Woollen-

those beforementioned. Thus much of Su-· We continu'd our Voyage without any سائلهم با

remarkable Accident, till the 3d. of February, when we pass'd by Punte Gale, and arriv'd 1662. the next day at Colomba, both Cities belonging to the Island of Ceylon. Having foon tinue their dispatch'd our Business here, we set Sail a- Voyage. gain the 9th, and the 12th came within light of Cape Comorin and the City of Pass by Koylang, steering our Course along the Coast Cape Coof Malabar, where we met with the Ship morin and the Phanix, in the Road of that City to Koylang. the Phanix, in the Road of that City, to load Pepper, which done it joyn'd with us, to continue its Voyage to Perfia.

Over against the life of Baypin we met

with 15 or 16 Sail under the Command of

Mr. Adrian van der Meyden, who was fent thither to Attack the Fortress of Palipatnam; Palipatwe went immediately abroad the Viicland, nam. where we paid our respects to the Admiral, who enjoyn'd us, to fend all our Land and Sea Men a shoar, to assist at the taking of this Fortress; which being done accordingly, and the Dutch Forces Marching in good Order to the Attack, they found, to their great Aftonishment, that the Encmy had Deserted the Place, and left only one old Woman and a Boy behind them; thus we became Masters of this strong hold, without striking a blow. However our Defign upon the City of exanganor was laid afide for that time, after we there thoroughly informed concerning its Condition, and that we were not fufficiently provided for fuch an Attempt. So we proceeded on our Voyage again the next day, and the 5th of March pass'd by the Bar of Goa, where we pass by found several Dutch Ships under Commodore Goa. Roothaes a Cruifing, which kept the Harbour of Gon Block'd up. The 6th. we came to an Anchor in the Road of Mingurla, Come to where we met several of our Men of War, Wingurwhich had been a Cruifing before Gon, and la. were come hither to refresh themselves; We faw likewife here the Bantam Yacht. which was fent on purpose hither to carry the Queen of Golconda to Mocha, (a City of The Queen Arabia, Situate on the Red-Sea) she being to of Golgo from thence to Medina, to visit Maho- condagoes go from thence to Medina, to vint Maho to vifit met's Tomb, and to make a present of Maho great value there. Her Guards which had met stome Conducted her 80 Leagues as far as Wingurla confifted of 4000 Men, all mounted on fine bright Persian Horses, well Accou-Romans; They had fine Polish'd Helmets on their Heads, being for the rest Arma with Bows and Arrows, and some of them with very long Beards. At the Head of them rid two Trumpeters, who Sounded the Trumpet by turns. All the Perions of Quality that attended her, were likewise

# Mr. John Nieuhoff's Voyages

mounted on very fine Horses, with a Footmen on each fide of the Horses Head, who held the Bridle. The Queen her felf and all her Ladies, were carried in Palakins covered on the top, to keep themselves from being seen by any body; and before them were led several Camels, covered with rich Furnitures. On one of these was mounted a Kettle-Drummer, who with a Hammer beat crofs ways, as we do in Europe; the Drums, of which one hung on each fide of the Camel, being tomewhat sharp at one end like our Bee-hives. The Commodore Roothrees and M. Santvliet (Director for the Dutch East-India Company at Gamron) were gone to meet and complement the Queen about two Leagues from the Town; who, whilft the tarried here, dictated feveral Letters in divers Languages to her Secretaries; she fent foon after to know whether the Ships were ready to fail, and being answered they were, she came immediately aboard the Yacht, but finding her much less in bulk than the other Ships the faw lying at Anchor in the Road, the was not very well fatisfied, till being told by Mr. Roothacs and Santvliet, that the Yacht was most proper for her purpose, by reason of the shallowness of the shoar of the red Sea, the seem'd to acquiesce in their judgment. Near the Sea-side a Tent was set up, and from thence a passage covered all over with Callico to the Chaloop, in which was likewife a Tent, as also in the Yacht, to prevent her being feen by the Ship's Crew. She gave a very fine present of Gold and Diamonds to the Commodore Mr. Roothacs and Mr. Santvliet. The Captain of the Yacht who carried her to Mocha, did not return from thence, but went along with her, being, as we suppose, turn'd Mahometan; because the Yacht was reconducted by the Boatswain.

Wingurla is no more than a large Village, fituate on the Sca-shear of the Kingdom of Golconda under the 15 deg. of Northern Latitude. The Dutch East-India Company have built a very fine House here of Stone and Plaister-work, because all Ships bound for Perfia, are obliged to come to an Anchor nere, to provide themselves with fresh Water and Fuel, which they buy here at a very low rate, the place scarce affording any

thing elfc.

After we had left Wingurla, we came the 6th of April before that famous City of Perfia, call'd Gamron, and Anchored at 6 Fathoms Water. I went ashoar the same day to give Notice of our Arrival, and to make the necessary preparations for unlading our ship; which being done, I apply'd my self to have it laden again with all possible expedition; and our Cargo being for the most part Gold and Silver Coin; we might foon

have been ready to Sail again, had we not been oblig'd to stay for some other Commo- 1662. dities, till the 2d of June, when we set sail again from thence, and Mr. James Williamson Director for the Company in Persia, took this opportunity to go along with us to Batavia, the time of his stay in Persia being expired.

The Famous City of Gamron, the only A descrip-

Sea-Haven of Persia, is situate on a flat Sea-tionof that shoar, just at the entrance of the Persian- City. Gulph, at the foot of a barren Sandy Mountain, producing neither Grass nor Trees; it lies betwixt two Castles under the 27 deg. of Northern Latitude: This City was built out of the Ruines of the Castle and City of Ormus, the Destruction of which, proved the rife of Gamron. It is to the Sea Side defended by three Stone Bastions, on which are mounted, good Store of Iron Cannon. But on the Land-side, it is only surrounded with a stone Wall, which is much decay'd because they fear as it seems nothing from thence. 'The Houses here which are built after Iss Houses. a very antick manner, like most of the Persian Houses, stand very close together, having each a square Turret which mounts to a confiderable hight above the whole Structure, having on each fide several Holes for the free passage of the Wind and Air; in these Turrets they fleep every Night during the Summer featon. The best of their Houses are built only of Loom, which being form'd in four Square pieces and dry'd with the Sun, become as hard as stone, and keep out the Rains and Winds. They whiten them on the out-fide with Lime made of burnt Muffelshells, but their back and out-houses are covered only with the leaves of Palm-trees; and are miserable Hutts, scarce fit to defend the Inhabitants from the injuries of the Scason.

The Streets here are both narrow and streets. short, with many turnings, and are covered by the Houses on both sides, which are almost join'd together on the top; notwithstanding which, the heat is so excessive here, that they are scarce passable. They are not paved with Stones, but only with Earth beaten close together, which being continually watered to allay the heat and dust, becomes by degrees as hard as a Stone. Both the the English and Dutch have their Factories here near one another, each being distinguish'd by their respective Flaggs; the Dutch is built close to the Water side, being a goodly Structure and very convenient for the unlading of Vessels.

The City of Gameon affords no fresh Water, Scarcity of which must be seach'd by the Slaves in Earth- fresh Wa en Vessels or Sheep skins early in the Morn-ter. ing (to keep it the cooler) from the Mountains, which are near three Leagues distant from thence, which makes the refla Water

Wingur-

here, that most People of Fashion 662. will rather present you with a Cup of Wine than Water, there being no Pools or Bafons here, where any fresh Water is to be mer with, but during the Rainy Scason. Neither/does the Country produce any thing but Palm-trees; notwithstanding, which there is great plenty here of every thing, wherewith they are supplied from Persia and The common Drink of the other Places. Inhabitants is Water, tho' they also are provided with good Pofian Wines; they are very Strong, and of a high red Colour, but as Sweet as Canary Wine: It grows about Schiras and Yead and is Transported from thence in large Flasks and Casks. They have also Arack Destill'd of Coco-nuts and They make likewife a mixture of Water, Limons and Sugar, but if drunk in too great a Quantity occasions the Bloody-

Thumbolethe Air.

The Air of Gamron is from the beginfomeness of ning of May till September more unwholtome than in any place of the East or West-Indies that ever I faw; fo that there is no abiding here for Foreigners, except in December, January, February, and March. The Natives of any Quality being more used to the Air, will continue formething longer, viz. till Mar, when they retire to their Country Houses, which are for the most part built among the Mountains, near some River or other at 10 or 12 Leagues from the City: Here they foend merrily what they have got by Traffick in the Winter, leaving the management of their City Houses to their Slaves, till October, the usual time for Ships and Foreign Merchants to come to Gamon. The Heat which is most excelfive here, obliges them to Sleep upon Leather, or with the lower parts of their Bodies in Water; or in the Turrets, which are on the top of their Houses; some Cool themfelves with pouring Rofe-water down the Neck; fuch Ships as are obliged to flay in the Port during the Summer Seafon, must be covered all over with Sails, otherwife the Planks would fplit afunder, the Pitch and Tarr rifing up in Bubbles as it were a Boiling; so that no Body dare Walk bare-footed upon the Deck. Those who venture to continue during the hot Season at Gamron, commonly get for their pains an Ague of a very malicious Nature, which if it does not kill, at least seldom quits them, but leaves fuch Relicks behind, as at laft brings them to their Graves. The Cause Bargains at such a Juncture. Most of the of this excellive Heat feems to me to be the Merchants that refort to Gamron, are Per-Situation of the Place, at the Foot of a fians, Armenians and Indians, living in Perbarren Mountain, facing the South, so that sia. And were it not for the unwholesomethe Sun-beams by their Refractions against ness of the Air, abundance more would the Mountain are redoubled in their Strength, come from other places, who now stay at • Vol. II.

7

especially if it be considered that the Wind here during the Summer Season Blows for 1662. the most part from the South, and confequently from the same corner, from whence the Sun-beams exert their utmost Strength. For, immediately after March is pass'd the Winds turn commonly to the West and Southwest, which are sometimes so Stifling stiflingthat they kill Men and Beafts. The Arabi-Winds, ans call this Wind Elbamudi, i. c. Fish-winds, and the Persians Badesambour, because it Choaks on a fudden, fuch as it touches. It is very observable, that the Dead Carcasses of such as are kill'd by it, if touch'd with the Hands, are as unctuous as Greafe or Oil, and appear as if they had been Dead a Month ago. This Wind continues here in May, June, July and August, as likewise all about Munffil over against the old Nineve, and near Bagdat, but those who are upon the Water, even in Boats in the River, never feel the effects of this Wind, tho' they are quite Naked.

Most of the Inhabitants of Gamron are Traffick of Merchants, who Trade to feveral Cities the Inhabi-Situate upon the Branch of the Euphrates Gamron. fuch as, Baffora, Schiras, Ifpahan, Tauris and Smyrna. Once every Year, to wit, in Officber, the Caravans, confifting of feveral thoufands, Men and Beafts, arrive here from the East, viz. from Balylon, Turk, and Terfia, with all forts of Merchandices loaden upon Camels, Dromedaries and Affes, which they exchange for East-India Wares. The Staple Commodities of Gamron are Cloth of Gold, Tapestry and Pearls, which they take near the Island of Balrain; as likewife Fruits of all forts, Plumbs, Raifins, Currans, Nuts, Dates, Oranges, Citrons, Pomegranates, Peaches, &c. They abound likewife in Herbs, which are brought thither from other Places, especially from the Isle of Kikmi, not above three Leagues from thence. They have also good Store of most excellent Perfian Wine, which is brought thither from Schieas and Yeard, in large Flasks pack'd up in Casks. They fell also abundance of the best Rose-water, which is here in greater plenty than in any other place, that ever I faw. There is at certain times fuch. a valt Confluence of Merchants and Ships at Gamron, that they want Money to buy their Commodities; in fuch Cases they write to their Correspondents at Lar, Sching, 1/pahan and other Perfian Cities, who if they have ready Cash, are sure to buy good

Nnn

home, and rather choose to buy from the 662 Merchants, that bring their Commodities from Gamron.

Disposition

The Women here, like as in most other of the In- Eastern Countries, are feldom feen abroad, babitanis. but dwell in separate Apartments, where the Men live with them for some time, and in the mean while lay afide all other Bufiness. The Women who expose themselves for Money, fit in the Evening upon Benches at the Doors, with Lanthorns in their Hands, where every Man is free to choose ha to hikes best. The Inhabi-

The Inhabitant persons are the most part Naked, one appear course National States only in their Shirts. The Rich Charles and their specific about the soul in their Shirts. The Rich Charles and the specific about the specific specific about the specific specific about the specific s Diet. for it is observable that the ordinary of the Indians all along that Coaft, fora to Sindi is Dates and Fish, the Air. The Heads and Guts of s, they mix with Date Stones, and

> they give at Night to the Cows, afwith very little Herbage. They abound in Hares, Sheep, Pidgeons and Partridges; but as for tame Fowl, tho' they have great flore of them, they are not much efteem'd, because they have a brackish Taste. The Sea, especially that of Solda and Sardin, furnishes them with vast plenty of Excellent Fishes, and among the rest with very fine Oifters, but they are to little regarded by the Inhabitants, that if you have a mind to some of them, you must bespeak them of the Preserv'd Fruits Fisher-men on purpose. of all forts are here in great abundance; The Rich Merchants, but especially the Per-

alltog ther with a little Salt-water,

fian Governour living in great Luxury and Pomp.

About a League to the East of the City is a famous Sepulchre of a Banyan Saint, buried there some hundred Years ago, under a Tree call'd Arvor dus Rav, i.e. Root-tree by the Persugueses, or Lul by the Persians, which he Planted here sometime before his death. The Inhabitants call this Tree, the Tree of the Banyans, either from its firld Planter, or because the Banyans have founded a Pagod, or Pagan Temple under it, and a Caranvansera or lnn, for the Conveniency of Passengers. This Tree has spread its Branches at a confiderable diffance round about, and encreases every Year to that de-

gree, that its Branches, which indeed all de- Ka icend from one Trunk, but by degrees take 1 66 root again, encompals a space of 550 Feet. Under this Tree both Inhabitants and Foreigners shelter themselves against the heat of the Sun, when they are Walking abroad, and entertain one another. Over the Sepulchre it felf is built a small Pagode, in which you fee burning Lamps hanging Day and Night under a Canopy of Silk. The Ground all round about is Paved with Bricks. and Adorned with convenient Benches and Seats, neatly kept, where every body is at liberty to take his Repose under the agreeable Shadow of this Tree. Here the Indians come Indian in great Numbers to offer their Sacrifices, e Srints, specially the Siogs, call'd by others Gogges, Gioghi, and Joeghi, and Fakirs by the Arabians and Moors. There are a certain fort of Banyan Saints (or at least pretend to be such) belonging to one of the four Sects of the A Sea of Bramins, viz. the Sect of Cenramaghi, of Bramins. Samarath, of Bisnou, and the fourth the Sect of Siegs or Goegys. You see them sirting on the High-ways with their Legs across, as the Mahomerans do; they never pair their Nails; some have locks of Hair hanging down their Backs of 4 or 5 Feet long, others never Shave their Heads or Beards, which makes them appear more like Devils than Men. They have no dwelling Places of their own, but in the Night time they Sleep in the Porches of their Temples, on Dung-hills and corners of the Streets, or perhaps in some Cave or other Hole. They always appear Naked, having only a piece of Cloth wrapt about the middle. The Indian Women resort to them in great Numbers out of Devotion, to touch the extremities of their Fingers, or to Kiss their Privy Members in a most humble Posture; which they admit of, without flewing the least fign of sensibility thereat, for if they should do otherwise, they would be look'd upon as unfit for that Holy Seat. They never cast their Eyes upon any Body, but draw them in a most frightful manner upwards, as if they were afflicted with Convulsions. They lead a most severe and miserable Life, constantly mortifying their Bodies, by some strange and unnatural Penances they lay upon themfelves. Some retire into Caves and Cellars, where they continue in their Devotions fometimes 9 or 10 days, without Eating or Drinking. Some Walk both day and night for feveral Years together without Sitting; and when they intend to Sleep, hang themtelves with a Rope about their middle to the Branch of a Tree. Others carry both their Arms all their Life-time streight upright above their Heads; to that in process of

time the are not able to bend them down-5 2. wards a gain. In this Posture they continue ~ day and night throughout the Year quite Naked, without the least fear of being scorch'd by the Sun, or Stung by the Gnats, which they won't as much as remove with

their Hands. Nay they Sleep with their Arms in the same Posture, a thing which 1662 needs must be very Painful at first, and at last makes their Arms thus difforted and bereaved of their usual Nourishment to hang down behind their Backs. There are

unumerable forts of other Penitents, some always lifting up their Eyes against the Sun, others fixing them constantly upon the Ground, without ever looking upon or fpeaking a Word to any Body living. They besmear their nauseous Bodies with Ashes, and their Greafie Hair and Faces, with Sandel wood and Saffron; but especially with Cowdung mixt with Ashes; during our stay at Gamron we went several times to refresh our selves under the Tree; the common Custom is to carry some Wine and Sweet meats along with one, and as for Dates, Almonds, Nuts and other Fruits, they are to be fold there.

a present of Cloths; and so they enter the City, where they pass their time together in Feasting for some days. The Governour of the City did in our time meet the Commissioners with some armed Bands, and thus conducted them into the City.

The Posts which go from Gamron to If- Persia pahan are wonderful expeditious in their Posts. journeys; They are appointed by the Governour of Gamron, after he has made fufficient trial of their nimbleness, which is done by running with the rifing of the Sun, to an appointed place till Sun sett; a certain Horseman being appointed to ride along with them, and to take care they don't rest by

TheGove Four of

every 1 ear certain Commissioners untiler to take an account of the Governours Conduct; he commonly meets them at some distance off the City unarm'd, and if they find him to have transgress d his Commission, they cut off his Head, otherwise he is regal'd with

tuit of Ciotins and with the title of Kunner to foon as any Stranger of fashion arrives: Gamron, some or other of the Inhabitants ready to offer him his fervice, to attend hir in the quality of a Porter, or as a Servan to show him the way; they are sure to wa

at your Lodgings every Morning, and fol-1662 low you all day long whereever you go, for a very flender allowance.

I had the curiofity to take a view of the earGam- Shepherds and their Hutts, with their Flocks of Sheep and Goats; for which purpose

by the help of my Guide, I went fome Leagues deep into the Country, where I found them feeding their Sheep in a very barren Ground; Thefe Shepherds, who have no other Loushold Goods but a flight Coat. commonly manage a flock of 500 Sheep and Their Hutts they fet up at pleafure in the open Fields, they having no certain Grounds appointed them, but like the A ai ians change their places according to the best conveniency of Pastorage; and the the Grounds betwixt the City and the Mountains are very barren, yet are the Sheep and Goats here very good, an evident fign that a finall matter is fufficient to feed them. These Fields extend from the City to the Mountains, which furround them at tome diftance from thence. They have fome Sheep of an extraordinary bigness, with two horns on each fide of the head. Their He-Goats have long curl'd hair, of which they make Caralets. Some have fuch long Ears that you may tye them together fords great diagnities of tann'd Goat and Sheep skins, It has much of Gamen.
A limb to the Right of the Harbour of

Gamron, you may fee the Isle of Ormus, at the very entrance into the Perfian Gulph, as likewife the Hlands of Queixone, Kefem and Larger of which we will give you a fhort

deteription.

The Ille of Ormus.

So be put the Hland of O.mis under 25 deg. 30 min. of Latitude, and 22 deg. 45 min. of Longitude; others under 26 deg. 4 min. and fome others under 27 deg. and 30 min. Northern Latitude. The Ifle of Ormus is by some taken for the same, which by the Ancient Authors, as Plins, Pomponius and Dionyfius, is called Ogyris, and by Proteiny Vercebia; it is fituate in the Perfian Gulphy about two Leagues distant from the Continent of Persia, having the Province of Caramania to the East, Arabia falix to the South and West, being divided from them only by the Streights of Baharem, and the Continent of Persia to the North; it is very near Triangular; its largest side which faces the N.N.E. extending from S.E. to the N.W. from the Chapel of St. Lucie to the point of Land where the Castle of Ormus is, being the nearest to the Continent, where formerly the Portugueses had a Fort call'd Comoran, built just opposite to the Caftle of Ormus, which thereabouts is not above a League distant. The second side extends from the fame Chappel, viz. from the

S. E. to the S. S. W. as :\_ and so further to the W. and makes the Basis of the third and finallest side beg

ends at the beforementioned Callet; it faces the Country of Mogosthan, a name commonly given to the Perfian Coast on that fide, which is about two Leagues from the Isle. Its whole Circuit is about three Leagues.

The Western part of the Island, extend- Karu. ing along the Sea shoar, where the Mountains end, is call'd Karu, where you see a . few houses scattered up and down belonging to the Moors: At Turumbake are a greater number of these Houses, but as wretchedly built as the former; except some few formerly belonging to the Austin Fryars, where they used to divert themselves some times. Near to them is a fine Fish-pond surrounded with very fine Trees, and a large Ciftern for Rain-water.

The whole Island is divided by a ridge of Mounta Mountains, extending from the East to the West, behind which there is nothing to be feen but white and barren Hills, producing nothing except very good white Salt. Among the rest there is a Mountain here called Kuykastaron, or, The Mountain of the Dead; on the top of which the Portugueses had built a Chapel call'd, our Lady of the Rock; which Chapel is observed to rife higher and higher, because the Salt, Salt-Peter and Brimstone, which are contain'd in the Bowels of this Mountain, encrease daily in quantity. The Inhabitants visit this Chapel with a great deal of Devotion, unto which they have made a pretty easie ascent by cutting steps out of the Rock, which otherwise is very fleep. Near the Mountain, where the Cha- 54 pel tlands, is another, which runs upwards : in form of a Pyramid. It is compos'd of one entire Mass of the best and whitest Salt that can be feen, and appears at a distance like a Mountain covered with Snow. Not far from hence is a Chapel call'd St. Lucy, built behind the Ruins of some old Towers, where formerly the Kings of Ormus used to keep their Brothers Pritoners, after they had bereaved them of their eyes. About half-ways betwixt this and the City, was another Chapel dedicated to St. Lucy, with fome Houses about it, whither the Inhabitants of Ormus used to retire during the Summer Seafon, as likewife to fome others built near the Sca-shoar of Reed only, and covered with Palm-tree-leaves.

From this Chapel to the City is a large Plain, where the Inhabitants used to have their Cifterns to gather and keep Rain-Water in, which were always lock'd up; for not only hereabouts, but also all over the Island, the Ground is Brackish, which makes the Rain-water which is kept in these Cisterns

much

as gathered from the does it not come near sh-water that is brought

from the Cartestate, of the Isle of Queixome. The remaining part of this Plain is taken up Graves of the Mahometans, Pawith the gans and Jews which are buried here Promiscuously without any difference; some of these Tombs are covered with a kind of a Chapel, but open on all fides. you fee great numbers of Mahometan, Pagan and lewish Women, of all ages and degrees, which come to bring their Offerings of eatables in flat fmall diffies to the Souls of the deceated. And fome of these are so Zealous as to pay their conftant Visits and Devotions to the Tombs of force of their Pious Men or Saints, that are in great reverence among them, and their Tombs sumptuously adorn d.

Not far from this Plain is another extending from the Mountains to the City, call'd by the Moors by a peculiar name Ardemira, i. e. The prospect over the Plain (in the same Sense as the French say Bellvidere) where the Mahometan Courtiers, and other Officers of the King used to keep their Turnaments, and running at the Ring on Horfe-This Plain extends to the West as far as the Sea shoar, the way that leads to Kanu, from whence the City has the fairest

Profpect.

Vol. II.

irum-

Behind the Mountains, being the S.S. W. and the W.S.W. part of the Island, call'd Turumbake is the fairest of all, tho' its Compass is less betwixt the Mountains and the Sea than that part beyond the Mountains. Here you fee a Country Seat of the old Queen of Ormis, adorn'd with Walks of Palm-trees, and two large Cifterns or Basons, call'd from the Place, the Ponds of Turumbake, besides several lesser ones.

Their Water is the wholesomest and freshest of the whole Island. There is another great Bason belonging to this Seat, which is continually supply'd with Water out of three adjacent Ponds and a small Brook; this Water is not near fo Salt as that which is kept in the Ponds, more to the E. and N. N. E. where the Sun turns the Water into folid Salt. This Country Seat was already in a decaying condition 50 or 60 Years before my coming here, having only a few Appartments left, wherein the King of Ormus used to lodge during the Summer Scason; Turumbake had at that time not above 15 or 20 Huts built of Reed close together, like a small Village, and covered with Palm-tree leaves after a wretched manner. Most of the Houses of this Island are built after the fame manner, notwithstanding which, the Inhabitants of Ormus retire thither with their

Families in the Summer, being taught both by Tradition and Experience, that the open 16 Country Air is much more wholesome during the hot Season, than the City Air.

On the North fide of this Isle lies the City of Ormus, which before it was subdued by the Portugueses was very Populous, Foreigners flocking thither daily from Persia, the East-Indies and Europe it felf, for the conveniency of Trathick. To be short, the City of Ormus was the most famous and richest trading City of the World, before the Portugueses had found out the passage by Sea to the Erst-Indies, being inhabited and frequented by the Persians, Arabians, Alyssines, Armenians, Tartars, Turks and other Mahometans; belides the Italians, French, Dutch, English, Poles, and other European Nations. It was much Inhabited by the Portugueses, but very few Spaniards, because the first would not permit them to go thirber by Sea, and the Turks flop their passage by Land, betwixt the Mediterranean and t'e Persian Gulph; fome few dwelt there under the Name and Protection of tome other Nations. The Natives of Ormus are all Mahometans, but of different Sects, some being call'd Kinys, belonging to the Sect of Hali Son-in-Law to Mahomer, whole Doctrine is followed by the Perfians; Others are call Suny's, tollowing the Doctrine of Martinet, Olmar and Ofman, as the Turks do; the Hing himself is of this Scot; besides which, divers forts of Pagans, as Banjans, Camboyans, &c. inhabit here.

The City of Ormus whilst under the juris- 76:0 diction of the Portugueles, and before the Per-Orn fians made themselves Masters of it 1619, was the I a very Stately, Rich and Magnificent place, guel of which the Inhabitants ufed to boaft, That if the World were a Ring, Ormus must be confidered as the Diamond. For, after the Perturnefes had conquered this City, they were very careful in adorning it from time to time with most Magnificent Structures, to fuch a degree, that all the Iron belonging to their Windows and Doors were gilt; and it was the common opinion in those days, that if they had remain'd Masters of it till now. they would have turn'd them into Maffive Gold. They had built a flately Church upon an Eminency, dedicated to the Virgin Mary, with an adjacent Hospital call'd the Miscricordia. Next to this was the Exchange or Custom-House, call'd by the Persians Beneck [al; this was a fine Edifice furrounded with Galleries on the out fide. They had likewise several Monasteries, amongst which those of the Austin Fryars and Carmelites were the chiefest. There is yet to be seen a very high Steeple, a most noble piece of Architecture, exceeding in Magnificence all others of this City; the Mahometans

Q a a

call it in the Arabian 1 ongue, Alkoran; on one 1662. side of the Castle stood formerly a famous Mosquewhich the Portuguesescaused to be demolish'd, as being too near the Castle which prov'd the occasion of the most inveterate hatred against the Portugueses, not only among the Moors Inhabiting there, but likewise amongst the Persians, their King Tahamas or Tahamas

Grandfather to Schach Abas having been the nder the Founder of it. No sooner was this City ersians, faln into the hands of the Persians, but she was by them dispoiled of her Ancient Glory. and most of her Inhabitants, many of whom were kill'd in the Siege, the rest fled for Shelter to some other place. All the Churches, Houses, and other Publick Edifices, were laid level with the Ground, except fome few thops in the Bazar or Shopkeepers-street. The Dutch Ships which unloaded there and returned commonly empty from thence, used to make it their Practice at that time to Balast their Vessels with the finest Marble stones the Remnants of the stately Structures of this City, and would questionless by degrees have taken all that was left, had not the Perfian Governor there prohibited the exportation of them under a severe Penalty. For the Pergans, whose Intention was to lay the Foundation of the greatness of Gamron upon the rubes of Ormus, did remove all the best Ston's from thence, which they made use of in their best Buildings at Gamron. The Fortifications of the City of Ormus, in the Portuguese times, in 1619, were but in a flender Posture, the Ditch about the Castle being fill'd up with dirt, having scarce 6 Foot of Water; besides that, it was not spacious enough for the Garrison. Their Commanders in chief, who were removed from thence every Year, had according to the custom of the Portugueses, but a flender share of knowledge in Martial affairs, the Governor at that time being an ancient Man, not trained up in the Wars, and not provided with experienced Engineers and Gun-

The Castle

The Old four-fquare Castle was built on Ormus the utmost Northern or North-West point of the Land of the Isle, where it approaches nearest to the Persian shoar, two sides of it being wash'd by the Sea, the other two facing the City; betwixt which and the Castle, is a very fair Square, of about 300 Feet long, from whence you have a fine Prospect into the Sea. This Castle, whilst in the possession of the Portugueses, was not very large, being defended only by four Baltions, which as well as the Cortines, were built with a kind of fmall Flint-stones mixt with mortar and Sea-water; fo that they were not proof against the Thunder of the Great Cannon. The Ditch was

likewile very thallow, tho' it might have been made deeper, without any great Cost, by reason of the nearness of the Sea, which waters it on two sides. In this Condition was the Castle of Ormus, under the Dortugue fes, of which the Portugueses boaled, that that it was impregnable. After the Perfians had made themselves masters of it, they were very carefull to repair the Old Fortifications, and to add fome new ones; especially on the point of the Ditch, they made a half-moon, the Cannon of which Commanded the Plain and a Gallery; fince which time they keep it always in a good posture of Defence, and maintain a considerable Garnion there, under the Command of the Governour of Ormus, who refiding for the most part at Gamron, appoints a Deputy for this place, who has his refidence in the Palace formerly belonging to the Kings of Ormus.

The Harbour of this Isle is a certain T Bay, made by two Points of Land that jett b out on both fides; upon one of these Capes flands the Castle, on the other the Portuguefer had built a Church, dedicated to our Lady of good Hope; but this Point turns somewhat nearer towards the City, so that the Harbour where the largest Vessels, Galleys, and smaller Vessels used to cast Anchor, lies opposite to the North-East part of the City, betwixt the two Monasterics built by the Portugueses, one of which belong'd to the Carmelites, the other to the Austin Fryars. The Tide where this Bay is deepest rifes at high Water, near 4 feet high up above the Foundations of the Houses; notwithstanding which, at low Water, the shore is dry for above 200 Paces; and 150 Paces further, the Water is not 3 feet high where it is deepest; so that the largest Vessels are obliged to cast Anchor at 600 Paces from the City, and the Galleys at 500, which renders this Harbour very unfafe, especially if a Storm arises from the East, which often forces the Ships ashoar; nay, this Harbour would be much more dangerous, were it not for the nearness of the Continent, which covers it on the N. and N. E. side, and the Isle of Queixome, which lies to the N.N.W. of it, and breaks the violence of the raging Waves. Some tell us of two different Bays belonging to the Isle of Ormus, which afford a fafe Harbour to Ships; the one to the East, the other to the West, being divided by a neck of Land which jetts out betwixt them a confiderable way into the Sea.

This whole Island is destitute of Water, except what some standing Pools or Ponds " afford, which is always brackish, tho' some more than others; some, especially such as are near the Sea-fide, being tolerably fit for

in the they participate of the petimes not Rain in Ormus of Frih Water they have, being in the Royal Ourdens. Ferra Gutka who reign'd in 1566 in Ormus, found out a Spring with fresh Water in Turumbake. Not far from thence near the Sea-fide, arifes a falt Water Spring from among the Rocks, call'd by the Perfian Inhabitants Abdarmon, i. e. Medicinal Water, which has a Purging Quality, and cleanfes the Bowels from all impurities. Here you see abundance of People drink the Waters at a certain Season of the Year; when they have a mind to be satisfied whether their Bowels are throughly cleanfed, they cut a piece of an Orange or Citron, and if immediately after they go to stool they reckon themselves sufficiently purged. 'Tis true, there are three Springs here, which all having their rife among the Mountains, afford Water Jufficient for three Rivulets, but it is as brackish as the Sea Water it self. Thus feveral Brooks are to be feen to the S. E. among the Mountains which carry a very clear Water, but so stockt with Salt, that in the Summer, when these Rivulets are dry'd up, you see vast lumps of Salt, which cover the Banks on both fides. The vaft quantity of Salt which is to be met with all over this Island, being in some places burnt up and blackned by the violence of the Sunbeams, affords a dreadful fight at a distance. They have also a kind of Salt Clay, out of which they make Earthen Vessels.

The whole Isle is nothing else but a barren vast lump of Salt, which scarce affords either Grass or Trees, except what is brought forth by force in the Royal Gardens in the Plains, neither does it afford any thing for the fullenance of Human life. It has however some few Trees in certain places, but bear no Fruit except Dates, and another finall Fruit growing on Thorn Bushes with green leaves; another kind of these Thorn Bushes they have with a pretty large stem, and fmall red leaves. In the opening of the Rocks you see now and then a large green and well spread Tree, notwithstanding several havepositively afferted that this Isle did procure neither Tree, Herbs nor Grass. The Mountains are full of Rock Salt which is very Transparent, and contain likewise a considerable quantity of Brimstone. In some Winters the Salt is washed by the Rains down from the Mountains, which afterwards is again coagulated by the Sun, which is the only made use of here, for the Rock Salt being of too corrofive a Nature, does consume the Meat instead of preserving it. The Dutch Transport abundance of Salt from hence to

the East-Indies. The Isle also affords a certain kind of white Plastering call'd by the 1662. Inhabitants Gueche, and another that is red of the same kind, but not so good as the white. They have also a Certain way, of preparing dung for Plaister-work, which they perform in the following manner: They take the uppermost part of an Old dunghill away, the rest they make up in balls, and let them dry in the Sun. done, they burn them to Ashes with fire; the Ashes they beat for a considerable time, upon an even piece of Ground, and immediately after mix it for use; for, if they let the Ashes be cold, or keep them only two or three Days, they are not fit for their purpose; but this prepared and used keeps the water out of any place, for many Years. There are scarce any other Stones to be met with here, but Flint-stones, of which the greatest part of the Fortifications of the Castle are composed. There is also a kind of Black Glistering Sand to be found here, which the Portugueses used to Transport from thence to their Factories in the East-Indies. No Barley or Oats is to be feen here. Their Cattle they feed with a peculiar fort of Peafe or Beans, which they grind, and afterwards fteep in vater, being otherwise too hard to digeit. Of these they give a certain quantity, every Night, to their Hories. But in the document they give to each horse two pounds of Black Sugar mixt with a Pound of Butter, and some Flour, which they make up into Balls; then they wash the Horses mouth. and Teeth, because this mixture sticks very close to their Teeth and Gums; in the day time they feed them with some Herbs, which they draw out of the Ground with Roots and all, and cleanse them very well from all impurities.

In the Bay and all along the Coast of sinkin the Isle of Ormus, they fish for Wood, of Wood. which they find great store in the bottom of the Sea, but not very large. This Wood is by the violence of the Currents of the Rivers arising from among the Mountains of the Continent of Persia, (which is not above two Leagues distant from hence) torn of and carried to the shoar of Ormus; a thing modefurprising and contrary to what is observed of this kind in other Islands lying near the Continent, or some other great Islands, whither the adjacent Rivers force abundance of Wood, which however always fwims on the furface of the Water, and commonly is found rotten, whereas the Wood upon the Coast finks to the bottom, and is not quite rotten, but affords the Inhabitants great store of Fuel, which has induced some to believe that this Wood did grow under Water.

On the remain Court you meet ano with certain kind of light porous ftone under water, not unlike our Pumice Stones: especially near those places, where subterraneous fires are: which makes these Stones to be always white, in which they differ from the common Pumice, which are either blackish or gray; They are found here in such prodigious quantities, that they build their Houses of them, because they mix very well with the Mortar, by reason of their spongeous substance, and very light; and when well Cemented with the Mortar, refift the violence of the Winds, which blow here exceedingly about the change of the Scafons, better than any other Stones. Someare of opinion, that these Stones were cast out by a burning Mountain, which feems not improbable, there being on the back fide of a neighbouring Mountain found vast quantities of thefe Stones, as black as Coals. The reafon why those on the Sea shoar are white, feems to be, because they have for many Years, nay, for many Ages past, been scowred by the Water of their impurities; The Inhabitants call them Sanchmay, i.e. Rock Fish, because as many as are taken away, grow agains in a little time, and furnish them with material for Building. They report that in former Ages this Island did burn for feven Years to before, of which they shew the marks to his day; the Earth upon the Mountains being red, and in the Valleys spongeous likeAshes or Quick lime; besides that, the whole Island is subject to frequent Earthquakes. The Mountains are all over covered with Salt, and the Grounds are full of Salt-Peter. As often as the Wind blows from the South-West, there arises so violent a stink of Brimstone from the Mountains, as infects the whole Air. The heat is more intense at Ormus than at Gamron; for it continues at least five Months, viz. from May till September, and fometimes till the beginning of December; In the Winter Season the heat is somewhat allay'd by the Dew which falls all the Night long, but in the Summer the Nights are so excelsive hot, that it would be impossible for the Inhabitants to abide here, if by feveral ways they did not af-'twage in some measure its violence. For on the tops of the Houses they set certain Wooden Vessels like Bathing Tubs, big enough to contain two Persons at a time; in these they fit and fleep all Night in the open Air with the Water up to their necks. cause of this intolerable heat, is attributed chiefly to the Nature of the Soil, which is not only Sandy, but full of Salt-Peter; which occasioning a continual loss of Spirits, the Inhabitants are forced to repair in some measure this defect, by continually keeping

inemicives in cold Water, notwiting it be none of the best here; all the water that is brought hither from Bandel Kengo or the life of Queixome, being taken but of Ponds, and confequently not purified from, its dregs, for want of motion; which is fufficiently demonstrable by its colour which is like Milk, and its Settlement which is sometimes two or three inches thick at the bottom of the Vessel it is kept in. During the violence of the hot Season you may see People of both Sexes and all Ages, flock to the City Walls; but the Europeans seldom venture at swimming in the Sea, the Water being to excellive falt, that it exceriates their Bodies; but they allay the excessive heat of the Nights by wetting their Quilts and Pillows with cold Water. It is further observable, that the Winds are fo changable here, that you may in a quarter of an hours time remarkably feel their different effects; some by opening, others by obstructing the Pores of your Bodies. During the Summer Seafon the Winds blow for the most part E. and S.E. or W.S.W. but feldom from the South, the last of which is not so unwholefome as the rest; and what is more surprifing is, That this Wind always cools the Water contained in any Vessels, but not the Chambers or Rooms where the Water is kept.

The Drink of the Common People is Water, those of the better sort drink Spanish Their Wine, or Persian Wines of Shiras, but these Erinkare very scarce and dear. They Destil also a Spirit of Rice and Sugar here, as well as in all other parts of the Indies. They have also a certain kind of Drink call'd Tari, which is drawn from a Tree, and as sweet as Must; this is the ordinary Liquor sold in Publick Houses, who pay a considerable Tax for their Licenses to the King. This Liquor is brought every day to Town in Casks on Horse back, each Horse carrying one on each side.

The Isle of Ormus was in Ancient times Go- Origin . vern'd by its own Kings, or Princes, descended the Isle from the race of these great Kings, that Ruled Ormus. all over Arabia, Persia and the adjacent Countries. The first famous in their Histories, was, a certain Arabian Emir or Prince, call'd Mahamed Dramku, of the race of the antient Kings that Ruled in Saba, or Arabia Falix. This Prince being extreamly defirous to Conquer new Dominions, extended his Conquests to the Persian Gulph, where he landed with a great Fleet from Kalayatta, a City of Arabia Falix, and laid the Foundation of a City call'd Ormus or Harmus on the Coast of Persia. He left for his Successor Solyman his Son, who was succeeded by the following Kings: Is the third in rank, Son of Solyman; the fourth Lax Kari, Son of Isa,

## Friends to the EAST-INDIES.

with the Court, and embraced a private the fish was Kathebad his Son; the 12th 18th Was Kathebad; the seventh Mamua Son of Isa II. who suspecting Mir Kabadin Molong his Nephew, made him a Prisoner in the Castle of Gati; from whence he escaped to Scugon, and Married the Daughter of the Governour of that Castle. The 8th Xaranta Son of Mamud, he engaged in a War against Molong, but was slain in an Engagement with his Enemy.

The 9th, Mir Xabadin Molong was declared King in his stead; his Daughter Sed Alkatum was Married to Emir, or Prince Seyfadin Aben Azar, his Brother Aly's Son, King of the Isle of Keys, who dying soon after, his Son Seyfadin obtained the Kingdom of Keys. Mir Xabadin dying likewise not long after, his Vizier Xarcar made himself Master of the Kingdom of Ormus; and those of Keys having at the same time deposed Seyfadin, he fled to Ormus, where being well received by the Inhabitants, he belieged the Usurper Xarcar in the Castle of Karcan, whom he kill'd, and thereby became Master of the whole Kingdom. After Seyfadin had well settled his Affairs here, he undertook an expedition against those of Keys of whom he kill'd many, and made some of their chief Men Prisoners. From thence he went to the Isle of Gerun, (since call'd Ormus) where he caused all his Prisoners to be slain upon a certain Mountain, which from thence was call'd Kay Kastaron, i. e. The Mountain of the Dead. He returned at last victorious to Ormus, where he spent the rest of his Days in Peace. The 11th was Xabadin Mamud, Son of I/a II. who fucceeded his Uncle in the Kingdom. The 12th Emir Roknadin Mamud, Xabadin's Nephew, Son of Hamud, who was very victorious, and extended his Conquests as far as Safar, a Province of Arabia falix. He Reign'd 35 Years, and died 1278.

He was succeeded by his Son Emir, Seyfadin Nocerat, but was soon after forced by Emir Kodbadin Thahantam and Emir Moethzadin Fulad, or Pulad, to Fly the Kingdom, and to feek for Shelter, together with his mother, by Sultan Gehaladin Suraget Mex, Governour of Kernon, by who's affiftance he was restor'd to his Kingdom: But being a fecond time vanquish'd, by his Brother Emir Kodbadin was forced to fave himself by Flight in a small Bark, in the Isle of Queixome. In the mean while, King Seyfadin, who had affifted Kodbadin, having caused him to be murthered, the Soldiers conceived fuch a hatred, against this Seyfadin, that they instantly recalled Emir Seyfadin Nocerat, chased away Seyfadin, and restored him to the Throne. Notwithstanding which he was not long after murthered, by his two Brothers, Emir Make and Emir Turkonza, together with his Sisters, Bibi Banek, and Bibi Nepty, 2 had Relgn'd 12 Years, viz. 1290.

Mafaud the murtherer of his Brother, ceeded him in his Throne, being a very Couragious but Cruel Man, which brought upon him the hatred both of the Nobility and Common People, of whom he Caufed many to be killed. This made them Implore the Asistance of Emir Bahadin Ayas Seyfin, formerly a Slave only of King Nocerat, but now Governour of Kalayatte, 2 Sea-port of Arabia Falix; who forced Mafaud to Fly to Kernon, and from thence into Syria, where he Dycd, after a Reign of three Years. He was fucceeded, by Babadin Ayas Seyfin, who caused two Brothers of Masaud, to be beheaded, for endeavouring to Restore him to the Kingdom.

About that time, a great swarm of Turks, came out of Turkestan, Conquered a Confiderable part of Persia, and by their frequent Inroads, into the Kingdom of Ormus, Forc'd the Inhabitants to feek for Shelter, the Command of their King Azarr, in the Isle of Queixoma. Whill they were Roving about in the Neigbouring Seas, to find out a Place where to fix there Habitations, they happened to light upon a certain Island, 2 Leagues from Queixome, where meeting with a very Ancient-Man, living just on the point of the Isle, a Fisher-man by Trade, He advised their King, to settle there. The King approving of his Counfel fent to the King of Keys, the Proprietor of this, and all the other Islands in the Perfian Gulph, to defire him to fell him the faid Isle, for a certain Sum of Money, which being Granted, he fettled there a Colony of his Subjects, 1300, and gave it the Name of Ormus, after his Native Coun-His fucceffors afterwards extended, their Conquests over a Great part of Arabia and Persia, and over the Persian Sea, as far as Basora; and maintain'd themselves in the possession of it, till this Island was conquer d by the Portugueses. This King dyed, 1312 in the 22 Year of his Reign. .

Some Historians give us the following account of this, and the succeeding Kings, of the Isle of Ormus.

After this King had setted his new Colony, He surrendered the Government, to Emir Ayzadin Gordonxa, Son of Salbor, and and Bibi Zeineb, a Nephew of the Ancient King of Ormus, and retiring to Kalaytte in Arabia, there snisshed his Days in Peace. Gordonxa was engag'd in War, with the King of Keys: Because he had intercepted some Ships coming from the East-Indies, his Dominions: Ormus he vancatished

and forced him to Fly his Dominions; but the King of Keys, Returning foon after, found means to make Gordonxa his Prisoner, under pretence of an interview concerning a Peace, betwixt them; and Bibi Sultan Gordonxa's spouse, committed the administration of the Government to Malek Garya Hadin Diner, fon of her husband Brother Xemza, Caree five Mantha were expired, before the King of Kers came to Ormus, with Gordonxa his Priferer, where he was joyfully received by his Subjects, except Dinar, who being used to Rule, would not submit to Gordonxa, but forced him to retire to the Castle of Minab, on the of Persia. Continent Notwithstanding which, Dinar being sensible what affection the people bore to Gordonxa, and fearing his Return, he thought it his fafeil way to retreat in time to the Kingdom of Makron, betwixt Persia, and the Country of Send or Ind. After which Gordonxa, once more Returned to his Kingdom, where he dyed 1218.

He was succeeded by his Son Emir, Mobarefadin Bararon Xa, who together with his Brother, was by Emir Xabadin Islas his Ge-Prison May afterwards mounted

but was engaged in a war, imter, with Emir Xa Kodbadin. Brother to the imprison'd King; Diner came likewise with a strong slying Army, to his Alistance, from Makron, but finding Iffuf too strong for them both, he Entred into a Confederacy with him and Iffuf after having caused the imprisoned King, his Mother, and one of his Brothers to be Slain, forced Kalbadin to Retire to Kalayatte, with Bibi Marfam, the spoule of Ayas Cerfin. But Kedbadin afterwards Returned, unexpectedly to Ormus, with a confiderable force, and having made Iffuf his Prisoner, he put the Crown upon his Head, and caused him. his wife and his two Some to be killed; after which he likewife made himself master of Keys. It happened that Kodhadan being abroad, a hunting, on the Continent 1345. Rud Kir. Nofomadin, in the mean while, got himlest, Proclaim'd King of Gerun or Ormus, but finding most of the Inhabitants averse in in, he quitted the Country. However in, he quisted the Country. However, it was not long before he Returned with a great Power, and having rain'd finer of jadin Markedia General, as join with him. He forced the first of the said of the said was been a fear when word was breuten him, that Markedia was bead, and that by his Lallewill be him enjoined his Sons, Kembe and the mineres at the Feet of Country and the said of performing their Fathers-will had feized upon the

gained the Grown of Grown 1347, in Nakellan, in Province of Man.

He was succeeded by Turenza (who writ the Lives of the King Cal decessours both in Verse and vanquished Xembe and Xembe ed 1378, after he had Beignet After him his eldest Son the Crown of Ormus, who are by Xabadin, the second Son after whom Reign'd Salgar, Arrange Son. Under his Reign, Soft Hibertal Conquered all Perfia, even to the Continent, directly oppolite to the Island of Gerun, or Ormus, which escaped his Hands, for want of Shipping; but Salgar lost all that he was possessed of on the Continent. For the rest he Reigned, in Peace, as did his Successor Xauwes. Him succeeded Seyfadin, who Reigned 1507 when the Portuguefes, after they had discovered the Passage by Sea to the Indies, first set footing in the Isle of Ormus, under the Command of Alfonfus Albuquerque, the King being then yet in his Minority, was under the Protection of one Atar or Kegear, his Fathers Slave, a brave but Cunning man; whole Chief aim was to let the young King bear the Title of King, but to keep the Administration of Affairs in his own hands. Albuquerque being not Ignorant of it, lookt upon this as a favourable: opportunity to bring the City of Ormus, under the Power of Emanuel, the then King of Porsugal, or at least to make it tributary to him, by erecting a Fortress near it, by which means he might clear the Persian Gulph of all the Tunkish, and other Ma-hometan Vessels, Trading to the Indies, and confequently Entail that whole Trade upon Parrugal. He was about that time with fix. frout Men of War well Man'd, Cruifing in those Seas; but thinking it below himself at fuch a juncture as this, to lie Privateering at Sea he fleer'd his Courie the 20th of August 1507, towards the Persian Gulph, and pailing by the Cape Refalgat, came to an Anchor before Kalayatte, (a Noble City, and the first on that Coast under the jurisdiction of the Kings of Ormus) to provide himself with fresh Provisions ... The Inhabitants dreading the name of the Porruguefes, which dreading the name of the Portugueles, Which was then already become famous throughout the Indies, entred into a confederacy with the upon fuch conditions as albuquerque pleafed to preferibe them. From then for pleafed to preferibe them. From the Gill for Kuriatte, another City belonging to the line of Coats. Here the Inhabitants being of a feet of the coats. There is the state of the coats of the coats of the coats of the coats. to submit to Alkanerque, the with very

For Albuquerque having Landed so vigoroully attack'd the City, Garrison after some Resistance were forces leave it to his Mercy, which he burnt to the ground, with all their Ships herseura in the Harbour. In the same manner he made himself Master of the Maskate andOrfafan,twostrong andwell fortified places, belonging to the King of Ormus; and from thence directly taking his Course to Ormus it felf, the chief Aim of this Expedition, he tent word to King Seyfadin and Atar the Protector, That Emanuel King of Portugal having taken a Resolution, out of an hereditary Hatred to the Mahometans, the declared Enemies of Christendom, to make War against them, which should not end but with the total Conquest of either fide, he was come to tell them, that if they were ready, according to the Example of feveral other Mintick and Mrican Kings, to spay his Mafter a certain Yearly Tribute, he would leave them in the quiet Possetlion of the Itland, but if they refused to acknowledge the King of Portugal for their Lord, he was come to denounce them War, which was not to end, but with their Total Dettruction.

The King being forely frightned at the last Success of the Portuguese, and dreading the same Fate, thought it his best way to cajol Albuquerque with fair Words into a Belief of his fincere Intentions of Peace; but at the same time, by the Advice of Atar fought to gain time, and to delay his positive Answer, till the expected Auxiliaries from the Continent of Persia were Arrived. No fooner had he received these Supples, but he altered his Note, and in plain terms fent word to Albuque que, that the Kings of Ormus were not used to pay, but to recieve Tribute from Foreigners; That · in case the Portugueses would be contented with the same Privileges of Trading, other Nations enjoy'd there, they should be welcome; but, that if they once came to Hostilities, they should be convinced to their cost, what difference there was to fight with well appointed Persians and Arabians, and with an undisciplin'd Rabble of Moors. By this time Atar the Protector had got above 20000 Men together, part of which he Embark'd aboard the Merchant Vessels then in Harbour there, which he posted in a Line along the Shoar, to prevent the Enemies Landing, whilft he with the Men of War put to Sea with an Intention to Attack Aljuquerque in the Rear; so soon as he should be engaged with the Merchant Men: But Albuquerque instead of Attacking the Merchant Ships, came up with Atar's Fleet and Engaged them so furiously, that in a

short time he sunk many of them, and burnt the rest, with a great Slaughter of Men on the Enemies side, whereas the Portugueses lost not above Ten Men during the whole Engagement. King Sessadin being sensible that the Loss of his Fleet must of necessity draw that of the whole Island after it, sent immediately his Deputies to Albuquerque to Treat of Peace; They were kindly received by the Portuguese General, who gave immediate Orders, that the Fire which had seized by this time upon the Merchant Ships, should be extinguished immediately, and the next day a Peace was concluded betwist them upon these sollowing Conditions.

That Cerfa.lin King of Orms and all his Successors submit themselves to, and shall acknowledge the King of Portugal their Protector, and pay him an Annual Tribute of

15000 Serafs.

That Albuquerque shall have Liberty to pitch upon a Place, such as he judges most convenient for the erecting of a Fortress, for which purpose he shall be supply'd with ready Money, and other Necessaries by the

faid King.

Accordingly Albuquerque apple 1 himfelf with all imaginable speed to the Building of the Fortres; but many of the Gentlemen Volunteers and other i orrugueses looking upon it as a great Hardship, to spend their time here in Slavish Drudgery, whilst they mis'd their opportunity of getting a Rich Booty at Sca, from the Moorish Ships, (the main intent of their Voyage) began to murmur, and at last with the consent of their Captains, embark'd themselves aboard two Men of War, and in spite of Albuquerque return'd to the Indies. He was vex'd to the Soul, to see himself thus Disappointed in this great Defign, but being forced to comply with Necessity, he follow'd the rest. But some years after he being sent from the King of Portugal in the Quality of Viceroy of the Indies, he did, after the Conquest of Goa and Malacca bring it to Perfection in the following manner.

He caused 1577 22 Men of War, and a good Number of Merchant Ships to be Equipp'd at Goa, and to have it rumour'd Propagation of the Red Broad, that he intended to go with this Fleet to Aden (a City at the Entrance of the Red Sea) to prevent those of Ormus to conceive any Jealouse of this Equipment. But no sooner was he come to Maskate, but he changed his Course, and Steer'd directly for Ormus, where his Arrival caused an incredible Fear both in the King and People. For Asar being dead since, and King Serfadin pioson'd by Noradin Governor of the City, his Brother Toro or Torunxa had Ussurp'd the Kingdom from his Children.

## Mr. John Nieuhoff's Voyages

No adin, who had both by this Act, and before heap'd to many Obligations upon this new King, got thereby the fole Administration of the Government into his own Hands, and daily appear'd in Publick with a ftrong Guard, confifting most of his own Kinsfolks Those that bore the chiefest Rank among these were three Brothers, among whom was one Hamades, Noradin's Chief Favourite, a Man of about 35 Years of Age, Bold, Prudent and very Ambitious, and resembling in every respect the late deceas'd Protector Atar. He took effectual Care, by placing his Creatures in all places of Trust, whereby he Ethablish'd himself in the Management of the Government, fo that not only Noradin, but alfo Toro himself durst not attempt to Act contrary to his Sentiments. From hence it was, that, tho' the League with Portugal had been kept inviolably hitherto, the Porruguefes had been civilly receiv'd there, and the Yearly Tribute punctually paid, yet was the Power of Hamades so prevailing, as to have constrained Toro to accept of the Perfian Turbant, fent him by Ismael Sophi, un ev dent fign, that Hamades his Inclinations were rather for the Persians than Portuguefes. Albuque, tue being not ignorant of what pass'd at Ormus, resolved, by delivering King iore from the flavish Submission imposed upon him by his Subjects, to Confirm him abfolutely in his Fidelity and Interest to the King of Pertugal; for which purpose he surrounded the whole Island with his Fleet, to take away from them all Hopes of Relief, and immediately fent word to the King, that he was come thither with no other Intent, than to enter upon a new League betwixt the Kings of Portugal and Ormus.

King Toro being not a little surprised at the unexpected Appearance of fo great a Fleet, dispatch'd immediately his Deputy's to Albuquerque, to Treat with him concerning the Conditions of it; Albuquerque de-manded, that, besides the Annual Tribute to be paid to the King of Portugal, Liberty should be given him to build a Fortress and a Factory House to secure the Trade of the Portugueses; and King Toro being willing enough to grant what he defired, the League was Confirmed by a Solemn Oath on both fides. But Hamades who foon forefaw that the building of this Fortress would tend to the no small Detriment of his Authority, left no Stone unturn'd to prevent its Accomphilhment, which Albuquerque being foon aware of, he caused this ambitious Favourite to be kill'd. After his Death, the Portuguefes meeting with no other Obstacle, the Fortress was soon after brought to Perfection; King Toro readily furnishing them with Materials and other Necessaries. The next

Care of Albuquerque was, how to a leve all the Opportunities of a Future re mong the Inhabitants of Ormus; for purpose, after having taken the Oath of Fire delity from King Toro, he removed all the great Cannon out of the City, and fent about 30 Persons of the Royal Family, who had their Eyes taken away before, and were maintain'd at the King's Charge from thence to Goa, where they were to be provided for by certain Persons appointed for that purpose by Emanuel King of Portugal. Albuquerque having thus settled the Affairs of Ormus return'd to Goa, where he was no The Mahome- Aipufooner Arrived, but dy'd. tans call this Albuquerque Malandy, because querque. he was born at Melinde in Africa, call'd by dies. them Maland.

It was not long before King Toro refused to pay the usual Tribute to the Portugueses, alledging that they did not defend him against the Violences committed by Mokrin his Vassal Prince of the Island of Baharen, who hinder'd the Ships from coming to Ormus. Sequeira then Governour of the Indies for the King of Portugal, sent hereupon se-ven Men of War (aboard of which were 400 Portuguese Soldiers) to the Assistance of King Toro under the Command of Anthony Korrea; which were join'd by 200 Barks of the Kings. Mann'd with 3000 Persians, under the Conduct of Xaraf his Admiral. Mokrin brought together an Army of 12000 Men, confisting of 3000 Arabian Horse, 4000 Persian Archers, and the rest of Turkish Firelocks, and some of his own Subjects. Arm'd only with Seymeters and Javelins; But being Overthrown and Slain in Battel, the Isle of Baharen fell into the Hands of the King of Ormus, who gave it to one Bardadi, under Condition, that he should pay him an Annual Tribute of 40000 Sc-

By this time Sequeira being sufficiently convinced, that the King his Master was circumvented in his Share of the Customs and other Taxes, appointed certain Portuguefe Commissioners to have a watchful Eye over them, which so exasperated the Inhabitants, that King Toro in 1521 Revolted. and caused all the Portugueses at Ormus, except fuch as fled into the Fortress, to be kill'd; the same Treatment received the Portugueses at Kuriatte, Soar, and in the Island of Babaren, who were either all flain or Imprifon'd. Then he attempted the taking of the Fortress, but meeting with a brave Refistance from the Portugueses, and dreading their Return with a good Fleet, he retired with all his Subjects and their Effects to the Ille of Queixome, and let fire to the City of Ormu, Which burnt four days fuccessively,

But for long after Xaraf, the Chief adviser and promoter of this Revolt, having received ligence of the coming of the Portugue Alect, and fearing to be call'd to a fe-vere Account, kill'd King Toro; and in his stend put Mamud Scha, one of the Sons of Seyfadin, upon the Throne. This King being but 12 Years of Age, made a new League with the Portugueses; by vertue of which, he was oblig'd to pay an Annual Tribute of 20000 Serafi to the King of Portugal: The Inhabitants of Ormus were to restore to the Portugueses all that they had taken from them; in confideration of which, the Portuguefes were not to intermeddle with their Custom-House, or other Courts of Judicamre. In the Year 1550, the Turks made in In-road into the Isle of Ormus and laid it ilmost desolate. The King who in 1566, Reign'd in Ormus was call'd Siafirufia of Aainuxa Gialedin; and in 1580, Reign'd one ferraguixa, who, tho' very Ancient, had a reat inclination to Marry Bifaime, the Wilow of Rex Bradadin his late Governour of Mogestan, thereby to be Master of her Treaure, which was very great; She gave him or Answer, That she would comply with his deres, as foon as he had perfected his new Gardens t Tarumbake, and found out a new Spring of resh Water; both which the King having ound means to effect in a short time, he vas nevertheles disappointed in his orpe Statin by the crafty Widow. He that Reign'd 1 Ormus in 1606, was Xeque i. c. Prince to, or as some call him Ajosia, i. e. King

For the' the Portugueses by the Conduct f Albuque que had got into the Possession of ne Island of Ormus, ever fince 1507, neverrelefs the Succession of their Kings from ather to Son, was kept inviolable under the rotection of the Crown of Portugal; for o sooner did the King of Ormus die, but ne Inhabitants fet another of the Royal Fanily, tho' not without the confent of the 'orruguese Governour upon the Throne, who as oblig'd to take the Oath of Fidelity to ne King of Portugal, after which he was inefted with the Crown and Scepter by the id Governour, who Conducted him in reat Pomp to the Royal Palace, and afterards gave him all the demonstrations of reect and honour, tho at the fame time he irst not stir from the Island without his oprobation.

The Ancient Kings of Ormus were Mafters vast Territories on the Continent of Perand Arabia; and among the rest of the ountries of Lar and Mogostan in Persia, the It of which is commonly call'd the Persian oast; and the Country of Lar being a lountainous Country of very difficult ac-

cess, serv'd them as a Bulwork against the Persians. For, after these had once taken from 1 6 the King of Ormus, the Country of Lar, and what elfe they were polles'd of on the Continent of Persia, whose Example was followed by the Arabians) the Isle of Ormus was bereaved of its chief defence, and exposed to the infults of the Persians.

It was the custom of the Ancient King of Lim Ormus, in order to fecure to themselves the form's quiet possession of the Throne, to confine their Source next Kinsfolks, or fuch as had any pretenti- ". ons to the Crown, with their Wives and Children, where they were well entertain'd, and kept till the King thought fit to dispote of them otherwise. They also used to blind their Brother, and others deteended of the Royal Line, because it was a fundamental Law amongst them, that no blind Man could Sway the Scepter. It was performed thus; They made a Copper Bason red hot, which they immediately after it was taken out of the Fire, held frequently close before the Eyes of him that was to be bereaved of his eyelight; which without any further Application, had the defired effect, without giving the least blemish to the Eyes in outward appearance, which look'd as clear as before. Some will have it to have been done with a red hot Iron.

The Kings of O. mus possessed vast Their Treasures in former Ages; the Customs Riches they received from all Goods Exported and Imported there, amounting to an inmente Summ yearly; which empower'd them to extend their Conquests on the Continent of Persia and Arabia, which they afterwards loft again, by their own neglect. For whilft they themselves were drowned in voluptuoutness, they left the tole management of affairs to their Favourites, who increaling in Pride as they did in Riches, at last left them nothing but the bare Royal Name, whilft they acted in the Government at their own Pleafure, disposing of the Treasury and all other Matters of Moment, as it fuited best with their own Interest, whereby both the Power of the Kings and the strength of the Kingdom being weakned, they were no longer able to Cope as before, with their Enemics, and at last were forced to yield themtelves Tributaries to the Portugueses, who were afterwards, viz. in 1622, chased from thence by the Persians, with the affiftance of the English, under the Reign of their King Schach Abbas; which happened in the foll-wing manner.

The Portugueses at Ormus had no socner been advertised of the taking of the Fort of Queixome (Situate upon the Point of the Island of the same Name); but they fent Deputies in the Name of the King of O mus and

of Gonzi to the Persian Chan of Shiras, to 662. come with them to an amicable Composition; but with such evident marks of Fear, that the Perfians, who had lately received advice of a Powerful Incursion made by the

Monqueft. by the Perlians.

Usbeck and Nogavan Tartars, and consequently would have refted fatisfied with the Conquest of the lile of Queixome, being sensible thereof, resolved not to let slip this opportunity of Plundring as it were enpaffent the City of Ormus. Accordingly the Chan of if Ormus Shiras, without tarrying any longer in the Island of Queixome, Embark'd about 40000 Performs and Arabians under the Conduct of Emanculiber his Licutenant, in some Barks, who coming before the City of Orms, found it deferted by the Portuguefes and most of its other Inhabitants, but met with a prodigious quantity of Merchandice, which they either could or would not bring into the Calle. The Perfians feeing themselves thus Masters of the City, without striking a blow, and finding that under the Protection of the Houses, they might open their Trenches, without any confiderable danger from the Cannon of the Castle, fell to work without delay, and foon carried them on to the foot of the Ditch which being dry on that fide, they pais'd without much opposition. Then they attack'd the Bastion of St. James, which they undermin'd and made themselves Masters of it in a few days; the Garrison all this while not making one Salley, but were forced to furrender the Place the 3d of May, after a Siege of ten Weeks. They confitted of 400 Men, regular Troops, besides Women and Children, which were some days before sent to Maskate. The English had the chief hand in making the conditions for this Surrender, which were,

That all the Soldiers should have their lives granted them;

And that all such as were willing should be transported to Maskate in two English Ships appointed for that purpole; which was strictly obferved by the Perfians; They made the King of Ormus, and Gonzil, with their Families priloners, and Seized upon their whole Treasure, which in Pearls, and Gold . Amounted to above Two Millions, befides a vaft Booty of Precious Stones, and other Riches belonging to the Inhabitants, and 300 pieces of Cannon, all which fell to the Persians Share, who lost a great Number of Men, in the Siege of this Fortress. The Portugueses, before they Surrendered the Fort, took Care to make all the Cannon Uteless, by Nailing of it up. The King of Ormus, with some other Arabians of Note, were carried Prisoners into Persia, together with the before mentioned, Genzil Raia Noradina. This Last was a young Lord, a

Subject of the King of Spain, a very hand-fome Person and well versed in the Aprilan, 1 6/6 and Arabian Hiltories. He had at the Beginning of the Siege, Offered 100000 Crowns in Ducats and Xerafing, to the Persians, to be transported to Maskate Goa; and the unfortunate King of Ormus, had likewise made an offer of his whole Treasure to the Portugueses, to obtain the fame Favour, which was refused by the Portugueses, notwithstanding they were both Vassals of the King of Portugal; which has given no Slender cause of Suspicion, to some, as if the Portugueses had invited the Persians thither, when they sued for peace to them, in the Isle of Queixome. The Englift, in confideration of this Service, had the moity of all the customs, and other Revenues granted them by the Persians. The Chief reason of the loss of the Fortress of Ormus, is attributed to the Revolt of the Garrison in the Portuguese Fort of Queixome, who in spight of Ruy Freira their Governour, furrendered it to the Persians. It was also alledged, that if the Governous of the Portuguese Fortress of Ormus, had, according to the advice of the other Commanders. filled the ditch betwixt the City, and the Fortress with water; by opening the Sluices the Persians, would have found it a muchharder Task, to have approached fo near to the Bearing of St. James.

Before the Portugueses had discovered, the Valt Trafpassage by Sea, to the Indies, all the Indi- fick of Oran Commodities, were brought into Eu-musin forrope by the way of Ormus; whither they mer Ages were first transported, out of all parts of the Indies; and from thence through the Persian Gulph, and along the River Euphrates, to Baffora, which City lies upon the Confluence of the two great Rivers the Euphrates and Tigrin From Baffora they were by Land, carried by Camels, to Bagdad, a City upon the Tigris. From hence they Travelled with their Merchandi-/ ces in Caravans through the defarts of Syria to Aleppo, being a journey of forty days; and from Aleppo to Tripolis, in Syria bordering upon the Mediteranean (only three days journey) from whence they were transported by the Mediterranern into all parts of Europe. From hence it is evident that Ormus in former Ages was the Staple of all the Indian Commodities. But fince the discovery of the Sea pasfage to the East-Indies, by the Portugueses, by the Cape of good hope, this way of transporting the Indian Commodities by Land, is laid aside, tho' even to this day, certain Indian. Merchandices, but especially Persian Silks, are brought from Ormus by Land by the Caravans, this Island by reason of its Situation, at the Entrance of the Persian

Gulph, and its two harbours, lying very com-1662 modious for traffick and Shipping from the Eastern parts of the World. After the City of Ormus was fallen into the Hands of the Pirsians, most of its Traffick and Suple of the Indian Commodities, was from thence transferred to Gamron, a City upon the Perfian Coast; built upon the ruines of Ormus. We will not proceed to a short description of the Islands of Bakaren Queixome and Kefem.

Isle of

Among a great Number of other Islands in aren. the Persian Gulph, and under the Jurisdiction of Persia, one of the chief is the Isle of Babaren, or Bahrem, called by Strabo and Pliny Tiles, and is by some taken to be the same Island, Called Ichaia by Pielemy. It is Situate in the Streights of Bajfora or the Perfian Gulph, betwixt Ballora and the Ifle Gerun, or Ormus, about 60 Leagues di-Hant from each, near the Arabian Coasts, overagainst the harbour of Karifa. This Island abounds in water, but is brackish, the best of all being found in certain ponds, or pools, in Nanvah in the midft of the Island; next to which that which is taken out of the Sea, is in most effect which is performed in the following manner.

There are certain Springs of fresh water arifing, in the bottom of the Sea, at 3 Fathoms and \( \frac{1}{2} \) deep. Near the City of Manama certain Divers go early in the morning in boats, about three Mucket shop deep in the Sea from the Shoar, and dive to the bottom of the Sca, fill their Earthern or Leathern Vessels with the water that Issues from the Springs, and fo come up again and Return to the shoar; this they do with a great deal of dexterity, and nimbleness. These Springs are supposed to have been formerly on the Shoar, not far from the Sca-fide, which Ince that time have been swallowed up by the finundations of the Sea, occasioned by Earthquakes. This Ifle, is very Fertile, abounding in Fruits of all Sorts, but especially Dates. But all the Rice, (which together with the Dates, is the General Food of the Inhabitants); is from the Indics Transported to Ormus, and from thence into this Island, which is famous throughout the Indies, by reason earl fills of the Pearl filhery here, from whence the King of Persia, draws a Vast Revenue yearly, as may be gathered from thence, that after this Itland, was fallen into the hands of one Bardadin; (who succeeded Anthony Kor-rea Mokrin, a Vassal of the King of Ormus) he promifed to pay, a Yearly Tribute of 4/2000 Serafs. Belides this, the Pearl-trade here produces yearly at least 500000 Ducate, incready Money, not to Reckon 100000 Ducats more, which are Shared betwixt the Persian Governour and the other Offi-

cers: For there is a great refort of Merchants to this place, which come hither from 1662. all parts of the World, to buy up Pearls, and to transport them to the Indies, and other places, the best and most precious Pearls in the World, been found near this Island of Baharen, and the Isle of Gionfar or Giolfar which both in bigness; and Roundness, far exceed those found near the other Iflands of Latif, Lasen, Barechator, Zezirafilhar, Mill, Seran, Dfind, Daas, Emergocenon, Arcevi, Screcho, Delmefialmas, Sirbeniaft, Aldane, Festebruntich, Cherizorn, Dibei, Sarba, Agiman, Ras, Emelgovien, Rafagiar, Daoin, Rafaelchimes, Sirkerkor, Kafab, Konzar, Me-Sendenderadi, Lima, Debe, Chorf, Chell, Sarar, Suct, Mestar, Garajat, Teuji, Golaf, Furgatile, Sam, Gameda, Bacha, and Jadi. All which afford Pearls, but they are not exactly found. Near Malkate about 33, or 34 Leagues from Oimus, are likewise very good Pearls to be found.

The Pearl fithery near Baharen begins fometimes in June, but Generally in July, and continues till the End of August. About 200 Barks go abroad together, viz. 100 belonging to the Isle of Baharen, 5 areas lifar and 50 to Nihely; their Rendervous being commonly near Katar, a Sea-fort of Aralia, 6 Leagues South of Baharen. The Pearls taken here, Exceed all the Rest in Goodness, Beauty, and Weight, tho' not in bigness. They Catch them by means of a Stone, which by its weight is let down 12 or 18 Fathom under water. They fell the Pearls by Karats and Abas three of which make one Karat; and by Matikals, or Mitigals, each of which contains 42 Karats. The Small Pearls are fold by Mirigals. Befides this General fishery near Katar, which Continues for two Months, there are feveral other particular Fisheries, near Nihely, Babaren, Julfar, Maskate, Teude, and Rozalgate, in the Perfian Gulph, which, tho' not of fo great Consequence as the first, yet are commonly, greatly beneficial to the owners. As they take up the Oysters, they open them, when the Pearls drop out. It is Generally believed, that these Pearls, are progenerated by the May-dews, during which Month, the Oisters rise up to the Surface of the Waters, and Opening themselves receive a finall quantity of dew, which being Coagulated, afterwards produces these Pearls. Certain it is, that if these Oisters are opened before June, the Pearls are foft and pliable like Pitch. Most of the Inhabitants of the Isle of Balaren; are Arabians, but the Garrison Consists of Persians, under the Command of a Vizier fent thither by the King of Persia. Formerly this Isle was under the Jurisdiction of the Kings of Ormus,

nd in 1602, taken from them by the Portuguees. But when the Perfian Sultan of Xiras had aid Siege to the Portuguese Fortress of Comoon, He made himself Master of Baharen. The King of Perfia alledging, that he had ot taken it from the Portugueles, but from Vaffal of the King of Ormus, vas his Vaffal; to that ever fince 16.2 Perhans have been in Poffetlion f it.

The Isle of Queixome, or Queixume, or Queone, otherwise called Kechmiche, and by he Inhabitants Broke, lies close to the Coninent of Perfia, being separated from it ony by a fmall branch of the Sea: It has aput two Leagues in Circuit, and is three cagues distant from Ormus. Its two chief Places are Arbez and Homeal, where the King of Ormus at the time when Albuquerque first appeared hereabouts, had strong Garri-The other Places of Note are, Lapht, the best Harbours of this Island, Darbaga not fur from the Lapht, Chau, and Sirmion or Sermion. It bears plenty of Corn, but especially Barly, without which, the Inhabitants of Ormus, who are supplied from hence with it for their Horses, could Scarce subfift there. Here is also a most Excellent Spring of Fresh Water; to secure which, the Persians had Erected a Fort hard by, for fear of the Portugueses, who were then as yet Masters of Ormus. If we may believe done Historians, this Island was not Inhabited in Ancient times; partly by reason of the Frequent Earthquakes, that happened -there, partly by reason of the vast Number of Scrpents, and other venomous Creatures, which infected both Air, and some Trees, so, as to render the Island uninhabitable. mong these Trees, is one called Baxama or Baxana, the Fruit of which is fo Poisonous that'the least Tast of it, kills in an Instant; and its Shadow is so pestiferous, that it kills those, who abide there, in less than a quarter of an Hour. The Root of this Tree, is in feveral other parts, esteemed as the greatest Antidote that can be, but here it is Mortal, as are its Leaves, and Fruit called Rebuzit.

The Portugueses in 1622, Conquered this Island from the Perfians; and on the point opposite to Ormus, Erected a Fort, fortified with a Wall, and Surrounded with a broad and deep ditch, but the Wall was very flight being sustained from behind only by some loose Earth. In short it was a Place of no defence; without any Great Cannon, neither in a Condition to bear the weight of them. It had three Ponds within its Precinct, being Chiefly built by the Portugueles, for that Purpose, because the Inhabitants of Ormus, were from thence supplyed with Water. Scarce had the Presignofes finished this Fort, but the Persiant, out of the Country of Lara, 1,60 in 1622, belieged it by Land, as the Emplift did at Sea; The Portuguese Continualitier, Ruy Freira de Andreada, defended himfelt brake ly for fome time, and killed many # ha Perfians, who would have bought it perhaps at a dear Rate, had not the Emplify Threatned to bring their Great Cannon against it; which obliged the Garrison who were not provided with them, to Capitulate, and to Surrender the Fort upon Honourable Conditions, which were not performed on the Enemies fide. There are some others who have given us the following Account of the Occasion of this,

The King of Persia had 1612, taken the Isles of Queixome and Baharen and the Fortrefles of Bandel and Mogostan on the Continent, from the King of Ormus, which he refuling to restore, the King of Portugal sent his express Orders to Ruy Freira, that in case the King of Perfia would not reffore the Isle of Queixome and the Fortress of Bandel, he should declare War against him, and erect a Fort on the Point of the Isle of Queixome. Accordingly Ruy Freira de Andreada, who in the beginning of June 1620, came to Ormus, caused a Fort to be built on the Point of the faid Island, surrounded only with a slender Wall made of Stone and Clay, or Loam; being scarce to be compar'd in strength to fome Private Buildings: The Persians with the affiftance of the English, having creeted a fmall Battery against it, did play upon the Fort with their Cannon, which did strike fuch a Terror into the Garrison, that they refused to stand the brunt any longer, but forced Ruy Freira to capitulate. For Emanchulican Governour of Shiras being just then come with 5000 Men to Bandel or Gamrov, he fent part of his Forces under the Command of *Emanculibey* to the Siege of the Fort <sup>3</sup> of Queixome; Ruy Freire, as I told you, being forced to furrender, had obtained certain conditions from the English, for himself and the Garrison, among which the chiefest was. That the whole Garrison as well Portugueses as Arabians (the last of which were come thither from Zulfa, upon the Coast of Arabia, under the Command of Emir Alikamai Zemur Mahomet, and had done fignal Services by Sallies and otherwife) should be safely conducted to Maskate, a City on the Coast of Arabia, belonging to the Portuguese; but this was but ill perform'd by the Persian General, who before the Portugueses were Embarked, caused all the Arabians to be beheaded, in spite of the Protestations of Ruy Freira, who accused the English with breach of Faith, but these excused themselves, alledging that the Arabian having formerly

not in their Power to present; No more than 20 out of 250 Arabians escaped with life, who were hid by the English Seamen. The Commander in chief of these Adbians, Emir Genedin being brought before the Persian General, was by his Orders stabed in his presence, by Xarial his Son-in-law, and then Governour of Mogostan; but the Portuguese Garrison consisting of 200 Men, were, by the English, instead of conveying them to Maskate, set on Shoar in the Isle of Ormus, from whence they got safe into the Portuguese Castle.

of The Isle of Jarck is Situate three Leagues from the Coasts of Arabia, to the South of the Isle of Ormus, and to the East of the Isle of Kechmiche. It is destitute of Inhabitants, and very small in Compass, the Dutch who reside on the behalf of the East-India Company at Gamron, have planted there only a Garden near a Certain Pond, whither the Wild Boars and Staggs, which are here in great Numbers, come to drink; They also keep here, some Tame Fowl for their Recreation. It is now time we should leave Gamron and Ormus, and proceed on our

Voyage. After we had taken in our Lading at Gamron; we set Sail from thence the 2d, of June, and with a favourable Gale, passed along the Coast of Malabar, towards the Isle of Ceylon; for before you come to the coastof Coromandel, you are obliged to fail Round all that vast tract of Land. I had Letters e by me, for the Governour of Punte Gale, o a City of Ceylon, which I delivered to a Certain Master of a Small Vessel; without going ashoar my self. After we had provided our felves with Fresh water here, that the Rendezvouz of the Dutch Ships, was appointed to be at Punto Pedro, where Mr. Rijklof van Goens Commanded a Body of Troops, in order to Besiege the City of St. Thomas: whither we also directed our Course. But whilft the Great Train of Artillery was Embarking, and the Troops ready to go on Board for this Expedition, we received Intelligence, that the Portugueses had fold the City of St. Thomas to the Jentyves or Pagans; which made us also alter our Measures; and I went to Jafenepatnam, to dispatch my

Business.

The City of St. Thomas is situate under 12 or 13 deg. 30 min. of Northern Latitude, 26 German Miles from Negaparnam, one and a half off the River Ganges near Cape Komorijn; and a days Journey, or five German Miles to the South of Paliakatte, on the Coast of Coromandel, close to the Seasthoar. The City of St. Thomas was otherwise called Kalamina, and by the Na-Vol. II.

tives Meliapor, which Nather the 10 to sue is changed into that of St. Thomas in honour 1 of that Apollle, which Natie is reains' to this day, not only among the Chithans, but also the Turks, and Indians. Meliapor Signifies in their Language, as much as a Peacock, intimating, that as this Bird is the most Beautifull of all others, so, this City did in Beauty excell all the rest of the East. Some will have the City of St. Thomas, or Meliapor, to be the fame called Mapura by Prolemy? This City was quite desolate, when the Portugueses first came there, who Rebuilt it in 1545. Since which time it has Encreased to that Degree, that not many Years after, she was Accounted one of the finest Cities in all the Indies: Both in respect of the Magnificence of its Building; and the Number of Rich Inhabitants. . It is Fortified with Stone-wall, strengthned by several Bastions; and had under its Juridiction above 300 Villages and Towns. It is one of the Richest Sea Port of all the East-Indies, its situation being in the midst of all the best Harbours of those Parts; which renders it the more Convenient, for the East-India trade. Whilft this place was in the Hands of the Portuguefes; was at first, Incorporated with the Diocess of the Bishop of Cochin, but afterwards erected into a Bishopdom, under the Juridiction of the Archbishop of Goa. They had a Church here, Dedicated to St. Francis, belonging to the Capuchins, and two others, one dedicated to St. John, the other to the Virgin Mary. Where the Mahometans, and Pagans were Instructed, and Baptized. In the Suburbs, was the Church of St. Lucy, and in the City, the Monastery of Charity and Lazarus, besides three others. The Jesuits, of whom there was a Confiderable Number here; had a Goodly College within the City, wherein the Children of the Portuguefes, and of the Chief Malabars, were Instructed in the Fundamentals of the Christian Religion. Next to this College, was a very large Parish, Inhabited by Christians, fuch as were by the Jesuits Converted from Paganism and Mahometanism, of which 120 where Baptized in 1604. Here you see also, the Famous Church of St. Thomas, this Apostle as the Portugueses pretend being Burled here; His Sepulchre is shown to this Day on the top of a Mountain, near a City, over which they have Built a a finall Chappel, which may be discovered at some distance at Sea. Close to this College, upon a pretty high Hill is a Chappel; which as they fay, was St. Thomas's usual Sleeping place. The Jesuits St. Thoto flew their Reverence to this place, mas's have Adorned that part of the Chap-Chappel.

Rir

pick

xel while St. There used to say his Prayers, with the Iron steps.

Here you fee alk Stone Cross, which se, that in the Apoliles they Gy time did .... Heaven; for which reafon they have covered it with an Arch, as they have done with the adjacent Spring, which arising from a Rock, is covered by another Arch resting upon four Columbs. The whole Chappel is likewife adorned with many Ornaments, and the Wood of the Chappel being look'd upon as a precious Relick; is frequently fet in Gold, and carried away by the Devout Pilgrims.

We continued our Course along the Coast till we came to Negaparnam, where we were to unload part of our Cargo.

ſ

Negapa

tan.

Negapatan or Negapatham is composed of Naga, which in the Malabar Tongue fignifies a Serpent, and Patnam or Patan a City; because round about this place used to be feen a certain kind of very venomous Serpents, call'd Cobros Capellos; i. e. Head Serpents. It is Situate under the 9 deg. 45 min. and the Adjacent Cape under 11 deg. of Northern Latitude; beyond the Rocks of Romanankir, overagainst the Isle of Manar, just opposite to Tripalikorin, three Leagues from the City of Tranguabar, and about 39 Leagues from the Cape Comorin, at the beginning of the Coast of Bisnagar and Coro-mandel. This City as well as its Castle call'd Ragu, acknowledge the Portuguese for its founders; the Caltle being built for their better fecurity against the attempts of the Naik or Neyk, Lord of the Circumpacent Country. They had feveral goodly Churches here, and a very fine Monastery belonging to the Franciscans, which was maintain'd at the Charge of the chiefest of the Inhabitants. There are to this day remaining divers fine Churches and other large Structures, with spacious Appartments, and Galleries according to the Portuguese Fashion. Next to the Pefuits College flood the Church of Tranguabar. The City is pretty well Fortified with defensible Towers; surrounded with a good Most: It is very Populous in proportion to its bigness, but most of the Inhabitants are of a tawny Complexion; being generally either Mestices, i. e. such as are born of a Portuguese Father, and a she Blackamore; or Kastices, i. e. such as their Fathers were Blackamores, and their Mothers Portuguese Women. It is also inhabited by Banyans and Mahometans, who are the chiefest Traders

This City was the 23d of July 1658, furrendered to the Dutch by Composition. For Mr. John vander Laen then Commander in chief of the Dutch Forces in those Parts, did, pursuant to his Orders from Mr. Rijklof

Van Goras, Admiral General of the Dusch-Fleet, of the from Zarischusen in the Ille of Colon, in Like the 19th of June, to Punco Pedro, what he cast Anchor in the Tunto and found the Yachts Working, the naors far, Nationar, Waterpalis, Narlapour, the liot the Amfieldam, and the Chaloop 344 ready to join him; but the Pidgeon Yacht was run aground, and the Workum was fain to stay behind, having lost three of her Anchors. He took care to provide the Fleet immediately with as much Meat and other Refreshments as the Place would afford; and on the 20th, was likewise join'd by the Yachts the Goes, the Pidgeon, and the Workum, Next day Mr. Lucas vander Duffen took a Review of the Land Forces, which confifted of 500 Men, divided into 11 Companies, besides the Sea men. Mr. Vander Laen having fummon'd all the Captains aboard the Admiral's Ship, where he gave them the neceffary directions, how every one should behave himself in his Post, at their arrival be-

fore Negapatan.

The 21st of July, the Fleet set fail from The Dutch Punto Pedro, and arrived the 22d early in the come be-Morning in the Road before the City of Ne fore No. gapatan, where he met with the Yachts the gapatan, Pipelen, the Naisepour and a Danish Chaloop. Mr. Vander Laen ordered to fet up the White Flag in the Yacht Vander Goes, and fent Mr. Lucas vander Dussen, with three Captains and are hit expreter in a Chaloop, and Cre-summon dential Letters to Cafe . Alfonso de Karvalho the City. the Portuguese Governour of Negapatan and his Council, to summon the faid City to a furrender upon honourable Conditions. About Noon Mr. Vander Duffen return'd, and gave an Account to the Admiral, that the Portuguese Governour and his Council, refuted to admit any of the Company, except himfelf and the Interpreter; that he was very civilly received, and admitted to appear before the Council, where he had made use of all the Arguments he thought might induce them to furrender, defiring that they would fend aboard the Admiral their Plenipotentiaries to treat about the Conditions. They defired time till the next Morning to confider of the Matter, and that the Admiral would be pleased to send another Chaloop to Morrow, because the Jensyves or Natives did stop the Passage of their Boats at the Mouth of the River. Accordingly the 23d Mr. Vander Duffen with two Enfigns returned to Negapatan in the same Chaloop with a white Flag, and brought back from thence Manuel Karvalho a Jesuit, Lewis de Quintal Parsire, and Diego Berifero two Captains, and Antonio. d Almeyde a Lieutenant, instructed with Credentials and full Power from the Portuguese Governour, to treat about the surrender of

Surrendered to the Dutch.

the City to the Dutch East-India Company upon Reasonable Terms. The Conditions proposed by them were these: That a Church Fortus should be allowed to such Portuguess as were sess withing to remain there, with all many to hatights as were requisite.

(.) That the Inhabitants should have liberty to retire to Bengale; and that they might carry along with them all what belong'd to

the Poor.

After some Contests on both sides, it was agreed to surrender the Place upon these solutions.

ds. Towing Conditions.

ditions That the City of Nogapatan belonging to ed up-his Portuguese Majesty, should be surrendered etwist on Wednesday the 24th of July, to the Dutch and East-India Company, with all its Territories, Connon, Ammunition or Arms, as likewise the Keys of the Magazines and other Store-Houses thereunto belonging.

That Immediately as many Soldiers of the East-India Company shall be admitted into the City, as shall be thought requisite by them and the Portuguese Governour, for their mutual Security; and all Merchandices or what essentially belong to the Crown of Portugal, shall at the same time be delivered with-

out the least fraud.

The Portuguese Garrison now in the City shall Marth out with beat of Drum, Matches lighted and Bullets in their Mouths, to a certain Place to be appointed by the Dutch Admiral Mr. Vander Laen, where they shall be disarmed, except that the Officers even to the Ensigns shall have liberty to retain their Swords.

All the Inhabitants whether Clergy or Laymen, Married or Unmarried, shall be left in the free Possession of all their Goods, except their Arms, as well moveable as unmoveable, Hopses, Gold, Silver, Merchandices, Slaves

oth Sexes, till the last day of Ottober, of fame Year; against which time they shall provided with convenient Shipping, at the rge of the Dutch East-India Company, in er to carry them to Goa, or further to the North, if they please.

The Clergy-men shall then be at liberty to carry along with them all the Church Ornaments, or what else belong d to the exercise of the Divine Worship, except the Bells, 'as likewise all the moveable Goods belong-

ing to them.

The Lay-men, Soldiers and Merchants, ing when the Inhabitants were to be difarm'd may, without the least exception, Transport all their Moveables, Money, Gold, Silver, to go along with him, which he courteously Jewels, Slaves of both Sexes, and all their Merchandices, provided the same don't belong to the King of Portugal.

. The day of their departure being come, the Paraguefer shall have their Swords restor-

ed to them.

Caspar Alfonso de Karvalho t Governour, shall be Transported to what place he shall think fit.

Accordingly the 24th about Noon, seven Companies of Dutch Soldiers, one of Bandanses, and one of Laskaryns under the Modlier of Negombo took possession of the Cottes of the City, at which time the Poruguesis drew off from the Bastions, and Proclamation was made immediately, not to Molest, much less Robb the Inhabitants, un-

der pain of Death.

Mr. Vander Laen himself, was received by The the Portuguese Governour, who was not very sale well at that time; at the entrance of one of selfithe Gates, where he had the Keys of all the the City Gates deliver'd to him: From thence he went to take a view of the Bastions, and after having given the necessary Orders, he commanded the Inhabitants to appear the same Asternoon in the Court of the Stadibouse, in order to be disarm'd, pursuant to the last agreement. They were no more than 670 strong, divided into 17 Companies, consisting of Portugueses, Mestices and Topasses, being all Inhabitants, not in the King of Portugues Pay. Their Artillery consisted in 28 Brass, and 53 Iron Pietes of Cannon, small and great; their Ammunition in 8000 pounds of Gunpowder, Lead, and other things of this Nature in proportion; besides which, there were ten large, and eight small Bells in the Town.

Much about the same time the Dutch appeared before the City, the Kapado Nagape, or General of the Neyk, or Lord of the Country came to lay siege to it, but understanding that the Dutch were got into possession of it, he defired to be admitted into the City to conferr with them, concerning the fudden furrender of it. His request being granted, he took a great deal of Pains to perswade the Durch, that both the City, and all the Portugueses ought immediately to be delivered to the Neyk his Master, to make satisfaction for what they stood indebted to him; but this request was civilly refused by Mr. Vunder, Laen, who told him that he was very ready to cultivate a good Understanding with the Nexk and his Subjects, but that both in point of Conscience, as he was a Christian, and in honour he could not recede from the Articles of the furrender; By this time the hour approaching when the Inhabitants were to be difarm'd at the Stadt-house, he invited the Kapado accepted of: The Inhabitants earnestly intreated Mr. Vander Laen to permit them to be Transported to Bengale instead of Goa, unto whom he gave for Answer, That he would intercede for them in Writing with the Durch The 15th. Admiral General vander Geens. Publication 1

نزا

rublication was made by beat of Drum, that
every one without any exception of Persons
or Quality, should deliver forthwith all his
Arms at the Stadt-house, unless they would
be excluded from the Benefit of the Capitulation; which was punctually personned the
next day, which was spent altogether in re-

ceiving their Arms. In the mean while the Neyk's Army had so inclosed the City, that we began to have fome scarcity of Provisions; and the Dutch living at Tranguabar, a Danish Colony, began to be forely afraid of being attack'd by Wardaraje Purmal, who, as it was given out, was fent for, from the Country of Tanjaor by the Nerk to chastise those of Tranguabar; the Governour of which, Esbeck Anderson, had promised to cruise before the Bar of Negapatan, with three stout Yachts well man'd; instead of which he had fent only one small Chaloop; so that the Inhabitants fearing the worst, fled daily with their best Moveables into the Fort of Danesburgh. The 17th the Kapado Nagapa fent by the Neyk with an Ola or Letter from Maniegul appear'd in the City of Negapatan, where he delivered the following Letter to Mr. John vander Laen.

## A Letter from the Neyk, to Mr. vander Laen.

THe 16th day of the Year Welenby. I Affy Para Neyk fend to the Dutch Commander Moor this Letter; by which I would have them to understand, that the Portuguese Inhabitants of Negapatan have for these 12 Years last past, not payed their usual Taxes, but are run much behind. It is for this Reason, I Sent my Army to Attack them in the City of Negapetan, to demelift its Fortifications, and after the Inhabitants were reduced under my Obedience to grant them liberty to live as before, under my jurisdiction; having always lived in a good correspondence with the Dutch East-India Company, I defired their affiftance by Sea; but now I am credibly inform'd, that you have made an Agreement with the Portugueses of Negapatan, who have delivered the City into your Hands; which is very displeasing to us; If you had a mind to maintain a good understanding with us, you ought first to have given us notice of it, and obtained our confent; but now you must surrender the City to us; therefore Send one of your Deputies to Treat with me, and be . Shall be honourably received, and receive all the fatisfaction that may tend to the maintaining a further good Correspondence betwixt us. If you do otherwife, you will have occasion to repent it; but as I know you to be Persons of Wisdom I don't question but you will surrender the City to our People; in Witness of which I have fent our Kapado Nagapa with this Letter.

Unto which Mr. Vander Laen fent shu Answer.

## Ilr. vander Laen's Answer.

HE Ola or Letter delivered to us by work Highnesses Envoy Nagapa, I received with all imaginable respect, under the discharge of three pieces of Ordnance; out of which, having fully understood your Highnesses intentions, I am obliged to tell your Highness, That the Portuguese having surrendered to us the strong City of Negapatan without making the least Opposition, and under certain conditions, agreed on betwixt both Parties; we are bound by our Duty as Christians, to observe Punctually in all respects the faid Articles; it being unquestionable that without any injustice to your Highness, we have power to annoy the Portugueles, our Enemies, wherever we can meet with them; which makes us live in hopes that the friendship establish'd betwixt your Highness and the East-India Company will not Suffer the least detriment upon this Account. What has the undertakings of the faid Company not long ago against the Portugueses, in the Country of the Neyk of Madura and in other neighbouring Countries, and Kingdoms, which were never interpresed to their prejudice, makes us believe that your Highness will not be displeased with the advantages obtained by us against the Portugueses, which as they tend to no other end than to increase our Trade in your Highnesses Dominions, so they must in time turn to your own Advantage. In the mean while we have Communicated your Highnesses Sentiments, by two several Yachts fent for that purpose, to the Directors of Jafenepatan, from whence we hourly expett an Anfwer, which we don't question will be to your Highnesses Satisfaction.

In the mean while Kamerapanijk the adviser of this Siege was faln in disgrace win't the Neyk.

The 30th Mr. Vander Laen received Let ters from Rijklof Goens, dated the 29th, with the Ratification of the Capitulation, with Orders to fend the Portugueses to the number of 150, according to their Request to Bengale, where they were likely to do them the least mischief, and they might soonest rid their hands of them. As to what concerned the difference with the Neyk, he advised to endeavour to compose the Matter by the means of some Presents; but if that would not fucceed, to make his Forces to retire deeper into the Country; in the mean time to give all the Courteous Entertainment to his Deputies, and to affure them, that he intended in a few days to be with them in Person, to adjust all matters in question betwixt them and his Highness; but, if he committed any Hostilities against the City,

to frend upon the Defensive, and to pro-2. test in writing against his proceedings. In the mean, while the Neyk's Forces continued - in their Camp, which extended to the very Ditch of the City; and as it encreased laily in Number, fo it occasion'd great searcity within. The first of August, Mr. Vander Laen was inform'd that the Commander in chief of the Neyk's Forces before Negapatan had received a Letter from the Neyk, directed to Mr. Van Goens, and in the afterthree Persons were sent into the City, to give Notice of the faid Letter and fome prefents, which they defir'd might be received with all imaginable Demonstrations of respect. In compliance with which Mr. Vander Laen commanded immediately Captain Walh with his Company, and the Modlier of Negombo with his Laskarins, to post themselves in good Order without the Gatas of the City, in Order to receive the Pre-fents with all imaginable Respect, under the discharge of three pieces of Cannon. They kept their Post till Evening, without seeing any Body, when a certain Person belonging to the Neyk's Camp came privately to the Modlier, and told him in the Singalefe Language (for fear of being underitood by others) that there was no Ola or Letter; nor any presents sent from the Nesk, the whole being only a Stratagem contriv'd on purpole to draw some of our Forces without the Gates into an Ambush; which they had been disappointed in, by our Forces not fliring from the Gates, upon which the M diler and Captain Wash return'd with dieir Troops into the City, and the Work's Forces retird back into the Country. This Work Befreg'd Negapatan a fecond time, 1660. in September; but the truch Garrison making a vigorous Sally, which they kill'd 400 of his Men, they came to a Composition for that time, notwithttanding which, he appear'd before it gain in the next following Year.

The Country hereabouts bears fuch great plent of Rice, that abundance of it is Transported from hence to other Places. But they have great Numbers of Lewd

Women and Idle Fellows here.

Not far from the City is a Pagode, with which reaches to the very Clouds; the In-· habitants believe that it was built by the Devil, and that in one Night. In the Subjects to the North, which are of Mag- Season, when the Merchandices may be unnificent Houses, there are likewise many Pagode's or Pagan Temples, wherein you fee many Idols of a terrible afpect, made only of Clay. Thus far-concerning Negapatan.

From hence we purfu'd our Voyage towards Palisherens and faw she lofty and

most ancient Pagode call'd Tyripopeliri which stands within the precinct of a Fort little Distance from the Sca-shoar, and of which I had the Curiofity to take a full View. It is an antient Structure, the front The Temple of which is adorn'd with many Statues Ar- of Tyritificially cut in Stone. It is surrounded by popeliria Wall with a Gallery on the top of it, over which are placed a great Number of large Coffins, which reft upon Statues of divers Figures, some representing a Horse, others fomewhat elfe. The Walls are made of large blue Stones, which are brought thither a vast way, out of the Country, and most Artificially join'd together. The Indian Pagodes or Temples, seldom have any Light but what comes through a hole in the Frontispice; notwithstanding which, I ventur'd in, and found several Lamps burning there, by the Light of which I ascended by a pair of Stairs of Wood, to the top of the Temple, from thence to take a view of the circumjacent Country. But scarce was I come to the Stairs-head, when I faw my felf in an instant surrounded by thousands of Batts, that were striving to get out thro' the hole in the Frontispice, so that I was glad to get away from this unwelcome Company, which to avoid the brightness of the Sun-beams, shelter the office by day in thefe dark lurking Holes.

We foon fet Sail again, and Coasted it along the Shoar, which is flat and fandy here, till the 15th of June, when we arrived at They come Paliakatte, where I delivered our whole to Palia-Cargo of Gold and Silver we had taken katte. in, in Persia, to the Director Lawrence

The Dutch East-India Company has a The Fort of strong Fort here, with four Bastions of Geldria. Stone Work, call'd Geldrin, of which they have been possessed ever since the Year 1619. without the Castle is a Plantation or Town, which to the Land fide is defended by an Earthen Wall, which is but indifferently kept, but the Houses within are very close and well built. It is Inhabited partly by Hollanders, partly by Jentives or Pagan Natives; the lait of which live for the most part upon Trade with Painted and White Callieo's and Linen. The Rice which grows in this Country in great plenty, is as well as all other forts of Grains brought Weekly to Market here. The Fort is on one fide wash'd by a River, which swells very high in the Rainy loaden here, by the help of Lighters. But in the Summer Season the River being quite dry'd up; the goods are forc'd to be carried a Shoar on their Backs. This River abounds in Fish in the Winterstime, most of which die in the Summer; schich makes the Inhas

SIT

histories catch them before that time, and dry them in the Sun, and so Transport them to other places. The North Monfon begins here in Offaber, and holds all the November and Decomber, with such violence, that the Ships can scarce ride in the Road. In January the Monfon changes, and the fair Season returns.

As to the City of Paliakatte; its Inhabicants are for the most part Mestices and Kaflices; Mestices are such, whose Parents were Married with Foreigners; as for Instance, when a Hollander Marries an Indian Woman, or an Indian Man a Dutch Woman; but the Children of the Meftices are call'd Kaftices. Thus many of the Natives, especially of the Thioles have Married Dutch Women, as on the other hand, several Hallanders are Married to Women of the Thioles; from whence is come a numerous off-fpring of Mestices and Kastices. Many Bramans, Banyans and Panekayers or Thomists and Jews live here; of great Traffick; for every Month comes hither the Kaffila or Caravan of Agra, The Banyans and Jews are the chiefest of all the Traders here, this City being a place Golconda, Suratte and Cambaia by Land; both Christians and Mahomerans bring to this place their Merchandices from the Red-Sea, the Persian-Gulph, from Suratte, Goa, Malatiar, Sumarra and Malacca. There is great plenty of Fish at Paliakatte and a Neighbouring Country furnishes them with all other forts of Provisions.

After we had dispatch'd our Business here, · we purfued our Voyage towards the great City of Masulipatnam, where we were to load Wood and other Materials for the Building of our Fort at Paliakatte. We for fail the 20th of July, and came to an Anchor before Majulipatnam the 22d, I went a Shoar the same Evening to take care of our Loading, which conlisted for the most part in Timber and other Materials for Building, belides some Callicoes, which took us up till the 14th of August, when we were ready to fet fail again. In the mean while I had sufficient lessure to take a full view of the City of Majuliparnam. It lies near the Sea Shoar upon a Branch of the great River Kilna, a few Leagues from Nogenaparam, being furrounded on all fides with Water. It is closely Built and well Peopled, it being the only place of Traffick in Callinoes, Indigo, Dismonds, and other precious Stones, in the Kingdom of Goloonda. To the Land fide, North West of the City, is a standing Pool, over which is built a Bridge of 2000 Paces long, in the midit of which stands a House, for the conveniency of the Pallengers, to repole

Shells of (12 or 14 Feet long, without any leanings on either fide. Most of the lithe- 166; bitants are Pagans and Merchants. The S Persian Mahometans have here likewife a Mosqy! Built of white Stone, after a very antick Falhion, in the very Center of the City. The Houses are all of Wood covir'd with Pan-tiles, the King having expressly forbid the Building of Stone Houles, for fear of encouraging his Subjects to Revolt; who, tho' Pagans, wear white Callico Vests, and Turbants like the Moors. They use Rice instead of Bread, and drink commonly Water; they have also great plenty of all lorts of Fishes, Ducks, Geese, and Tame and Wild Fowl. Both the Dutch and English East-India Company's have each a House here, with their respective Flags on the top of them. The Franciscans, who are all Portugueses have here a Monastery; overagainst the City, on the Continent, is a Village, where the Governour has a Country Scat, where he Diverts himfelf fometimes.

The River of Kifna arises very deep in The River the Country, and exonerates it felf with Kima one Branch about five Leagues below the City of Masulipatnam into the Sea, where it is but shallow; but the other turns to Masuliparnam, which is much deeper. This River is not joyn'd to the City by a Bridge, but they pais it in Boats; It has plenty of Fishes, as likewise Crocodiles, it swells sometimes to fuch a heighth, during the Rainy Season, that you may pess in Boats through the Streets of the City; but in the Summer Season it is so shallow, that near the City it is scarce four Feet deep. About half a League to the West is a Champaign Country; and on the East side the Country is Planted with Palm and Syry Trees, behind which you may discern the tops of the Mountains. We left Masulipatnam, and the 29th return'd to Paliakatte; where meeting with several forts of Commodities, that were wanting at Batavia, I made all the hast I could to have the Ship Loaded; but when we were almost ready to depart, the Yacht call'd the Parrokes arrived in the Road, with Advice, that the Ships the House of Zwieten, the Sea Horse, the Exchange, the Stadthouse of Amsteldam, the Rising Sun, and the Enerosing Moon were at Sea, being sent from Holland with Men and all forts of Ammunition to salist in the Expedition against the Coast of Malabar. This foon made us Alter our Meafures, every one having received Orders to join the faid Floet, so that after we had unladen our Ships, we fet Sail the roth of September for Colombo, the general Randevous of our Fleet. We Ropt themselves there. This Bridge refit upon at Padro Passo, where having provided our very chick Bess, which are covered with selfs Water and Fuel, we came

o an Anchor the 7th of Oltober before he rest to take the great Train of Artillery aboard of us. The Commodore Roodbacs in the mean while went out before the rest with feven Ships only, ordering the rest to follow him to Manepara, one of the seven Sea Port Villages on the Coast of Madure, where all our Ships were to meet, which we did accordingly on the 15th of November. Mr. John wander Weif, Mr. Symonson and my felf were made not only Supervisors, but alfo Treasurers of the whole Train of Artillery: Being provided with every thing requilite for such an expedition, we set sail from thence, and came with the whole Fleet the 7th of December to an Anchor, about two Leagues to the South of the City of Kolung or Kalang. The remaining part of the day was ipent in landing our Soldiers and other necessaries, and bringing the Ships as close as possible could be to the Shoar. The 8th we March'd in Battle Array into the Country, and the Negros had thrown up a fmall redoubt, within half a League from the City, from whence they Fir'd thick upon our Yachts, but without any great loss, yet they ply'd us so warmly near the Shoar, that we were forced to cut our way throw the Woods, to attack them from behind. Immediately all our Carpenters were fet to Work, to cut down the Bushes and Trees, whilst the Seamen were employed in leveling the Grounds, to make way for our Artillery. After we were advanced a little way into the Wood, we came into a small plain, to the left of which leading to the Sea fide we faw a Stone House, where we halted a little to take Breath, because the Seamen had been hard put to it, in drawing the Cannon through the deep Sand, along the Sea fide. The Enemy at the same time kept within his Strong hold, but as we advanced further they charged our Vanguard, who were order'd to break in upon them, they bravely itood the first brunt, but afterwards retreated again to their Fort. In the mean time our Cannon having join'd us, we prepar'd for a general Attack, which was carried on fo vigorously, that the Negros defected the Fort, in hopes of faving themselves by Flight, but were most of them either kill'd upon the spot or in the Flight. A flrong pufty of them happen'd accidentally to fall with Captain Polmans Company of Firelocks, who were fent thro' the Woods to attack the Fort from behind; Here you might have feen them right like desperate Men, the Engagement was very terrible confidering the Number of Men on both fides; at last they were overcome with 100 Kill'd and as many Wounded on

their fide; we had no more than three but a great many Wounded, who fent aboard the Ships to be taken care. We found two Iron pieces of Cannon this Fort, which we Nail'd up, and beat th Carriages in Pieces: After we had places Guards in all convenient Posts thereabour the Souldiers reposed themselves under the shadow of Trees; but within two hours after, we continued our March to the Ciry of Kelang, passing all the way by a great many fine Plantations, surrounded on all fides with Walls; the Road betwist them being very narrow. As we advanc'd to the City, the Enemy fired briskly upon us front a finall Fort near the Water lide, where the had set up the Portugues Standard, but perceiving us notwithstanding this to Many undaunted towards the Walls, their Heat began to fail, and betaking themselves Flight, left the City to our Mercy, which we took without the least Resistance. A to their respective Qualities had their Qualities and Posts assigned to the Posts as a post as next day, but every one being animas by the last success in taking so considerable a City without opposition, long'd for ACL on, so that before the Morning the whole Body being put in Battle Array, without the Water Gate, the chief Minister of the Camp, Mr. Baldeus, made a short but very fere vent Speech, and the Commanders exhorted them to Fight courageously, for the honour of their Country and Religion; which being joyfully accepted by the Soldiers, who promiled to hazard all for the Service of the Company, the Drums and Trumpets began to found the March. Mr. Tsbrand Goskeled Commanded the Van, and Commodore Roodhaes the Reer, being both Persons of known bravery; Mr. Riiklof wan Goens, Commanded the main Battle; we carried fome Field Pieces along with us, to serve us upon occasion. We were forced to March through narrow Ways, where scarce four couldmarch a Breaft, and finding that the Enemy gall'd us from an adjacent finall Fort, forme Companies wheel'd to the right and the rest to the left, whilst the Seamen aundmintedly approach'd with their Scaling Ladders, and mounting the Walls, took the Fort with little refutance. We found here no more than two iron pieces of Cannon ready Chari-ged; notwithitanding all this they Skirmith'd briskly with our foremost Troops as they were advancing beyond the Fort, but give way by degrees, and retreated to the Royal Palace, where they made another halt and engaged our Treope a fecond time; but with no better success; for being once seiz'd with a Panick feery they foot gave Ground, and left the

Place to our Mercy, which we Plunder'd 6 62. and Destroy'd. They had however in the mean while attack'd our Reer sever il imes, because our heavy Cannon could not come up foon enough with us, by reason of the narrowness of the Way; the Enemy making use of this Advantage, attack'd us very furioully, but were bravely repuls'd by the help of c or Field Pieces, which being charged with finall Shot, were discharged among them, with fuch Success, that many of them remained dead upon the spot; and by this means we kept them to long in play, till we received a teafonable reinforcement, when they be. took themselves to their Heels, and left us absolute Masters of the Field. In the mean while our Troops were advanced to the River, where they made themselves Masters of another Fort, in which they found 2 Brass and 10 Iron Pieces of Cannon. In a certain Pagode next to the Royal Palace, call'd Matta del Reyne, we found a great Cheft with Gun-Powder, which being fet on Fire, in an instant blew up and destroy'd this ancient Structure, covered on the rop with Brass. Then our Troops beat the Country, both to the right and left, burning and destroying all they met with. In an instant we saw whole Woods in a Flame, the Bambo canes making a most terrible Noise, and burning like Brimstone; a miserable spectacle to the Enemy, who from the other fide of the River faw the Flame confume in an inflant, what had cost them many Years Labour. John Piccard my Nephew, a Captain Lieurenant, and William van Teylingen were fent with some Chaloops up the River Arwick, to purfue the flying Enemy on that fide; but these took another way; most of them wading throw the River, where they could not come near them with their Chaloops. Mr. Piccard then Landed his Company on the other fide, where he fet 40 Houses on Fire, which occasion'd a fresh Consternation among the flying Enemy. After we had thus ravaged the Country, we return'd to the beforemention'd Pazode, where our Troops reposed theraselves for a while, and the same Evening return'd Conquerors to the City of Koulang. The 12th, all the Ship Carpenters were fent for a Shoar, to cut down the Trees, that flood upon the City Walls, and Orders were given for breaking down part of it, and to bring it into a narrower Compass, which was put in Execution immediately. About the same time the Navi tives fent time Deputies to fue for Peace; The 24th the Garrison of the conquered by what we were informed, that at the time. City of Koulang confishing of 663 Men. of ottr-Arrival, there were not above 30 both Soldiers and Mariners, under the Comtrue born-Portugueses in the City, who fied mand of Captain Cox, and Horry Walling, inintediately, and that the Negroes, who were being provided with all necessaries, during near 8000 strong. having had some notice! our intended stays before Crasquands, My Vand

of our Design near 15 days before, had refolved to kill all the Hollanders they met, 166 with, except a few, whom they intended to Cruci 4 preserve to send them aboard their Gallies; fign of But the Scene was alter'd; In the mean while Negro we continued with breaking down and removing, which had almost proved fatal to the Ship the Sea-horse, which happened to take Fire, and was in great danger of being burnt by the violence of the Flame, had not the Sca-men quenched the Fire.

By this time it being refolv'd to profecute the career of our Victories, the Commodore Roodhaes with eight Ships, fail'd towards the City of Cranganor to block up the Entrance of that River; the rest being to follow with all convenient speed. The 10th I went on board the Commissary ames Borchorst, with whom I had some carnest Bufiness, but scarce was I come thither, but on a fudden there arose such a Tempest, that with much ado I could get a Shoar again; for the Wind arose first from the Land fide, with most violent Rains, but foon after chop'd about, with fuch violence, that it tore Roots of Trees out of the Ground, and untiled abundance of Houses. By this fudden change of the Wind, our whole Fleet confishing of thirty Ships great and fmall were in no fmall danger of being Shipwrack'd. The Ship the Stadthouse was driven among the Rocks, where having lost her Rudder she gave the Signal of being in utmost distress, but no Body durst venture to bring her off. The Ship the Achilles was likewise forced from her Anchors among the Rocks, but by good Fortune happened to call Anchor again, not far from the Stadthouse. The Ship the Enasmus was also got a drift and was in great danger of running upon the Shelves; feveral of our fmall Craft were beaten to pieces by the Sea, and many others much endamaged. The Ship the Stadthouse continu'd in great Distress all that day and night, striking several times against the Rocks, but next Morning, the fury of the Tempelt being fornewhat appear'd, we fent out forne Boats to her Assistance, which brought both her and the ... Achilles fafe from among the Rocks, into the open Sea. So that at last, through God's Mercy all our great Ships escap'd the danger of this Storm without any confidenceble damage except what was in their Ri ging, which however fell most upon the imaller Volleds.

Goens fet Sail the same day with the Ships the Walnut-Tree and the Vlieland towards Cranganor, Commodore Goisk- being to follow with the rest; we were in the mean while busie with refitting the Ship the Stadtboule, and I stay'd a Shoar with Mr. Gorske till fuch time that the Gun-powder, of the Stadthouse and several other Ships, which had got wet in the last Storm, could e dry'd again; about the fame time we vere inform'd, that the Negros had receiv'd a good Summ of Money, to Fight against us, nut when they perceived we wear in carieft, they left the Portugueses in the burch, gho as we told you before, left the City of Qulang the fame Afternoon, when we Laned. The 29th we fet Sail in the Ship the Exchange to follow the Fleet; by an Express ent us from some of the Malabars, we were lefired to flay till the next day, which we efus'd, it being not our Bufiness to tarry ere for Matters which might well be deferr'd ill another time. The next following day ve pass'd by Kalkeulang, the Governour of which came aboard of us, with a prefent of resh Provisions, which we accepted. The 11th we Coasted it along the Shar, where ve taft our Anchor, because one of our fachts approach'd to near to the Shoar, hat we feared the would run her felf into langer, which made us detach 20 Soldiers n a Boat, to her relief if occasion should equire. The 1st of January 1662. by reak of day, we found our felves within a League of the City of Cochin, and foon fter Sail'd fo near the Shoar, that we could icar the Centinels Speak. We faw five ships lying in the Road, the foremost of which carried English Colours. The fame lay about Noon we came into the Road, it the entrance of the River Palliport, and he next day having embark'd our Men in loats, and our Ammunition with two Field dicces in another, we landed them without my opposition, except that the Enemy Difharg'd fome of his great Cannon against is, from Cranganor, but without any loss on

We had posted our Forces in three several places, the better to cut off all Correspondenbetwixt the Enemy and the Country. The next following day we brought two uns of Rice, and two brass Guns a Shoar, id foon after our whole Train of Artillery, with all other necessaries requisite for such in Undertaking. For fome time we had tept the place Block'd up both on the Land and River fide, but now we began to ozen our Trenches with fuch fuccess, that in thort time we carried them on under the athon of the City; the Garrison being all while not idle on their fide, but endea-

vouring to hinder our approaching, by their continual Fire out of their Cannon, and Fire-arms, which they did with fuch Dexterity, that they kill'd many of our Men in the Trenches; among the rest a certain Soldier had his Arm and Shoulder shot off at once, notwithstanding which, Mr. Van Goens order'd him to be dress'd, which the Surgeon did accordingly, who told me at the fame time; That fince he must infallible die, he would give him fomething that might ease his Pain; I ask'd the poor Wretch how he did, he answered me without any alteration in his Countenance, Pretty well, I don't find my felf very .!!, tho' he dy'd in a few hours after. Fourteen days after we had carried our Trenches to the Body of the place, during which we had feveral fmart Skirmishes with the Enemy, it was resolv'd to venture a general Affault; pursuant to this Resolution I was sent with two Servants to confer with Commodore Gotske and Mr. Confulta-Roodbars concerning the most convenient tion about place, the Affault was to be made in. I was the Affaults formetimes to Wade up to the middle in Water, and met with Captain Lieutenant Piccard, who had the advanced Guards. He forewarn'd me, not to approach too near the City, from whence they fir'd without intermittion; but I was forc'd to venture at all, being oblig'd to be with the Admiral General again the next Morning. I went close under the Walls of the Place, the Sentinels ask'd me in Portnguese, who was there? I anfwered in the fame Language, a Friend, and fo escap'd the danger. Mr. Gotske and Roodhacs had been before inform'd concerning the Condition of the Place, by a certain Negro, and where it might be most conveniently Affaulted, of which they have given me a circumstantial Account, I return'd forthwith, and was with the Admiral by next Morning, who thereupon refolv'd to Affault the City, and as he left me faid, To Morrow the City shall be ours. So soon as every thing was prepar'd for the intended Affault, I went on board the Fleet, to keep a watchful Eye over the Ships, which were of the utmost consequence to us all.

In the mean time our Forces mounted the Breach, and Affaulted the Town with great fury under the favour of the smoak of their Cannon and Fire-arms, which by the Wind was forced towards the City; I saw from a board the Ships the Smoak approach nearer and nearer to the place, which I look'd upon as a good omen on our fide; The Enemies Defended themselves with a great deal of bravery, for a confiderable time, but our Men pushing on the Assault with the uthost Vigour, they were at the last force to give way, and to leave us Masters of the

662. rangaor taken 7 Storm.

Mr. Polman and Shuilenburgh, two of City. our Captains were dangerously Wounded, 80 Common Souldiers were kill'd in the Affault and a great many more Wounded. The loss on the Enemics side was much greater, 200 Postuguefes being fluin during the Action, belides a great Number of Negres who were all thrown into the River, and carried back and forwards feveral times by the Tides, a most terrible Spectacle to behold. For we found the taking of this place to be another piece of Work than that of Koulang, and we were upon the point of founding the retreat, had not the Commanders by their own example animated the Souldiers to do their utmost; it being almost surprising, how with so small a force, we were able to attack and conquer fo ftrong a place as this. After the City was plundred, it was laid level with the Ground, except one Stone Tower, which standing upon the River, was preferv'd entire, and a Garrison put into it, for the security of the River.

Majs Defolase.

A descrip-City.

The Re-#port-

This City of Cranganer (for there is another on of the Coast of Maiabar, nearer to the Sea-floar) lies about four or five Leagues to the North of the City of Cochin; being the capital City of a Kingdom of the same Name, bordering to the North upon Cochin and to the South upon Koulang. It was very famous among the Indians, by reason of its Antiquity; being Situate upon the banks of a River, about a League from the Sca-shoar, defended by a Wall of Earth, and a Stone Breast Work; which had seven Bastions and the Wall of Earth three more. At the Point near the River is remaining to this day a strong stone Tower, for the defence of the River, which served instead of a Bullwork on that fide; on the other Point, was a finall Fort, which Commanded the River, and all Ships going out or in. Several goodly Stone Houses were in this City, and among the rest a Church, excelling all the relt, on the opposite side of the River, towards the fide of Cochin, is the Redoubt call'd Palliport, built for the better defence doubt Pal- of the River; upon a long Island, call'd Baypin extending to the River of Cochin. The Royal Palace is not far from hence, in a very pleafant Country; The King then Reigning being a Prince of great Bravery, and well verted in Military Affairs, in the slower of his Age.

After the taking of Canganor it was concluded by the Majority of Voices to Attack likewife the famous City of Cechin, not questioning but that the fame of our late Victories, would upen as likewise a way to the Conquest of this Place, before the Enemies of this could recollect themselves, from the fear they were in at that inacture. Accordingly we like

camp'd from thence and fat down before Cuchin, our forces as in the last Siege were 466 again posted in three several places, from whence the Attacks were to be carried on Cochin against the City; Mr. Tibrand Gothe had his Post assigned him near the Sea-shoar; Mr. Roodhaes upon the bank of the River: and the Admiral Generals Quarter was be-But the Garrison of Ccobin twixt both. were not so much Frightn'd, as we had Flatter'd our selves, but made a brave Resistance. We did all we could to perfwade the Negros that we were not come hither with an intention to hurt them, but the Pertugueles our Enemies: but in vain for they all appear'd in Arms against us. and feveral times Attack'd us like Mad-niga; throwing themselves in among our Ranks. tho' they were fure to die in the Attempt; and thrusting themselves upon our Swords and Pikes, not like Men, but rather like Wild Boars or enraged Bears. Not far from the Royal Palace, was a very large Pagode, where the Negros had Fortifi'd themselves. Our Men, notwithstanding their fury, Attack'd them in this Advantageous Post, with fo undaunted Courage, that they chas'd them from thence with the loss of 400 Negres, and many more Wounded. The Old Queen would fain have hid her felf in a corne, on the top of the Pagode, but was found out, and brought a Prifoner by Captain Henry Rede into our Camp. But after we had spent near two Months in the Siege the Waters beginning to rife more and more every day, which fill'd up our Trenches to the middle, and our Forces by the feveral loffes we had fuftain'd in divers Engagements and Attacks, and thro' the Garrisons we had been oblig'd to put in the conquer'd Places, being confiderably diminish'd in Number, it was thought most expedient, to raise the Siege for this time, and to return with a greater force against next Spring. dingly we Decamp'd without any Noise and in one Night got all our Men, Artillery and Ammunition aboard, without being perceiv'd by the Enemy, who were not sensible of our departure, till next day about Noon, as kooking upon our Motion, only as a faint, to draw them out of the Town, into an Ambush; But when they found how Matters The Sie, stood, the Discharged all their Cannon roundiraid. the Walls, unto which we gave no answell for that time, but delay'd it till a more con [ venient opportunity. The next thing the E nemy had to do, was to flight our Works and Trenches, which they did immediately, and to cut down all Trees and Edifices which they had found to be an obstacle to them during the Siege, they also took effectual Cure to have their Fortifications repair dand strengthen'd, as her questioning but the

fhould give them another Visit, with 66 2. The next fair opportunity; in which they

Yound themselves not deceiv'd.

After the raising of the Siege of Cochin our Land Forces and Ships were order'd to fuch Places, where their prefence was judged to be most necessary at the present juncture, Mr. Tsbrand Gurske fail'd with a Squadron of Ships to Batavia, and the rest steer'd their Course to other places thereabouts, I went aboard the Ship the Exchange and pass'd by the City of Rakonlang, in my way to Koulang, where I was appointed chief Director of the Company, At the same time, it was thought convenient to strengthen the For incations of Kalkoulang, and to put a good Garrison in it, under Captain Polman and several other Commanders till we could dispose our Forces in strore convenient Onarters.

I arrived at Koulang the 7th of January where I gave immediate Orders for the Repairing of the Castle, and such Houfes, as belonged to those that were in the Company's Service; and fettling every thing that might tend to the re-establishment of Traffick with the Queen of Konlang, and other Neighbouring Princes, unto whom I was fent as a Deputy, to treat with them concerning the most convenient Methods, and to enter into a Confederacy with them for that pur-

The first Treaty that was set on foot after the taking of the City Kalkoulang, was with the Queen of Koulang : which was foon concluded upon these Conditi-That her Palace and great Guns should be restor'd to her; for the Rebuilding of which and other Damages foftain'd, she was to have a certain Summ of Money to be paid her by the Company; who's interest it was, rather to purchase a Peace upon reasonable Terms, than be at

the Charge of a War.

The City of Kolang or Koulang or Kouon and Koylang, the Capital of a King-10m bearing the same Name, Is Situated apon the Sea-shoar of the Coast of Maer, under 9 deg. of Northern Latide, about 13 French Leagues (Linfhet 18 24) to the South of Cochin. It is rifi'd with a Stone-wall of 18 or 20 toot high, and 8 Bastions; Its Suburbs which are very large and stately, are by the Portugueses call'd Kolang China. For Karlang is separated into two Bodies, one of which is call'd the Upper or Malabar Konlang, the other the Lower Koulang; In the Arit the King and Queen kept their

merly in the Possession of the Portugueses as lying nearer to the Sea-side; Here the 1662. Fryars of St. Paul and the Franciscans, had each a Monastery, adorn'd with stately Chappels and Steeples which, there were four other Fortuguefe Churches here, Dedicated to as many Romift Saints; They had no less than seven goodly Churches, amongst which was the famous Church, built many Ages ago by the Christians of St. Thomas, which was left standing, after we reduc'd the place into a narrower Compass; In this Church is the Tomb of a certain great Portuguese Captain, who was Governour of Konlang 60 Years. The Houses of the inhabitants were very stately and lofty built of Freestone; Among which the Stadtboufe surpass'd all the rest; it was two Stories high, and had very curious Stone Steps on each fide. But the Castle, the Residence of the Portuguese Governour, furmounted all the rest in Magnificence; This I took up for our own Lodgings, it lies very near the Sea-side, at one end of the City, being cover'd on the top with Coco-leaves, as likewise two of its Turrets, the third being Til'd with Pan-Tiles. Just upon the Sea-shoat is another four-fquare Tower, where I fet up the Company's Flag, on the top of a Mast. In the midst of it is a very lofty Edifice, which the Portugueses used for a Chapel, which I order'd to be made up into divers convenient Chambers, and to be fitted for the use of the Company's Officers. This Callle is the strongest, the Portugueses ever were Masters of on the Coast of Malabar, being built some hundred Years ago, by the famous Engineer Hector de la Cafa.

This City as I told you before, was drawn into a less Compass by the Dutch, which they fortifi'd on the Land-side, with two half, and one whole Bastion. Most of the Churches and other publick Edifices were pull'd down; except the Castle, St. Thomas's Church, and some Monasteries, which remain'd standing Within the said Precinct. Behind most of the Houses here are very Pleasant Gardens, Planted with Cocon, Mango's and other Indian Fruit-trees; and about the City you fee very fine Balins cut out of the Rocks, unto which you afcend by Steps: They have also some Ponds with fresh Water, their Water being else tor the most part Brackish and full of Saltpeter. The Air is very Wholefome in this Country, which is low and full of Rivers, which afford a convenient Paffalle from hence to Kalkenlang, Cochin and

Cranganot ;

Crangauer; and is accounted the best 1662. both for Fruitfulness and its pleasant Situation, in all the Indies. This part of the Country affords abundance of Pepper, which twists it felf round the Trees; the Fruit is gather'd in January and February. The Harbour is very convenient for small Vessels, but not for great ones, because the South Wind blows directly upon the Shoar, and forces the Waves with great violence thither. They call it Koydanel. Near the Sea-side you see great store of Stonelike Rocks, but they lie loofe uopn the Sand, and are frequently wash'd away by the Sea. About a League to the West of Koulang, the great River Equick disembogues, into the

> The Dutch were once before Mafters of the City of Konlang; till the Negros took the opportunity of Murthering Captain Hemy Glunning their Governour there, as he was taking a Walk without the Gates, and afterwards Massacred all the Dutch; fince which time the Portugueses got into possession of it. On the the fide of Koulang China, along the Seashoar, the Jesuits had built a great Village for the Parvees, a poor fort of Ma-Labars living upon Fishing; where the Governor of the King of Travankor and Prince Baryette l'oele kept their Residence; which are about a mile in Circuit, and furrounded with an Earth Wall, with some Points like Bastions, on which are mounted good store of great Cannon, which Command the Roads, without which there is scarce any access to them. If we may believe the Malabars, the Maldive Islands, which lie about 60 Leagues deep is in the Sea, just over-against the Place, were formerly part of the Continent and Town from thence by the Sea; and as a confirmation of their Opinion, shew certain Rocks, betwixt the Shoar, and these Islands, upon which they assure us stood at that time a goodly Church. The best Houses, are built along the River side, with very good Gardens, stock'd with all forts of Trees, Fruits, Flowers, and Herbs, but especially with Citrons, which grow here not on Trees, but Shrubs; their Houses are seldom above two stories high, their Stairs within of Stone, their Rooms above Stairs are Pav'd' with Green and Yellow four square Stones, the ceiling of which is commonly of Indian Oak, some being finely Carved, others Painted: They commonly have an Arbour or Summer-house belonging to each Garden, which is commonly near the River-side; where they

spend generally their Evenings, and divert themselves with Angling.

The Mouth of the River Kulchan, The or Mangal, or Mangar, upon which this Kal place is built, is a very large Bay, where Yachts of 300 Tuns may come close to the Shoar and unload, being 28 Feet deep at high Water; but of very difficult entrance if the Winds be not favourable, because they blow the Waves directly upon the Shoar. In the midst of this Bay you fee three vast Rocks laying all together in a Ridge. During the Rainy Season this River frequently overflows the Neighbouring Country, and carries away a great deal of the adjacent Grounds; These violent Rains are occafion'd by the Clouds, which gathering among the tops of the Mountains, break out into sudden Storms and Tempests. The Country is flat and marshy hereabouts, and the Air not altogether fo

Wholesome as at Koulang.

By this time the Season for Action drawing near, and every thing being prepar'd for a vigorous Expedition, the Siege of Cochin was resolv'd upon the second time. For which purpose Mr. Jacob Hustart, one of the Members of the Great Council of India, with Captain Peter du Pon and Henry van Rode fet Sail the 25th of October 1662. with 11 Ships from Batavia, Mr. Van Goens being ordercd to follow with three more, with all imaginable speed. No sooner had they s landed their Men, but they began to C Form their Attacks, notwithstanding they found the place much Strengthned by some additional Fortifications, since the last Siege, and put them so to it, that the Belieg'd being enclos'd on all sides, and beyond all hopes of relief, were forc'd to Capitulate, and to Surrender the City, after a Siege of three Months; Is Surafter the Portugueses had (with the Con-rendred. fent of the King of Cochin) been in possession of it above 150 Years. The Porsugueses had not long before forc'd Momadavit, the lawful King of Cochin to leave the City, in whose stead they had set up an Aunt of his of the House of Godarme; but whilst our Forces lay before Cochin, the Dethron'd King stay'd with me, at Koiglang, in order to his solemn Coronation af: ter the taking of the place. I had takes all imaginable Care to have his Room. hung with Tapestry, and furnish'd with other moveables, the best the Place Momadaafford; he came often to Visit us, vil Kr. being commonly clad in White Callinge, of Cw. with his Hair ty d. in a Knot on the try of his Head, River of his Fingers, and

Con a Golden Chain hanging down before 1662 him He spoke the Portuguese and Ma-Labar Tongues, and was of a pleasant Conversation. But scarce a few Days were pass'd, when finding himself not very well, he desir'd to go to the Queen of Koulang, for his Diversion; which I was very unwilling to Grant, being fenfible that his Person being committed to my Care, I might be call'd to an account by his Subjects who much esteem'd him, if any finister Accident should befal him; But at his reiterated Instances, and the carnell request of the Queen of Konlang, who was an excellent good natur'd Perfon, and engag'd her Word to bear me harmless, I conducted him thither, but he found no confiderable Alteration in his Health, for when not long after a Yacht was fent to Kealing, on purpose to fetch this Prince to the Camp before Cocher, he was fo very Weak, that he would fain have avoided going thither; but there being positive Orders given for his coming, I fent him my Palakin or Letter, and conducted him with some of our Officers aboard, but before he could reach Cochin, his Sickness encreas'd to ip board, that degree, as to put an end to his Life. succeed- His Brother, who was aboard the same by hic Yacht, being the next Heir to the Crown, other. was after the taking of the City, Crown'd King of Cochin by the Dutch, his Crown, which was of Gold, having the Cypher of the East-Ind.a Company, engraven on one fide. He kept his Residence not

t City of

Custom of that Country. The City of Cochin by the Portugueses call'd Coch n, and generally Kakochin, is the Capital of a Kingdom of the same Name, and indeed of the whole Coast of Malabar. It is Situate under 10 deg. of Northern Latitude 4 or . Leagues to the South of Koulang, extending along the Bank of the great River Koulang, or Kolchan, or Mangat, or Mangar. Some Authors make mention of two different Cochins; viz. the Old Cochin lying about a League and a half from the Sea-shoar; the Portugueses call it Cochin Dacima, or Arabia, s. e. the Higher Cochin, because it lies higher up the Kiver; by the Dutch it is call'd the Malabar Cochin, where the King keeps his Residence; being Situate upon the Banks of a River, and pretty well Peopl'd, and adorn'd with feveral. goodly bructures and Pacedes, according

far from Cochin, in a place Situate in a

very pleasant Country, call'd by the

Dutch, Malabar Cochin, had his Guards,

Musicians, and all other things belonging to a Royal Court, according to the

to the Custom of the Malabars. other Cochin, call'd commonly the New 166 Cochin is scarce a League distant from the Sea, just at the entrance of the same River; it was for many Years together in the Possession of the Portugueses, who had Fortisi'd it with a Stone Wall, and several Bullworks, and Beautifi'd it with feveral fine Edifices, Churches and Monasteries. In the Suburs towards the Land-fide were feveral goodly Churches, and a little nearer to the Sea shoar the Monastery of St. John. Here the Austin Fryers, Franciscans and Jesuites had likewife their feveral Convents, all Magnificently Built, with very pleasant Gardens and Walks; the place being luhabited only by Portugueses. But fince this City was Conquer'd by the Dutch, the greatest part of it was laid Desolate, and the rest Fortisi'd with regular Stone. Bastions, Curtines and a very broad Ditch, fo that it is now look'd upon as impregnable. Among other ples, that of St. Paul being magnificently Built of square Stones, exceeded all, the rest as well in Height as Beauty, which is fince demolish'd with all the other Churches, except one, where divine Service is exercis'd according to the Tenets of the Reform'd Religion. Houses here are cover'd with Tiles of about the Breadth of a Hand, and are fastned to the Laths by small Hooks. Some make their Windows only of a kind of Lettice Work, others of Canes very Artificially twisted together; others make use of large Shells in which the Pearls grow, these they Shave and Flatten, and make Windows of them, as we do of Glass.

After we thus had made our felves Masters of the greatest part of the Malabar Coast, and had taken all imaginable care, to re-establish the Commerce in those Parts, it was judged necessary for the better obtaining of this end, to enter into strict Alliances with the Kings and Princes of the Adjacent Countries; For which purpose Mr. James Hustare chief Councellour of the Indies, of Ceylon, and the Malabar Coast, having sent me the necessary Instructions and Credentials, I provided my felf with all things requifite for fuch a Journey, and the 21 of January 1664. embark'd aboard a small Vessel, with one Serjeant, several Soldiers, an Interpreter, and divers Mari-The Anti ners, which carried us up the River as fent to far as to the City of Kalkelang, where we Trait w.

Arriv'd fafely the next day. So foon as labar Pri I had provided my felf with a conveni- er.

ang.

Departs

ent Lodging, I gave notice of my Ar-862. rival, by our Interpreter to the King, who foon after returned in Company of a Resideer from the King, to fetch me to Court. Accordingly I and Mr. Willing, who resided there in the Quality of Under Factor of the East-India Company, were introduced by the faid Residoor into the Kings Presence, whom we found furrounded with a good Number of Courtiers, that constantly attend his Per-After the first Ceremonies and The Audi- Son. ne of the Compliments, such as are usual in this place, were pass'd, I surrendred my Credentials to the King, who receiv'd them with a great deal of Respect and seeming Satisfaction. After he had perus'd them, he gave Orders to one of his Residoers, one of his chief Favourites to treat with me concerning such Points as I should propose to him, tending to the maintaining of a good Correspondence betwixt us and them, and to make his Report to him. This Prince had the Character of a very Sincere Person, which appear'd both in his Countenance and Actions; but leaves the chief Management of all Affairs of Moment, to the beforemention'd Resideor, who knows how to make his Advantage of it. After I had Treated with the Residoor, as far as my Commission would give me leave, I desir'd to be dismis'd, under pretence of fetching new Instructions, which being Granted, I took leave of the King, and fromthence with Mr. Willing pursu'd my Journey to so Porka. Porka, whither I had fent a Serjeants with fix Soldiers before. But at our Arrival there, being inform'd that the King of Porka was ten days before gone to his Palace call'd Kudda Malair, or Koramallur, or Koromallo, about Ten Leagues distance from hence, I resolv'd to go thither. We were forc'd to go by Water, through several Channels and Rivers, the Country hereabouts being full of both, like the Province of Hol-

> Trees on all fides. We were forc'd to have our Mansicol (Vessel) drawn through a narow Sluce, which open'd us the Passage into a large Lake, which to the North is about two Leagues broad; from thence we enter'd into a Channel of about a League in length, its entrance is somewhat narrow and so full of Flaggs, that there was scarce room enough to manage our Oars. At the end of this Channel you fee very pleasant Rice Fields, which extend to.

land, which affords scarce any Passage by

Land, but by the Dikes, all the rest be-

ing Rice Fields, curiously Planted with

the foot of the Mountain, and are stock'd with prodigeous Quantities of Wild and Water Fouls. The Inhabitants hereabouts have a certain way to drain their Fields, which makes them bear Rice all the Year round; so that whilst they are Sowing and Planting in one Field, in another the Rice is half Ripe, and in another its come to its full Maturity; which renders this Country both very Fruitful and Populous. The Mountains produce fome Pepper, but in no great Quantity. This part betwixt the Channel and the Mountains is Water'd by a very fair and large River, Beautifi'd on both fides with many fair Houses, Gardens and Trees, which afford a very agreeable Spectacle to those that pass by that way the Houses being all Built among small Groves. After we had spent several hours in coming up the River, we in the Afternoon cast Anchor before the Court of the King of Porka, Situate upon the Right fide of the faid River, near a Village inhabited by Christians of St. Thoma, who enjoy great Privileges here. As we were passing up the River, not far from the Court, we saw a large Crocodil Sunning himself. upon the sandy Bank; 1 Order'd our Souldiers to fire at him; which they did, but he escap'd under Water. This Creature was us'd to fet upon the People as they pass'd by that way, and confequently much dreaded by them. The King of Porka was at time Rebuilding his Palace, in which they fay he had already bestow'd 20 Years; It was but an odd Old Fashion'd piece of Structure, furrounded with Walls of Earth and a dry Ditch; I fent our Interpreter to notifie our Arrival, and to provide us a Lodging, who being return'd, we scarce had set a Foot a shoar, but the chief Resident of the King came to conduct us to Court, where he introduced us into his Presence. After the ufual Compliments I deliver'd him my Credentials, which he receiv'd with extraordinary marks of Respect, Ordering the Residoor to entertain me till he had Read, and Consider'd of them. In a little while after he return'd with some of his Attendants into the same Apartment, where he ask'd me whether I had any other Commission to Treat with him, and I answering that I had, he declared to me, that his Inclinations had been always for us, even whilst we appear'd in Arms on that Coast, though at the same time he was not infensible, that some had endeavour'd to perswade us to 1 trary, but that time and oppe

fhould discover the good Sentiments he 662. 'had for us. Hetold us further, that he had caus'd the Flaggs of the English and some other Nations to be taken down, and the Dutch Flagg to be fet up, for which they threatned him with an open War, in his wn Territories, and refus'd to quit the Country, which made them to be look'd upon but with a very indifferent Eye by all the Neighbouring Princes. Having afterwards given him a farther Account of the occasion of my coming, he told me that he should be very glad now he was convinc'd of the intentions of the Company, which were agreeable to his, to speak with Mr. Hustart himself; I return'd for Answer that the Company was fensible of his favourable Sentiments to them, and had always put a great value upon his Person, inviting him at the same time to Cochin, to visit Mr. Hagtart, the last of which he Modestly Declin'd, alledging that for feveral reasons he could not come to Cachin, but that if Mr. Huttart would come either to Porka, or any other Place under his Jurisdiction, he fhould be very ready to Treat with him concerning fuch Matters, as tended to The King their mutual Advantage. further ask'd nie, whether I delir'd an Account of my Negotiation in Writing, which I having accepted of, he faid it it flould be fent to my Lodgings, and at my departure Conducted me in Person to the Door of his Apartment, from whence the Residoor carried me to his Lodgings. and treated us with all forts of Refresh ments, a very welcome Entertainment to fome of my Attendants, who had not met with the like fince the beginning of our lourney. Towards the Evening the Residoor brought me the Writings, with whom whilst we were taking a View of the Court, I had abundance of Difcourse concerning the intended Treaty.

This Palace of the King, is a four King square Structure, of about 40 Paces in the Square, in the midst of which is a Court, about which the Aparements, (of which there is a great Number) are Built; they are all four Square, their chief Ornaments within being the Carving of Lear and other Work in all forts of fine Wood; In some of these Lodgings you see fine Cifterns for the conveniency of Bathing, you alcend to them by certain broad Stone Steps, like our Grave Stones. In one of these Lodgings is a very large Bason, surrounded with fuch Stones, which are about 20 Feet broad, and a Foot and a half thick, which have been brought thither with in-

credible Pains and Charges, a great way out of the Country. The Palace it felf 1662 is cover'd with small Tiles, of a Hand broad, the Windows being made either of twisted Canes, or Shells, which transmits the Sight.

After my return from thence to Konlang, I went further to Cochin, to give a a verbal Account of my Transactions to Mr. Hustart, who thereupon Order'd me to go once more to the Court of the King of Porka, in order to fet Matters there upon a fure Foundation; Accordingly I fet out the 3d of February, with some of my former Attendants from Cochin to the King of Porka's Court, where within an Hour af- 7he Author ter giving notice of my Arrival, one of goes a fethe King's Residoors came to introduce me cond time to the King, whom that time I found to the Court in a most Magnificent Array, (after the of Porka. Malabar Fashion) in the milft of his Courtiers. After the ufual Respect pay'd, I deliver'd to him my Credentials, which he having receiv'd, he Order d all his Attendants and my Interpreter among the rest to withdraw, because he had a mind to Discourse with me alone in Portuquese, which he understood very well. Has Audi-I told him that I was fent on purpose by ence. my Masters to his Majesty, to assure him of their Friendship, and to pay the Money Stipulated by the last Treaty, which Summ, though it much exceeded the value of the thing receiv'd, yet notwithstanding all this my Masters had thought fit not to recede from what had been promis'd in their Name. The King gave for Answer, That it never had been a Custom to weigh the Pepper at Cochin (which I had defir'd should be done) and that therefore he hop'd the Company, would not Introduce any Novelties in his Territories; affuring us withal, that he would be ready to Affift the Company. and their Officers upon all Occasions, befides several other Assurances too tedious to be inserted here. I soon understood his meaning, to wit, that he would not have the Pepper Trade Transfer'd to Cochin, which was a Matter of no great consequence, so I did not infift any longer upon it, but agreed, that that the Pepper should be receiv'd and Weigh'd at Porka; affuring him, that the Company had never had the least intention to impair any Bodies Right, as his Majesty might easily be convinc'd, as well by this as feveral other Transactions

and Treaties, made lately with other

to be highly fatisfi'd thereat, defiring that a Factor might be fent thither forth-

Kings and Princes.

The King appear'd

·lace of

1662. Departs from thence.

with, to Buy and Receive the Pepper; which I having promis'd to the King, he Order'd Resideer to receive the Money and

granted me leave to Depart.

The next following day, just as I was ready to Depart a Residoor come to my Lodgings, which was an old Chappel, and presented me, from the King with feveral Refreshments, according to the Custom of the Country, and knowing this Relianor to be a Person in great esteem with the King, I requested his favour in behalf of the Company, which he promis'd to do.

11 : \ing of Porka and Government.

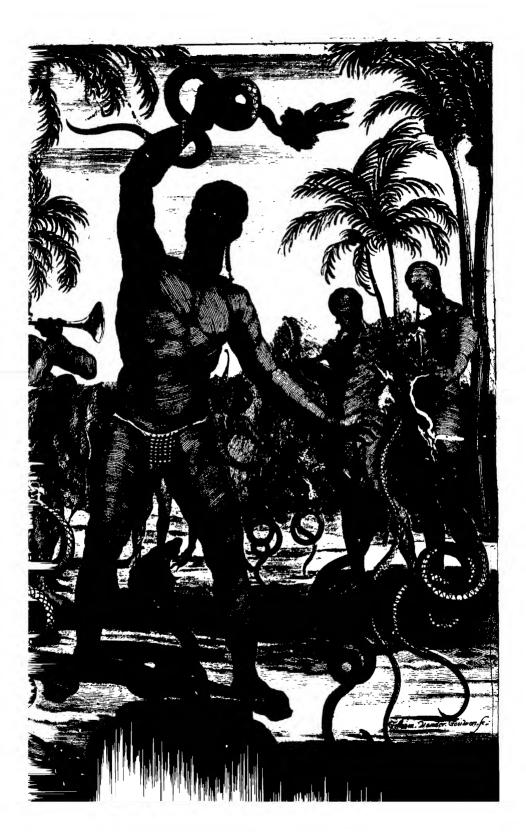

The King then Reigning at Porka was a Person of 30 Years of Age, very starely and well made. He was Adorn'd with many Jewels, of Diamonds and Rubies, which he wore on his Hands, Arms and Ears, according to the Malabar Fashion. He is a most absolute Prince, acknowledging no Superior, every Foot of the Country being his own, and at his Disposal. Justice is Administred here with extraordinary feverity, especially on the Account of Theft, which makes this Crime scarce ever to be heard of here, of which I faw the following Instance my self; whilst I was paying the Money to the beforemention'd Refulour, I was call'd away to the King, and feeing above 50 Persons in the same Room, I charg'd one of my Attendants, to take care of the Money; The Residoor having taken notice of it, Laught heartily; and told me; You need not give your felf that trouble, no Body will dare to touch the Money; the it was untold and unguarded, for we know fearce what Thieves are; which furpris'd me not a little, knowing that the Malabars in general are the errants Thieves in Nature.

7 keft un-I orka.

The Kingdon of Porka.

The Kingdom of Porka or Porkah, otherwise Perkatti has borrow'd its Name from its capital City; It borders to the North upon the Kingdom of Cochin, to the South upon that of Kalkolang, it has Takken Berkenker, to the North East, and the Sea to the West, being about twelve Leagues in length; its capital City is Porka or Porkak. Another of the chief City is Koramallur or Koromallo Situate upon the fame River with the Cities of Cochin and The Kings of Porka were in antient Times great Idolaters, who Worship'd at least 900 Idols, unto each of daily Sacrifices were offer'd, and Vifits made them about fix or feven a Clock in the Morning, till twelve at Noon. was not till the Year 1590, that the Romish Religion was openly profess'd here with confent of the King. Tho' many Years before, the Christians call'd

of St. Thomas liv'd in these Parts. This King granted considerable Privileges to the Jesuits; such as the Building of Churches with Crosses on the top of them, and the necessary Bells, near unto which no Pagodes, Jewish Synagogues, or Mahometans Mosques were to be erected; they had also Liberty to Baptize as many as were willing to embrace the Christian Religion; all which was punctually obferv'd. The King of Porka who Reign'd 1599. Was call'd Nambrale or Numbrane, which imploy's as much as the High Priest in the Malabar Tongue. In the Year 1640. one Siam Baatshery Vanbaar Reign-They claim a superied over Porka. ority over the King of Cochin, against whom they waged heavy Wars in former Ages; But now a days the Kings of Porka are under the Jurisdiction of the Dutch East India Company, being forc'd thereunto by their Victorious Arms; The chief Strength of the King of Porka confifts in his small Frigatts, of which he has 500, and are made use of, when the Fields are overflown with Water; Formerly the Fortugueses were Masters of the Pepper Trade here, with the King's confent; but finding, that they intended to Fortifie themselves in several Places, he engaged in a War against them, which lasted three whole Years. The Dutch never came to Porka till 1642. under the Reign of Siam Baatshery Vaubaar, being then not above 24 Years Old; they were very kindly receiv'd by him, a Treaty being concluded betwixt them at that time, by which the Dutch had the Pepper Trade granted to them. This part of the Country is very Fruitful, but unwholesome, most of the inhabitants being Afflicted with thick swell'd Leggs, occasion'd by the drinking of brackish Water, Blindness is also a common Distemper here, which by some is ascrib'd to their feeding so much upon hot Rice. Most of the Inhabitants live by Husbandry, tho' during the Rainy Seafon, most of the Rice Fields hereabouts as well as all along from the Cape Comarin as far as Pokare Biarbar lay un-This Country produces alder Water. fo a confiderable Quantity of Pepper Yearly, which is for the most part bought up by the Engl sh, who have had a Factory here many Years ago. Deeper into the Country live abundance of Christians, who were formerly Converted by the Portugueses, these buy up the Pepper in the Country, which they are oblig'd to deliver to certain Merchant, appointed for that nurnole, be

these may not unlikely be the same mention haby them as the most War-like Nation of ale tre Indians, Alexander the Great hahaving receiv'd a mortal Wound, as he was attacking one of their Cities. Now adays they don't inhabit any Cities, Towns or Villages, but only certain Enclosures in the Valleys betwixt the Rocks; their Houses are built of Canes, very low, and plaister'd up with Loom or Clay. Some of them live in the Woods, these make their Houses of Wood, which they remove from Tree to Tree, to secure themselves against the Elephants and Tygers. The first they eatch in Holes, cover'd with the Branches of Trees, with some Earth on the Top; They also Cultivate the Ground, but in a very flender manner, tho' their Valleys would be very fruitful if they were duly manag'd. They have but one Wife at a time, who goes abroad a hunting with them, or whereever they go; whereas the Pagan Malabars Marry generally, several Women. They chiefly differ from the other Malabars in their Complexion, are just and honest, good natur'd, charitable, without Deceit; for the rest, courageous, ingenious and cunning; they pretend to converse with the Devils, only out of Curiofity to know the Event of things the Cultom of the other Ma-Inbars and Indians, who hurt others by their forceries, being unknown to them. They pay a great deal of deference to the Sepulchres of their Ancestors, and if they happen to be defiled, they look upon it to be an ill Omen. Upon their Festivals they wear a long Gown, with a Turbant, as the Mahometans do; but at other times they go half naked, like as the other Malabars do. They have holes in their Ears and Nofes, in which they hang Gold Rings and Jewels; a Custom common also to the Pagan Malabar Women, who look upon this as their chief Ornament, especially to wear such things in one of their Nostrils. At their Feasts and Festivals the Maidens play upon Rush-pipes and small Flutes and Drums; Theft is a thing unknown among the Malabars, every one living in his house in a profound Security with open Doors; fome times the Inhabitants of a whole Enclosure, transfer their Habitations to ano-Part of the Malabars acknowledge the King of Turbula, part the King of Pugnati Perimal for their Superiours, unto whom they pay some Yearly Tribute, yet with the entire Preservation of their Liberty, they being govern'd by their own Laws, under Captains or Judges of their Nation, call by them Arley, each of them has commone; ooo or 6000 under his Diftrict; blides which, each Enclosure is govern'd ₩ol. 11.

by its own Judge call'd Pandera, unto them they pay strict Obedience.

Before 1599, when they began first to be instructed in the Romish Religion, by the Assiduity of the then Archbishop of Gon, they were all Pagans, but fince that time, a good number of them have embra-ced Christianity; Eight of their best Men, among whom were three Pandara's, with their whole Families, first received Baptism, who being follow'd by many others, a Church Dedicated to St. Michael was built in the Village of Printa. Before their Conversion, they had no Temples erecled in honour of their Idols, neither did they Sacrifice with feafting, dancing and fuch like Ceremonies, but each Family had its domestick God, unto whom they paid their Devotions. They are much more effeem'd among the Malabars, than their common People, neither are they look'd upon as unclean by them, no more than the Christians of St. Thomas, if they happen to touch a Note; They keep scarce any Commerce with the neighbouring Nations, even not with the Thomiss themselves, who live at the foot of the same Mountains. Their Wespons are the same as the rest of the Malabour use, viz. a Bow and Arrows pointed with a broad Iron. They use also seimeters or Hangers, and a peculiar fort of hre arms. fuch as are no where elle to be feen among the Malabars. On the foot of the Mountain inhabited by the Malabars call'd Karatkara, bordering upon the Kingdom of Karanarata, stands a Church belonging to these Thomists or Christians of St. Thomas, dedicated to St. Austin, because the Inhabitants owe their Conversion to certain Fryers of that Order.

Malabar as I told you before, is a Coun-products try abounding in divers forts of Fruits, fuch of Malaas the Indies commonly afford, of the choicest bar. of which we will give you a short Description herc.

All along the Sea-shoar of Malabar, and Cocoethe Rivers near the Sea fide, the Indian Polm tree. or Cocoe-tree, grows in fandy and brackish grounds; The Malabars call it Tenga, the Brahmans Mado, and in the Malabar Tongue it is call'd Kalappa. Its Trunk which is of an Ash Colour, rises sometimes to the height of 95 feet; fuch I have several times meafured my felf near the City of Koulang; It has commonly 16 Inches Diameter, tho fometimes it is so thick, as scarce to be grasped by a Man; and is of the same thickness from the Bottom to the Top; the Wood is spongy, and the Pith as white as Paper. However the Trunk does not grow up streight, but is jointed, without any Branches, but only on the Top, where

Ccce

commonly sprout forth 16 or 18, and in a 662. very large Tree sometimes 28, which bear green large Leaves like Reeds, being about a fingers length broad, and about two foot long. The Root of this Tree is very finall in proportion of its Bigness, and does not reach deep under ground, but creeps just under its Surface, so that it seems next to a Miracle, how these high Trees are able to withstand the fury of the Winds. The Fruit, call'd commonly Cocoe-Nuts, after the Portuguese, who call them Coquo and Cocoe, grow at the Ends of the Branches, about 6, 8, or 10 in a Bunch; a Bunch weighing fometimes from 60 to 100 pounds weight; Each ripe Nut exceeds the bigness of a lusty Man's Head, being of a triangular figure, and cover'd with a double Peel; The first is an Inch thick, confisting of many threads, extending length-wife round the Fruit; The outlide is of an ash Colour, but inwardly inclining to Red; The next Reel is hard and brown, which contains the Peel. Before they are ripe, they are of a pale Yellow Colour, and afterwards turn dark Green, having at one end a bigh of small Leaves, resembling our Turnep eaves. The Pith is white, inclining to wellow, about an Inch thick, and to the second Peel, the remaining hollowness being fill'd with Liquor, and containing according to the bigness of the unripe Nut, a pint of Liquor, which in the ripe ones diminishes by degrees, and encreases the Bulk of the Peel. This Liquor is good to drink, the Pith is fiveet, and of no ungrateful Tafte, only a little flat. Bloffon, which is not unlike that of the Chefnuts, appears at the ends of the Branches, which produce the Fruit, which ripens in three Months time. The Pith dried may be kept, and transported like Chesnuts; if it be pouder'd and mixt with Sugar and Cinnamon it taftes very well, augments the Seed, and is a strong Provocative. When the Nayros are to gather the Nuts, they climb with most wonderful Nimbleness to the Tops of these high Trees, where they cut off as many Bunches as are ripe, and let them fall down upon the ground. Besides the Fruit, this Tree aftords also a certain Liquor call'd by them Sury, and by the Europeans Palm-Wine; When they are to gather this Liquor, they only cut off one of its Branches, from whence 'add some Raisins, and make it taste like issues the Liquor, which falls into a Vessel of Bamboe, hung under it for that purpose; if they draw too much Liquor at a time, the Branches turn brown, and the Tree produces no more Nuts. These Trees being planted in a streight Line, the Nayros lay Sticks reaching from one to the other,

by which means they get to the Branches, where they have fail ned the Veffel plat re 1 562, ceives the Liquor. This Liquor, whilst fresh, is very good to drink, and kill inebriate like Wing; but if kept in the Sun, turns to Vinegar in an bours time. But tho' they take never fo much care of it, what is gather'd about noon, will turn by night, talte fourish the next day, and turn quite to Vinegar the day after that. The Liquor which diffils from the young Trees, is not fo strong and spirituous as that gather'd from the old ones, but the first afford a greater Quantity. After this Liquor has been kept 24 hours, they diftil a Spirit of it, with the Addition of a small quantity of the Oil of Clove; this is by the Indians call'd Arack, and by some Tula or Mype. Out of this Liquor they prepare Vinegar thus: They put the Vessels in which the Liquor has been gather'd, in Lime 15 days, during which time, it ferments, casting gross Sediments to the Bottom; the clear is very good Vinegar. Out of the same Sugar they make a kind of Liquor call'd Jagra. They put a small quantity of Lime in the Vessel which contains the Liquor, as much as is fufficient to make it turn red; For, if you put in too much Lime, the Liquor turns whiter and whiter. but if you put too little, it does not change its Colour. The Liquor thus mix'd with a sufficient quantity of Lime, must be boil'd and ftirr'd continually with a Spoon, till it comes to the Confiftency of red Sugar; where it is to be observed, that if there benot Lime enough added, it will produce no Sugar, but if too much, part of it will fettle to the bottom, which must be taken out before you can boil it into a Sugar : If you intend to make white Sugar or Jayra, you must take care to pour the Liquor mix'd with the Lime out of one Pot into another (to separate the superfluous Lime) which you must repeat three times; as for instance, if your Liquor be gather'd in the Morning, you must pour it into another Vessel by noon; and repeat the same a second time about two a Clock, and a third time before night, and then boil it. What Liquor is gathered in the night time keeps longer than that gather'd in the day-time. Whilst it is fresh, its Taste is not much unlike our Whey, unto which the Inhabitants Spanish Wine. The Trunk of the Cocoe Tree is used for Timber in the Buildings of Houses and Ships, the Branches and Leaves to write upon and to cover Houses with, as also by the Basket-maker. Out of the hard Shell of the Nuts (fome of which are of a pale, others of a dark brown Colour

they make drinking Cups and other Vef-62. fels, which they polifh, and fometimes are edg'd with Silver. The hairy Substance, call'd Kayer, is used by the Rope-makers. these Ropes don't rot easily: They also make Matches of them, which burn very fiercely. In the Maldive Islands (where these Trees are found in vast quantities) they sometimes equip whole Veffels out of the Cocoe Trees; The Body of the Vessels being made of the Trunk of a Tree, without any Nails or other Iron-work; the Sail and Ropes of the hairy Substance, the Provisions confifting of the Liquor and Kernels of the Cocoe Nuts, their drinking and other Vessels being made of the Shell, and their Hammecks, Quilts and other Implements of the Leaves. In short, this Tree furnishes the Indians upon occasion, with all that is necessary for their Subsistance; being very fruitful in marshy and low grounds, but bears not so great a quantity of Fruit neither so big in the mountainous Counries. The Cocoe Tree is in its prime from the 25 to the 30 Year, and affords the most Fruit and Liquor; From the time it begins to bear, the ripe Fruits fall off, and others grow continually in their stead, but when it begins to grow old, the Fruit grows leffer and leffer. This Tree will continue till it is 100 Years old; when the small Branches and Leaves begin to turn yellow, it is an infallible fign of its decay. produced out of the Kernel of the Coco-Nut; These the Indians put into the ground till they begin to fprout, then they make as many holes as they intend to plant Trees, and of fuch a depth, that the tops of the Leaves don't reach beyond the Surface of the ground; then they throw a handful or two of Sand (unless it be in sandy ground) and half a handful of Salt in each hole, upon which they put the Kernel, which they cover with the same ground, they had taken out of the hole before, and every other day water them, till they are fure the Nuts have taken Root. They plant them with the point downwards, out of the oppolite part of which at first shoot forth two or three broad Leaves, after which comes the right Leaves, and foon after the fmall Sprouts, which tall off as new ones fucceed, till the Tree comes to its full growth. The young Tree commonly begins to bear in the fifth Year after its planting; great care is taken that the Horse-Flies don't spoil the young Trees; This is a kind of Worm not unlike our Hornets, with two sharp florns, but not so big; This Worm gets to the Pith of the Tree, which he confumes the Tree dies, unless he be taken out in time, at which the Malabars are very

dextrous, and then the Tree will recover. It has been observed, that this Tree in the 1662. third Year after its planting, has its Branches in their Perfection, and from that time the Branches begin to fall off. Those Branches are at that time about five or fix Yards long tho' the Stem, on which the growth is not above two foot high, and about a foot in Circumference. Every Month you see commonly a new Branch come forth, and then the old ones fall off, but in the Summer and dry Seasons, they fall off more frequently than in rainy weather; these Branches come to their full growth in three Months. I caused above 4000 Cocoe-trees to be planted near Koyland, but most of them came to nothing, being not carefully look'd after by my Successors. There are divers kinds of this Tree, which are diffinguish'd by the Fruit, but especially by the watery Substance found within the Shells of the Nuts.

Malabar produces prodigious quantities wild Ciof wild Cinamon Trees, but the Cinamon namonis neither in Smell nor in Goodness compa- Trees. rable to that which grows in the Isle of Ceylon; This Mand, and that of Floris being the only ones, where the true Cinamon grows. The Portugueses call this wild Cinamon Canella del Mato, i. e. Wood-Cinamon, the Malabars Larva or Bahena, as also Kaunema, i. e. Sweet Wood, from the word Kau, which in their Language fignifies Wood, and Nema, i. e. Sweet, the Malayans Kais Manii, the Zingalese or Inhabitants of Ceylon Kurudo or Kurundo, and the Arabians Quirfaa and Querfe, as also Kerfak. Before the Dutch got into the Possession of Ceylon, they us'd to transport this Cinamon, but since that time they make no account of it. The Tree is of the bigness of our Orange Tree, less or more, but not large as the Cinamon Trees in Ceylon. It has abundance of Branches, Leaves not unlike the Laurel Leaves, but broader, of a paler Colour, with three distinct Veins. The Blossom is white, almost without any Scent; the Fruit not unlike the wild Olives, first Green, afterwards inclining to Red, and when ripe, black shining. It has also a Kernel not unlike the wild Olive, which is cover'd with a Pulp like the same, out of which issues a kind of green Oily Liquor, of the same Scent as the Laurels, biting and bitterish upon the Tongue. The Rind of this Tree, (or the Cinamon it felf) is thick, without any remarkable Tafte, tho' the finall Sprouts or Tacks are somewhat bitter, yet don't come near to the Cinamon in the Isle of Ceylon.

or to the Cinamon in the lile of Ceylon.

Out of the Rind of the Root, they prepare namon and a kind of Volatile Salt, which they call Cam-volatile phir; Iwimming upon the Surface of the sals.

Water, of a yellow Colour, clear, strong, and well scented; sharp upon the Tongue, and very penetrating, being to Volatile, that if exposed to the Air, it evacuates immediately. This Camphir is exceeding white, excelling the common Camphir in its Scent; The Particles of this Camphir are insensibly mix'd with the Oil, whilst yet warm, immediately after its Distillation; but as foon as the Oil begins to cool, they adhere to one another in divers shapes, and settle to the Bottom. This Camphir is very Volatile, and so fiery, that it takes fire in an instant, and leaves not the least Impurity behind, after it is confumed. The Oil approaches very near both in Smell and Tafte to the Camphir, and is so Volatile, that if some of it be dropp'd upon woollen Stuffs, even of the nicelt Colours, it evaporates immediately, without leaving the least Spot behind. It is also very combustible, burning with a white and blue Flame; If put upon the fire, it evacuates in an instant, and turns into a white Smoak, which is very apt to take fire. This Oil mixt with Gunpowder, will fet it on fire by degrees, yet not till a great part of the Oily Substance be evacuated. If mix'd with Sulphur or Salt Peter, or with both, it will take fire immediately and confume the Sulphur and Salt Peter, remaining without the least Alteration. If you put the Oil upon the fire, and receive the Flame which evaporates from thence in a thick Cloth, a white kind of Salt will fettle in it, which is the Camphir itself. This Oil will also in time separate some of thosecamphirous Particles, which falling to the Bottom, render the Oil more clear and pure. The Oil drawn out of the Malabar Cinamon, is clear, transparent, yellowish and well scented, swimming upon the Water; whereas out of the common Cinamon of Ceylon, besides that Oil which rifes on the top of the water, another is also drawn, which finks to the Bottom. The Oil distill'd from the Leaves, is thin at first, turns yellowish by degrees, and transparent, and of a greenish Colour at lait, being very sweet, but sharp at last, having something of Cinamon, it finks to the bottom of the water.

Root, with its Volatile Salt (the Camphir) · The Oil made out of the Rind of the is endow'd with greater Virtues. It is a Soveraign Remedy against all Lameness, if applied outwardly, and gives immediate Ease in the Gout; it may also be taken inwardly with very good Success; being a great Remedy against Malignant Fevers, a great Sudorifick, expelling the Wind, procuring an Appetite in the Stomach, and confuming the Stone both in the Kidneys

and Bladder, and is good in the Cough, and many other Chronick Distempers; To 1 66; be short, it is the most Universal Remedy made use of there by the Dutch (In their Hospitals. The Camphir is very proficuous in all Distempers in the Womb, promotes the monthly Terms, and is a great Sudorifick, being us'd in all respects like the common Camphir. The Oil distill'd out of the Bark of the Tree, is an excellent Remedy in all Diftempers of the Stomach, and in the Cholick, proceeding from a cold Cause; The Water of Cinamon is Cordial; The Oil of the Leaves is good against , the Cholick, if applied outwardly to the Belly, and helps Lameness.

In the Woods of Malabar about Kana- Zua or nor, grows a certain Shrub in great plenty, rumbe call'd Zua by the Malabars, at Surate Dekan, and Cachora by the Canarins; by the Arabians and Persians Zerumber, and Zeruba by the Turks. If planted or fow'd, it will grow also in many other places. By some it is reckoned a kind of Ginger, and not without Reason, its Leaves resembling those of the Ginger, only that they are somewhat larger; as is also the Root, which being cut in pieces and dry'd, is thus trans-

ported into Foreign Parts.

On the Coast of Malabar in the Isle of The T St. Cruce, belonging to the Kingdom of call'd Cochin, near the River Manatte, grows a cre or certain Tree call'd Macre by the Brahman Physicians, by the Christians there Makuyre, and by the Portuguese Arbore de las Canaras and Arbore Sancto, i. e. the Tree of the Bloody Flux, and the holy Tree. The Saints of this Country have this Saying of it; Kura Santea Macre Nistusa garul: i. c. Macre was discover'd to Mankind for their Benefit by the Angels. Galen, Dioscorides and Pliny call it Macer, and Avicenna Talisfar; This Tree foreads its Branches in a large compass, being bigger than our Elm-tree. Its Leaves are feven foot long, and two broad, the uppermost side of a pale, and the undermost of a dark green Colour. It is generally believ'd, that this Tree produces no Fruit, but only a kind of Seed, of the bigness of a Farthing, thin, yellowish, resembling in taste the Kernel of an Almond or Peach-Stone, cover'd with a white Skin. It is enclosed in a kind of a bladder composed of two different Peels. This Bladder comes forth in the middle of the Leaf, resembling that which in May sprouts forth on the Elm Trees, except that it is somewhat broader and flatter. The Leaf of this Bladder, is of the bigness of other Leaves, but not so much pointed at the end, and narrow towards the Stalk; of a deep yellow Colour, cover'd with kind of curl'd down, from the Stalk to the

The Root of this Tree is not unlike that of the Stene Palm Tree, with large and thick Robts, spread at a great distance; The Rind of those Roots is thick, rough, of an Ash colour without, but white within; containing a Juice like Milk, whilst fresh, but turns yellow; when dry it is very aftringent. This Tree delights in few but fandy grounds, and kills all other Trees or Shrubs near it. The Rind of the Root of this Tree is in vast Esteem among the Malabars as well as among the Chinefes, Javanefes, Malabars and all Bengale; being look'd upon and made use of in their Hospitals, as the most Soveraign Remedy in the World; against Loofness, and all manner of Bloody Fluxes. The Indian Physicians, as well Brahmans, Canarins, as Malabars, cure with this Rind whilft fresh, pouder'd and mix'd with Butter-milk, the Bloody Flux; some infuse half an Ounce of the Rind dry'd and pouder'd in a quartern of Whey for 12 hours, which they give the Patient twice a day, viz. in the Morning and Evening, immediately after they give the Patient Rice to cat, boil'd without Salt or Butter, and after that a Chicken boil'd in the Decoction of Rice Flour. the Distemper be very urgent, they add some Opium for the strengthning of the Stomach, and to stop Vomiting, they mix a little Mastich with this Rind, give it in Mint Water. They tell you that a small quantity of this Rind, excels much in Virtue a confiderable number of the Myrobolan Rinds, or of Areka; nay, they prefer it before the Koru of Malabar it felf. The Fruit, or rather Seed, expels all forts of Worms, and diffolves the Stone in the Kidneys, being look'd upon likewise as a great Prefervative both against the Stone and Cholick; Besides the Tree Macer, other Trees grow here very different in kind, but agree in Virtue with the Macer Tree.

The first of these two is by the Malabars call'd Kurodapala or Kuro, and Koru by the Canariins, by the Brahmans Kura, and by the Portugueses the Malabar Shrub, its Use having been first shewn them by the Malabars. This Tree or Shrub is the Malabars. not unlike a small Orange Tree, especially as to its Leaves; except that the Vein in the middle of the Leaf, out of which come 8 or 9 on both sides is somewhat thicker. The Bloffom is yellow, and without the least Scent. Garcias says this Tree is somewhat less than a common Crab-tree, its Leaves like a Peach-tree, with a white Blofform. It has a pale, green and smooth Bark; out of which, if cut with a Knife, issues a Milk-like Juice, more viicous than that which icomes forth out of the Macer Tree, bitterish of take; the Malabar Phylicians assign

it a cooling quality. This Tree affords an infallible Remedy against all kinds of Bloody Fluxes; provided the gross ill Humours have been purged away before, without which the Patient will foon have a relapfe. The Malabars (according to Garcias) prepare a compounded Water out of the Root unto which they attribute great Virtues against the Bloody Flux, they take 8 Ounces of this Root well beaten to Pouder, and infused in Whey and the Liquor of boil'd Rice, unto this they add the Seeds of Purfley, black Cummin and Coriander each an Ounce and a half; of the Myrobalan Rind 7 Drachms, and fresh Butter 2 Ounces; This they distil, and mix a quartern of this diffill'd Water with half a quartern of Arak. and give it the Patient. They apply this Water also in form of a Clyster in the night time, by reason of the excettive Heat of the days in those Parts. Inwardly they commonly give it twice a day, arin the Morning about fix a Clock, and in the Afternoon about two. Their Diet is Rice mix'd with Far; and Chickens boil'd in the Decoction of Rice, which they call Kenje in their Language, but the use of Wine is absolutely forbidden, unless it be in an inveterate bloody Flux, to keep up the Spirits. Some give only the Juice of the Shrub, whilst green, of which they give dequartern and a half in the Morning, and as much in the Evening; and to take away the bitterish taste, allow the Patient to drink a little Whey after it. In case of necessity they mix some Opium with it. It is also a good Remedy to strengthen the Stomach, and to stop Vomiting, if taken in Mint Water, or mix'd with some Mastich pouder'd. The Root taken inwardly with the Detoction of Rice, or applied ouwardly is very good against the Piles. The Decoction of the Leaves, and those of Tamarinds, make an excellent Fomentation for swell'd Legs, held over the hot Steam, and a Cloth dipp'd in the same Decoction is with good Success applied in the Lookness and

The third fort of those Vegetables which Pavate or are tis'd here against the bloody Flux, is Vasa Vesti call'd by the Malabars Pavate, and Vasa Vesti by the Brahmans, and Canarins, and Arbor contra las erisipolas, i. e. The Tree against the St. Anthony's Fire. It is a Shrub not above 8 or 9 foot high, with a few Branches and Leaves, refembling the small Leaves of Orange-trees before they come to their full growth, green on both sides; The Blossom is white and small, the Seed round, in bigness like to that of the Mastich-tree; dark green at first, which turns black as it ripens. The Stem and Tacks are of an

## Mr. John Nieuhoff's Voyages

Afh-Colour, the Root without either Scent

1 6 6 2. or Taste, except that it is somewhat bitterish. Among the Fruit Trees of Malabar, that Jambos or which the Inhabitants call Jambos, and the Portugueses Jambeiro, must not be pass'd by in Silence. The Malabars and Canarins call the Fruit Jambali, the Arabians Tufa India the Turks Alma, and the Persians Tufat. It is the common Opinion, that this was first of all for the Pleasantness of its Bloffom, and Excellency of its Fruit, transplanted from Malacca (where it is found in great plenty) into all the other parts of the There are two kinds, resembling one another in most respects, except in their Fruit, which is somewhat different. Both are not unlike, as well in shape as bigness to our European Apple Trees, and will grow without much Cultivating in any ground, and bear Fruit within Years; they take Root very deep, a thing feldom observ'd among the Indian Trees. These Trees are of a pleasant Aspect, spreading their Branches to the height of a good Plumb-tree, The Bark, as well of the Tree as of the Branches, is of an Ash Colour and fmooth; the Wood brittle; the Leaves also resemble those of the Plumb-tree, but are somewhat more pointed at the end, being a Palin in length, and not unlike the Iron point of a long Pike or Launce; the tipper fide is dark, and the undermost pale green, with a straight Vein in the middle, which fends out divers others on both fides. The Bloffoms are both for Scent and Colour like our Roses, but inclining more to a Pur-ple Colour; The first is of the bigness of a large Pear, or of a Goofe Egg, or rather bigger; They are of two forts, one of which is a dark red inclining to black, generally without Stones, excelling the other in taste; the other is pale red, has a longish white Stone, of the bigness of a Peach Stone, cover'd with a white rough Skin; This tho' inferiour to the former, yet is of a most pleasing taste. Sometimes the first is absolutely red, and these are of a purple Colour, and smells like a Rose; The Fruit is cover'd with so thin a Peel, that no Knife can separate it from the Pulp, which is accounted cold and moist; and so are the Bloffoms, notwithstanding which, they are very well fcented; and for that reason in high Esteem among the Inhabitants. The Fruit is commonly eaten before Dinner, or at the beginning of a Meal; neither are they useless in Physick, both the Fruit and Flowers preserved, being prescribed in violent burning Fevers, having besides their cooling quality, a certain Virtue of comforting the Spirits. This Tree may well be accounted among the number of these,

which by the Excellency of their Fruit, and the agreeableness of their Flowers, surpri- 1662. fes the Beholders; for, whilst you see one fide of the Tree bare of Leaves and Bloifom, the other is stor'd with Fruit, which last till the other side begins to renew its Leaves; so that in one and the same Tree, you fee a continual Spring and Autumn at once. Thus you never can cast your Eye upon this Tree, but you meet there either with Bloffom or Fruit; and as the Bloffom drops underneath on the ground (which is frequently cover'd with those purple colour'd Flowers) others come forth in their stead; and whilft some of the Fruit are ripening. others are to be gathered. The best way to gather their Fruit, is, to shake the Tree, then they fall with ease, but if you endeavour to pull them off, the Tacks are apt to break.

The Fruit Karkapuli call'd Kerkapoli by the Canarins, is in shape and bigness like an Orange; they are green at first, after-Karkawards turn yellow, and when ripe, white, puliof fiveet tafte, but a little tartish. In the Center of the Pulp lies the Seeds, flat and long, of the bigness of a Joint of a Finger,

and are of a dark brown Colour.

The Tree which bears this Fruit is very tall, call'd Koddam Pulli by the Malabars, fometimes Otta Pulli, and by the Brahmans Koddar Danubos, by the Inhabitants of the Isle of Pulli, Ceylon Chorokas; The Feuit is eaten, and used in Physick among the Indians, being accounted an excellent Remedy against Loofeness, especially if occasioned by too much Venery. Besides which, the Fruit beforc it is quite ripe, or the Juice of it mix'd with Butter-milk, or the Fruit dry'd and pouder'd mix'd with Butter-milk and boil'd Rice, is excellent good to acuate the Appetite of the Stomach. This Juice also, as well as the dry Fruit pouder'd, is accounted a good Remedy against the Dimness, Cataracts, and other Infirmities of the Eyes; they apply the Juice mix'd with fome other Herbs to the Nail of the great Toe, on that fide, where the defect of the Eye is. The Midwives give it to Women lately brought to Bed, to expel the After-birth, and produce plenty of Milk for Suck. This Fruit, when dry'd, is transported to Foreign Countries. There is another kind of this Tree, bearing a round Fruit and fweet, of the bigness of a Cherry, call'd Karkapuli by Mr. Dinstroten; This Tree is call'd Karue Choraka by those of Ceylon, i. e. sweet Choraka; Out of the Bark of both of these Trees, if flit with a Knife, iffues a Gumm, The mit of call'd Guera, but that which comes from Aloes the Kanka Choraka is the best.

The use of Aloes Leaves is very frequent mong the among the Majakars, a Purge they boldly

## and Travels to the EASTINDIES.

give not only to Children, but also to Wo-6 2. men with Child. They take of the Aloes Leaves 3 Ounces cut very small, these they boil with two Drachms of black Salt, over an casic fire, and after they have strain'd it, add to it an Ounce of Sugar, and so let it stand the whole night in the Air. The next Morning about fix a Clock they give the Patient this Decoction cold, ordering him to abstain from sleep, and to walk about to promote its Operation; Three hours after he hath taken it, they give him a · little Chicken Broth, with a few Grains of ·Mastich in it, and an hour after that allow him to cat, and to take a little Wine of the smallest fort. They either increase or diminish the Dose of the Decoction, according to the Constitution of the Patient.

There grows in Malabar a certain Fruit of the bigness of a Hazle Nut, but is not quite so round and white; It grows on the Tacks of a certain Shrub, which they sow; It has no peculiar use in Physick, tho 'Scrapio ascribes to it a Virtue of augmenting the Seed, and promoting the Birth in Women; the same the Malabars do to this day, who evique tall the Fruit Chevique lenga, and in some places Kunkas, and those of Cambaiak Karpaia. If Garcias may be credited, this is the fame Fruit described by Serapio by the broken name of Habel-culcul, whereas it should have been Hab-alcul, which signifies as much as the Seed of Culcul.

The Tree call'd Kumbulu by the Malabars, and Bon-Varo by the Brahmans, grows very tall, with a Trunk of that Thickness, that a Man can scarce grasp it. The Leaves are a Span, and two or three Inches long, and two Palms broad, woolly at the end of the Stalks which are round, long and thick; at the Extremities of the Tacks, which fprout forth out of the Branches grow certain yellow Flowers in Clusters on short Stalks, confifting of five round and thick Leaves. After these comes a Fruit that's like a Pear, full of Juice, the Pulp being of a yellowish Colour, and a sweetish taste, but the Juice when press'd out is deep yellow. They are green at first, next of a pale yellow, and turn reddish at last; In the Center of the Fruit is a white, smooth Stone, shap'd like a Pear, with a small Ker-The Decoction of the Root mix'd with a little Rice, is a good Remedy against the Ague, which often follows the Gout or Rheurzatism. Taken in Butter-milk, or mix'd with the Oil of Sirchelem, it expels the Wind, and eases the Pain; and the Juice of the Leaves taken with Butter-milk, is good against the Colick.

The Tree call'd Ganschi by the Malafars, and Schivanni by the Brahmans, grows in fandy Grounds a great height and thickness, so that a Man can scarce grasp the 1662. Trunk, which as well as the Branches has a Bark of an Ash colour without, but green within. The Leaves hang on long, round and green Stalks, being above a Span in length, and two Palms broad, of an oblong Figure. The Bloffoms fastned to Stalks which are pale green, fweet, round and thin, each Flower confifting of no more than three, and feldom of four Leaves. After these comes the Fruit, which is of a triangular Figure, flattish; andof a green Colour, hanging on long and green Stalks, the Seed being triangular, and the Pulp very substantial; The Decoction of the Root is used against the Gout, and apply'd to the affected part. Of the Tree Palega there are two kinds; The Tr.e

one is call'd Palega-Pajaneli by the Malabars, Palegiand the other barely Pajanel. The Palega-Pajameli-Pajaneli, called Davandiku by the Brahmans, is very tall, with a Trunk enough for a Man to grasp, having an ash-coloured Bark, as well as the Branches, which grow ftreight upright of a confiderable thickness. The Leaves hang on Stalks which shoot forth both out of the Stem and Branches of the Tree. On the extremities of the Branches grow certain clusters of Flowers, shap'd like Bells, confifting of fix thick Leaves; whitish or pale yellow within, and streak'd with red on the out fide, the Scent of which is offensive to the Nostrils. The Fruit, which follows the Flowers, is about three Spans long, of the breadth of a hand, and an Inch thick, with a dark green Peel. The Pulp, juicy and tender at first, but grows hard at last; the Sced is very flat. The Bark of the Tree pouder'd and mix'd with Wine, applied to a Wound, or broken Bones, heals them. The Decoction of the Root, is good against the Dropfie; and the Leaves, whilst yet very young, mix'd with Malabar-Saffron, cures all forts of Ulcers, if apply'd to them out-

The second kind of the Pajaneli, called The second Davandiku by the Brahmans, is likewise a ve- kind of ry tall Tree, whose Branches shoot forth Pajaneliupright to a great heighth; it delights in fandy Grounds: The Root spreads at a great distance, having a thick ash-coloured Rind. The Trunk is of that thickness, that a Man can scarce grasp it, of a brittle Wood, with a dark ash-coloured Bark-The Flowers are, like the former, shap'd like Bells, but have no more than 5 Leaves. The Fruit is the same: Of the Juice of the Leaves, and that of the Fruit Kareka, of Mirobalans, mixt together, the Malabars

make a black Dve. to Dve their Mourning

# Mr. John Nieuhoff's Voyages

Cloaths with. The Decoction of the Rind of the Root, dispels hard Tumours if they

be Fomented with it.

Of the Tree Pala, called Santeru by the Brahmans, there are four kinds; 1. Pala; 2. Kurutu Pala ; 3. Kadaga Pala ; 4. Kaihotten Pala : The first kind, called only Pala is a high Tree growing in fandy places, and fpreading its Branches into a great circumference: The Root, which has a dark yellow Rind, reaches very deep into the Ground, and contains a milky Juice: The Trunk is two or three fathoms thick, the Bark of an ash-colour, as is likewise the Bark of the Branches. The Leaves grow four or five together on Stalks of an oblong Figure, and towards the Stalks full of a milky substance; The Flowers grow in clusters, having five whitish Leaves of a ftrong Scent, but offensive to the Brains. The Fruit which comes immediately after the Blossom, do likewise hang in clusters on small Tacks, being green Husks of about two Spans length, but small and flat, full of a milky Juice or Substance, as is the Tree it felf, which produces Fruit but once 2 year, viz. in January.

The second kind of Pala, is by the Malabars called Kurutu Pala, by the Brahmans, Kudo; being a Tree from fix to twelve foot high, the Trunk about the thickness of a foot, with an ash-coloured Bark, as well as the Branches. The Leaves come forth out of the Branches, with their Stalks, being of an Oblong figure, and pointed at The Flowers grow on the extrethe end. mities of the finall Tacks, are white, bigger than those of the first kind, and have five long Leaves. The Fruit grows likewife in clusters, being of an Oblong figure, dark green at first, and as they ripen turn yellow. The Husk contains five, fix, or feven Seeds. The Tree bears Fruit all the year round; but most in the rainy Season. The Bark of the Tree beaten to Powder and taken in warm Water, is good against the Loofe-Piles, but if taken in Milk, ftops

the Bloody Flux.

The third kind of Pala, called Kadaga-Pala by the Malabars, and Alego-Kugo by the Brahmans, is no higher than the Kuruu-Pala, and delights in fandy Grounds: The Root does not go to deep underground as that of the Pala, the Bark is of a dark brown colour. The Trunk is of a foot circumference, like the fecond kind, but the Leaves and Bloffom being also like the fame. It bears long Husks, like the Pala, but are somewhat thicker, of a green colour, a Span long and fall of a milky Liquor. The Bark of the Trunk beaten to Powder, and taken in Butter-Milk, stops the Loosenes; and the Rind of the Root,

taken in the fame manner, cures the Bloody-Flux. The Decoction of the Seeds is given in Burning-Fevers, and kills the Worms. Kaikotten The fourth kind, called Kaikotten-Kala, is Kala, very near the fame with the third.

There are two kinds of the Tree called Parva by the Malabars; the first they call Tindaparva, and the second Anaparva, and the Brahmans Bendarli. The Tindaparva grows to a great height in sandy grounds, having a thick whitish Root, with a soft Rind: The Trunk is so thick that a Man can scarce grasp it with his Arms, having an ash-coloured Bark as well as the Branches, which underneath the Bark are of a The Leaves which dark brown colour. are long, and pointed at the end, hang on very fhort Stalks; as do likewife the Flowers, confisting of four pale-green and pointed The Fruit are a kind of round Leaves. Berries, with a very thin peel, green at first, afterwards inclining to white, and turns red as they ripen. In the Peel is enclosed a round Kernel. The Root beaten to powder and taken inwardly, is a fovereign Remedy against Epileptick Fits; and the Decoction of the Leaves disperses all pain, if the affected parts be well formented with it.

The Tree Kavalkan, as the Malabars call it, and Bankar by the Brahmans, grows in stony and sandy grounds; Its Root, which is very thick, and covered with an ash-coloured but sostish Rind, stretching very deep underground. The Trunk is so thick, that a Man can scarce grasp it with both his Arms, covered with a thick Bark, of an afh-colour without, and pale-green within. The Wood is also white, and may be drawn into Tread. The Leaves are of an Oblong figure, a Span and 2 or 3 inches long, pointed at the ends, hanging on long round and green Stalks: The Flowers confifting of five small Leaves sprout out in clusters, with green and hairy Stalks. The Fruit comes forth in bunches, three, four, or five together, being of the shape of an Egg, with a thick and hard Rind, containing nine or ten Beans of the length of a Finger each, but round and smooth, with a double Peel: These Beans when roasted. are good Food: This Tree bears Bloffom but once a year, viz. in May, and is not used in Physick among the Malabars.

Of the Tree Ambalam there are two kinds the Tree in Malabar; One is simply called, Ambalam, Ambala or Koduko Ambado, (i. e. Sweet Ambado) by the Brahmans; the other, Kat Ambalam, or Pee Ambalam. The Tree Ambalam grows to a great height in fandy Grounds, owith its Branches not spreading but upright. The Root which is very large spreaching with many Twigs under-ground. The Trunk is of a great circumference, cover

with

with a very thick Bark; the Wood being 62. very foft: The Leaves hang on finall green Stalks or Sprouts, in Bunches of five together; they are generally as long again as they are broad, smooth and soft; and of a light-green on both sides. Those of a light-green on both fides. Leaves which are nearest to the small Twigs, are not fo large as the rest, of an agrecable fcent, and tartish, not unlike the Rind of the Indian Mango's. The Bloffom or Flower do likewise come forth out of finall and green sprouts, are of a whitish colour, shaped like Stars, having five or fix Leaves. The Buds of these Flowers are round, and green at first, but turn white before they open; which when it happens, the Leaves fall from the Tree, which continues bare as long as it stands in Blossom, but as the Fruit grows new Leaves come forth by degrees. The Fruit grows in cluthers, being of an Oval figure, and pretty hard, not unlike to the Indian Mango's: Before they come to maturity, their Rind is dark brown, and full of foure Juice, but when they begin to ripen, turn light green, and at last yellow, of an agreeable tartish tafte, and are Eaten by the Inhabitants. In the midt of the Fruit is a very large Stone. This Tree bears twice every year, The Root if viz. in January and May. thrust into the Matrix stops the superstuous Monthly times. The Bark poudred and taken in Butter-Milk, is good against the Loofeness; and so is the Juice mix'd with Rice. The Decoction of the Wood is a good Remedy against the involuntary Emillion of the Seed; and the Juice of the Leaves mixt with that of the Fruit inflill'd into the Ears, eases the pain in those

The fecond kind of the Ambalam, Kat Ambulam, or Pee Ambulam, as the Malabars call it, and Kaduko Ambado by the Brahmans, retembles the first in a great many respects, except that its Leaves are less; and so are the Fruit, being fomewhat rounder, and the Talte a mixture of foure and bitter, which is the reason they are never eaten. Kat Ambalam, or Pee Ambalam, signifies in the Malabar Tongue, as much as Wild Ambalam, and Kaduko Ambado among tre Brahmans as much as the Bitter Ambado from its tafte.

The Tree called Agaty by the Malabars, and Agasto by the Brahmans, runs up to the height of ten or twelve yards, the Branches growing streight upright: The Trunk is to big in circumference, that a Man can scarce grasp it, having a very soft Wood, and the Pith much tender. If an Incision be made into the Bark, a certain

watery Substance distills thence, which turns to Gum afterward. The Leaves come 1 662. forth out of small and green Sprouts or Buds, being near a Span and a half long, and growing two and two on long green Stalks. The Flowers confift of five small Leaves, and grows in clusters on Stalks of a pale-green colour. After the Bloffom come thin, straight and green Husks of about a Span in length, and an Inch in breadth, having a thick Peel; in which are enclosed certain Beans, not unlike in tafte to, but fomewhat finaller than, our French Beans, being white at first, but turn pale-green by degrees, and are very good Food. This Tree bears Fruit twice or thrice in the Rainy Scaton, and indeed, the whole year round, but not to frequently in the Summer. The Juice of the Bark of this Tree, either by it felt, or mix'd with Honey, is an excellent Remedy against all the Inflammations of the Throat and Mouth. The Juice of the Leaves taken into the Notirils like a liquid Snuff, cures the Quartan Ague.

The Tree call'd Appel or Nalla-Appella, The Tree by the Malabars, and Karo-Nervoloc by Appel. the Brahmans, have a very thick and hairy Root, the Rind of which is of a Saffron colour. The Circumference of the Stem is of five or fix Palms; the Branches growing directly upright: Its Wood is white, but the Peel dark red. The Leaves sprout forth out of the Branches, in finall green and fourre Buds, the Stalks being round, very short, and of a palegreen colour, commonly two and two together: The Leaves are of an Oval Figure, round near the Stalk, and pointed toward the end. The Flowers grow in clusters, confisting of four round white and fmall Leaves each. The Fruit are round Berries, having a round, Stone in the middle; are pale-green at first, but when ripe, turn black. The Tree bears but once a year. The Root of this Tree poudred and taken in Water, frops the Loofeness; and Boil'd in Sca-Water, and applied outwardly, appeales the Pain of the Gout. The Decoction of the Leaves is a good Remedy against the Pain of the Belly and Stomach, occasioned by Wind; the same effect has the Oil drawn out of the Root, if anointed on the painful part: This Oil is yellow and transparent, of an agreeable Scent, and a picquant bitterish talte.

The Tree call'd, Schageri Kottam by the Malabars, and Sahali by the Brahmans, fel-Schageri-dom exceeds the heighth of fix foot, and delights in fandy Grounds: Its Stem is of Ddddz

the thickness of a Man's Arm, the Root 1 662 red within, and black on the out-fide. The Leaves sprout forth out of the Twiggs, and hang on round, and green Stalks; they are very large, and pretty long, broad towards the Stalk, and pointed at the ends; the upper-fide dark green, and the undermost lide of a pale green colour. At the very extremities of the small Twiggs, grow the Flowers in clusters, on small Stalks, confisting of four or five great Leaves, of a white, and pale yellow colour. Fruit is in shape like an European Pear, dark green at first, and when ripe, turns black; it is of a sweetish taste, and eaten by the Malabars. The Juice of the Leaves boil'd with Sugar, and taken inwardly, strengthens the Liver, and stops the loofeness

Kolinil.

The Tree call'd Kolinil by the Malabars, and Scheara Punka by the Brahmans, does not grow above two or three foot high, its Stem being not above three or four inches thick, the Branches spreading round about it. The Wood of the Stem is very hard, and the green Bark which covers it, of a picquant bitterish taste. The Leaves come forth out of small and green sprouts, hanging on very small Stalks; they are of an Oval Figure, round at the ends, and formewhat pointed towards the Stalks, of a sharp and bitter taste: The Blofforn is like our Bean Blofforn, having each four Leaves: The Fruit is a kind of a fmall, fmooth, and long husk, yet not above two or three inches in length, are green in the beginning, and dark red at last, having within them certain Beans, which are green at first, and black at last. This Tree produces Fruit twice a year, once in the Winter, and once in the Summer. The Root powdered and boiled in Milk, or the Juice of the Cocoa Tree, is a good Remedy against the Falling Sick-

Atu, or

Fig-trees. Malabar, call'd by one general name Atu; the hrit they call Arry-Alu, the second Irry-Alu, the third Arêalu, and the fourth Pera-lu. The Fig-tree Atty-Alu, call'd Roembadoe by the Brahmans, grows to a great heighth, foreading its Branches at a good diftance: The Trunk is of that thickness, that a Man cannot well grasp it; the Fruit, is round, but flat, and lesser towards the Stalk, and fomewhat hairy and rough, not unlike our Figs: Before they are ripe, they are green and full of a Milky Juice, but turn red when ripe, and are not so juicy. Within the pulp, you see small Kernels like in our Figs, and as foon as they are

ripe, the Pismires get into them. These Figs are the only ones that are eaten by the Malabars, and eaten raw when ripe, are accounted good against the Luoseness: If the Inhabitants may be believed, these Trees are produced out of the Seed of the Fruit, ofter it is eaten by the Ravens, and difcharged again with their Dung.

The fecond fort Itty-Alu, and Areka Goli Itty-Am. by the Brahmans, is the smallest of all the four kinds, its Trunk being to be graspt by any ordinary Man. It bears a small and round Fruit, which is green, whilft not come to maturity, and full of a Milky Juice; but when ripe, turns yellow. It has also abundance of Kernels, like the first

kind.

The Tree of the third kind, call'd Area- Atea lu, and Bipaloe by the Brahmans, is as tall as the former, spreading its Branches very loftily, at a good distance: The Trunk is of fuch a thickness, that two Men can scarce grasp it: The Fruit is like that of the Itty-Alu, small and round, and not fored, as that of the Atty-Alu. These Pagans have Dedicated this Tree to their Idol Viftnu, who, they fay, was born under this Tree, and took of its Bloffoms: For this reason it is, that they furround it with a Stone Wall, and Worship it: The Christians call it the Devil's Tree.

The fourth fort, cak'd Peralu, and Vad-Perali hoe by the Brahmans, exceeds all the others in heighth; for which reason, the Brabmans have given it the name of Vadhoe, i. c. large. The Fruit is much the same with that of the Atty-Alu, but very round, and of a very high red colour, being covered with a kind of a Lanugo, or Woolly substance when they are ripe.

Of the Tree call'd Paniti by the Malabars, are likewise four different kinds, viz. Pariti, Bupariti, Kudupariti, and Schem-Pariti. The Tree Bupariti, call'd Valli-Kari-Kapoesi by the Brahmans, is a very high Tree, with very lofty Branches, growing in the shape of a Crown round the Tree, which is never infelted with any ln- The 1 fects. The Leaves refemble in shape, a Buant Man's Heart, of the bigness of the Palm of a Man's Hand, somewhat pointed at the end, of a lovely green on the upper-fide, and a pale green on the other: The Flowers are of the shape of Bells, consisting of several white Leaves. After these, comes a certain round spongeous Fruit, which emits a gummous Liquor, if an incision be made with a Knife: For the rest, the Tree produces Flowers all the Year round.

Pariri, or the Tree of the second kind, call'd Karikaprefs by the Brachmans, grows to the height of 18 foot, the Trunk being however within the compass of a Man's grasping. The Flowers are like those of the Bupariti, only somewhat lesser; and after these come certain Oval Sponges, covered with a Lanugo, or nairy substance. The Blossom bruised ind mix'd with Womens Milk, and inused into the Ears, cures the Head-Ach.

The Tree Kuduparity of the third fort, alled Kapuffi by the Brachmans, runs to he height of 12 foot, tho' its Stem is ot above two Palms thick. The Flowers re likewise like Bells, of the same shape id colour as the precedent, only that ley are a little leffer, and inclining to The Spongeous Fruit are ree corner'd, pointed at the top, and ithin diffinguish'd by three Skins in as any different Concavities, each of hich contains three or four Seeds enofed in a thick white Lange or woolly bstance: This Tree is never without offome throughout the whole year. he Leaves bruifed and mixed with Cows ilk, and apply'd outwardly to the Head, ocures Sleep, and confequently cures e Head-Ach. The Fruit bruifed and ken inwardly in Water stops the Bloody The fourth fort is very near the me with the third.

Of the Tree Mandaru are likewise ur different sorts, viz. Chavanna Manru, of which two bear the same name; luita Mandaru, and Kanschenapou. The It call'd Chavanna Mandaru by the Mavars, and Tambido Mandaru by the achmans, grows up to the heighth of 24 ot, spreading its Branches far round out. The Trunk is not above a foot ick. The Leaves hang on very short alks, being even in two at the upperd, like Goats Fect, whence the Portueses have given them the Name of Pee The Flowers have five Leaves an oval Figure; among which, the rgest and broadest is rounder than the ft, white on the outside, and of a Pure colour within; the other four are ore Oval, of a pale red colour withit, but high red within; two of those ur, viz. those next to the biggest Leaf, e on the infide whitish towards the ittom, but the other two all over of a ose colour within; from which Roselour the Malabars have given the name Chavanna Mandaru to this Tree. In me of those Leaves you see streaks as blood, which they say are the moments of the Blood of St. Thomas,

who preach'd the Gospel on the Coast of Malabar, and in the Isle of Ceylon, 1 6 6.2 After these come certain flat, long, and smooth Husks, of the length of seven or eight Inches; in which are enclosed flat and long Beans, which at first are ripe. but afterward turn dark red. This Tree produces Flowers all the year round, but in the rainy Seafon in greater Plemy. The Flowers preserved with Sugar, are used with good Success, for a Laxalive, as we do with our Rofe-Sugar. The fecond fort of the Chavanno Mandaru is a very tall Tree like the first, with such like Branches, a Trunk of the fame thickness, and the same Leaves, only somewhat larger. The Flowers have five oval Leaves of a Purple colour both in and outside, with white streaks. Husks of this Tree are the largest of all the four kinds; being two Spans long, an Inch thick, flat and smooth; The Beans are the same both in shape and colour as the first; and this Tree Blosloms at the fame time, and in the fame manner. The Flowers of this Tree eaten raw, are Laxative; The Bark, Flowers, and Fruit, bruifed together and mix'd with the Liquor of the Decoction of Rice, is a fovereign Remedy to bring to Maturity, and to open all forts of Tumours. The Bark chaw'd, cures the Tooth and Head-Ach.

The third fort, call'd Velutta Mandaru Velutta by the Malabace, and Dove Mandaru by Mindert the Brachmans, is not above fix fort high, and an Arm thick; the Leaves are Cloven like those of the first, but the Fl. wers white without the least Scent, round Leaves. The Husks are ... : fo big as those of the others, viz. not above four or five Inches long, and an Inch thick, for the rest, stattish and smooth The Beans are long and round, of a yellowish colour, neither to big nor fo red as those of the Chavanna Mandaru. This Tree Blossoms two or sirree times every year, but chiefly in the Rainy Sea-fon. The Flowers bruised and mixed with some Pepper, and applied outwardly to the Head, cures the Head-Ach; and if you wash your selves with the Decoction of the Root, it lays all forts of Itching of the Skin.

The fourth fort called Kanschenapou by Kanschethe Malabars, and Kamt fanu by the Brach-napou. mans, is a Tree which runs up to the heighth of 12 foot or more, with lofty Branches, but the Stem is not above half a foot thick. The Leaves are Cloven like the rest, but not so big, very strong scented if rubb'd betwixt your Fingers,

efpe-

of pecially in the night-time: The Flowers 1662. confift also of five Leaves, of a pale-yellow colour without the least Scent. The Husks are the same with those of the Chavama Mandaru, very smooth on the outfide, but somewhat hairy whilst very young. The Beans are small, in shape and colour resembling those of the Velatta Mandaru. The Tree bears Flowers twice or thrice a year, but most plentifully in the Rainy Seafon. Decoction of the Root, taken inwardly, is a good Remedy against the Worms and Inflammations of the Liver, and the Piles. The Bark poudred disperses Tumours, cleanfes the Wounds, and is an excellent Narcotick.

11 71.3 Nilikamaram.

The Tree called Nilskamaram by the Malotars, and Anvali by the Brachmans, grows up to the heighth of 24 foot, tho' its Trunk be no bigger than a Man's Arm, which as well as the Branches, are covered with a black Bark. The Leaves sprout forth out of thin and round Twigs, with very fhort Stalks; they grow two and two together, of an oval Figure, and very small, being dark green on the upper fide, and light green on the other fide. Every night the Leaves close up, like I ulips; The Flowers grow on finall Twigs in clusters, confishing of fix very finall Leaves. It bears a round, but flattish Fruit, of a pale-green colour when tipe, and somewhat transparent; the Pulp being likewife green and very Juicy, of an agreeable aftringent tafte: In the midst is a Stone, distinguish'd into fix different Concavities, each of which contains a fmall triangular Seed or fmall The Fruit is much used by the Malab er: The Water diffill'd from this Fruit cools the Liver, and dry'd and pouder'd, and mix'd with sowre coagulated Milk, flops the Bloody-Flux.

Odollam.

The Tree called Odollam by the Mala-I and Uro by the Brachmans, grows to the heighth of 18 foot, its Trunk being fo thick as scarce to be encompass'd by a Man with both his Arms, with crooked Branches. The Wood of the Stem is very foft, and the Pith red, the Bark of an ash-colour, bitter, and very hot upon the Tongue. The Leaves grow scate tering upon the I wigs and long Stalks, are of the shape of a Tongue, thick, finooth, dark-brown on the ripperfide, bitter and biting upon the Tongue. The Flowers grow in clusters like Cornets, on long, thick, and green Stalks, having five very white and pointed Leaves. It bears a kind of ground-Apple with a green and smooth R ind, under which is a white Pulp of a waterish \*~ taste. The Stone which is in the midst is shap'd like the Heart of a Man of a pretty large fize, with two Kernels within it. Some will have this Tree to be the same which the Indians call

The Tree called Nurotti by the Mala- Nuro bars, and Kautu by the Brachmans, rifes up to a great heighth, its Branches fpreading very lofty round about it: The Trunk is fo big, as scarce to be grasp'd by a Man, the Wood white, with a thick Bark, which is green without and red within. The Leaves are feartered here and there on the Twigs with short, round, and green Stalks, of the length of a Span, and the breadth of four or five Inches, of an oval Figure, pointed at the ends, not unlike the Laurel-Leaves. The Flowers sprout forth fix or seven together out of the extremities of the fmall Twigs, confifting of three rows of small Leaves. The first row makes up a Star of five small, pointed, and dark-brown hairy Leaves. The fecond row contains five round and finall Leaves of a rofe-colour, and the third or outermost row, five pointed green Leaves. The Fruit grows on short and thick Stalks, being of an oval Figure, having a rose-coloured rough Peel, and within a large yellowish Stone, containing 10 or 12 Kernels of an oleaginous substance. This Tree produces both Flowers and Fruit in great plenty all the year round: From the Kernels or Seeds an Oil is drawn, which has an Anodine Quality, and applied outwardly, cures all forts of Scurfs and Itchings: The same Oil, mixt with a certain Fiuit, the Malabars call Palego, kills the Corns in the Feet, if applied to the affected part.

Of the Tree call'd Kaniram there are Kanir four several Kinds: One is called Kaniram only; the second Karakaniram, and the third and fourth Vallekanin am. The Tree called Kaniram, and by the Brachmans, Karo, grows up to a great heighth, with lofty and far spreading Branches. The Root is very thick, exceeding bitter, and covered with a yellow Rind. The Trunk is of that thickness as scarce to be grasp'd by two Men, having a dark ash colour'd Bark. The Leaves, which are of an oval Figure, are very broad in the middle, and pointed towards the ends, of a bitterish taste and an odd fcent, grow two and two over against the other; The Flowers sprout forth in clusters, having each five or fig pale-green and pointed Leaves. No

fooner

From hence we went to the King of the time have the capital City of the time have the fame River.

I and Mr. Component of the fame River. in the Morning, and Arriv'd at 10a Clock before Noon at Carnopoly, where we took up our Lodgings in a House near the River side, which the Dutch East-India Company, some Years before had purchas'd from the King. It is pretty large, but not very convenient, being Built according to the Malabar Fashion. with abundance of Corners and Inletts oddly contriv'd: 'The Gardens are well Planted with Palm-trees, for the use of the House. I had no sooner given notice of my Arrival, but I was fent for to After the usual Complithe King. ments, to be paid to the Malabar Kings, I deliver'n the following Ola (Letter) from Mr. Hultart to the King.

James Huitart, Councellour of the Indies, Governour and Director of the Isle of Ceylon, and the Malabar Coasts, sends his Ola to the King of Marten.

Illustrious Prince.

Othing could be more Wellcome to me, than to understand at my first Arri-7 to val in these Parts, that your Majesty had ing. always liv'd in a good Correspondency with our Company. To shew your Majesty, what an extraordinary value we fet upon your Friend-(hip, me have fent Mr. John Nieuhoff Captain of Koulang, in order to enter with you into a more strict League and Friendship. We hope your Majesty will give him entire Credit, in what he shall propose to you, which I shall be ready to acknowledge upon the like Occasions. God preserve and give your Majesty

a long and a happy Life.

Cochin 2 Feb. 1664.

James Hustart.

Afterwhich I gave theKing a more particular Account of my Commission, unto which he answer'd that he would consider of it till the next day; accordingly I was fent for at the appointed time, when I found the King furrounded with a great Number of his Courtiers; and among the rest some Mahometan Merchants; He Ordered immediately two of them, and one of his Captains, who was in great efteem with him, to Treat with me concerning

Company; but as I was fufficiently inform'd that most of the Mahometan 166 Merchants here drove confiderable Traffick to Cananer, to the no small prejudice of our Company, I did not think fit to Treat with them, if possibly I could avoid it, which made me to tell the King, that I had no Commission to Treat with the Mahometan Merchants, but with His Mijesty; That the Company at present offer'd Peace to the whole Coast of Malabar, in which, if his Majesty was desirous to be inrighing Trade, he might hipfielf Treat with me, but if not, Grant me deave to Depart. The King after a little pauling, defir'd that my Propositions might be drawn up in Writing, which I did accordingly; our demands were,

To forbid the importation of Amsson, the Pecling of the wild Cinamome, and the exportation of Pepper.

ThesePropositions the KingOrder'd to to be Read aloud in our Presence, which the Mahometan Merchants endeavour'd to oppose with all their might: and the greatest part of the day being spent in Messages betwirt the King and us, by the Residoors, who gave an exact Account of all what pass d to the King, he gave leave for us to return to our Lodgings, and Order'd us to attend him a .ain the next day. But early in the Morning a certain Person of Quality, who nears the fecond Rank in that Kingdom, came along with the beforemention'd Captain, to tell us, that what we desir'd, was abfolutely to the prejudice of the King and Kingdom, which I endeavour'd to put out of their Heads, by telling them, that we were come with no other intention. than to establish a free Commerce with them, as we had done with most of the other Malabar Kings and Princes before, and which would turn to their great advantage; notwithstanding this they were for making feveral Alterations in each Point, and five or fix Messages pass'd betwixt the Court and us; At last they ask'd what quantity of Pepper we delir d Yearly? we answer'd them that it was no matter about the Quantity, fince we were for buying all. This Point was vigoroufly oppos'd by the Mahometan Merchants, who fain would have perswaded the King to referve part of it for them; but by degrees we overcame all these difficulties, the King having granted us all we demanded, except the Peeling of the wild Cinamome, which we did not fo ach infull upon heing a thing uncer-

iral arts's tain whether it would quit the cost to the Undertakers or not, because it was in the Kings power to fet what Price he

The King-Marten.

pleas'd upon it. The Kingdom of Marta or Marten is very near as big as that of Kalkolang, extending to the North as far as Porka; to the South it border noon the Indian Sea, and to the East, it is infrounded by high Mountains, and walk doy the fame River, upon which Cochin and Konlang lie: The capital City is likewise call'd Marta or Marten. But to the South near the Sea-shoar is another City call'd by the Inhabitants Panderatoutte, and Peffe by the Portugueses; here we built a House by the King's confent, for the conveniency of the Pepper Trade, which is always weigh'd here. There is another City belonging to this Kingdom call'd Podiogabo or Maulikara. This King pofsesses some parts of the Country in common with the King of Kalkolang, a thing not usual on this Coast, where are so many petty Kingdoms, that it requires no imall time, to diftinguish and know them from one another. The Country is well Peopl'd, here, abounding in Pepper, Peale and Beant, and the Fields near the River side, in Rice and Salt-pits. King is a Severeign Prince, he that then Reign'd being of about 60 Years of Age, very large of Body and a stern Countenance; Upon his Head he wears a Bonnet of Scarlet Cloth lin'd with Callicoe; he keeps constantly 1200 Negres in pay; His Residence is at Carnopoly, a place sur-rounded with an Earthen Wall of 20 Foot High, but appear'd much decay'd at that time: This Kingdom has long ago been Inhabited by Christians, who however were forc'd to live there 12 whole Years without a Church, viz. till the Year 1581. when the King then Reigning, not only gave them Liberty to build a Church, but also to cut Wood in the Adjacent Forests, Dedicated to the Pagan Idols. He also gave Permission to his Subjects to turn Christians, and the Jesuits had full Power Granted them, to exercise the Church Censure, and to inflict it upon those that were Baptiz'd The faid Church was Dediby them. cated to St. Andrew, because it was finished upon that Saints day.

Upon the Banks of the same River, where the Kingdom of Marten lies, is also the Kingdom of Batyma, with its City call'd Katyapery. It is commonly reported in these Parts, that the King's of Batyma made a Law, by which a Man was impower'd to kill any Woman, that should refuse him a Kindness.

By this time our Negotiation being A brought to an entire conclution; I offered 1 66 the usual presents to the King, which he ordred to be taken by him who bears the fecond Rank in the Kingdom, who, as well as feveral others of his Courtiers having been very instrumental in promoting the Treaty, we thought fit to engage to our Party by some small presents. At last we were appointed to attend before the Court in the open Air, where the King first, and I afterwards Sign'd the Treaty with our own Hands, in the presence of a great multitude of People, that were flock'd thither on purpose to be Spectators of this Ceremony. This done I took my leave of the King and The Am his chief Courtiers, and the same Even-leaves ing went aboard our Vessel, which about Martes a League from thence did ride at Anchor in the River. A certain Lord Commanding over the Country here, a Vasfal of the King of Marten, came on purpose to Meet and Compliment us and presented us with some Fowls, Pyfang and other refreshments; of whom I likewise took my leave and return'd to Koulang, where Return

l arriv'd the 9th of February. Whilst I was Negotiating with the King of Porka, the King of Kalkolang fent for me to his Court, where he Presented me with a very fine Brocado Silk-Gown, made according to the Indian Fashion; Is prese testifying his joy for the good Success we red by had had in our Negotiation with his King ! Neighbour; I return'd my hearty thanks Kalko to the King for this and all other favours I had receiv'd at his Hands, and went back agen to the King of Porka.

But to return to Koulang; no fooner was I arriv'd the 9th of Feb. at Koulang but the Queen of the same Name, sent the next day her chief Captain to receive the Customs and Cannon she pretended to be due to her by Vertue of the late Treaty; I was willing to furrender the Cannon, according to our Agreement, but could not confent to the other; and in the mean while we were preparing our Mansio (Vessel) for a Voyage to the King of Travankoor's Court, the Residoors of the King of Goerree and Bariserse Pule defir'd an interview with me, whom I gave a meeting accordingly in Company of Mr. Cherde Venne Book-keeper of the Dutch East-India Company. We saw above 300 Negroes all in a Body, who with one Voice cry'd out for the Customs, which made me after many Debates and Disputes, tell them, that I would go home, with an intention to return the nextDay to them, provided they would be

fift from these Things, that were not gran-662. ted them by the Treaty, norwere ever likely to be granted, and fo return'd to Koulang. The 12th of February, I embark'd at nine a Clock in the Evening for Actingen, ere the King of Travankoor kept his fidence then, being come thither some ys before. With break of day we found our selves near the Village of Mappul, about five Leagues to the East of Koulang, but not daring to approach the shoar with our Vessel, we were forc'd to hire an Indian Boat, which carried us fafely a shoar, notwithstanding the violence of the Waves that rowled against We Travell'd for about a the fhoar. League along the Sea-side till we came to a large River, which carried us in three ingen. hours Rowing to the Court; Here we understood that the King was just then reanotice of my Arrival to his Majesty, who fent for me by one of his Refideers; he met us on the Stairs-head, with many of his Courtiers; where I presented him with the usual respect, the Letter, with some Presents; which he receiv'd and caus'd the Letter to be read aloud, before all there present; telling me, that he would forthwith let me know his intention, and that in the mean while I might take a Walk into the Garden of the Castle, with some of his Resideors; and Discourse with them farther in a certain Grove, which he Pointed at with his Fingers. Accordingly I begun to talk more at large, concerning my Propositions, with the four Resideors, who were for Treating with me immediately upon the Subject in hand, which I told them I had no Orders to do, my Business being to Treat with the King in Person. They having given the King an Account of what I faid, brought me Word, that his Majesty, in a Matter of such Consequence could not take a resolution till next day, defiring me to have Patience till then, and presented us with Pysang and some other Refreshments. On the Westernside of the Palace is a pleasant House at the Foot of a Hill, in the midst of a very pleasant Grove from whence there is a Prospect into a very fruitful Valley, full of Rice-fields, hedg'd in with Palm-trees; This place was assign'd us for our Lodgings, our Host appearing to be a very Honest Man, but so mistrustful withal, that when we were sing to Supper, he refus'd to let us have pldiers being exasperated at this usage, whole House began to be in an Ala-

That the Devil and his ill Fortune one'd him a shame, when they brought such Lodgers 166 into his House, desiring us at the sametime to look out for another Lodging. With much ado I perswaded him, that we were no such Fello.vs as he imagin'd us to be, and fo at last with the help of a little Mony he let us have w! . we had occasion for.

The next day being the 14th of Feb. about eight a Clock in the Morning the King fent for me to Court again by a Is call's Negro; where we met the beforementi- Court. oned four Residoors at the Gate ready to receive us, we went together into the Garden, where I caus'd a Carpet to be spred under the shadow of some Trees, as they did their Indian Matts, and being feated, the chiefest of the Resideurs told me; That his Majesty was not a little dis- Proposals Satisfied at our Rurning the Royal Palace of made to dy to go to Kalkolang, I gave immediate Koulang, and that he had given him Or- kim. ders, to Treat of that as well as the other Subject with me. That the Letter sent to Admiral Hustart had been written with no other intention, than to Treat concerning the Pretensions of Prince Gondormo, and that therefore they would be glad to hear, what inftructions I had about that Matter. thought it not for our purpose to Tergi- Hu Anversate in the Matter, I told them blunt- fwer. That Gondormo might thank himfelf for his Misfortunes: For that, when our Fleet and Forces about two Years ago appear'd near Cochin, to Attack the Portugueses, our Enemies, the Dutch Admiral had fet up a White Flagg, to shew his willingness to Treat with the Queen of Cochin, which Gondormo had not only prevented, but also Attack'd our Forces, and oppos'd and still did oppose all our Designs, tending to the Re-establishment of the Government of Cochin upon its true Foundation. I further told them, that, when about two Years ago, I had the Honour to fee his Majesty at Kalikoli, I affur'd his Majesty, that we had Conquer'd Cochin, and were engag'd in an everlasting Alliance with Monta Davila, their legal Sovereign; and, that therefore Gondormo need not flatter himself with the least hopes of his Re-establishment. Of this they gave an Account to the King, who foon fent them back with another Proposition, to wit, whether he emight not be admitted as a second or third Person in the Kingdom? To make an end at once of this Dispute, lask'd them whether they did acknowledge lishes, or any other Utensils; Their Monta Davila lawful King? They anfwering they did; I Demonstrated to them, how unreasonable it was, to De-mand that one who had set up against

his legal Sovereign, should be receiv'd in fuch a Station in the fame Kingdom, and confidering the ill confequences which must needs ensue from thence, I told them, it was in vain to fay a word This made them infift no more of it. more upon the Bufiness of Gondormo, they only told us. That we had best be upon our Guard, Gondormo and his three Brothers being resolv'd to live, and to be Buried in the Kippelom-of Cochin. I answer'd him carelefly, that's had Travell'd thro' the greatest part of that Kingdom; and that I was fure there was room enough for 100000 of them. I affur'd them farther; That his Majesty of Travankoor, had been always in great efteem with our Company, and that they never doubted of his Friendship, notwithstanding he feem'd to bear so great a share in Gondormo's Buliness; That I was sent thither on purpose to enter into a more strict League with him, in the same manner as had been done with several other Kings his Horgist: ors. Whilst they were Debating this Matter, an Envoy arriv'd from the Queen of Koulang, with a Letter, in which fhe Complain'd, that she had not Receiv'd any share of the Customs, nor were the Cannon reftor'd to her; The Residoor ask'd me what the meaning of it was, and whether we would do less than the Portugueses had done; lanswer'd him, if we should follow the Footsteps of the Portugueses, we must be guilty likewise of the same enormities, in Murthering, Plundering, &c. things not Customary among us, the intention of our Company being to maintain every one in his Right, and to establish a free Commerce, without interruption; And these, said I, are the main contents of my Commission, according to which I am to Treat with all the Kings and Princes of the Coast of Malabar. After several other Debates, finding them full of Tergiversations, I roundly told them, that I found them very backward in what had been propos'd; that for my part, I had done all what I could to procure a Peace, but that they feem'd to be rather inclinable to War; and finding them somewhat puz-'zl'd by their Silence, faid, That if as yet they could find out any expedient, to compose Matters upon reasonable Terms, I should be willing to harken to them, and that, if it was for a Yearly present, or a Summ of Money, once for all, they should have it. The King be-ing informed of this Resolution, sent mi-Word back, that in a thing of this Nasure, in which feveral others belides

himself were concern'd he must like fome leifure to Advife, which die he would fend one of his Refideors to Koning, to Treat further of the Matter. I instead upon having all things dispatch'd her !. but the Residoors telling me, that the durst not urge it any more to the King for that time, I was fain to acquiesce, and to deferr it till our next meeting at Koulang, tho' I very well forefaw that this Negotiation, would meet with no small difficulties unless something more were Granted than had been offer'd hitherto. About the fame time the beforemention'd Queen sent me under hand, Word that she was very inclinable to a further Treaty, but that it could not be done till the K. of Travankoor was gone, which as it was no unwelcomeNews to me, fo Idefir'd the Residoor whom she sent to me, to use his utmost Interest with her Majesty to bring it to pass, being sensible that it was the intention of my Masters to live with her in a good Correspondence.

The Country about Attingen , has hi- Attingen therto not been describ'd by any that I know; it abounds in Pepper, of which a great Quantity is brought thither out of the circumjasent Parts. The Ancient Race of the Kings of Travankoer ow'd its Origin to Accorgen, but for want of Male Heirs, one of the Princes of Cochin was plac'd in that Throne; the King, who then Reign'd being descended from the Cochin Race of Rammerankoil, and elected King of Travankoor. The Ground where the Pepper Grows, is hereabouts strong and red; which makes the Pepper not full fo large here, as in the Valleys about Koulang and Cochin, On the Descents of the Hills you see very pleafant Rice-fields, cut out like Steps, and Water'd from the top by finall Rivulets. The King and Queens Palace are directly opposite to one another, with some Rice Fields betwixt them.

The next following day about to a Clock in the Morning, I was call'd to Is call'at Court again, where the King told me in Court Person, that it would be better to reast gam, which I be departing fain to be satisfy'd with, I took my leave of his Majesty and the Resissors, who offer'd me a Present from the King according to the Custom of the Country, which I accepted off, and went directly to the River-side, where we found our Boat, and Salling down the River came just before Sunset to Maypute, where I was met by the Resident of Tengeparnam, whom I had given notice of my coming that way. The next following day, with the sall way.

mary we reimbark'd our Vessels, and cer'd our Course by Sea to Koulang, from hence I immediately dispatch'd our Ineter to Pule de Margary, to inform of Goenthat time kept her Court ; He rethe next day with Advice, that Month before the was gone deeper to the Country, to a place call'd Pedy, about four days Journey from

Travankoer.

tnence. The Kingdom of Travankoor (thus The Kinge call'd from its capital City) begins at the Cape of Comory or Comorin, and extends all a long the Sca-coast as far as Koulang, comprehending a Tract of Ground of 20 or 24 Leagues in Length; the famous Village of Paru, belonging to the Queen of Sngnaty, being only in the midst. To the East it borders upon the Kingdom of Madure, and to the West upon the Countries of Peretaly and Kotarkery. It has feveral confiderable Villages which are inhabited by the Moors, such as Tengepatnam, Keletture, Kor typatnam and Allage. About the Year 1544. above 30 Villages inhabited by the Mikaos, who live for the most part upon Fishing, and by the Mahometans, were upon this Coast. But the Chief Cities lie Deeper in the Country, which is of a great extent all along the Mountains to Naynar near the Cape of Comorin and toward Travankoor, in all 29 great Cities and Villages. About a League and a half to the North of the Cape Comorin is the City of Kotate or Kokatti, a place of great Traffick; the populous City of Simintira, and Matadavalur, famous for its bigness, being furrounded by fix or feven other Towns; Verrage is not above a quarter of a League distance from Kotate and Tatikury, the two most considerable Places of the whole Country. Kalkolang is a very large City, being a League and a half long, upon the Confines of the Neyk of Madure. It is Situated upon a high Hill, three Leagues from Tengepatnam and 12 from Koulang; being on one fide strengthned by inaccessible Mountains, on the other by a Wall, the undermost part of which is of Stone, the uppermost of brick Work, in all 24 Foot high; The Royal Palace stands at the West end, being surrounded by a Stone-wall. On the East-side you fee the Ruins of an old Castle built on the top of a Hill, Fortifi'd with a triple Wall. The City of Kalkolang is the chief Residence of the King, who constantly keeps Garrison of 10000 Negros here; to seure it against the Neyk of Madure, who's ver is much dreaded here. It is very a VO NI.

fertile Country, abounding in Pepper, Rice and other Grains It also produces 1 6 6 wild Cinamom, the best, the whole Coast of Malabar affords; but it wants feveral things requisite for the conveniency of Life. One of the chiefest Rivers which Water this Country, is the River Mannikorin, it exonerates it self into the Sea, near Cape Comorin. The King of this Country is by some stil'd the Grea King, because he possesses larger Tereil tories, than any other of the Malabar Kings. He is serv'd in great State, and maintains abundance of Commanders, whom they call Mandigals, and many Councellors, call'd Pullas. Some ascribe to him a Superiority over Neighbouring Princes, but of this I am convinc'd to the contrary by my own experience; it is true they Reverence him, as a Potent King, but pay him no Obedience. Others will have him to be a Vassal of the King of Na singu The whole Country is well stock'd with People, who appear very well Cloath'd according to the Malabar Fashion.

The 18th of February, I fet out from The Koulang in Company of Mr. Siemert Ba- got ker, for the Kingdom of Geem ce. But em scarce were we come to Kalig. li, but one of the Residoors told us that the Queen of Goenree was a Month ago gone into the Country, and would not return very quickly, by reason of a certain Religious Ceremony, she was oblig'd to perform there, before her return; I desir'd a Guide, because I had something of Moment to Communicate to the Queen, but they excus'd it, telling me that the Ways were so Rocky and impassable, that it would be impossible for me to get thither, it being five tedious Days Journey to the Country of Peretaly, bordering upon the Territories of the Neyk of Madure. Being made fensible that this Journey could not be undertaken without great Difficulty and Charge, I thought it most expedient to leave a Letter with the Residoor, to be deliver'd to the Queen, the Contents of which were as follows.

#### His Letter to the Queen.

THat I was come hither, to offer a small Present to her Majesty, and to enter into a strict and everlasting Alliance with her; But the I was fo Unfortunate, as not to meet with her Majesty, I liv'd however in hopes, that she would not be backward in entering into a General League, which the Company had lately concluded with all the Malabar Princes; to accomplish which as we Yуу (hould nould be ready to contribute every thing 2. on our fide, so we did not question, but o that her Majesty would be pleas'd to let us know her Sentiments by the Bearer of this Letter.

Whilst I tarried here, I understood, that the Residoor of the King of Travanoor was arriv'd the 20th at Koulang China, and had notified his Arrival by our Peangatin Thome Bottancho, desiring to Confer with me, concerning certain Matters Commanded him by the King, his Mather, fince my apparture from thence. The place appointed for our interview,

prefent at the appointed riour, but and ing them to trifle away the time in Altercations and Tergiversations, I was ready to mount on Horse-back again, in order to return to Koulang, which when they perceiv'd, they desir'd me to stay, and give them another meeting, which I agreed to do. At last, after abundance of Contests the following Agreement concerning the Shares of the Cultoms, the Importation of Amfion and the Exportation of Pepper, was made betwixt the Dutch F.ast-India Company, by their Deputy Mr. John Nieuhoff on one, and the Kings of Marten, Singnaty, Goenree, and Travankoor and Barrigetta Pule on the other fide.

### Articles of Agreement.

1. N O body shall Import, Sell or Exchange any Ambon in the second change any Amfion into these Countries, except the Dutch East-India Company.

II. No body, without any Exception, shall be permitted to Export any Pepper or Cinamome out of this Country, or to Sell them to any body, except to the faid Company.

III. A certain Price was settl'd, betwixt both Parties, and what Share each should have in the Customs; whereby all former Pretentions and Exceptions should be annull'd.

February Matta del Reyne. ' 21. 1664.

In my return from Konlang, in the Road Leading to Matta del Reyne, I found Guards posted upon all the cross Roads, which made me enquire of Matta del Pule chief Commander of the Negres, what

the meaning of it was, who told me with a Sorrowful Countenance, that the No 62. Prince Barrigetta Pule, had caus'd one of the Queens Residents to be slain By his Trables Souldiers, who had also laid about to priget-Houses in Ashes, and cut down many & Pule. Palm-Trees. That they had been feet to Besiege him in his Castle, but that at the Intercession of the King of Travankoor's Resideor, who had promis'd that the said Prince should be call'd to an Account by the King his Master, they had delay'd the Execution of it, for three days, but he much fear'd, he should scarce withold them much longer, from taking a direful Revenue of him He was very inqui-

WILL CHE INTER OF AVABLAGING DUCK ON the Matter, telling him only, that I hop'd it would be brought to a Conclufion, to both fides Satisfaction.

The 22d I fent a Letter by Mr. Sebastian Ferdinandi, our Interpreter, to the Queen of Singnaty, in which I gave her an Account of what had been Transacted, betwixt the Residoor of the King of Travankoor and my felf. In the mean while the Kings and Princes Soldiers were come to blows, feveral being Kill'd and Wounded on both fides: Whereupon the Prince finding himself Besieg'd in his Castle, sent one of his most Trusty Servants, to desire Assistance, and some Powder and Ball for his Master, which I thought fit to refuse, for weighty Reafons; For, whatever may be the Opinion of those who think it a Maxim of State to Fish in troubled Waters, I was too well acquainted with the Perfidiousness of the Malabars, who make not the least Account of Faith or Leagues, unless they are forc'd to it, than to put the least Confidence in them.

In the mean time the beforemention'd Residoor of the King of Travankoor not appearing at the time and place Appointed for the removing of some remaining Differences, I fent him the following Letter by Topaes Nicolaes da Costar.

The Captain of Koulang fends this Letter, with his Service, to Narrano Poly Resideor of Travankeer.

Sign'd in the Court The Author's Letter to the Residoor of Travankoor.

> DUrsuant to our mutual Agreement, I came to Koulang China, in order to bring the Treaty begun before to a happy Conclusions But your Highness did not Perform his Promife, neither had I the least Account forth

ween of Singnaty was likely to re-Fransactions. And as the Nature would admitt of no delay, I fare d to fend my Interpreter to the nguacy and Topaes Nicholaes b the Goenree and Barrigetta, men'd concerning that Point. They or Answer, that the faid Queen she Cuftoms without the least Diwhich is not in my Power to agree m sensible, that I have left nothing red which might reasonably and beneftly be expelled from me, for the Terminating of these Differences, but all in vain, I have nothing left to do, but to Protest once for all, according to the firstest Rules of Justice, in the Name of the whole Company against your Narrano Poly, and your Transactions, and all others who take part with you, that we will, and hereby Declare our selves Innocent, and guiltless of all the Troubles and Miseries of a future War.

February 26. 1664.

Koulang. John Nieuhoff.

In the mean while I had given an Account of the whole Matter to Mr. Hustart, desiring him to come in Person, and to endeavour by his Presence to put a happy Conclusion to the Negotiations. He fent me an Answer dated Cochin the 24th of Febbruary, intimating that he had intended to let out from thence within two days after, of which he Order'd me to give notice to the King of Travankoor, and Queen of Singnaty, which I did accordingly by an Express fent with Letters to both their Majesty's. The 27th the Re-sideor of Travankoor, fent me word by Topaes Nicolaes de Costa, that he was willing to Treat with me once more about the Customs; but that no body except the Queen must be Privy to the Matter; for which reason he could cause a quite different Rumour to be rais'd among the People; but considering with my self that the Negros, who are in great esteem here, might get scent of the Matter, and that (as the King had told me himself before) several Persons in the first Rank were concern'd in the Customs, I did not look upon this underhand Treaty as advantageous for the Company: Which made me write to the Residoor; that, I was willing to contribute all what in me lay, towards the composing of the Differences betwixt us, provided it could be done in the same Nature as with the other Malabar Princes, who had not refus I to Read the Treaties in the Presence of their subjects to thew that their Words where altogether confonant to their Deeds. I receiv'd an Answer the same 1662. Evening, in which the Resideor desir'd an Interview with me in St. Thomas's Church interview the next day. Accordingly I went this with the ther on Horse-back with Mr. James Cher Resideor de Venne. After many Contests on both of Trassides, we agreed at last, and the Resideor vankoor. promis'd to return to Morrow to finish the Treaty. About this time I receiv'd a Letter from the Queen of Singnaty, in answer to that I had sent her before; as follows:

The Queen of Singnaty Letter to the

Receiv'd and saw the Contents of the Letter sent to me from Mr. John Nieuhoff Captain of Koulang, concerning the propos'd Treaty, I will send Word in the Month of March to Kottekkery; where we will meet together, and I shall be ready to restife what my Plenipotentiarses shall agree to. For which reason I Order'd this Leter to be written to Captain John Nieuhoff.

The Next day the Residoor of the King of Travankoor came to Koulang, who was receiv'd by us with all imaginable respect; he began among other things to renew his former Discourse about the Prince Gondormo, upon which it was agree'd to delay the last Conclusion of the Treaty till the coming of Mr. Hustar who was expected every day at Koulang.

The 2d of March with break of day, the Vice Roy of the King of Travankoor, call'd by them Gorepe, the chief Commander of the Negros, call'd Matta de Pulo, and my felf fet out for the Court of the The A Queen of Koulang, which was then kept goes, at Calliere. We Arriv'd there about two Quee, a Clock in the Afternoon, and as foon as Koul. notice was given of our Arrival, we were sent to Court, where, after I had deliver'd the Presents, and laid the Money down for Pepper, I was Introduced into her Majesty's Presence. She had a Guard of above 700 Souldiers about her, all clad after the Malabar Fashion; The Queens Attirement being no more than a piece of Callicoe wrapt round her middle, the upper part of her body appearing for the most part Naked, with a piece of Callicoe Hanging carelelly round her Shoulders. Her Ears which were very long, her Neck and Arms were Adorn'd with precious Stones, Gold-Rings and Bracelets, and her Head cover'd with a piece of white Callicoe. She was past her middle Age, of a brown Com-

plexion, with black Hair, ty'd in a Knot behind, but of a Majestick Mein, she being a Princess, who show'd a great deal of good Conduct in the Management of her Affairs. After I had paid the usual Compliments, I shew'd her the Proposition, I was to make to her in Writing; which fhe Order'd to be read twice, the better to understand the meaning of it, which being done, she ask'd me, whether this Treaty comprehended all the rest, and whether they were annull'd by it; unto which I having given her a fufficient Anfwer, she agreed to all our Propositions, which were accordingly Sign'd immediately. This done I Recommended Mr. James Cher de Venne, who was to succeed me at Koulang, to her Majesty, desiring her to acknowledge him as fuch, and to continue in a good Correspondency with our Company, by whom I was order'd to go to Toutekorin, which she promis'd to do. I then desir'd leave to depart, because I expected Mr. Hustart every hour at Konlang, which she readily Granted, and at the same time took a Golden Bracelet from her Arms, which she presented me

as a token of her good Inclinations to the She Order'd one of the Residoors to fasten it to my Arm, but it being too Streight, she caus'd it to be fitted for me; she having once before, viz. when I first gave her notice of Mr. Hustari's coming, presented me with another Golden Bracelet, for which and all other honours, I had receiv'd from her Majesty, since my Residence at Konlang, I return'd my hearty thanks, desiring once more not to withdraw her favour from the Company. Thus I return'd to Kou-Return's lang, about two a Clock in the Night, Koulit where I was let in through one of the Gates, the Admiral Hustart being the day before Arriv'd there with two Ships, the Erasmus and the Niewenhoven from The next Morning I paid a BATAVIA. Visit to the Admiral at his Lodgings, where I gave him an ample Account of my Negotiations, and other Matters relating to our Factory here, wherewith he was highly fatisfi'd, and gave me some further Orders about certain Matter to be Transacted before my Departure

About the same time the Vice Roy of he King of Travankoor came back to the City of Kinder, to Compliment the dis-trival, and to simpliment the dis-trival, and to simpliment the Treaty. The Admiral fant him singwards regist Prefeats, and let him kinder, that if the Aing his Mader, did give any Affitment Agms to Prince. Golderno. or comes 1 Kou-Arms to Prince Goderne in and the Company, he make to be Treated as an Enemy and d for Answer. That he was in a good Correspondency with my, upon which he was dis-left Koslong the same Night; Admiral from after, who jet Cranganer, leaving the Comminders, Bitter behind him, who with his Wife and Family was come aboard the Ship, the Niemenhouen to load Pepper hores. His Wife being yang definition hopes. His Wife being very delirous po be carried thither in my Primary, the Queen received her very courteoutly, being extreamly well pleas'd with the fight of a Durch Woman; and many of the Malabars were to curious as to peep into the Palankin to fee her; they being no less forpriz'd at the fight of the Europeans, than we were at them. Commodore Bit-Author ter having by this time got his full Cargo. es bje fet Sail again for Baravia; as I did the 11th to the Court of Gonree, and so to jonree the Prince Baryette Pule, where I intro-Prince duced Mr. Cherde Veane, who, as I told yette you before, was to manage the Affairs of the Company after my Departure; they receiv'd him very Civilly, and promis'd to maintain an everlasting Correspondence with our Company. At parting Prince Baryette Pule Presented me with a Golden Bracelet curiously Wrought, and the Vice Roy with a Silken fuit of Cloths, and so I return'd very well satisfied to Koulang, where I prepar'd for Toutekorin; for within four Days after, viz. The 12th of March, having first furrendred all my Accounts, and what also belong'd to the Company, and given the best instructions I could, to Mr. James Cherde Venne, taken my leave of the chiefest Officers belonging to the Company, I set out for Toutekorin, after a stay of 'Kou- two Years at Koulang; confidering that my appointed time was near expiring, and I had fettled our Traffick at Koulang upon a good Foot. I could have been very glad to have stay'd the remainder of my time here; for which purpose I sent a

Letter to Colomba, but the chief Director of Tollitorin being Order'd to Persia up-

ome urgent Buliness, I was forc'd to

supply his Place. . And upon this occasion I think it not amiss to give the Reader 166: of mast have observed most the Coast energia the Products, ady cal- Limits of Limits of epies Malabar only di- Its Dis Comband of Many, Mark feveral others among the middle between the Line and Tropick of Concers which makes the days here excelling Hot, notwithstanding which, it is a pleasant, ex-traordinary fertile and healthful Coun-try. It is full of very fine Springs, Pools, Rivers and Channels, even as far as the Mountains, but most towards the Sea-side; in which it resembles the Province of Holland, being scarce passable without Boats; tho' most of their Rivers are shallow, and consequently unfit for Ships of burthen. Here grows great store of the best Pepper, exceeding all the Its Prorest in goodness; Formerly the Inhabi- duas. tants us'd to exchange the Pepper with the foreign Merchants for Silver, Gold, Amfion and other Commodities; but, fince the Dutch East-India Company have made themselves Masters of the Kingdoms of Cranganor, Cochin and Koulang, and forc'd the Portugueses from thence, they have by entering into several Leagues with the Neighbouring Princes, got the Monopoly of Pepper on that Coast into their Hands, and have so well provided the three before mention'd Places with strong Fortifications and Garrisons, that shey are look'd upon as impregnable. Besides this, the Country of Malabar is full of Cocoe-trees, especially in the Marthes, where thefe Trees thrive better, than in any other place in the Indies, there being some Trees here of 95 and more Foot high. They drive a confiderable Trade with the Oyl, and Bark of this Fruit, neither do they want Wood fit Zzz

the year.

for the building of Houses and Ships. 2 6 6 2. Air is very pure here, and very cold in the Night time, during the three Months of January, February and March; and when the Nights are very foggy, which questionless occasions the Cold, the Days being excessive hot. The Winter begins here in April, or at the most in May, and ends in September or Ottober; with Thunder, Light-nings and Storms: This Season produces Seasons of the most Truits, by reason of the warm Rains. The begins the Summer Scafon, which continue till April or May, with intolerable Hear, and commonly without any Rains; which renders the fandy Grounds to hot, that they cannot pass over them with their bare Feet, but are forced to make use of a certain fort of Shooes, call'd by them Siripons. Every Morning about Nine or Ten a Clock, the Land wind blows from the East, and immediately after Sun-set the West Wind from the Sea; both which contribute much towards the cooling of the Air, as well here, as in all other adjacent manus. What is most observable is that the Land Wind never reaches above ten Leagues in the Sea; an Observation which has never been known to mils. The Seasons here are quite of a different nature from ours, for whilft during the Summer Monthsevery thing is dry'd up in the hot Climates of Europe, here the Fruits appear most florid and green, because this is the Winter Seafon in Malabar, where it rains continually for fix Months, during which time you not as much as fee the least glimpse of the Sun, but in the other Six Months it never rains. During the Months of October, November and December, they are much afflicted with dreadful Storms. There is another thing which is most surprizing here, that when it is Summer on the Coast of Malabar, it is Winter on the Coast of Coromandel. This is occasioned by the Mountains call'd Gare, which stop the passage of the Winds; For whilst on the East side of these Mountains, which extend all along the Coast of Medabar, they have great Heats and Droughts during their Summer Season, those on the West side have their Winter with violent Rains. Thus on the South fide of the Cape Comorin, they have their Summer during April, May, June, July, August and September, whilst at the same time, those on the North fide have their Winter; it being very stormy and rainy on one, and fair and calm on the other fide at the same time.

Their ordinary Houses are of Bamboe Canes, cover'd with Leaves of Coco-Trees; some are plaistred with Carving, without any Cellars, Garrets or Windows. They never lock up their Houses, because their Houshold-stuff is not worth steali

they be Persons of an eminent Rank; Their Doors are so low, that you cannot center without stooping, tho' they have with Houses cover'd with Lead, Copper in and built otherwise and well fitted cording to their Fashion; Their priva Buildings don't approach in height to ben they commonly have two or three Appartments, within one another; within the compass of the middlemost of these Apartments is a small Square, with some small Galleries round about it, which receive the water from the tops of the Houses. At the Entrance of all their Houses, whether rich or poor, are Court-yards furrounded with high Walk and Ditches, and one of strong Pallifado's. 'These Court-yards are for the Reception of Travellers, who eat, drink and fleep here, with more Conveniency than if they were lodged within, being ready at all times to proceed on their Journey when the rest of the Company goes. Their Royal Palaces and Pagods are commonly built of Stone, surrounded with a Mud Wall, on which are Mounted some great Cannon. Most of their Princely Palaces are erected in large Ponds or Lakes, some having a League and a half in Circumference. They have most excellent Carvings in Wood, with all forts of Images in their Houses; their Ceiling is of a plain polish'd Wood; Among the Marshes are to be seen many Ruins of old Houses, which appear to have been built many Ages ago. Some tell us, that Alexander the Great coming into those parts, after he had order'd his Admiral to enter by the way of the River Ganges the Sea, and from thence by the Euphrates to Babylon, had laid these Countries desolate; others ascribe this Devastation to Tamerlan.

The Malabars eat and drink fitting upon the Ground, after the Mahometan Fashion, almost like our Taylors. Their Cups, Dishes and Spoons are made of Coco-Nuts; How th People of Quality have them made of drink. Metal; instead of Bread they use nothing but Rice; besides which, they feed up-on Flesh, Fish, Spices, Fruits, Milk and Eggs; They drink abundance of water, as likewise the Juice of the Coco-Trees; some of which give 30 Quarts of this Liquor in 24 hours, but if they are drain'd too much, the Trees perish. They also distil a Spirit, call'd Arak out of this Liquor, but it is not near fo good nor wholfome as our Brandy. When they drink, they don't touch their Lips with the Cup, him pay the Liquor from above into the Some eat neither Flesh nor Fish, purely upon the products of the

Houses.

his they either mix with Arak, or chaw it Jalone, formetimes till they fall afleep; they presented hear this makes them have very pleasing trams, of the Elysian Fields, and fush the. When they are to Attack an Enemy they take a good Quantity of it; which makes them fall on like enraged wild Beafts, and the Virtue of the Amfion being gone, they don't remember what has past, which shews that it is very obnoxious to the Memory. Some have accustomed themselves to use Amsion every day, some every two or three days; and before I knew . the effects of it, I have been often furpriz'd, that they should be so forgetful in such Matters as I had treated with them of before. The Queen of Koulang asking me once among other things, what was the Reason the Dutch were more active and perseverant than the Malabars, who were generally fickle and unfettled; I laid the fault upon the use of the Amfion, telling her withal, that the Malabars should imitate the Dutch, and drink Wines, which used with Moderation, did acuate the Understanding, made the Spirits active, and often discovered the Truth.

Among these several Sects of the Malabars, that of the Brahmans is most Reve-Brah- renced, and maintains a peculiar Manner of living. They are generally very wife, ready, active, modelt and charitable, and strict observers of their Promises. They betake themselves to divers Imployments, at pleasure; Some are Soldiers like the Naeives, and wear the same Cloaths, except that they are diftinguish'd from them by the Cord they wear round their middle, and abstain from Flesh. Others are Priests, whose Business it is to offer Sacrifices to their Idols, no other Sect being admitted to that Service. Some also encrease Traffick, and tho' they grow very rich, yet observe the fame Rules of living. Some there are among them, who addict themselves to Natural Philosophy, and other Sciences, but especially to Airronomy, others to Physick and Pharmacy. They eat neither Flesh nor Fish, nor any other living Creature, and drink nothing but water; nor do they ever eat, before they have wash'd and bathed themselves; which done, they only cover their Privy Parts, and for the rest eat naked. They are forbidden to eat any thing, but what is prepared by one of their own Sect; which makes them commonly be their own Cooks; for they rather chuse to die; than eat any thing toucht by one of another Sect? whereas all the others are at libery to eat, what is dreft by a Brahman.
They never (no more than all the other Mallane) much the Brim of the Cup when the beauty but pour it from above They were a white Time

bant upon their Heads, red Shooes, and a Callicoe Coat, which reaches down to their 1 6 6.2 Ankles. Over this they have another large white piece of Stuff, which they wrap three times round their Bodies, which they draw thro' betwixt their Thighs, and tie it together behind upon their Buttocks in a Knot. They wear about the middle a Girdle or Scarf of fine white Callicoe, as their Turbants are, and over the Shoulders a piece of colour'd Callicoe or Silk, as the Europeans do their Cloaks. They also have long Hair with Pendants in their Ears. But that which diftinguishes them from all the other Mala bars, is a Cord of fine Cotton Thread which they wear next to their Skin, and is put about them first of all in their Temple: with a great deal of Ceremony, and not without a confiderable Charge; which is the Reason you cannot do a greater Injury to a Brahman, than to tear this Cord, which he is obliged to purchase again, if he will pass for a true Brahman; and if any of them is to undergo any Corpored Punishment, his Cord must first be taken from him, which is likewise done, if any of them mappen to transgress the Rules prescribed to their Sect. As they pass along the Streets in their white Callicoe Cloaths, they tell fuch as they meet, that they are Brabmans. because the Cord, by which they are chi ly distinguish'd is worn next to their Sk and confequently not to be feen; when they are to take an Oath, they lay the Hand upon it. The Brahman Women have holes in their Nofes, in which they hang Gold and Silver Rings, Pearls and Predious Stones. as well as about their Legs, and in their Ears, where they have Silver and Gold Plates fet round with Precious Stoues. The Wives of the Negroes, of the Moncorn and the other Malabars are not permitted to use these Ornaments. They also wear Bracelets from their Wrists up to their El-4 bows, some of Gold and Silver, others of Glass and Tortoise-shell curiously engraven and enamel'd. These Women are generally handsome and well featured, some of them being not inferiour in Complexion to the Portuguese or the brown Dutch Women. They marry very early, fometimes before they are quite 7 or 8 Years old; for the Boys and Girls are permitted to sport toge ther till they come to be in good earnest but they take great care, not to mix them felves with another Sect. The Men are al low'd to marry twice, tho' no more than oneWoman at a time. Bethey never fo poor they will be fure to keep their Rank, and to oblige fuch as meet them, so paleby with making a Bow in solven of their Reverence Those among the Brahmans who have litted

themselves among the Negrocs, are in the same 1662. degree with them, except that they observe o more Austerity. The Brahmans are in great Esteem with their Kings, who keep some of the chiefest always near their Person, to advise with them in all matters of Moment. Those of the first Rank among the Brabmans, as well as other Indian Persons of Quality, have commonly a numerous Attendance; Some of whom carry their Umbrello's, others a Silver Bason full of Bethel: others one full of Water; some are carried in Palankins or Chairs.

The Brahmans have under pretence of a

Feast of the Brahmans.

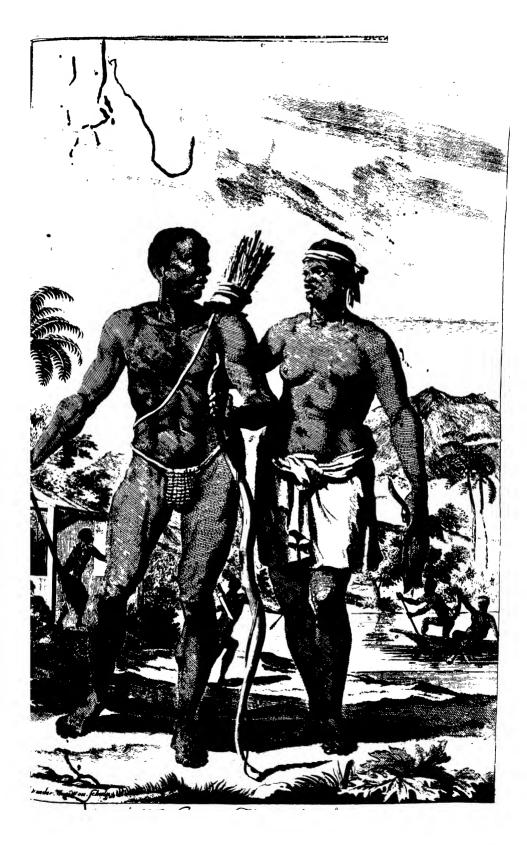

Religious Worship, introduced a Feath, which furnishes them with a certain Opportunity of being revenged of their Enemies. It is a Custom among the Malabar Kings, once every Year, viz. at the time of the New Moon in October, to remember the Bleffings they suppose they have received from their Idols, by a folemn Sacrifice, which is perform'd by fetting certain Houses on fire, fuch as are appointed by the Brahmans; This is formonly performed in the night ime, without the least fore-warning given, to that fometimes not only the house, but also the Inhabitants, with all their Goods are burnt no body daring to quench the Flance. This they call The Sacrifice of Fire ald Blood

Secual toris of Brahmans.

There live many of the Banjans of Camlaya in Malabar; These have also Brahmans, who are in great Esteem among them; the Brahmans of Malabar are allow'd to frequent their Temples. The Banjans themselves lead as austere a Life as their Brahmans, but they are of an inferiour Degree, nor can they intermarry with them. Kingdom of Calicut, is a certain fort of Bralmans, who despise all Images, and live in Chastity after the 20 or 25th Year of Age. They are so averse to the Female Sex, that s often as they ftir abroad, fome body cries out aloud before them, Poo, Poo, i. e. keep back, keep back, to let the Women know they must keep out of fight. These don't wear the Cord twitted of Cotton thread, neither do they abstain (like the other Brabmens) from Fielh, Fish or Wine; but to preserve their Chastity, eat daily a certain quantity of the Pulp of the Fruit Karaza; being raught by Experience, that the same has a quality of checking the Venereal Appetice. Neither do they bury their dead Bodies like the other Brahmans; Some strew shemselves all over wish Ashes, and are enclosed day and night in Iron Cages, which are to small, that they can scarce sit upright in them. Others burn or feald certain parts of their Badies, whereby they to gain the Affections of the common People. Thus far mans.

For the rest it is to be oferved, that the Inhabitants of the Coaft of Manbar may forts of be divided into Foreigners and Natives; kabitan The Foreigners are groperly those call'd commonly M. labars, peing a Colony of Arabians, who have fixt their Habitations there many Ages ago near the Sea fide chief-The Natives are Pagans, divided into Brahmans or Bramenis, Brames or Bramen; into the Naires or Nayres, and into the common People call'd Monceris or Pouleds, and otherwise Parvas. They are also divided into five feveral degrees; The first are the Royal Families, among which, the House of Gondormo is one of the most Illustrious. The fecond is the Sect of the Brahmans, or of the Priests. The third is the Military Order or Nobles, call'd the Nayros. The fourth comprehends the Merchants, and the fifth the Parvas or Fishermen.

The Nayros, as I told you, are descended The No. of Noble Families, and brought up to the ros. War. They appear with a Shield on their left Arm, which they carry aloft, and with a naked Sword in the Right Hand. They are very haughty, and at first pretended to dispute the Rank with the Portugueses, which occasion'd no small Disturbance, till the Difference was agreed to be decided by a fingle Combat betwixt a Portuguese and a Nayros, in which the last being worsted, the Nayros ever since were forced to give way to the Portugueses; but all the other Malabars must give place to the Nayres. They are generally well proportion'd, though of a brown or Olive Colour; They take a fingular Pride in having long Ears, which they perform by Art; They bore holes thro' the Ears of both Boys and Girls, which they fill up with Palm-tree Leaves roll'd together; these Rolls they make bigger and bigger by degrees, till the holes are extended to the utmost reach the holes can bear, and hang down to their very Breafts; This is accounted one of their chiefest pieces of Gallantry, and they adorn them with Gold, Silver and Jewels. Tho' the Nayres are from their Infancy train'd up to Arms, and are very bold and brave, they are nevertheless very civil and meek in their Conversation, according to the Custom of that Country; notwithstanding which they are mightily addicted to Robbing upon the High Way, and will kill the Travellers unawares, unless they be well upon their Guard This is the Reason, why the Mahometan Milabars dwelling in this Country, whenever they are travelling from one place to another, take one of these Narios along with them, who is their Conductor for a certain

piece of Money, to the next place where they were manney, and by this means may pals who of the Danger thro' a thousand of Nayro's, the heir Conductor should be an old decripid Peron, or only a Boy. These Nayro's are strict Observes of the Times, which are neglected by the common People; For, they will not converse with any of the inserious Orders, except the Bark of the inferiour Orders, except the Brabmans; nay, if any of the vulgar fort happen only to touch a Nayros as he passes by he will make his Servant that carries his Meat after him, to throw it down upon the ground; nay, if they do enter their Houses, or only touch the Doors and Walls, they will not eat there for fear of being defiled. However the Nayros are not altogether so nice in these Points, as the Brahmans. For the rest they are not much inclined to Vice, Sodomy and Incest; nay, the Boys and Girls, tho' they converie together daily, and that without cloths, you shall seldom observe in them either in Word or Action, any thing that favours of Uncleannels. The Nayros learce ever laugh, and that not but upon extraordinary Occasions; and if they see others laugh, they will look downward. Those Nayres who are watching at the Town Gates. and serve for Conductors to Travellers, are the poorest of all, yet will they rather follow this Employment than a Trade; which they look upon below their Quality. They apply themselves from their Infancy to the use of Arms, and frequently Fight together with Swords and Targets, which renders them infinitely active at that Sport. They are the best Wrestlers in the World, and are very nimble on foot. They attack their Enemies quite naked their Privities being only cover'd. Their Arms are Bows, Arrows, Javelins, Swords and Shields; These are very large, which they use with the utmost Dexterity to cover their Bodies. On the Hilt of their Swords they have small Plates of Metal, which makes a noise when they are a Fighting, and ferves to animate them. Since the Portuguese and Dutch have got footing there, they have also learn'd the Use of Fire-Arms to that degree, that they will turn Right and Left, and give a Volley of Shot with the same Order as the Europeans do.

One Nayros is not allow'd more than one Wife at a time, but the Women in this Point have got the Start of the Men, they being permitted to have three Husbands at once; except that a Woman of the Sect of the Brahmans, that is Married to a Nayros is not allow'd more than one. Each of the three Husbands contribute their Share the Maintainance of this Woman and the Children, without the least Contest leabuting. As often as any of them

Their Mer-

ruges.

comes to visit her, he leaves his Arms at c the Door, a fign that neither of the other 166 2 two must come in, for fear of disturbing the first. From hence the poorer fort reap this Benefit, that they have the use of a Wife, yet contribute only the third part towards the Maintaining of the Family: tho' on the other hand, this carries along with it a great Inconveniency concerning the Inheritance of their Children, which they recompense in some measure, by making the Sifters Children the Heirs of their Unkles. The Nayros employ the coramon People in the Country and other Drudgeries, but in their Houses they make use of none but Nayros (or Gentlemen) tho' very poor, who are willing to serve them for their Bread. The vulgar fort are all clad after the fame manner, being quite naked, except that they have a small Girdle round their Waste, on which they hang a piece of Callicoe, or perhaps of the Bark of a Tree, or a few Leaves, to cover their Privities. 7the Women wear a kind of Vestment of Calicoe, which reaches down to their Knees; and have-very long Hair, whereas the Men are/obliged to cut their Hair close, except one Truss which they keep on the Crown of their Head. All the Malabars have black Neeth, occasion'd by the continual chawing of the Leaves of Bethel. Black Teeth are in great Esteem among them, because those that don't chaw Bethel, are confider'd here as of a mean Extraction. The Malabars are faid to be much addicted to Sorcery, who are able to kill People as they pass by, or at least throw them into a lingring Diftemper. They are extreamly covetous, and will venture at any thing for a small gain. The Women are generally unchaste, the young Women about 17 or 18, being obliged by custom, to dispose of their Maidenheads, for no body cares to Marry a Maiden here, but such as have been best beloved, soonest meet with a Husband. The Malabars have great store of great Artillery, Muskets and Pikes; nay, their Arms were in more Esteem than those of the Portugueses, only they did not know the Art of hardning their Armour: They now make very good and strong Gun Barrels and Gun-powder. The Children of the Nayro's are from the seventh Year of their Age exercised in Arms, and train'd up to the Wars; but every one betakes himself to one peculiar kind of Arms; it being their Opinion, that they cannot excel in the use of all. They anoint the Limbs of their young Children every day with a certain Oil, to make their Joints more pliable; for when they are forced to fly, they put their greatest Confidence in the Agility of their Bodies, and will in an inflant turn back upon their Enemies, and 6 6 2. attack them in the Rear; befides, that in their flight they throw their Javelins backward with great Dexterity, and as foon as they have thrown their Darts, they know how to faelter themselves behind their Shields.

Tho' the Name's in general are very good Soldiers, yet is there a certain kind among them call'd Amokos, who are Esteem'd above all the rest, being a Company of stout, bold and desperate Bravadoes. They oblige themselves by most direful Imprecations against themselves and their Families, calling Heaven to witness, that they will revenge certain Injuries done to their Friends or Patrons, which they certainly purfue with fo much Intrepidity, that they ftop heither at Fire nor Sword, to take Vengeance of the Death of their Master, but like mad Men run upon the point of their Enemies Swords, which makes them be generally dreaded by all, and makes them to be in great Esteem with their Kings, who are accounted the more potent the greater number they entertain of those Amokes; tho' this their Fool-hardiness is chiefly attributed to the extensive use of the Amfion. You fee the fireets of all the Towns on the Ma-Iniay Coast full of Nayro's with their Arms always about them, tho' many of them dwell in the Country, and a good number are kept near the King's Person. Most Persons of Quality here maintain some of those they call Janguy's. If a Quarrel happens to arise betwixt a Nayros and a. nother Malabar, the King allows the latter a guard of another Nayres, and as long as he stays with him, they dare not fight; the first Aggressor being guilty of HighTreafon; for Persons of the chiefest Rank, if they will be admitted in the number of the Navro's, must have the King's peculiar Leave for it, and are afterwards diffinguish'd by a gold Ring they wear on the right Arm, or by a Bufflers Horn. The Nayro's frequently hunt the Tigers, some apply themtelves to Philotophy, but especially Astronomy, but never to Trasfick or any Handicraft Trade. They eat all forts of Meat, except Cows Flesh, and are very fond of Pork. They go above half naked, with bare Heads and Feet, having only a large piece of white Callice wrapt round their middle, which reaches down to their Knees, and is' drawn thro' betwixt their Thighs, and tied together behind above their Buttocks. They wear also a red filken Scarf, with a Fringe of about half a foot long, being half Gold and half Silk. They let their Hair grow very long, without ever cutting it, by which they are distinguish'd from the common People; they have a way of tying it very

neatly together in a Puff on the Crown of their Heads. Their Shield they carry on 1 6 6 2. the left Arm, and the Swodl in the right Hand; some have also a Javelin, Musket or Pike. The Nation Woman are clothed after the same manner as the Men, so that there is not the east Diffinction to be seen betwirt the Boys and the Girls, till the Breafts begin to appear in the last. They are forbid to Marry any other Person but of the same Rank, and but one at a time; and in case a Nayros Woman should Marry another, except a Nayros, she instantly forfeits her Head; In the same manner, if a Nayros should Marry a Woman of another Tribe but a Nayros, he is punish'd with Death. This they have provided against, because they would not have their Blood mixt with Strangers or those of an inferiour Rank, of which they are fo cautious, that they will not as much as fuffer any to approach them; for which Reafon, when they walk abroad, they cry out aloud to the common People Popuire, keep back; for if any of thefe should touch a Nayros, he would certainly ruin him.

The common People of Malabar call'd The com-Moncois or Poulias, or otherwise Parvas or mon Peo. Parivas, are a wretched fort of Slaves; they labar. are blacker and much uglier than the Nayros, neither must their Ears hang down above three Inches at most. They are again of different kinds, for those inhabiting near the Sea shoar, are properly call'd Moncon; these are all Fishermen, and all along the Coast of Malabar are employed at Sea in Rowing and otherwise for certain wages. TheirWives and Daughters perform all manner of Drudgery by Land; and expose themselves for Money to the first Man, without the least distinction of Quality or Religion, without the least fear from their Husbands, who are well enough pleafed at it. For it is to be known, that there are no common Strumpets here, but the Wives and Daughters of these Moncon, and of the Tivas, who are Handicrafts men; for the rest are obliged to contain themselves within their own Tribes. The common People are often put to a great Nonplus when they happen to meet a Nayros at the corner of a Street, when they are fain to stand aside till they are pass'd by. There is another kind among the vulgar fort, call'd by some Tivas, whose Employment is to draw the Liquor from the Coco-trees. The rest are Handicraft and Husband-men. But these intermarry with one another, notwithstand ing there is some difference in their Ra for the Husbandmen claim the first and

the Moncon or Fishermen are the last.

Parion or Parvas live in live near the Sea fide; some of these live near the Cost, and in the life of Make Parker, where as well as near Toutekorin, betwith the Cape Comoin and the life of Ceylon, they live upon Flark fishing; They are a stubborn Generation, mor addicted to Lazines than Labour, they live chiefly upon Pearl and Oister filhing, being the best Divers in the World, unto which they are accustom'd from their first Infancy. Whilst the Men are abroad at Sea, the Women and Children are employed in gathering of Pearl Dust near the Shoar. They are a cowardly and deceitful fort of People, Lying and Deceit being to customary among them, as not to be look'd upon as a They are great Admirers of the Ecclefiaftical Laws, it being a strict Custom among them, not to punish a Crime, if the Transgressor confesses it, and promites Amendment. The Parva's were formerly all Pagans, but being forely oppress'd by the Mahometans, they rebell'd against them, and with the Atliftance of the Portugueses shook off the Yoke; which proved the Opportunity of their Conversion to the Romish Re-

For, finding themselves daily more and con. more oppress'd, by the Advice of one John ed to de Cruis (a Native of Malabar) they fent their oman Deputies to Cochin, to crave Assistance against the Mahometans, offering at the same time to be Baptized. The Portugueses received these Pantagitini (being then their Magistrates) very courteously, promising them immediate Succours against their Enemics, which had fo powerful an Influence upon these Deputies; that, to shew their Gratitude, they received Baptilm immediately, and took upon them the Sirname of De Cruis; which name is retain'd by many of the Parva's to this day. After the Parva's had rid their hands of the Moors, with the Ailistance of the Portugueses, and got the Pearl Fishery again into their hands, many thousands of them, at divers times and places, embraced the Christian Faith; and under the Vice-Royship of Stephen Gamma the Portuguese, viz. about 1500, above 20000 Parva's received Baptism. But for want of good Ministers, who understood the un to Malabar Tongue (few ofthe Portuguese Clerlanism. gy being willing to settle here) they soon return'd to their Pagan Superstitions, having scarce any thing left among them but the name of Christians, till Francis Xaverius (who arrived in the Indies 1540, and went by he name of the Great and Holy Father) being inform'd by Michael Vas of the mife-rable Cofficien of the Parva's, refolved to

go thither from Gos, to re-establish the de-

cay'd State of Christianity among the Parva's. Accordingly he set out from Goa (af- 1 6 6 2, ter a Stay of five Months there) in the beginning of October, 1543. in company of Francis Manfilla, who was come along with him out of Portugal, and two Novices of the College of Goa, who understood the Malabar Tongue. After his Arrival at the East End of that Coast, near the Cape Comorin, finding that his young Interpreters stood him but in little stead, he found out this Expedient; He call'd together fuch of the Natives, as he knew to be well vers'd in the Portuguese Tongue; among those he choic certain Persons, who joining with those two he had brought along with him from Goa, translated the Chief Articles of the Christian Faith, the Ten Commandments, with a fhort Explication, a general Confeilion of Faith, and some other such like necessary Matters into the Malabar Tongue. Then he began to Preach to them according to the Capacity of his Auditors, explaining to them the Chief Duties Averecon-of a Christian, the Glory of Heaven, and the citation the Punishment of Hell, with the Reason, why Charles by fome deserved Heaven, and the other Hell Xaverine. He explain'd afterwards to them the sign of the Crois, and began to unfole to their the Mystery of the Holy Trinity, of which they had been quite ignorant before, and made fuch a Progress among them, that, whereas at his coming thither he found not above 2500 Demi-Christians, at his going away he left near 40000 good Christians behind him. Xaverius himself in his Letter dated the 12th of Jan. 1554, speaks of the valt Increase of the Christians in those

King, you may guess what a great number of these poor people were reduced back to the Flock of Christ from thence, that my Arms and Hands used to be tired with Baptizing, sometimes whole Villages at a time. My Strength and Voice have often fail'd me, by Reafen of the frequent Repetitions of the Articles of

Parts, faying thus.

The Romanists tell us, that befides these, Xaverius converted ten Towns betwixt Bringen and Permanel (and fix or feven more near Bengala and Remanankoris.) This they fay he perform'd by his Miracles, by healing the Sick, casting out Demons, and raising the dead from their Graves. He raised a certain young Man, the Son of a poor Widow, who was choak'd in the Mud. from the dead. The same he did to another young Man, the Son of a Person of Quality, in the City of Puvicale, and to a young Maid. Another Woman in Labour, being reduced to the last Gasp, he deliver'd without the Least Pain, as foon as she had

By his Miracles he conreceiv'd Baptism. 1662. verted a whole Village at once, near Toute we kerin; so that both Christians and Pagans

us'd to have their last Recourse to him in their Sicknesses, many of which he restored by reading the Gospel over them; As may be seen more at large in the Life of Xaverius, of John de Luceras, and other Roman Authors. But whatever Success Xaverius had in Con-

verting the Parvas and others to the Chri-

stian Religion, certain it is, that he brought no more than one Brahman over to the Romish Faith, tho' he bestow'd much time and pains in speaking to them. And among the Parvas themselves are many to this day, who adhere fo deeply to their Pagan Superstinions, that they make but little account of Christianity. However, those that have ever fince persever'd in the Romish Faith, are from time to time furnish'd with, and inthructed by the Portuguese Priests; who ever fince 1685, when we made our felves Masters of Toutekorin, live about a League or two from the Town in the Country whither they carry their Children to be Bapgion, thich extends no further than the knowledge of the Christian Faith; Our Father, the Ten Commandments and an Ave Mary; but of follow blind-fold the Directions of the rruguese Priests; carry Pater Nosters and a Cofary constantly about them, and use the Sign of the Cross on their Foreheads and Breasts, like as the Roman Catholicks do. The Dutch Ministers of the Protestant Religion, have several times attempted to introduce the Reformation into the Churches of the Paivas, both before and fince we were Masters of Toutekorin, but all in vain; for tho' we caus'd the Word of God to be Preach'd in the Portuguese Tongue, the Parvas durst not venture to come to Church for fear of the Roman Priests living among them. These Parvas declared to Xaverius and Michael Jassus, in those days, that whilst they were yet involv'd in the darkness of Paganism, the Devil us'd to appear to them in most dreadful Shapes, so that they durst not stir abtoad at Night, or go a Fishing, unless in great Companies. He us'd to enter into the Bodies of the Living, and declared he would not leave them, till they had erected Temples for him. But fince they had embraced the Christian Religion, the Devil never had appear'd either in their Houses or Vessels, tho' they freely went abroad a Fishing without any Company. Xaverius having exhorted them to persevere in their Religion, fet out from thence to Makarara, and the adjacent places, and so further to

All the Mahometan Malabars are either Merchants or Pirates, if any Foreigners-

come into the Harbours where there rurates lie, they endeavour to energe them into 1 6 6 2 their Service; which if they accept of, they maintain them and their Familist through the maintain them and their Familist through the whole Winter When they are just labars. a going to Figage at Enemy, they take fome Bethel, by which they swear to stand by one another. If hey take a Prize, they explicit the Shir and all the Mariness and ransack the Ship and all the Mariners and Passengers, before they come a shoar, The Captain and other Officers take the best part for themselves, the rest is divided among the Crew. These poor Wretches endure incredible Fatigues and Miseries at Sea, and \* tho' they have no Head that has any legal-Authority over them, they feldom fall out or quarrel, a thing scarce to be believ'd among us. Several of the richer fort of the Malabars Equip certain Vessels, with a good number of Soldiers and Gally-Slaves, which always keep at Sea, except that now and then the Captain comes ashoar to dispose of the Booty; which the Merchants buy without any regard, whether they belong to Friends or Foes, provided they can have a good Bargain; the Mahometan Malabars knowing no other preference but Riches: The Merchants are distinguish'd only by their Habits; both these and the Corfairs being never to be feen without Arms; but the Merchants wear their Hair fhort, and have a Bonnet of red Scarlet Cloth upon their Heads, sometimes with a Handkerchief rowl'd about it like a Turbant, which they call Mondy, and are commonly embroider'd with Gold and colour'd They half shave their Beard, but without Whiskers, wear a Silk or Callicoe Veit, reaching three Inches below the Middle, and under that a kind of Drawers hanging down to the Knees. They commonly carry a Silk or Callicoe Handkerchief flourish'd. in which they tye and hide their Purses. The Corfairs never shave their heads, but wear their hair very long, like the women, which they like the rest of the Indians, tye together in a Knot, and wear one of these flourish'd and embroider'd Handkerchiefs over it; For the rest, they go quite naked, except that they wear a Silk Vestment down to their Knees; both the Merchants and Corfairs have Knives with Silver Hafts, on which hang all forts of Toys, such as Tooth-picks, and the like, all curiously wrought.

The Corfairs shave their Beards, but leave Whiskers, which in time grow ex-cethvely, that so one may tye them together behind. The se, as well as all the other Malabars use no Shooes. Their formen are clad like the Men, neither of they wear any other Ornament upon their leads, but their Hair; but have Pendants in their

their Fingers and Toes. The control of the co the Men. All the delabars are of a mid-dle fize, and very lairy upon the Breaft, and other Parts of the Bodis. The Wo-men are very well featured, but finall of Statute. Their Men understand Their Men undergo incredible Staturė. fatigues at Sea, and tho' they are Mahometans, they use the Malabar Tongue, and pay Allegiance, and Taxes to the several Kings of the Nayros, under whom they live, which is commonly near the Sca Shoar. Their Priests never meddle with any thing except Marriages, and what relates to their Temples. They are clad in White, after the Arabian manner; besides which, they have a certain kind of Religious Men call'd Abedallen, or Ministers of God, who vow Poverty, and begg in the Country: You may see sometimes 30 or 40 of them together, tho' they Travel not above two or three at a time, and fometimes one alone.

The Country of Malabar was formerly under the subjection of one potent Prince, Sarama Perimal, who, at the perswasion of fome Arabian Merchants, that Traded thither, having embraced Mahometilm, became so great a Zealot of that Religion, that he resolved to leave his Kingdom, and to undertake a Pilgrimage to Meccha and Medina, to visit Mahomet's Tomb : And having no Children, divided, before his departure, the whole Country, betwixt his chief Favourites and Courtiers, to wit, The Country of Cananor to his Esquire; to his Sword-bearer, who was his darling Favourite, Calicut, to his Scepter-bearer Cochin, and to another Koulang, unto which he annexed the Title of Kingdoms, and gave several other Countries to others of his Friends. Upon his Sword-bearer, who had Calicut for his share, he bestowed the Title of Zamory or Zamorin, or Emperour, and to have a Preheminency above the rest: For Zamorin signifies in the Indian Tongue as much as an Emperour, being otherwise express'd by the Word Tambarana, i. e. God, which is the reason that all the other Malabar Countries follow the Religious Ceremonies of those of Calicut, as being the chiefelt Kingdom of Malabar. From hence it is, That the Zamorin claims the preheminence before all the other Malabar Kings; he having alone the Prerogative of Coin-The two next in rank, were the Kings of Koulang and Cananor; besides which, many ther Petty Princes on the Coast of Malder claim the Title of Kings, tho Vol. IL

they are not really so, nor enjoy the Prerogative of Coining. The Zamorin, or King 1 6 6 of Calicut loft a confiderable share of his Lustre, after the coming of the Portuguese into those Parts, with whose assistance the King of Cochin freed himself from all Subjection formerly due to the Kings of Calicut. and foon after arrived to that pitch of Greatness, that they thought themselves not in any wife inferiour to the Zamorins, and waged continual War against them. Nevertheless most of the perty Malabar Kings, and the Nayros are Vassals of the Zamorin, and never speak of him but with a great deal of Reverence, except the King of Cochin; and the King of Koulang, being the most remote of all, pays the zamorin less respect than any of the rest: However, all the Kings of Malabar are Soveraigns in their own Dominions. The Malabar Kings never Marry, but maintain a Concubine of a Noble Family, who lives commonly in the same Palace; if they happen to disagree, another is taken in her place; tho they are fo modest, as seldom to change their Bedfellows

The Sons born from these Conculous; are not regarded as Kings Children ineither do they succeed in their Territoric or Estates, but are Heirs only to their King except what Money the Kings are pl to bestow freely upon them, to make the live with the more Luftre among other Gentlemen: But the King's Sisters Sons inherit their Dominions. These Sisters don't Marry no more than the Kings, but are at liberty to choose a Galant, such a one as they like best. If they have three or four Sons, and two or three Daughters, the eldest Son succeeds the King his Uncle, and the other Brother after him. After their Decease, the Succession goes to the eldest Son of the King's second Sister, and to his Brothers afterwards. After their Decease, the Sons of the other Sifters are the next Heirs to the Crown; fo that the Succession descends from the Brothers to their Sitters Sons. If it happens, That the King's Sifters bear no Sons, the chief Men of the Kingdom Elect a King, who is next of Kin, but for want of fuch a one, choose whom they please. When the King's Sisters are arrived to Age of Maturity, viz. to their 13 or 14 Years, they pitch upon one of the Nobility whom they like best; unto whom, after they have made him confiderable Presents, they send Word, that he is chosen to get her Maiden-head, and to get her With-child. The Young Noble Man accosts her the first time with a great deal of respect and Ceremony, and after having tied a very fine Jewel about her Neck,

Вььь

1 6 6 2. with her, and so returns home: If the prove with-child, it is well, if not, she commonly chooses some Brahman or other, to try his strength whether he can get her with-child. When a Malabar King dies, Burials of the Corps is burnt three days after. All bar Kings. his Subjects from the next Successor to the meanest Child, shave themseves from Head to Foot, leaving no Hair, except what is on the Eye-brows and Eye-lids. They are also obliged to abstain from the use of Bethel for the space of 13 days, and if any one should be found to chaw Bethel during that time, they cut off his Lips. During these 13 Days, they dare not eat either Fish or Flesh, and the Fishermen are forbidden to Fish upon pain of Death. Considerable Alms are given to the Poor, out of the King's Coffers, and the Brahmans are provided with Victuals at the publick charge. After the expiration of these 12 days, every one is at liberty to eat what he pleases, except the new King, who is ty'd to the same Rules for a whole Year after; during which he must neither have the Hair of his

he diverts himfelf in private for some days

of the Body cut, nor pare his Nails: He is bliged to fay certain Prayers every Mornifg, and must Eat but once a day. time before Dinner he bathes himself,

done, he must forbear to cast his Eyes any body, till after he has taken Food. Cowards the latter end of this Mourning Year, his next Successor in the Kingdom, the other Princes of the Royal Blood, and other Persons of the chiefest Quality attend the new King, and pay their Homage to him, in the presence of many Thousands; at which time, the new King declares his next Successor, and the others each in his Degree; which done, he confirms the Lords there present in their respective Places and Offices. He that is declared the next Succeffor to any new King, is oblig'd from that time not to appear at Court, as long as the King lives; but those Princes, who are to Succeed him, may continue there. Before the above-mentioned 13 Days are expired, the new King has not the least Authority in the Kingdom, which they take for a general maxim here, to fee whether any body else will lay claim to the Succession: But, after the expiration of this time. the Great Men of the Kingdom, and chief Officers of State, engage the new King by a Solemn Oath, to maintain the Laws made by his Predecessor, to pay his Debts, and to endeavour the recovery of the Territories, lost under the Reigns of his Predeceffors. Whilst he takes the Oath, he lays his right Hand upon an Oyl Cask, in which are set up many Lighted Wicks, and with

a drawn Sword, which he hold in his left, touches a Jewel fet in Gold within the Cask. 1 6 6
This done, they firew Ric upon his Head, with a great deal of Ceremony, and cerwith a great deal of Ceremony, and certain Forms of Prayers, turning their Faces to the Sun. In the fare manner, all the Princes of the Blood, and other great Men Swear fealty to the new King. During the first 12 days after the King's Decease, the tole Administration of the Government is lodged in the Lord Chancellor, who has also the management of the Treasury, without whom, the King cannot take or dispose of the publick Money, unless it be in case . of the greatest necessity. It is also the Chancellor who puts the King's Mandats in Ex-ecution. The first in rank next to the King, are those call'd by them Knimales, then the Brahmans, who are in great efteem in those Courts, the King of Calicut himfelf being of that Sect, and wearing the twisted Cord. After the Brahmans come the Nayros, or Military Order, the true Off-spring of their Ancient Nobility; then come the vulgar or common People, call'd Moukon, or Poulias, or Parvas: The King is the only Judge here, before whom, are brought all fuch as have committed any Crime, or refuse to pay their Debts: In his absence certain Great Men of the Court determine all Affairs of any moment; but if a difference arises betwixt two or more Moukois or any Strangers, he that thinks himself aggrieved, makes his complaint to the next Nayros he meets, who is oblig'd to do him justice immediately, without receiving any Reward, unless the Plaintiff will voluntarily give him a Present: This holds in Matters of small consequence, for all Matters of moment are decided before the King in Person. Their ordinary Punishments are Imprisonments, or the loss of a Joynt of a Limb; if the Crime be Capital, the Malefactor is thrown to the Elephants. They have no other Prisons, but what are in the Royal Palaces. In case of any Difference betwixt two Pagans, when the truth is to be verified by a Solemn Oath, they we put one hand into boiling Oil, or else lay kin hold of a piece of red hot Iron; formetimes Oast they Swim cross a River, swarming with venomous Creatures; it being their Opinion, that if they have spoke the whole truth, they shall not receive any hurt; but the Trial with the hot Iron is most generally received. When the Malabar Kings, or their Governours intend to inflict a punishment upon the Inhabitants of a certain place, they furround it with Wooden Stakes fake an Enclosure, out of which they may not stir, neither may they buy or sell, have the least Communication with others,

the Gare the removed again, under pain of 662 Date. This is forestimes done also before the Door of Page Persons.

\*\*All Co-Pagers here, as well \*\*Brahmans\*\*

\*\*Culti-\*\*

\*\*Castles of this decorated Friends; tho' this castles of this decorated again, under pain of the page of the p was more university practised before the Portuguese and Dutch introduced and settled the Christian Religion here: They take peculiar Care to provide in their Life-time as much fine scented Wood and other precious Drugs, as they think requifite for the burning of their Bodies to Ashes, which is afterwards divided among their Relations and Friends, , who preserve them, and at their Festivals mix them with Water, and paint their Faces with them. When a Brahman happens to die, his Widow is obliged, as a Demonstration of her Affection towards her deceas'd Husband, to burn her felf; this is commonly done under the noise of several musical Instruments, to suppress the doleful Out-Cries of the dying Person, and in the presence of their next Kindred. However they may excuse themselves as to this point, if they pleafe, but then they are branded with Infamy, their Hair is cut off close, which they must not let grow to any length again; they are excluded from the Society of other Women, nor are allow'd to Marry again. Notwithstanding which, many chuse rather to dispense with these Disadvantages, than to burn themselves. Wives of the Nayros are not obliged to this Custom; tho' there are not wanting Instances, that they have thrown themselves into the Flames, which confum'd their Husbands Carcass; The Men are not engaged to mourn for their Wives, except that they are forbidden to Marry again.

The Marriages of the richer and better fort, are celebrated here with a great deal of Solemnity; The first thing they do after Matters are agreed betwixt them, is, to repair to the Pagode or Temple, where the Priests perform certain Ceremonies; After this, the Friends and Relations of the new married Couple, both Men and Women, lead the Bride for 15 days confecutively to the Bridegroom's House, where they are Entertain'd at his Charge; Most of the Women finging and playing upon Flutes, small Drums, and other mulical Instruments; The Bride and Bridegroom are placed together very richly attir'd, especially with Jewels, to fuch an Excess that they have been computed to amount fometimes to 200000 Crowns. The Room is hung with Sage Silk Hangings interwoven with Gold, and among other things, a Plate with Beeven to those that are Strangers; Towards

the Evening, the Women reconduct the Bride to her House. At the Expiration of 1662. the 15 days, the Bride and Bridegroom are Mounted on an Elephant richly accouter'd, fo as to face one another; The Elephant is led by a Nayros, and furrounded by the Friends and Relations on foot; Thus they are Conducted thro' the whole City and are fure always to stop at the Doors of any of their nearest Kinsfolks, Relations or Particular Friends, who present them with Bethel, Fruits and Sweet Meats; and anoint the Head of the Elephant with sweet scented Waters; they are very careful not to miss any of their Friends Houses, for if any fuch thing should happen, they would look upon it as a fignal Affront. When they come to the Pagode, they difmount, and after they have tarried there for some time, return to the Bride's House, where the Marriage is Consummated, each of the Guests being obliged to prefent the Nayros that led the Elephant with a Coco Nut.

They begin their New Year in September, but have no fixt Day, which they regulate according to the Decision of the A. itrologers and Conjurers, who present to find out by their Art, the very kour which is likely to be the most fortunate for the beginning of the Year. All those the are. above 15 Years of Age, cover their Fices that Day, for fear of casting their Byer upon any thing; Thus they are hid by Children to the Temple, where uncoming themselves, they fix their Eyes upon what Object they find directly before them; If this happen to be an Idol (which their Temples are full of) they have a peculiar Veneration for it, they look upon it as a good Omen, that the next Year will prove prospe-

rous to them.

All over Malabar they use a peculiar Their wri-Language call'd by them Malkama. Paper ting. they have none, but instead of it write upon the Leaves of the wild Coco-trees, with an Iron Pencil or Pen; which contain not only their Religious Ceremonies, but likewife the whole Series of their most antient These Leaves they cut all in Histories. the same shape of the breadth of two Inches, and two hands length; of these they lay together as many as they think fit, and put a small Stick thro' them on the top; which done, they fasten the Stick on both Ends to the Leaves with a Pack-thread, which they loofen as often as they have occasion to peruse them. Each of these Leaves is call'd Ola by the Malabars. They exceed all the European Writers in swiftness, which they perform with that Dexterity, as to turn their Faces frequently from the Leaves, and to entertain others with talk-

ing, whilft they are writing. The Mala-1662 bar Tongue is very difficult to be learn'd, by reason of its multitude of Words, one and the same thing being express'd by different terms; nay, each day throughout the Year is distinguish'd by a peculiar Name. Several Portuguese Jesuits have attempted to give us an Inlight into the Malabar Tongue, and among the rest, Father Gaspar Aquilar. They have their peculiar Letters, which

are very ancient, and resembling the Syriack

7 beir reli-

Characters. The Inhabitants of Melabar, as we told gious Wor. you before, are either Natives or descended from Foreigners; the last of which being first come thither out of Arabia are Mahometans, as the Natives are Pagans. Some are of Opinion, that all the Kings of Malabar follow one and the same Religion, but that their Subjects are divided into 18 several Sects; But, as far as ever I could learn by the most exact Enquiry I was able to make, all the Natives of Malabar, as Well Brahmans as Nayros and Moucon perform their Religious Worship in the same manner; for they adore their Idols, and the Sun, as they rise in the morning. In their Temples you fee a golden Cow, or fome other Image, unto which they pay their Hevotions; which is the reason that neight the Brahmans, Nayros nor Moucois wil kill this Beast, but pay such Reverence to it, that they paint the Walls of their Houses with its Dung mixt with Water; Thus, when the King of Calicut is to Bathe himself, fifteen Maids with Cow-dung in their Silver Basons plaister the Rooms with it, thro' which he is to pass twice aday. Their Chief God they call Parabramma, with three Sons near him, in Remembrance of which the Brahmans wear a Cord twisted of three threads on their bare Skin. They not only worship Man, but, as I told you, the Beafts also, and erected Temples for them, exceeding in Magnificence those of the ancient Romans. There is one Temple dedicated to the Ape, the Gallery of which is supported by 700 Marble Columns. Befides the Cow they pay likewise a godly Veneration to the Elephant, it being their Opinion, that the Souls of Men transmigrate into those Beasts. They have many Books, which contain an Account of their Religious Ceremonies, much refembling the ancient Greek and Roman Fables. The Priests and Brahmans keep these Books from the fight of the vulgar, these being their Oracles, unto which they have Recourse for their Prophecies, to blind these poor Wretches, as has been confest'd by lome converted Brahmans. They make however much more Account of Religion,

than the Nayros; for they daily provide (at the King's Charge) a conjuderable contrary of boil'd Rice in their Temples which saidtributed among the poor, or given thany body elfe, that will ask for it, this being not look'd upon is ignominious among them. They keep continually burning Lamps in their Temples, and their Prophets are al-most cover'd with Bells, which when they Dance and make other awkard Postures, make a great noise; The Moucos have their own Temples, which are naftily kept; they don't frequent them above once a Month, ris at the New Moon, because they can spare no more time from their daily Labour; Are the Entrance each of them is presented with some Ashes mixt with Water. The Nayros go commonly once a day to their Temples, where each mutters out a short Prayer; These Temples are disposed throughout the whole Country, and are most frequented at certain days, when they repair thither with a great deal of Devotion; fome for 20 or 30 Leagues, for they have their appointed Feasts, but two or three before all the rest. The chiefest is that of the New Years Day, when the Nayros come to pay their Reverence to the King, who receives them standing at a Window, and throws a certain quantity of Bethel to each, and some Gold and Silver among them, as well as the rest of his Subjects that appear there.

The Malabar Kings, Brahmans and Nayros pay likewise their Devotions to Serpents, which they consider as Evil Spirits, made by God, to torment Mankind for their Sins. You meet here with certain Vagabonds, who carry Serpents in a Basket with fome Bran for their Food, hanging on a Stick. carried on the Shoulders of two Fellows; fome of these Serpents are fix, seven or nine foot long, of a Grass green Colour, and not above an Inch thick, some are very large and bulky, with grey Spots; fo foon as these Malabar Vagabonds begin to play upon a certain Instrument like a Bagpipe, the Serpents fet themselves upright upon their Tails, twist themselves in a most surprizing manner, and soon after raise their Fins or Bristles, which are near the Head, and fall on with fuch Fury, as if they would tear one another to pieces; to the no finall terrour of the Spectators.

On the tops of the high rocky Moun- The Mal tains of Malabar (on the foot of which live leans the Christians of St. Thomas) dwells a certain Nation call'd the Malleans, they have a pretry good Tillage about 13 or 14 Leagues from Madura call'd Prises. According to the Description given us by Physical Stands Currius, and the resemblance of their saints.

gins the Blofforn to Bud but ' boies Tree loses all its Leaves, inad of which new ones come foon after. It bears a kind of round and smooth Apple, which is green at first and turns yellow atterwards, two, three, four, or more hanging together on fhort Stalks. The Pulp, before they are ripe, is white and infipid, but when ripe, bitter with a thick rough Peel. It Bloffoms in the Summer, and brings forth Fruit in the Winter. In the Pulp are round, but flattish Seeds, which are also very bitter. The Juice of the Leaves taken in the Decoction of the time Leaves, cures the Head-Ach; but if used in too great a quantity, is mortal, the only Antidote against vibich is Man's Dung taken inwardly. Two or three of those Seeds taken every day for two years fuccessively is a Prefervative against the Biting of the Serpent, called Cobra de Capelo by the l'orthqueses.

The Tree called, Manjapumeram by the Malabars, and Pariataku by the Brachmans, rifes up to the heighth of 18 or 24 foot, with very thick and lofty Branches for eading round about it; but the Stem is not above the thickness of an Arm, having an afh-coloured Bark: The Leaves hang croffwite over one another, being pointed at the ends, the uppermoft. tide of a dark-green, and the other of a light green colour, of an affiliagent and bitteriff taffe; The Flowers grow on Stalks which Itand upright five in a clufter are very agree, ble and fweet flented, having fix, fever, and formermies cight Leaves each; of a white colour both in and out fide. The Fruit is of an oval Figure, but flat, of a green colour, containing two round and flattish Seeds. This Tire is of no use among the Malabas Phylicians.

This Tice Champakam, as the Malabars call it, and the Brachmans Champo, is a very tall Tree, with many lofty Branches foreading at a good diffance: The Trunk is of that thickness as scarce to be grasp'd by a Man, with a thick Bark of an all colour without, and foft within, of a bitter adfiringent tafte. The Wood is white: The Leaves are of an oval Figure pointed a good way towards the ends, of the length of a Span, and the brealth of four or five Inches; the up-, permost side dark-green and shining, the other fide light-green, bitter and biting noon the Tongue. At the Extremities of the final Twigs, sprout forth palegreen Flowers, of a quick odoriferous Scent, having oval Leaves placed in three

rows within one another. In Root are about eight Leaves, broad again as those of the feet \* ~ W". round but pointed at the cide; in: in the fecond row are more pointed and those in the third more than in . . . cond, and pale yellow. The bruit grove in Banches of an oval Figure, with a thick Rind. Whilst not come to Maturity it is green, but turns pale yellow when Ripe, being sharp of Taste, and of no agreeable Scent: Within are three or four Seeds, round on one, and flat on the other fide; Within those Seeds, when they are come to their full Perfection, is a thin milky Substance encios d in a Skin of a Purple colour, and within it a black Stone. The Tree if not too old. Bloffoms twice a year; Out of thefe Howers they Diffil a good Cordial Water.

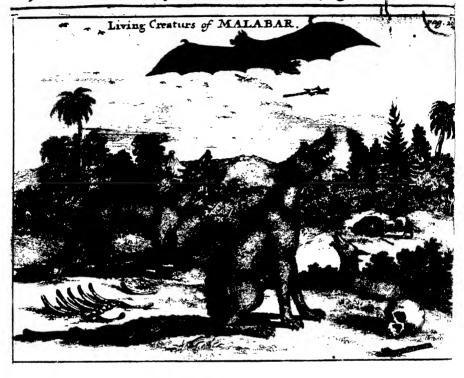

The Tree called Thoris by the Mait- Henry, bars, and Faralli by the Erulmans, groves up very high, with many far-spreading Branches: The Trunk is of that thickness, that two Men can scarce well grasp it; with a dark brown and rough Bark, containing a nalky Liquor within. The Wood is full of the . we fuice, and will keep a great while mader Water bet not very long in the Air. The Leaves grow on finall round out green Stalks, being of an oval ligure, but ponited at the The threes have pal green ends. Stalley growing you o in a clutter, of a white colour, confifting of 16 Leaves of an Gornerous Scint. The Audahas rocke Notegays of them. I roll is that'd like an Olive, green at first, but turns yellow and red by degrees: The Pulp is yellow and meally. The Malabars Est this Fruit, which has two oval but flat and dark brown Stones within. This Tree bears Flowers twice a year, out of which the Mulabar, Diffil a well-scented Water, which is look'd upon as a great Cordial, and revives the Spirits. The Fruit bruifed Tarea inwardly in warm Water promotes the Birth.

Besides these there also grows here Cussia Fisiala, called Komm by the Malabars, and Buso by the Brachmans; and Tamarinds call'd Balam-Pulli, or Malabars, and Sinza by the Brachmans. The Coast of Malabar produces likewise, Cardamom, Berbery Ginger, and some Aloes; as also, Bezoar-Stones, Salt-Petre, Honey, Lacca, and Cotton; to be short, this Country abounds in all forts of Indian-Trees and Fruits.

Living Creatures of Mala bar.

The Woodsafford vast plenty of Birds of all kinds, and among the rest most excellent Peacoks, the Flesh of which is very white and well tafted. No place in the World abounds more in all forts of W ter-fewl, and there are a great many Birds here for tame, and fo plentiful, that you may kill them with a Stick, the reason of which is, that, as the Pagan adl ere to the Opinion of Pythagoras, concerning the Transmigration of the Soul; fo, they won't kill any living Creature, which makes all forts of Wild Creatures multiply here, almost in infinitum. The Flesh of their Hogs (of which they likewise have great plenty) is also excellent good; but above all, Tame-Fouwl is fo prodigious cheap here, that you may buy a very good Pullet for Two-pence, and Thirty Eggs for the fame price. I remember I had once bought up 300 Pullets against the Arrival of our Ships, which being put in the Old Church of St. Thomas, we found all dead one Morning; we could not guess at the cause of this disaster, till a certain Malabar told us, that it could not be otherwise, but that a Cobre Kapel (a very Venomous Serpent) must be hidden in the place; whereupon first fearch being made we found the Serpent, to 6 of under a heap of the Wood, which was no seoner removed, but the Serpent set her self upright upon the Lait spitting. Fire and Flame, so that we ady durst approach her, till one of our Soldiers kill'd her with his Sword. Of Venison there is also great plenty.

They have likewise Batts of divers Batts. kinds; and among the rest a certain fort, of that bigness, that their Wings when extended are as long as Man can stretch with both his Arms together. They have red Heads, and Necks, black bodies, and are shaped like a Fox. They are extreamly nimble, and having very sharp Teeth, do a great deal of dammage to the Fruit. Their Wings are bare, like those of our Batts, unto which are fastned their Legs and Tails, so that they can neither walk nor stand; to recompence which defect, they have a kind of a hook, of the thickness of a Finger on each Wing, wherewith they fasten to the Branches of the Trees: You see here vast multitudes of them in the Woods; so that it is no difficult thing to kill them; but whatever you kili,

Plenty of Lowl.

inging among the Trees: They will have their own a star as they can reach; they will have their own a star as they can reach; as far as they both remained dead when the foot. They will dripk of the upon the spot. They will drink of the Liquor of the Coco-Tree till they are Drunk; They commonly bring forth two coung ones at a time, and that general in the hollow of Trees; the Manual the Flesh, which has no agree-

Here you meet also with Jackalls, as our People call them, being not unlike a large Fox, of the bigness of an ordinary Peasants Dog, of a red grey colour; but thinly covered with Hair. They allemble in the Night in whole Troops, and approaching (especially about the New-Moons) to the Villages or Plantations, make a hideous noise, like the onterries of Women, or Men; they are very greedy after Mens Flesh, and will Icratch the Dead Carcasses out of the Graves, unless they be well covered with Stones: They are scarce ever to be tamed. The Malabars Eat the Flesh of these Jackalls. And thus much of the Coast of Malabar.

After, as I told you, we had fet Sail the 12th of March, from Koylang, the Wind turn'd against us the same Evening, but about a Eleven a Clock at Night we fet Sail again with the Land wind. The 13th we kept along the Shoar, with a gentle breeze and very fair weather; but the Wind turning foon after to the E. S. E. we were forced to chuse the main Sea, but made to the Shoar again towards Evening and took the benefit of the Land-wind. The 14th there being but little Wind we advanced no farther than e over 12 Leagues from Koylang; and the 15th finding our felves off of the City of Tengepatnam, we gave the Signal by a Cannon-Shot, for the Resident Mr. Koek to come aboard us, which he did accordingly; and after I had discoursed with him, of what I had in Commission to tell him, we continued our Voyage, but being towards Evening overtaken by a Tempest, were forced to come to an Anchor. The 16th early in the Morning the Winds being somewhat laid we fet Sail again, but by reason of the contrary Winds, were forced to return towards Pulon, near the Cape of Comorin, where the Portuguese have a small Church redicated to St. Martin. The 17th we Vol. II.

made this Cape, but the Winds continuing fill egainft us, it was not till 1662 the 18th that we could reach Toutekeriin, Come to the chief among the Sea-Ports of the Lome to Company, Both in respect of their Traffick hither, and in the Government of the Inhabitants, who live under their Jurisdiction along the Sea-Coa large Villages, the chief of maich is The feven Toutekoriin, the other fix are, Manna-Scaporis para, Alendale, Wisconypannani, Pannackiel, of Madu-Baypaer or Various, and Bushier. After re. a fixy of fix highthe been, I received Orders from high Vaccount to return to Kolong, and to the other to return to Kolong, and to the other more spea me the Government of shiphetes, being very well known to the Onen there. Accounts to Mr. Lawrenz high in the prefence of Captain Van Reede, I feft this place the 19th of May 18th, and went by Land to Koylong. The number of Their Inthe Inhabitants of the beside-mentioned babitants feven Villages amounted 1664 to above Toutekoriin, the other fix are, Manna Sea-ports seven Villages amounted 1664 to above 20000 Souls, viz. in Toutekerin about 3000, in Mannapara 4000, in Alendale 800, in Wiranyparnam 900, in Pommekiel or Punikael 2800, in Bayers 700, and in Bempaer 800; Befides those Inhabiting on the Coast of Comorin, which amounted to a considerable number: All these Villages are adorn'd with stately Churches, built by the Portugueses, especially those of Mannapara and Bempaer; but are now in a decaying condition, fince the Portugueses have been chased thence. Some of the Romish Priests now and then come to say Mass in the Neighbouring Villages, wither the People flock in great numbers; tho' to speak truth, they are more Heathens than Christians. Toutekoriin confumes Yearly abundance of Foreign Commodities, by reason of the great numbers of Inhabitants living along this Coast, who must be provided from abroad with most things they stand in need of; Tontekoriin otherwise Tutukuriin, or rather Tutukury, or Tutukuriin, The Village or Totokury, is now, as we told you, the of Toute-Chief of all those Sea-Ports, being an open place, but beautified with stately Stone buildings. It has three large Churches, built by the Portugueses, which are to be feen at a great distance at Sea, the Country round about being flat and low. In one of these the Reformed exercise their Religious Worship: Besides which the Convent of the Franciscans is lately fitted up for the same use.

Au-

The Dutch-East-India Company have 1662. a Factory here, managed by a Merchant as Chief Governour; by a Factor, as his Deputy; two or three Affistants, and a Military Officer, under whose Command are some Soldiers, but the Nayk of Madere will not allow them to crect any Fortifications: During my stay here, I begun to erect a Brick-Wall round the Garden, but finding the Jentypes to lock with a jealous Eye upon it, I defisted; yet I took care to repair the House of the Company, and set their Flag on the top of it which might

Inhain-

Portu-

gueles.

Punikael near the Rocks of Remanekor, not far from the Kingdom of Narsinga lies the Village of Punkail, where the Portugueles formerly had a Fort, and a Garrison of 40 Men. Two Leagues from thence there was a Pagan Temple of the Bramens call'd Trichanduri, against which and the Priests thereof the Portugueses would frequently utter very injurious Words, which so exasperated the Inhabitants, that they entred intrixt the to a League with their Neighbours, viz. the Badagas of Narsinga, in order to drive the Christians thence: Accordingly having with a great deal of fecresie got together a Body of 6000 Men, and received certain Intelligence that the Portigueses in the Fort were but ill provided with Gunpowder (the Chief terror of these Barbarians) they march'd directly to Pumkael; The Portugueses being not a little surprised at so unexpected a light, were put to the greatest nonplus, that could be, being in want of Ammunition, and no great account being to be made upon the Parvas (the Christian Inhabitants) as being not trained up to Military Affairs, but living upon Fishing and Swimming: These being sensible of their inability to relift the Enemy, no sooner heard of his approach, but they began to betake themselves with their moveables to their Boats, which lay near the Shoar, which c the Budagas indeavouring to prevent, some retired to unpassable places, others to the Sea lide, whilst others were exposed to the mercy of the Enemy, and with most dreadful outcries implored the Assistance of the Portugueses in the

About that time a certail Priest, on named Anthony Kriminalis, who was 166 come some Days before thither to take care of the Christians there feeing of Anthis miserable spectacle, applied him-ny Kri felf to John Ferdinando Korrea, Gover-nalis. nor of the Fort, remonstrating to him, that fince they were not in a condition to oppose the Enemy, to endeavour to bring things to an Accomodation; but the Governour answer'd, that it was against the Glory of his King, to subnit in the least respect to those Barba. rians, Kriminalis made what hafte hecould, to return to his Flock, which he met in the Church where he had preached the same Morning, and led them to the Sea-shoar, endcavouring as much as he could, to fee them Embark in their Boats, whillt he refused to enter himfelf, being refolved to flay ashoar, and to expect the utmost fury of the Barbarians, who were advancing apace, and with their Arrows had already kill'd several of the Portugueses and others; among whom was the Interpreter of Kriminalis, who was Shot by his fide, notwithstanding which he remained immoveable in his Resolution, and wringing his Hands up to Heaven, tell upon his Knees; The first Troop of the Bagadas pass'd by without doing him the least harm, except that they took his Hat, and fo did the fecond, but one of the third Troops (confifting of Mahometans) run a Launce into his Left side, whilst others let fly their Arrows at him, and thinking he had been kill'd came to take his Cloaths, which he, being yet alive, gave to them, and fo retreated into the Church, with an intention to spend the small remainders of his Life, at the Foot of the Altar; and being follow'd by the Bagadas, he there received a fecond thrust, and soon after a third, which put a period to his Life: Is kille They afterwards cut off his Head, which together with his Bloody Cloaths they carried in Triumph to their Temple of Trichanduri; the Trunk of the Body was afterwards buried by the Christians.

Not far from Punikael or Pommekiel lieth a great Village call'd Putanam, and so further up the Coast Bembar or Bempaer, Kalekure, Beadal, Nianankor or rather Remanakoris and Kanhameira; Next you see Negapatam the first Frontier of the Coast of Coromandel, but one of the Chiefest Towns of this Coast is Perhapatan situate near the Rocks of Romanankoris, being the Capital City of the

Marauns

Maraya, who inhabit the Mountains, 562. a turbulus Generation, living only upon Robbing; The Jesuits that formerly belonged to the Church of Periaparan, who Inhabit the Mountains, did endeavour to reclaim them in some measure from their Barbarity, but most of them foon return'd to their old way There is another Village of living. feated on the other side of the Rocks of Romanankoris, directly opposite to Negaparam, the Inhabitants of which are all Christians. All along the Sea-Coast are about 30 Villages, among which, befides the beforemention'd, are the Chief-; Trichandar or Trekandar, Kallegrande and Cherakalle.

anners 1 Cuns of Inhaants.

The Inhabitants of those places are very black and strong; they are deceitful and cunning, make but little account of their Wives, but generally keep two or three Harlots, by whom they have fometimes 16 or 18 Children. w Clo- Men wear nothing but a fingle piece of Callico wrapt about their Middle, and another piece about their Head which they call Romare. The ordinary Women commonly wear painted Callico, those of Fashion are adorn'd with Gold Rings and Bracelets when they are abroad, but are very nasty at home. They tie their Hair up in a Truss behind, like those of Malabar, for the rest they have very good Features. They live upon Meat and Rice, but drink nothing but Water, which they are fain to fetch half a League from the Seashoar; They live by Pearl-sishing and catching of Fish, by Weaving and Shipping, there being fome who drive a confiderable Trade with the painted Callico's to Kalpentien, Kolomba and the Malabar Coast. They have abundance of Callico and Linen Weavers here. and great numbers of People are employed in painting of Callico's, which they do very Artificially. This Trade was in great Request whilst I was here. because I used to give all imaginable Encouragement to them; The Inhabitants are Govern'd by Judges of their own, who are chosen every Year by the Chief Director of the Dutch Company there, whom they stile the Captain of the seven Seaports. Each Village has the Privilege to propose four, out of which the Captain choses two, who swear Fealty to the Company; all civil Causes are transacted in their respective Villages, but Criminal Matters are decided at Toucekoriin in the Council of Nine, whereof the Captain is President. The remaining Portugueses pay no Taxes to

the Dutch Company, but to the Nayk o of Madure; however, this Tax is paid 1662. with the Approbation of the Chief Director, who allots every one his Share according to his Substance; Those who are backward in their Payment, must expect speedy Execution, which is done by the Soldiers of the Nayk, and causes frequent Quarrels, betwixt the Inhabitants and the Soldiers, as it happened in my time, then the Nayk percriptorily demanding the Tax from the Parvas, which they were not able to pay, I fent to him a Sergeant with fome Soldiers, to defire that he would fend a Commissioner, with whom they might Treat, and obtain some time for the Payment thereof, upon which the Nayk having fent one of his great Officers with a Body of Horse, I remonstrated to him, the Impossibility of the Matter, telling him that the feven Sca-Ports were willing to make a Present of two Silver Dishes fill'd witi Ducats to his Master, which was valuecounted of, and the Nayk as a Token of his Satisfaction, fent me a Scarfe richly Embroidered with Gold. These seven Seaports were formerly (before the Porinquele Fleets appear'd in these Parts) under the Government of the King of Marien, a Vallal of the Queen of Tengauly, unto whom they were forc'd to pay many Taxes; at which time the Parvas lived deeper in the Country, and used to serve in the Wars to such Princes as would pay them best.

One time a certain Paraus happening Wars beto fall out with some Moors, these cut twist the off his Nose and Ears, which to exa- Moors. sperated the Parvas, that they resolved to take up Arms, and to revenge the Quarrel of their Countryman. To begin the Fray, they took one of the Moorish Merchants Prisoners, whose Nose and Ears they likewise cut off, and so fent him home. Hereupon the Moors having affembled a Body of 30,00 Men, they marched to, and pitch'd their Tents near Toutekoriin; On the other hand, the Parvas were not above 5000 Men, and well arm'd, and trusting more to their Bravery than Number, fell upon the Moors so couragiously, that they made them quit the Field, with the Slaughter of 7000 of their Men; A great Number of them being forc'd to the Sca-shoar, saved themselves in Boats, but were scarce got to Sea, when by a strong Tempest from the SW. they were fo dispers'd, that no news was ever heard of them since. After this

Victory

Victory the Parvas having made them-1 6 6 2. selves Masters of these Sea-Ports, came to  $\sim$  a Composition with the Queen, promifing to pay her the same Taxes as the Moors had done, which being impossible for them to perform, this proved the occasion of unspeakable Miseries; some of them being Imprisoned, for want of Payment, others fold for Slaves, to that degree, that at last they resolved to shake off the Yoak, cost it what it would: The Portuguefes who 1490 appear'd first thereabouts with their Ships from Cochin, having at that time Traded there for 40 Years before, and confequently their Strength at Sea, being not unknown to the Parvas, they fent their Deputies to Cochin to implore their Protection, and to promise their Obedience, and that they were ready to imbrace the The Portugueses wil-Christian Faith. ling to improve this Opportunity came with their Fleet 1533. on that Coast and having made themselves Masters of the Sea-port Towns, the Parvas received Baptism all on one Day. However they met with great Oppolition afterwards from those on the Coasts of Coromandel and Malabar, encouraged under hand by the Parvas, till at last Matters were adjusted thus, that the Portugueses should remain Masters of the Coast, that the Parvas should pay them a certain Annual Tribute, according to their Ability, and that all the Chief Men of that Coast should have their Share in the Pearl-Fishing, which was to be perform'd on a certain Day. After all, the Nayk of Madure having found means to get into the Possession of this Country, left the Portugueses in the full Possession of their Jurisdiction over the Parvas, and of the Free Exercise of their Religion, in which State it continued till the Year 1630. when the King of Portugal having fent thither a Governor, to clip the Wings of the Romish Clergy, who were grown too powerful there, this occasion'd new Troubles, For the Parvas being a Zealous kind of People, and for the most part at the Devotion of the Priests, they were divided into two Factions, during which intestine Commotions, the Clergy did not forget to improve their Authority, and to Enrich themselves at the Expence of their Flock, but the Jentyves or Pagans also began to encrease to such a degree, that being become formidable to the Parva, they often forc'd them to shelter themselves against their Forces in the neighbouring Islands. Since that time the Parvas acknowledged the

Jurisdiction of the Portuguese Cavernor; Lach Village has two Judges, who are changed every Year, they keep Courts twice a Week, and in Conjunction with the Perangiins ( who are Hereditary Officers ) decide all Controversies of less Moment; They raise the Taxes, and are accountable once a Year to the People for all their Transactions; whilst the Portugueses were Masters here, the Jentyves or Pagans durst not exact more Taxes from the Parvas than was agreed for, unless they would see them go with. Wife and Children to the neighbouring Islands, from whence they did not return till they had obtain'd fome considerable Abatement; But of late Years the Parvas having left off that Custom, the Jentyves improve it to their Advantage, and force them to pay three times as much as they used to do former-

The Kingdom of the Nayk of Ma-The Kingdom, under whose Jurisdiction the seven dom of before-mention'd Scaports are; borders Nayk to theW. upon the Kingdom of Travanker Madu to the East upon the Sea, and to the N. West upon the Country of the Nayk of Tanjaor or Tanjauwer, betwixt the Coast of Malabar near the Cape Comorin and Coromandel; Its whole Extent being along the whole Eastern Gulph or Coast opposite to Ceylon from the Cape Comorin (where the Coast of Malabar ends) to the Town of Bempaer or the River Ulton a Tract of 75 Leagues in Length, and 30 in Breadth. The Seashoar, commonly call'd the Pearl-Coast, from the many Pearl-Banks that are hereabouts, extends from South to North in length, and in some places about halt a League deep into the Countrey. The Capital City and ordinary residence of the Nayk is Madure, five Days journey's to the N. of Koylang; being adorn'd with many most magnificent Pagodes, or Pagan Temples, which have very high Turrets Gilt on the top. Along the Coast of Madure neither Grass, or Herb, or Plant is to be feen, except Thistles and House-leek; it having been found by Experience, that the Cocotrees would not thrive here no more than several other Indian Trees; notwithstanding which they are sufficiently provided with all manner of Necessaries from the circumjacent Country, as well as from abroad, by the way of Touter koriin (besides that, the Sea-shoor abounds in Hares and Partridges, the first of which resemble our Rabbits, their Flesh being tough, yet in Tasta

## Travels to the EAST-INDIES.

The safe Hares. The Flesh of the Parpringer, which have red Legs and round Hills have, is of an agreeable Taste. Table have here Mice as big as Cats,

The have here Mice as big as Cats, which dare not approach them, for, if they he purfixed, they will fettle upon a Chair, or Cheft, and fitting upright, Fightinad Bite like Dogs: They are in colour and shape like the European Mice, except that they are without Hair, and have a rough Skin like an Elephant. They will dig underneath the Doors, if do considerable mischief to the paterchandizes in the Warehouses.

There is also here another fort of Mice, red, and much lesser than the first, but so sierce, that they will make the

Cats run before them.

This Country also produces Serpents, and divers other forts of venomous Creatures. One Morning, as I was rifing, I found the Skin of a Serpent sticking to one of the Posts of my Bedstead, which she had cast there the night before, without being perceived by me or any body elfe: In October, November, and December, the Western Winds blow with such violence the Sand from the adjacent Mountains to the Shore, that you are not able to open your Eyes. Much Rain falls deeper in the Country, and near the Cape Comorin, but never at Toutekoriin, instead of which a Thaw falls every night, which is very cold; and consequently by the sudden alteration of the Weather, very unwholsome; the Winds being sometimes so excessive hot here, as if they did blow out of a fiery Furnace; as long as these Winds last, the Inhabitants dare not go abroad into the Fields for fear of being overwhelm'd by the Sand.

The Nayk of the Kingdom of Madure is Master of several considerable Countries, each of which are govern'd by a peculiar Governour; besides which, there is one Governor-General, who has the chief Management of the whole Kingdom; who ruled all our time the Country, was called Boomalapalles; befides the Governors, each Village has two Judges, who are much respected by the Inhabitants. The Nayk to secure himself of the Fidelity of his Governours, detains always their Wives and Children in a certain Castle call'd Zwela Baddy, about seven Leagues from Madare, under the guard of 300 Eunuchs; neither are the Husbands permitted to fee them without peculiar Licence from the Neyk, and are obliged to depart again in two or three days; some to avoid Vol. II.

this inconveniency, content themselves with Harlots. Most of the Inhabitants 1 6 6 3 of the Country of Madure are Jemyves or Pagans, (by some they are called Badagas) tho some of them have been Converted to the Romish Faith by the Portugueses. The Jemyves are accounted good Soldiers, yet are much inferiour to the Malabars; witness, the Wars the Nayk of Tanigos, tho much inferiour in Power was a capital them.

power, wages against them.

There are three Nayks in this part of the Indies, viz. the Nayk of Madure, the Nayk of Tanjaor, by the Dutch call'd the Tanjower and Tanjouwer, and sometimes Teaver, and the Nayk of Gingi, otherwise call'd Cingier or Chengier. The Word Nayk, Neyk, or Najeka, fignifies as much as a Governor, Vassal, or Viceroy, their Predecessors having in antient times been only Governors of those Countries they are now possessed of under the Jurisdiction of the Kings of Vidia Najar or Bisnagar, or Narsinga; but having Revolted against their Liege Lord, each of them assum'd the Royal Power and Title. The Nayk of Madure had been for a confiderable time in War with the Nayk of Tanjaor, and taken many Places from him: At my time the War was renewed with more vigour than ever; and the Nayk of Tanjaor having gathered a great Army, attack'd the Nayk of Madure so briskly, that he took from him in a few days all the Places he had conquered from him before. The Army of the Nayk of Madure being much disheartned by the Victories of their Enemies, the Madure sent to me to Koylang his Chief Governour, desiring Assistance from the Company; but as it was not our Interest to engage on any fide, I excused it as handsomely as I could.

Betwixt the Coast of Madure, where The Pearlthe feven Villages are, and the Isle of Banks .... Ceylon, are divers famous Pearl Banks by the Sea, for which reason this Tract is called the Pearl-Fishery. These Pearl-Banks are properly Rocks of white Coral-Stone, which fometimes are covered with Sand; on these Rocks, the Oister shells, containing the Pearls, are festned, but in what manner no body knows: Some of those Banks are about 12 or 13 Fathoms, and others at 15 Fathoms distance from the Shore, so that they can scarce to be seen from thence: Some of those Banks are five, six, or seven Fathom under Water. The Oifters live fix years, after which time the Shells open and the Pearls are loft; of

GRER

which I have seen several that were shown 1 662. me by the Divers. These Pearl-Banks are search'd every year to see whether the Shells are come to their full Maturity: This is commonly done in October, when the weather is Calm, and the Sea clear hereabouts. After they are convinced that the faid Oifters are come to their full Perfection, the time of Pearl-Fishing is appointed and proclaimed throughout the Country; so that the Merchants refort thither from the other part of the Indies, nay from Arabia and Turkey it self, who set up their Tents near the Seafide, to buy the Pearls.

Pearl-Fishing bow perform'd.

They Fish for Pearls, or rather the Oister-Shells containing the Pearls, in certain Boats called Toniis, being about 28 foot long, (of these you shall see 3 or 400 at a time;) Each of which has feven or eight Stones, which serve instead of Anchors, and five, fix, or feven, nay sometimes eight Divers, who are to Dive one after another. These Divers Dive one after another. These Divers are quite naked, being covered only with a kind of thin Wastecoat; they have each a Net hanging down from the Neck, and Gloves on their Hands, wherewith they are to pick the Oisters from the Rocks; each of them has also a Stone of about a foot in length, and 50 pound weight, to make him Dive the fwifter: This Stone has a hole on the top, wherewith it is fastned to a Rope; when they are going to Dive, they fet their foot into a kind of Stirrup, laying hold with their Left-Hand of the Rope, the other end of which is held by one in . the Boat, stopping their Nose with the Right-Hand to hold in their Breath, and fo they go to the bottom; where they are no fooner come, but they give a fignal, by pulling the Rope, for those in the Boat to pull up the Stone. done, to work they go, and scraping the Shells from the Rocks, fill their Nets, and then pull again the Rope, when those in the Boat draw up the Nets first, and foon after the Divers, who are fucceeded continually by fresh ones. Divers can hold their Breath four times as long as other People; they are obliged to Dive from 3 Fathom to 15, being not able to hold their Breath any These Boats commonly go to Sea every morning by break of day, with the Land Winds, and return in the afternoon with the Sea Winds. Those who Equip those Boats, hire both the Divers and the rest of the Boats Crew, at a certain price per diem, like as we do our

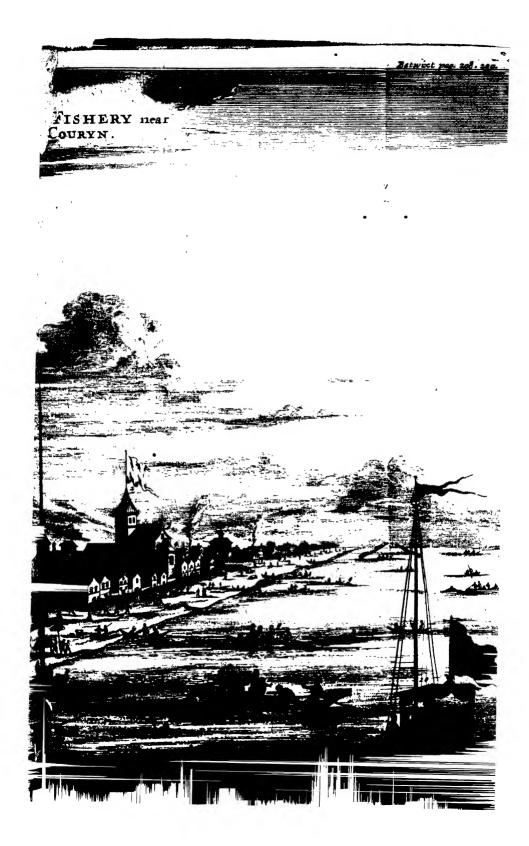

brought ashore, and there laid p in a great heap, till the Pearl-Fisher, over, of which begins immediately after Bober, aud continues all the November and December, which makes the Oisters smell very ftrong, and fometimes occasions Distempers. The Pearl-Fishing being over, a wooden House is erected for the Company and the Nayk, where each receives his share, the Boats being obliged to Fish one day for the Nayk, and another for the Company; and these take care that they be not disturbed in their Fishing, the Governor and two Judges being every day near the Sea-shore, to decide such Differences as arise betwixt At last, the Oister-Shells are opened in the before-mentioned House, in the presence of certain Commissioners; every Oister-Shell does not contain Pearls, nay the most are either without any, or have at least very small ones: On the other hand, some Shells contain five, fix, seven, nay eight Pearls apiece: Some of these Pearls are found in the Liquor, some in the Flesh of the Oisters, others but few, are fastned to the Shells; of which last I keep several by me. The Pearls being all taken out of the Shells, are put into thin Sifts of different holes, and according to their different fizes are fold to the fairest Bidder: The Pearl-Dust is bought and fold by the Dutch. They Stew and Eat the Flesh of these Oisters, but it is somewhat rank and hardy, not comparable in Taste to our English Oisters. They give the Pearls a glaunce by rubbing them with Salt and powdred Rice. Out of the Shells they make a very fine Mortar.

They have two forts of Pearl-Dust, Pearl the Old and the New; The New Pearl-Duft. Dust is search'd after daily by the Women among the Dirt and Rubbish of the Oifters: The Old Pearl-Dust is dug out upon the very brink of the Sea-shore, Dirt, Sand and all, fometimes, fix, feven, or eight foot deep; this they let dry altogether in the Sun, and by degrees the Dust being blown away by the Wind, the black Pearl-Dust remains behind, which they bring to those in fmall Parcels, who have given them fome Money beforehand. This Pearl-Dust being the worst of the two, and of no great value, these poor Wretches can scarce get a Half-penny a day for their Labour, a wretched gain indeed, but fufficient to keep them from Starving in this Country.

Besides the Pearl-Oister, they also The Day-labourers. All the Oister-Shells are catch on this Coast certain Horses of the ofs

these they make Bracelets, and rhm, b-Rings, which they make use of in crawing their Bows, being valued much beyond Ivory. This Product of the Sea is found at 8 or 12 Fathom depth, in a Tract of the Sea of about 10 Leagues in length, from the Coast of Vyraamdes Laam to Ilha Doce. begin to Fish for it in the middle of December till the middle of May, when the Sea hereabouts beginning to be unclear, the Divers cannot without great danger Among these Seago to the bottom. Horns they now and then, (tho' scarce once in 100 years) met with one they call the Kings- Horn, being not to be distinguish'd from the rest, except by the opening, which is on the contrary fide; being red within and green without; they are faid to Swim before the rest, which follow them like their King; for which reason it is, that the Kings of Colconda, and several other Indian Kings, are accounted out of one of these Horns, which makes them to be in great Esteem here, especially among the Jentyves, who will sometimes give 800 Reals for such Whilst I was hereabouts, a certain Fisherman Dream'd that he had taken a King's Horn, which he telling to one of his Comrades, they agreed, that they would go immediately to try, and divide the Booty; accordingly they did, and he who had Dream'd the night before, catch'd a King's-Horn, but refufing to give to his Comrade his share, they went before the Judges, who were obliged to decide in favour of the Dreamer, the other having no witnesses to prove his Bargain. I bought the same Horn afterwards for 170 Reals, and was offered 20 Reals gain immediately after, by one of the Judges. These Siankos are fold at a dear Rate at Bengal, where they have a way of polishing them, that they shine with a most lovely white much beyond any Ivory; They make Bracelets and other Ornaments of them.

As the Fishing of those Horns is one of the main subsistance of the Inhabitants on this Couft, so, they must be tants on this Coair, 10, they mult be care lly look'd after, that under pre-tend of Fishing for them, they don't live by Oisters, for which reason cer-tain People are maintain'd to watch the life freemember they once brought up beforein Boat belonging to Kalir-pa, which under pretence of Fishing for watch, had been found among the

me. I found upon a strict Examination, that extream Poverty had enforced them 1662. thereunto, and so dismise'd them for that time. Some are of Opinion, That the Pearl-Dust dug on the Sea-shore, has lain there ever fince the Isle of Ccylon, and the Maldive Islands, were torn from the Continent, when the Pearl-Shells were cast up by the Floods here, and opening themselves, were confumed by degrees, leaving the Pearls underground. The Pearl-Dust is gathered by the Men during those intervals, when they can't go a Fishing; but when they are abroad at Sea, their Wives and Children do it in their flead. Abundance of Diversare devoured by the Sharks, against which they pretend to defend themselves by certain Incantations, notwithstanding they are Christians. After I had settled my Accounts at The Author

Toutekoriin, I prepared for my Journey retires to

to Koylang cross the Mountains of Balli- Koylang. gate; and accordingly as I told you, fet out the 19th of May 1665. under a guard of some Soldiers, and with an attendance of some Porters to carry my Baggage and Provisions, there being no Inns by the way, and in many Places not the least thing to be got for Money. We had scarce Travell'd a day but were met by a Troop of Malabar-Robbers, arm'd with Bows and Arrows ready to let fly at us: They had already laid hold of two Slaves, who were carrying some Persian Wine, but seeing the Soldiers ready to discharge their Firelocks among them, they thought it their best way to retire, and finding us continually upon. our Guard, quite to leave us wieft.
We pass'd that dreadful ridge of Mountains call'd Balligate, extending too tain of Leagues in length, and is covered with Balligate. a very fine red Land, which being as light as Dust is in October, November, and December, blown by the continual strong West Winds as far as the Isle of Ceylon, a Tract of at least 50 Leagues; whence it is probable, that these Mountains are not so high now as they were in former Ages; When the Sun casts its Rays up-

on this Red-Land, the Reflection there-

of appears most dreadful to the Eyes

in the Sky, which scems to be all on fire. This high ridge of Mountains does likewife occasion most surprising alterations in the Season; so, that whilst on the Northlide of the Cape Comerin, it is Winter during the months of May, June, July, August, and September; it is Summer at the same time on the southfide of that Cape; on one fide you meet with

continual

continual Tempests, Thunder and Light-1662. ning, whilst the other enjoys an agreeable and lovely Scason. About that time, black Clouds are gathering upon these Mountains, by the Winds, which break out into very hard and sudden Rains, occasioning great Water Floods, by the overflowing of the Rivers, which are oftentimes thereby choak'd up with Sand to that degree that they are rendred unnavigable, for a confiderable time after.

Comes to

Having at last passed the Mountains Koylang. I arrived the 15th of May at Keylang, whereabouts I found all the Fields under Water; Pursuant to the Orders I had received, to draw the City of Koylang into a narrower compass, and to Fortifie it on the Land-side with one Wall, and two Demibastions, I ordered all the Houses, Churches, Trees, and what else stood in our way to be cut or pull'd down; and 30000 Stones, each of two Foot long and one broad, to be cut out of the Quarries; so that the first foundation of these Fortifications being laid the 1st of July, the same was continued with all imaginable diligence. In the mean while I went in an Inland Bark to Cechin, by the way of Kalkolang, to confer with the Governour Kolfter how to regulate the Factories of Koylang, Kalkelang and Karnepely, to the best advantage of the Company.

After a stay of three Days at Cochin, 'n my return to Koylang, we were furprised by so violent a Tempest, that we were forced to leave the Bark and to get ishoar, but the next Day the violence of the Wind being much abated, we profecuted our Journey to Koylang, where I arrived the 4th Day after I left Co-

chin.

The War among some of the Indian Kings continuing as yet, it was generally reported, that the King of Travankeer (who was then at Mansassi, tho' the Queen refided at the same time at Koylang) was marching with a confiderable Force to attack the Fort of Kalkolang, whereupon I fent our Factor with Letters from our Chief Director Mr. Kelster to the King, to know the reason of this Enterprise: But he was forced to resurn without any other Answer, from his Courtiers, than that the King being employed in his Devotions, no body could be admitted into his Presence, till that time was expired, which was likely to hold for some time; However the Army did remain all the sime in its former Camp, without com-Hostilities: In the mean

while I had taken effectual care to provide for the fecurity of Koyland, the I walls advancing apace, and being in fuch forwardness, that we hoped in a little time to bring them to perfection; This being the only thing that stay'd me at Koylang; for as the time of my Contract with the Company began to come near to a period, I began to make preparations for my return into Holland. But Mr. Jacob Hustart being gone to Batavia, and Mr. Goens put in his place, I happened to have some difference with him, concerning the Government of Tomekoriin, which rife to that height The A that he ordered me immediately from thoris Koylang to the City of Kolombo in the to Kol Isle of Ceylon, leaving Captain Van Reede bo.

Governour of Koylang.

The Season for Sea-Voyages (which must be exactly observed in these Parts) being then expired, I was forced to Travel for above 60 Leagues along the Sea-shoar, with no small difficulty, there being no such thing as an Inn to be met with hereabouts, or any other convenient Lodgings, unless, you meet with fome Charitable Popish Priest or other, who will receive you into his House, most of the Inhabitants along this Shoar being Roman Catholicks, who have here and there a fmall Church. However after some troublesome Days Journey I came fafely to Toutekeriin, where I found the Mary Yacht ready to Transport me Com to Kolombo, where I arrived the next Kolo Day, viz. The 18th of Sopt. 1666, I stay'd here above a whole Year; when I resolv'd to go aboard the Brederos Yacht bound for Batavia, where I landed the 20th of August, 1667; without meeting with any thing remarkable at Sea, I continued for three whole Years at Batavia, without being engaged in the Company's Service, and in 1670 return'd thence into Holland. During those three Years, I had sufficient opportunity to take a full view of the City. both within and without, in which I was fo curious, as not only to make draughts of all its publick Structures, but also of fuch Plants and Trees as grow in and about that City; tho' to confess the Truth, the same could oftentime not be undertaken without great harved as well from the Wild-Beafts, as from the Barbarous Javanefas, to that I durit not venture far out of the Town, without a good Guard; But before I proceed to give you a description of the fing Creatures, Trees, Fruits and Plants, and of the City of Beauty is fall of the City of Beavia it felf, in the

Goes to Cochin.

it will be requisite, I should an Account before hand of the of this great Island.

known generally by the name lava, to distinguish it from the

Java, to distinguish it from the Java, otherwise call'd Bati, lies egrees to the S. of the Line, diopposite to the South-Point of the Smatra, from which it is sepondary only by the Streights of Sundary, where the same is not above four or five Leagues over. To the North lies the Isle of Borneo, betwixt which and this allee there is a convenient passage for small Vessels; To the East it has the ssle of Bati, or the Lesser Java, from which it is divided by the Channel of Balambuam, and to the South by the Main Ocean. Its length from the Streights of Sunda to the Channel of Balambuam, viz. from E. to W. inclining however a little to the S. and N. is about 130 or

puted at 300 Leagues: The North Coast of Java has abundance of very commodious Creeks, Bays, Harbours, and goodly Towns; with many little Islands, near the Shoar. In former times; the Isle of Java had as many Petty Kings as there were Cities, but now a days it is divided into two Kingdoms only, the one of which is under the Jurisdiction of

14 40 Leagues; its breadth is very different,

but the whole Circumference is com-

the Emperor of Mataram, the other under the King of Bantam. The first is in the possession of the Eastern and greatest part of the lse, the other of the Western and lesser part; for since the Emperor of Mataram (call'd also the Emperor of Great Java by the Dutch)

had once found means to subdue his Petty Neighbours, he soon extended his Conquests all over the Eastern parts of this sise: The Emperor who Reign'd all the time of my being there, was a Young Prince named Souloukounan Ingelaga, the Son of Sulthan Mahomet.

Unto one or other of these two Potent Princes all the rest are obliged to pay homage, tho' there be also as yet remaining some Petty Soveraingties along the Sea Coasts, besides what belongs to

Eastern parts of Batavia are Balambuam, Panarukan, PafJoartan, Surabaaya, Brandaon, Tubaon, Kajaon, Japare, Pati, Samarang and Mataram, the cof the Emperor of Java. To the Easter the Sea are: Taggel, Chamayaon, Manukaon, Karavaon, of the Coast of which we

intend to give you a short but exact Account. About 10 or 12 Leagues from 1662.

Batavia is the famous City of Bantam, where the English have a Factory; and

a confiderable Traffick.

The Javaneses are a Barbarous, Proud, Manners and fierce Nation, of a brown Colour, and Cuwith flat Faces, and thin, short Coal stoms of black Hair, large Eye-brows, and large the Java-Cheeks. They boast themselves to be descended from the Ancient Chineses, unto whom they refemble in some refpects, having very small Eyes with large Eye-lids. The Men are very robust and strong limb'd, and well sitted for the War; the Women are but small. The Men, wear a piece of Callico wrapt. Their Clotwo or three times round their Bodies; thing. People of Fashion have them with Gold Flowers or Streaks. The Women wear it from under their Arm-pits down to their Knees; all the rest bare. They Marry sometimes two or three Wives, and perhaps keep divers Concubines befides, according to their Ability. Lying and Cheating is a daily practice with them. Those living near the Sca fide Religion. are for the most part Mahometans, which was introduced there about 156 Years ago. In the Inland Countries they are generally Pagans, abstaining from Feeding upon any living Creatures. When they are to confult about matters of Moment it is done in the Night time.

The Isle of Java is very Fertile, tho' In Fertilia great part thereof be not known hi- v. therto; It has very high Mountains, reaching to the very Clouds, witness the Pepper Mountain on the South fide of the Island; It has likewise imparable Forests and Wildernesses Sut to the North betwixt Batavia and Bantam is a very populous Country, full of Rice Fields, and all forts of tame and wild Creatures; Hereabouts also is Salt and Pepper to be found, but not so good as that at Malabar, besides most other sorts of Indian Fruits, which are fold in great plenty; at Baravia. They abound also in Fish, are well stor'd with Hoggs, Oxen, Sheep and other tame Beasts, the Flesh whereof is of a very good Taste; Fowl both wild and tame they have in great plenty; but the Woods have also large Tygers, Rhinoceros's and divers other wild Beafts; In the Rivers . you see also often Crocadils, call'd Kaymans by the Indians.

The Air or Climate of Batavia is in The Air my Opinion as temperate and healthy and Seasas any place whatever in the Indies. Jons.

The East and West Winds blowing all the

Year long along the Shore, besides the 1662. ordinary Land and Sea Winds. V Seasons of the Year run herein the same manner as in Europe, except that the Sun passes twice a Year directly over their Heads; The most agreeable Sea-fon begins in May, which continues with continual Breezes from the East, and a very serene Sky till November; When the Winter Season approaching it rains fometimes continually for three or four days without Intermission, which sets all the low Grounds under Water, which however has this Convenience, that it kills and washes away all Insects, which else would prove very obnoxious to the This Season ends about May, when the dark Clouds beginning to diperfe, the Sky assumes its former Serenity; In December the West Winds blow so violently, that there is no going by

Sea here; In February it is changeable Weather, intermixt with sudden frorms of Thunder and Lightning; I March they begin to Sow, and this Month produces some Fruit; In June is the most agreeable time of the Year. In July the Sugar and Rice begins to ripen, in September it is the best time, and the October affords them plenty of all sorts of Fruits. The happy Temperature of the Climate produces such Plenty of all forts of Necessaries, that there are very few Countries, that can compare with this Island; The pleasant Rives rising in the Mountains, divides it felf into many Branches, and waters the circumjacent Country, and afterwards recollecting its Channels, passes thro' the midst of Batavia, (which it divides in two parts ) and there exonerates it felf into the Sea.

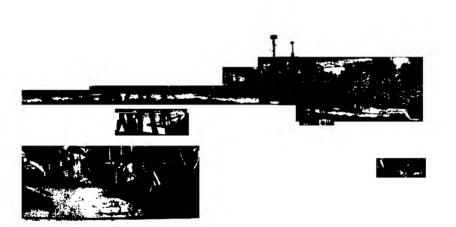

The City of Batavia, which got its
Name many Years ago from the Dutch
after their first Establishment in those
Parts, was first, and is now by the Javaneses and Chineses call'd Kalakka; from
the Fruit of a Palm or Cocoe Tree,
which grows very plentiful hereabouts;
the fruit of which the Javaneses call

Kalappa. The Indians call it Jarived likewise from a certain Fruit Jaccas by the Indians, and Schroftz the Dutch. Not long before thometans settled in the Indies, was no more than an open Village, bited by Pagans; At first it was suited ded only with a row of Pallisade.

Bamblo Canes, but as it became more populous, the Inhabitants began to wage War against the King of Bantam, and fome other neighbouring Princes, and The City that with very good Success. of Batavia lies at 5. Degr. 50 Min. off Southern Latitude, at the North fide of the lile of Java in a large but fenny Plain before it to the South; it is furrounded with abundance of small Islands: and to the North or Land lide with Woods and highMountains. It is divided into two Parts by a River, is of a quadrangular Figure, fortified with a Wall of Stone, and 22 Bastions; the names whereof are, Amsteldam, Middelburgh, Delft, Rotterdam, Hoorn, Enkahuissen, Vienna. Gelderland, Katzenelbogden, Orange, the New Gate, Hollandia, Dieft, Naffaw,

Zealand, Utrecht, Friesland, Overysel, Groningen, Zewburgh, Kuilenburgh, and the Middlepoint. The Ditch underneath the Wall was in the Year 1670, surrounded with a Quick-Set-Hedge of Thorns; It has fourgreat Gates, two whereof are very Stately and Artificially built, by the Famous John Listing, on the South fide; the first 1630, and the other 1657. The third Gate is on the East-side, call'd Rotterdam, and the fourth call'd Utrecht on the West side. The City of Batavia is Situate in a Bay, extending to the East, as far as to the Cape of Karovant, and to the West as far as the Cape call'd the Rough Point, towards Bantam, which lies on the same Shoar, about twelve Leagues from Batavia.

Both within and without this Bay lie ab 17 or 18 Islands, upon which the Vi sence of the Winds and Waves bein broken and checkt, this renders the B. I of Baravia one of the safest Harber of the whole World, being sble to to train above 1000 Veffels at once; Smill Vessels and Barks lie commonly cly's under the Banks of the River,

in a muddy Bottom; The River is lined with Stones on both fides as far as the Boom, which is shut up every Night at nine a Clock, and guarded by a good number of Soldiers. Besides which, there is cut a Channel out of the main River, for the Reception of smaller Veisels; No Vessel passes the Boom without paying a certain Custom, eve-Wire they may lie without Anchors ry Vessel that fetches Salt pays a Real, and those that carry Stones two Reals.

662. The Ditch without the Wall is very broad and deep, and sometimes rises so high, that some of the lowermost Streets without the City are laid under Water; All the Buildings of this City are well contrivid, most even of the private Houses having handsome Gardens, well planted with Fruit-trees and Plants and Flowers, adorn'd with Pearls, Springs, Pumps, Control

.sStreets.

All the Sreets of this City run in a streight Line, most of them being 30 Foot broad; and on both fides near the Houses paved with Bricks; There are Eight Streets which are all well built and inhabited; among which the Princes Street is the Chiefest, beginning at the middle Point of the Castle, and running in a streight Line to the Town-House, having on each side a cross Street. Next to this is the Lords-Street, beginning on the North fide over-against the Castle, reaching in a direct Line to the New Gate. The first Cross Street on the East side has got the name of John Tirment, who built abundance of Houses in this Street. The second is call'd the Market Street, opposite to which lies the third call'd the Petawins Street; The fourth is call'd the Street of the Hospital; as you come out of the Caftle at the first Entrance into the Princes Street is the Princes Lane on the left These are on the East side of the River; we will now pass over to the Western side; The Bank of which is planted with pleasant Trees, and adorn'd with Houses all in a straight Line as far as the Dieft Gate. The first Street on this side is call'd the Gentlemans Screet, being divided into two Streets by a Gracht, that comes cioss The second Street comes crosswife thro' this part of the City, beginning at the Utrech Bastion, from whence it has got the name of the Utrecht Street. But now we must look back and take a view of the Burghwalls or Grachts (being Streets with Water Channels in them) of these there are no less than 15 among which the Tygersgracht is the most Stately and most Pleasant, both for the Goodliness of its Buildings, and the Ornament of its Streets, which afford a very agreeable Shadow to those that pass along the Street; The Channel is edged and lin'd with Stones from the Bottom, over which are four Stone Bridges, sustain'd by as many high Stone Arches, twelve Foot broad each; belide which, there is a wooden Bridge at one end. The

inward Gracht behind the Car enters and Wharf (where is also the Founding- 126 House ) has three Bridges; Next to this is the Kaymans Gracht with four Bridges. The first Gracht which runs crosswife, is the City's inward Burgh Wall, having only one Bridge; Next to this the Herb Gracht, without any Bridgeat all. The Sesons Gracht extending from the Middle Point directly to the Rotterdam Gate with fix Bridges, and the Inward Gracht with one Bridge only. These are all the Burgh Walls and Grachts on the East side; now we must come to those on the West sides? The first is the Gentlemans Gracht, with three Bridges; The second is call'd the Rhinoceros's Gracht, having likewise three Bridges; The third, is the City's Inward Gracht, with three Bridges. The first Gracht running crosswife to the North is the City's Inward Gracht; the second faces the Carpenters Wharf, and is call'd the Javanese Gracht; and the third is call'd the Chinese Gracht, having only one Bridge. The fourth Gracht which runs croswise, begins at the Bastion call d Frieseland, and ends at the New Bridge near the Fish-Market, having three Bridges; last of all the City's Impard Gracht with These are all the Graches one Bride. and Burgh Walls within the City, over which are laid 56 Bridges, most of which are fustain'd by large Stone Arches, not to mention here the wooden Draw-Bridges which are over the Graches without the Walls. At my first coming to Estavia I Lodg'd upon the Tygers Gracht, so that having sufficient Opportunity to take a Draught of it, I thought fit to insert it here.

Among the publick Building of this The pub City, the Church call'd the Crofs lick Bui Church claims the Precedency, being ingent built in 1640. of folid Stone; In the City. midst of the Church stands the Steeple, being exceedingly beautify'd with Iron Work. It has but one Bell, which is only rung before Church-time; The Stone Edgings in the Front of the Church are Artificially Carved, and adorn'd on the Top with Cherubims. The But time which defaces all things, and ch the Air, which is much sharper here than in Europe, has in a few Years wer \_att a confiderable change in this Magraficent Structure. The Pulpit and Seates the Chief Men here are very finely with the and adorn'd with Iron-Work and Wood. The Vestry is of the Workmanship. Workmanship. This Structure is Lightsome and Lofty, within t adorn'd with five clear Branches

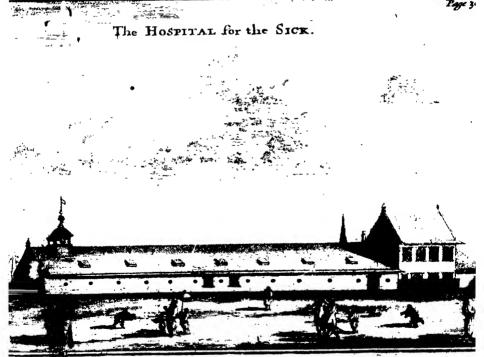

## and Travels to the EAST-INDIES.

brought thither from Holland. In the other part of the City, the Foundation of a New Church was laid during my ftay there, and before my departure, the Brick Work was almost finished. In the year 1644, there was also a Church built in the Castle of an Octagonal Figure, being very light within, and state on the top; The Floor covered with well polish'd white and blue Stones neatly done; Te Ghlass of the Lanthorn on the top was of the best kind, and the Pews of the Church Carv'd very Artificially, and made of the best kind of Wood the Indies association.

The Town-House stands very near in the Centre of the City, in a spacious Place; being built of Brick in 1652. It two Stories high, and you ascend into the second by a pair of winding Stairs; The great Gate is exactly in the middle of the Structure, artificially

wrought, of the Corinthian Order, over which is a Balcony or Gallery of Stone. into which you enter out of the upper-Hall. When Criminals are to be try'd a Scaffold is erected before the Town-House. The Windows of this Building are in proportion very high and lofty, finely glazed, and on the out-fide guarded with Iron-work. In this House, the Courts of lustice are kept; Here is the Meeting Place of the Shepen or Senators, as also of the Masters of the Hospitals, and of the Overseers of other Places; as also of the Court for the Direction of Military Affairs within the City. The inward Court is enclosed with a high Wall, and a double row of Stone-Pillars; here the Officers of Justice have their Habitations; and the Prison-Keeper with his Attendants on the West-end of it. It extends from the Tygers Gracht to the Lords-Street.

The Hospital for the Sick stands upon the Bark of the great River, which runs the brough the City, betwixt the New-Gate and the Diest-Cate. Here such as are Sick, and have not where withall to provide for themselves, are entertained and Cured; there being sometimes 200 of 300 to be seen here at a time, who

are all provided with neat Lodgings, Beddings, and other Conveniencies. In the Out-houses, are the Apartments for the Overseers and their Servants, for the Doctor, Apothecary, Surgeon, Minister, Cash-Keeper, Treasurer, and others, who are to keep the House clean, and look after the Sick; all these are

## Mr. John Nieuhoff's Voyages

plentifully maintain'd by the Company. 662. Besides, those before-mentioned, three > Persons of Note belonging to the Company are constituted Overseers, who take their turns every Week, and fee that every thing be done as it ought to be, and especially whether any of them are recovered so far as to be fit for Service. Behind it is a Square enclosed with a high Wall, and planted with Trees, which ferves for a walking Place, for those who are upon their Recovery; and a Door with a wooden-Bridge reaching a good way into the River, is also made for the taking of the fresh Air of the River. The Minister, who is appointed to visit the Sick, fays Prayers every Morning and Evening, when a Bell is rung; Every Sunday there is a Sermon, where all those that are able are obliged to be present.

be Spinloufe.

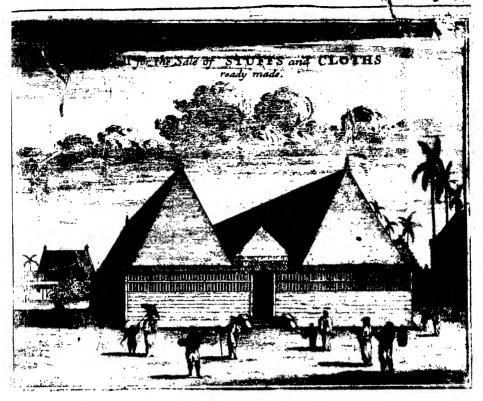

For the Encouraging of Virtue, and Suppressing of Debauchery in lewd Women, a Spin House has been erected here, having no Windows or Prospect but only on the Eastfide towards the Burgh-liall, where certain Iron-Rails are made in the Gate, with wooden-Shutters within, which are shut and bolted as often as the Overfeer pleases. Here the Women are reclaim'd from their Lewdness by keeping them continually at Work, under the Tuition of a Governess, whose Bufiness is to look after the House, and to fet them their Task, which if they miss to perform, they are fure to be Scourged. For the rest, there are two Members of the Senate constituted on purpose for the Government of this House, whose Buliness is to be present there every Sunday at the Sermon that is held there, for the Reclaiming those lewd Creatures from their ill Course of life: It they commit any Misdemeanour which cannot be corrected by Scourge, they are punish'd by the ordinary Court of Justice.

Slaughter-Flefh-Halls.

Upon the very brink of the River Houses, or are built two Slaughter-Houses or Flesh-Halls, sustained by wooden Piles, by which means they may with conveniency throw the Excrements of the kill'd Beafts into the River. They kill twice a Week, each Butcher having his peculiar Stall, where he fells his Meat, at fuch a price as the Magistrates shall think fit to set; the' most of them find means to Sell it as dear as they can. Whilst I was there Beef was fold at the Rate of four pence per Pound, and Pork at the same Rate; but Mutton being most esteem'd was sold dearer. All the Beafts that are to be kill'd must be Taxed by the Farmer of o the Excise upon Cattle; according to which, the Butcher is obliged to pay the Tenth-Peny Excise: But if the Farmer should be Extravagant in his Taxation, the Butcher, who thinks himself injur'd, may Appeal to the general Judgment of all the Butchers, who if they do not agree to the Price fet by the Farmer, he is obliged to Tax it himself at his own set

On the West-side of that sp prs The H Place which Faces the Town-Horge, is certain Structure, in which are fold all sale forts of Cloaths ready made, as also stuffs. Stuff, and Callicoes, white and painted; befides divers other Commodities expofed to Sale there, by the Chinefes. Thefe have here their peculiar Shops, for each of which they pay ? Corpus per month. The whole Building is of Wood, being divided within into 5 Walks or Galleries, having Shops on each fide; and Doors from without, which . . hept open day and night, because the Shopkeepers don't put up their Commodities till very late at night, and lay them out again early in the morning, with a great deal of curiotity, to Invite the Buyers to give them a good price, at which the Chineses are very destrous and quick, so that unless you be upon your guard, you are over-reacht before you are aware of it; however, these little Shops have this conveniency, that you may furnish your felf here at an eatier Rate, and that all at once, with abundance of fmall things, which you can't buy so conveniently at the great Shops, where they will not be fatisfied with a finall gain.

On the Eastlide of the Town-House is The a goodly Structure, fitted up for Stables Stab for Horfes, being all of Brick-work without, and provided with Racks, Mangers, and Partitions, and paved with Stones, fo that the Horse-Dung may be removed and wash'd away with all imaginable The Place where they Conveniency. Manage their Horses is very airy and well fituated, having two Doors, one whereof leads to the Cities Binn. Grach, for the conveniency of Water and In this Some are Washing the Horses. kept, belides the Coach and Cart and ries, above 100 Saddle-Horfes, that we may purpose. Their best Horses rabian and Persian Horses, which they Buy here at a high Rate; 200 Crowns being a common Price for an indifferent Perfian Horse, the best being not to be got for Money. It is worth Observation,

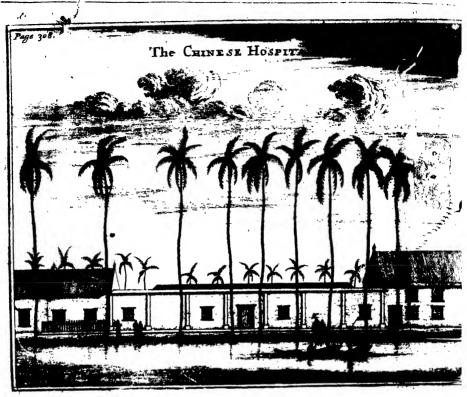

That the Persians Train up and Manage their Horses without Blows, whereas 662. our Managers are used to make use of Whip and Spurs, which makes them unfit for the due Management of those Abundance of Horses are alfo brought to Batavia from Japara in the Isle of Java; but these are not comparable to the Persian Horse: Some of these however are very Tractable, it well handled from the beginning, but many of them are broken Mouthed before they come to Batavia: The Natives being used to Ride their Horses with a light Hunting Bridle; they are aft to tols up their Heads when they are rid afterwards with a Curb-Bridle, to prevent which, our Managers fasten a Belly the other end of which being? Buckled to the Bridle, makes them keep

spin House, is the Chinese Hospital for
spin House, and Aged Persons, built of Brick,
spin divided into convenient Apartments,

and a pleafant Court to walk in: It was built in the year 1640. In this House, such as are Sick and Superannuated, and have not wherewithall to fublist, are received and maintain'd. For the Maintenance of which, a certain Duty is laid upon Marriages and Burials; as also upon Actors of Plays, Farces, and such like Shews. And as, besides this, many of the rich Chineses, either by voluntary Contributions, or Legacies, give great Encouragement to this House: It is provided with a considerable Revenue. The whole Management of this House is committed to two Hollanders, and as many Chineses, who have a Secretary to keep their Accounts.

At the Extremity of the West-end of The Hospi the Rhinoceros's Gracht, you see the tal for Hospital wherein poor Orphans are maintained and educated, being of Brick, with convenient Lodgings for the Servants of the House: It has hitherto no fettled Revenue, being maintain'd by the voluntary Contributions of well-

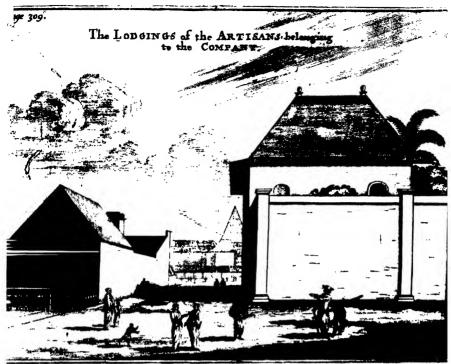

disposed People.

In the East-Corner is the House, wherein are lodged all the Artifans belonging to the Company, as Carpenters, The House Bricklayers, Gun-Founders, Stone-Cutof the Arters, Carvers, Glass-Makers, Turners, Ingineers, Seal-Cutters, Pewterers, Painters, &c. all which are disposed into their proper Quarters, under the Direction of three Hollanders appointed Belides the Slaves by the Company. belonging to the House, there is also a Chirurgeon, and a Schoolmaster; the last of which is obliged to fay Prayers every night; at which all are obliged to be present under a certain Forfei-In this House the Surveyor-Geture. neral has his Lodgings, which are very handsome, and keeps two Clerks under him. He Oversees the Workunder him. men. In this House also are maintain'd •fuch Criminals as have been Condemn'd to the Chains, who are kept here to hard Labour, and well guarded. Every night at Nine a Clock, the Doors of the House are shut up; and a guard of Slaves is placed to prevent any Dif-orders, which might happen among fo great a number of People of different

Callings. I had for fome time my Lodgings in this Honse; and here it was that I first made the Draught, and afterwards made the Description of Batavia. The Wharf belonging to this House, is only fitted for the Building of small Yachts and Boats, such as are used only in the Road for the loading or unloading of Ships: But Ships of Bulk are built at the Isle of Ormus, about a League to the West of Batavia, where are considerable Magazines for Ropes, and other Implements belonging to Ships, which are defended by certain Fortifications.

The Rope-Alley, where they are em- The Rop ployed in twifting Roaps, is likewise Allev. in one corner of the City, opposite to the Carpenter's Wharf, being planted with large Nut-Trees, which afford an agreeable Shade to the Rope-Jakers. A little beyond it to the West, you see the Pack-Houses of the Company; wherein are laid up Pepper, Cinnamon, Nutmegs, Cloves, Mace, Oct The Overseer has a goodly Habitatical for his own ufe.

Not far from thence, viz. near the Bastion call'd Amsterdam, stands the Companies Magazine of Rice, a large ga. Structure, having a Door looking to the Water-side, where Ships may be laden and unladen. It was built in my time 1670, of Brick-work. There is a Square enclosed with a Wall at the Inward Wharf, where the Receivers and other Servants of the Company have their Habitations.

The Prawenhouse, so call'd from the Word Praw, which in the Malayan Tongue signifies a Boat or Small Veffel, stands upon the brink of the River, for Conveniency of fuch small Boats, as are built or refitted there; Here several Shipwrights, and a good number of Sea-Men, have their Quarters, the last being obliged to be ready upon call, where ever they are ordered to Row, by the Deputy Governour, under whose Tuition they are. On the East-side of the little Wharff, the Overseer has a small House. Having thus given you an Account, of the publick Structures of this ty, with such draughts thereof as time mity would permit us to now proceed to the four Great Markets of Batavia, and begin with the Fish-Market.

The Fish-Market is on the Western- The Fishside of the Great River, being sustained Market. by ftrong Wooden-Piles; and covered on top with Pan-tiles. Opposite to it is the Dwelling place of the Aslager (or Outroper) where the Fisher Boats are oblig'd to stop, and their Cargo is fold immediately by publick Sale, to the fairest bidder; The Fish-Mongers are generally Chinefes, each of which has his own Stall, for which he pays two Reals per Month. The Outroper pays ready Money to the Fishermen, for what they sell to these Chineses, who allow him Two-pence in the Crown, and are obliged to repay it at a set time. Here you may furnish your felf with Sea, River, or Shell-fish, according to your own pleasure, from 10 a Clock in the Morning, till four in the Afternoon; when the Fish-Mongers leave their Stalls here, and Sell the Remnants near the Riverside behind the Flesh-Hall.

The Rice or Corn-Market is adjoining The Rice to the former, or rather opposite to it or Cornat the North-end; being built after the Market. fame manner, except that it has no

Stalls or Banks; Here you meet with Grains of all forts which are fold here, according to the Market Price, by a certain small Measure called Ganting, containing about 13 or 14 Pounds of Rice, which is commonly Sold for Six-pence. He that has the over-fight of the Market and Measures, has a House at one end : His business among other things is to set the Mark upon the Measures, and Weights, which is done twice a Year; viz. in January and July, at the Town-House, in the presence of two Shepemen

or Aldermen. They pay Two-pence for

The Form!

Near the New-Bridge, as you pass along the River-side to the Cross-Church, is the Fowl-Market, where the Mardiikers and Topassen (a kind of Negro's) fell all forts of Fowl in great plenty, fo that you may buy an ordinary Pullet for Three pence, but the best fort are dearer. In this Market you fee many Hutts, in which they fell dried Fish, Eggs and course Earthen Ware.

The Fruit Market begins at the New-The Fruit-Bridge, extending by the River-side, to the Middlepoint. Here you meet with all forts of Fruits and Herbs, Sold by the

Chineses and Negro's, who pay the 100th Penny Excise. From four a Clock in the Afternoon till Night, this Market is so crowded with People, that there is scarce

any passing in it.

On the Tygers-Gracht is the Latin and The L Greek School; the back side of it reach- and Gr ing to the Kaymans-Gracht, with a lofty School. Stone-Gate. It has a very pleafant Court, where the School-Boys may divert themselves at certain times. The Rector or Head School-Master has a very handsome House. Besides this School, there are divers other Schools at Batavia for the Instruction of Young People in Reading and Writing; in which some of the Natives, and especially the Topasses are so ingenious, that they don't give way in that point to any other Nation. What Books are used here, are brought out of Holland; but in the Year 1667, 2 Printing-House has been erected, and several Books have been Printed here with good fuccess.

The Castle is a Quadrangle, Situate 766 in a level Ground, two Bastions of which, viz. the Diamond and the Babbek; front the City, one facing the Typers Grache and the other in a straight lime thro' the

Market.

Market.

Lord-street to the Middlepoint of the 6 2. Newegate.

On the West-side the River washes the very Walls, being enclosed by part of the City, which lies open on that... fide; The two other Bastions call'd the Pearl and the Sapphire, face the Sea; The low Grounds towards the West are well planted with Gardens and Orchards; The Bastions as well as the Courtins of the Castle are faced with white Stone from the bottom to the top, and provided with Watch-Houses at convenient distances; The Ditch is very broad and elecp; being enclosed, 1669, within a Quickfet-Hedge, ferving not only for an Ornament, but also as an Additional ftrength to the place, from whence they Fire with advantage upon an approaching Enemy.

In this Castle the Dutch Governour General of the Indies, and all the Members of the Council of the Indies, refiding at Batavia, have their places of Residence; As likewise the head Factors, who keep the Accounts, and of what is paid to the Servants of the Company; and the general Book-Keeper, the Secretary of the Great Council, the Captain of the Armory, the Phylician, Chirurgeon, and Commander of the Soldiery; all these I say, besides several others, have their fix'd Habitations here. But the House or rather Palace of the Governour General, furpasses all the rest

in Magnificence.

It is built of Brick, two Stories high, yet so lofty that the top of the Roof furpasses in height all the other buildings, and may be feen a great way at Sea; especially the Lanthorn or Turret, which stands in the midst of it, having instead of a Weather-Cock a Ship of Iron, very Artificially wrought. Door is just in the middle, unto which you ascend several broad Stone-Steps; In this Palace, is the Council Chamber, for the Great Council to meet in; and near it the Secretary's Office, and Chamber of Accompts. The great The great Hall is hung about with bright and well polish'd Armour, Ensigns, Stan-dards and Flags, which have been taken by the Dutch, in several Sea and Land Engagements; In this Hall Prayers are faid every Night, and here it is that the Governour at certain times gives Audience, to all fuch as have occasion to Represent their Grievances to him. Behind it are pleasant Walks, planted with Trees, among which a Tamarind-Tree of an excessive height, and stand-

ing in the Center of the Garden, affords a most agreeable sight. Out of 1662 this Garden you pass thro' a little Gate of the Courtin, by a small Bridge to a Summer-House, built upon Piles in the midst of the Water, from whence you have a very pleafing Prospect, not only of the Fortifications of the Castle, but also of the Rivers Mouth, and the Road where the great Ships Ride at Anchow. At the Eastern Corner of this Summer-House is a Door leading thro' a Gallery, to the before-mentioned Chamber of Accounts, which has a flat Roof, convenient Offices, and pleasant Walks belonging to it; The Floor is covered with a kind of Grey-Stone neatly done. In this Apartment, most of the Bookkeepers and Clarks are boarded at a certain rate, by the Treasurer.

The Houses of the Members of the Great Council are on the South-fide of the Castle, the Land-Gate being in the

midst of them.

The Armory is built much after the fame maner as the Chamber of Accompts; It extends along the East-side of the Courtin, having separate Apartments for Sword Cutlers, Gunsmiths, and o-

ther Artificers of that kind.

The Governour of the Sea Affairs has his House on the North-side just opposite to it, and on the same side dwell the Factors, Physician, Chirurgeon and Apothecary. Hereabouts stand also the Magazines of Flesh, Bacon, Wine, Brumswick-Mum, Holland Butter, Oil, Vinegar, and divers other Provisions; And under Ground are made certain Vaults for Gunpowder, and Artificial Fireworks. The Castle has four Avenues and as many Gates. The first and largest is call'd the Landgare, built 1636, where you fee a Stone-Bridge, supported by 14 Arches over the Ditch; being 26 Rods long, and Ten Foot broad, paved with Dutch Bricks fet on edge. The Watergate faces the North, where is a large Watch-House for the Garrison, and some Apartments on both sides, for the Overseers of the Magazines and Store-Houses.

This was built 1630, according to the Inscription. Besides these, two lesser Gates are in the Courtins to the E. and W. which are scarce ever made use of \*unless that some Vessels laden with Ammunition, and fuch like things are gene- . rally unladen here. There is a small Plain before the Rabber Baltion, where the new Listed Soldiers are Exercised and Taught the use of Arms, by an

many Years ago a Gooden Draw-Bridge was built near the Bastion call'd the Sapphire, by which means you may walk all round the City to the Boom, where you must be ferried over.

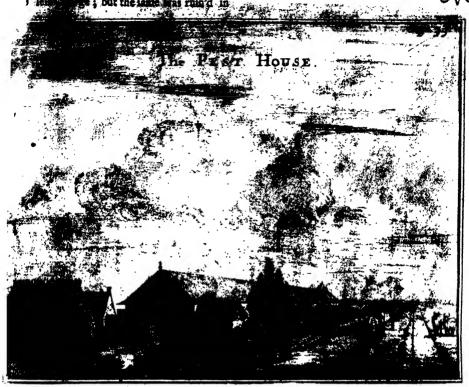

Before my departure a project was on foot of building a Tower and Steeple upon the Rabbet Bastion, making some additions to the Rotterdam and Utrecht Gates, and to enlarge the City to the E. and N. as far as to the turning of the Great River, so that the North-side of the Castle should front the Bastion call'd the Middlepoint. Thus far of the City of Batavia it felf, we will now take a view of its outside.

It is easie to be guess'd at, what moved the Regents of this City to furround it with Forts at fuch a distance, viz. to the E. as far as the River Antjol, and to the W. as far as the River Anke along the Bay of Batavia, and on the Landfide to the S. by the Forts, Northwisk, Riswick and Jacatra; these serving the Inhabitants of the flat Country, as a Defence against the Incursions of the Neighbouring Barbarians, fo that they may quietly enjoy the Fruits of their Labour;

The Country all about this City being well Cultivated, and stored with Rice 1 66 and Sugar-Reed-Fields, Gardens and Orchards, Country-Houses, Brick and Tile Wharffs and Sugar-Mills, which are of great Consequence to the City. To give all possible encouragement for the Manuring of the Ground, the main Channel of the Great River was ordered to be stopt up, 1659, instead of which two branches being made, one leading to Reswick, the other to Jacatra, these ferve to lay the Ground thereabouts under Water, upon occasion. One of these Branches is to the W. brought into another Channel, leading directly to the middle of the City, and being stopt near the second Bridge of the New-Gate by a Dyke and Sluce. Here you fee seven Mills, one whereof is a Corn-Mill, four Gunpowder-Mills, one Saw-Mill for Wood, and one Paper-Mill, which are driven by the force of the Water; near it the Millers have their Habitations.

Before the Dyke just at the Entrance of the City is the Place, where they Refine the Brimstone; Near this place, 1658, a very strong Sluce and the state of the

for the Conveniency of bringing Country Commodities into the Cities with Water.

Not many Years ago, a certain contagious Diffemper began to rage at Batavia, which proving Mortal to many, it was refolved, (to flop the Infection) to build a kind of Hospital or Pest-House, where such as were seiz'd with this Evil, might be provided with Lodgings, Diet, and suitable Remedies. This House, which has with it the Deist Gate near the Road to Arke, is under the Government of several of the richest Citizens of Batavia.

By the East side of the Dike where the Mills are, a House was built in 1609. for the washing and whitening of Linen Apparel, the latter (being carried thither by Bamboo Canes sasten'd together. Without the City are besides these many other Houses Erected partly by the Company, and partly by the Liberality of some of the Inhabitants, which I will pass by in Silence here; and say a word artwo more of their Out-works or Fosts: All these lie in a state even Country, m de of Earth, surrounded with Ditches and Quickset Hedges, except the

Quinquangular Fort, call'd the Rismick and the Fort Ansiol, both which are faced with Brick-work. They are all well provided with great Artillery, and Provisions for nine Months, or perhaps for a whole Year, as well as the Garrison of the City of Batavia it felf. There is a certain Officer appointed to keep the Cannon and other Arms neat and clean, the which being under the Overfight of a Captain of the Artillery, who commands also the Fire-Workers, and has his Habitation upon the Bastion call'd the Diamond. The Garrison confifts chiefly in Foot, there being only a Troop of Horse, which serves as a Guard to the Governor General, who are obliged to be upon the Guard in their Turns. These enjoy great Privileges, are commanded by one of the best Officers, and are obliged to appear every Sunday in their Armour well polish'd, and with . their Pistols, Carabines, and broad Swords.

The Inhabitants of Batavia consist The Inhaeither of the Citizens, or such as bitams.

on are servents to the Company, being of 1 6 6 2. divers Nations; among whom the Dutch wexceed the rest both in Riches and Dignity, mast places of Honour and Profit

being in their Hands.

The Chineses drive here a considera-Chineses ble Traffick, being more industrious than any of the other Indians; They deal much in Fish, and cultivate most of the Rice, Reed and Corn-fields, fome also maintain themselves by Fishing but the chiefest upon Merchandizing; They Farm the Excises and Customs; but of late years forme of the other Nations have found ways to imitate them in their Tariftiness and Cozenings, at which they are great Artists; which I know by my own Experience. They live here according to the Laws and Customs of their own Country, under the Tuition of a Chinese Governor, who manages all their Affairs with the Company. They are drefe'd after their own Fathion, in a Gent with wide Sleeves, either Callicoe or Silk, according so their Abilities. They don't shave their Heads here seconding to the Tantarian Fashion, as they do now in China, but mear their Hair song, and neatly swifted. Their Habitations are settled thro' the whole City, but live for the most part on the West fide near the Great River, and many of them on the East fide; Their Houses are low, with the Roof cover'd over the first Floor.

The Malayans as they are not so much 7 addicted to Trading as the Chineses live li for the most part upon Fishing; Their Bosts are made after the Indian Fashion. with large Sails. They have also a Governor of their own, who lives in the Rhinoceres's Gracht, whereabouts most of them have their Dwelling Places. They wear light Callicoerer Silks, the force of their Women of Fashion tale sower'd and strip'd Silk; their Hair, which is very black, they tie behind in a Knot, but the Mon wear a piece of Cloth about their Heads. Those few Merchants that are among them, are next so the Chineses, accounted the cup mingest Traders; The Houses of Maleyans are but very indifferently had there, being covered with Leavestin planted round with Coco-Trees. have a Custom of chewing the Leaves continually, and take Tobacci through Sugar Canes lackered wer with frone Ball.

Their Drefs approache near to the Darch Lathion, but their Breeches reach down to their Ankles; and wear a knad of Caps on their Heads Their Women are clad like other Indian Women Their Houses are better built than those of the other Indians, generally of Stone, and cover'd with Tiles, flately built and arch'd. Before their Honfes they plant Coco-Trees, and all forts of Icdian Fruits and Flowers, but the Backfide they referve for the keeping of Pigs, Pidgeons, Fowl and other forts of Poultry, which they bring to fale in the Market.

The chief Arms of the Soldiers of Ma. Makuffar are certain poison'd Arrows of a Foot long, pointed at one End with Fig. Teeth, and on the other with a kind of hard Wood; when they are to go into the Wars, they provide a good number of these Arrows dipt a good while before in a poisonous Liquor which they let dry upon them. This Poison is the lune, iffuing out of the Bark of a certain Tree growing in the Isle of Makaffar, and two or three adjacent Isles of the Roseiffes; It is of the height of a Clove I ree; its Leaves resembling also those of that Tree; the Juice of which whilst yet fresh is Mortal, and not to be cured by Antidotes. These poisoned Arrows the Soldiers of Makassar don't shoot out of their Bows, but thro' Trunks, as we let fly at the Birds in Europe with small Earthen Balls; with these they will hit any Mark with in four Rods ailtance. This Poison is fo pernicious, and penetrates with that Swittness thro' the whole Mass of the Blood, and feizes upon the Spirits, that

the Makaffa themselves knew no Re- A medy against it. The most approved its Remerly against ir, is Mans Dung, which taken immediately after the Wound is given, causes a Voiniting, and hinders the Operation of the Poilon, I have known feveral of our Soldiers court by this Remody, the force others I have feen die not long afte, they had been wounded, notwithstanding the tie " and others after two or three days 1. the life of Alikaffar grows a certain Root, of a bitterish Taste, which is look'd upon as a great Antidote against this forfou, and is often used as such by the Prich; they chaw the Root, and lay it about the Orifice of the Wound.

The Time, e/c Soldiers or Inhabitants Tim of the Isle of Timoor, use Swords of San-5/4 del Wood, wherewith they can cut a Man through the middle at one floke: For in this lile, and the Molucca-Illands, and all along to the S. S. E. beyond the Leffer Java, to the 10th Deg. of Southern Latitude, grow whole Woods of white and yellow Sandel Wood, call'd Chandava by the Inhabitants. The Timoreses are very Barbarous, but Warlike; formerly they were all Pagans, but of late years, most are turn'd Atalometans, and some Roman Catholicks.

The Bokjes or Bougiffes, who formerly Bou inhabited divers liles near that of Makuffa, are a warlike People, arm'd with Cymeters, Arrows, and Shields, which they handle with great Dexterity. They go for the greatest part naled, having only a piece of Stuff about the middle down to the Knees. The Women are clad like the other Indians. After the Dutch became engaged in a War with the King of Makaffar, these Bougiffes fixt their Habitations in and about Batavia, till the event of the War; their King having his Relidence near the Outguard, betwixt the Forts of Rifwick and Northwick, the Queen being permitted to relide within the City; but after the Makaffars were conquered by the Dutch, under the Conduct of Cornelius Spellman, and a firm Peace was fettled with the Neighbouring Nations, both the King and Queen had a House affign'd them in the Lords-fleet. This House or Palace extends to the Brink of the River, with very pleafant Walks, Flower-Gardens, and a most delightful Vineyard, which in my time, 1676, bore vast Branches of Grapes. The Gate facing the Street is very neatly built, of the Ionian Order, with a Gallery on the top of it, and the Apartments fo spacious, and well-conrived,

trived that most of the Indian Kings 62. and their Retinue might live here.

 $\sim$ Among the Foreign Nations reliding iber here, there may, according to Computation, be raifed 6720 Fighting Men, viz. 400 Topassars or Marduken under two Captains, within the City, besides 710 without the City under three Captains, making in all 1110; Of Regantiins 70; Amboynefes 600; Malayans 201; Chinefes 1200; Moors 200; Of the Javanefer in their Quarter within the New Gate, 750; Near the Burying Place of the Christis • 500; In their Quarter beyond the New Tot 800; And of Bafilians beyond the Int 300. That this Iffind is fufficiently Fruitful, and able to maintain its Inhabitants, is evident from the Exportations that are made yearly thence to Amboyna, and other Places: 'Tis tive, no Wheat grows here, but supposing the Supplies that are brought of that Grain from Sratte and Taper should be flopt, the Defeet thereof may very well be supplied with Rice. The Chief Artifans here are Dutch, most of which live very well, and the Chinefes have many Carpenters and Bricklayers among themselvas, who will work as Journeymen: Their Cabinet-Makers have a way of joining the Wood of their Cabinets, fo that the Jointures are not to be feen. Others get a livelyhood by Selling of Sugar-Beer, Cookery, and the Sale of Sury, or Coco-Ligaror, and Acel or Indian Strongwaters, of which they mais Punch, (as the Ire-I lb call it) a Liquor that opens both the Hearts and Purfes of the Inhabitints. But the Chief Inns and Taverns are kept by the Dutch, who pay as well as all the other Nations, two Reals for Month for then Licente, belides 70 Reals Excile of every Pipe of Spariffi Wine they Sell. The Distillers of Acade are most Chinefer, Reals Excite for every who pay 5 Chaildron of Gofper per Month.

> The Government of the City of Rateria is fettled upon the fame Bafis as in the United Proximers, being administred by Six peculiar Colleges or Councils.

The First and Chief is composed of the Members of the Council of the Inde, in which the Governor General of the Indies prelides, whose Name was Mr. Maetzuiper at that time. In this Council all Affairs of State are transacted: Their Chamber is in the Palace of the Governor, where Audience is given ever) day to redress the Grievances of the People.

The Second College or Council confifts of Mine Persons, besides the President,

who commonly is one of the Members of the Great Council, and is the Keeper 1662. of the Great Scal, representing a Woman W placed in a Tower, with a Balance in one, and a Sword in the other Hand, with this Inscription; The Seal of the Co: ve lof J. flace of the Caftle of Patavia: This College being generally called the Co milo, J. fluc. Here are Debated and Decided all Matters relating to the publick Revenue and Treasury. also take Cognizance of Differences arifing about Cuftoms. The Prelident in Conjunction with the Council has a Voice in the Determination of Civil Causes; and has a third part of : If the Fines, but if they exceed 100 Reals, he has only a Sixth part. His Chief Bufiness is to take care that no Increachments be made upon the Prerogatives of the Sovereignty of the Charl Press of The Solicing is to keep an exast Regifler of all I hings transacted in this Affinally, without any other Reward but his Salary: Healfo has in his Cuffedy, the Money which comes from the Fines, of which he must give an account. The Door Keeper is to attend whilst they are Sitting, and to fummon fuch Persons as are to appear before them: He wears a Stick, and a Silver-Shield on the Left-fide with the Seal of the Council. Their Gool-keeper keeps three Tables for the Prisoners; who are to pay half a Real for turning the Key. This Council affembles in the Council-Chamber of the Town House, twice, and fometimes thrice a week.

The I had College or Council, confifts of the Aldermen or Senators, choica out of the be'l Citizens. They affemble three times a week, eds. Mondays, Wedne fdays and I harfdays, from 7 tin in the foren on. At their Election they are prefented with 50 Readolist , and with 1.5 more every 6 Months. In this Council are determin'd all the Caufes betwixt the Cirizens, from a conhowever lies an Appeal to the would of Julice; ) if any difference arise betwixt a Servant of the Company and a Citizen, the last must be remmon'd before the Court; and no Citizen is obliged to appear before the Could of J. fle, but must be fur mon'd before this A Tembly first, and there answer for Contests the c This Council iffue their Orders i' rela- no. a tion to the publick Structures, Br. Cog of Ba and Streets, yet not without the Ap to- calbation of the Great Co. reil. The Prebdent has the Cuftody of the Seal, and calls the Assembly together when he

Mmmm

thinks

thinks fit: He may peruse the Register, 1 6 6 2. and proposes all Matters to the Council: He has a double Voice, and is commonly one of the Members of the Great The Landrost, or chief Judge, Council. has in this Assembly a decisive Sentence in Criminal Causes, and is allowed a third part of all the Fines. This Council confifts of nine Persons, among whom are two Chimfes. They have alfo a Door-keeper, who is called the City Mellenger, having a Shield with the City A:m in it.

The Fourth Council confifts of the feers of the Hospital of the Orpounts, being cholen out of the best Ci-12. rizens, except the President, who is generally a Member of the Great Co mil. It confifts of Five Members only, three whereof are Citizens, the other two Servants of the Company: Their Bufiners is to provide for the Poor-Orphans, and to enquire into their Condition, and

what is left by their Parents.

The Fifth is the Council appointed for the Determination of Matters of less Moment; the Prelident whereof is a Member of the Council of Justice. They are to give Licenses for Marriages, and not to permit Men before they are Twenty One, and Maids before Eighteen years of Age, to Marry; nor Mahometans or Pagans to Marry with Christians; nor any Hollanders with the Natives that don't understand Dutch. They Sit twice a Week in the Town-House, where Causes of little Moment are Pleaded and foon Decided.

The Sixth Council of Bulavia is the Council of Wat; in which the Chief Officer of the Militia of the City is Prefident. Here are determined all Matters relating to the Militia of less moment, which are brought before them by the City Major; but Matters of Confequence are referr'd to the Determination of the Judge and Court of the Senators. They also meet in the Town-House once a Week.

All these Courts have each their own Scretary, Clerks, and Waiters.

The Railefialtical Govern ment.

The Ecclesiastical Government of Batavia is administred by the Ministers, Church wardens, and Overseers of the Poor, who assemble in the Vestry of the Charlet upon the Summons of their Prefident, who is chosen every Month. The Ministers being chosen in, and sent hither out of Holland, are Confirm'd here, and live in great Esteem among the Citizens.

Batavia, the Capital City of allethe Indies under the Dutch Jurisdiction, has 1 66 been frequently attempted by the Na
The on

tives, or Juvanefes: For, no fooner had nat a the Hollanders in 1618. (after the taking "us and and the Hollanders in 1618. of Jacatra, unto which they gave the Batayi Name of Batavia) crected a Fortress here, but the Natives being encouraged by the English of Bantam, endeavour'd to drive them from thence. To effect which, the English perfuaded them to erect a Redoubt or great Battery, upon which they planted their great Guns, from whence they play'd fo furioufly upon the New Bastion of the Dutch Fort, that they were not able to bring it to perfection. John Peterson Koen, the Dutch Governor, having thereupon call'd to-gether a Council of War, it was refolved, That to hinder the further Progress of the Enemy, they should make a Salley the next morning by break of day, in order to attack the Redoubt, and the Quarters of the Chineses and English at the fame time. Accordingly our Men were divided into three Troops, commanded by Peter Van Brock, (afterwards Gover-nor-General of the Dutch Indies) Peter Van Dirks, and Peter Van Rey, with these they attack'd the before-mentioned Posts at once. The Javaneses fought bravely at first; but seeing the Hollanders persisted in the Attack, resolved either to Die or overcome, they retreated, leaving their strong Hold to the Enemy, who destroy'd all their Work in a few hours. But being forely gall'd by the Fire of the City, they had not the same Success at the new Redoubt creded by the Enemy near the River fide; fo, that having endeavoured, but in vain, to make a Breach there, they were forced to retire with the loss of 15 Men kill'd and 10 wound-Besides this Redoubt, the Javaneses had another Battery raised in the midst of the City, which being mounted with heavy Cannon taken out of the English Ships, did also considerable mischief to the Belieged; who were day and night at work in raising Batteries, and putting their Fortifications in a State of Defence, whereas the Enemy being much Superiour in number, had had time enough to provide themselves with all things for this Enterprise. In the mean while, the Hollanders made a fecond Attempt upon the Redoubt near the River-side, but were repulsed with the loss of 7 or 8 of their Men, and a Lieutenant, whose Head the Javaneses carried in triumph on the top of a Launce. . The English then living at Bantam, would him have

revenged themselves upon the Dutch In-, 6 2. habitants there, for the Damages their Countrymen had received at Batavia. had they not been prevented therein by the Pangerang. Whilst the Dutch, who were not above 240 Fighting Men strong in the Fortress, were thus defending themselves against some thousands of the Tavancles, (besides the English) an Eng-1 lb Squadron of 11 Ships appear'd in the Road of Batavia, coming from Bantam; whereupon the Governour of the Fort, having recommended the Defence thereof to Peter Van Breek the Deputy Governor, he went on Board a Man of War with an Intention to Engage the English, but finding himfelf too weak, left what Ammunition he could spare in the Caftle, and fo fet Sail for the Molucca Islands, being pursued for some days by the English, but to no purpose; who after their return, came again to an Anchor in the Road of Batavia. Thus the Dutch were attack'd both by Sea and Land, yet did not lose their Courage, but defended themselves with so much Bravery, that the Enemy thought fit to offer a Truce, to Settle as they pretended the Preliminaries of a Peace.

Hostages being exchang'd on both sides; the Dommagon or Prime Minister, the K.of Jacatra's Brother, demanded the Summ of 4000 Crowns from the Hollanders; which he faid they had forfeited according to Agreement, for having attack'd the English without the King's Leave, and 4000 more for the letting them finish the New Bastion, which they faid was not comprehended in the faid Contract; After many Debates and Contests, certain Articles were at last agreed on, which the Durch (who wanted Ammunition) were willing to fign; But the English finding those Conditions against their Interest (the Dutch being thereby permitted to remain in the Possession of their Fortress and Habitations at Bantam) found out the following Trick to break off the Treaty; They so far prevail'd, First with Peter vander Brock the Deputy Governor of the Fortress, that he came out to meet the King of Jacan a at an appointed place, but no fooner appear'd there, but he was taken Prisoner, with those few that attended him, and laid in Irons; being threatned with prefent Death, unless he · would prevail with those in the For-• tress to Surrender it immediately; But finding the Garrison resolved to detend the Place, the English brought more of their heavy Cannon a-shore, in order to

batter it with the utmost Fury; At the ~ fame time they dragg'd the Deputy Go- 1662. vernor loaden with Irons, and a Rope Bravery about his Neck to the Walls of the Ca-of the file, threatning him once more with im- Dutch Gomediate Death upon the Spot, unless the vernor of Garrison would prevent it by an imme- Batavia. diate Surrender; The Deputy Governor was so far from being overcome by the fear of present Death, that on the contrary, like a brave and faithful Commander, he exhorted them to defend the Place to the last Drop of Blood. which so exasperated some of the Javamifes and English that stood near him, that they threw him backwards by Rope, and so dragg'd him back the Council, all which he took patiently, and with fo undaunted a Courage, that fome of the English being asham'd of so barbarous an Action, afterwards begg'd his Pardon. By this time the Dutch having fpent all their Ammunition, and quite tir'd out with continual Labour and Watching, without any Hopes of pre-fent Relief, saw themselves under an indispensable Necessity to furrender the Place under Condition, that the Garrifon and Caftle with all the Artinery should be deliver'd to the Linglish, and the Merchandises, Money and Jewels to the Javaneses; It was Sign'd the First of February 1619. by Wydurk Bania King of Jacana and the English chief Commander on one fide, and by those in the Fortress on the other fide.

The Hollanders being now upon the point of delivering themselves and the Fortress up to their Enemies, a sudden Accident robb'd the Javaneses and English of all their Hopes; For the Pangerang of Bantam had no fooner notice of this Capitulation, in which he had no Share, but he order'd his Dommagon or chief Minister to march with a Body of 4000 Men to secure the Dutch Deputy Governor, and the Castle with all that was found in it for his Use. Accordingly he marched with all Secrefie to Jacatra, and meeting with the King in his Apartment, put his Dagger to his Breast with these Words: King, Sur render your self Prisoner, or expenser, which so territy'd the King, that he comply d not only with his Demands, but foon after rethed with the Queen into the Mountains, without ever being heard of fince. The Dommacen of Bantam having taken the Depaty Governor into his Custody, summon'd the Fortress to Surrender, which thoserefus'd to do, except upon the be-

fore-mention'd Conditions, which the 1 6 6 2 · Bantameles refuling to agree to, and the English in the mean while (seeing they were like to be disappointed in Aim) beginning to reimbark their Cannon, thro' Connivance of the Belieged, these finding their Enemies at variance about the Booty, began to take fresh Courage, and having in feveral Attacks bravely repulsed the Javaneses, were now so confident of maintaining the Fort, that they gave it the Name of Batavia; Thus Matters stood when on the 25th of March 1619. their fo long look'd for Relief, confisting of 17 Men of War, under the Command of John Teterson Koen came from the Moluque Islands in the Road of Batavia: Within a few days after, they landed 1100 Men, divided into 12 feveral Bodies, and edged on with Revenge, attack'd the City of Jacatra with incredible Fury, the Javaneles defended themselves with great Obstinacy for some time, but no longer able to endure our Fire, they left their Entrenchments, and look'd for their Safety in an open Flight, being closely purfu'd by the Dutch who gave no Quarter; This happened the 30th of March, 1619. which day is yearly Celebrated here in Memory of this great Action. done, Mr. Koen sail'd with the Fleet to Bantam, demanding the immediate Restitution of all the Prisoners; the Pangerang being at first unwilling to grant his Demand, he began to thunder with his Cannon into the City, which foon terrify'd him into a Compliance. The English seeing themselves now quite out of all Hopes of accomplishing their Delign, by the coming of the Datch Fleet, made the best of their way thro' the Streight of Sunda, and those of Bantam finding themselves for saken by their Confederates, thought it most convenient to give over their Project.

The Hollanders having now their hands free, and feeing the Situation of their new Fortress in so Fertile a Country, near a very advantageous Bay, capable of containing 1000 Ships with Safety, resolved and gave immediate Orders for -- the building of the City, under the Cannon of the Fortress; the adjacent Islands furnishing them with sufficient Stone and Morta, and what else was requisite for this undertaking, being purchased from the neighbouring Confederates. But the Javaneses not being able to brook the Rife and Encrease of this new City, the Mataran (or favanese Emperor) 1629. laid close Siege to it with 12000 Men.

under the Conduct of the Prince of ~ Madure; and being advanc'd with their 16 Works within Musket Shot of the Walls, they made several furious Attacks in the Night time, but were as often repulsed by the Fire of the Belieged, who belides this, made frequent Sallies, and ruin'd their Works, without giving them leifure to repair them. The Javaneses being refolv'd to try all means to reduce the Place, stopt the Current of the great River with Piles ramm'd into the Bottom, behind which they threw all the dead Carcasses of Men and Beasts. which not only infected the Water, but also the Air, which occasion'd Distempers among the Belieg'd, who were forced to drink Salt-water for a confiderable time, till at last by continual digging having found some Springs of tolerable good Water, they began to refresh themfelves with less Danger and more Ease. The Javaneses finding also this Design to prove unsuccessful, had recourse again to Force, and the Second of October, 1629. made a general Assault on the South side of the City, Relieving their Troops continually with fresh Men, but were repulfed bravely without any confiderable Loss of the Dutch. At the same time they assaulted a smallOutwork or Tower call'd Maasland-Waerburgh defended only by 15 Men, who defended themselves courageously, as that they were attack'd. At last having spent all their Powder and Batav Ball, they went to work with the Tiles Befree and Bricks of the Castle within; The by the Javaneses being sensible of their Want, advanced to the very foot of the Walls, and having found means to bring a great Rope round the Building, were endeavouring to pull down the Tower; But the Besieged seeing themselves in Extremity, made a furious Sally upon the Javaneses, who thought not fit to stand the Shock, but foon retreated to their Entrenchments; except a few that were flain upon the Spot. The first of November, 1629. about fix Hours after Sunfet, the Javaneses set fire to their Camp in three feveral places, and march'd off with all imaginable Secrefie, after a Siege of three Months and three Days. No Booty worth mentioning was found there, but 800 Men miserably murthered all on a Spot; a miserable Spectacle! occasion'd as we learn'd afterwards by th haughty Courage of the Prince of Ma dure, which happened thus: During the first Siege of the Castle of Bathvia the Emperor of Mataran having sen a Body of Troops under the Command

of one of his haft Officers to the King 16 2, of Jacatra, and the fame returning infuccessful, the Prince of Madure spoke slightly of the matter, telling openly at Court, That if he had been sent with such Troops, he would have carried the Castle or dy'd in the Attempt. The Materan being inform'd thereof, and resolv'd to try his Fortune against Batavia, gave the Supream Command of his Army to the faid Prince, tho' proving unfuccessful, just as he was ready to march off with his Troops, was order'd to be flain with all his Followers, to verifie his own Words √as he faid ) that he would either carry the Castle or perish in the Attempt.

The Javaneses lost above 30000 Men in this unfortunate Siege, notwithstanding which, those of Bantam in the Year 1655, had a mind to try their Fortune against the Dutch; who meeting them in the open Field, this occasioned many Skirmishes, in which the Javaneses commonly had the worst; so that being pretty well tired with the War, and hearing of the approaching Succors from the Molucca Islands, under the Command of Arnold Ulaming, they thought it their best way to come to a Composition with them, since which time they have not thought fit to come to any Rupture; but maintain a good Correspondence with those they know are able to cope with them; especially fince they have Itrengthned their City with divers considerable Outworks and Forts.

The Fort Ansjol on the Sea side, the Fort Aake to the West side; and on the Quinquangular Fort, the Riswick, Northwick and Jacatra on the Land fide. The Fort Aake is built 1200 Rods from Batavia to the East, near the Sea side just by the Lime-Kills, and faced with Stone. The Fort Auke lies about 500 Rods from the City, more towards the Land fide, being also a free quadrangular Figure; Hercabouts live abundance of Farmers along the River, the Grounds being very fertile here. Near it is the The Fort Jacatra stands Pest-House. upon the Bank of the River, not above 700 Paces to the North-East of the City; from whence there is a streight and pleasant Walk thither; Planted on both sides with Gardens and Orchards. The Chineses, Ambeineses and some other Fore mers have their Habitations hereabout. the Fort of Northwick lies to the North of the City near the River, betwixt that of Jacatra and Rifwick.

Without the City, many of the Citizens have very pleasant Gardens and 1662. Houses. Upon the great River without Batavia you see a House belonging to Captain Burghs, built flat on the top after the Indian Fashion, being surrounded with all forts of Indian Trees. Upon the Brink of the River is a pleafant Summer-House. Without the City, near the great River, stands another House belonging to a rich Citizen call'd Strantweek, belonging formerly to Mr. John Maciznicker, Governor-General of the Duich Indies: It is very airy and pleafantly built, with a very fine Front, the Gardens being well-stored with Trees and Flowers of most forts.

Without the New Gate in a Grove of Achinese very pleasant Trees, you see the Tomb Ford of a Chinese Governor, named Segua; being no more than a heap of Earth raised above the surface of the Ground, and enclosed with Brickwork, plaistered white all over: In the midst you see a Table, and upon it a Cup, into which the Chineses put sometimes Money, sometimes Victuals, to appeale the Maies of the deceased.

The Grounds about Batavia, and in-Trees. deed of the whole life of Java, are ex- Plants. tremely fertile in all forts of Fruits the and Flow-Indies afford; but what is most surpri- ers of fing, is, That divers Plants, which in Java. Europe grow on imall and tender Stalks, rise up here very thick, and with hard Stalks; whereas on the other hand, divers forts of Beans and Flowers grow in Java upon Trees. The Soil about Batavia is so rich, that the Sceds brought hither out of Holland, Persia, and from Suratte, thrive extremely and yield plentiful Fruits.

Holland Cabbages, if Sown in due Fruits of time, and well look'd after, come here the Earth. to a good Perfection; but if neglected, they will not Cabbage. Provident Nature feems to have been careful in abundance of Astringent Plants for this Climate, where the Bloody-Flux, and other Diftempers occasioned by the Gall, are so frequent. Of Tresoil or Clover, they have great store here; and in their Gardens, Purcelain, Asparagus, Endire, Lettice, Bekabung, Water-Cresses, Par fley, Radishes, red and white Beetes, and such like: The Reddishes grow longer and better tafted here than in Europe and there is a certain kind of them thert-. er but thicker than the rest, which are Boil'd like our Turneps. The Chineses Pickle Radifies, and use them to create an Appenie to their Victuals. Here alfo

also is found a certain kind of Mandra-1 6 6 2 pora, called Bella dona by the Italians, in vegreat Request among the Indians in Burning Fevers; They Pickle it in Vinegar, and Eat the Fruit roasted in the Ashes as a Disert.

Vines.

Vines are very plenty and good here if well cultivated; whether, or by whom the Vines have been transplanted hither ixuncertain, there being no mention made of it in the Journals of the Voyages made into those Parts since the year 1595. They grow very lusciously upon the Walls of the Houses of Batavia, which bear Fruit in a manner all the year cound, provided they be Pruned in due time; for 14 days after they are Pruned, the Buds come out, which in 14 days more stand in full Blossom, and in two months longer produce ripe Grapes; fo that every Vine brings forth ripe Grapes every three months, and confequently four times in the year. But they don't thrive so well without the City, whether the Lands be too low, or not sufficiently purged from the Salt-Petre, I will leave to the Enquiry of others; since it is certain, that Vineyards would be of prodigious consequence to the Inhabitants; there being Vines here, who bear Grapes, each Bunch weighing 16 or more Ounces; and there are some Grapes as big as the Spanish Musicadine Grape.

Blue-Beans.

All along the Roads about Batavia grows a certain Plant among the Woods, with small Branches not unlike the Hops, which spread very plentifully upon the Ground, or will rife up to a good heighth on Stalks like our French Beans, having Leaves like our Rose-Trees. The Flower comes forth out of a Bud as large as our ordinary Roses, pointed at the end; they are of a lovely Sky blue colour, and vellow in the middle, but the Fruit being rank, is not regarded.

Indian Garden-Herbs.

The Indian Beets grow in the Gardens of Batavia, their Leaves being not unlike our Sorrel Leaves, with a pale Vein through the middle: They bring forth Pursley Flowers on green Stalks; some are white, others a mixture of Purple and Green. The Leaves and Stalks when boil'd, are in Taste like the Indian Bajan: All forts of Garden-Herbs are in great Request among the Indians here, because most of the Indian Foreigners that come Fruit Jangomas, is equivalent in its Virfrom Surage, and the Coast of Coromandel, feed for the most part upon Fruits of the - Corth, for believing the Transmigration of the Soul, they will not Eat the Flesh of any living-Creature; for which reafon also they abstain from red Beans, or

Herbs of a red colour, as having a refemblance to Blood; and for the same 160 reason it is, that the Indians, tho' otherwife very Ignorant, yet are very well versed in the Knowledge of Plants and Trees. The Malayans call all Pot-Herbs or other Eatable Herbs, Seir; but Medicinal and Poisonous Herbs, Oubat. About Batavia are to be found divers forts of Pot and other Garden Herbs; as red and white Beets, Parsley, divers forts of Lettices, Dill, Fennel, Asparagus, &c. And of Fruits of the Earth. Water-Melons, Pompions, Cheumbers, Citruls, &c. And of Pulse, all forts of Beans and Peafe, which grow up to a great height on Stalks or Trees.

The Fruit call'd Fokky-Fokky by the In- Fokia d'ans is shaped like a Pear, sometimes Fokks near a yard long, and of the thinness of a Man's Arm: It contains abundance of finall Seeds, the Rind being thin, but so smooth and bright, that you may fee your Face in them like as in a Looking glass: The Leaves are green, but rough, and as it were covered with a hairy Substance: They grow up to a good heighth. This Fruit is one of the best and most esteem'd of all the Indies, being of a delicious Taste; and when Boil'd with Wine and Pepper, not unlike our Artichoak-Bottoms. They are frequently Eaten both by the Dutch and Indians, instead of the Furopean Turneps, being look'd upon as very nourishing and easie to be digested; besides, that by their Diuretick quality they are good against the Gravel and Stone. There is another wild kind of Fokky-Fokky, the Fruits whereof are round, and when ripe, turn yellow, but these are only Food for the Hogs.

In the Plains of Java grows a Tree, Jambos the Fruit whereof the Malayans call Jamboes, and the Dutch, Sloes, or Small Plumbs: This Tree refembling in all respects unto our Sloe, or wild Plumb Tree; The Fruits being also of an astringent, but not disagreeable Taste: The Fruit when ripe is yellow, and the Juice thereof mixt with Champana and Rose-Water, is used against the Inflammation of the Throat. The Juice taken inwardly is good against the Bloody Flux, and other bileous Distempers. Thus this Juice of the Indian tue to the Acacia of the Antients, or to our European Sloes.

In the life of Java only, viz. in the Cubebe Woods near the Shore of the Streight of & Kumu Sunda, grows wild, a certain Fruit, called Cabebes and Quabeb, by the Arabians;

Kunne by the Javeneles; and by the rest of the Indians, except the Malayans, Kubab Sini, i. e. Chinese Kubebe, not because it grows in China, but because it is transported thither in great quantities. The Tree which bears this Fruit is both in Leaves and Branches not unlike to our Apple-Tree, but somewhat lesser. The Fruit is round, smaller than Pepper, of a dark brown colour, and if pincht with the Nails, will emit a certain Liquor like unto the Cloves. This Fruit is in fo high an Esteem among the Javaneses, that they will not permit them to be transported, unless they are Boil'd beforehand, to prevent their being transplanted into another Place. They gather some of them before they are ripe; These are light, with a rough Rind, within which is a finall foft and whitish Kernel. When they are ripe, the Rind is fmooth, have a bigger Kernel, and are much heavier than the others. Before they are quite ripe, they have an Aromatick, biting, and bitterish Taste, and when chew'd offend the Brain: But the ripe ones are neither fo sharp nor so bitter, and don't send so much of their offensive Vapours up to the Head. they are reckoned hot and dry in the third degree; are good to Attenuate the Slime in the Stomach and Breast, expel Wind, and correct the cold Symptoms of the Womb. Chaw'd with Mastick, they draw the Phiegmatick Humours from the Head, and strengthens the Brains. They are in great Request among the Javanesis and other Indian, who steep them in Wine, and take them to raise their Appetite to Venery, and to Warm the Stomach. Three or four Chaw'd, disperse the Vapours which occasion Giddiness in the Head; but care must be taken to Spit out both the Phlegm and Cebebes, and to keep the Nostrils close while you are a Chawing, that so the Smell and Scent of them may penetrate with the more Efficacy, and affect more immediately the Head.

The Javaneses, Malayans, and other Indians, use very frequently for the relishing of their Sawces, a certain Drug called Hin, by the Arabians, Alit, and by the Europeans, Assarbians, out of the Root of which this Juice is express'd, grows in Persia, betwixt Gamron and Lara. " is of two forts; the sirst is not un. cour Osier, out of the Leaves and Sprigs of which is squeezed the Hin by a Fress, and the Juice afterward coagulated in the Sun: The second fort is

much stronger and worse scented, being the Juice express'd out of the Root of this Shrub. This Juice, and that of Amssion or Opium, are two of the chiefest Commodities the Dutch Trade in in the Indies. Our East-India Ships bound to Java and other Indian Ports, do always carry a considerable quantity of this Juice from Persis, which they Exchange with the Javaneses for such of their Country Commodities as they have occasion for

Both great and fmall Cardamome, (as Cardan the Arab. ans call it) called Mal greeus by mome. the Indians, grows likewise in the Isle of Java. The small Cardamonie grows on 2 Stalk with small Joints, like Reeds, the Leaves being also like theirs) and grow in Clufters like them; but the Candamore feldom grows above two or three foot high, and the Leaves rubb'd betwixt your Emgers, emit a very edoriferous Scent. From the Root first sprouts forth in Ears like the Spicknard; the Flowers being of a pale colour, not unlike the Orange-Flowers. After those come certain Husks, which contains these wellfeented Seeds, which are green, but in time turn of a dark Vermilion colour. The Cardamome is a most excellent Spice of extraordinary Virtues; having an agreeable heat confonant to our Nature, without leaving any heat behind it, which is the reason that it is Chaw'd without any addition. It promotes Urine, and the Monthly Terms of the Women; opens the Obstructions of the Spleen and Liver, and procures a Sweet-The great Cordamone grows Breath. plentifully in the Woods of Java; the Flowers grow on the Stalk like the Hyacinth; it differs from the imall Cardamome in divers respects: It grows to the heighth of fix foot, the Leaves are larger, and the Stalks not knotty like the Reeds. The finall Cardamone fends forth an Ear from the Root; and the Husks are fometimes a Finger long. However, the Leaves and Flowers are of the same Scent in both; but the Leaves of the great Cardamome are not only much larger, but also covered with a Lange on the under fide. This Shrub is very pleafant to behold, of a light green colour, with white Flowers tipp'd with Purple red at the Extremities.

The Plant called by the Malayans Moulit Bebek, i. e. the Ducks-Beak, from M9 its shape, grows in the Gardens of Lavia on a somewhat longer Stalk than the Cardamome, being a sempervirent Herb; the Leaves also differ from those

of the Cardamome, being carved or edged 1 6 6 2. in the circumference. The Inhabitants v use the Juice of this Herb against Pustules and other Exulcerations, of a bileous Nature; and steept in Vinegar, it is a good Remedy against the St. Anthony's Fire; The Malayan Women lay it upon the Heads of their Children, to corroborate the Brains.

Indian Sorrel. In the lile of Java, and adjacent I-flands, grows an odd kind of Sorrel, having no resemblance to the European Sorrel, growing up to the heighth of fix foot, with a strong, hard, and three corner'd Stalk not unlike the Hemp; the Leaves being also not unlike those of the Hemp, beset with sharp small Prickles. The Flower has but one fingle Leaf of a pale yellow colour, but of a Purple colour below. The Leaves Chaw'd have the same Taste as our Sorrel, but are more oily: The Seed is Thorny like that of Carduns, and of a cooling and drying quality. The Malayans Eat this Herb among their Sallads; They also take the Leaves, and after they have mixt them well with the Saw-dust of Sandel-Wood upon a Marble-Stone, and a little Cocoe-Oil and Vinegar, make a Cataplasm of it, which they apply to the Head to Cure the Tooth-Ach, proceeding from a hot

Renzoin-

In the Isle of Java grows likewise the Tree, out of the Bark of which, after an Incision made, slows that well-scented Gum called Benzein or Benjuin, being a Shrub or Tree spread into many Branches of the thickness of a Man's Arm.

About Batavia grows a Plant in great plenty, called Nardus, most in request among the Javaneses, who used it in their Fish and Boil'd Meat Sauces, to give them a relish. They steep the Nardus in Vinegar, and make a Syrup of it with Sugar, which is esteem'd a good Remedy against the Coldness of the Bowels, and opens the Obstructions of the Spleen This Vinegar and Syrup and Liver. Cures also the Stings of the Serpents and Scorpions, if applied outwardly and taken inwardly at the same time.

or Opium.

Amfioen or Amfion, as it is called by the Indians, and Opium by the Europeans, is nothing else but the Juice of Poppy's, much used by the Javaneses and other Indians, Specially when they are upon the point of engaging their Enemies. The Antion is a very useful Drug to the Indians, without which they would be at a stand how to Cure many Distempers in this hot Climate, as the Bloody-Flux, Burning Fevers, and fuch like Di-

stempers proceeding from the Gall. The poorer fort of the Indians Boil the 16 Leaves and Sprouts of the Amfion, our of which they make a flighter fort of Opium, by coagulating the Decoction called Poult.

The Fruit called Pyzang or Indian Figs. as also Bachovees from the Portuguese Pyz. Word Bakovia, are called Pyzang or Banana's by the Malayans, Gedars by the Javaneses, Thio by the Chineses, by the rest of the Indians, Oucelli, by the Inhabitants of the lile of St. Thomas, Oucella; and by the Arabians, Mans and Muza. The Stem or Trunk of this Tree grows up in long oval Scollops to the heighth of 20 or 30 foot, in fix months time; its circumference being of four foot, but so soft, that you may cut it with a Knife like a Cabbage Stalk. It spreads its Branches very loftily, and bears Leaves, some of which are a foot and a half broad, and five, fix, or feven foot long; green on the uppermost side, but dark on the other fide, with a thick Vein through the middle. The Fruit has an Ear, the Stalk a vellowish brown, is very pleasing to the fight, and shap'd like a Cucumber. turning at the Extremities towards one another as they hang on the Tree: Before they are ripe, they are of a Parrot-green colour, but when come to full Perfection, yellow both in and out-side. When the Fruit is fit to be gathered, the Stem is cut down to the Ground, and the Fruit, which is green as yet, taken and hung up in the House, where it ripens and turns pale-yellow in a few days. The Rind is fo thin, that it may be taken of without a Knife. Neither the Tree nor Fruit produces any Seed, but a very handsome Flower of the bignels of an Ostriches Egg, which sprouts forth on the top out of large Budds, and opens its Leaves by degrees. Whilst the Stem has Fruit enough to nourish, the Leaves fall of one after another: Out of the before-mentioned Knot or Flower comes forth a Branch, on which grows the Fruit in a Cluster, sometimes one or 200 together; fo that sometimes one Branch is as much as a Man can carry, and each Stem or Trunk brings forth no more than one Cluster. There are divers forts of these Figs, distinguish'd by the Inhabitants, by different Names, Shapes, and Taste and they put them to various Uses. some have a way of drying them in the Sun, when they Tafte as pleafantly as the Poringuese Figs: Of this kind I talted at St. Anthony, one of the Salt-Islands. The

lons, but on the outside like the Ananas, 1662.or Pine-Apples. The Fruit is green at medical first, but after it is gathered and ripened yellow: It has a thick Rind, covered with a kind of three cornered thorny Lanugo, but don't prick. Within this Rind you have certain Divisions like as in Honey-Comb, which contain certain Kernels or Chesnuts larger than Dates, enclosed in a yellow Pulp, which is Eaten. The Kernel is generally of the bigness of a Joynt of a Man's Thumb, and two of them be sometimes found in one of these Fruits if it be of the largest fize; some are yellow, others white within; the harder, the sweeter they are. The Fruit is of an agreeable Scent, yet of a rough Taste, and if Eaten raw, create Winds; but Roasted like Chesnuts, are well-tafted, and a Provocative to Venery, for which reason they are frequently eaten by the common People. If you cat too much of this Fruit, it influmes the Blood, produces Loofenesses, Exulcerations in the Bowels, and Bloody Fluxes. In short, this Fruit is very unwholsome by reason of its Lusciousness, and is commonly evacuated by Stool just as it is eaten; the Pulp about the Kernels being so tough, that it is scarce to be manag'd with the Teeth; The Kernels are eaten boil'd by the Inhabitants with a little Salt instead of Rice. Of this Fruit there are two forts; One is call'd Barka, and is the best, the other Papa or Girafol, which is fofter than the other; as you may perceive by preffing it with your Fingers. grow all over the Indies, but those of the lile of Ccylon, and the Coast of Malabar are the best; I remember that the Queen of Signati presented me with one, which was of fo delicious a Taste, that I could meet with none afterwards like

The Flower

This Flower is call'd by some the Siampin. Flower of Camboja, because it was transplanted from thence to Batavia, tho' others look for its Original as far as China, whence it is call'd Pakjaboa. It grows all about Batavia in the Gardens, on knotty Trees, which grow fometimes twelve Foot high. It bears no Seed, but thick oily Leaves, white on the Extremities, but a pale yellow towards the · Stalk; some have red Spots on the uper fide. The Flower sprouts far at the Ends of the Twiggs, in a broad Knot, which produces several Flowers, the Scent whereof is like our May Flowers, but stronger and not so agreeable. The Leaves of the Stem are long, poin-

ted at the End, green and full of Veins; ~ The Wood is grey; and near the Top 16 where the Flower Buds out, furrounded \ with many young Sprigs.

The Flower call'd Katsiepiri by the The F Malayans, Korban by the Javaneles, and Katin Micuhoa by the Chineses, grows in the Pirk Gardens of Batavia, the Tree being not unlike a Palm-tree, but somewhat higher, and with larger Leaves. Flowers sprout out of pale green Buds, are well scented with thick, oily and snow white Leaves, with yellow Seeds in the This Flower is in great Re-Middle. quest for its pleasing Scent, being sold

fometimes for Two Pence a piece.

The Rice-flower is call'd by the Por- Arm tugueses Fulo di Arroz, by the Malayans Rice Boingo Pitsia Pria, and by the Javaneses. Pella Sidanga, all in the same sense from its Scent, which is like Rice, when it comes boiling hot out of the Pot. It grows on a kind of Vine, which spreads its Branches like our Vines, with very fair broad Leaves, like those of the Quince Pear-tree; and are as green as a Leek. The Branches grow so thick that the Sun cannot penetrate them, being supported by Bamboo Sticks. Flower has fingle white Leaves, streaked with white within, and in the middle a pointed Sprout, furrounded with fmall Buds.

The Apples call'd Pon:pions, by the Dutch, Jon Jamboa, by the Portugueses, and Those by the Chineses, grow scarce any where else in the Indies but in the Isle of Great Java, especially in the Gardens of Batavia. Tree is produced by no other ways than either by laying off of the Branches, like as we do our Vines, or from the Seed of the Fruit; The first bears Fruit the second Year, but the Tree which comes from the Kernel or Seed does not bear till the third or Fourth Year. The Apples are of a Gold Colour without, and fome of them Red within; their Taste being not unlike our Cherries. Some are white and somewhat sweeter; They are very like Oranges, both in and out side, except that they are sive times as big, some weighing Ten or Twelve Pounds, and being Ten or Twelve Inches in Circumference, fo that one Apple is fufficient for two or three at a time. They grow in Clusters tour or five together on thin Twigs supported by mboc Canes, without which they would either break or hang down to the Ground. The Tree also grows like the Orange-tree, except that the Branches are for new hat thicker and closer, and the Deaves

broader. The Blossoms have white Leaves, with a yellow Seed within being of the bigness of our Apple Blosfoms; The Fruit continues almost all the Year round, and after it is gathered will keep four or five Months. It delights in a fat Soil, and the Ground must be kept clear of Weeds near the Stem.

Most and the best of the Indian Fruit fome continue throughout the whole Year, except few, among which that are call'd Mangas by the Javaneles, and Pao Ampelan by the Malayans is one; The 'Trees which bears this Fruit are sometimes as tall, thick and well Spread as the largest Oak Trees in Europe. Flowers which are white, sprout forth of certain small Twigs growing on the Branches, which produce fuch vast plenty of Fruit, that when they begin to ripen, they are forced to support them with Sticks. Their time of gathering is chiefly in September and October; tho? less or more they continue throughout the Year, but not in such plenty, and most of the Trees bear Fruit, but every other The Fruit is something larger than a Plumb; green at first, but when ripe of an Orange Colour; fome are fpotted, and being of the same Colour on the infide are very pleafing to the Eye, but somewhat crabbed in Taste; The Inhabitants make divers Relishing Pickles of them; They boil them in a certain Pickle, and make them as good in Taste as the best Portuguese Olives; Others are Pickled with Vinegar and green Pepper, and are used with roafted Meats like our Pickled Cucumbers. They are also Preserved with Sugar for the use of the Women; They have another way of taking off the Rind and the Kernel, the space of which they fill up with Sugar, Butter and Eggs, and so make a delicious Dish of them, very pleasing both to the Palate and Stomach. The Fruit, if eaten any great quantity after it is ripe is very unwholfome, but moderately used, is good against the The Tree is produced Bloody-Flux. out of the Kernel; and does not bear till some Years after, neither does it bear Fruits for several Years before they

The Fruit call'd Mangostan by the M inans and Manges Tanges by the Jather Unaian Fruits, for its agreeable Taste. It grows chiefly about Bantam, and in fome places of Malarca. The Trees which bears this Apple, grows no higher ban our Plumb or Mulberry-tree,

having a streight Stem of the bigness of a Mans Calf of the Leg; with a 1662. rough Bark, its Branches growing up like those of the Clova Tree; Both the Leaves and Branches affording a very agreeable Sight. The Apples hang at the Extremities of the small Twigs, each being cover'd with two Leaves, of two Palms in Length, having abundance of Veins; they are somewhat of a pale Green on the out side, but light Green on the infide. This agreeable Fruit comes forth from a pale green Bud, which opening produces the Bloffom, and these the Fruit. On the Top of the Apple is a kind of a Coronet, which opens as foon as it begins to ripen. The feveral points of this Coronet has fo many Marks, to direct you how many Kernels are contain'd in the Apple; which are fometimes Six, fometimes Eeght; but those which have the most Kernels, are generally the best. Fruit has a very thick Rind, not unlike our Granate Apples, of a Purple Colour without, and whitish on the inside; Its Taste is somewhat Crab-like, not unlike the Rind of the Granate Apple, and fomewhat inclining to bitter; The Pulp which is round the inward Kernels, is fometimes white, fometimes inclining to red; being exceeding pleafing to the Palate, and not unwholfome for the Stomach, notwithstanding its cooling Quality, it being fearer ever known, that any Body furteited himself by the eating of this Fruit, a thing otherwise very common to the cooling Fruits of the Indies. These are accounted very proper even in Agues, and have towards the Bottom about the Stalks three or four different Rinds or Shells. These are brought in such vast quantitics from Bantam to Batavia, that you may buy many of them for Sixpence; and I have feen feveral of them in the Gardens about Batavia, one whereof bore Fruits very plentifully, which makes me believe they would thrive very well hereabouts.

As far as I remember, there is scarce Indian Alany kind of Fruit Trees in the Indies mond-tree. which casts its Leaves so as to reman in bare except this Tree, which as well as the Fruit is call'd Katopper. The Tree grows up very tall, with thick Branches and Leaves, which afford a very plentiful Shade; It is in all respects like an Elm-tree, except that its Leaves are above a Palm in length and very narrow, with yellow Veins. The Stem of this Tree is very strait, out of which come

forth the Branches one above the other The Fruit grows in Clustin due order. ers on the Extremities of the Twiggs with the Blossom, which are small white Flowers with a yellow Seed, and many green Buds not open'd yet, near them; The Fruit is enclosed in a hairy Substance, which turns yellow, and shrinks adit ripens; within which is a hard Shell, which contains commonly one, and sometimes two Kernels. These are as fweet as Almonds, being not unlike them in Shape, and are caten and used otherwise like Almonds; The Shell is so hard that you can scarce crack them with your Teeth. There are divers forts of them; fome having a pale red Shell, which are bigger, others a yellow

The Javanele Rottangs.

The Javanese Rottangs grow in those Country's wild; And are different in their kind; Some would have them to be a kind of Reed, because they grow fometimes with Knots or Joints; whereas otherwise they have no resemblance either in the Stem or Leaves to the Cane or Reed kind. This grows fo fast, and twists its self sometimes so close up to the very Tops of the highest Trees, that they die for want of Air. are much used in the Indies; However the best walking Canes are brought from 'fapan and Siam. They bear also a kind of Fruit, of a brown Colour like our Earth-Nuts, with a very thin Rind, containing two Kernels, which are white but of an unpleasant Taste, and therefore scarce ever eaten, except a small portion thereof next to the Rinds which is well tasted. The Chineses make divers forts of Pickles of this Fruit; in the nature of the Pickled Olives; and draw an Oil from them which is very good to heal Wounds.

The Tree and Fruit Anrae.

The Tree and Fruit call'd by the Portugueses and Dutch Anrae, is call'd Sarborofia by the Malayans. It grows in divers places of the Indies, to the height of an ordinary Apple-tree, with rough Leaves, green at first, but turn brown as the Fruit begin to ripen, and grow directly opposite to one another, like those of the Tree Gojovas, but are not so broad. It bears no Blossom, the Fruit coming forth of Buds like the Portuque/e Figs; which has a rough Rind. with pale green Knots, not unlike the Pine-Apple, it comes to full Maturity in three Months time, when it is gathered, and kept till it grows foft, that it may be broken with ones Hands; within it resembles a rotten Medlar, being

full of Seeds: and the Pulp of so agreeable Tafte, that one can scarce be satis- 166: fied with it. The inhabitants make many Incisions in the Bark, to make the Tree bear the better, as we say of our Walnut-trees, when the Twiggs are well beaten whilst they are gathering the Fruit. There is another fort of these Figgs call'd Atanoane by the Inhabitants which are lesser, as is likewise the Tree, which rather resembles a Shrub, with narrow Leaves, but above a Palm in length. The Fruit is of the bigness of a China Apple, yellow and shadow'd with an Orange Colour, but white within, with brown Seeds; They are much more luscious, and when cut open emit a Scent like Rose Water, being accounted very comfortable to the Brains, and therefore held in great Esteem. Fruit likewise sprouts forth out of long green Buds; which opening, contain another round Nut or Bud, which produces the Fruit.

The Date Trees grow in great plen-Datety in Persia near Gomron, and delight much in Sandy Grounds. Some of these Trees have of late Years been transplanted to Batavia, of which I saw a young one in Mr. Peter Moleth's Garden, the Draught of which I have inferted, but whether it will bear Fruit time will The Date Trees continue in their full Vigour for many years; they have, like the Coco-trees, very small Roots, and the Trunk is thicker near the top, than towards the Root. The Pith of the Tree is accounted excellent good to encrease Sperm, and an Appetite to Venery, and the Persians about Gamron are so fond of this Fruit, that they eat it at their Meals, as we do Bread, or the Indians Rice. The Dates hang in yellow Shells on the Trees, being of a delicate tafte, especially if eaten green. There is a Male and Female Date-tree; the last of which bears Fruit only; they differ also in this, that the Female has a thicker and longer Stem, but the Bloffom is the same in both, and shoots forth in a great Bunch or Cluster on the top of the Tree, of the thickness of an Arm, which opening after some time produces the Flowers, and those the Fruit. The Persians cut off this Knot from the Male Tree before it opers, which they cut into divers pieces ne of which they put into the Knol of Cluster of the Female Tree, (which they have a way to open) pretending thereby to make the Tree bear greater. plenty of Fruit.

They have many Stories of the Male 6 2. and Female Trees, tho' not worth the in-~ ferting here.

ter-

The Water-Melons, called Batiek by ons, or the Indians, as also Patekas or Pateko, grow almost in all the Countries betwixt the two Tropicks of Cancer and Capricorn; yet the nearer to the Equinoctial Line, the better they are, and continue in vigour all the year round, except in the heighth of the Rainy Season. Some are white without, as at Batavia, but the red ones are the best; They have a thin green Rind, which is soft and tender within. The Pulp is bright, and fo tender as to melt in ones Mouth like Sugar. The Seeds are black, not unlike our Pompion Seeds: The Plant creeps with its Stalks and Leaves along the Ground like the Pompions, and at their opening refemble our Cucumbers. The Fruit is sufficient for four Persons to feed upon; and is, among all other Fruits that are Eaten raw, the most pleasant and harmless, though you Eat ever so much of it. However, moderately Eaten they are best, when they are very refreshing, and acuate the Stomach; whereas in too great a quantity they are obnoxious, and may occasion the Bloody lux: They grow best in Sandy Grounds. have feen some of them in the Gardens of Holland, but the Fruit has a watery Γafte.

The Fruit called Ananas, by the Poruguefes and Dutch, is called Nuna by the Malayans and Javaneses, and Unglay by he Chineses. The Plant which produces his Fruit delights to grow in shady 'laces and a fat Soil: First shoots forth a italk of an Inch thick, and a foot long, on which near to the Ground grows the ruit, not unlike a Melon, with a well colour'd Rind, being of a pale red coour, mixed with Orange colour Streaks, which towards the Extremitics are green. The Fruit looks yellow within. re sometimes five Inches in circumfeence, and nine long, weighing perhaps five or fix Pounds. Below and round about the Stalk come forth certain sprouts like House-Leek or Aloes, with 15 or 16 carved Leaves of the same colour as an Orange colour about the edges. The Ananas, after it is come to its full Perfection, is one of the most delicious Fruits of all the Indies; but before they are well ripe, they contain a corroding Peifonous Quality; of which the Ripe

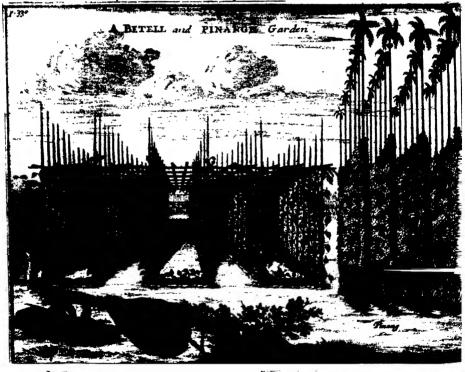

seven have someRemnants, and theret ought not to be Eaten in too great

a quantity, unless you cut them into fmall Slices, and by pouring some Spanish 1662. Wine upon them draw out the sharp Humour. Some use Water instead of Wine, notwithstanding which they often create a heat in the Throat; but as they are Diuretick, fo they are accounted good against the Gravel: But without being steept in Wine or Water, they would Exulcerate the Palate of the Mouth and the Tongue, and cause a mortal Bloody-Flux. They have a way of preferving them with Sugar, and are thus transported frequently from the West-Ind'es into Europe. This Fruit has fo fragrant a fmell, that when it is cut it fills the Room with a smell like Rose-Water: In Taste they approach next to our large Strawberries, which being very inviting to the Pallate, makes one Eat too much, and Inflames the Bowels, or occasions Burning Fevers, for which reason they ought to be Eaten with cau-Those of the life of Ceylon exceed the rest in Taste; those growing near Batavia, and in other Parts of Java, are not so fine. The Fruits ripen in fix Months; when they are cut from the Stalks, which remain thus; or elfe they take the Sprouts, and having cut them from the main Stalk, put them thus without any Root in the Ground, which afterwards produce new Plants. The Fruit Anana: grows in most parts of both the Indies, and some are of Opinion, That the first Plants thereof have been transplanted many years ago from Basil unto the East-Indies.

Among other Indian Plants, which are beneficial to human Kind, is that called Betel or Betele by the Indians, and Siry Betel, by the Malayans, Sury by the Javaneles, and Lauhen by the Chineses, which is one of the most inconsiderable ones. It refembles at a distance the Black Pepper, and runs up with its Branches round Trees, Stalks, Posts, or any other thing it meets with, like our Hops, to a good heighth, delighting especially in a well Dung'd Soii, and shady Places; and growing but flowly in the open Air: It requires also a considerable heat, which is the reason that it is Planted the Fruit, green in the middle, and of near the Sea-side, and after all must be defended and covered against the cold Night-Blafts, being fo tender, that it can't bear the least Cold. Both the Branches and Leaves are in all respects like those of the Pepper; the Leaves being fometimes fix Inches broad, and as many long, of a dark green colour, having foveral Veins through the length.

nnd 5 or 6 crosswife; the Stalks are an 662 Inch broad. The Leaves have a Spicy Taste, very penetrant and somewhat adstringent. They are so generally used in the Indice, as if the Inhabitants could not live without them. They take a fingle Leaf, and a small quantity of Lime made of burnt Oister-shells, then folding the Leaf together, they put into it the Lime, and a fourth part of the Nut Areka, (or Pinang,) which augments the astringent quality of the Betel, and draws the Spittle: After they have Chaw'd it thus a while, the first Spittle is red, like stagnated Blood, which being pass'd, they swallow the rest. The first Spittle taints the Lips with a pleafing red, as foon as it affects the Brains, which is chiefly attributed to the Areka; and I have feen some, who, tho' used to Chew this mixture, were feized with Swouning Fits: It never fails to create a Giddiness in the Head to such as are not used to it, which is soon Cured by

rubbing their Gums with a little Salt. C The Juice thereof, which is swallowed 16 down, has an aftringent and corroborating quality of the Stomach, after the first Spittle which contains the Lime, is spitted out: It closes the upper Orifice of the Stomach, disperses the Vapours arifing from Drunkenness, and revives the Spirits. It corrects a stinking Breath; cures the Tooth-Ach and Scurvy, fastens the Teeth, and strengthens the Gums; but makes the Teeth as black as Jet, an Ornament much affected by the In-a dians; and if you Chew too much of this mixture, it will loofen and corrode the Betel Chaw'd without Lime, produces a green Spittle, but with Lime, makes it red; Persons of Quality mix fome Musk, Ambergreece, or Camphire with it: The use of it is so frequent here, that no Body pays a Visit to another, but a small Dish of Betel is brought immediately. Nice People Spit in Pots.

Pynang-

The Ancient Herbalists have placed the Pynang-Tree among the Palm-Trees, perhaps because its Stem, Leaves, and Branches, are not unlike the Coco-Tree. It owes its Original to the Kernel of them in prodizious quants

THE REAL PROPERTY AND ADDRESS OF THE PARTY AND the Nut like the Coco. Tree, all over the Indies, especia of Ceylon, where they drive Traffick with these Nuts, and tra

Coast of Madura, and other Places. In 56 2. a few years after it is Planted it bears Nuts. From underneath the Leaves sprout forth certain Twigs, which grow close together, and are full of small white Leaves, emitting a most fragrant Scent at a confiderable distance, especially Mornings and Evenings. these Flowers come the Nuts, called Faufel by the Arabians, Areka by the Indians, and Pynang by the Malayans: They grow very thick together on both fides of very ftrong Stalks, being green at first, but turning yellow by degrees; some are of an Orange colour. Some of these Nuts grow not so close on tender Twigs; others, which are of an Orange colour, grow out of certain green Husks in Bunches like Grapes; they are covered on the outfide with a hairy Substance. This Tree equals in heighth the Coco-Tree, but the Stem feldom exceeds fix or feven Inches in thickness, neither has it so long and many Branches as the Co. co-Tree, and the Leaves are shorter and broader. These Trees look very oddly at a distant ting fo thin of Stem and t Branches, fo that they the Wind on all sides, yet neverthreak. The Stem is spongy withthey make Laths for the coverings of their Houses, for which they are very nfer al by realon of their straightness. The inferently realism of their straightness. will certainly be seized wit in the lead, and will be seen to be seen to

Surybon is a certain Plant which runs In close round the Pynang-Tree to a great heighth, and being Planted in rows, affor shady and agreeable Walks. The Leaves and Branches are like those of

the Betel, or of Pepper: The Fruit is not unlike in shape to the Bengal Pepper, growing on small and green Stalks of two Fingers length: It is green and chequered, of the length of a Palm, but scarce an Inch thick, containing a white Kernel with small Seeds. These Kernels are used with the Areka instead of Betel, being a pleasant Chaw. They cut them through the middle, and taking one half of the Pynang Kernel likewise cut in the middle, they tie both together with a Cotton Thread, and with the addition of a small quantity of Lime made of Oyster Shells, use it like as they do the Betel; it has the same effects, and being not so common as the Betel is more esteem'd among Persons of Quality.

Dap-Daf, or Dap-Dap, is a very a- Dap-Daf, greeable Fruit both raw and drefs'd, ha- or Dapving a very pleasant Taste, of a mixture Dap. of fweet and foure, and of a cooling quality. It grows out of the bottom of a Stem of a Tree, having very fine Leaves, the Flowers or Blossom, confifting of small red Leaves. The Fruit is inclining to red, mix'd with black spots of an oval Figure, and ragged, bent a little at the end like a Cucumber. It contains a white Kernel of a delicious Taste, being enclosed in a whitish Rind. These Trees bear Fruit all the year long, and grow properly in the Molneca Islands, from whence they have been transplanted into the Gardens of Batavia, but do not thrive so well there as in their Na tive Soil, being much pester'd wir.
Aunts or Pismires, de licred of Mischies to the Fairs there. whereof I took at the wat the crossing was the country was the crossing was the crossing with the black at the crossing with the crossing The Fruit called I by the Majares, by the Marketter the Marketter their referred our Currents, they in their qualification they are 'wer' staction.

the Gardens about Batavia, and bear

Fruit

Fruits every three Months, but most in

September.

The Tree called Moringo by the Portuqueses and Dutch, Ramongy by the Malayans, and Kelor by the Chineses, is found not only in all the Gardens, but also before the Houses: It has a White Blossom, which sprouts forth from White Buds, having a yellow Seed within. The Fruits grow feveral together, being enclosed in hard Husks, not unlike our French Beans, except that the Husks are round and longer. So foon as they are ripe, they are gathered, and the Twigs on the top being cut off, others sprout forth in their stead, which bear new Fruit. The Leaves are very smooth and thick, in taste not unlike the Coco-Leaves in Holland; but not so biting and penetrant. They Stew these Leaves with Meat, or Eat them alone, as we do our Spinage, being well-tafted and cooling; the same they do with the Husks, whilst they are young, but when old, are tough; so that both the usefulness and pleasantness of this Tree is a sufficient Encouragement to the People to afford it a place in their Gardens; especially since it wants no great Industry to Plant it, as growing out of a Sprig of the Tree planted only in the Ground without any Root, which in a few months begins to Blossom and to bear Fruit.

The Tree called Torre by the Malabars, Tary by the Portugueses, Rombang Juri by the Javaneses, and Husk-Tree by the Dutch, does not rife above the heighth of an ordinary Apple-Tree: He brings forth certain Husks hanging strait down on thin Stalks of about a quarter of a yard in length, and the thickness of a little Finger. The Husks contain 8 or little Finger. 10 small Pease, which are Eaten as well as the Leaves, which are round and small growing on fmall Twigs; and the Flowers, which are furprising at first fight. They sprout forth out of green Buds in the shape of a Half-Moon, with Purplecolour'd Points, and streaks of the same colour within: From the innermost Leaf come forth certain long and thin Sprouts like Fillets, with yellow hairy Points; The Stalk is green, but the beginnings of the Leaves of the Flower, are white, interspersed with Veins to the Extremi-\* ties, with a Parrot-green colour, intermix'd with some red, which affords a most agreeable Spectacle to the Eye: The Inhabitants also make use of the laves as a Soveraign Remedy against the Stings of the Serpents, in which case they squeeze them betwixt two Stones,

and mixing a little Salt with them, apply them to the Tumour, which give

immediate Relief.

The Portugueses have given it the name of Folio di Inverno, or the Devil's Leaf, or Hellish Leaf, because it will overrun all Plans Places wherever it lights: The Malayans call it Garrak, and the Javaneses, Klatte: It has several Physical Virtues, against divers Distempers. There are two forts distinguish'd by their different colours; one having green Leaves, and growing very fast; the other being brown and red, like the Leaves of our red Cabbages, and growing up to the heighth of 12 or 14 foot, with carved Leaves hanging on very long Stalks. On the top sprouts out a bunch of green Buds, which opening by degrees, produce yellowish Flowers; after which comes the Fruit, not unlike a Chefnut, containing a Bean or Kernel, which is very good Food.

The Plant or Herb called the Broad The Nomerado by the Portugueses, and Bajan Nor Dierdia by the Malayans: The, shape of rado the Leaf which grows on the Stalk of this Plant chequered with various colours like a Tulip, is altogether like our Beetes, and used in the same manner; but is preserved for the Beauty of its Leaves, which are on the top, as an Ornament of the Gardens. There is another fort resembling in colour our red Cabbages, and is frequently planted by the Chineses, who Sell it in great quantities in the Market of Batavia: It is of an agreeable Taste, either Boil'd with Meat, or

Stew'd by it self.

The Tree which produces the Javanese-Cotton, is called Kappok by the Ma- Kal layans, Jerondo by the Javaneses, and My by the Chineses, grows up to the heighth of a great Malt, spreading its Branches directly straightways on all sides: The Bark of this Tree is white, as far as the lowermost Branches, but from thence to the top green; The Flowers which are white come forth out of certain Buds growing out of the Branches; then come the Fruits of the bigness of a Hens Egg, pointed at the end, being green at first, but turn brown like a dried Oaken-Leaf. These Fruits hang on the middle and end of the Branches, two and two together, feldom one alone. They open at last near the Stalks, and produce the Cotton-Wooll, which covers the Seed, and extends its self when exposed to the Mir The Seeds are black, not unlike the brown Pepper, but somewhat find ther. The Cotton Wool is gettered in the Indies, in October and Antender.

with they drive a confiderable Traffick 662. all over the Indies, where they are used v instead of Feathers, to Stuff their Cushipns, Bolsters, and Quilts withal, Feather-Beds being unknown here; but is not long enough for Combing, or for Weaving; Great care is to be taken that no Fire come near it, for if it takes fire it burns with fuch violence, that scarce any Water can fquench it: This Tree grows whereever it is planted.

The Tree Jamboes, as the Indians and Javaneses call it, the Portugueses Rosado, the Malayans, Jamboe Ramus, and the Chineses, Ileapont, affords a very agreeable Entertainment to the Eye, while it stands in full Blossom. It grows up very regularly, in the shape of a Pyramid, the Branches growing in good order, neither entangled within one another, neither above one another. rises to the heighth of a large Pearl-Tree in Europe, and takes deep Root. The Leaves are long and green, at the Extremities of the small Twigs sprout out green Buds, which produce Flowers with Leaves as red as Blood, containing certain red Fillets within: The Fruits are of an Oval figure, resembling in bigness and shape our Sugar-Pears, which grow in Clusters 23, 24, and 25 together: Some are red, others white, but both of the same Taste, tho' the white ones are reckoned the best. They smell very sweet, but are somewhat mellow; The Stone which lies in the middle has a large but bitter Kernel, which is never Eaten. Abundance of these Flowers which produce no Fruit, fall from the Tree upon the Ground, which cover the Ground underneath, and afford a pleafant fight. The Stalks of the Flowers are red, not unlike the Sea-Lions, but not fo long. These Flowers have so pleafing and favory a tafte, that they are used and Eaten as a delicious Sallad. The Fruit has a sweet, yet relishing taste, and allays the excessive Heat of the Stomach; if Stew'd with Sugar, and a little Wine, they Eat like Stew'd Pears. The best I ever met with were in the Isle of Ceylon, where they grow in great Plenty. These Trees are produced from the Seed, and bear Fruit in the 4th year, and three times in a year, so that they never are in want of this Fruit, throughout all the Scasons: 'Tis generally believed, That this Tree, for his sweetwers, and well-tafted Fruits

transplanted from Malacca in-to other distant Countries. There is yes mother fort of James, which grow in the life of Ambona, on Trees

no bigger than our Cherry-Trees; but they are not so well tasted, so that this 1662. Tree is cultivated there rather for its Blossom, which is red also, than the goodness of the Fruit.

Among many other Fruits, which if Eaten raw, are crabbed and foure upon the Tongue, we must not pass by in silence what the Portugueses call Nelyka, the Malayans and Javaneses, Boa Malakka, the Chineses, Soaly, and the Dutch, Wild- Boa Mo-Plumbs: They grow in vast numbers on lakka. thin Twigs, and are greenish of colour; the Twigs have small green Leaves grow, ing close together. The Fruit has a fourish taste, and is very cooling, for which reason it is in request by some, tho' generally no great account is made

of it. They are in their Prime in Azgust, and are then to be sold in the Market in Batavia.

The Tree called Canary by the Ma. Canarylayans, Javaneses, and Chineses, is an In-Tree. dian Oak-Tree, which grows very high with lofty Branches, and very smooth Leaves, interwoven with divers Veins. The Stem grows thick, and extends it self into several Protuberances near the The Rangers of the Forests keep a watchful Eye over these Trees at convenient distances, when the Acorns begin to fall, because the Wild-Boars appearing in great numbers, they shoot them; so that during that Season, the Wild-Boars Flesh is fold at a cheap rate in the Market of Batavia. The Fruit is nothing else but an Acorn or Nut, produced out of a yellow Blossom growing on finall Twigs. The Nut or Acorn is enclosed in a green Shell, and next to that another, which is so hard, that you must break it with a Hammer if you will come at the Kernel, which is as white as an Almond, and of as good a tafte, being covered by a thin Skin.

In and near the City of Baravia, grows in the Gardens a certain Flower, both in Scent and Figure not unlike our Camomile-Flower, but whether it obtains the same Virtue, is unknown hitherto. The Camomill Topasses call it after the Portugueses, Fulo Tree, o di Madre, i. e. Mother-Flower, because Fulo di Madre. its Leaves and the Flower are somewhat: like the Matricaria, and perhaps of the fame kind. It grows about a foot high with large carved Leaves: The Flower which is white, sprouts forth out of green Buds, with double Leaves carved at the ends.

The Flower called Four Lights comes forth out of small Buds, being not un-like a single Gillislower, but of a bright red colour. It consists of 4 carved Leaves, which

Qqqq

## Mr. John Nieuhoff's Voyages

which have certain pleasant curls at the 1 6 6 2. ends. The Leaves are dark green on the vinside, and pale green without; chequered with Streaks which run all along to the point of the Leaf, which has the shape of an Heart. This Flower is kept only for Ornaments sake, but is soon faded.

Alli or Witter Flower.

There is scarce a Lake or Pool in this Country, but what produces some Flower or other, but the Flower called Aili is found in great plenty all along the Ditch or Gracht betwixt Ansjol and Jacatra. It is a pretty fort of a Flower, which may be kept a pretty while in Water; It comes forth out of long and large Buds, is pale green without, and white within with yellow Seeds. After it is opened, it is not unlike a Tulip or Lily, except that the Leaves are green on the Its Virtues are unknown as out fide. yet, but is kept for Ornaments sake.

White Vio.

The Leaves of this Flower growing let or Jar- close within one another like our Violets, it has got the name of a White Violet. scarce differing from it in any thing but It grows wild on certain the Scent. Shrubs without Batavia; when they are planted in the Gardens, the Stalks thereof are cut down close to the Ground, when new Stalks sprout forth, which bring Flowers in great plenty. The Inhabitants who call this Flower Jarron Jarron, say it was brought hither from the life of Baly. The Malyans call it Benga Sulun the Javaneles Malati Rompah, and the Chineses Belehoa. It much refembles the Karfiopiri, but is not fo strong of Scent, tho' it has no Scent at all, except in the Morning, before the Sun-Beams have dry'd up the Dew from its Leaves. The Leaves are pale green, in Shape not unlike Peach Leaves, but fomething broader; The Flower issues out a pale green turn'd Bud, of the bigness of a double Daffadil, and is snow white.

Cotton of Bengale.

There is a certain fort of Cotton, which is transplanted from Bangale to Batavia, call'd by the Chineses Algordan, but by the Malayans and Javaneses, Kapas or Kappas, the Tree bears Flowers and Fruit throughout the whole Year. So foon as the Flowers are gone, there Jouds out a Knot, containing the Cotton or Wool; The Leaves are carv'd in three places, being not unlike a certain Herb the Dutch call Ducksfoot. certain pointed Fillets. This Cotton is WildMan. fit for Weaving. Flower is brown red, having within

The Fruit call'd Butsian by the 3a-

vaneses, Malayans and Chineses, is a kind of wild Mangas of so strong a Scent, T that you may fmell it before all other Herbs in the Market. The Tree which bears this Fruit, is very delightful to the Eye, and not unlike the Mangas-tree; but the Leaves are somewhat bigger than those of the Almond-tree, of a dark green Colour. The Blossom is also like that of the Mangas-tree, and yellow. The Fruit is green, of the bigness and shape of a Limon, within which grows certain Almonds, which are much more taking to the Eye than toothfom, tho the Smell is much more disagreeable than the Taste, which is bitterish, and somewhat naufeous, and not comparable to the true Mangas; which is the Reason they are not much planted near Baravia, but abundance of them are brought to Market there from Bantam in October and November.

About Batavia and all over the Isle Mar of Java grows a certain Tree call'd Marokko or Morukko by the Portugueses, Dap-Dap or Dadap by the Javanefes, Darradap by the Malayans, and Oy sensio by the Chineses. Its Leaves are like those of the Poplar-tree, but as big again, fmell very well, and grow on yellow Stalks. These Leaves being interspersed with many yellow Veins, appear at a distance. as if the Tree were cover'd with Flow-The Inhabitants lay these Leaves over their Pots, in which they have their boil'd Rice, the Steam of which draws out from thence a very agreeable Scent; but have no other use that I know of.

The Plant call'd Ratsiobonk by the Ma- 11layans and Javaneses, Bantohoa by the Di Chineses, Datura by the Turks and Persians, Duroa by the Indians, and in a broken Dialect Dutter by the Dutch, grow wild in the Woods, almost all over the Indies; it seldom rises above the height or thickness of our red Cabbages, the Stalk being very like the same, but the Leaves brown, pale green and carved. It bears divers Flowers, which open every Morning, and close up again about Noon; they are white within, and pale yellow without; fome being near a Palm in length, and of the Figure of a Bell, others carv'd at the Extremities; After these comes the Fruit, which has a pale green Rind, cover'd with thou ly Prickles; they feldom exceed the b gness of our yellow Palms, and conta. ellowish Seeds. Whether this Plant has the Virtue of intextenting to a decree of Madnels for a certain direct probability and have it, I am not able to describe to

lian

but this I am certain of, that the Topasses and other Negro's who keep it in their Gardens near Batavia, look upon it as a able. It is properly a kind of Night-

Shade or Henbane.

The Trees call'd Kananga by the Malayans, Javaneses and Chineses, bear leaves of a Parrot green Colour, ahove which comes forth the Bloslom; they are planted near the Betel, which winds about them, and growing to a great height; their lofty tops are conspicuous above most of the other fruitful Trees in the Gardens; As far as I know, they have no other use. Besides that, these Trees are easily to be discern'd from the rest by their crooked hanging Boughs, they commonly fet a little Windmill in the tops to frighten the Birds out of the Garden, especially the great Batts here, which keep their Rendezvouzes in these Trees, and are feen hanging with their Claws to the Branches thereof with their Heads downwards, and that in such Numbers, that you see sometimes more Batts than Leaves on a Tree.

The Indian Oak-tree produces no eatable Fruit, yet does its Wood make a fufficient amends for this Defe ?: being the most lasting of all, and as good as our European Oak. This Tree grows up to a great height, as may be feen by the long pieces of Timber in many of the Churches, and other Lofty Buildings of Batavia. This Tree is sufficiently known by its large Branches and broad Leaves, which sprout forth out of the Boughs and Branches, being intermix'd with green Veins of a pale brown Colour, and fomewhat rough, fomething resembling the Figg Leaves, but are not carv'd; at the Extremities of the Boughs, fprout forth certain Flowers not unlike the Hops, which produce Acorns, the Seeds from whence this large Tree takes its Root; the Inhabitants use the Leaves in the Pleurisse; They take a certain quantity of the Liquor contain'd in the Coco-Nuts, in which they boil some of these Leaves, to the Consumption of half the Liquor, and this Decoction they give the Patient to take inwardly; which appeales the Pain. I have feen pieces of this Oak-timber as streight as an Arrow, no less than forty Foot long, and of 2 foot Dismeter to the very top the thickness; and nothing more come in than to meet with Boards of the good of three and more Foot broad. The Malayans call this TreeKyati, from whence they call wis Oak Wood, Killer Wood: which is deceeding hard, and has the same Veins as our Oak; being very lasting, and not subject to be worm-eaten; being Proof, especially against the Mice, which sometimes will eat whole pieces off the Timber within, tho' the out fide appear very found.

The Fruit call'd Water Pompions by the Water Dutch from their Shape, are call'd Ka- l'ompions tolas by the Malayans and Javaneses, and with a broken name Katilas by the Portugueses. It is neither a Tree. Shrub.Herb nor Plant; but sprouts forth in the nature of small Branches, from a small Seed, and spreads to that degree, that it runs over the tops of the Houses with its Leaves and Flowers. The Indians frequently lead them over their Cifterns in which they Bathe, being fustain'd by Bamboo Canes to keep off the Heat of the Sun-Beams. They bring Fruits the whole year round, but especially in April and August. The Flowers are like those of our Pompions, and fade without producing any Fruit. The Fruit is of two forts; one grows to the bigness of our ordinary Pompious, but the other which is the best, scarce exceeds in Bulk our Cucumbers or Melons. They are used in the same manner for Salad. There is another fort of the length of a Man's Arm, but no thicker than a good walkingCane, theRind being full of Spots; That of which I took the Draught, was 13 Inches long and 31 Diameter, weighing 34 Pounds. When the Gardners have a mind to make this Fruit grow longer than their ordinary Size, they fasten a Weight with Wire thread to the Extremities of it, which stretches it downwards to a prodigious Length. Leaves and Branches are like those of the Pompions; The Fruit is green inclining to yellow on the Rind without, but white within; as are also the Sced.

If we should enter upon giving you Cham an Account of all the Flowers that grow pakka. in the lile of Java, it would require an entire Volume; Among the Chiefest and Best is that Flower call'd Champakka of Siampakka by the Malayans and Indians, and Vinhoa, by the Chineses. The Tree which produces these Flowers, grows up to the height of our moderate Pear-trees or Peach-trees, with large wrinkled Leaves, intermix'd with many Veins. The Branches or Bought grow all in a strait Line from the Tree, and afterward turn upwards; they are generally fo weak, that no body can climb up to the Tree, so that the Flowers which grow on the top, must be taken down with Bamboo Canes or Reeds.

These Flowers are in great Request among the *Indians*, for their odoriferous Scent, and used in Garlands: the Scent is betwixt a Rose and a Violet, and so strong, that it may be smell'd in the Houses, as the Flowers are carried by in They are of two Colours, the Streets. viz. of an Orange Colour and green; not unlike the Blossom of a Spanish Orange-tree; but resemble in Figure the Fnglish Saffron. This Flower is one Ingredient of that famous Ointment made by the Indian Women call'd Rorbory; they also Adorn their Hair among the rest with this Flower. This Tree also bears Fruit, which grows out of the Sprigs like Bunches of Grapes, and are of the same Colour and Bigness, but fit for nothing.

The Great creeping Beans.

The Branches which produce the Beans, call'd by the Dutch the Large Creeping Beans, are call'd Katsjang Parang by the Malayans and Javaneses, and run up in many small Branches to such a height, that their curled Sprigs on the top grow beyond the Pinacles of the highest Buildings. At the Bottom they are of the thickness of a Man's Arm, and change their Leaves and Fruits, without any alteration to themselves; They bear fine green and thick Leaves, intermix'd with small Veins; The Blossoms are of a Purple Colour, and before they open pointed at the End; The Husks which contain the Beans, are green like ours, having a purple Colour'd String all round the Husk. They are of divers forts, among which these following are most in Request.

abas de

The Moors Bean call'd Fabas de Moro by the Inhabitants, are very large, and run up to a great height; they commonly plant them near the Pynang-trees, which ferve them for Supporters. The Husks are about a Foot in length, and an Inch in breadth; They are chiefly used by the Chineses and Javaneses, but neglected by the Dusch, by Reason of their unsavoury Taste.

iondola.

The Bean call'd Gondola runs up likewife to a good height, affording a verry agreeable Shade; The Leaves boil'd or ftew'd are very cooling; The Ranks don't hold above one year, tho' the Beans will keep green three or four ye'rs; I did plant fome of the Large Greeping Beans at Koulang about a Summer-House, four or five of which yielded me near fix Bushels of Beans.

ladjang.

Kadjang as the Javaneses and Malayans call it, and the Chineses Perau, is a kind of Pease, known by all the Inhabitants of Batavia, which grow in vast Plenty

in the Fields about Batavia. When they to are ripe, they are gather'd and dry'd pool in the Air. These Pease are of the Bisi-J. ness of our Vetches, which grow among the Winter Corn, and grow with green Shells at first, but turn black afterwards. Betwixt each two Leaves sprouts forth a Bud, which produces a Flower, and this the Pea. These Pease are of great Advantage to the Ships in their Return home, and when boil'd with Bacon and well Butter'd, are very good for the Stomach. If you plant them in a Pot, with Earth and keep them well water'd, they will come in twice 24 Hours, and make a good Sallad aboard a Ship.

The Tree, the Fruit whereof, the Javaneses call Makandon, has very broad, M thick and fine Leaves, the Blossom is dou. long and white; after which comes the Fruit Makandou; in all respects like a Pine-Apple, except that it is not pointed at the End, neither so hard, but soft. Before it is ripe, it is green, but afterwards yellow, and almost insipid. Malayans Roast it in the Ashes, and take it inwardly against the Bloody Flux, Asthma and Pleurisse. In the lile of Java grows a certain Tree with Leaves like those of the Ash-tree, and a knotty Stem or Trunk. It bears a Fruit like unto our Hazle-Nuts, the Kernels whereof, after they are taken out of the Shells, are of no ill Taste, yet a little astringent. The Leaves apply'd to Wounds and Ulcers, cleanse them and render them fit for healing; a Spoonful of the Juice of the Leaves is a good Remedy against the Worms. Out of the Stem grows a Twig, but to no great height, which brings torth yellow Flowers, like those of the Nightshade; after these come the Fruits, which before they are ripe are green, but afterwards red, and of a circular Figure; If you iqueeze them betwixt your Hands, they fend forth fuch an ill Scent, that no Asa Fatidate Sagapenum is comparable to it; for which Reason the Indian Women apply to the Nostrils of such Persons as are afflicted with Fits of the Mother; The Indians look upon them as not fit to be eaten.

In the Woods of Java grows a cer-Daulor tain Shrub, call'd Daulontas, to the height tas. of fixFoot, spreading itsBranches at a good distance, like our Water Willow in Holland; and that in such vast Quantities, that the Chineses are forced to root them outwith Fire and Steel; The leaves are not mailed those of the Balfanian, and cover distribute at the endual binned limiter of Blake.

erslike C

der-Tree; after which come certain Berries that are very bitter; both the Laves and Flowers fmell like the Camomle-Flowers, and contain the same Virtues: Its Decoction is excellent good against the Cough, and nothing provokes the Monthly Terms of the Women beyond this Remedy.

The Fruit Mangam is look'd upon by the Javaneles as the greatest Antidote in the World, even beyond Bezoar, Maldive-Nuts, &c. The Tree which bears this Fruit grows upon the Graves of their Kings, and the Fruit is of the bigness of a Coco-Nutt. Whenever the King of Bantam intends to give a mark of his particular favour to any of his great Men, or some Foreign Minister, he first puts his Drinking Cup upon this Fruit, and then Drinks to the Person he intends to Honour.

In the Isle of Java, on the Banks of the Rivers, but especially about Bantam, grows a certain Plant, the Leaves whereof resemble altogether the Horn of Alce, from whence the Javaneles have given it the Name of Simbar Mangiram, and the Malayans that of Tanda Rousa; It has no Root, but instead thereof a Veiny Knot or Lump, which lies not under ground, but either upon Stones, or in hollow Trees, sending forth its Leaves on all sides. This, Plant is Sempervirent and full of Juice, and if some of the Leaves happen to rot by the Rains, the next Sun-shine produces others in their stead. The Javaneses use these Leaves like as we do the Roots and Leaves of the White Lilies, viz. to make Poultices of to apply to Tumours; but they are not proficuous in the St. Anthony's Fire, which shews, that this Plant is very hot, which its bitterish and bitting Taste seems also to intimate. Taken inwardly it Purges by Stool, and applied to the Navil kills the Worms.

The Flower called Tratty, or Tongjong Traity by the Malayans and Javaneses, Tienhoa by the Chineses, and Fulo de Tanke, i. e. The Flower of the Lake, by the Portugueses, is very large and fair, and grows most commonly in Pools and standing Waters. The Stalk grows to the heighth of a fathom above the furface of the and Water-Plantine, which if chew'd Water, and the Flower resembling our Tulips, except that it has broader Leaves, and is at least as big again. Some are of a Purple colour near the Points of the which by degrees turns pale yellow or white, towards the Stalk. Some are quite white, but of the same

ing of the Buds, these Flowers emit a most fragrant Scent, and discovers to us 1662. their Beauty, which by reason of its pleasant colour attract the light of all that pass by. They sprout forth out of a green Bud, which buists open like those of the Peony Flowers: Some of the Leaves grow upwards, like the Flowers, being of the breadth of a brim of a Hat, and bright green; Some lie flat and close to the Surface of the Water, being round, out of the midst of which comes forth a Stalk with the Flower. Atter the Leaves are fallen off come forth round Husks or Buds of the bigness of a Man's Hand, of a green colour containing a pale yellow Seed, and many fmall and yellowish Beans, which lying bare in part, resemble the Faba Egyptiaca of Dioscorides, viz. This Husk being flat on one fide, is as if it were cut afunder in the middle with a Knife, and discovers about 30 Beans placed in a Circle. As these Beans grow to their full bigness. they are enclosed in a peculiar Husk, and when ripe resembles the green Husk of a Hazel-Nut without the Shell, and are not unlike it in tafte, being very sweet, but fomewhat Phlegmatick; they are fold daily in the Market of Baravia: It feems to me to be a kind of Water-Lilly, having broad and red Leaves, and being the same both in the Stalk and Root, tho' it differs from our Dutch Water-Lilies, which are white or yellow, but are of a Purple colour in the Indies: It also differs from ours in the Fruit and Husk. The Leaves of this Plant are esteemed cold in the third degree, like our European Water-Lilies; wherefore also the Dutch here after the Example of the Malayans, give the Decoction there-of in Burning-Fevers, Frensies, Bloody-Fluxes, and other Hot Diseases. There is also another fort, with pale purple'd Flowers; and a third also worth seeing. There grows also in the Rivers and Pools abundance of what is commonly called Ducks-Meat, being a Food the Ducks are mighty fond of, whereof the Chineses keep here great Numbers. In the standing Pools and Rivers grows alfo the Potamo Geyton, or Fountain Herb, causes great Burning in the Throat and upon the Tongue.

Nothing more frequent in the Indies. than to see the Trees bear Fruits all the year round, but the Fruit called Langzap Langzap. by the Malayans, Kakasan by the Javaneses, and in a broken Dialect Lansen by

once a year, viz. in February. The 662 Trees which bear these Fruits, hanging vin Bunches like Grapes, in vast quantities, spread in a large circumference with lofty Branches, and pale green Leaves like the Lawrel Leaves, or those of the Chefnut-Tree, but are not carved. The Fruits have foft and yellow Rind like our Peaches, containing a white and sharpish They resemble most our yellow Plumbs, but are inclining to red and white within, the Pulp being divided by certain Partitions, is of a somewhat aftringent Tafte like our red Corinths, and fo luscious, that one can scarce be fatisfied with them; they are in great request here, being accounted very good to allay the Heat of Burning Fevers: each has commonly two or three Kernels, from which you must suck the Pulp, the Kernels and Skin being both bitter. The Fruits sprout out of small yellowsh Buds or Knots, after the Biofforn. They grow in vast plenty in the life of Airboyna, and especially at Gilole. where I have feen prodigious quantities on them brought to Market. The II c Java produces another fort of this fauit, called Boa Rampi by the Malayans, and Kipan. dung by the Javaneses, differing from the former only in the outlide, being for the rest the same in taste and virtue; for which reason they might well be called the Javanese Lansen . These are ripe in Odober. and are brought out of the Country to Batavia.

These Purple Plumbs are so called by the Dutch from their colour, but by the Javaneses, Gapak, and by the Malayans, Boka Gohok: They grow in great plenty on Trees of a moderate fize: They are of a Purple colour without, but white within, with red Stones. They have a

fourish Tafte.

The Fruit Jambulang is the same with our Black Cherries, which is the reason the Dutch call it by that Name here, but the Javaneses, Duar, and the Malayans, Kriange; tho' they are of an Oval figure; and not of so agreeable taste, approaching to our great Sloes; they ripen in Autumn. The Tree which bears these Eruits is also much taller, as the Black-Cherry Trees, and spread their Branare dark green, taper towards the Stalk, and broader at the ends, being intermix'd with many Strings or Veins. The Flowers have red Leaves with small Filets within: The Fruit is brought to Market at Batavia by whole large Baskets full in the Months of September and

October. It is fook'd upon among the Inhabitants as a very good Remedy for 16 gainst the Bloody-Flux.

The fingle Shooe-Flower, is called by the Fulo Sapar Portugueser, Fulo de Sapato, i. e. Shooe-Sapat Flower, because the Flower Chaw'd af-doub fords a Juice, which is excellently good Shoc for Blacking and Beautifying of Shooes. Flow There are two forts of it; which may be diffinguish'd as Male and Female, like our Peony Flowers. Out of the Flower, which is darkned, and not unlike our common Roses, sprouts forth on the top a yellow Stalk, at the end of which Bud out Leaves like a Coronet, covered with a yellow Wooi: The Leaves are green, and carved at the Extremi ies like Nettles: These produce large Buds a staining the Hower. They are afterngent of taile, and confequently co The Warer Datill'd thereof Burning Fevers, and appli-...wardly to the Fo chead procures thep. Trere is also another kind of these Flowers, with ungle I saves, of a. Ifabella colour, which upon small Trees like our Sact ins. They spread their Branches at luch a distance, that they are frequently used for Arbours; they also make Baskets of the Twiggs. The Inhabitants wash their Heads with the Decoction of these Leaves, and when steept in Vinegar, use it against the Looseness; they also apply it to Bruises. Bushes or small Trees require an excesfive heat for their growth, which is the reason they commonly Plant them against the East-Walls here, as we do in Europe, against the South-Walls, for the exercise of Heat. There is likewise a Shoot-Flower with double Leaves, not differing from the former except in its Leaves, and the Coronet in the middle, which are both of a bright red colour like a Ruby.

The Flower called Dukol by the Java- Ile neses, Bale Adap by the Malayans, and Fulo Dat di Poco, i. e. Flower of the Bush, by the the Portugueses, grows every where in the Hedges, to the heighth of 12 or 13 foot; it produces at the top a white Leaf growing straight upwards, now unto which the Flowers, which are come Orange colour, grow in Cluffers he other Leaves are dark green, we white Veins running through the middle.

The Fruit called Boenga Tay jong by the 

th a most fragrant Scent, but close gain against Sun-set. The Fruit is the bigness and shape of a Hazel-Nut, grean at first, but turns yellow afterwards, and of an Orange colour at last: The Pulp which is of the same colour, grows about a brown Stone, but being of a soure Taste, this Tree is admired and planted chiefly for its Flowers fake.

The Fruit called Karembolas, and likewife Kamozia, Karabelli, Chamarah, and Bolumbach, by the Indians, grows in many Places of the Indies on a Tree, with a Ilender Stem, Twigs, and Leaves; which is produce i from the Seed, and growing to the heighth of an ordinary Cherry-Tree, bears a Flower of a pale blue colour, after which comes the Fruit, which is green at first, but turns yellow, refembling in shape our Pompions. Some of these Trees, (which is very ftrange) produce a Fruit of fo delicious a tafte, that nothing can be beyond it; whilst others of the same kind bear a Fruit so astringent and soure as can scarce be imagined; when they are cut in the middle, they represent in the inside a Star. The Leaves of the Tree are green, not unlike the Rose-Tree Leaves, but not carved and full of small Veins.

The Tree which produces the Fruit called Boca Bidara by the Malayans and Javaneses, and Massam by Chineses and Portugueles, and by the Dutch, Prick-Plumbs, from their thorny Prickles, grows up to the heighth of our Cherry Trees, with ash coloured Leaves, with a triple Vein. Its Twigs are covered all over with almost invisible Thorns or Prickles: It produces Fruit all the year round, in fuch plenty, that the Twigs bend to the very ground. The Fruit is of the bigness of a Hazel-Nut, of a dark green colour without, but white within, containing a Stone of an Isabella colour: The Flowers are yellow, having no more than Five Leaves, with as many small Stalks betwixt them. This Fruit being of an agreeable tafte, tho' fomewhat astringent, is Eaten raw, and very cool-The Tree grows wild at some diitance from Batavia, but has been of late years cultivated in their Gardens.

The Root called Gadang, by the Javanefes and Malayans, has got the Name of a Javanese Turnip among the Dutch, because it grows like our Potatoes in the Earth, and is of the bigness of our Tur-lars, thoy it differs much from them both in the substance and taste. It bears dark green Leaves, with white Streaks or Vins, betwirt which sprouts forth

a Twig with Flowers of a Purple colour. They are accounted very nourish. 1662. ring and wholesome if not used in too great a quantity.

Here grow divers forts of Mushromes Mushor Toadstools, called Kulet by the Ma-romes. layans, and Jamor by the Javaneses. Some are of a red, others of a pale green colour; they grow without any Seed out of the moisture of the Earth. Some of them are used here like as in Europe, and are Eaten with Wine and Sugar.

The Plant, the Root whereof is called Indian-Rorbori by the Javaneses, Saffran di Terra, Suffron, or i. e. Saffron under Ground by the Portil-Borbori. queses, Kurkum by the Arabians, and by the Latins, Rud.x Curcuma, or Curcumy-Root, has Leaves not unlike those of the White Hellebore, viz. thick, long, and broad, fmooth, and interspersed with many Veins. The Stalk is thick, and grows up to a confiderable heighth: The Flower is of a Purple colour, and the Root resembles the Gentian-Root. After the Flower comes the Fruit, like a Chefnut, containing a round Seed not unlike our Pease. The Root contains a Saffron yellow Tincture, wheave it has go the Name of Indian Saffron. The Mulayuns Boil and Eat them both with fish and Flesh and look upon them as the most Sovereign Remedy in the World, against all the Obstructions of the Liver, Lungs, and Spleen; against the Gravel and Stone, the Stoppage of the Monthly Flowers, and other Diseases of the Womb; but most especially against the Yellow Jaundice: 'This Root is one of the main Incomplete in the main Incomplete in the Complete in the Complet the main Ingredients in that Ointment, called Borbori by the Javaneses, wherewith they anoint the whole Body.

The Indian Tree-House-Leak, grows in The Indian the Isle of Java, on the Mango-Trees, Treeand a certain Indian-Oak called Kyati by Housethe Maleyans. The Shrub has long Leek. Leaves, in tafte, not unlike our Sorrel, but are more Juicy, and much thicker, like our common House-Leek. It has long round Roots, out of which sprout forth certain Threads, which fasten to the Trees and Stones, and grow thus till they come to their full Perfection. It has a small white Flower of an Aromanick, approaching to the smell of Citrons, for which reason the Malayan look up it as a great Strengthner or mo Sinews and Brains. The Leaves and Flowers made up into a Conserve, are good against the Cramp, and very Cordial, like our Borage-Flowers. Atter the Flower comes the Fruit, of the length of a Finger, and an infipid tafte, con-

taining Seeds as big as our Barley.

This Plant has a certain Quality of refifting all Putrefactions and Poifons; for which Reason the Malayan Physicians prescribe it as an infallible Remedy against poifon'd Wounds, occasioned by the poison'd Darts, and other Weapons of the Javaneses, which they poison with the Blood of a certain Newt, call'd Gekko by the Dutch.

The Fields and Woods of Java proonica. The Fields and Woods of Java proonica duce a certain Herb call'd Veronica by
the Europeans, with a white Flower;
The Malayans and Javannses call it Ortbat Matta, i. e. a Remedy for the Fyes,
because its Juice allays the Inflammations
and Defluxions in the Eye. The same
Juice or the Decoction of the Herb, they
also use against old Coughs and Consumptions. By Reason of its Diuretick
Quality, they also prescribe it for the
Gravel and Stone, and the Gonorvirulenta. The Leaves bruised are also apply'd outwardly to Ulcers, as having a
singular drying Quality.

The Plant call'd Kolkas by the Arabians and Moors, has a very thick Root, large broad Leaves, and bears a red Fruit growing in Clusters, not unlike the Arum. It contains a slimy poifonous Substance, for which Reason the Javaneses cut them in Slices, and steep them three or four days in River Water; after which they squeeze the remaining Juice out by a Press, and having laid theRoots to dry, make a kind of Meal ro Flower of it of whichthey make Cakes instead of Rice. The Malayans and Chinefes prepare them in the same manner. The Bread made of these Roots, which the Javaneses of Materan were forced to eat, 1629. at the Siege of Batavia, for want of Rice (their Magazine of Tengel being destroy' by the Dutch) occafion'd a pestiferous Bloody-Flux in their Camp; The Chineses and Malayans also boil these Roots, but throw away the first Decoction, and putting on fresh Water, boil them again, and afterwards eat them with Vinegar, Oil of Cocoe, and Pepper as we do the Red Beet-Root.

The Indian Betony-Tree has speckled Leaves like our Pulmonaria. The Flowars sprout forth like Ears, sometimes a shousand in one Ear, of a pile blew Colour, like our Rosemary Flowers. The Decoction of this Plant they account a good Remedy against Spitting of Blood, the Consumption and Coughs, call'd Sahit Haty, i.e. the Disease of the Hears, by the Malayans, who comprehend the

Liver, Lungs, and even the Spieen, under the general Name of the Herrisof as an Antidote against the Sting of Serpents, Scorpions, and such like venomous Creatures.

Java produces all forts of Grass, and Ind among the rest, a peculiar kind, which Gra has four Ears croswife on the Top of the Stalk, the Leaves being for the rest like those of common Grass. There also grows here another sort of Grass, of the same kind with six or eight Ears, which contain finall Seeds. The Malayan Physicians prescribe the Root and the Grass it self for the Bloody Flux, stoppage of Urine, Exulcerations and pains of the Kidneys, and to promote the Monthly Times in Women. Java produces likewise another kind of Grass differing from the rest in the Roots, which are three or four small Knots, which when chaw'd, have a Flavour like Cloves, but are not so hot in the Mouth.

The Indian Primeprint has got its The Name from its Resemblance to ours, an in its Leaves as well as Flowers; tho' the Pri Leaves thereof have a more odoriferous Scent than our Primeprint; and the Flowers, tho' the same in shape, yet differ in their Colour from ours; those of the Indian Primeprint being inclinable to a Blew, whereas ours are as white as Snow; but the Berries of both are black. Like unto this is a certain Shrub call'd Alkanna and Henne by the Arabians, and Chinnets by the Persians, except that its Leaves are somewhat less. The Leaves of Alkanne are in great Request throughout the Indies, to give their Teeth, Lips, but especially their Nails, a red Tincture, a thing much esteem'd among the Moors. They prepare the Tincture, by steeping the Leaves after they have been rubb'd fmall upon a Marble Stone, in fair Water mixt with a small quantity of Lime; with this the Turks and Persians also Dye their Horses Tails. Leaves chaw'd leave a piquant taste upon the Tongue, yet without any Sharpness. Both these Shrubs are in high Esteem among the Indian Women, who use the Decoction of the Leaves, in all Diseases of the Womb; and have an Opinion, that it keeps them young; And to confess the Truth, they have a peculiar Virtue (if boil'd in Water) to cure the Indian Gent or Barrenneis, call'd Beribery ; It grows all it.

The Indian Sage Tree ground selve

kas.

1662

to be seen about Batavia; and if planted in the Gardens, spreads its Roots to that degree, as not to be easily rooted out again. The Flowers are white, the Leaves very long and of an agreeable Scent. They Cultivate the Trees in the Gardens by pruning and cutting the Roots and Shoots at certain times, and by this means make it as good and as wholesome as our Garden Sage. The Malayan Women use it against the Distempers of the Womb, mixt with the Sagaudi and the Daulontas, wherewith they bathe themselves. The Flowers are prescribed by the Physicians to correct the cold Humours of the Brain and Sinews, and by reason of their Diuretick Quality are very proper in the Dropsic. Our Garden Sage as well as Rosemary, are a kind of Rarity here, the Excessive Heat of this Climate being as unnatural to them, as the Cold is with us in Winter.

The Indian Verbena grows also in Java, being altogether like ours, except that the Ears are somewhat longer and They apply the Flowers bruifed to Exulcerated Legs, by Reason of their drying Quality, requisite in the healing of Wounds, especially at Batavia, where the moist and hot Climate renders the Cure thereof very difficult. A Spoonful of the Juice of the Leaves taken inwardly, cures the Cholick and Bloody Flux; and the Indian Women attribute to this Plant a Secret Virtue a-

gainst Witchcraft.

In the Woods of Java grows a certain kind of Esula, which shoots up to a great height, with a three corner'd Stalk, fometimes of the thickness of a Man's Leg; It has abundance of thorny Knobs, which being however not very hard, don't prick; The Leaves grow at some distance from one another, being not unlike those of our Housleck; out of the Stalk (after an incision made) issues a milky yellow Juice, of a sharp taste. This Juice reduced to the Confistency of an Extract is administred in the Dropsie, Lameness and other Distempers proceeding from Cold; it purges both by Stool and Urine. This Plant differs not either in Shape or the Manner of growing from that, which affords that yellow Juice call'd corruptly by the Apothecaries Gutta Gemou. and by the Indians Lonan Kambodia, because it is of the Product of the Kingdom of Kambo-

In also grows a costain kind of Mitigin Solia, refembling ours in its Flow-

ers, Leaves and the Stalk. But the Fruit is much larger, and as hard as a Stone, containing a mealy Pulp. The Portuguefes have given it the name of Yerva da Rosarios, the Rosary Herb, because the Malayan Women use to make their Rofaries of the Fruit, and wear it about the Neck instead of Necklaces. Both the Herb and Fruit is proficuous in the Distempers of the Kidnies and Blad-

The Fruit call'd Boa Kamba or Kaman Koa Kamby the Javaneses, Boa binsel by the Ma- ba or In-Layans, and Letsife by the Chineses, is by dian Pears. the Dutch call'd the Indian Pear, by reafon of its Bigness, and Resemblance to our Pears. When ripe, they are of a pale yellow, with black Spots, hollow within, with blue Seeds, the Pulp adhering close to the Peel. They are scarce ever Cultivated in the Gardens of Batavia, by Reason of their crabbed Taste, tho' very agreeable to the Eye; They are brought in great Quantities into the Market there, especially in February. The Tree grows up to a great height, having a brittle and coarse Wood and Leaves.

Rambustan or Rampostan as the Ma- Rambulayans call it, is one of those Fruits, which fian or are produced without Flowers, for this Rampo-comes forth only out of a green Bud. They grow in Clusters on very small Twigs, of a Tree of the height of our Cherry-trees, are of a Purple Colour, and resemble at a distance our Chesnuts, whilst they are hanging on the Trees. Within is a slender quantity of a Pulp, of an acid agreeable Taste, and in this a Stone. They come to Maturity in February. There is another kind of Rambustan growing on shorter Twigs than the former, and being cover'd with a hairy Substance; But the' these two Fruits are very different in outward appearance, their Taste is much the

same. The Fruit call'd Satarra by the Ma-Romani layans, Gandaria by the Javaneses, and or Satarrai Romani by the Portugueses, resemble our yellow Plumbs, but are fomewhat big-The infide is not unlike the Mangas, and in Taste like the Batsian, yet not altogether fo four. They are greenat first, but turn yellow mixt with an Orange Colour; the Pulp is likewist yellow. The Inhabitants Pickle and use? them like as we do Olives; they are of no disagreeable Taste, but something more hairy than the Mangas.

The Javanese Flower call'd Fule de Ja- The Javapes (in the same Sense) by the Persu- nese Flowguese, er. Ssss

on queses, Benga Japan by the Malayans, 1 662 and Quihon by the Chineses, delight in fhady places; The Stalk is not above a Foot high, some of which produce white Flowers, others of an Isabella and purple Colour, sprouting forth with small Knobs between the Leaves; and no fooner do the Leaves of the lowermost Flowers fall off, but others come forth on the top in their stead. The Stalk after the Leaves have been cast, produces a Bud, containing a black Seed, as fmall as Tobacco Seed; Tho' this Plant will grow without it, if you put only Twigg of it in the Ground. These Flowers have no other use but to divert the Eye.

The Tree Patty.

The Tree call'd Patty by the Malayans and Javaneses, grows in many Gardens about Batavia, being cherish'd by the Inhabitants, by Reason of its spacious Branches and fine Leaves, which afford an agreeable Shade; It rises up to the height of an Appletree, with thin Branches, on which you see the Fruit hanging on the Stalks, three and three together, of a crabbed Taile, and therefore not regarded; they resemble the Pine Apple on the one fide, and have a Seed The Leaves are of a lively green Colour, and grow very close together.

Marygolds.

The Flowers call'd Marygolds by our People, have got their Name rather from their Colour, than any other Resemblance to ours. The Leaves are dark green, like those of the Appletree, but somewhat less: On the tops of the Twigs sprout forth certain Orange colour'd Buds, which opening, produce the Orange colour'd Flowers with four Leaves, they have no other use than to please the Eyesight.

The Huntsmans Tree is a kind of mans-tree. Wild Palm Tree, the Stem whereof is covered with a grey Rind or Bark, twisted about as it were with Circles. The Leaves which are bright Green, grow on long yellowish Stalks, the lower-most of which, turn yellow by degrees, and hang downwards; being for the rest very agreeable to the Eye. The Fruit is not near fo big as the Least Coco-Nuts, and has no other use, except that the Inhabitants draw a certain Syrup and Sugar, which they fell to the Neighbouring Countries. The Wood of the Stem is very durable, provided it be kept from the Air, and so hard, that they can neither Saw nor Cut it; but are forced to fplit it by

pieces of Wood in it; Some of the Indians make their Bows of the Twigs of this Tree; and the Chineses at Ba tavia make of the Leaves and tender Sprouts, Fanns to cool themselves with. The Malabars make use of the Leaves instead of Paper; which they know how to order with a great deal of Dexterity; For, the Leaves being about three Inches broad, and above a Yard long, they make Holes at one End of them, and so tie as many of them together with a String, as they have occasion for at a time. write with an Iron Pencil, wherewith they know how to Imprint and Cut their Characters on the uppermost Surface of these Leaves, as that it they remain indelible. This they perform for the most part without keeping their Eyes so close and earnestly upon them, as we do. These Leaves are also very durable, and will not easily putrefie, even in Water; I have several Letters writ to me upon these Olen or Leaves by Persons of great Quality among the Malabars. This Tree also yields a Juice like the Coco-tree, which if boil'd, taftes very fweet, and is apt to Inebriate; but if not boil'd, turns four immediately. But the chief Use they make of it is, to boil it into Sugar. This Huntfmans Tree is none of the lowest Rank among the many kinds of Palm-trees of the Indies, being much Esteem'd and Cultivated for its Usafulness, especially in the Isle of Ceylon and in Javapatnam, where you see whole Woods of this Tree.

About Batavia grows a Tree of a most The Tree delighful Aspect, with most pleasant and Feut Leaves, hanging downwards. The Stem, Billing, bing or which is very thick, and Branches, fend Blinbing forth small sprouts full of green Buds or Knobs, which produce red Flowers, not unlike a fmall Lily; after which comes the Fruit, growing in Clusters, refembling both in bigness and shape our small Cucumbers, about the thickness of an Inch, and a Fingers length. They have a green rind, and within it a Seed, not unlike that of the Cucumbers, but somewhat more round. The Malayans and Javaneses, call this Fruit Billingbing and Blinbing. This Tree is among the Trees what the Sheep are among the Beasts; for they not only rob it of its Flowers and Fruit, but also of its Leaves and Rind, formations to the very Root; as having their simular use in Phylick: So that this Their would note the re-ry flender appropriate for the months and

were it not, that provident Nature, did 1662 almost cover its Stem and Branches with oriferous Flowers and well-tafted Fuits. The Fruit is very Juicy and Cooling, but somewhat astringent; for which reason it is seldom used alone, but in Sauces, to give a good relish: The Fruit is also preserved with Sugar. Our Physitians there, prepare a Syrup out of the Juice, and prescribe it in the excessive Heat of the Liver and Blood; and this Syrup is also mix'd with the Decoction of the Rice, before it is peel'd, called Pady, and given in Fevers. Juice also quenches the Thirst, and has one peculiar quality, that notwithstanding its astringency, it takes away that foure taste of divers other Fruits, which fets the Teeth on edge.

The Herb called Hounds, or Dog's-The Indian Tongue, from its refemblance to ours, which bears the same name, is by the Javaneses called Surve, by the Malayans, Sudu-Sudu, and by the Chineses, Kautsu. The Stalk is thick below, but grows thin towards the top. As you pull off the Leaves, you fee a milky Juice drop out of it; of which two or three drops dropt into the Ear, cures the Ear Ach; as its use is only in Physick, it generally

grows wild.

Dog's-

Birter-

Tern.

longue.

The Plant, called Bitter-Green by our People, has got its Name from its bitter taste: It grows in the Gardens of Batavia, and creeps up to the next Tree or Stalk, almost like the Branches of the Cucumbers, but that its Leaves are deeper carved, and more pointed. Fruit is also not unlike a Cucumber, yellow with green Streaks, and a thick Rind, yellow within, with a red Kernel. When it comes to its full Perfection, it is marbled with an Orange colour. The Dutch make no account of this Fruit, by reason of its bitter taste; but the Inhabitants use it in their Sawce called Karry, and put the Root and Leaves in their ordinary Drink, which preserves it for two or three days, whereas otherwise it would turn immediately. They Cure the bitterness with Sugar.

Among all the Garden Fruits, there is . scarce any that exceed the Durions; 'Tis true, the Scent of it is not unlike that of Rotten Figs, and confequently not very inviting to fearch after the Kernel, which makes amends for the smell, being of,a luscious taste. The Tree which proabundance of Branches; and very harsh Leaves pointed at the end, of a Palms length, fometimes grey withe outfide,

but bright green on the other side. They are not inferiour in height to the tallest Trees of Europe. The Fruit Durions grows in Clusters on the thickest ends of the Twigs, and sprouts forth out of a green Bud, which growing bigger and bigger by degrees, open s atlast into an Isabella colour'd Flower, furrounded on the outfide with hard Leaves, like a Rind: This Flower produces a thorny Fruit, of the bigness of a Melon, covered with a thorny Rind, not unlike the Fruit Jaka; it is green at first, but turns yellow. It has four Partitions within, in each of which you fee a Stone like a Peach-Stone, of the bigness of a Chefnut, containing a delicious sweet and white Kernel. Before they take out the Kernels they stamp the Fruit under foot, to avoid being wounded by the thorny Prickles. The Durions are always Eaten raw, being reckoned one of the wholsomest Fruits in the Indies if used moderately; but if in excess, Inflame the Blood, and raise Pimples in the Face. They feem to have an Antipathy against the Betel, because they will not grow near it, but Die. They come to Maturity in three Months time, and chiefly in October and November, tho' I have feen them also in the Market of Batavia in Angust, for they are to be had all the year round, but not in fuch Plenty. They grow much about Bantam, whence they are brought to Batavia. The first that I saw was in the Grounds of Christian Chandellour, near the great River of Batavia; and fince that I have met with them in divers other Places thereabouts; fo that this Fruit thrives as well here as at Bantam, but no where better than near Malacca, where the Dursons are of an excessive bigness.

The Pepper, called Lada, or Laden, by Pepper. the Malayans, and Maritsia by the Javanefes, grows on tender Branches, with abundance of Knots, and creep up along Stalks or Trees like our Hops. Sometimes they will climb beyond the Pinnacle of the highest Trees, and afterwards hang downwards. On the Stalks or Twigs of these Branches the Pepper grows in fuch thick Clusters, that they Pare scarce to be discern'd from the leaves These sprout forth out of the Buds st the Branches, being green, and inter-fperfed with Veins, not unlike those of the Cinnamon-Tree, pecked at the Extremity, fometimes of the breadth of a Hand, and long in proportion, of a bitterish taste, and hot upon the Tongue; After the Leaves come forth certain

Twigs

Twigs or Stalks not unlike those of the 662. Hazel-Nut Trees, on which hangs the Perries, like our red Currents, but in larger Clusters; these Berries turn black as they tipen. The Pepper is one of as they ripen. the chiefest Commodities in the Spice-Trade; the best grows along the Coast of Malabar, near Koylang, where I used to Buy great quantities for the Companies Use: The Pepper must be Planted in a rich Soil, and bears Fruit within the In Malabar it ripens chiefly in January, but in other Places sooner or later, according to the difference of the Climate. In the lile of Java it ripens in Ollober, and is gathered in November and December; and is then green, but turns black, as it is a drying in the Sun; after which it is made up into Balls of 80 or 90 Pounds. The best Pepper, is, white, close and biting within: There is also a fort of long Pepper. The Indians also make a Pickle of green Pepper. Of the Sagon-Tree, represented in the next Print, we have treated before.

The Portugueles have given the Name of a Wild Onion, or Sabollos de Matte, to a certain Flower, because its Root resembles that of an Onion, tho' for the rest it has not the least congruity with it. The Javaneses and Malayans call it Hakung, and the Chineses, Taukio. Flower grows in a Bunch on the top of a thin Stalk, but near three foot high. They come forth out of red Buds, are of a high red colour, with Purple colour'd Streaks of a Palm in length; are very delightful to the Eye, and of no disagreeable smell, especially in the morning before the Dew is dry'd up by the Sun-Beams, for which reason they are much cherished in the Gardens of Bara-The Leaves of this Plant are above three foot long; and spread all round

mities. The Roots of Potato's, called Patattes by the Portugueses, after the Brasilians, are called Ubi Tora by the Maleyans, Ubi by the Javaneses, and Hantsoa by the Chineses. These Roots grow in the Ground on Branches, with Leaves not unlike the Cucumber Leaves: Some of these Branches bearing white, others blue Flowers, maped like Bells. The Chineses cultivate Inese Roots in the Fields near Batavia, which must be well Dung'd beforehand; fond of them. They cut the Ranks near the Extremity, which they put into the Ground, and let them grow for fome time. Then they cover these Ranks with rich Earth at a foots distance perhaps, into which You see this tree frequently at

about, being pointed towards the Extre-

the ranks fend forth their Roots, which come to Maturity in a short time, and 166: fometimes grow to the thickness of a Man's Arm, and a Foot long. Some alred on the outlide, and these are in greatest Esteem at Batavia, but don't approach in goodness to those of Brasil, especially near Rio St. Francisco, where these Roots are red both within and without. This Root is frequently Boil'd by the Dutch both with Fish and Flesh, excelling in taste and sweetness much our Parsnip-Roots or Artichokes: They are also Eaten raw with Salt, Oil, and Vinegar, like a Salad, but are not of fo easie a Digestion then; The best way is to Roast them in the Ashes, which makes them taste like Chesnuts, and are good to stop the Looseness, a Symptom very frequent to those that Inhabit near the Line: for which reason this Root is in great Request here, and cultivated with a great deal of Care, which makes them very cheap here; for you may Buy as much for a Half-peny as will suffice for a whole Meal. In the lse of St. Thomas they use them instead of Bread. also make a kind of Drink of them. They Boil a confiderable quantity of these Roots in a Kettle well covered, till they are foft or tender; then they stamp them well, and put them in a Vessel with Water, where they begin to ferment in twice 24 hours, when the Vessel must be stopp'd up; which done, it turns clear, and as strong as good Beer.

Belides the Potato's, there grows another Root about Batavia, called Injames Injame by the Portugueses, after the Brasilians, or Byra by the Javaneses and Malayans, Byra and Siat sini by the Chineses. It has a very fine green Leaf, and interspersed with Veins: The Root has commonly five or fix Inches Diameter, and is one foot and a half long, having a brown Rind, but is white within. The Flower is of a greenish colour. These Roots are sold in the Markets of Baravia by the piece, weighing each 15 Katty, or thereabouts, a Katty being a pound and a quarter, according to our weight, so that 30 Perfons may Dine upon one Root. Its tafte is however not near so good as the Potato's, and being of a hard Digestion and very dry, are not much look'd after by the Duich, but the Natives are very

The Tree which bears a kind of Blue Blue Plumbs, spreads its Branches vary intenses but not unlike the Mulberry-Free except that its Leaver are of a different

Wild Onions.

the same time, laden with Flowers and Fuit, both ripe and unripe: The Wood is very tough, so that you may venture to climb'd up by the smallest Branches:

> ie Flowers are of an agreeable scent, especially in the Morning before the Dew is gone: This Fruit is not regarded at Batavia, because the Markets are overstock'd with them by the Country People, who bring them in vast quantities thither out of the Mountains; tho' for the rest it is of an agreeable taste, somewhat like the Dates. They are rarely to be met with here in the Gardens. This Plumb comes forth out of certain Buds, confifting of five white Leaves each, and grows on the Twigs like our oval Plumbs. It is green at first, but turns to a dark red, but the Pulp is white, within which are three Stones. The Malayans and Javaneses call these Plumbs Boa Soa, or San, the Chinefes, Theely, and the Portiguefer, Fruite de Manilha, i. e. Fruit of Manilha. At Batavia I never faw but one Tree, bearing at the same time Flowers and ripe Plumbs.

> Java produces divers forts of Oranges, among which, three are preferr'd before the rest, viz. the common ones, and those of Jupan and China. The Trees are much of the same heighth, but different in their Leaves. Those of Japan have broader Leaves than the ordinary ones, and these again broader than those They all are of a different of China. taste, yet very agrecable. The Japanese Oranges, are the biggeft and most Juicy, but somewhat inclining to a soure taste; Among the ordinary ones, some are exceeding tweet, others quite Crab-like. The China Oranges have a pleasant taste, betwixt fweet and foure, being preferr'd here before the rest, having a very thin tind: They are prefetv'd with Sugar, like the Po inguese Figs, and thus transplanted all over the Indies.

Tho' this Fruit called the Wild Jamboe by our People, and Jamboe by the Malayans and Javaneses, has not the least resemblance to the Jamboe we have given a Description of before, in outward appearance, because that grows upon high Trees, with a most delightful Blosfom; whereas this grows upon a low Tree not unlike our Mulberries, without any Blossom, but is produced out of certain green Buds, not unlike the Figs, over are they the same in taste, and divers other of lities. Some of them are extream well tasted, and quench the Thirt. Some are dark red, others white, mix'd with red and that on the Vol. II.

fame Tree; where they grow in Clusters in such prodigious quantities, that 1662 they cover the very Leaves and Twigs. as if they had been spread over with a Scarlet Cloth. They are of the bigness of a Sugar-Pear. In Amboina they grow in fuch Plenty, that you may fee the Ground under the Trees covered with them, every one being free to gather them: One reason whereof is, that they being used there as we do our Acorns, for the fatning of Hogs, which the Moors and Mahometans abominate, they are not much regarded.

The Weed called Tobako by the Mar Tobacco. layans and Javaneles, after the Portugueles, grows in all parts of the Indies; the Chineles call it Hun: Tobacco being frequently used by the Inhabitants, is confequently in great request, and carefully look'd after; That of Ternate being csteem'd the best, is most generally made use of at Butav.a. They have a way of tying several Leaves, weighing about two Pounds together, with small twisted Canes; each parcel of the best being commonly Sold for Six Pence; but you may Buy also very good Tobacco at Batavia, for Two Pence. In Amboina each Family commonly Plants as much Tobacco in their Garden as they have occasion for. not troubling themselves with any other Plantations. About Batavia, the Plantations of Tobacco are chiefly managed by the Chineses and Javaneses, and this Weed grows here and Thrives extreamly well, provided it be planted in a rich Soil, when it will grow up to the heighth of eight foot, with Leaves of 18 Inches long and eight broad. The Indians don't take Tobacco through Pipes, but have a way of rowling one or more Leaves (according as they are big) together, and lighting the same at one end, suck in the Smoke as we do with our Pipes. The Women commonly take of the worst fort, and rowl up their Leaves in a piece of dry'd Pylang.

Among all the Flowers of the Indies, Fula Mothat call'd Fula Mogori, or Mugri, i. e. gori. The Flower Mogori, by the Portugueses, Kombans Malati by the Javaneses, and Badihoa by the Chineses, is more esteem'd by the Inhabitants; which they Plant with fingular care upon long and well dung'd Beds, with little Walks betwie't them: The Stalk on which this Flower grows, seldom exceeds two foot in heighth, and grows like Briars; The Leaves are smooth like the Quince-Pear-Tree Leaves, the Flowers exceeding white, consisting of four Leaves, which seldom open, and imitate in their odo-

riferous

Tttt

riferous Scent our White Lily's, but are 8 6 6 2 no bigger than the Blossom of an Apple-The Javaneses of both Sexes wear Υ Trec. thefe Flowers upon Strings on their Fe-Rival Days. I remember that at a certain Turnament on Horseback at Japara, I saw the Javaneses thus adorn'd with these Flowers, some of which had these Strings ty'd several times round above their Ears, with the two ends hanging down before, upon their Breasts. They also Distil a Water out of these Flowers, which they esteem a great Cordial in fainting Fits, especially, much beyond our Rose-Water; it being reckoned equal with Orange Flower-Water. They prescribe it in Burning-Fevers, and Head-Achs, proceeding from a hot Caufe. The Javaneses also wash their Faces with this Water, to make them smooth. The Leaves bruised are a good Remedy against the Rheum or Defluxions of the Eyes: These Flowers grow in vast plenty all the year round, and are fold in the Streets by the Slaves.

The Tree is called the Melancholy-Tree, has got its Denomination from its opening its Flowers not till after Sun-fet, which continues no longer than the night time. Hence the Portugueses have given it the Name of Arvore da noyte, i. e. The Night Tree: At Goa they call it Pareautake, at Malacca Singadi, in the Kingdom of Dekan, Pul, the Arabians, Guart, the Persians and Turks, Gul, and the Malabars, Megli, i. e. Trees, for its Excellency's Sake; for which reason the same Malabars call the Water Distill'd from the Flowers; Mogli Water: There is another kind of this Tree, which begins to Blossom in the Morning, and is bereaved of its Leaves by night: These Trees grow for the most part about Co-

chin and Malacca.

The Plant. called Boenga Mera, by the Malayans, Kombang Merak, by the Javaneses, and Konkussou by the Chineses, has very sine green Leaves, growing on small Stalks, close together. The Flowers, which are not unlike our Gillistowers, are high red, but yellowish at the Extremities: They no sooner open, but drop of, leaving commonly small Husks behind them, which contain a kind of Pease, are not Eatable.

Among several other sorts of Beans which grow and are Eaten at Batavia, those called Kassian Goedi by the Malayans, and Kassian only by the Javaneses, but by the Chineses, Lak Goessian, exceed the rest. They grow in the Fields all about Batavia, especially in those belong-

ing to the Chineses: The Stalks and Hushs of these Beans are pale green, and some it seems that Woolly; but the Leaves are smooth, and resemble those of our French Beans, being intersperied with many Veins. The Blossoms are white, and sprout forth out of green Knobs or Buds. These Beans grow almost all the year round, and consequently are no small advantage to the Inhabitants of Batavia, affording very good Food to the Labouring Men; as likewise for our Ships, because they will keep a great while at Sea.

The Turkey-Wheat, called Maiz, by a Turke general Name among the Indians, and Maiz. Jangon by the Malayans, Javaneses, and Chineses; grows in many Places in the Indies, and in good plenty about Batavia; for they take the Corn fresh out of the Ears, and put it into the Ground, which produces fresh Corn in three Months time. It is Boil'd and Roasted with the Chass, and look d upon as a great dainty; some of this Corn is white, some red. The Indies produce also Rice, Ginger, Cotton, and Sugar, in many Places, Figs, Quince-Pears, Apples, Lemons, besides many other Fruits.

Thus much concerning the Trees, Fruits, and Plants of the Indies, and of Java and Batavia, in particular; we will now proceed to give fome account of the Living Creatures of the Indies,

and begin with the Fishes.

The Sea. Purpoise, or Hog-Fish, is a- The Se bout 15 or 16 Inches long, and about Porpo seven in breadth. It has a very thick or, it Skin, and fuch close and hard Scales, Sea. H that scarce any instrument will pierce them; but when Boil'd, the Scales come off with ease, and the Skin is very foft. Their Flesh is very white resembling the Breast of a Boil'd Capon; the Mouth is but small in proportion of the rest of the Body, but is arm'd with two rows of white gliftering Teeth, one above, the other below. Upon the Back, which is brown, you see a sharp Finn, of half a Fingers length, which the Fish can erect at Pleasure, and such another is below The other Finshere not near the Navil. fo strong, of a pale blue colour: Belly is white, and gliftering like Silver, but the fides are mix'd with yellow, which by degrees towards the back, turns into an affi colour. It has large brown fining Eyes, and when Boil'd is of a very pleafant tafte.

fant taste.

The Amboinese Fish has got Name because it is bund chiefly in of Amboines, hat being very to

Arvore da noyte, or, The Melancholy Trees.

> Boenga Mera.

if a very good taste, is look'd upon as dainty here. It is about a Span in ength, something like our Perch both n shape and taste. Its colour is inclining to brown, with blue Streaks under he Head, the Fins below the Mouth are ikewise blue, but those on the sides are green and speckled. It is both a very wholesome and toothsome Fish, especially with a good Sauce.

The Stone-Bream is a most excellent Fish, some of which are four foot long; hey resemble our Breams, (which has begot them their name) but are much Their Eyes are very large, reger. with a large red Mouth, as are also the Fins ind Extremity of the Tail. They are atch'd at Sea with a Hook, being not afily to be taken with the Net; and are Eaten either Broil'd and Boil'd. There s another kind, but not so good as the ormer, the Flesh of which shrinks when they are cut, from whence some call hem. Shrinkers.

The Fish called Baldpate has got its Name from its Head and Neck, being without Scales, whereas the rest of the sody is covered with them. It is of a stepish colour, its Mouth, which is very wide, being spotted with red. The Eyes are large, yellow, and starting out of the Head: It is one of the best forts of Fish that can be Eaten, of a very agreeable taste: It is taken both in the Sea and Rivers.

Among that great variety of Fish found in the Indies, most of which turn immediately after they are catch'd; there are however a few that will take Salt, like our Herrings; such is the Sea Rleack, a Fish much of the bigness of a Herring, but not so long, and something broader: It is green on the Back, but white on the Belly, with a forked Tail: The Head is of a very odd shape, with a wide Mouth and large Eyes. They are catch'd in profigious quantities, because they Swim in the Shoals, like the Herrings, especially on the Coast of Malabar, where they Dung their Rice-Fields with them. They are of a tolerable good taste, but not so good as our Herrings.

This Fish is called Thurd Fish, because it delights in nasty Places, the otherwise it is of no ill taste, but is not regarded. It is very flat, about a Span in length, and near of the same breadth. The Belly is blue, and the Body is sul of brown spots.

The Fish called Yellow Tail is in shape and bigness like a Bream, with very sharp

Mouth. The Back all along to the Tail is inclining to a yellow, and the Tail very yellow, whence it has got its name. The Belly is blue, inclining to a brown towards the forepart. It has red Fins, and is catch'd with Hooks at Sea near the Rocks: It is both a wholfome and toothfome Fifh.

The Kaelt Fish, as our People call it, The K is a kind of Pike with a large piked Fish. Mouth-full of Teeth, and large bright Eyes. The Belly and Tail is of a Purple colour, but the Back brown: It is very thick and plump, about a foot and an half long, Swims very swiftly, and of a good taste, but somewhat hard.

The Ravens Fish, has got its Name from its Mouth like a Bill under the Head. It is about a Span in length, red on the Back and Tail, but inclining to yellow on the Belly, and has two yellow Streaks on each side which vanish by degrees. It is a very firm Fish, and very wholesome to Eat, and is taken in Salt-Waters.

The Kings Fish has obtained his Title from its excellent taste, being one of the best and most wholsome Fishes of the Indies. Some are five foot long, and have long forked Tails. The Back and Sides are full of brown spots, but the Belly is white. They can open their Mouths very wide, and are very greedy after Carrion.

The Rivers and standing Pools afford also abundance of Eels; they are generally black on the Back, which turns pale towards the Belly, and are full of blackish Spots. It is the general Opinion here, That they are a kind of Water-Serpents: There is another fort of a ruddy colour with yellow Streaks, having a sharp Head with very small Eyes; some of them are are a foot and a half long. They are Eaten by none but the Natives.

There is another kind of Sea-Eels, or rather Water-Serpents in the Indies, of about three foot long, of a brown colour, chequered with black spots like the Skin of a Serpent. The forepart of the Body is slender, but is as thick again towards the Tail. It has a long Head and Mouth with sharp Teeth, but so small as scaree to be discerned. It delights in Rocky Places, and ferves the Natives for a dainty. This Fish has one peculiar quality, viz. That those who kill or exente rate it, are commonly seized with a tremb-. ling, and fometimes with fainting; which however continues not long; which feems to intimate that this Crea------ Camarking of Daifan which

Flounders are in Shape and Bigness like ours, except that they have Teeth, wherewith they take hold of all an-they light on; They also are as well tasted as the Dutch Flounders; they have here also Turbutts and Soals, little different from ours both in Shape and Taste.

The Klip Fish is a kind of Fish with a smooth Skin without Scales, flat, broad, and of the biggess of our Plaife; It is brown on the Back, spotted with white, but very white towards the Belly, with many Streaks of various Colours. Month and Eyes are like those of the Bream, and it is a well tasted Fish.

The Cod Fish here is of the same Size and Colour with ours, except that it has very sharp Fins on the Back and the under part of the Mouth jets out be-

yond the uppermost.

The Horn Fish has got its name from the Horn upon his Head, and two more e derneath, which being very brittle, : also very poisonous, and if part theref remain in a Wound, will scarce admit of a Cure; and if you happen only to be wounded by it, it will Exulcerate nmediately.

The Flat Fish is about a Foot long, with a fmooth Skin without Scales, and a white Mouth; It glisters all over like Silver; on the Back it has a small Finn, and one more on each fide. Underneath the Belly, it has only one Fin which is instead of the Tail. It is a Fresh-water Fish, of a very good taste, but full of small Bones, and therefore not much regarded.

.The Red Esh is a kind of a Bream, of a dark red Colour, as are likewise the Fins; however the Belly is blew, and has two yellow Finns; It is very thick of Body, and the Head is sharp at the End, with a large Mouth and yellow

Eyes, some are four Foot long. The Bitter Fift is of the Shape and Bigness of a Carpe, with large Scales and red has, and two black Streaks round the Tail. It is a fine well-tafted Fish, but being full of small Bones, is not much

in Request.

The Parrot F.fh has got its name from its Mouth, which turns like the Bill of a Parrot. It is a foot long, and sometimes bigger. It is of a greenish colour, marbled or checquered towards the Head with yellow. Both the Fins and Eyes are of a blue colour; the last

d furrounded as very large hard Teeth;

wherewith they often bite off the Hooks. This Fish is very greedy after Muscles 1662. and Oisters, which it creeks to pieces to come at the Fish. It is a very firm Fish and of a very good tafte.

The Short Nofe is a Fish like our Had- Shortdock, having a round Body; It is yel- Note: low on the Belly, and the Fins are of the same colour. The Mouth is just un the Nose, which is very short; It i well-tafted Fish.

The Bone Fish is of the bigness : shape of our Carps, but flatter, and, another Head: It has large Scales, a forked Tail; its tafte is very g but being full of small Bones, is not my regarded.

The Sand Smelt resembles in cole and bigness a small Whiting, and round of Body, and inclining to a y low on the Belly : It is a Sea-Fish, a

of an excellent Taste.

The Pock Fifth is generally above a fi long, with a fmooth Skin, without Scale but being very bright, it varies in lour according to the various Polition its Body, appearing fometimes blue, th green, and foon after of a purple, fome other colour. It is a long Fish, not broad, not unlike a great Smelt, w a forked Tail, and Teeth in its Mot Tho' it is a well-tasted Fish, yet be full of finall Bones, is not Eaten, exc by the Natives.

The Chinese Fish is round, and ab a Span long; The Head is like an with small Eyes, and a long Tail. green on the Back, but white on Belly. It is a fresh Water Fish, and v tafted, but those catch'd in Ponds are

counted unwholesome

The Pitt Fish is no bigger than a la Smelt, with a round Body, full of gi and yellow spots, and without Sci The Eyes, which they can draw in out, are starting out of the Head. the Back they have sharp-pointed F They delight in muddy Places, notwithstanding which they are well-tasted; They are very nimble, and will leap a great way.

The Mullet is a very fine Fish, which The Mulbeing catch'd in particular Places only, is let. dry'd in the Sun, and transported all over the Indies. It is white of colour, chequered with blue and purple; It Swims with great swiftness, and is so nimble that it will not only leap over the Net, but even over the Fifther-Boat. Thefe Fishes are of a dainty taste whilst in Seafon, but at certain times they are pestered with Worms, at which time Uuuu

Snipe.

they are neither toothfome nor wholefome.

Nothing more common than to give Names to Fifnes in Foreign Countries from what they most resemble; whence it is, that the Sea Snipe has got its Mouth, which is like the Bill of a Snipe. Some of them are five foot long, with a Head like that of a Hog, and large bright Eyes: On the Back are large and sharp Fins, reaching from the Head to the

Tail, and full of spots.

Some Korets are fix or feven foot long, have large yellowish Eyes, and a forked yellow and greyish Tail, with yellow Fins; under the Belly, which is blue, inclining to green, and under the Tail, are divers Fins. They are very bright, and shine like Silver, when they are catch'd at Sea with Hooks: They are very well tafted and not unwholfome. being sometimes a great Refreshment to those Ships that come to these Parts.

The Sea-Devil.

This kind of Fish has deservedly got the name of Sea Devil, by reason of its ugly shape; having the Eyes on one side. and the Mouth in the Concavity below the Head. Its Tail is like that of a Roach. with two Teats on each side, pointed towards the end: The Skin on the Head is full of brown spots; Some are near seven or eight foot long, but afford very course Food.

The Stip Fish.

The Stip Fish has a Skin full of Spots, is well-tafted, and taken generally with Hooks near the Isle of St. Vincent.

The Sca-Pigeon.

The Sea Pigeon has got its name from the refemblance of its Head to that of a Pigeon; and of its Breasts portuberating like those Creatures. This Fish is without Scales; but not without divers Spots. It is but rarely catch'd, and none of the best tasted.

The Sea-Hedge-Hog.

The Sea Hedge-Hog is justly so called from its sharp Fins about the Head and Mouth, which is round, and has very large Eyes. They can't Swim very fwiftly, and confequently would foon fall a prey to other Fish, were it not that Nature has arm'd them with these pointed Fins against any attempt.

The Suckers.

1

The Suckers are represented at length in the Cut, tho' there are some much bigger. They are blue, with bright yellow Eyes, a smooth Skin without Scales: They have no Teeth, but broad Lips, wherewith they will Suck, and adhere - fo close to other Fish, that they will rather be kill'd than let go their hold, They will stick so close to the Schark that they are often catch'd with them. They are Exten fometimes for want of

better Food, but are but of an indifferent

Some Sharks are eight, ten, or fourteen foot long: Their Skin is rough and The! sharp, and they have a double row of Teeth, and some three or four Rows. which are covered with the Gums. Their Eyes lie forward near the Mouth. It is a very pernicious Fish, which oftentimes bites off an Arm or a Leg, of those that divert themselves with Swimming. The Sharks bring forth their young ones alive, which follow the She-Shark whereever she goes, and in bad Weather creeps into her Belly, and come out again after the Storm is over. It is observable that certain Fishes of a foot long always Swim after the Shark, which are plainly to be scen in still Weather.

The Sea Car, (the Draught whereof 7he you see in the Cut) is a very odd Crea- Ca ture, both for its colour and shape. The Eyes are exceeding large in proportion of the Body, the Back is of a Purple colour, and the Belly blue, with divers purple spots. The Tail is in comparison of the rest of the Body, vastly large, and pale red, wherewith it Swims, it being destitute of Fins. However, just on the Front of the Head, it has seven Fins, which stand out straight forward like those of the Shrimps. It affords very good Food, especially if dry'd in the Sun.

The Klip Fish, or Soldiers Fish, is a kind So of a Bream, but sometimes grows not Fi above to the length of a Span: It is flat and of a pale colour: On the Back it has sharp Fins like a Perch; a sharp Tail, and yellow Eyes. It is one of the best Fish in the Indies; of a very delicious

The Sea Eagle is an odd kind of Fish: 7b It has a Tail like a Roach, with large Ea Fins like Wings, a thick Head, and tastes like a Roach.

The Sea Car is a round Fish of a Span 12 in length, of a very odd shape; The C hindermost part of the Body being an oval Lump, on which hangs the Head. It has long and large Eyes,a smooth Skin, inclining to blue, but brown upon the The Intrails of this Fish contain a certain Gum, out of which the Chineses make their link. They dry this Fish in the Sun, as the Durch do the Plaife, and are in great Request among the Indians, tho' they are of no case Digestion.

The Leaping Fish is so called, necause, they Leap and Play continually upon the in Surface of the Water. They are of the bigness of a Herring, and

Finn the Back, from the Head to the 6 2. Tail. They have a knotty Head, and the Body of a greyish colour, with black fpots; but toward the Belly they begin They look very fiercely to be white. before they begin to Leap. They are Sea Fishes, and of a very good taste, e-

Apecially Broiled.

The Fish Pampus is above a foot long, and about a Span in breadth; for the rest in colour and shape, not unlike our Plaife, with a smooth Skin: The Eyes stand on both fides, and the Mouth straight forward. It is a well-tafted Fish, especially if dry'd and Eaten as the Dutch do their Plaife.

Peyxe Kok.

Pampus.

Peyxe Kok, i. e. the Fift Kok, so called by the Portugueses, because when taken it makes a noise or sound like Kok. It is taken near the Isle of St. Vincent, and is

but an indifferent Fish.

The Blow-

The Blowers are huge Fishes which appear now and then in the open Sea. They have got this Name from their drawing in of the Water, and spouting it out again with great force into the Air.

The White Fish is about the bigness of a Whiting, with a round hanging Belly, 1 straight Back, and turn'd up Mouth: Its Tail is forked, it has one large Fin upon the Back, and abundance of small ones betwixt the Belly and the Tail. It is full of Streaks all over the Body, and on the Mouth it has two long Teats: It is of a very good tafte.

The Five Finger Fish has got its name from five black spots on each side, resembling the Prints of Fingers. langth is about a foot and a half, with a shall Head, large Mouth, and brown pointed Fins towards the Tail. It is of a shining blue colour mix'd with purple, without Scales. It is of a pretty good tafte, and taken in the Sea all over the

Karappa, or Round Fish, is not unlike a Whiting, of a very good tafte: It has but a small Head and Tail, but a pretty bulky Belly. Below it has some Fins not unlike those of an Fel.

Some of the Flying Fish are near as big as a Corette, of a bluish colour on the Back, but inclining to a brown towards . the Tail. They have large Eyes, and large yellowish Fins, and resemble in shape our Smelts: They are of an agreeable tafte, but not easie to be catch'd, which they frequently do, and so fall ppon the Ships Deck.

The Forck Tail is a long and round

Fish, with a very long forked Tail, whence it has got its Name. Its Head is 1662. not unlike that of a Herring, with a long Teat on the top of it; and two more below near the Mouth, like those of the Shrimps, but larger, they keep them close to the Body when they are a Swimming. They are of the bigness of a Mackrel, but of no extraordinary good tafte.

Some Soals here are a foot long, of the Soals. fame colour as ours, and as well-tafted; but their Heads are strangely shaped, the Mouth turning quite to one side, as well

as their Eyes.

The Bonites are not unlike the Contract but with lesser Fins and blue Streaks, which vanish by degrees towards the Tail. The Back is of a dark brown, and the Belly white, the Eyes blue, furrounded with a yellow Circle. Some are a foot and a half long, and very bright when first taken, which is done without much difficulty, because they follow the Ships, and are very greedy after a Bait. They Eat best if they are Salted a little before they are Broil'd.

The Sword Fish has a very odd Head, The Sword not unlike that of an Owl, with a very Fifthwide Mouth: The Skin is hard, the Back grey, the Belly white, without any Scales. On each fide of the Sword, which is above five foot long, are 27 Teeth: Their whole length, including the Sword, is generally 25 foot long, and fo thick, that scarce two Men can grasp them. Near the Eyes they have two Nostrils, through which they draw the Water in and out.

The Fish call'd Siap Siap by the Java. Siap Siap neses, is a River Fish in great request among the Javaneses, and is taken in con-

siderable quantity near Batavia. The Pyed Fish has got its name from its The Pyed colour; its Tail and Fins being brown, Fish. spotted with pale blue spots: It is about a foot long, and pretty thick, without The Eyes, which are yellow, Scales. are furrounded by a blue Circle; underneath the Throat hangs a Crop extending it self to the Tail: It has a little Mouth, and on each fide a yellow Fin. It is in great Esteem among the Inhabitants, and well-tasted, but contains a certain venomous matter, which must be carefully taken out when they are

The Five Eyes have got their name Five Eyes from Five Black Eyes, enclosed in yel-. low Circles, which are in the Fins near the Tail. They are smooth and yellow without Scales; pretty thick with a small Head and tharp Note, which turns over

Sea-Bats.

on the Mouth, near which they have 1662 two red Fins; they are catch'd in the Rivers and are well-tafted.

The Sea Bat has got its Name from its resemblance to a Bat : It has two yellowish Wings streak'd with three blue streaks; a long Tail, thick Head and large Month. By its tafte it seems to be

The Gud goun.

a hing of Thornback.

The Gr. geons of Java are of the length of a Finger, but scarce an Inch thick. They are speckled with pale the and ther colours, without Scales; because small fork'd Tails; are catch'd in the Rivers and are exceeding welltaffice. I'here is another kind of them quantities, that they fell a whole Canoe full for eight or ten Pence, and Fatten their Ducks and Geese with them.

The Indian Carps are taken in the Rivers being not in the least different from

ours either in shape or taste.

he Scar Aonster.

nd Crea

larps.

The Sea Monster is an odd kind of Fish, having a knobby Star of eight Tacks upon the Head, and upon that a certain Excrescency resembling a Bishop's Mitre: From the sides of the Head issue two Fins of the same length with the Body of the Monster. It has a very dreadful wide Mouth, and very broad Tail, wherewith it guides it self in Swimming.

hrimps

They have divers forts of Shrimps and Creafishes in the Indies; and of the latter fort, a certain kind which have Teeth like a Saw on the Back; Some of them are of that bigness as to weigh fix Pounds, of a delicious tafte, and very wholesome, being accounted good for fuch as are troubled with the Afthma, or Spit Blood. The Sea-Shrimps are a Salt-Water Fish, the biggest of which are near a Span in length, and have Shells like ours, of a fallow colour with a red fork'd Tail. Out of the Head come forth divers Fins, on which hang two small thin Horns. They are very well tafted, and five or fix are sufficient for one Man's Meal. The River Shrings are about the bigness of our Sea Shrimps, of a blue colour, with a small Head and thick Body. Out of the Head came two long Fins, as fine as a Thread; Their Shell is not so hard as the former, neither are they so well-tasted. Rivers here afford also abundance of Creafiles, which are taken in holes a-mong the Oisters. They are better tafted than our Lobsters.

The Sea Star is an odd shap'd Fish with five Branches or Tacks, like a Star: They are of a pale red colour, an Inch

thick, covered with a known Stird derneath which are many (1917) They have a hole in the middle which they draw their Suftenance: The are never to be feen at Sea, except in Calm Weather, and are taken and kept rather for Curiofities fake than any other use.

The Sea Crabs are of about the bigness Se of a Span, of a most curious colour, the Shell being speckled with yellow ipots; Re besides which they have three purple spots enclosed within white Rings. Their Claws are yellowish towards the Body, afterwards white, and at the Extremities of a high Purple colour, their Eyes are fixt upon certain small Tacks an " Inch breadth without the Head. There is also a kind of Blue Crabs, some of which are a foot and a half long: They are of a Purple colour spotted with white: The Claws are blue, and of a purple colour towards the Body: Their Eyes are fixt upon small Tacks like the former, and stand a Fingers length without the Head. They are a Salt-Water

Fish, and very well-tasted.

There is another kind of Lobsters not Lequite so big as the former, which run very swiftly: Their Eyes stand likewise about two lnches breadth without the Head, especially whilst they are running, but otherwise can draw them back, and lay them close under two Fins. Their Bodies are marbled with divers colours, the Claws of a purple colour; Behind they have two small round and blue Shells, edged with yellow. Some are of a confiderable bigness, and of a very There is another fort of good talte. Sea Crabs, of the same bigness as the Blue Lobsters, but easily to be distinguish'd from them by their colour, which is inclining to green, with red Claws, and by their taste, which is exceeding delicious; these being the best fort throughout the Indies: Their Eyes stand likewise an Inches breadth without the Head. Some Sea Crabs here are of a prodigious bigness, and are as well as all other Shell-Fish best in the Encrease of the Moon. Some Crabs here cast their shells, and during a certain Season of the year abide under Ground till they grow again. The Indian Oisters are preferr'd before those of Europe.

The Muscles of the Indies are like ours, Mul The Shell is and but somewhat bigger; another fort of All cles by our People ish colour; the

## and Travels to the EAST-INDIES.

they open two fharp Horns, and on the other end, a pale yellow Tail, wherewith they can fasten themselves in the Mud. They are of the same take, and used like ours, as well as those we commonly call St. James's Muscles. Of Oisters they have also several forts, the biggest adhere to the Rocks, some to the Roots and Tacks of the Trees; They are all of a very good taste, and are either Stew'd with Spices, or Eaten raw with

Lemon Juice and Pepper. Abundance of Purple Snails are found in the Islands over against Baravia: The Scallop or Shell is of a yellow colour, of the bigness of a good Citron, with curious Windings at one end. Within this Shell is the Snail, which is round, plump, and yellow, streak'd with black. They are Boil'd and Eaten by the Chinefes, who have a way of polishing the Shells, and pick out of the middle of the Snail a certain purple colour'd subfrance, which they use in colouring and making of red Ink. There is also another kind with green Shells, ftreak'd with black, white within, and of the bigness of a Childs-Head: The Snail is of the same colour, and is not ill tafted. Another fort has a Shell pale red marbled with white, and curionly twifted, of the bigness of an Orange: The Snail is of the same colour, and is Eaten as we do our Perewinkles, but is

of a hard Digestion. The Quallen are a certain Product of the Sea, of a mucilaginous substance, without Head or Tail, or Entrails; they commonly are of the bigness of a Trenone, and sometimes lesser. They have purple edges all round them, wherewith they Swim. In the midst is a certain white spot, (which is sometimes bluish) wherein perhaps their Victuals are contained. If they are forced ashore, they are Dissolved. The Chineses have a way of Distilling a certain Arack or Strong-Water out of them; which is excessive hot, sharp, and unwholsome, causing Explorations in the Body. For if this substance happen to adhere to the bare Skin of a Man in Swimming or otherwife, it burns with great Violence, and raises Blisters immediately.

The Derades, by some called Sea-Breams, are a kind of Dolphins. They have long and sharp Fins on the Back, and a very long Tail; underneath the Belly they have three Fins, the last of which Some are extends as far as the Tail. 4 or 9 foot long, and rather broad than there. They Est tolerably well, if Sala-

ed before they are dress'd, but are of a ~~~ hard Digestion: They are sometimes 1662. taken with the Hook, being not easily catch'd with the Harpion, by reason of their nimbleness, which is such, that they will Leap fometimes five or fix foot high above the Water, after the Flying

The Indies afford excellive large Thorn- Scates. backs, some of which are as big in cir-Thorncumference as a moderate Table, and backs will suffice to Dine forty People. They will suffice to Dine forty People. have vast long Tails, but are of the same colour with ours, and of the same talte, but are hard of Digestion, but the young ones are much better: Their Fins, which are very large, are of a purple colour: All Fish with Scales cast their Spawn; but those without Scales bring forth their young ones alive.

## INDIAN and JAVANESE Birds, and Four Logg'd Beafts.

N the Isles of Sumaira, Bunda, and the other adjacent Molucca Islands, The Bir is to be found a certain Bird, called Emen, Emen, or Eme by the landbitants, and Casuaris, by the Dutch. He walks confantly with his Head straight upright, when he is about five foot high, and about three in length from the Breast to the Tail. The Head is in proportion of the Body, but finall, very smooth, and of a charle blue colour. Before on the Neck, hang two red Teats, or Bags. The Eyes are large and herce, behind which are the Ear holes, and almost at the entremity of the Bill two Noftrills; and from the midst of the Bill to the crown of the Head, grows a hard yellow Substance, like a Cockle-Shell, especially in the Males. They have very long and gross Legs, covered with a yellowish Rind, their Feet are thick, knobby, and without Spurs; instead of which they have on the forepart three long horny Claws in which they differ from the Oftriches: whose Feet are cloven both before and They are covered all over with Feathers, or rather with Plumes, of a dark red mix'd with black. Those upon the Breast and Thighs, grow two and two together, but those on the Tail are much longer and stronger. Underneath the Feathers, which grow on both sides, are hidden certain Pens, which ferve them in running, for these Birds are scarce able to raise themselves from the Ground. They are exceeding greedy, devouring every thing they meet with, even to Iron

Xxxx

and Burning Coals, all which they evacuate backwards without any alteration; nay, they fometimes throw out what they have Eat, not till a year after, without the leaft Signs of any Digefino. For the reft they live upon Herbage. Their Strength confifts in their Legs and Feet; and run so fast that no Man can overtake

them, and when exasperated, kick with their Feet backwards and sideways like a Horse. They lay greenish Eggs upon the ground among the Shrubs, scarce so big as our Hen-Eggs, speckled with dark green spots. The Yolks thereof are Eaten by their Inhabitants. They have neither Tongue nor Tail.

Hying-Cat. Among the several sorts of Flitter-Mice, of Bass, that which by some is called a Flying-Cat, may well challenge a place; its Head, Tail, may the whole Body and Bulk resembling to a Cat, It differs from the Bass in this, that whereas they hang on certain Tacks, this hangs on its Claws, and hides it self within its Wings: The Hair brown red, except on the Back, where it is black. Betwirt the fore and hisdemoeth Lega grows two Skins, a little Hairy on the outside, which serves them for Wings. There is also a fort of Flying Apes, their have very sharp Teeth and Claws, and very lively Eyes.

The Hunters Bir 1.

In fome parts of the Indies you meet with a certain Bird call'd the Humans Bird. The Breast and whole Body is black, but the Tail grayift; The Head is dark vellow, but withous Feathers:

below the Neck hangs a Bag, not unlike those of our Turkey; The Bill is distinguished by certain twisted Rings, by which they discern their Age, every Year producing one like our Oxes Horns. On the top of the Bill grows a horny. Substance; they are look dupon as a Rarity; and fold at a dear Rate.

In the life of Manuties you meet with a certain Bird call'd Drante by the India historia, and Doders by the Duch. In his bigness it is betwirt an Odrick and a large. Turkey, and has also some Resemblance to them in his Feathers and Tail. His Head is very large, nor valike that of a Cuckoe, but cover'd all over with a Skin. The Eyes are large and black the Neck crooked and very thick: The Bill is very long, thick and pale blue, except towards the Extremities, the operation whereof is blackin, and the

## and Travels to the EAST-IN

undermost vellowith, but both therp and bent. He is very thick and round of Body, corered with foft gray Feathers, like those of the Offrich; the Belly and hindermost part are so thick as to touch almost the Ground, which is the reason he is easily catch'd. On both tides he has certain Pens inftend of Wings, of a pale yellow colour, and instead of the Tail five curl'd Plumes of the fame co-His Legs are short and thick, with four large Claws. The Meat, efpecially that of the Breaft, is fat and spothsome enough, and three or four of these Greatures, afford a Meal for 100 Persons. In his Stomach is sometimes found a certain porous hard Stone.

. The Parraketes are of a green colour, of the biguess of a Searling; Their Bills are yellow, the Neck red mix'd with green, and the Wings yellow at the Extremities: They are found in vast numbers in the Woods, and are easily tamed

and taught to Speak. There are divers forts of them of different colours.

The Martins here are as big as our The Mar-Magpies, of a black colour with a yellow tinsi Bill; and a yellow Tuft upon the Head. The midst of the Wings is white; the Feet yellow, with large crooked Claws, The Javaneses are great admirers of this Bird, and teach him to Whiftle and Speak, which he does as distinctly as a Man, but with somewhat a rough Voice. There is another fort of them not for big as these; They are found all over the. Inglies, and feed upon Rice and other Fruits of the Earth.

The Indian Crows are pale blue, in hape Crows. betwixt a Heron and Stork. The Head and Neck is somewhat of a darker colour, with a curl'd Tail, and sharp Bill. They live most in Wildernesses, and fly (as they fay) fometimes, as far # Enrope, under a certain Leader, who flics fometimes before and fometimes behinds.

The Bird

The Bird Rubus is of the bigness of Seasting, with a blue Bill and Legs, the Back and Tail red, and white and black Wings. The Head is green, and in his has two large feathers, like the WBirk.

In divers parts of the Indies are very 1 large Bass, exceeding in bigness our Cats: In the life of Java are some of the ordinary fort, no bigger than a Pigeon; they live in the Woods, and are accounted a dainty by the Jovenefee. In the Night

time they will get fometimes into the 1 6 6 2. Chambers if the Windows be left open, and draw Blood from such as are asseep there.

Gwira.

There are two forts of the Bird called Gpira, they are both white, mix'd with some brown Feathers. One fort has a red Belly, and the other a blue Tail, with one very long Feather in it.

Poero.

The Peero is a long, but slender Bird, of a Span in length including the Bill and Tail. The Bill is somewhat crooked, and the Tail like that of the Bird Gwire. His Feathers are bluish, mixt with yellow, and his Feet very small. He feeds upon Pilmires.

Cormorants.

In Java, you meet often with Cormorants, not unlike our Geele, except that they are much bigger; underneath the Bill hangs a large Bag, which they can extend and draw together at pleasure. and in the keep such Fish as they have swallowd. Their Feet are like those of the State and their Bills are crooked toward and their Bills are crooked toward the Extremities. They are so
great they repeat they rush out
from the Flags with such violence,
that the receasily takes by that means.
They blow Oisse with the Shells,
and know them in their Bags till they
soon to they spew them out again
and the shell of the They are frequeitle tound in the sile of Din Ding,
and soon discovered by their Noise.

and foot discovered by their Noise.

All the the ladies you meet with Ducks in great numbers, resembling ours both in bigned and taste. They are generally dark, yellow, with a black Bill and Legs, large Belling, and Tufts on their Heads.

But when the the West India Ducks have But whereas the West-India Ducks have hanging Britis, these carry them more upright by rea fon of the excellive heat they are not east ly brought to fit upon their Eggs, which were generally laid under Helm, or ford cased in Horiedung or Ovens, their Marie wery wholeome, provided they are well fed.

The Wide Bill has got his Name from his Bill which i eaches up on both lides to the Eres: He: is force of the bigness of a Pigeon of a pale black colour, with Iblack Wings, and underneath the Eyes and Bill white. They are brought to Market in great quantities at Batavia,

their Meat being well tafted.

The Strand Bird is a kind of Snipe of the Thestrand The Strand Bird is a mind. Their. Fea-Bird, w. bigness of our Wood-Cocks. Their. Fea-Ox Eyes there are green mix'd with black, they are fold in great numbers at Baravia, and in tafte are not unlike our Wood-Snipes.

The Indian Tursles are not altogether

so big as ours; and of a verter lour mix'd with grey: They block Feather in each Wing. The Tail is black and white; under the Neck they are fomewhat brighter, and the Breast simost red. They are taken in great quantities in the Rice-Fields, and are fat and well-taffed.

The Indian Geese are much finer and Geese. larger than the European Geefe, refembling rather our Swans, their Necks being excellive long, of a yellowish colour, but their Bills black. Along the Back, upon the Wings and Tail they have dark grey Feathers mix'd with fome light ones; but on the Belly they are white. They have not fo Shrill a Voice as our Geefe. but differ not in the least from them either in shape or taste, their Feet being likewise red. They have both wild and tame ones.

In divers Places of the Indies are great Birds of quantities of Birds of Prey, as Eagles, Prey-Hawks, Kites, and such like, which do prodigious mischief both among the wild and tame Fowl, and are of fuch Strength, that they carry fometimes a young Pig away and devour it in the Woods or among the Rocks. There is a certain Bird of Prey here, which you fee moving in the Air without moving its Wings; and another called Jin by the Chinefes, exceeding all the rest in nimbleness: It is greenish on the Back, but white on the Belly. The Eyes are quick and red, and the Bill yellow, bent like a Hook at the end. Their Feet are likewife yellow, arm'd with long and very tharp Claws.

The Kokoy is a kind of a Heron, but Kukoy, much exceeding ours in Beauty, being yellow before and green in the hindermost part. On the Head he has a delicious Plume, spreading all over the Neck. The young ones Eat tolerably well, but the old ones are tough and taste much after Fish.

Kolibry is the least of all the Birds, be- Kolibry ing no bigger than a Horse-Fly; it has a very sharp Bill, wherewith it sucks ats fustenance out of the Flowers, though some are of Opinion it feeds upon the Dew. It has all the Colours of the Rainbow, and its Wings are not unlike those of the Pigeons or Ducks: It builds a very Nest to the South under the Branches of Orange, Limon, or Cotton-Trees, to defend it felf against the Injuries of the North Winds: Its Eggs are no bigger than Peafe. There is another Sings exceeding fine, but is not fo well colour'd; it weighs not above 24 Grains

and is catch'd by throwing hot or any

thing elfeupon it.

In the Woods of Java you fee vast
Numbers of Birds not unlike our Quails or Threstly, but of the bigness of our wild Pigeons; Their Bills are however somewhat longer than those of our Quails, and their Noise is very different. They are of so cold a Constitution, that if exposed on the cold Ground, they are in danger of perishing by Cold, for which Reason they hide themselves, cover'd with their Wings in the hollowness of Trees, immediately after Sunfet, and at Sun-rising come forth again and begin to Chirp with a great deal of Chear-

Quails.

fulness

The Indian Quails resemble those of Europe; are brown on the back and blue on the belly; they have a yellow Bill, and four Claws, viz. three before, and one behind; they don't make any Noise, but are very good Meat.

Rice-birds

The Rice-bird is of the bigness of one of our Pullets, but something longer Legg'd, with brown feathers on the Body, a red Head, and very large Claws; they live among the Rice whence they have got their Name, and eat very deliciously roafted.

heafants.

In many Parts of the Indies are also Pheafants with long and pointed Tails; fome are white on the Breast and about the Eyes.

utter-

They have prodigious Numbers of Butterflies of various Colours; They have long Bills, which they can stretch out when they fuck the Juice of the Flowers, or draw back at pleasure. Some are of a most delicious Colour, intermix'd with blue, white and red, beyond what can be express'd. They are generally of the bigness of the Palm of the Hand, when their Wings are spread; some have larger Wings than others, and have two fmall Feathers on their Heads.

Vood Picons.

The Indian Wood Pigeons are of the bigness of our Tame Pigeons, with brown Spots on their Backs; a white Belly, purple colour'd Breast, and red Feet; They resemble entirely our Twele Doves, or common Pigeons, live generally in the Woods or in the Rice-fields, and are a most delicious Food; when they are Tam'd, they will breed in our Houses.

be Lory.

The Lory Bird is a Bird as big as a Parrot, but of a much finer Colour, with a Lofty round Breast, cover'd with yellow Feathers. The Wings are green, the Head black and shining, with a yellow Bill. The Indians give sometimes 30 Crowns for such a Bird, because they Vol. 11.

will Learn and Speak several Languages. and are very tame; There is another with large and long Tails, sometimes three quarters of a Yard long, these are blue on the Back, and yellow under the Belly, and commonly call'd Kakkataws or Indian Ravens. Another kind there is: which is white all over, except a yellow Tuft on the Head, which they fer upright when they are vexed. They have also some resemblance both in shape and bigness to our Mag. Pies or Blackbirds; these imitate a Man's Voice much more distinctly than the Parrots; They are of a bluish Colour, mix'd with dark blue Spots and Streaks, they have a yellow Tuft on the Head, which is black, and

as smooth as Velvet. The Yelambers are as big as our Larks, The Yewith a thick Bill and red Feet; their lamber. Feathers are yellow chequered with grey, they are catch'd in prodigious Numbers, and fold in the Markets of Batavia; being look'd upon as a Dainty.

The Rice Sparrows are no bigger than Rice Sparour ordinary Sparrows, and of the same rows. Colour, except that their Bills are somewhat thick, with a few black Feathers near the Tail, and fome white ones underneath on the Belly, their Feet are blue. They are found in such prodigious quantities, that the Inhabitants are scarce able to preserve the Rice from

being devour'd by them.

These Birds properly call'd Parrokers, Parroare no bigger than our Larks, but have kers. a very fine green Head and Wings; the Back underneath the Wings is of a high red Colour, the Breast light green, and the Tail of a most agreeable Colour; They are found in the Woods in great Numbers, feed upon Rice and Fruits, but will not speak, being kept only for their Feathers sake. The Iudian Pullets are generally white, Pullets.

with long red Tails, and their Feet almost cover'd with Feathers, and a bright red Comb on the head. They are not much biggerthan our largest tamePigeons, but very welltasted. They were first transported to Batavia from Siam. They have also a kind of tame fowl with black Feathers. Legs and flesh, which however is not ill tafted, and accounted very wholfome; Another kind there is that have Hair instead of feathers, others have their feathers turn'd forwards the Head in lieu of declining backwards.

About Batavia and many other pasts Heromi of the Indies abundance of Herons are to be feen in the low Grounds; They are in bigness the same with our Herger,

Yyyy

are above a Finger in length, of a ruddy 6 2. colour, inclining to black, some with, others without Wings. They are very pernicious to the Fruits of the Earth; and, even in the Houses, scarce any thing can be preferved against them without a great deal of Care. It is observable, That an Ant meeting another with something in her Mouth, will give way to her

if the be not loaden her felf. The Gardens about Batavid are exatterpil-Heads. The sending upright on their yell-wift, but his Wings inclining to a green, spotting the Wings inclining to a upon Herbs where eaves like the Locusts. This interest of got its Name from the knotty Course from of its Books, which, as well as a vect is of a public reen co-

chranels or aden?

It has two fore Legs covered with a hard Shell like a Crab or Grea-Fift. It feems to be a kind of Locust, and feeda DOTupon greens, but can neither # very fast. There is another kild, with a monstrous Head and Neck, and a thick Body, on the hindermost part of which are two small Pins like Thorns. two Fore-feet are enclosed in a hard Shell and of a very odd shape; It has two Wings, but can scarce fly, by Reason of the weight of its Body.

There are many lorts of Spices in the Indies, and of a very different Birnels; fome are above four Inches lang, and have very thick Legs. Other's b Feet, a thick speckled Body, and Head with brown Eyes. two Teeth bent like Hooks they blte fiercely. There pieks made of there Te

The Lynx is a fierce Creature, of the. the Lyax bigness of a large Dog, and in shape seems to participate both of that and a He is of a brown colour checquered with Red, with black Streaks; His Tail is very short, and the Ears very black; he lives upon Prey, and is extreamly nimble.

The Suketyro, as the Chineses call it, Sucotyso is a very odd shap'd Beast; It is of the or Sucobigness of a large Ox, with a Snout like tario. a Hog, two long rough Ears, and a thick bushy Tail. The Eyes are placed upright in the Head, quite different from other Beafts; On the fide of the Head, next to the Eyes stand two long Horas,

or rather Teeth, not quite so thick as Herbage, and is but seldom taken. Of the Jackall we have given a Description

On the Cape of Good Hope, but espeen With nebes. cially in the life of Madagascar are certain Oxen with thick Bunches upon their Necks and Shoulders, which being nothing but Fat, is melted and used by 1662. the Inhabitants like Butter; but these Oxen have not so great a quantity of Suet about their Kidneys as ours. The Cows of this kind frequently bear two or three Calves at a time.

Ma- The Macassar Fox has got his name at Fox. from the lile of Macassar, where he is most found. He has an excessive long bushy Tail, which stands upright, flat Feet, long Claws, and short Ears, just as he is represented in the Cut.

's and theys.

There are divers forts of Apes and Monkeys distinguish'd by peculiar names. Some are very small, others middle sized, and others as big as a Boy of eight Years of Age; fuch an one I saw my self once at Batavia. In many parts of the Indies, where the Inhabitants think it a crime to kill any living Creature, the multiply to a prodigious degeee, and are very tame; They live for the most part in Woods, and feed Some are green with a apon Fruits. long Beard and large Eye-brow, like an Ancient Man; Some, call'd Gicatik by the Indians, have long bulky Tails, for what inclining to a grey about the Eyes, √ Vol. ∦I.

which Reason they are reckoned by some among the Fox kind. There is another fort call'd Saragose, with long Tails, which they carry straight upright. Another fort are call'd Deaths Heads by the Dutch, from their pale Faces. The Suri Monkeys are in Bigness and Shape not unlike a Squirrel, but of a yellow colour; they have short and round Ears, large Eyes, and a large bushy Tail, wherewith they can cover the whole They can leap at a great distance from Tree to Tree, and guide themselves with the Tail so exactly, that they feem to Fly. There is a certain fort of Monkeys or Apes, that are not in the least mischievous; they are no bigger than a Rat, but have a long Tail, which they carry apright. They have a green, foft and woolly Hair, fome-Zzzz

and a little white on the Feet. They 1662. have short Ears, a sharp Mouth, and brown Nose, the Feet being like those But these are very of an Ape. Those call'd Sanguwyns are likescarce. wife of the bigness of a Rat, and very nimble; Their Face, Hands and Ears are black, and the rest of the Body of a Chefnut colour, except that they have fome dark yellow Hair along the Back: They have very long Tails, feed upon Fruits, and are very diverting.

The Pif-

Stags.

The Pismire eater or Ants bear, is fo mire est- called, because he feeds chiefly upon eror Ants- Ants; There are three several forts of Hem; The first is of the bigness of a young Hog,, the second somewhat lesfer, and the third like a Cat, but longer. They are all of a ruddy Colour like a Fox. with a long sharp Mouth, small Ears,

and a Head like that of a Pig.

Abundance of Deer or Stagsare found in the Forests of the Indies, they are eafilv to be tamed here, so that they will feed among the Cattel. They are generally red, speckled with white, and much of the same bigness as ours. They have large Ears, long Legs, and are white underneath the Belly. The Horns of the Male are wrought towards the Head, and brown and very hard towards the Extremities. Their Flesh is very well With the Deer Skins a great tasted. Traffick used to be carried in the Isle of Tayowan, whilst the Dutch were Mafters of it; for they used to take many Thousands of them only for the Skins fake, which were fold to the Japoneses: and scarce to preserve any part of their Flesh, except the Tongue, which is accounted a Dainty here.

The Iron Pig or Porcupine.

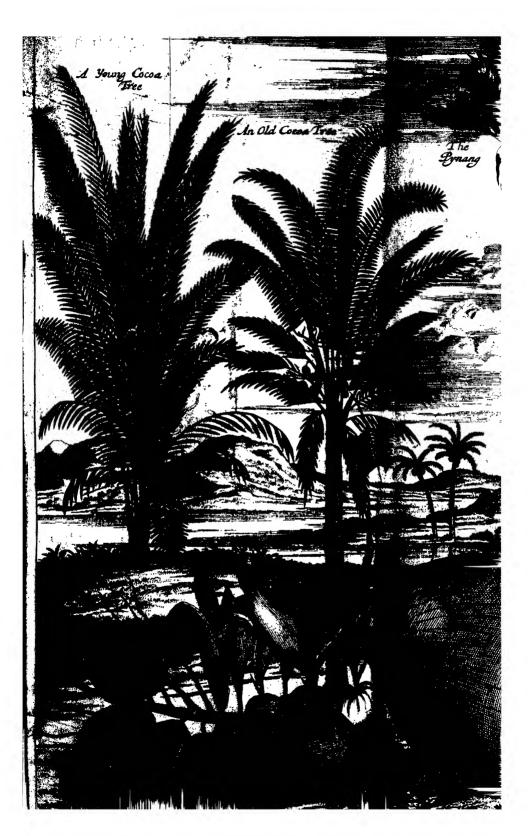

About Batavia, and in the Woods of Java are abunda nee of Iron Pigs or Porcupines. They grunt like Hogs, and are covered with a certain painted Pens or Pegs like Iron, whence they got their They are of different Sizes. some of the bigness of a good large Dog, but somewhat longer, and more short Legg'd. They are generally brown, with a grey Tuft on the Head, and a Mouth like a Hare, with two great Teeth both below and above, like a Horse, the two Fore-feet like those of a Deer, and the Hind most like a Bear. The Pinsor Pegs are very sharp, a Foot long, and sheequered with black and white. When they are at Rest, they lay them close to the Body, but if they are vexed, they can by contracting themselves, cast them forth with fuch Strength, that they kill Man or Beast; Thus some years ago, a

dead Lyon was found at Good Hope with a Percuping ing in his Body, wherewith M less been kill'd. In the retire into Holes, where

without either eating or drinking. I ney feed upon Herbs and Roots, and cast their Pens as other Creatures do their Hair; In the Stomachs of some of these Animals grows a certain Stone, which by reason of its Sudorifick Quality is accounted very good in Pestilential Fevers, just as the Stone found in the Vesica Bilearis or Gall Bladder of the Wild Boars. is reputed the most Sovereign Remedy in that Distemper call'd Morderi by the Javaneses, and as much dreaded among them as the Plague in Europe, because it commonly kills in a few Hours time.

There are several forts of Hogs in the Tame of Indies, some with, but the most without Wild any Hair; Hogs Flesh is accounted wholfomer and better than Beef or Mutton, and is by the Chineses prescrib'd even for fick Persons. The Wild Boars feed upon what Roots or Fruits they can meet with, and I remember that I saw a considerable Number of them swim cross the Water in the Isle of Dingding neer Malacca, to look after Provisions. In the Gall-Bladder of the Indian Wild Boars, grows a certain porous Stone, call'd thence Piedra da Puerco; i. e. Hogs Stone by the Portugueses; it is Sudorifick, and Expedient in Malignant Distempers; They steep it in Wine for twelve hours. and give the Infusion to the Patients; or they give the Quantity of 25 Grains poudered, in Wine. Women with Child must be cautious of it, because it makes them Miscarry, it being a general Opinion among the Malayan Women, that they can procure their monthly Times, with only holding this Stone in their Hands.

The Javanese Sheep are much of the Sheep. fame bigness as ours, some being white, others pyed, white and red, with short Legs, and little or no Wool. Their Meat is not so good as the European Mutton, Pork being much preferr'd be-The Sheep have somefore it here. times Teats hanging below their Throats like some of our Hogs, others have such long Ears that you may tie them together underneath the Throat. Others have Tails of 20, 30 or 40 pounds, being one Lump of Fat, which eats best boil'd. Some have a plain Hair like our Goats, others a curled Wool, like our Sheep, and are milk'd like Cows.

The Goats here are not near so big as the Steep, nor is their Flesh so well tasted, tho' the Kids in some Parts of the Indies afford excellent good Meat. Some are white, some pyed, and have generally long Hair. Others have very long Ears, and Horns standing upright on the Head. In some Places they bear three or four young ones at a time: They

make Cheese of their Milk.

The Bouffles are Bulkier, and stronger than an ordinary Ox; they have no Hair, their Flesh is very good, but not fo Juicy nor fo Digestible as Beef, for which reason it is most used among the Slaves, and other labouring People. Their Horns lie close to the Head; some of them are black, and when polish'd, are very useful for several things to be made out of them. The tame Bouffles are used in the Sugar-Mills, Plough and Cart: They Guide them by means of a Chain drawn through their Nostrils: Their Milk is accounted very wholefome: The wild Bouffles that live in the Forests are very fierce, and not easie to be taken.

Oxen and

Horfes.

Many Places of the Indies afford Oxen and Coms; the Flesh whereof, as well as the Milk and Butter, are very good: Some are red, others white, others pyed, and of feveral other colours. Some have Hornsstanding uprighton the Head, others crooked Horns like ours; and others long Ears hanging downwards. However, the Beef is much better in some Places than in others: It is generally Eaten fresh, because it will scarce take Salt well in this hot Climate, and is not to be kept Dove three or four days. They bring à certain kind of Oxen from Suratte to Batavia, not much bigger than a large Dog; they look very fierce, notwithstanding which they are used in small Carts, to draw Children, or any other odd thing.

The Horses here are of different forts and colours, some black, others of a Chefnut colour, and others white and grey. The Javanese Horses are not very tall, but thick and well-fet, like the Norwegian or Westphalian Horses, very strong and hardy; but are not near fo high-spirited as the Persian Horses, that are transported from Saratte to Batavia, and excel all the rest in Swiftness, Courage, and Beauty. The Indians carry on their Wars for the most part with Foot Soldiers, and preserve their Horses for .the Draught and Travelling.

Thus much of the Isle of Java, and the City of Batavia, we will now proceed to give an Account of our return into Helland.

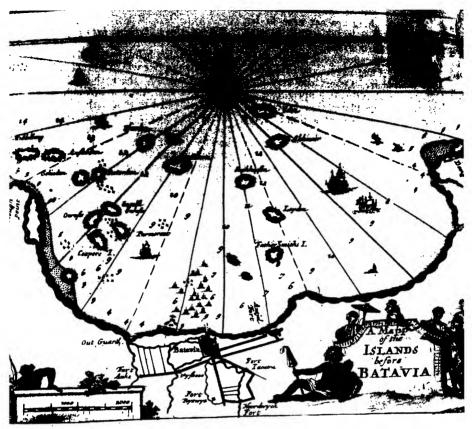

The Authors Return into Holland.

Very thing being got ready for our The Au-Voyage, we weigh'd Anchor in the thor's re-Road of Batavia, the 17th of December tun into 1670. and with the Land-Wind, pass'd Holland. betwixt the liles to the South of Batavia, situate betwixt the Ruigenhoeck, or Rough-Point, and Karowan, most of which have borrow'd their Names from some Place or other in the United Provinces; as the Cooper's Isle, the Schiedam, Amsterdam, Middleburgh, Purmerent, Rotterdam, the Pigeon Island, the Harlem, Hoorn, Enckhuysen, Edam, Alemar, &c. we came the fame Evening to an Anchor near the Isle call'd the Men-Eaters Island, near which the Ship called the South-Pole, ftruck upon the Sands, but got off again. Here a general Review being taken of all the Persons on Board the Ships, such as were found to be Indebted to the Company, were fent back to continue in the Service till they had discharged their Debts.

Then we fet Sail again, and had the 19th, the Point of Bantam to the West of us, and Pulo Paly to the North; but being Becalm'd were forced to come to an Anchor at 15 Fathom Water. 20th, having received some Refreshments by the Golden Lion from Bantam, we fet Sail again, but the Calm obliged us to come to an Anchor again at 15 Fathom. The 21st we continued our Voyage, and had the 23d the Point of Java, called Krakketon to the East-South-East, at 23 Fathom Water. The Commodore having by the usual Signal of the White Flag fummoned all the Commanders of Ships aboard him, to know whether they were provided with what was necessary for fo long a Voyage, the Golden Lion was fent back, and we had the North Point of the Princes Isle, West to the North; and the 25th the South-Point about four Leagues from us.

About Noon the Commodore went aboard and took a view of all the Ships under his Command, and in the Afternoon fet Sail again; we met with feveral fierce but short Travadoes or Storms, at 7 Deg. and 41 Min. Southern Latitude. The 31st we had another most violent Travado at 9 Deg. 54 Min. but continued not long.

The First of January, one of our Shirs The Isle of Crew died, and we got fight of Land to Mony. the South-East, which we found to be the life of Mony, and that we were 64. Leagues to the South-South-West of the Princes Isle, being forced thus far to the

East by the Tide; we were at the Lati-52, tude of 10 Deg. 29 Min. The 2d we whad the said ssle to the South-East, and found its Situation to be 52 Min. more to the North than it is placed in the Maps. The 3d, we were within four Leagues of the said Island, at 11 Deg. 15 Min. Hereabouts one of our Ships Crew was found Dead in his Cabin. The 6th we were at 13 Deg. 40 Min. and the 9th at 14 Deg. 17 Min. The same day Mr. Dirk Indiik died of a long and lingring Diftemper: As he had been Factor and Fiscal at Suratte, and was accounted very rich, his Goods were all Sealed up in the Presence of the Commodore and the other Commanders. The next following day we made 32 Leagues, and so continued our Voyage with a prosperous Gale till the 19th, when we found our felves at 20 Deg. 54 Min. of Latitude, and at 105 Deg. . 14 Min. Longitude. The 26th, the Commodore having by the usual Signal fummon'd the Chief Officers aboard bim, to adjust the difference in the Compasses, and the same being found only I Deg. 33 Min. no alteration was made therein.

The 2d of February we were at the heighth of 29 Deg. overtaken by a most 1 662. furious Tempest, with Thunder and Lightning, from the West, and had frequent Travado's till the 4th, and for. many days after, had very changeable Weather, fometimes good, fometimes bad. The 26th with break of day we found 112 Fathom depth, but saw no Land; About Noon we found our felves at 35 Deg. 17 Min. stearing our course Westward, the Weather being very fair, we faw divers Whale-Fish sporting in the Water, and some Sea-Birds; which, together with the colour of the Water, was a fufficient fign, that we were not very far from Land. The next day we found seven Fathom Water without seeing the Land.

The 28th very early in the morning They discovered Land to the North-North-wer Land. West of us, at 45 Fathom depth, and the next day after Sun-rising at 38, being then within three Leagues of the Shore, which appeared hilly and white. About Noon we were at 34 Deg. 36 Min. the Weather cold and fair. The First of March, we found our selves at 35 Deg.

and

and iteative bat results to the south were areasis in light of a mountainous The 1th we fill faw Land se shom Water, and in the Evening

at 20: The 6th before Sun-set, we saw the famous Point of the Table-Bay of the Lage of Good-Hope, where we calt Anchor before the Fort, at eight Fathom Water. Here we thet with three Ships, viz. the News, that the Commendore Thrand Gotske did come to the Cape, the last ad of February, and thence continued his Voyage with three Ships the 24th for Hol-- land. Our Commodore being then Sick, he fent one to the Commander in Chief of the Cape, named Mr. Hakkins, to notiffe his arrival, and the next day went ashore himself.

The 8th the Mary Yacht arrived at the Cape from the life of Madagascar, having on Board the Marquis de Mondeverguin, French Governour of Madagascar, and the other adjacent Places under the French Jurisdiction. He was a Person of 70 years of Age, and of a goodly Aspect. He sent word to Mr. Hakkins Commander in Chief of the Cape, that he should be glad to come ashore, provided he might be fure of a Reception suitable to his Quality: However, he fet Sail again on a fudden, without coming ashore, perhaps by reason of the Rumour that was then already spread abroad of a War betwixt France and the Dutch.

The same Evening the Ship called the Spanbroeck came into that Road from Ceylon, with Advice, That the Cingaleses had taken up Arms under their King Radya, and were in the mean while not idle to provide our felves with what Necesfaries we could get for the profecution of our Voyage, till the 17th of March, when the Commodore fummoning all the Officers aboard him, told them, That he intended to fet Sail the next Sunday, viz. the 23th of March, without staying for the two Ships we left behind, and a War betwixt us and the French being then much talk'd of, he ordered every Body to be upon his Guard, and to pre-, be more Eastward than we intended. pare for a vigorous defence in case of an Attack.

The 20th was spent in letting the Seamen go ashore in their turn.

The 21st the Goods of the beforemention'd Mr. Indyck, deceased, were exposed to publick Sale, and 13 Dia-Vol. II.

monds, beindes tour more as and ordinary bigness, with for traces, bring found con-vate Pocker in his Breach where leaded up, setzes has a contraband Goods, for Company.

dere having given the figural to Sail to the Cape of the five Ships, the Peace the Arms of Hope. Spanbroeck, they weighed their Anchors, and after Sup let were about two Leagues

and an half from the Table Boy.

The 23d, a Consultation being held aboard the Commodore about Regular ting the Compais, and the same being fix'd to 3 Deg. to the West we found our felves that Evening at 33 Deg and about 18 Leagues to the South-East of the Take ble Mountain.

From hence we Steer'd our Course to Sail to Sh the Isle of St. Helens, of which we got Helens light the rath of April, at 16 Deg. 44 Iles Min. without any remarkable Accordent.

The 13th with Sun-riging we were within five or fix Leagues of the faid lile, when the Commodore Summoned again all the Officers aboard him, in order to Confult what Course they should take towards the Ascension Island.

The 24th we were at 4 Deg. 32 Min. and the 27th, at 16 Min. of Southern Latitude, steering our Course North-West to the West with an Easterly-wind and brisk Gale.

The next following day we were at 15 Min. of Northern Latitude; and the They page 29th at 2 Deg. 38 Min. having been the Line. much peftered with sudden Storms and Travadoes.

The 14th of May, the Breda gave a fignal, as if they had feen Land, but it proved only a Refraction of the Sun-Beams through the Clouds. The Sea hereabouts feem'd in the Night-time all on Fire, a thing usual in hot Weather.

The 24th, at 25 Deg. 29 Min. we found our felves in the Kroos or Crofs Sea, See the (fo called from a kind of Water-Creffes, Brafil or Ducks-Meat that Floats in prodigious Voyage. quantity upon the Surface of the Water) and the 25th finding these fort of Herbage encrease, we judged our selves to

The 30th, at 26 Deg. 15 Min. our Constable Mans Timmer died, and we were still much pestered with these Cresses, which continued the 1st and 2d of June.

We continued the same Course till the. 13th, when it being agreed to fix the Assas

The Marquis de Mondevergnia

Compass 4 Deg. more to the West, we 5 6 2 took our Course North to the East, towards the Dutch Coast.

The 15th, being a foggy day, we discharged every Hour a Musquet, as a fignal to the Ships to prevent their being

separated from one another.

About Midnight the Commodore fent for me, and in the presence of the Mafter of the Ship, Henry Span, the first Chirurgeon, and the Minister, told me, That finding himself very ill, he was resolved to make his last Will, which he did accordingly, recommending his Affairs, and what he had of the Companies in his Hands, to our Care.

About fix in the morning, he fent for

me again, with an Intention to make some Alterations in his Testament, but before the Clerk could finish it, he Expired, without figning of it. We took care to Summon immediately the Council of War, where every thing being fettled for the profecution of our Voyage, we discovered Land the 20th to the North East at 115 Fathom Water.

The 30th we found our felves over e Isle of against the life of Fulo, and understood by one of their Fisher-Boats, that the Peace continued betwixt France, England, and Holland, and that 14 days before, 11

Rout Ships pass'd that way.

Having provided our felves with fome Cods, which we Bought or Exchanged at the rate of two Pence a piece, we gave the Signal by a Cannon shot, to our Convoy, which we expected to meet us hereabouts.

The first of July, meeting a Boat betwixt Fule and Hitland, we charged the Mafter thereof with the Body of our deceased Commodore, in order to his Burial in Hitland: He had fix Crowns given him for his Pains and Charges, with a promise of fix more, after we had received certain advice, that he had well discharged his Trust. About Noon our two Convoys, the Middleburgh and Leyden came up with us, and after the usual Salute, brought us fresh Orders from the Company.

The 2d and 3d of July, several of our Seamen, and among the rest, the Quartermaster died of the Dropsie, an usual Diftemper to those that return from the East-Indies, and many more falling Sick ! daily, for want of Provisions , the the were hardly put to it, especially in cur Ship, which being Leaky, four Men were continually employed at the Pump.

The 5th we advanced bravely with a

very cold Wind and Air.

The 6th it was fair weather, and we bad 18 Fathom Water.

The 7th it proved cold and faint, at 16 Fathom: The same Evening the Shipcalled the Arms vanter Veer left us, and

foon got out of fight.

The 8th of July we got fight of the the Dutch Coast, and the Ship Spanbroeck having taken its Course towards the Spaniards Gate, we were forced to lie by till four in the Afternoon, when with the They arturning of the Tide, we made the Texel, Texel. where we came to an Anchor the fame Night.

The 9th, Mr. Silvius, Mr. Bekker, and Mr. Schagen, came aboard us, three Directors of the Company; who having given the necessary Orders for the Unloading of our Vessels, and taken the Diamonds belonging to the Company into their Custody, discharged the Ships Crew from their Service; and I Embark'd in a Boat for Enkhusen, and arrived at Amsterdam the 11th. Count Maurice of Nasjau happening to pass at the same time through Amsterdam in his way over Zealand to Cleves, he fent for me; and I having shew'd him my Observations and Draughts of Brasil and the East-Indies, he engaged me to meet him the next day again at Dinner, at the House of Doctor William Pise, where I took my leave of. the faid Earl, he being just upon his Departure.

Some days after I appear'd in the Nieuhoff Assembly of the Directors of the Com-gives an pany, unto whom having given a satis- Account factory Account of all my Transactions, so the Comthey return'd me Thanks; and as a pany. Mark of their Satisfaction, bestow'd upon me another Factors place; fo that accordingly I undertook my third Voyage to the East-Indies, in the Ship call'd the Arrow, before the Expiration of the year.

The End of the First and Second Sea and Land Voyage.

The Third Sea and Land Voyage of Mr. JOHN NIEUHOFF aboard the Arrow to the Isles of Majotte, upon the African-Coast of Mosambique, Extracted from his own Journals, and brought over and deliver'd by Cap. Reiner Klacson to his Brother Henry Nieuhoff.

bark'd aboard the Arrow, they pass'd by the French Coast the 18th of Decemb. and the 1st of Jan. 1672. at 29 Degr. by the Canary Isles, about three Leagues off of Teneriff, where they met with the Lyon bound for the East-Indies. They continu'd their Voyage with a prosperous Gale, without any remarkable Accident, and passing the 4th of Feb. the Line, and the 16th the high Islands of John Christian de Akonga at 36 Deg. 36 Min. Southern Latit. Arriv'd the 8th of April within f Good light of Cape of Good Hope, at 33 Degr. 30 Min. Latit. and cast Anchor the same day in the Table Bay the same night. Here they met with seventeen Vessels, thirteen of which were bound from the East-Indies for Holland, and accordingly fet Sail the twenty fourth. The Ship the Arrow had aboard her a large Chabop or Boat, which being taken to pieces thefore they left Amsterdam, was now Set together again, for its more conve-ficent Passage along the Shoar of Sofala, Mosambique and the Island of Majotte. In this Chaloop (unto which they gave

R. John Nieuhoff having Em-

They leave the name of the Bow) they Embark'd, the cape of and in company of the Arrow and another small Vessel call'd the Goldsinch, bound for the Isle of St. Maurice (having aboard Mr. Huigens) Governor of that Isle, set Sail the 30th of April. The 6th of June being at 36 Degr. 3 Min. Lat. the Goldfinch Steer'd her Course towards St. Maurice, leaving the Bow and Arrow to profecute their Voyage towards the lile of Madagascar, which they got first sight of the 20th. They kep? along the Coast which was high and rocky, and near a large Point of Land found 20 Fathom Water at a Leagues Distance from the Shoar; and near it a . long Sand Bank. They were then at 24 Degr. and being by Reason of the Land Whid, obliged to advance sometimes

nearer the Shoar, fometimes to keep off at Sea; they at last cast Anchor at 30 Fathom, whereas three Leagues from the Shoar, They could find no Bottom. The Bow afterwards followed the Arrow, but kept closer to the Shoar.

The twenty second they discovered small Isle not above half a League from the Shoar; where the Arrow cast her Anchor at 17 Fathom; they went a Fishing, and brought back along with them two Canoes belonging to the Inbabitants, loaden with Coco-Nuts and Water Limons. The Bow being failed before, and come to an Anchor in the Bay of St. Austin near a small Isle, the Arrow followed her thither, and found at the Mouth of the River two white Points of Land jetting out into the Sea.

The Inhabitants brought some Fruits They Land aboard us, and Mr. Hugo and Mr. Nieu- at Mahoff went a-shoar the next day, to see dagascara whether they could Traffick with them, but could only Exchange a few Slaves with them; however Mr. Nieuhoff catch'd abundance of Fish at the Mouth of the

The second of July the Bow fail'd within the Mouth of the River to refit, having received some Damage; they endeavour'd to catch some Tortoises but could not take any; About Noon the Captain of the Madagascarians came aboard us to Exchange some Slaves; and the seventh the Bow in which was Mr. Wienhoff, and the Arrow separated, the first some Leagues to the North, but were to meet again at the Island of Majotte.

The 14th the Bow after 17 Leagues Sail was at 16 deg. 56 Min. Lati't within fight of the Continent of Mofambique, and. at 3 Leagues Distance from the Shoar, found 100 Fathom Water, near a Sand Bank : The next day they came within 1. League off of the life of Painibris.

The 18th at 16 degr. 15 min. they. faw white Downs, and in the Evening

bey come

Good

Hope.

cast Anchor near a Sand-bank at 18 Fa-5 7 2. thom, whereas at the Stern of the Ship, v there were at least 60 Fathoms. The 20th they passed by a large Bay, cover'd with a great Sand-bank, which at low water has fix Fathom Water. The 22d they pass'd betwixt the Southern Islands of Mosambique, named St. James's and St. Joris, where coming to an Anchor at nine Fathom, they met here with a stout Portuguese Ship at Anchor behind the Fort, having aboard the Governour of Goa lately come from Portugal with three lesser Vessels. The Arrow coming likewife afterwards to an Anchor here, divers Portuguele Officers came aboard us, to buy certain Commodities, and about the same time three other Portuguese Ships, one of which had the Governor of Mosambique aboard her, arrived here from Sofala. It prov'd a very tempestuous Day.

> The first of Aug. the Bow and Arrow fet Sail again, steering their Course Eastmard to the lifes of Madagascar and Ma-The 10th they got fight of the Shoar of Madagascar at 15. d. 53 m. and about half a League from a round Mountain cast Anchor at ten Fathom Water. The Bow entred the River, and discoveed two Boats with Masts, and divers Canoes, but could not come up with them. As the Wind hereabout turns every 24 hours thro' all the Points of the Compass, so it is easie sailing along this Coast. The 12th Mr. Nieuhoff in the Bow sail'd towards the Isles of Makandari and Magelagie, taking a Madagascarian Slave along

> with him. The 15th the Bow and Arrow met again, but had not been able to Traffick much; They saw nine Boats with four square Sails pass in sight of them, and in a small River met with another Boat, that furnish'd them with eight Pullets, and told them, that further to the North they might meet with fresh Provisions enough. So they fet Sail again, and after five days came to a large Bay, where they cast Anchor at feven Fathom. Here they were told, that it was a plentiful Coast, and that Magelagie and the Islands of Makandari were further to the East. 22d they came within a League of an Island, where they cast Anchor at 11 The 24th Mr. Nieuhoff sail'd Fathom. in the Bow up the River, Magelagie and returning the 26th reported, That this was the River upon which Magelagie stood, a populous and plentiful Place; That he had feen there an English Ship, that had brought Slaves there to be carried to Barbadoes, besides several other

: ..

Moorish Vessels Trading in Slaves. Hereupon Mr. Hugo and Mr. Nieuhoff went thither, and return'd the 30th. About two Leagues into the Country you fee a high ridge of Land. The 3rft Mr. Nieuhoff carried certain Commodities ashoar. but could not agree about the Exchange, the Inhabitants offering very little, and holding their Slaves at fixteen Crowns a piece; However the fecond of Septemb. Mr. Hvgo and Mr. Nienhoff went a-shoar with some Cloves, for which the King had offered some Money before, but return'd unsuccessful, and the Madagascarians (a very malicious Generation) having besides this spoil'd the Pouds. where we used to fetch our fresh Water. they fet Sail again for the River Marieando, where they east Anchor the ninth on the East side of the Cape, and met with good fresh Water on the West side of the Bay. Mr. Hugo and Mr. Nieuhoff had the good Fortune to exchange some of their Commodities with the King of the Place, and brought back 22 Slaves, 13 Cows, some Sheep, and other Provisions, of which they stood in great want. The 22d it being resolved to fail 36 or 40 Leagues further to the North; Mr. Nieuhoff sail'd before with the Bow to discover the Lands and Rocks, and came into the Young Man's Bay, where there is 10, 12 and 15 Fathom Fathom Wa-Hence continuing their Voyage. they came the 27th about Noon to the Point or Cape of Parmira near one of the Five Islands at 13 Degr. 13 Min. The 29th they were near the Cape of Kom quiso, where they saw some Fisher Boats? The middlemost of these Islands, is a high, Reep and unaccessible Rock, which may be discovered a great way at Sea, some of the Fishermen having shew'd them where their King kept his Court, Mr. Nieuhoff set Sail thither in the Bow, leaving the Arrow in the Bay, and in Company with the Ships Mate, and some few Seamen went afhore, in hopes to Exchange some of his Commodities; But on the 7th, the Arrow was much furprized to fee the Row making towards them, and with two Cannon shot to give the fignal of Distress. They fent out their Boat to meet them, which returning with the Master of the Bom, gave an Account, That Mr. Nieuhoff being gone ashore with some of the Company in the Bay of Antegoa, or Ant Ofy Sanbo, by fonte stiled the Mursherers Bay, to Tratfick, was not returned, and that therefore the Bow, after a fray of three whole days, had weigh'd her: Anchors, and fet

A fail again without them. It was con-57/2. cluded on all hands, that the Bow ought to return thither, but Mr. Hugo alledging that having at first no more than six Months Provisions, they would be in great danger of being starved if they tarried any longer here, he infifted upon returning to the Cape first, which they did accordingly, and fet fail the same afternoon at 25 and 30, and again at 20 and 25 Fathom Water. In the Evening they pass'd near a great Sand-Bank South to the West, and North to the East, of the biggest of the three Islands near the Cape of Koaquiso, about three Leagues from the said lile, and the Northern

Point and the great lile of Naushy. This was the end of Mr. John Nieuboff, who had spent so many years in viewing the West and East-Indies, and consequently deserved a better Fortune. What Hugo alledged, concerning their scarcity of Provisions, was indeed true enough; but on the other hand, it is unquestionable, they needed not to have bestow'd much time in looking after him. The Bow and Arrow prosecuted their Voyage, and on the 8th found themselves at 12 Deg. 40 Min. Latitude, having the West Cape of St. Sebastian, six Leagues to The next following the North-East. Day they came in fight of a small life full of Trees, about three Leagues from the Cape of St. Sebastian, near which place being tos'd to and fro by Tempests and contrary Winds, they were reduced to that Extremity, that they were torced to live upon a Spoonful of Rice

24 Hours; So that after having endured a great deal of Misery, and lost many of 16.7 their Men, both the Bow and Arrow return'd to the Cape of Good Hope the 17th of Decemb. where Mr. Hugo met but with an indifferent Recreation, and the Master of the Bow was cashier'd for having not tarried longer near the place where Mr. Nieuhoff went a-shoar. The first of Jan. 1673. the Row and Arrow being provided with sufficient Provisions, set Sail again, the first for the Bay where they had left Mr. Nieuhoff, the second for the Isle of St. Maurice, whither she was to to carry Mr. Hugo. After their parting at Sea, no News was heard of the Bow for a long time after, till at last it was discovered that the Ships Crew had Mutinied, and fold the Vessel to the French at Mosambique; so that it remains uncertain, whether any of them had any Intelligence concerning Mr. Nieuhoff. At the Request of his Brother, Mr. Henry Nieuhoff, the Directors of the Chamber of Amsterdam dispatch'd the 2d of May 1676. the Yacht called the Voerhout from the Cape of Good Hope, to the Place where Mr. Nieuhoff went ashore; which returning to the faid Cape the 20th of September with 250 Slaves, brought no further account than that they had feen the King of the Place, and that he had declared to them, that he knew nothing of the matter; fo that it is very probable, that Mr. Nieuhoff and his Company, were at their first landing Massacred by the barbarous Inhabitants.

O F

Captain 70 HN SMITH,

INTO

EUROPE, ASIA, AFRICA, and AMERICA,

From Ann. Dom. 1593. to 1629.

### To the Right Honourable

WILLIAM Earl of PEMBROKE, Lord Steward of His Majesty's most Honourable Houshold.

ROBERT Earl of LINDSEY. Great Chamberlain of England,

HENRY Lord HUNSDON, Viscount ROCHFORD, Earl of DOVER,

And all your Honourable Friends and Well-willers.

My Lords,

IR Robert Cotton, that most Learned Treasurer of Antiquity, having by perusal of my General History, and others, found that I had likewise undergone divers other as hard hazards in the other Parts of the World, requested me to fix the whole Course of my Passages in a Book by it self, whose noble Desire I could not but in part satisfie; the rather, because they have acted my satal Tragedies upon the Stage, and racked my Relations at their Pleasure. To prevent therefore all future Misprisions, I have compiled this true Discourse. Envy hath taxed me to have writ too much, and done too little; but that fuch should know, how little I esteem them, I have writ this, more for the satisfaction of my Friends, and all generous and well disposed Readers. To speak only of my felf were intolerable Ingratitude; because, having had so many Co-Partners with me; I cannot make a Monument for my self, and leave them unburied in the Fields, whose Lives begot me the Title of a Soldier; for as they were Compa-

nions with me in my Dangers, so shall they be partakers with me in this Tomb.

For my Sea Grammar (caused to be Printed by my worthy Friend, Sir Samuel Saltonsfall) hath found such good Entertainment abroad, that I have been importuned by many noble Persons, to let this also pass the Press. Many of the most eminent Warriours, and others, what their Swords did, their Pens writ: Though I be never so much their inferiour, yet I hold it no great Errour, to follow good Examples; nor repine at them will do the like.

And now, My most Honourable good Lords, I know not to whom I may better Present it, than to your Lordships, whose Friendships, as I conceive, are as much to each others, as my Duty is to you all; and because you are acquainted both with my Endeavours, and Writings, I doubt not, but your Honours will as well accept of this, as of the rest, and Patronize it under the shadow of your most noble Virtues, which I am ever bound in all Duty to Reverence, and under which I hope to have shelter, against all Storms that dare threaten,

Yours Honours to be Commanded,

Captain JOHN SMITH,

#### CHAP. I.

His Birth; Apprenticaship; Going into France; His beginning with Ten Shillings and three Pence; His Survice in the Metherlands; His bad Passage into Scotland; His return to Willoughby, and how be lived in the Woods.

E was born in Willoughby in Lincoln-fluire, and a Scholar in the two Free-Schools of Alford and His Father antiently Louth. descended from the ancient Smiths of Crudley in Lancashire; his Mother from the Rickands at Great Heck in York-fbire. His Parents dying when he was about Thirteen Years of Age, left him a competent Means, which he not being capable to manage, little regarded; his Mind being even then fet upon brave Adventures, fold his Satchel, Books, and all he had, intending fecretly to et to Sea, but that his Fathers Death stay'd him. But now the Guardians of his Effate more regarding it than him, he had liberty enough, though no Means, to get beyond the Sca. About the Age of Fifteen Years, he was bound an Apprentice to Mr. Thomas Sendall of Linne, the greatest Merchant of all those Parts; but because he would not presently send him to Sea, he never saw his Master in Eight Years after. At last he found Means to attend Mr. Peregrine Berty into France, second Son to the Right Honourable Peregrine, that generous Lord Wil-long blog, and famous Soldier; where coming to his Brother Robert, then at Orleans, now Vol. II!

Earl of Lindfer, and Lord Great Chamber-lain of England; being then but little Youths under Tutorage: His Service being needless, within a Month or six Weeks they fent him back again to his Friends; who when he came from London, they liberally gave him (but out of his own Estate) Ten Shillings to be rid of him; fuch oft is the fhare of Fatherless Children: But those two Honotirable Brethren gave him sufficient to return for England. But it was the least thought of his Determination, for now being freely at liberty in Paris, growing acquainted with one Mr. David Hume, who making some use of his Purse, gave him Letters to his Friends in Scotland to prefer him to King Fames. Arriving at Roan, he better bethinks himself, seeing his Money hear spent, down the River he went to Haber de grace, where he first began to learn the Life of a Soldier: Peace being concluded in France, he went with Captain Joseph . Duxbury into the Low-Countries, under whose Colours, having served three or four Years, he took his Journey for Scotland, to deliver his Letters. At Ancufan he imbark'd himself for Lethe, but as much danger, as Shipwrack and Sickness could endure, he Cccce

had at the Holy Isle in Northumberland near Berwick ? (being recovered) into Scotland he went to deliver his Letters. After shuch kind usage among those honest Scots at Ripweth and Broxmoth, but neither Money nor Means to make him a Courtier, he returned to William by in Lincoln bire; where within a short time, being glutted with two much Company, wherein he took finall delight, he retired himself into a little Woody Pafture, a good way from any Town, inveronce with many huntred Acres of other Woods: Here, by a fair Brook he built a Pavillion of Boughs, where only in his Cloths he lay. His Study was Machiavil's

Art of War, and Marcus Aurelius; his exercise a good Horse, with his Lance and Ring; his Food was thought to be more of Venison than any thing else; what he wanted his Man brought him. The Country wondering at such an Hermite, his Friends perswaden one Seignior Theodora Polaloga, Rider to Henry Earl of Lincoln, an excellent Horse Man, and a Noble Italian Gentleman, to infinuate into his Woodish Acquaintance, whose Languages and good Discourse, and Exercise of Riding drew him to stay with him at Tatterfall. Long these Pleafures could not content him, but he returned again to the Low Countries.

#### CHAP. II.

The notable Villary of four French Gallants, and his revenge; Smith thrown over-board; Captain La Roche of Saint Malo relieves him.

"Hus when France and Netherlands had taught him to Ride a Horse, and use his Arms, with fuch Rudiments of War, as his tender Years in those Martial Schools could attain unto; he was defirous to fee more of the World, and try his Fortune against the Turks, both repenting and lamenting to have feen fo many Christians flaughter one another. Opportunity casting him into the Company of four French Gallants well attended, faining to him the one to be a great Lord, the rest his Gentlemen, and that they were all devoted that way; over-perswaded him to go with them into France, to the Dutchels of Merceur, from whom they should not only have Means, but also Letters of Eavour to her Noble Duke, then General for the Emperour Redulphus in Hungary; which he did, with such ill Weather as Winter affordeth, in the dark Night they arrived in the broad shallow In-let of St. Valleries sur Soame in Picardie; His French Lord knowing he had good Apparel, and better furnished with Money than themselves, so Plotted with the Master of the Ship, to set his and their own Trunks ashore, leaving Smith aboard till the Boat could return, which was the next day after, towards Evening: The reaion he alledged, was, the Sea went so high he could come no sooner, and that his Lord was gone to Amiens, where they would flay his coming; which treacherous Villany, when divers other Soldiers, and Passengers understood, they had like to have slain the Master, and had they known how, would have run away with the Ship.

Coming on shoar, he had but one Car-

ralue, was forced to fell his Cloak to pay A Carre for his Passage. One of the Soldiers, called value a-Curzianvere, compassionating his linjury, penny. assured him, this great Lord Depreau was

only the Son of a Lawyer of Mortaigne in base Britany, and his Attendants Curfell, La Nelie, and Monfergat, three young Citizens, as arrant Cheats, as himfelf; but if he would accompany him, he would bring him to their Friends, but in the interim supplied his wants: Thus Travelling by Deepe, Codebeck, Humphla, Pount-demer in Normandy, they came to Caen in base Normandy; where both this Noble Curzianvere, and the great Prior of the great Abbey of St. Seeven (will re is the ruinous Tomb of William the Conqueror) and many other of his Friends kindly welcomed him, and brought him to Mertaigne, where he found Depreau and the rest, but to small purpose; for Mr. Curzianvere was a banished Man, and durst not be seen but to his Friends: yet the bruit of their Cozenage occasioned the Lady Collumber, the Baron Larshan, the Lord Shafebe, and divers other honourable Persons, to supply his wants, and with them to recreate himself so long as he would: But such pleasant pleasures suited little with his poor Estate, and his restless Spirit, that could never find content, to receive fuch Noble Favours, as he could neither deserve nor requite: But wandring from Port to Port to find some Man of War, spent that he had, and in a Forest, near dead with grief and cold, a rich Farmer found him by a fax. Fountein under a Tree: This kind Peasant relieved him again to his content, to follow his intent. Not long after, as he passed thorow

25.

A notable Villany of four French Gallants.

re be a great Grove of Trees, between Pounterson named and Dina in Britany, it was his chance to of the meet Curfell, more miserable than himself: His piercing Injuries had so small patience, as without any word they both drew, and in a short time Curfell fell to the Ground, where, from an old ruinated Tower, the Inhabitants feeing them, were fatisfied, when they heard Curfell confess what had formerly passed; and that how, in the dividing that they had stolen from him, they fell by the Ears amongst themselves, that were Actors in it; but for his part, he excused himself to be innocent as well of the one, as of the other. In regard of his hurt, Smith was glad to be so rid of him, directing his e noble- course to an honourable Lord, the Earl of is of the Pleyer, who during the War in France, with art of his two Brethren, Viscount Poomory, and loyer. Baron d'Mercy, who had been brought up in England; by him he was better refurnished than ever. When they had shewed him Saint Male Mount, Saint Michael, Lambal, Simbreack, Lanion, and their own fair Castle of Tuncadeck, Gingan, and divers other places in Britany (and their British Cornwaile) taking his leave, he took his way to Raynes, the Britains chief City, and so to Nants, Poyters, Rochel, and Bourdeaux. The rumour of the strength of Bayon in Biskay, caused him to see it; and from thence took his way from Lesker in Bicarne, and Paw, in the Kingdom of Navarre to Tolouza in Gafcoigne, Bezers, and Carcassone, Narbone, Montpelier, Nimes in Languedock, and thorow the

against Nice in Savoy. Here the inhuman an inhibation Provincials, with a Rabble of Pilgrims of divers Nations going to Rome, hourly cursing him, not only for a Hugoner, but his cafting Nation they swore were all Pirats, and so bim over vilely railed on his dread Soveraign Queen board. Elizabeth; and that they never should have fair Weather so long as he was aboard them; their Disputations grew to that Passion, that they threw him over board, yet God brought him to that little lile, where was no Inhabitants, but a few Kine and Goats. The next Morning, he espied two Ships more riding by them, put in by the Storm, that fetched him aboard, well refreshed him, and so kindly used him, that he was well contented to try the rest of his Fortune with them. After he had related unto them his former Discourse, what for pity, and the love of the Honourable Earl of Ployer, this Noble Britain his Neighbour, Captain la Capt. La Rothe of Saint Malo, regarded and enter-Rothe retained him for his well respected Friend. With the next fair Wind, they Sailed along by the Coast of Corfica and Sardinia, and crossing the Gulf of Tunn, passed by Cape Bona to the Isle of Lampadofa, leaving the Coast of Barbary till they came at Cape Refata, and so along the African Shoar, for Alexandria in Ægypt. There delivering their Fraught, they went to Scanderoone, rather to view what Ships were in the Road, than any thing else: keeping their Course by Cypres, and the Coast of Asia, Sailing by Rhodes, the Archipelagus, Candia, and the Coast of Gracia, and the Isle of Zefalonia. They lay to and again a few days, betwixt the Isle of Corfue, and the Cape of Otranto, in the Kingdom of Naples, in the Entrance

#### CHAP. III.

of the Adriatick Sea.

A desperate Sea Fight in the Streights; His Passage to Rome, Naples, and the view of Italy.

A desperate Sea Fight.

BErwixt the two Capes, they met with an Argosie of Venice; it seemed the Captain defired to speak with them, whose untoward answer was such, as slew them a Man; whereupon the Britain presently, gave them the Broad-fide, then his Stern, and his other Broad-fide also, and continued the Chase, with his chase Pieces, till he gave them to many Broad-fides one after another, that the Angles Sails and Tackling was so torn, she stood to her defence, and

Country of Avignion, by Arles to Marseilles in Provence, there imbarking himself for Ita-

(1); the Ship was inforced to Tolonne, and

butting again to Sea, ill Weather fo grew apon them, that they Anchored close aboard

the Shoar, under the little Isle of St. Mary,

a half the Britaine boarded her, yet they cleared themselves, but elapping her aboard again, the Argosie fired him, which with much danger to them both was prefently quenched. This rather augmented the Britain's rage, than abated his courage; for having reaccommodated himfelf again, shot her so oft between Wind and Water, she was ready to fink, then, they yielded; the Britain lost fifteen Men, the twenty, besides divers were hurt, the rest went to Work on all hands; some to stop the Leaks,

others to guard the Prisoners that were chained, the rest to rifle her. The Silks, Velvers, Cloth of Gold, and Tiffue, Pin-Iters, Chiequeons and Sukanies, which is Gold and Silver, they unloaded in four and revetue hours, was wonderful, whereof having fufficient, and tired with soil, they caft her off with her Company, with as much good Merchandise as would have fraughted fuch another Britain, that was but two Hundred Tuns, the four or five Hundred.

To repair his Defects, he stood for the Coast of Culabria, but hearing there was hix or feven Galleys at Melfins, he departed thence for Mulsu; but the Wind coming fuir, he kept his course along the Coast of the Kingdom of Sicilia, by Surdinia and Corfice, till he came to the Road of Antibo in Peamon, where he fet Smith on Shoar with five Hundred Chicqueens, and a little Box God fent him worth near as much more. Here he left this Noble Britaine. and embarked himfelf for Logorn, being glad to have fuch opportunity and means to better his Experience by the view of Italy; and having pailed Tuckeny, and the Country of Siena, where he found his dear Friends, the two Honourable Brettsen, the Lord Willoughly, and his Brother cruelly wounded, in a desperate fray, yet to their The Popes exceeding great Honour. Then to Virerho bely Stairs and munty other Cicles he came to Rome, where in was his chance to fee Pope Ciment from Jeruthe VMI. with many Gardinals, creep up the Holy Stairs, which they fay, are those our Saviour Chaft went up to Fontine Pilone, where blood fulling from his Head, being wens up so pricked with his Opown of Thoms, the drops are marked with Mails of Seed, upon them none dare go but in that manner, faying so many Ave-Maries and Rater-Nesters, as is their Devotion, and to kis the Nails of Steel: But on each fide, is a pair of fuch like Stairs, upon which you may go, stand, or kneel, but divided from the Holy Stairs by two Walls: Right against them is a Chappel, where hangs a great Silver Lamp, which burneth continually; yet they fay, the Oil neither increaseth nor diminisheth. A little distant is the ancient Church of Saint Jahn de Lateran, where he saw him fay Mass, which commonly he doth upon forme Friday once a Month. Having faluand Father Parsons, that famous English Jefait, and fatisfied himself with the Rarities of Rome, he went down the River of Tiber to Civita Vechia, where he embarked himfelf, to farisfie his Eye with the fair City of Number, and her Kingdoms Nobility; returning by Capua, Rome and Siena, he pafsed by that admired City of Florence, the Cities and Countreys of Belonia, Ferrara, Manme, Padue and Venice, whose Gulf he pasfed from Malamaco and the Adriatick Sea for Ragouza, spending some time to see that barren, broken Coast of Albania and Dalmatia, to Cape de Istria, Travelling the main of poor Sclavenia by Lubbiano, till he canae to Grates in Styria, the Seat of Ferdinando, Arch-duke of Austria, now Emperour of Almania: where he met an English Man, and an Irifo Jesuit, who acquainted him with many brave Gentlemen of good Quality, especially with the Lord Ebersbaught, with whom, trying fuch Conclusions, as he projected to undertake, preferred him to Baron Kifell, General of the Artillery, and he to a morthy Golonel, the Earl of Meldrively with whom, going to Vienna in And firin, under whose Regiment, in what vice, and how he spent his time, this ensu! ing Discourse will declare:

In excel-

The first part from A. to L. is signified mt Stra- by shewing and hiding one link, so oft as there is Letters from A. to that Letter you mean; the other part from M. to Z. is mentioned by two Lights in like manner. The end of a Word is fignified by shewing of three Lights, ever staying your Light at that Letter you mean, till the other may write it in a Paper, and answer by his signal, which is one Light, it is done, beginning to count the Letters by the Lights, every time from A. to M. by this means also the other returned his answer, whereby each did understand other. The Guides all this time having well viewed the Camp, returned to Kifel; who, doubting of his power, being but Ten thousand, was animated by the Guides, how the Turks were fo divided by the River in two parts, the could not easily second each other. To which Smith added this conclusion; that two or three thousand pieces of March faflened to divers fmall Lines of an hundred Fathom in length, being armed with Powder, might all be fired and stretched at an instant before the Alarum, upon the Plain of Hysnaburg, supported by two Staves, at each lines end, in that manner would feetn like fo many Musketteers; which was put in Practice; and being discovered by the Turks, they prepared to encounter these false fires, thinking there had been some great Army: whilst Kifell with his Ten thoufand being entred the Turks quarters, who ran up and down as Men amazed, it was not long ere Ebersbaught was pell-mell with them in their Trenches; in which distracted confusion, a third part of the Turks that belieged that fide towards Knowbruck, were flain; many of the rest drowned, but all fled. The other part of the Army was so busied to relist the false fires, that Kisel before the Morning put two thousand good Soldiers in the Town, and with small loss was retired; the Garrison was well relieved with what they found in the Turks Quarters, which caused the Turks to raise their Siege and return to Caniza: and Kisel with much honour was received at Kerment, and occafioned the Author a good Reward and Preferment, to be Captain of Two hundred and fifty Horse-men, under the conduct of Colonel Voldo, Earl of Meldritch.

#### CHAP. V.

The Siege of Stoll-weissenburg; The effects of Smith's Fire-works; A worthy Exploit of Earl Rosworme; Earl Meldritch takes the Bashaw Prifoner.

A General rumour of a general Peace, now spred it self over all the face of those tormented Countries: but the Turk intended no such matter, but levied Soldiers from all Parts he could. The Emperour also, by the affistance of the Christian Princes, provided three Armies, the one led by the Arch-duke Matthias, the Emperour's Brother, and his Lieutenant Duke Merceur to defend Low Hungary; the second, by Ferdinando the Arch-duke of Styria, and the Duke of Muntua his Lieutenant to regain Caniza; the third by Gonzago, Governour of High Hargers, to joyn with Georgio Buffer to make an absolute conquest of Transitionnia. Dake Merceur with an Army of Thirty

French, befreged Stoll-weiffenburg, otherwise The Siege called Alba Regalis, a place to strong by of Alba-Art and Nature, that it was thought im-Regalise pregnable. At his first coming, The Turks sallied upon the German Quarter, slew near five hundred, and returned before they were thought on. The next Night in like manner, they did near as much to the Bemers, and Hungarians; of which, Fortune still prefuming, thinking to have found the French quarter as careless, Eight or Nine hundred of them were cut in pieces and taken Prifosners. In this Encounter Monsieur Grandvile, a brave French Colonel, received seven or eight cruel Wounds, yet followed the Enemy to the Ports; he came off alive, but within three of four days died.

Earl Daddd

Earl Meldritch, by the Information of three or four Christians, (cfcaped out of the Town) upon every Alarum, where there was greatest Affeinblies and throng of People, caused Captain Swith to plut in practice his fiery Dragons, he had demonstrated unto him, and the Earl Von Sulch at Comera, which he thus performed: Having prepared forty or fifty round-bellied Earthen Pots, and filled them with hand Gun-powder then covered them with Pitch, mingled with Brimstone and Turpentine; and quartering as many Musket-bullets, that hung together but only at the Center of the divilion, stuck them round in the mixture about the Pots, and covered them again with the same mix-ture, over that a strong Searcloth, then over all, a good thickness of Towze-match, well tempered with Oyl of Lin-feed, Cam-phire, and Powder of Brimstone, these he fitly placed in Slings, graduated fo near as they could to the places of these Assemblies. At mid-night upon the Alarum, it was a fearful fight to fee the short flaming course of their flight in the Air, but presently after their fall, the lamentable noise of the miserable slaughtered Turks was most wonderful to hear: Besides, they had fired that Sub-urb at the Port of Buda in two or three places, which so troubled the Turks to quench, that had there been any means to have affaulted them, they could hardly have refifted the fire, and their Enemies. The Earl Rosworme, contrary to the opinion of all Men, would needs undertake to find means to surprize the Segeth and Suburb

of the City, strongly desended by a muddy

Lake, which was thought unpafiable.

The Duke having planted his Ordnance, buttered the other lide, whilst Reference in Emploite the dark Night, with every Man a bundle Em? R of Sedge and Bavias fill thrown before them, werne. so laded up the Lake, as they surprised the unregarded Suburb before they were disp vered: Upon which unexpected Alarum, Turks fled into the City, and the other Sub. urb not knowing the matter, got into the City alfo, leaving their Suburb for the Duck, who, with no great resistance, took it, who many Pieces of Ordnance; the City, being of no such strength as the Suburbs, with their own Ordnance was so battered, that it was taken by force, with fuch a merciless Execution, as was most pitiful to behold. The Bashaw notwithstanding, drew together Earl Ma a Party of Five hundred before his own dritch Palace, where he intended to die; but see takes the ing most of his Men slain before him, by Prifoner, the valiant Captain, Earl Meldritch, who took him Prisoner with his own hands; and with the hazard of himself saved him from the fury of other Troops, that did pull down his Palace, and would have rent him in pieces, had he not been thus preserved. The Duke thought his Victory much honoured with such a Prisoner; took order, he should be used like a Prince, and with all expedition gave charge presently to repair the Breaches, and the Ruins of this famous City, that had been in the possession of the Turks near threefcore years.

CHAP. VI.

A brave Encounter of the Turks Army with the Christians; Duke Merceur overthroweth Assan Bashaw; He divides the Christian Army; His Nobleness and Death.

Abomet the Great Turk, during the Siege, had raised an Army of Sixty thousand Men to have relieved it; but hearing it was lost, he sent Assan Bashaw, General of his Army, the Bashaw of Buda, Bashow Amerez, to see if it were possible to regain it; The Duke understanding there could be no great experience in such a new levied Army as Assan had, having put a strong Garrison into it, and with the brave . Colonel Resworme, Culnits, Meldritch, the Rhine Grave, Vahan, and many others, with Twenty thousand good Soldiers, set forward to meet the Tark in the Plains of Girk. Those rwo Armies encountred as they marched, where began a hot and bloody Skirmish be-

twixt them, Regiment against Regiment, A brave as they came in order, till the night parted Encounter them: Here Earl Meldritch was to inviron-Turks Ared among those half circular Regiments of my weth Turks, they supposed him their Prisoner, and the Chris his Regiment loft; but his two most coura-frians. gious Friends, Vahan and Culnits, made such a Passage amongst them, that it was a terror to fee how Horse and Man lay sprawling and tumbling. The ene way, fome another on the Ground. The Earl there at that time made his valour thine more bright than his Armour, which terms the parties of with Turkille than the parties to his Princed, Burnis Tomas to his Patter to his Princed, business

the Nobility, took their Ouths of Allegiance and Pidelity, and thus their Prince being gone Transferents became again subject to

the Emperor.

Now after the Death of Michael, Vavoid of Waltachia, the Turk lent one Ference to be their Vavoid or Prince; whole infulning "Tyranny carried the People to take Arms against him, so that he was forced to flie into the Confines of Meldevia; and Bufea in the lichalf of the Emperor, proclaimed the Lord Rodol in his fread. But Jeremy having effectioled an Army of forty thou-fand Turks, Tartars, and Moldeviant, returned into Wallachia. Rodol not yet able to raise sich a power, sted into Transilvania to Busca, his ancient Friend; who confidering well of the matter, and how good it would be for his own fecurity, to have Waltachia subject to the Emperor, or at least fuch an Employment for the remainders of the old Regiments of Sigifmundus, (of whole Greatness and true Affection he was very

furpicious) fent them with Rodal to removed Wallachia, conducted by the Valuat trine, the Earl Meldritch, Earl Velens, Earl Neder pole, Earl Zarvana, the Lord Besklefield, the Lord Budendorfe, with their Regiments, and divers others of great rank and quality, the greatest Friends and Alliances the Prince had; who with Thirty thousand, marched along by the River Altus, to the Streights of Rebrink, where they entred Whillachia, encamping at Raza; Jeremy lying at Arzish, drew his Army into his old Camp; in the Plains of Peteske, and with his best diligence fortified it, intending to defend himself, till more power came to him from the Crim-Tartar. Many finall Parties that came to his Camp, Rodol cut off, and in the nights would cause their Heads to be thrown up and down before the Trenches. Seven of their Porters were taken, whom Jeremy commanded to be flayed quick, and after hung their Skins upon Poles, and their Carcases and Heads on Stakes by them.

#### CHAP. X.

#### The Battle of Rottenton; a pretty Stratagem of Fire-works by Smith,

R O lol not knowing how to draw the Enemy to Battel, raifed his Army, burning and spoiling all where he came, and returned again towards Rebrink in the night, as if he had fled upon the general rumour of the Crim-Tartars coming, which to inflamed the Turks of a happy Victory, they urged Fereny against his Will to follow them. Rodol seeing his Plot fell out as he defired, so ordered the matter, that having regained the Streights, he put his Army in order, that had been near two days purfued with continual Skirmishes in his A Battle Rear, which now making Head against the betwixt Enemy, that followed with their whole Ar-Rodol and my in the best manner they could, was furioufly charged with fix thousand Herdukes, Wallachians, and Moldavians, led by three Colonels, Overfall, Dubras, and Calab, to entertain the time till the reft came up; Veltus and Nederspott with their Regiments. entertained them with the like courage, till the Zanzacke Hamesbeg, with fix thousand more, came with a fresh charge, which Meldritch and Badandary rather like enrogwhich and Besself are the like enrogtich and Besself are bravely encountion and a being flain unwhat they could
the his own hand at Zanzacke, whereupon

his Troops retiring, the two proud Baskames, Aladin, and Zizimmus, brought up the front of the body of their Battle. Velrus, and Neder folt having breathed, and joyning their Troops with Becklefield and Zarvana, with fuch an incredible courage, charged the left flank of Zizimmus, as put them all in disorder, where Zizimmus the Bashaw was taken Prisoner, but died presently upon his Wounds. Fereny feeing now the main Battel of Redol advance, being thus constrained, like a Valiant Prince in his front of the Vantgard, by his example fo bravely encouraged his Soldiers, that Rodol found no great affurance of the Victory. Thus be-Ing joyned in this bloody Maffacre, that there was scarce Ground to stand upon, but upon the dead Carcases, which in less than an hour, were so mingled, as if each Regiment had fingled out other. The admired Aladin that day did leave behind him a glorious name for his Valour, whose Death, many of his Enemies did lament after the Victory, which at that instant fell to Redol. It was reported, Jeremy was also flain; but it was not fo, bur fled with the remainder of his Army to Moldavia, leaving five and twenty thousand dead in the Field, of both Armics. And thus Rodol was feated again Wallachia in his Soveraignty, and Wallachia became subjected fubject to the Emperour.

to the Emperour.

### The true Travels, Adventures, and Observations

But long he reflect not to fettle his new Estate, but there came News, that certain Regiments of stragling Tartars, were foraging those Parts towards Moldavia. Meldritch with thirteen thousand Men was sent against them, but when they heard it was the Crim-Tartar, and his two Sons, with an Army of thirty thousand; and Ferenz, that had escaped with sourteen or fisteen thousand, lay in ambush for them about Langanaw, he retired towards Rottenton, 2 strong Gartilon for Rodol; but they were so invironed with these hellish numbers, they could make no great haft for skirmishing with their Scouts, Foragers, and small Parties that still encountred them. But one night amongst the rest, having made a pasfage through a Wood, with an incredible expedition, cutting Trees thwart each other to hinder their passage, in a thick Fogg, ear ', in the Morning, unexpectedly they met two thousand loaded with Pillage, and two or three hundred Horse and Cattel; the most of them were slain and taken Prisoners, who told them where Fereny lay in the passage, expecting the Crim-Tartar that was not far from him. Meldritch intending to make his passage by force, was advised of a pretty Stratagem, by the English Smith, which presently he thus accomplished; for having accommodated two or three hundred Trunks with wild-fire, upon the

Heads of Lances, and charging the Enemy in the night, gave fire to the Trunks, which blazed forth such Flames and Sparkles, that it to amazed not only their Horses, but their Foot also; that by the means of this flaming Encounter, their own Horses turned Tails with such sury, as by their violence overthrew Jeremy and his Army, without any loss at all to speak of to Meldrisch. But of this Victory, long they triumphed not; for being within three Leagues of Rottenton, the Tartar, with near forty thousand to befet them, that they must either fight, or be cut in pieces flying. Here Bufca, and the Emperour had their defire; for the Sun no sooner displayed his Beams, than the Tartar his Colours; where at mid-day he stayed a while, to fee the Passage of a tyrannical and treacherous imposture, till the Earth did blush with the blood of Honesty, that the Sum for shame did hide himself, from so monstrous sight of a cowardly Calamity. It was a most brave fight to see the Banners and Enligns streaming in the Air, the glit-tering of Armour, the variety of Colours, the motion of Plumes, the forests of Lances, and the thickness of shorter Weapons, till the filent Expedition of the bloody blaft from the murdering Ordnance, whose roaring Voice is not to foon heard, as felt by the aimed at Object, which made among them a most lamentable slaughter.

#### CHAP. XI.

The names of the English that were flain in the Battel of Rottenton; and how Captain Smith was taken Prisoner, and sold for a Slave.

IN the valley of Verifthorne, betwirt the River of Altus, and the Mountain of Rottenton, was this bloody Encounter, where the most of the dearest Friends of the noble Meldritch ha-Prince Sigismundus perished. ving ordered his Eleven thousand in the best manner he could, at the Foot of the Mountain upon his Flanks, and before his front, he had pitched sharp Stakes, their Heads hardned in the fire, and bent against the Enemy, as three Battalion of Pikes, amongst the which also, there was digged many small The Banle holes. Amongst those Stakes was ranged of Rotten-his Foot-men, that upon the charge was to retire, as there was occasion. The Tartar chaving ordered his 40000 for his best advantage, appointed Mustapha Bashaw to begin the Battel, with a general Shout, all their Enligns displaying, Drums beating, Trumpets and Haut-boys founding. Nederspole and Mavazo with their Regiments of

Horse most valiantly encountred, and forced them to retire; the Tartar Begolgi with his Squadrons, darkning the Skies with their flights of numberless Arrows, who was as bravely encountred by Veltus and Oberwin, which bloody flaughter continued more than an hour, till the matchless multitude of the Tartars so increased, that they retired within their Squadrons of Stakes, as was directed. The bloody Tartar, as scorning he should stay so long for the Victory, with his massie, Troops prosecuted the Charge: But it was a wonder to see how Horse and Man came to the Ground among the Stakes, whose disordered Troops were there so mangled, that the Christians with a loud Shout cried Victoria; and with five or fix field Pieces, planted upon the Thong of the Mountain, did much hurt to the Enemy that still continued the Battel with that fury, that Meldriich feeing there was no pos-Upilie

## of Captain JOHN SMITH.

fibility long to prevail, joyned his small Troops in one body, resolved directly to make his passage, or die in the conclusion: and thus in groß gave a general charge and for more than half an hour, made his way plain before him, till the main Battle of the Crim-Tartar, with two Regiments of Turks' and Janizaries to overmatched them, that they were overthrown. The night approaching, the Earl with some thirteen or fourteen hundred Horse, swam the River, fome vere drowned, all the rest slain or ta-ken Phisoners: And thus in this bloody Field, near 30000 lay, some Headless, Armless and Legless, all cut and mangled; where breathing their last, they gave this know-ledge to the World, that for the lives of so few, the Crim-Tartar never paid dearer. But now the Countries of Transilvania and Wallachia (subjected to the Emperor) and Si-Extratted gifmundus, that brave Prince, his Subject and Book, in Correct and Call tituled, the Captains and Soldiers, became a prey to the cruel devouring Turk: where, had the Em-Hungaria, perour been as ready to have affifted him, Wallachia; and those three Armies led by three such and Mol- worthy Captuins, as Michael, Busca, and written by Himself, and had those three Armies joyned Francisco together against the Turk, let all Men judge, Ferneza, how happy it might have been for all Chria learned stendom: and have either regained Bulgaria, or at least have beat him out of Hungaria, secretary, where he hath taken much more from the and tran- Emperour, than hath the Emperour from fisted by- Transilvania.

In this difinal Battel, where Nederspole,

Veltus, Zarvana, Marie, Bavel, and many other Earls, Barons at Solonels, Captains brave Gentlemen, and Soldiers were flain give me leave to remember the names of our own Country-men, with him in those Exploits, that as resolutely as the best in the defence of Christ and his Gospel, ended their days, as Bakersield, Hardwick, Thomas Mile- The Eng mer, Robert Mollineux, Thomas Bishop, Fran in this ch Compton , George Davison , Nicholas Willi- Bastel. ams, and one John a Scot, did what Men could do, and when they could do no more, left there their Bodies in Testimony of their minds; only Enfign Charleton, and Sergeant Robinson escaped: But Smith, among the flaughtered dead Bodies, and many a gasping Soul, with toil and Wounds lay groan-ing among the rest, till being found by the Pillagers, he was able to live, and perceiving by his Armour and Habit, his ranfor might be better to them than his Death, they led him Priloner with many others; well they used him till his Wounds were cured, and at Axepolis they were all fold for Slaves, like Beafts in a Market-place, where every Merchant, viewing their Limbs and Wounds, caused other Slaves to struggle with them, to try their strength, he fell to the share of Bashaw Bogal, who sent him forthwith to Adrianopolis, to for Constantinople to his fait Mistriss for a Slave. By twenty and twenty chained by the Necks, they marched in file to this great City, where they were delivered to their feveral Masters, and he to the young Charatza Tragabigganda.

#### CHAP. XII.

How Captain Smith was fent Prisoner thorew the Black and Dissabacca Sea in Tartaria; the Description of those Seas, and his usage.

This Noble Gentlewoman took fometime occasion to shew him to some Friends, or rather to speak with him, betause she could speak Italian, would leign her felf fick when the should go to the Banmians, or weep over the Graves, to know how Bogal took him Prisoner; and if he were as the Bashaw writ to her, a Bohemian Lord conquered by his Hand, as he had many others, which ere long he would prewhole Ranfornes should adorn her

her ties, whole kanonies mount and the last she glory of his Conqueits.

The head list proceed he knew for Bogal, till he south his at Angeli, and that he was in a set of the his Adventures. To try

the truth, she found means to find out many who could speak English, French, Dutch, and Italian; to whom relating most part of these former Passages she thought necessary, which they so honeitly reported to her, she took(as it feemed) much compassion on him; but having no use for him, lest her Mother should fell him, she sent him to her Brother, the Timor Bashaw of Nalbrits, in the Country of Cambia, a Province in Tartaria.

Here now let us remember his passing, in How be this speculative course from Constantinople by max sens Sander, Screw, Panassa, Musa, Lastilla, to taria. Varna, an ancient City upon the Black Sea. In all which Journey, having little more liberty, than his eyes judgment, fince his

Cape

thas.

## I ne true Pruvels: Adventures, and Observation

Captivity, he might be the Towns with their fhort Towers and a most plain, fertile, and delicate Country, officially that anote admired place of Greese, now called Rements but from Varna, nothing but the Black Sed Water, till he came to the two Capes of Jam and Pargiles, where he puffed the Science of Niger, which (as he conjectured) is some ten Leagues long, and three broad, betwixe two Low-lands, the Channel is deep, The Def. best at the entrance of the Sea Diffabutors cription of there are many great Ofic-shaulds, and matthe Distance of the Parks faid bacca Sea. were Trees, Weeds, and Mud, thrown from the In-land Countries, by the Imm-dations and violence of the Current, and east there by the Eddy. They Sailed by meny low liles, and faw many more of those muddy Rocks, and nothing elfe, but falt Water, till they came between Safax and Curushe, only two white Towns at the entrance of the River Bruapo appeared: In fix or seven days Sail, he saw four or sive seeming strong Castles of Stone, with flat tops and Bartlements about them, but arriving at Cambia, he was (according to their curiforn) well-used. The River was there more than half a Mile broad. The Castle was of a large Gircumference, fourteen or fifteen foot thick, in the Foundation forme fix foot from the Wall, is a Pallizado, and then a Ditch of about forty foot broad full of Water. On the West side of it, is a Town, all of low flat Houses, which as he conceived, could be of no great strength,

yet lit keeps all them barbarous Counsteys about it in admiration and fabjection. After he had flayed there three days; it was two days more before his Guides brought hirs to Nathrits, where the Tymer were then refident, in a great valt Stone Calife, with many great Courts about it, invitored with their Arms, when they first subjected these Countries, which only live to labour for those Tyrannical Turks.

To her unkind Brother, this kind Lady Smith's vvrit fo much for his good usage, that he usage in half suspected, as much as the intended; for Tartaria fhe told him, he fhould there but fojourn to learn the Language; and what it was to be a Turk, till time made her Master of her felf. But the Tymor, her Brother, diverted all this to the worst of Cruelty; for within an hour after his arrival, he caused his Drabman to strip him naked, and shave his Head and Beard fo bare as his Hand, a great Ring of Iron, with a long stalk bowed like a Sickle, revitted about his Neck, and a Coat made of Ulgries Hair, guarded about with a piece of an undrest Skin. There were mamy more Christian Slaves, and near an hundred Forsados of Turks and Moors, and he being the last, was slave of Slaves to them all. Among these slavish Fortunes, there was no great choice; for the best was so bad, a Dog could hardly have lived to endure, and yet for all their pains and labours,

no more regarded than a Beaft.

#### CHAP. XIII.

The Turks diet; the Slaves diet; the attire of the Tartars; and manner of Wars and Religions, &c.

The Tymor's DiPillaw, which is, boiled Rice and Garet of Cambia, is as manoes, with little bits of Mutton or Buckthe Turks, ones, which is Roated pieces of Horse, Bull, Ulgrie, or unity Beiss. Sambosses and Mar-fellis are great Dainties, and yet but round Pine, full of all forts of Flesh, they can get the parel with variety of Heris. Their best Drink is Ooffee, of a grain they call Conve, boiled with Wester, and Sherbeck, which is only Heary and Water; Marcs Milk, of the Milk of any Beast, they hold restora-The Maser Water. Their Bread is made of this Coava, which is a kinet of black When, and Cities a which white Seed, like Matta his Billy; Bur was shinking Victoria, the entraits of Horse and Ulgette; of this con in that pie-

ces, they will fill a great Cauldron, and being boiled with Cuskus, and put in great Bowls in the form of Chaffing-diffies, they fit round about it on the Ground, after they have raked it thorow, so oft as they please with their foul Fifts, the remainder was for the Christian Slaves. Some of this Broth. they would temper with Cukus pounded, and putting the Fire off from the Hearth, pour there a Bowl full, then cover it with Coals till it be baked, which stewed with the remainder of the Broth, and force finall pieces of Flesh, was an extraordinary Dain-

The Berter fort are attired like Tarks, big the anive the plain Tarrar bath a black Sheeps and of shofe ver his back, and two of the Length at Tarrars bout his Neck; the other two about his middle

flain. Captain Smith had his Horse slain under him, and himself fore wounded; but he was not long unmounted, for there was choice enough of Horses, that wanted Ma-The Turk thinking the Victory fure against the Duke, whose Army, by the Siege and the Garrison, he had left behind him, was much weakned, would not be content with one, but he would have all; and left the Duke should return to Alba Regalis, he fent that Night Twenty thousand to beliege the City, affuring them, he would keep the Duke or any other from relieving them. Two or three days they lay each by other, entrenching themselves; the Turks daring the Duke daily to a fett Battle, who at length drew out his Army, led by the Rhine-Grave, Culnits, and Meldritch; who upon their first Encounter, charged with that resolute and valiant courage, as disordered not only the foremost Squadrons of the Turks, but enforced all the whole Army to retire to the Camp, with the loss of five or fix thousand, with the Bashaw of Buda, and four or five Zanzacks, with divers other great Commanders, Two hundred Prisoners, and nine pieces of Ordnance. At that instant appeared, as it were, another Army coming out of a Valley over a plain Hill, that caused the Duke at that time to be contented, and to retire to his Trenches; which gave time to Assan, to reorder his disordered Squadrons: Here they lay nine or ten days, and more Supplies repaired to them, expecting to try the event in a fett Battle; but the Soldiers on both Parties, by reason of their great Wants, and approach of Winter, grew fo discontented, that they were ready of them-

selves to break up the Leager; the \_\_\_\_\_ retiring himself to Buda, had some of the Rear Troops cut off. Amaroz Binshaw hearing of this, found fuch bad welcome at Alba Regalis, and the Town so strongly re with so brave a Garrison, raised his and retired to Zigetum.

The Duke understanding, that the Archduke Ferdinando, had so resolutely besieped Caniza, as what by the lofs of Alba Regaln, and the Turks retreat to Buda, being void of hope of any relief, doubted not, but it would become again the Christians. To the furtherance whereof, the Duke divided his Duke Army into three parts. The Earl of Rof Mercent worme went with Seven thousand to Caniza; dividerb the Earl of Meldritch with Six thousand he bis Army. kent to affift Georgio Busca against the Tranfilvanians, the rest went with himself to the Garrisons of Strigonium and Komara; having thus worthily behaved himself, he arrived at Vienne, where the Arch-dukes and the Nobility with as much honour received him, as if he had conquered all Hungaria; his very Picture they effected would make them fortunate, which thousands kept as curiously as a precious relique. To requite this honour, preparing himfelf to return into France, to raise new Forces against the next year, with the two Arch-dukes, Marthias and Maximilian, and divers others of the Nobility, was with great Magnificence conducted to Nurenburg, there by them royally ducted to Nurenburg, there by them royally feafted, (how it chanced is not known;) but Merceur the next Morning he was found dead, and and bis his Brother in Law died two days after; Brother whose hearts, after this great Triumph, with in Lew die much forrow were carried into France.

eth Affan

THE Worthy Lord Resporme had not a worse Journey to the miserable Siege of Caniza, (whereby the extremity of an extraordinary continuing Tempest of Hail, Wind, Frost and Snow, insomuch that the Christians were forced to leave their Tents and Artillery, and what they had; it being to cold, that three or four hundred of them were frozen to Death in a Night, and two or three thousand lost in that miserable flight in the Snowy Tempest, though they di know no Enemy at all to follow them, than the Noble Earl of Meldritch ) Transilvania, where hearing of the

Death of Michael, and the brave Duke Merceur, and knowing the Policy of Buscas and the Prince his Royalty, being now beyond all belief of Men, in Possession of the best part of Transilvania, perswaded his Troops, in so honest a Cause, to atlist the Prince against the Turk, rather than Busca against the Prince.

The Soldiers being worn out with those Earl Methard Pays and Travels, upon hope to have dritch feet free liberty to make booty upon what they verb could get Possession of from the Turks, were Prince eafily perfwaded to follow him whitherfo- Sigilinum ever. Now this Noble Earl was a Transil-dass

born, and his Fathers Country yet nharied by the Turks; for Transilvania was yet in three Divisions, though the Prince had the Hearts both of Country and Resple; yet the Frontiers had a Garrison amongst the unpassable Mountains, some for the Emperour, some for the Prince, and some for the Turk: To regain which small Estate, he defired leave of the Prince to try his Fortunes, and to make use of that experience, the time of twenty years had taught him in the Emperours service, promiting to fpend the rest of his days, for his Countrys defence in his Excellencies Service. The Prince glad of fo brave a Commander, and fo many expert and ancient Soldiers, made him Camp Mafter of his Army, gave him all necessary relief for his Troops, and what freedom they defired to plunder the Turks.

The Earl having made many incursions ritch ma- into the Land of Zarkam, among those eth incur- Rocky Mountains, where were some Turks, over Re. some Tartars, but most Bandittoes, Rennegadoes, and fuch like, which formetimes he forced into the Plains of Regall, where is a City, not only of Men and Fortifications, strong of it self, but so environed with Mountains, that made the Passages so difficult, that in all these Wars, no attempt had been made upon it to any purpose: Having fatisfied himfelf with the Situation, and the most convenient Passages to bring his Army unto it: The Earth no fooner put on her green Habit, than the Earl overspread her with his armed Troops. To possess himself first of the most convenient Passage, which was a narrow Valley betwixt two high Mountains; he sent Colonel Veleus with his Regiment, dispersed in Companies to lie in Ambuscado, as he had directed them, and in the Morning to drive all the Cattel, they could find before a Fort in that Passage, whom he supposed would fally, seeing but some small Party to recover their prey; which took fuch good fuccess, that the Garrison was cut off by the Ambuscado, and Veltus seized on the Skonces, which were abandoned. Meldritch glad of so fortunate a beginning, it was fix days ere he could with fix thousand Pioneers make passage for his Ordnance: The Turks having fuch warning, strengthned the Town so with Men and Provision, that they made a scorn of fo fmall a number as Meldritch brought with him before the City, which was but eight. thousand. Before they had pitched their Tents, the Turks fallied in fuch abundance, as for an hour, they had rather a bloody Battel than a Skirmish, but with the loss of near Fifteen hundred on both fides. The Turks were chased till the Cities Ordnance caused the Earl to retire. The next day

Zachel Monfes, General of the Army, pitch-Moyles ed also his Tents with nine thousand Foot and Horse, and fix and twenty Pieces of Regal. Ordnance; but in regard of the Situation of this strong Fortress, they did neither fear them nor hurt them, being upon the point of a fair Promontory, environed on the one fide within half a Mile with an un-ufeful Mountain, and on the other fide with a fair Plain, where the Christians encamped, but so commanded by their Ordnance, they fpent near a Month in entrenching themfelves, and raising their Mounts to plant their Batteries; which flow proceedings the Turks oft derided, that their Ordnance were at pawn, and how they grew fat for want of Exercise, and fearing lest they should depart ere they could affault their City, fent this Challenge to any Captain in the Army.

That to delight the Ladies, who did long to see some Court-like pastime, the Lord Turbasbaw did defie any Captain, that had the command of a Company, who durst Combate with him for his Head: The matter being discussed, it was accepted, but so many Questions grew for the undertaking, it was decided by Lots, which fell upon Captain Smith, before spoken of.

Truce being made for that time, the Three him Rampires all beset with fair Dames, and gle Com-Men in Arms, the Christians in Battalia; bates.

Turbashaw with a noise of Haut-boys entred the Field well mounted and armed; on his shoulders were fixed a pair of great Wings, compacted of Eagles Feathers, within a ridge of Silver, richly garnished with Gold and precious Stones, a Janizary before him, bearing his Lance, on each fide another leading his Horse; where long he stayed not, one Smith with a noise of Trumpets, only a Page bearing his Lance, passing by him with 2 courteous Salute, took his Ground with fuch good fuccels, that at the found of the charge, he passed the Turk thorow the fight of his Beaver, Face, Head and all, that he fell dead to the Ground, where alighting and unbracing his Helmet, cut off his Head, and the Turks took his Body; and so returned without any hurt at all. The Head he presented to the Lord Moyses, the General, who kindly accepted it, and with joy to the whole Army he was generally welcom-

The Death of this Captain so swelled in the Heart of cree Grualgo, his vowed Friend, as rather imaged with madness than choler, he directed to removal challenge to the Conquerte, to removal Friends Head, or lose the own which according to his defire, was the state day undertaken:

# of Captain JOHN SMITH.

as before upon the found of the Trumpets, their Lances flew in pieces upon a clear Pallage, but the Turk was near unhorsed. Their Pistols was the next, which thanked Smith upon the Placard; but the next shot the Turk was so Wounded in the left Arm, that being not able to rule his Horse, and defend himfelf, he was thrown to the ground, and so bruised with the fall, that he lost his Head, as his Friend before him, with his Horse and Armour; but his Body, and his rich Apparel were fent back to the Town.

Every day the Turks made some Sallies, but few Skirmishes would they endure to any purpose. Our Works and Approaches being not yet advanced to that heighth and effect, which was of necessity to be performed; to delude time, Smith with so many incontradictible perswading Reasons, obtained leave, that the Ladies might know he was not so much enamoured of their Servants Heads; but if any Turk of their rank would come to the place of Combate to redeem them, should have his also upon the like conditions, if he could win it.

The challenge prefently was accepted by Bonny Mulgro. The next day, both the Champions entring the Field as before, each discharging their Pistol, having no Lances, but fuch martial Weapons as the Defendant appointed, no hurt was done; their Battle-Axes was the next, whose piercing Bills made sometime the one, sometime the other to have source sense to keep their Saddles, specially the Christian received such a blowthat he lost his Battle axe, and failed not much to have fallen after it, whereat the fupposed conquering—Turk, had a great shout from the Rampires. The Turk profecuted his advantage to the uttermost of his power; yet the other, what by the readiness of his Horse, and his judgement and dexterity in fuch a bufiness, beyond all Mens expectation; by God's affiftance, not only avoided the Turks violence, but having drawn his Faulchion, pierced the Turk to under the Culets, thorow back and body, that altho' he alighted from his Horse, he stood not long ere he lost his Head, as the rest had done.

#### CHAP. VIII.

Georgio Busca an Albane, his ingratitude to Prince Sigismundus; Prince Moyses his Lieutenant, is overthrown by Busca, General for the Emperour Rodulphus; Sigismundus yieldeth his Country to Rodulphus; Busca assisteth Prince Rodol in Wallachia.

His good success gave such great encouragement to the whole Army, that with a Guard of fix thousand, three spare Horses, before each a Turks Head upon a Lance, he was conducted to the Generals Pavilion with his Presents. Moyses received both him and them, with as much respect as the occasion deserved, embracing him in his Arms, gave him a fair Horse, richly furnished, a Scimitar and Belt worth Three hundred Ducats; and Meldritch made him Sergeant Major of his Regiment. But now to the Siege, having mounted fix and twenty pieces of Ordnance, fifty or fixty Foot above the Plain, made them so plainly tell his meaning, that within fifteen days two Breaches were made, which the Turks as valiantly defended as Men could; that day was made a darksome Night, but by the light that proceeded from the murdering Muskets, and peace-making Canon, whilest their slothful Governour lay in a Cattle or the top of thigh Mountain, and like a aliant Prince taketh what's the matter, when horror and death stood amazed each at other, to see who should prevail " Vol. II.

to make him victorious: Moyfes commanding a general affault upon the floping front of the high Promontory, where the Barons of Budendorfe and Oberwin, lost near half Regal 4/2 their Regiments, by Logs, Bags of Powder, Jaulted and and fuch like, tumbling down the Hill, they saken. were to mount ere they could come to the breach; notwithstanding with an incredible courage, they advanced to the push of the Pike with the Defendants, that with the like courage repulsed, till the Earl Meldritch, Becklefield and Zarvana, with their fresh Regiments seconded them with that fury, that the Turks retired and fled into the Castle, from whence by a Flag of truce they defi-red composition. The Earl remembring his Fathers Death, battered it with all the Ordnance in the Town, and the next day took it; all he found could bear Arms, he put to the Sword, and fet their Heads upon Stakes round about the Walls, in the same manner they had used the Christians, when they took it. Moyses having repaired the Rampires, and thrown down the Work in his Camp, he put in it a strong Garrison, though the pillage he had gotten in the

## The true Travels, Adventures, and Objervations

Town we much, having been for a long time an impregnable den of Thieves; yet the loss of the Army so intermingled the sowre with the sweet, as forced Monses to seek a surther revenge, that he sacked Verasio, Solmos, and Kupronks, and with two thousand Prisoners, most Women and Children, came to Esenberg, not far from the Princes Palace, where he there Encamped.

Sigismundus coming to view his Army, was presented with the Prisoners, and six

and thirty Enfigns; where celebrating thanks to Almighty God in triumph of those Victories, he was made acquainted with the service Smith had done at Olumpath, Stoll-Weissenburgh and Regal; for which, with great honour, he gave him three Turks Heads in a Shield for his Arms, by Patent, under his Hand and Seal, with an Oath ever to wear them in his Colours, his Picture in Gold, and three hundred Ducats yearly for a Penfion.

#### Gulielmus Segar, Garterus.

CIGISMUNDUS BATHORI, by the Grace of God, Duke of Transilvania, The lame Wallachia, and Moldavia, Earl of Anchard, Salford and Gromenda; to whom this in English. Writing may come or appear. Know that We have given Leave and Licence to John Smith an English Gentleman, Captain of 250 Soldiers, under the most Generous and Honourable Henry Volda, Earl of Meldritch, Salmaria, and Peldoia, Colonel of a though Horse, and fifteen hundred Foot, in the Wars of Hungary, and in the Provinces a foresaid under our Authority; whose Service doth deserve all praise, and perpetual Meritory towards us, as a Man that did for God and his Country overcome his Enemies: Wherefore out of our Love and Favour, according to the Law of Arms, We have ordained, and given him in his Shield of Arms, the Figure and Description of three Turks Heads, which with his Sword before the Town of Regal, in fingle Combat he did overcome, kill, and cut off, in the Province of Transilvania. But Fortune, as she is very variable, so it chanced and happened to him in the Province of Wallachia, in the year of Our Lord 1602, the 18th day of November, with many others, as well Noble Men as also divers other Soldiers, were taken Prisoners by the Lord Bashaw of Cambia, a Country of Tarraria; whose crucky brought him such good Fortune, by the Help and Power of Almighry God, that he delivered himself, and returned again to his Company and fellow Soldiers, of whom We do discharge him, and this he hath in Witness thereof, being much more worthy of a better Reward; and now intends to return to his own sweet Country. We defire therefore all Our loving and kind Kinsmen, Dukes, Princes, Earls, Barons, Governours of Towns, Chies, or Ships, in this Kingdom, or any other Provintes he shall come in, that you freely let pass-this the aforesaid Captain, without any hindrance or molectation , and this doing, with all kindness, we are always ready to do the like for you. Scaled at Lipswick in Misenland, the ninth of December, in the year of our Lord, 1602:

SIGISMUNDUS BATHORN

O all and fingular, in what Place, State, Degree, Order, or Condition whatfoever, to whom this prefent Wrising shall come: I William Segar, Knight, otherwise Garter, and principal King of Arms of England, wish health. Know, that I the aforesaid Garter, do witness and approve, that this aforesaid Patent, I have seen, Signed, and Sealed, under the proper Hand and Seal Manuel of the said Duke of Transitvania, and a true Copy of the same, as a thing for perpetual memory, I have Subscribed and Recorded in the Register, and Office of the Heralds of Arms. Dated at London, the nineteenth day of Angust, in the year of Our Lord, 1625, and in the first year of our Soveraign Lord Charles, by the Grace of God, King of great Britain, France, and Ireland, Defertier of the Faith, &c.

WILLIAM SEGAR.

#### CHAP. IX.

Sigismundus sends Ambassadours unto the Emperour. The Conditions re-Affared. He yieldeth up all to Busca, and returneth to Prague.

Ofca having all this time been raising new Forces, was commanded from the Emperour again to invade Transilvania, which being one of the fruitfullest and strongest Countries in those Parts, was now rather a Defart, or the very Spectacle of Defolation; their Fruits and Fields overgrown with Weeds, their Churches and battered Palaces, and best Buildings, as for fear, hid with Moss and Ivy; being the very Bulwark and Rampire of a great part of Europe, most fit by all Christians to have been supplied and maintained, was thus brought to ruin by them, it most concerned to support it. But alas, what is it, when the Power of Majefty pampered in all delights of pleasant Vanity, neither knowing, nor confidering the labour of the Plough-man, the hazard of the Merchant, the oppression of Statesmen, nor feeling the piercing Torments of broken Limbs, and inveterate Wounds, the toilsome Marches, the bad Lodging, the hungry Diet, and the extream milery that Sol-diers endure to fecure all those Estates, and yet by the spight of malicious detraction, starves for want of their Reward and Recompences, whilst the politique Courtier, that commonly aims more at his own Honours and Ends, than his Countries good, or his Princes Glory, Honour, or Security, as this worthy Prince too well could teltifie. But the Emperor being certified how weak and desperate his Estate was, sent Busca again with a great Army, to try his fortune once more in Transilv mia. The Prince confidering how his Country and Subjects were confurmed, the finall means he had any longer to defend his Estate, both against the cruelty of the Turk, and the power of the

Emperor, and the finall care the Polanders had in supplying him, as they had promited, fent to Busca to have truce, till Messengers might be fent to the Emperour for some better agreement, wherewith Bufca was con-tented. The Ambassadors so prevailed, that the Emperour re-affured unto them the conditions he had promifed the Prince at their confederacy for the Lands in Silefia, with 60000 Ducats presently in hand, and 50000 Ducats yearly as a Pension. When this conclusion was known to Morfes, his Lieutenant then in the Field with the Army, that would do any thing, rather than come in subjection to the Germans, he encouraged his Soldiers, and without any more ado, Busca in marched to encounter Bufca, whom he found Transilvamuch better provided than he expected; to throweth that betwixt them, in fix or feven hours, Moyfes. more than five or fix thousand, on both fides, lay dead in the field. Moyfes thus overthrown, fled to the Turks at Temefware, and his scattered Troops, some one way, some another.

The Prince understanding of this so sudden and unexpected Accident, only accompanied with an hundred of his Gentry and Nobility, went into the Camp to Bufca, to let him know how ignorant he was of his Lieutenants error, that he had done it without his direction or knowledge, freely offering to perform what was concluded to Ambaffadors with a second of the caufing all the Goodbe their throng-Hole for the Emperor, where he was have stablished in his Majesty had promise

## of Cuprain JOHNSMITH.

middle, with another over his Belly, and the Legs tied in like manner behind him ; Then two more, made like a pair of Bales; ferveth him for Breeches; with a little close Cap to his Skull of black Felt, and they use exceeding much of this Felt for Carpets, for Bedding, for Coats, and Idols. Their Houses are much worse than your Irish, but the In-land Countries have none but Carts and Tents, which they ever remove from Countrey to Countrey, as they fee occasion, driving with them infinite Troops of black Sheep, Gattel and Ulgries, eating all up before them as they go

For the Tartars of Nazi, they have neither Town, nor House, Corn, nor Drink, Nagi and but Flesh and Milk. The Milk they keep in great Skins like Burracho's, which though it be never fo fower, it agreeth well with their strong Stomachs. They live all in Hordias, as doth the Crim-Tartars, three or four hundred in a Company, in great Carts

fifteen or fixteen foot broad, which are covered with finall Rods, wattled together in the form of a Bird's Nest, turned upwards, and with the Ashes of Bones, temper'd with Oil, Camels Hair, and a Clay they have, they loam them to well, that no Weather can pierce them, and yet very light. Each Hordia hath a Murse, which they obey as their King. Their Gods are infinite. One or two thousand of those glittering white Carts drawn with Camels, Deer, Bulls, and Ulgries, they bring round in a Ring, where they pitch their Camp; and the Murfe, with his chief Alliances, are placed in the midft. They do much hurt, when they can get any Stroggs, which are great Boats used upon the River Volga, (which they call Edic) to them that dwell in the Countrey of Perolog, and would do much more, vvete it not for the Muscovites Garrisons that there Inhabit.

#### CHAP. XIIII.

The Description of the Crim-Tartars; their Houses and Carts, their Idolatry in their Lodgings.

The de-feigura of and Scythia are all one, but so large the Crim- and spacious, seve, or none, could ever perfeetly describe it, nor all the several kinds of those most barbarous People that inhabit Those we call the Crim-Tartars, border upon Moldavia, Podolia, Lithuania, and Russia, are much more regular than the interior parts of Scythia. This Great Tartarian Prince, that hath so troubled all his Neighbours, they always call Chan, vehich fignificth Emperour; but vve, the Crim Tartar. He liveth for the most part in the best Champion Plains of many Provinces; and his removing Court is like a great City of Houses and Tents, dravyn on Carts, all so orderly placed East and West, on the right and left hand of the Prince's House, which is always in the midst towards the South, before vyhich, none may pitch their Houses, every one knowing their Order and Quarter, as in an Army. The Princes Hulloufes Houses are very artificially vyrought, both and Carts. the Foundation, Sides, and Roof of Wick-3 ers, ascending round to the top like a Dove coat; this they cover with white Salt, or white Earth, temper'd with the Povvder of Bonges, that it may thine the vvhiter; formetines with black Felt, curiously painted with Vines, Trees, Birds, and Beatts; the breadth of the Carts are eighteen or Vol. II.

tvventy Foot, but the house stretcheth four or five Foot over each fide, and is drawn vvith ten or tvvelve, or for more state, twenty Camels and Oxen. They have al-Baskethi so great Baskets, made of smaller Wickers, like great Chests, with a covering of the fame, all covered over with black Felt. rubbed over with Tallow and Sheeps Milk, to keep out the Rain; prettily bedecked with Painting or Feathers; in those they put their Houshold Stuff and Treasure. drawn upon other Carts for that purpose. When they take down their Houses, they fet the door always towards the South, and their Carts thirty or forty Foot distant on each fide, East and West, as if they were two Walls: The Women also have most curious Carts; every one of his Wives hath a great one for her felf, and so many other for her Attendants, that they feem as many Courts as he hath Wives. One great Tartar or Nobleman, will have for his particular, more than an hundred of those Houses and Carts, for his several Offices and Uses, but set so far from each other, they will feem like a great Village. Having taken their Houses from the Carts, they Their Ido-place the Master always towards the North; later in over whole head is always an Image like a sheir Lodgi Puppet, made of Felt, which they call his ings. Brother; the Women on his left hand, and

Ggggg

over the chief Millrife her Head, fuch another Brother, and between them a little one, which is the keeper of the House; at the good Wive's Beds feet is a Kids Skin, fluffed with Wooll, and near it a Pupper looking towards the Maids; next the door another, with a dried Cows Helder, for the Women that Milk the Kine, because only the Mea Milk Mares; every Morning those Images in their orders, they beforinkle with that they drink, be it Collinos, or whatfoever, but all the white Mares Milk is refer-Coffmos is ved for the Prince. Then without the door,
Mares
Mills thrice to the South, every one bowing his knee in honour of the Fire; then the like to the East, in honour of the Air; then to the West, in honour of the Water; and laftly to the North, in behalf of the dead. After the Servant bath done this duty to the four quarters of the World, he returns into the House, where his Fellows stand waking, ready with two Cups, and two Basons, to give their Master, and his Wife that lay with him that Night, to wash and drink, who must keep him company all the day following, and all his other Wives come thither to drink, where he keeps his House that day; and all the Gifts preferred him till night, are laid up in her Chafts; and at the door a Bench full of Cups, and drink for any of them to make merry.

#### CHAP. XV.

Their Feasts, common Diet, Princes Estate, Buildings, Tributes, Laws, Slaves, Entertainment of Ambassaders.

Their Feafts.

Milk.

F OR their Featls, they have all forts of Beafls, Birds, Fish, Fruits, and Herbs they can get, but the more variety of wild ones is the best; to which they have excellent Drink made of Rice, Millet, and Honey, like Wine; they have also Wine, but in Summer they driak most Cossmoo, that standeth ready always at the entrance of the door, and by it a Fidler; when the Mafter of the House beginneth to drink, shey all cry, ha, ha, and the Filder plays, then they all clap their Hands and dance, the Men before their Masters, the Women before their Miltreffes; and ever when he drinks, they cry as before; then the Fidler stayeth till they drink all round; fornctimes they will drink for the Victory; and to provoke one to drink, they will pull him by the Ears, and lug and draw him, to stretch and heat him, clapping their Hands, flamping with their Feet, and dancing before the Champions, officing them Cups, then draw them back again to increase their Appetite; and thus continue till they be drunk, or their drink done, which they hold an honour, and no Infirmity

Their com-

Their com- Though the Ground be recommend have Bread and Hony-wine; Grapes they have plenty, Though the Ground be fornile, they fow and Wine privately, and good Fich and Fish; but the common fore samped Milles, mingled with Milk and Water. They call Calla for Meat, and drink any thing; also any Beaft unprofitable for fervice they kill, when they are like to die, or however they die, they will can them, Guts, Liver and all; but the most sleshy parts they cut in

thin flices, and hang it up in the Sun and Wind without falting, where it will dry fo hard, it will not putrifie in a long time. A Ramm they esteem a great Feast among forty or fifty, which they cut in pieces boiled or roasted, puts it in a great Bowl, with Salt and Water, for other Sawce they have none; the Master of the Feast giveth every one a piece, which he eateth by himfelf, or carrieth away with him. Thus their hard How the bare makes them so infinite in Cattel, and become potheir great number of Captived Women to breed upon, makes them to populous. But near the Christian Frontiers, the baser sort make little Cottages of Wood, called Vlufi, daubed over with dirt, and Beafts dung covered with fedge; yet in Summer they leave them, beginning their Progress in April, with their Wives, Children, and Slaves, in their Carted Houses, scarce convenient for four or five Persons; driving their Flocks towards Precopia, and fometimes into Taurica, or Ofon, a Town upon the River Tanew, which is great and swift, where the Turk hath a Garrison; and in October return again to their Cottages. Their Clothes are the Skins of Dogs, Goats, and Sheep, lined with Cotton Cloath, made of their finest Wools, for of their worst they make their Felt, which they use in abundance, well for Shooes and Caps, as Houses, Beds, and Idols; also of the coarse Wooll mingled with Horse hair, they make all their Cordage. Norwithstanding this wan- Their Prindring life, their Princes lit in great State ces state upon Beds, or Carpers, and with great reverence are attended both by Men and Wo-

mea, and richly ferved in Plate, and great Silver Cups, delivered upon the Knee, eattired in rich Furrs, lined with Phulh, or Tuffity, or Robes of Tiffue. Thefe Tursars policis many large and goodly Plains, wherein feed innumerable Herds of Horse and Cattel. as well wild as tame; which are Elkes, Bifons, Hories, Deer, Sheep, Goats, Swine, Bears, and divers others.

Ancient

In those Countries are the Ruins of ma-Buildings. ny fair Monasteries, Castles, and Cities, as Bnonfaray , Satutium , Almaffary , Precopia , Cremunt, Sedacom, Capha, and divers others by the Sea, but all kept with strong Garrifons for the Great Turk, who yearly by Trade or Traffick, receiveth the chief Commodities those fertile Countries afford, as Bezoar, Rice, Furis, Hides, Butter, Salt, tribute to Cattel, and Slaves, yet by the spoils they get from the secure and idle Christians, they maintain themselves in this Pomp. Also their Wives, of whom they have as many as they will, very costly, yet in a constant custom with decency.

Good yers.

Army,

They are Mahometans, as are the Turks, Laws, yet from whom also they have their Laws, but no Lawyers, nor Attornies, only Judges, and Juffices in every Village, or Hordia; but Capital Criminals, or matters of moment, before the Chan himfelf, or Privy Councils, of whom they are always heard, and speedily discharged; for any may have access at any time to them, before whom they appear with great Reverence, adoring their Princes as Gods, and their Spiritual Judges as Saints; for Justice is with such Integrity and Expedition Executed, without Covetoufnels, Bribery, Partiality, and Brawling, that in fix Months they have sometimes scarce six Causes to hear. About the Princes Court, none but his Guard wear any Weapon, but abroad they go very strong, because there are many Bandittos, and Thieves.

They use the Hungarians, Russians, Wal- their lachians, and Moldavian Slaves (whereof slaves. they have plenty) as Beafts to every work; and those Tartars that serve the Chan, or Noblemen, have only Victuals and Apparel, the rest are generally nastly, and idle, naturally miterable, and in their Wars bet-

ter Thieves than Soldiers.

Moldavia, and Nagayon Tartars; their Mei- ment of fengers commonly he useth bountifully, and dours. very nobly, but sometimes most cruelly; when any of them do bring their Presents, by his Houshold Officers, they are entertained in a plain Field, with a moderate proportion of Flesh, Bread and Wine, for once; but when they come before him, the Sultans, Tuians, Ulans, Marbies, his chief Officers and Councellors arrend, one Man only bringeth the Ambaffadour to the Court Gate, but to the Charl he is led between two Councellors; where faluting him upon their bended knees, declaring their mellage, are admitted to eat with him, and presented with a great Silver Cup full of Mead from his own hand, but they drink it upon their

Knees: when they are dispatched, he invites them again, the Feast ended, they go back

a little from the Palace door, and rewarded with Silk Vestures, wrought with Gold down to their Anckles, with an Horse or two, and sometimes a Slave of their own

Nation; in them Robes presently they come

to him again, to give him thanks, take their

leave, and so depart.

This Chan hath yearly a Donative from His Enthe King of Polard, the Dukes of Liebnania, terrain-

#### CHAP. XVI.

How he levieth an Army; their Arms and Provision; how he divideth the Spoil, and his Service to the Great Turk.

Hen he intends any Wars, he must How he lefirst have leave of the Great Turk. vierb en whom he is bound to affift when he commandeth, receiving daily for himfelf and chief of his Nobility, Pentions from the Turk, that holds all Kings but Slaves, that pay Tribute, or are subject to any: signifying his intent to all his Subjects, within a Month commonly he raifetts his Army, and every · Man is to furnish himself for three Months Victuals, which is parched Miller, or ground to Meal, which they ordinarily mingle with Water (as is faid) hard Cheefe

or Curds dried, and beaten to powder, a little will make much Water like Milk, and dried Flesh, this they put also up in Sacks: The Chan and his Nobles have some Bread and Aquavita, and quick Cattel to kill when they please, wherewith very sparingly they are contented. Being provided with expert Guides, and got into the Country he in2 tends to Invade, he fends forth his Scouts to bring in what Prisoners they can, from whom he will wrest the utmost of their Knovvledge fit for his purpose: having advised vieh his Council, what is most fit

to be done, the Nobility, according to their Antiquity, doth march; then moves he with his whole Army: if he find there is no Enemy to oppose him, he adviseth how far they shall Invade, commanding every Man (upon pain of his Life) to kill all the obvious Rusticks; but not to hurt any Women, or Children.

The man-Wars.

Ten, or fifteen thousand, he commonly ner of bu placeth, where he findeth most convenient for his standing Camp; the rest of his Army he divides in feveral Troops, bearing ten or twelve Miles square before them, and ever within three or four days: return to their Camp, putting all to Fire and Sword, but that they carry with them back to their Camp; and in this scattering manner he will invade a Country, and be gone with his Prey, with an incredible Expedition. But if he understand of an Enemy, he will either fight in Ambuscado, or flie; for he will never fight any Battel if he can chuse, but upon treble advantage; yet by his innumerable flights of Arrows, I have feen flic from his flying Troops, we could not well judge, whether his fighting or flying was most dangerous, so good is his Horse, and so expert his Bow-men; but if they be fo intangled they must fight, there is none can be more hardy, or resolute in their defences.

How be jpoil.

Regaining his own Borders, he takes the divides the tenth of the principal Captives, Man, Wo. man, Child, or Beast (but his Captains that take them, will accept of some particular Person they best like for themselves) the rest are divided amongst the whole Army, according to every Mans Defert and Quality; that they keep them, or fell them to who will give most; but they will not forget to use all the means they can, to know their Effates, Friends, and Quality, and the better they find you, the worle they will use you, till you do agree to pay fuch a Ransome, as they will impose upon you; therefore many great Persons have endured much mifery to conceal themselves, because their Ranforns are fo intolerable: their best hope is of fime Christian Agent, that many times cometh to redeem Slaves, either with Money, or Man for Man; those Agents knowing so well the extream covetousness of the Tartars, do use to bribe some Jew or Merchant, that feigning they will fell them again to some other Nation, are oft redeemed for a very fmall Ranfom.

How the But to this Tartarian Army, when the Chan doth Turk commands, he goeth with some small Jerue the Artillery; and the Nagayans, Precopens, Gre**at** Crims, Ofevens, and Circaffians, are his Tri-Tuck. butaries; but the Petigorves, Occaconians, Bialego, dens, and Dobrucen Tartars, the Turk

by Covenant commands to follow him, & that from all those Tarters he hath had an Army of an hundred and twenty thousand excellent, fwift, stomackfull Tarrarian Horse; for foot they have none. Now the Chan, his Sultans and Nobility, use Turkish, Caramanian, Arabian, Parthian, and other strange Tartarian Horses; the swiftest they efteem the best; seldom they feed any more at home, than they have present use for; but upon their Plains is a short Wood-like Heath, in tome Countries like Gail, full of Berries, much better than any Grass.

Their Arms are fuch, as they have fur- Their prised or got from the Christians or Persians, Arms. both Breit-plates, Swords, Scimitars, and Helmets; Bows and Arrows they make most themselves, also their Bridles and Saddles are indifferent, but the Nobility are very handsome, and well armed like the Tucks, in whom confuseth their greatest Glory; the ordinary fort have little Armour, fome a plain young Pole unshaven, headed with a piece of Iron for a Lance; some an old Christian Pike, or a Turks Cavarinel; yet those Tattertimallions will have two or three Horses, some four or five, as well for fervice, as for to eat; which makes their Armies feem thrice so many as there are Soldiers. The Chan himself hath about his Person, Ten thousand chosen Tartars and Janizaries, some small Ordnance, and a white Mares Tail, with a piece of green Taffity on a great Pike, is carried before him for a Standard; because they hold no Beast so precious as a white Mare, whose Milk is only for the King and Nobility, and to Sacrifice to their Idols; but the rest have Enfigns of divers Colours.

For all this miserable Knowledge, Furniture, and Equipage, the mischief they do in Christendom is wonderful, by reason of their hardness of Life and Constitution, Obedience, Agility, and their Emperours Bounty, Honours, Grace, and Dignities he ever bestoweth upon those, that have done him any memorable Service in the face of

his Enemies.

The Caspian Sca, most Men agree that A Descriphave passed it, to be in length about 200 tion of the Leagues, and in breadth an hundred and Sea. fifty, environed to the East, with the great Delarts of the Tartars of Turkemania; to the West, by the Circasses, and the Mountain Caucasus; to the North, by the River Vola, and the Land of Nagay; and to the South, by Media, and Persia: This Sca is fresh Water in many places, in others as falt as the great Ocean; it hath many great . Rivers which fall into it, as the mighty River of Volga, which is like a Sea, running near Two thousand Miles, through many

great and large Countries, that fend into it many other great Rivers; also out of Saberia, Tdick, and Tem, out of the great Mountain Caucasus, the River Sirus, Arash, and divers others, yet no Sea nearer it than the black Sea, which is at least an hundred Leagues distant: In which Country live the Georgians, now part Armenians, part Nestorians; it is neither found to increase or diminish, or empty it self any way, except it be under Ground, and in some places they

can find no Ground at Two hundred Fa-

Many other most strange and wonderful things are in the Land of Cathay, towards the North-east, and China towards the Southeast, where are many of the most famous Kingdoms in the World, where most Arts; Plenty, and Curiofities are in fuch abundance, as might feem incredible, which hereafter I will relate, as I have briefly gathered from fuch Authors as have lived there.

#### CHAP. XVII.

How Captain Smith estaped his Captivity; slew the Bashaw of Nalbrits in Cambia: his Passage to Russia, Transilvania, and the middest of Europe to Africa.

How Smith Captivity.

ALL the hope he had ever to be deonly the love of Tragabigzanda, who furely was ignorant of his bad usage; for although he had often debated the matter with some Christians, that had been there a long time Slaves, they could not find how to make an escape, by any reason or possibility; but God beyond Man's Expectation or Imagination helpeth his Servants, when they least think of help, as it hapned to him. So long he lived in this miserable Estate, as he became a Thresher at a grange in a great Field, more than a League from the Timors's House; the Bashaw, as he oft used to visit his Granges, visited him, and took occasion so to beat, spurn, and revile him, that forgetting all reason, he beat out the Timors Brains with his Threshing Bat, for they have no Flalls; and feeing his Estate could be no worse than it was, clothed himself in his Clothes, hid his Body under the Straw, filled his Knapfack with Corn, shut the doors, mounted his Horse, and ran into the Defart at all adventure; two or three days, thus fearfully wandring he knew not whither, and well it was, he met not any to ask the way; being even as taking leave of this miserable World, God did direct him to the great way or Castragan, as they call it, which doth cross these large Territories, and generally known among them by these marks.

planted a Post, and in it so many bobs with broad ends, as there be ways, and every bob the Figure painted on it, that demonstrateth to what part that way leadeth; as that which pointeth towards the Crim's Country, is marked with a half Moon, if towards the Georgians and Persia, a black Man, full of white spots, if towards China, the Picture of the Sun, if towards Musco-. Vol. II,

via, the Sign of a Cross, if towards the Habitation of any other Prince, the Figure whereby his Standard is known. To his dying Spirits thus God added some comfort in this melancholy Journey, wherein if he had met any of that vile Generation, they had made him their Slave, or knowing the Figure Engraven in the Iron about his Neck, (as all Slaves have) he had been sent back again to his Master; fixteen days he travelled in this fear and torment, after the Cross, till he arrived at Æcopolis, upon the River Don, a Garrison of the Muscovites. The Governour after due Examination of those his hard events, took off his Irons, and so kindly used him, he thought himself new rifen from the Dead, and the good Lady Calamara, largely supplied all his

This is as much as he could learn of those faription of wild Countries, that the Country of Cambia, bia is two days Journey from the Head of paffuge to the great River Bruapo, which springeth Russia. from many places of the Mountains of Innagachi, that joyn themselves together in the Pool Kerkes; which they account for the Head, and falleth into the Sca Diffalacca, called by some the Lake Maoris, which receiveth also the River Tanan, and all the Rivers that fall from the great Countries of the Circaffi, the Cartaches, and many from the Tauricaes, Precopes, Cummani, Coffunka, and the Crim; through which Sea he Sail-In every crossing of this great way is, ed, and up the River Bruapo to Nalbrits, and thence through the Delarts of Circuffi to Ecopolis, as is related; where he stayed with the Governour, till the Convoy wene to Caragnam; then with his Certificate how he found him, and had examined with his friendly Letters, fent him by Zumalack to Caragnaw, whose Governour in like manner so kindly used him, that by this means he went with a fafe conduct to Lereh, and Don-

Hhhhh

Their guides in those Countries.

through

Newgrod in Siberia, by Rezechica, upon the River Nieper, in the confines of Lithuania; from whence with as much kindness, he was convoyed in like manner by Coroski, Duberesko, Duzibello Drohobus, and Oftroge in Volonia; Sastaw, and Lasco in Podolia; Halico and Collania in Palonia; and fo to Hermonflat in Transilvania. In all this his life, he feldom met with more Refrect, Mirth, Content and Entertainment; and not any Governour where he came, but gave him somewhat as a Present, befides his Charges; seeing themselves as subject to the like Cala-His Obser- mity. Through those poor continually Forvations in raged Countries, there is no passage, but ku four- with the Caravans or Convoys; for they Transilva. are Countries rather to be pitied than envicd; and it is a wonder any should make Wars for them. The Villages are only the midst here and there, a few Houses of streight of Europe. Firr Trees, laid heads and points above one another, made fast by notches at the ends, more than a Man's heighth, and with broad split Boards, pinned together with woodden Pins, as thatched for coverture. In ten Villages you shall scarce find ten Iron Nails, except it be in some extraordinary Man's House. For their Towns, Acopolis, Letch, and Donko, have Rampires made of that woodden Walled fashion, double, and betwixt them Earth and Stones, but so latched with cross Timber, they are very strong against any thing but Fire; and about them a deep Ditch, and a Palizado of young Firr Trees; but most of the rest have only a great Ditch cast about them, and the Ditches Earth, is all their Rampire; but round, well environed with Palizadoes. Some have forne few fmall pieces of fmall Ordnance, and Slings, Calievers, and Muskets, but their generallest Weapons are the Russe Bows and Arrows; you shall find Pavements over Bogs,

ko, in Cologoske, and thence to Berniske, and

only of young Firr-Trees, laid cross one over another, for two or three hours Journey, or as the Passage requires, and yet in two days Travel, you shall scarce see fix Habitations. Notwithstanding to see how their Lords, Governours, and Captains are civilized, well attired and accounted with Jewels, Sables, and Horses, and after their manner with curious Furniture, it is wonderful; but they are all Lords or, Slaves. which makes them so subject to every Inva-

In Transilvania, he found so many good Friends, that but to see, and rejoyce himself (after all those Encounters) in his Native Country, he would ever hardly have left them, though the mirrour of vertue their Prince was ablent. Being thus glutted with content, and near drowned with Joy, he passed high Hungaria by Fileck, Tocka, Casfovia, and Undergroway, by Ulmicht in Moravia, to Prague in Bohemia; at hit he found the most gracious Prince Sigismundus, with his Colonel at Lipswick in Misenland, who gave him his Pass, intimating the service he had done, and the Honours he had received, with fifeeen hundred Ducats of Gold to repair his Loffes: With this he spent some time to visit the fair Cities and Countries of Dresden in Saxony, Magdeburgh and Brunswick; Cassel in Hessen; Wittenberg, Vilum, and Minekin in Bavaria; Augsburg, and her Univerlities; Hama, Frankford, Mentz, the Palatinate; Worms, Spires, and Straburg; passing Nancie in Lorain, and France by Park to Orleans, he went down the River of Loyer, to Angiers, and imbarked himfelf at Nantz in Britain, for Bilbao in Bukay, to see Burgos-Valladolid, the admired Monastery of the Escurial, Madrid, Toledo, Corduba, Cucdyrial, Sivil, Cheries, Cales, and St. Lucas in Spain.

#### CHAP. XVIII.

The Observations of Captain Smith; Mr. Henry Archer, and others in Barbary.

Being thus satisfied with Europe and Asia, understanding of the Wars in Barbary, he went from Gibralter to Centa and Tangier, thence to Saffee, where growing into Acquaintance with a French Man of War, the Captain and some twelve more went to Morocco, to see the ancient Monuments of that large renowned City: It was once the principal City in Barbary, fituated in a goodly plain Country, 14 Miles from the great

Mount Atlas, and fixty Miles from the At-Yantick Sea; but now little remaining, but the King's Palace, which is like a City of it felf, and the Christian Church, on whose The three Golden flat, square Steeple is a great broach of Iron, Balls of whereon is placed the three Golden Balls of Africa. Africa: The first is near three Ells in Circumference, the next above it formewhat less, the uppermost the least over them, as it were an half Ball, and over all a pretty gilded

The de-(cription

Against those Golden gilded Pyramid. Against those Golden Balls hath been shot many a shot, their weight is recorded 700 weight of pure Gold, hollow within, yet no that did ever hit them, nor could ever any Confpirator attain that Honour as to get them down. They report, the Prince of Morocco bethrothed himfelf to the King's Daughter of Æthiopia, he dying before their Marriage, the cauled those three Golden Balls to be let up for his Monument, and vowed Virginity all her Life. The Alfantica is also a place of note, because it is invironed with a great Wall, of Moroc- wherein lie the Goods of all the Merchants fecurely guarded. The Inderea is also (as it were) a City of it self, where dwell the Jews: The rest for the most part is defaced; but by the many Pinnacles and Towers, with Balls on their tops, hath much appearance of much sumptuousness and curiosity. There have been many famous Univerlities, which are now but Stables for Fowls, and Beafts, and the Houses in most parts lie tumbled one above another; the Walls of Earth are with the great fresh Flouds washed to the ground; nor is there any Village in it, but Tents for Strangers, Larbes and Moors. Strange Tales they will tell of a great Garden, wherein were all forts of Birds, Fishes, Beafts, Fruits, and Fountains, which for Beauty, Art and Pleasure, exceeded any place known in the World, though now nothing but Dung-hills, Pigeon-Houses, Shrubs and Bushes. There are yet many excellent Fountains, adorned with Marble, and many Arches, Pillars, Towers, Ports, and Temples; but most only reliques of lamentable Ruins and fad Defolation.

When Muly Hamet Relgined in Barbury, he had three Sons, Muly Sheek, Muly Sidan, and Muly Befferres, he a most good and noble King, that governed well with Peace and Plenty, till his Empres, more cruel than any Beast in Africa, poisoned him, her own Daughter, Muly Sheck, his eldest Son, born of a Portugal Lady, and his Daughter, to bring Muly Sidan, to the Crown now reigning, which was the cause of all those brawls, and Wars that followed betwixt those Brothers, their Children, and a Saint that started up, but he played the Devil.

A bloody

King Muly Hamet was not black, as ma-Muly Ha my suppose, but Molata, or thiny, as are met, or the most of his Subjects; every way noble, free Zeriff of Barhard and friendly, very rich and pompous
in Some and Majetty, though he litteth not
sipon a Throne nor Chair of flate, but
cross Leg'd upon a rich Carpet, as don'the
farth, whole Religion of Mahomet, with an
introduble miderable Curtofity they observe. His ordinary Guard is at feat 5000, but

in Progress, he goeth not with less than 20000 Horse-men, himself as rich in all his Equipage, as any Prince in Christendom, and yet a Contributor to the Turk. In all his Kingdom were so few good Artificers, His great that he entertained from England, Gold-love to fmiths, Plummers, Carvers, and Polishers English of Stone, and Watch-makers, so much he Men. delighted in the Reformation of Workmanthip, he allowed each of them ten Shillings a day standing Fee, Linen, Woollen, Silks, and what they would for Diet and Apparel, and Custom-free to transport, or import what they would; for there were scarce any of those qualities in his Kingdom, but those, of which there are divers of them, living at this present in London. Amongst the rest, one Mr. Henry Archer, a Watch-maker, walking in Morocco, from the Alfantica to the Juderea, the way being very foul, met a great Priest, or a Sante (as they call all great Clergy-men) who would have thrust him into the dirt for the way; but Archer not knowing what he was, gavehim a box on the Ear, presently he was apprehended, and condemned to have his Tongue cut out, and his Hand cut off: But no fooner it was known at the King's Court, but 300 of his Guard came, and broke open the Prifon, and delivered him although the Fact was next degree to Treason.

Concerning this Archer, there is one thing The strange more worth noting: Not far from Mount love of a Atlas, a great Lioness in the heat of the 1 ion. day, did use to bathe her self, and teach her young Puppies to swim in the River Cauzef, of a good breadth; yet she would carry which fome Moors perceiving, watched their there one after another over the River; opportunity, and when the River was between her and them, stole four of her Whelps, which she perceiving, with all the speed she could passed the River, and coming near them, they let fall a Whelp (and fled with the rest) which she took in her mouth, and fo returned to the rest: A Male and a Female of those they gave Mr. Archer, who kept them in the King's Garden, till the Male killed the Female, then he brought it up as a Puppy-dog lying upon his Bed, till it grew so great as a Mastiff, and no dog more tame or gentle to them he knew: But being to return for England, at Saffee he gave him to a Merchant of Marfeilles, that presented him to the French King, who fent him to King James, where it was kept in the Tower leven Years: After one Mr. John Bull, then Servant to Mr. Archer, with divers of his Friends, went to see the Lions, not knowing any thing at all of him; yet this rare Beaft intelled him before he saw him, whiting, grouning, and fumbling, with fuch

an expression of acquaintance, that being informed by the Keepers how he came this ther; Mr. Bull fo prevailed, the Keeper opened the Grate, and Bull went in: But no Dog could fawn more on his Master, than the Lion on him, licking his Feet, Hands, and Face, skipping and tumbling to and fro, to the wonder of all the beholders; being fatisfied with his acquaintance, he made shift to get out of the Grate: But when the Lion Taw his Friend gone, no Beaft by bellowing, roaring, fcratching, and howling, could express more rage and forrow, nor in four days after would he either eat or drink.

Another

In Morocco, the King's Lions are altogelind Lion ther in a Court, invironed with a great high 171 Moroc Wall; to those they put a young Puppydog: The greatest Lion had a fore upon his neck, which this Dog to licked, that he was healed: The Lion defended him from the fury of all the rest, nor durst they eat till the Dog and he had fed; this Dog grew great, and lived amongst them many years

Fez also is a most large and plentiful The de-

of Fez.

Country, the chief City is called Fez, divided into two parts; old Fez, containing about 80 thousand Housholds, the other 4000 pleasantly situated upon a River in the heart of Barbary, part upon Hills, part upon Plains, full of people, and all forts of Merchandize. The great Temple is called Carucen, in breadth seventeen Arches, in length 120, born up with 2500 white Marble Pillars: under the chief Arch, where the Tribunal is kept, hangeth a most huge Lamp, compassed with 110 lesser, under the other also hang great Lamps, and about some, are burning fifteen hundred lights,

They fay, they were all made of the Bells

the Arabians brought from Spain. It hath three Gates of notable heighth, Pricsts and

Officers so many, that the Circuit of the

Church, the Yard, and other Houses, is little less than a Mile and half in compass. there are in this City 200 Schools, 200 Inns. 400 Water-Mills, 600 Water-Conduits, 700 Temples and Oratories; but 50 of them most stately and richly furnished. Their Alcazer or Burfe is Walled about, it hath twelve Gates, and fifteen Walks covered with Tents, to keep the Sun from the Merchants, and them that come there. The King's Palace, both for strength and beauty is excellent, and the Citizens have many great Privileges. Those two Countries of Fez and Morocco, are the best part of all Barbary, abounding with People, Cattel, and all good Necessaries for Man's use. For the rest, as the Larbs, or Mountainers, the Kingdoms of Cocom, Algier, Tripoli, Tunus, and Ægypt; there are many large Histories of them in divers Languages, especially that writ by that most excellent Statesman, John de Leo, who afterwards turned Christian. The unknown Countries of Guine and Binn, A brief this fix and twenty years have been fre-description quented with a few English Ships only to of the most Trade, especially the River of Senega, by parts of Captain Brimslead, Captain Brockit, Mr. Crump, Africa and divers others. Also the great River of

Gambra, by Captain Jobson, who is returned in thither again, in the Year 1626, with Mr. William Grent, and thirteen or fourteen others, to stay in the Country, to discover some way to those rich Mines of Gazo or Tumbatu, from whence is supposed the Moors of Barbary have their Gold, and the certainty of those supposed Descriptions and Relations of those interiour parts, which daily the more they are sought into, the more they are corrected: For furely, those interiour Parts of Africa, are little known to either English, French, or Durch, though they use much the Coast; therefore we will make a little bold with the Observations of the Portugals.

#### CHAP. XIX.

#### The frange Discoveries and Observations of the Portugals in Africa.

HE Porougals on those Parts have the plory, who first coasting along this Portugals Will he Shoar of Africa, to find pallage to the \_nt-Indies, within this hundred and fifty years, even from the Streights of Gibraleer, about the Cape of Bone Esperance to the Perfian Gulf, and thence all along the Afian Coast to the Moluccas, have subjected many great Kingdoms, erected many Common - wealths, built many great and strong Cities; and where is it

they have not been by Trade or Force? No not so much as Cape de Verd, and Sorm leone; but most Bays or Rivers, where there is any Trade to be had, especially Gold, or conveniency for Refreshment, but they are scattered; living so amongst those Blacks, by time and cunning, they feen to be maturalized amongst them. As for the Mes of the Canaries, they have fair Towns, many Villages, and many thousands of People rich in Commodities.

or Edward.

Ordoarde Lapez , a noble Pertuguie, Anne Dom. 1578, imbarking himself for Congo to Trade, where he found such Entertainment, finding the King much oppressed with Enemies, he found means to bring in the Poringuls to affiff him, whereby he planted there Christian Religion, and spent most of his life to bring those Countries to the Grown of Portugal, which he describeth in this

Congo.

The Kingdom of Congo is about 600 The King Miles Diameter any way, the chief City called St. Savadore, seated upon an exceeding high Mountain, 150 Miles from the Sea, very fertile, and Inhabited with more than 100000 Persons, where is an excellent Prospect over all the plain Countries about it, well watered, lying (as it were) in the Center of this Kingdom, over all which the Portugals now command, though but an handful in comparison of Negroes. They have Flesh and Fruits very plentiful of divers forts

ld Ele-

This Kingdom is divided into five Provinces, viz. Bamba, Sundi, Pango, Batta and Pembo; but Bamba is the Principal, and can afford 400000 Men of War. Elephants are bred over all those Provinces, and of wonderful greatness; though some report, they cannot kneel, nor lie down, they can do both, and have their Joynts as other Creatures for use: With their Fore-feet they will leap upon Trees to pull down the Boughs, and are of that strength, they will shake a great Cocao Tree for the Nuts, and pull down a good Tree with their Tusks, to get the Leaves to eat, as well as Sedge and long Grass, Cocao Nuts and Berries, &c. which with their Trunk they put in their Mouth, and chew it with their finaller Teeth; in most of those Provinces, are many rich Mines, but the Negroes opposed the Portugueses for working in them.

be Kingingola.

The Kingdom of Angola is wonderful populous, and rich in Mines of Silver, Copper, and most other Metals; fruitfull in all manner of Food, and fundry forts of Cattel, but Dogs Flesh they love better than any other Meat; they use few Clothes, and no Armour; Bows, Arrows, and Clubs are their Weapons. But the Porsuguefes are well armed against those Engines, and do buy yearly of those Blacks more than five thousand Slaves, and many are People exceeding well proportioned.

King-

The Anchies are a most valiant Nation, m of An but most farange to all about them. Arms are Bows, short and small, wrapped about with Serpents Skins, of divers Colours, but so smooth, you would think them all one with the Wood, and it makes them very strong; their Strings little twigs, but Vol. II.

exceeding tough and flexible; their Arrows short, which they shoot with an incredible quickness. They have short Axes of Brass and Copper for Swords; wonderful, loyal and faithful, and exceeding simple, yet to active, they skip amongst the Rocks like Goats. They trade with them of Nubea, A strange and Congo, for Lamach, which is a finall Meney. kind of Shell-fish, of an excellent azure, colour, Male and Female, but the Female they hold most pure; they value them at divers prices, because they are of divers forts, and those they use for Coin, to buy and fell, as we do Gold and Silver; nor will they have any other Money in all those Countries, for which they give Elephants Teeth; and Slaves for Salt, Silk, Linen Cloth, Glass-beads, and such like Portugal Commodities.

They circumcife themselves, and mark A Shemin their Faces with fundry flashes from their bles of Infancy. They keep a shambles of Man's Flesh Flesh, as if it were Beef, or other Victuals; for when they cannot have a good Market for their Slaves; or their Enemies they take, they kill, and fell them in this manner; fome are so resolute, in shewing how much they fcorn death, they will offer themselves and Slaves, to this Butchery to their Prince and Friends; and though there be many Nations will eat their Enemies, in America and Afia, yet none but those are known to be so mad, as to eat their Slaves and Friends

Religions and Idols they have as many, as Nations and Humours; but the Devil hath the greatest part of their Devotions, whom all those Blacks do say, is white; for there are no Saints but Blacks.

But belides those great Kingdoms of Con-Divers o, Angola, and Azichi, in those unfrequented Nations Parts are the Kingdoms of Lango, Matania, yet un-Battua, Sofola, Mozambeche, Quivola, the the won. Isle of St. Lawrence, Mombaza, Melinda, the ders of Empires of Monomotapa, Monemugi, and Africa. Presbyter John, with whom they have a kind of Trade, and their Rites, Customs, Climates, Temperatures, and Commodities by Relation. Also of great Lakes, that deserve the Names of Seas, and huge Mountains of divers forts, as some scorched with heat. some covered with Snow; the I ntains of the Sun, also of the Moon, some c stal, some of Iron, some of Silver, and Mountains of Gold, with the Original of Nilm; likewise fundry forts of Cattel, Fishes, Fowls, strange Beasts, and monstrous Serpents; for Africa was always noted to be a fruitful Mother of fuch terrible Creatures; who meeting at their watering places, which are but Ponds in defart places, in regard of the heat of the Country, and their extremiliili

## 398 The true Travels, Adventures, and Observations

ties of Nature, make strange Copulations, and so ingender those extraordinary Monfters. Of all these you may read in the History, of this Edward Lopez, translated into English by Abraham Hartwel, and dedicated to John (Lord Arch-bishop of Canterbury, 1597. But because the Particulars are most concerning the conversion of those Pagans, by a good poor Priest, that first converted a Noble Man, to convert the King, and the rest of the Nobility; sent for so many Priests and Ornaments into Porsugal, to Solemnize their Baptisms with such Magniscence, which was performed with such strange Curiosities, that those poor Negro's adored them as gods, till the Priests grew to that Wealth, a Bishop was sent to rule

over them, which they would not endure. which endangered to fpoil all before they could be reconciled. But not to trouble you too long with those Rarities of uncertainties; let us return again to Barbary where the Wars being ended, and Befferres possessed of Morocco, and his Fathers Treafure, a new bruit arose amongst them, that Muly Sidan was raising an Army against him, who after took his Brother Befferres Prisoner; but by reason of the uncertainty. and the prefidious, treacherous, bloody murthers rather than War, amongst those perfidious, barbarous Moors, Smith returned with Merham, and the rest to Saffe, and so aboard his Ship, to try some other conclufions at Sea.

#### CHAP. XX.

A brave Sea Fight betwixt to Spanish Men of War, and Captain Merham, with Smith.

Erham, a Captain of a Man of War I then in the Road, invited Captain Smith, and two or three more of them aboard with him; where he spared not any thing he had to express his kindness, to bid them welcome, till it was too late to go on Shoar, so that necessity constrained them to stay aboard; a fairer Evening could not be, yet ere Midnight, fuch a Storm did arise, they were forced to let slip Cable, and Anchor, and put to Sea; spooning before rhe Wind, till they were driven to the Canaries; in the Calms they accommodated themfelves, hoping this strange accident might yet produce some good event; not long it was before they took a small Bark coming from Tenerif, loaded with Wine; three or four more they chased, two they took, but found little in them, fave a few Paffengers, that told them of five Dutch Men of War, about the Isles, so that they stood for Boiadora, upon the African Shoar, betwixt which and Cape Noa, they descryed two Sail. Merbam intending to know what they were, hailed them; very civilly they danced their Top-fails, and defired the Man of War to come aboard them, and take what he would, for they were but two poor diffressed Biskeiners. But Merbam the old Fox, seeing himfelf in the Lions paws, forung his louf, the other tacked after him, and came close up to his nether Quarter, gave his Broad-fide, and so loused up to Windward; the Vice-Admiral did the like, and at the next bout, the Admiral with a noise of Trumpets, and all his Ordnance, Murtherers, and Muskers, boarded him on his Broad-fide; the other in like manner on his ley Quarter, that it

was fo dark, there was little light, but fire and fmoak; long he stayed not, before he fell off, leaving 4 or 5 of his Men sprawling over the Grating; after they had battered Merham about an hour, they boarded him again as before, and threw four Kedgars or Grapnels in Iron Chains, then shearing off, they thought so to have torn down the Grating; but the Admiral's Yard was so intangled in their Shrouds, Merham had time to discharge two cross barr shot amongst them, and divers Bolts of Iron made for that purpose, against his Bow, that made such a Breach, he seared they both should have funk for Company; so that the Spaniard was as yare in slipping his chained Grapnels, as Merham was in cutting the Tackling, kept fast their Yards in his Shrouds; the Vice-Admiral presently cleared himself, but spared neither his Ordnance nor Muskets to keep Merham from getting away, till the Admiral had repaired his Leak; from twelve at noon, till fix at night, they thus interchanged one volly for another; then the Vice-Admiral fell on Stern, staying for the Admiral that came up again to him, and all that night stood after Merbam, that shaped his course for Mamora, but fuch small way they made, the next Morning they were not three Leagues off from Cape Nos. The two Spanish Men of War, for so they were, and well appointed, taking it in scorn as it seemed, with their Chase, Broad-fide, and Stern, the one after the street, within Musket shot, plying their Ord-nance; and after an hours Work, commanded Merham amain for the King of Spain upon fair Quarter; Merham drank to them

them, and so discharged his Quarter Pieces: Which Pride the Spuniard to revenge, boarded him again, and many of them were got to the top to unfling the Main Sail, which the Mafter and some others from the Round-House, caused to their cost to come tumbling down; about the Round-House the Spaniards to peftred, that they were forced to the great Cablen and blew it up; the smoak and fire was so vehement, as they thought the Ship on fire; they in the Fore-Castle were no less assaulted, that they blew up a piece of the Grating, with a great many of Spaniards more; then they cleared themselves with all speed, and Merham with as much Expedition to quench the Fire with wet Cloaths and Water, which began to grow too fast. The Spaniard still playing upon him with all the shot they could; the open Places presently they covered with old Sails, and prepared themselves to fight to

the last Man. The Angry Spaniard seeing the fire quenched, hung out a Flag of truce to have but a Parley; but that desperate Marham knew there was but one way with him, and would have none, but the report of his Ordnance, which he did know well how to use for his best Advantage. Thus they spent the next Asternoon, and half the Night, when the Spaniards either lost them or left them. Seven and twenty Men Merham had flain and fixteen wounded, and could find they had received 140 great shot. A wounded Spaniard they kept alive confessed, they had lost 100 Men in the Admiral, which they did fear would fink ere she could recover a Port. Thus Re-accommodating their Sails, they failed for Sanda Cruse, Cape Goa, and Magadore, till they came again to Saffee, and then he returned into England.

#### CHAP. XXI.

The continuation of the General History of Virginia; the Summer Isles, and New England; with their present Estate from 1624. to this prefent 1629.

Oncerning these Countries, I would be a forry to trouble you with repeating one thing twice, as with their Mapps, Commodities, People, Government and Religion yet known; the beginning of these Plantations, their Numbers and Names, with the Names of the Adventures, the Yearly proceedings of every Governour both here and there. As for the Misprissons, Neglect, Grievances, and the causes of all those Rumours, loffes and croffes that have happened; I refer you to the General History, where you shall find all this at large; especially to those Pages where you may read my Letter of Advice to the Councel and Company, what of necessity must be done, or lose all and leave the Country, Pag. 70. what Commodities I sent home, Pag. 163. my Opinion and offer to the Company, to feed and defend the Colonies, Pag. 150. my Account to them here of my Actions there, Pag. 163. my feven Answers to his Majesty's Commissioners: Seven Questions what hath hindered Virginia, and the remedy, Pag. 165. How those Noble Gentlemen spent near two Years in perufing all Letters came from • thence; and the differences betwixt many Factions, both here and there, with their Complaints; especially about the Sallery which should have been a new Office in London, for the well ordering the fale of Tobacco, that 2500 Pounds should Yearly

have been raifed out of it, to pay four or five Hundred Pounds Yearly to the Governour of that Company, two or three Hundred to his Deputy; the rest into Stipends of forty or fifty Pounds Yearly for their Clerks and other Officers which were never there, Pag. 153. but not one Hundred Pounds for all them in Virginia, nor any thing for the most part of the Adventures in England, except the undertakers for the Lotteries, Setters out of Ships, Adventures of Commodities, also their Factors and many other Officers, there imployed only by friendship to raise their Fortunes out of the Labours of the true Industrious Planters by the Title of their Office, who under the colour of fincerity, did pillage and deceive all the rest most cunningly: For more than 150000 Pounds have been spent out of the Common Stock, belides many thoulands have been there Confumed, and near 7000 People that there died, only for want of good Order and Government, otherwise long ere this there would have been more than 20000 People, where after twenty Years spent only in Complement and trying new Conclusions, was remaining scarce 1500, with some few Cattel.

Then the Company diffolved, but no Account of any thing; so that his Majesty appointed Commissioners to oversee, and give Order for their Proceedings. Being thus

thus in a manner left to themselves, since then within these four Years, you shall see how wonderfully they have increased beyond expectation; but so exactly as I defired, I cannot relate unto you: For altho' I have tired my felf in feeking and discourfing with those returned thence, more than would a Voyage to Virginia; few can tell me any thing, but of that Place or Places they have Inhabited, and he is a great Traveller that hath gone up and down the River of James Town, been at Pamaunke, Smith's Isles, or Accomack; wherein for the most part, they keep one tune of their now particular abundance, and their former wants having been there, some fixteen Years, some twelve, some six, some near twenty, &c. But of their general Estate, or any thing of worth, the most of them doth know very

little to any purpole.

Their e-

Now the most I could understand in gestate 1627. neral, was from the Relation of Mr. Nathaniel Camfey, that lived there with me, and returned Anno Dom. 1627. and some others affirm; Sir George Terely was Governour, Captain France West, Doctor John Pott, Captain Roger Smith, Captain Matthews, Captain Tucker, Mr. Clabourn, and Mr. Farrer, of the Council: their Habitations many. The Governour, with two or three of the Council, are for most part at James Town. the rest repair thither as there is occasion: but every three Months they have a general Meeting, to confider of their Publick Affairs.

Their Their Numbers then were about 1500, Numbers, some say rather 2000, divided into seventeen or eighteen several Plantations; the greatest part thereof towards the falls, are fo inclosed with Pallisadoes they regard not the Salvages; and amongst those Plantations above James Town, they have now found means to take plenty of Fish, as well

> are the largest, having Means they need not want.

Upon this River they feldom fee any Their condition with Salvages, but in the Woods, many times she Salva- their Fires: yet some few there are, that upon their opportunity, have flain some few straglers, which have been revenged with the Death of so many of themselves; but no other Attempt hath been made upon them this two or three Years.

with Lines as Nets, and where the Waters

Their Cattel, Namely, Oxen, Kiuc, Bulls, crease of they imagine to be about 2000; Goats great Canie and store and great increase; the wild Hoggs, which were infinite, are deftroyed and eaten by the Salvager: but no Family is so poor that hath not tame Swine fufficient; and for Poultrey, he is a very bad Husband,

breedeth not an Hundred in a Year, and the Richer fort doth daily feed on them.

For Bread they have plenty, and so good, Plenty, that those that make it well, better cannot Corn. be: Divers have much English Corn, especially Mr. Abraham Perce, which prepared this Year to fow two Hundred Acres of Enlift Wheat, and as much with Barly, feeding daily about the number of fixty Persons at his own Charges.

For Drink, Some Malt the Indian Corn, Their others Barly, of which they make good Ale, Drink. both strong and small, and such plenty thereof, few of the Upper Planters drink any Water: but the better fort are well furnished with Sack, Aquavita, and good Eng-

lish Beer.

The Servants commonly feed upon Milk Their Ser. Homili, which is bruised Indian Corn pounded, vants dies. and boiled thick, and Milk for the fawce; but boiled with Milk, the best of all will feed oft on it, and leave their Flesh; with Milk, Butter and Cheefe; with Fish, Bulls-flesh, for they seldom kill any other, &c. And every one is so applied to his labour about Tobacco and Corn, which doth yield them fuch Profit, they never regard any food from the Salvages, nor have they any Trade or Conference with them, but upon meer Accidents and Defiances: And now the Merchants have left it, there having gone fo many voluntary Ships within these two Years, as have furnished them with Apparel, Sack, Aquavita, and all necessaries, much better than any before.

For Arms, There is scarce any Man but Their Arms he is furnished with a Piece, a Jack, a Coat and Exerof Male, a Sword or Rapier; and every cife. Holy-day, every Plantation doth Exercise their Men in Arms, by which means Hunting and Fowling, the most part of them

are most Excellent Marks-men. For Discoveries they have made none, Their nor any other Commodity than Tobacco do Healthand they apply themselves unto, tho' never any Discovewas Planted at first. And whereas the Coun-ries. trey was heretofore held most intemperate and contagious by many, now they have Houses, Lodgings, Victuals, and the Sun hath Power to Exhale up the moift Vapours of the Earth, where they have cut down the Wood, which before it could not, being covered with spreading tops of high Trees; they find it much more healthful than before; nor for their Nmbers, few Countries are less troubled with Death, Sickness, or any other Disease, nor where overgrown. Women become more fruitful.

Since this, Sir George Verely died 1628, The present Captain West succeeded him; but about a estate of Virginia Virginia 1629.

Five shou-

pitality.

Council as before: James Town is yet their chief Seat, most of the Wood destroyed, little Corn there Planted, but all Converted into Pasture and Gardens, wherein doth grow all manner of Herbs and Roots we have in England, in abundance, and as good Grafs as can be. Here most of their Cattle do feed, their Owners being most some one way, some another, about their Plantations, and return again when they please, or any Shipping comes in to Trade. Here in the Winter they have Hay for their Cattel, but in other Places they Browze upon Wood, and the great husks of their Corn, with some Corn in them, doth keep them well. Mr. Hut- Mr. Hutchins faith, they have 2000 Cattle, and about 5000 People; but Master Floud, John Davis, William Emerson, and divers others say, about 5000 People, and 5000 Five thou- Kine, Calves, Oxen and Bulls; for Goats, find Cat- Hoggs and Poultry, Corn, Fish, Dear, and many forts of other wild Beafts; and Hogs, and Fowl in their Season, they have so much Poultry in- more than they spend, they are able to feed three or four Hundred more than they have; and do oft much relieve many Ships, both there, and for their Return; and this last Year was there at least two or three and Twenty Sale. They have oft much Saltfish from New-England, but fresh Fish enough, when they will take it; Peaches in abundance at Kecoughtan; Apples, Pears, Apricocks, Vines, Figgs, and other Fruits some have Planted that prospered exceedingly, but their Diligence about Tobacco, left them to be spoiled by the Cattel, yet now they begin to Revive; Mrs. Pearce, an Honest Industrious Woman, hath been there Good Hof- near twenty Years, and now returned, faith, she hash a Garden at James Town, containing three or four Acres, where in one Year the hath gathered near an Hundred Bushels of excellent Figgs; and that of her own

Chor Poor is Governour, and the rest of the

Provision she can keep a better House in Virginia, than here in London for 3 or 400 Pounds a Year, yet went thither with little or nothing. They have some tame Geese, Ducks and Turkies. The Mafters now do & train up their Servants and Youth in shooting Deer and Fowl, that the Youths will kill them as well as their Masters. They have two Brew-houses, but they find the Indian Corn fo much better than ours, they begin to leave fowing it. Their Cities and Towns are only scattered Houses, they call Plantations, as are our Country Villages, but no Ordnance Mounted. The Forts Captain Smith left a Building, so ruined, there is scarce Mention where they were; no Discoveries of any thing more, than the curing of Tobacco, by which hitherto, being so present a Commodity of Gain, it hath brought them to this abundance; but that they are so disjointed, and every one Commander of himself to Plant what he will: they are now fo well provided, that they Commodiare able to subsist; and if they would join ties worth together, now to work upon Soap Albes, making, Iron, Rape-Oil, Mader, Pitch and Tarr, nut, 4sh Flax and Hemp; as for their Tobacco, there for Pikes, comes from many Places such abundance, Oak for and the charge fo great, it is not worth Planks, the bringing home.

There is gone, and now a going, divers preis, Ships, as Captain Perfe, Captain Prine, with Chefts &c. Sir John Harvey to be their Governour, with two or three Hundred People; there is also some from Bristow, and other Parts of the West Country a preparing, which I heartily pray to God to Bless, and send them a Happy and Prosperous Voyage.

> Nathaniel Causie, Master Hutchins, Mafter Floud, John Davis, William Emerfon, Mafter William Barnet, Master Cooper, and others.

CHAP. XXII.

The proceedings and prefent estate of the Summer Isles, from Anno Doma 1624, so this prefent 1629.

Rom the Summer Ifles, Mr. Ireland, tains, which is a most delicate Fruit, they and divers others report, their Forts, have lately found away by Pickling or Dry-Ordnance and Proceedings, are much as ing them, to bring them over into England.

tain Woodboufe Governour. There are few , fores of any Fruits in the West Indies, but lent Herbs, Fruits and Roots they have in they grow there in abundance; yet the fertility of the Soil in many Places decayeth, kind of Whale, or rather a Juharra, wasding being Planted every Year; for their Plan- ven on Shous in Southempson Tribe from Val n

Figgs, Wine, and all forts of most excelabundance. In this Governour's time, a Rhkkh

#### The true Travels, Adventures, and Observations 402

the West, over an Infinite Number of Rocks so bruised, that the Water in the Bay where the lay, was all Oily, and the Rocks about it all Bedasht with Parmacitty, congealed like Ice, a good quantity we gathered, with which we commonly cured any Boil, Hurt or Bruife; some burnt it in their Lamps, which blowing out, the very fuuff will burn so long as there is any of the Oil remaining, for two or three days to-

The prefent Estate ofikeSum- gether. mer Itles. 1529.

The next Governour was Captain Philip Bell, whose time being expired, Captain Roger Wood posses'd his Place, a worthy Gentleman of good defert, and hath lived a long time in the Country; their Numbers are about 2 or 3000 Men, Women and Children, who increase there exceedingly; their greatest Complaint is want of Apparel, and too much Custom, and too many Officers; the Pity is, there are no more Men than Women, yet no great Mischief, because there is so much less Pride: the Cattle they have increase exceedingly; their Forts are well maintain'd by the Merchants here, and Planters there; to be brief, this Isle is an excellent Bit to Rule a great Horse.

All the Cohow Birds and Egbirds are gone; seldom any wild Catts seen; no Rats to speak off; but the Worms are yet very troublesom; the People very healthful, and

When I went first to the North part

Colony had been planted, it had dissolved

of Virginia, where the Westerly

the Ravens gone; Fish enough, but not so near the shoar as it used, by the much beating it; it is an Isle that hath such a Rampire and a Ditch, and for the quantity so manned, Victualled, and Fortified, as few in the World do exceed it, or is like it.

The 22d of March, two Ships came from Mischance thence; the Peter-Bonaventure, near 200 Tunns, and fixteen Pieces of Ordnance; the Captain, Thomas Sherwin; the Master, Mr. Edward Some, like him in Condition, a Goodly, Lusty, Proper, Valiant Man: The Lydia, wherein was Mr. Anthony Thorne, a fmaller Ship, were chased by eleven Ships of Dunkirk; being thus over-match'd, Captain Sherwin was taken by them in Torbay only his Valiant Master was slain; the Ship with about seventy English Men they carried betwixt Dover and Callis to Dunkirk; but the Lydia fafely recovered Dartmouth.

These Noble Adventures for all those losfes patiently do bear them; but they hope the King and State will understand it is worth keeping, tho it afford nothing but Tobacco, and that now worth little or nothing, Custom and Fraught pay's, yet it is worth keeping, and not supplanting; tho' great Men feel not those losses, yet Gardiners, Carpenters and Smiths, do pay for it.

From the Relation of Robert Chefferan and others.

#### CHAP. XXIII.

The Proceedings and present Estate of New England, fince 1624. to this present 1629.

it felf within a Year, and there was not one Christian in all the Land. I was set forth at the fole Charge of four Merchants of London; the Country being then reputed by your Westerlings, a most Rocky, Bartions about ren, Desolate Desart; but the good Return the loss of I brought from thence, with the Maps and Relations I made of the Country, which I made so manifest, some of them did believe me, and they were well embraced both by the Londoners and the Westerlings, for whom I had promifed to undertake it, I thinking to have joined them all together, but that might well have been a work of Hercules. Betwixt them long there was much contention; the Londoners indeed went bravely forward; but in three or four Years, I and

my Friends confumed many hundred Pounds

amongst the Plimothians, who only sed me

with delays, promifes and excuses, but no Performance of any thing to any purpose. In the interim, many particular Ships went thither, and finding my Relations true, and that I had not taken that I brought home from the French Men, as had been reported; yet further, for my Pains to discredit me, and my calling it New-England, they obscured, and shadowed it, with the Title of Canada, till at my humble fuir, it pleafed our most Royal King Charles, whom God long keep, bless and preserve, then Prince of Wales, to confirm it with my Map and Book, by the Title of New England; the gain thence returning, did make the fame thereof so increase, that thirty, forty, or fifty fail went Yearly only to Trade and Fish; but nothing would be done for a Plantation, till about some Hundred of your Brownists of England, Amsterdam and Leyden, went to New Plimouth, whose humorous Ignorances, caused them for more than a Year to en-

Confidera-

dure

effect negard ejs.

dure a wonderful deal of milery, with an infinite patience; saying my Books and Maps were much better cheap to teach them than my felf; many other have used the like good Husbandry, that have payed foundly in trying their felf-will'd conclusions; but those in time doing well, divers others have in finall handfuls undertaken to go there, to be several Lords and Kings of themselves, but most vanished to nothing; notwithstanding the Fishing Ships, made fuch good returns, at last it was ingrossed by twenty Pattentees, that divided my Map into twenty parts, and cast Lots for their shares; but Money not coming in as they expected, procured a Proclamation, none should go thither without their Licences to Fish: but for every thirty Tuns of Shipping, to pay them five Pounds; besides, upon great Penalties, neither to Trade with the Natives, cut down Wood for their Stages, without giving fatisfaction, though all the Country is nothing but Wood, and none to make use of it, with many such other pretences, for to make this Country plant it felf, by its own Wealth: Hereupon most Men grew so discontented, that few or none would go; so that the Pattentees, who never a one of them had been there, seeing those Projects would not prevail, have fince not hindred any to go that would, that within these sew last years, more have gone thither than ever.

Now this Year 1629, a great company lantation of People of good Rank, Zeal, Means, and Quality, have made a great Stock, and with fix good Ships in the Months of April and May, they set Sail from Thames, for the Bay of the Massachusets, otherwise called Charles's River; viz. the George Bonnadventure, of twenty pieces of Ordnance, the Talbot nineteen, the Lions-whelp eight, the May-fllower fourteen, the Four Sifters fourteen, the Pilgrim four, with three hundred and fifty Men. Women, and Children; also an hundred and fifteen head of Cattel, as Horse, Mares, and neat Beast; one and forty Goats, some Conies, with all Provision for Houshold and Apparel; fix pieces of great Ordnance for a Fort, with Muskets, Pikes, Corselets Drums, Colours, with all Provision necesfary for a Plantation, for the good of Man; other Particulars I understand of no more, than is writ in the general History of those Countries.

But you are to understand, that the noble Lord chief Justice Popham, Judge Dodenrege; the Right Honourable Earls of Pemlayok & Southampton, Salisbury, and the rest, as I take it, they did all think, as I and them went with me, did; That had those two Countries been planted, as it was intended, that no other Nation should complant betwixt us. If ever the King of Spain and we should fall foul, those Countries being so capable of all Materials for shipping, by this might have been Owners of a good Fleet of Ships, and to have relieved a whole Navy from England upon occasion; yea, and to have furnished England with the most Easterly Commodities; and now fince, fee ing how conveniently the Summer Isles fel to our shares, so near the West-Indies, we might with much more facility than the Dutch Men have invaded the 177 ft-Indies, that doth now put in practice, what so long hath been advised on, by many an honest English States-man.

Those Countries, Captain Smith oft times Notes of used to call his Children that never had Mo- inconventther; and well he might, for few Fathers ency: ever payed dearer for fo little content; and for those that would truly understand, how many strange Accidents hath befallen them and him; how oft up, how oft down, fometimes near despair, and ere long flourishing, cannot but conceive Gods infinite Mercies and Favours towards them. Had his Deligns been to have perfunded Men to a Mine of Gold, though few doth conceive either the charge or pains in refining it, nor the power nor care to defend it; or fome new Invention to pass to the South Sea, or fome strange Plot to invade some strange Monastery, or some portable Country, or some chargeable Fleet to take some rich Carocks in the East-Indies; or Letters of Mart to rob some poor Merchants; What multitudes of both People and Money would contend to be first imployed? But in those noble endeavours (now) how few of quality, unless it be to beg some Monopoly; and those seldom seek the common good, but the Commons Goods, as you may read at large in his general History, pag. 217, 218, 219, his general Observations and Reasons for this Plantation; for yet those Countries are not so forward, but they may become as miferable as ever, if better courfes be not taken than is; as this Smith will plainly demonstrate to his Majesty, or any other noble Person of Ability, liable generoufly to undertake it; how within a fhort time to make Virginia able to refift any Enemy, that as yet lieth open to all, and yield the King more Custom within these few years, in certain staple Commodities, than . ever it did in Tobacco; which now not being worth bringing home, the Custonia will be as uncertain to the King, as dangerous to the Plantations.

#### CHAP. XXIV.

A brief Discourse of divers Rayages made and the goodly Country of Guinea. and the great River of the Amazons; relating also the present Plantation on there.

T is not unknown how that most Indu-strious and honourable Knight, Sir Walter Rawleigh, in the Year of Our Lord 1595, taking the lile of Trinidado, fell with the Coast of Guiann, Northward of the Line 10 degrees, and coasted the Coast, and fearched up the River Oranoca: where understanding that twenty several Voyages had been made by the Spaniards, in discovering this Coast and River, to find a paffage to the great City of Mana, called by them the Eldorado, or the Golden City: he did his utmost to have found some better Satisfaction than Relations: But means failleft to feek ing him, he left his trusty Servant France the great Sparrow to feek it, who wandring up and down those Countries, some sourteen or fifteen years, unexpectedly returned; I have neard him fay, he was led blinded into this City by Indians; but little Discourse of any purpole, touching the largness of the report of it; his body feeming as a Man of an uncurable Confumption, shortly died here after in England. There are above thirty fair Rivers that fall into the Sea, between the River of Amazons and Orancco, which are some nine degrees afunder. In the year 1605, Captain Ley, Brother to that noble Knight, Sir Oliver Ley, with divers others, planted himself in the River Weapoco, wherein I should have been a Party; but he di-cd, and there lies buried, and the supply miscarrying, the rest escaped as they could. Sir Thomas Ron, well known to be a most

Captain Charles Lcy.

Sparrow

Sir Thomas Roc.

Captain

Captain W bisc.

Ambassadour to the Great Mogul, or the Great Turk, spent a year or two upon this Coast, and about the River of the Amazone, wherein he most imployed Captain Machen Morton, an expert Sea-man in the discovery of this famous River, a Gentleman that was the first shot, and mortally supposed wounded to Death, with me in Virginia, yet fince hath been twice with command in the Enfl-Indies ; Alio Captain William White, and divers others worthy and industrious Gentlemen, both before and fince, bath spent much time and charge to discover it more perfectly, but nothing more effected for a Plantation, till it was undertaken by Captain Robert Harcote 1609.

This worthy Gentleman, after he had

Noble Gentleman, before he went Lord

by Commillion made a discovery to his mind, left his Brother Michael Harcore, with fome fifty or fixty Men in the River Weapace, and to prefently returned to England, where he obtained by the favour of Prince Henry a large Patent for all that Coast called Guiana, together with the famous River of Amazou, to him and his Heirs: but to many troubles here surprized him, though he did his best to supply them, he was not able, only fome few he fent over as Paffengers, with certain Dutch Men, but to finall purpose. Thus this business lay dead for divers years, till Six Walter Rawleigh, accompanied with many valiant Soldiers and brave Gentlemen, went his last Voyage to Guines, amongst the which, was Captain Roger North, Brother to the Right able the Lord Dudley North, who upon this Voyage, having stayed, and seen divers Rivers upon this Coast, took fuch a liking to those Countries, having had before this Voyage, more perfect and particular Information of the excellency of the great River of the Amagons, above any of the rest, by certain English Men returned to rich, from thence in good Commodities, they would not go with Sir Walser Rawleigh in search of Gold; that after his return for England, he endeavoured by his belt Abilities to inte-rest his Country and State in those fair Regions, which by the way of Letters Patents unto divers Noble Men and Gentlemen of Quality, crecked into a Company and Perpetuity for Trade and Planmion, not knowing of the Interest of Captain Hor-

Whereupon accompanied with 120 Gen-Capti tiemen and others, with a Ship, a Pinnace Roge and two Shalleps, to remain in the Coun-North April 1620, and within feven Weeks after he arrived well in the Amazons, only with the loss of one old Man: Some knowned Leagues they ran up the River to settle his Men, where the fight of the Country and People so contented them, that never Men thought themselves more happy: Some English and Irifo that had lived there forme eight years, only supplied by the Durch, he reduced to his Company and to leave the Burch: having made a good Voyage, so the value of more than the charge, he returned to Eng-

Captain Marcote. land with divers good Commodities, besides, Tobacco: So that it may well be conceived. that if this Action had not been thus croffed the Generality of England had by this time been won and encouraged therein. But the time was not yet come, that God would have this great business effected, by reason of the great Power the Lord Gundamore, Ambassadour for the King of Spain, had in England, to cross and ruin those Proceedings, and so unfortunate Captain North was in this business, he was twice committed Prisoner to the Tower, and the Goods detained, till they were spoiled, who beyond all others, was by much the greatest Advenrurer and Lofer.

Norwithstanding all this, those that he had left in the Amazons, would not abandon the Country. Captain Thomas Painton, a worthy Gentleman, his Lieutenant dead. Captain Charles Parker, Brother to the Right Honourable the Lord Morley, lived there fix years after; Mr. John Christmas, five years; fo well, they would not return, although they might, with divers other Gentlemen of Quality and others: All thus destitute of any supplies from England. But all Authority being diffolved, want of Government did more wrong their Proceedings, than all other crosses whatsoever. Some relief they had fometime from the Dutch, who knowing their Estates, gave what they pleafed, and took what they lift. Two Brothers, Gentlemen, Thomas and William Hixon, who stayed three years there, are now gone to stay in the Amazons, in

the Ships lately fent thither. The business thus remaining in this fort, three private Men left of that Company, named Mr. Thomas Warriner, John Rhodes, and Robert Bims, having lived there about two years, came for England, and to be free from the disorders that did grow in the Amazons, for want of Government amongst their Country-men, and to be quiet amongst themselves, made means to set themselves out for St. Christophers; their whole number being but fifteen Persons that payed for their Passage in a Ship going for Virginia, where they remained a year before they were supplied, and then that was but four or five Men. Thus this Isle, by this small beginning, having no interruption by their own Country, bath not got the start of the, Continent and main Land of Guinea, which hath been laid apart, and let alone until that Captain North, ever watching his best oportunity and advantage of time in the State, hath now again purfixed, and fet on foot his former delign. Captain Harcote baing now willing to furrender his Grant, and to joyn with Captain North, in passing

Vol. II.

a new Patent, and to erect a Company for Trade and Plantation in the Amazons, and all the Coast and Country of Guines for ever. Whereupon, they have sent this present year in January, and since 1628, four Ships, with near two hundred Persons; the sirst Ship with 112 Men, not one miscarried; the rest went since, not yet heard of, and are preparing another with their best Expedition; and since January is gone from Holland, 100 English and Irish, conducted by the old Planters.

This great River lieth under the Line, the two chief Head Lands North and South, are aboût three degrees afunder, the mouth of it is so full of many great and small Isles, it is an easie matter for an unexperienced Pilot to lose his way. It is held one of the greatest Rivers in America, and as most Men think in the World; and cometh down with fuch a fresh, it maketh the Sea fresh, more than thirty Miles from the Shoar. Captain North having feated his Men about an hundred Leagues in the Main, sent Captain William White, with thirty Gentlemen and others, in a Pinnace of thirty Tun, to difcover further, which the did tome two hundred Leagues, where they found the River to divide it felf in two parts, till then all full of Islands, and a Country most healthful, pleafant and fruitful; for they found food enough, and all returned fafe and in good health: In this discovery, they faw many Towns well inhabited, some with three hundred People, some with five, fix, or feven hundred; and of fome they understood to be of so many thousands, most differing very much, especially in their Languages: Whereof they suppose by those Indians, they understand are many hundreds more, unfrequented till then by any Christian, most of them stark naked, both Men, Women and Children, but they saw not any fuch Giant-like Women as the Rivers name importeth. But for those where Captain North hath scated his Company, it is not known where Indians were ever so kind to any Nation, not sparing any pains, danger or labour, to feed and maintain them. The English following their Buildings, Fortifications and Sugar-works; for which they have fent most expert Men, and with them all things necessary for that purpose; to effect which, they want not the help of those kind Indians to produce; and many other good Commodities, which (God willing) will ere long make plain and apparent to this Kingdom, and all the Adventurers and Well-willers to this Plantation, to be well worthy the cherishing and following with all alacrity.

1623.

#### CHAP. XXV.

The Beginning and Proceedings of the new Plantation of St. Christopher by Captain Warner.

After Ralph Merifield and others, having furnished this worthy Induitrious Gentleman, he arrived at St. Christophers, as is faid, with fifteen Men, the 28th of January 1623, viz. William Tefted, John Rhodes, Robert Bims, Mr. Benifield, Sergeant Jones , Mr. Ware , William Ryle , Rowland Grascock, Mr. Bond, Mr. Langley, Mr. Weaver, Edward Warner, their Captain's Son, and now Deputy Governour, till his Father's return, Sergeant Aplon, one Sailor and a Cook: At their arrival, they found three French Men, who fought to oppose Captain Warner, and to fet the Indians upon us; but at last we all became Friends, and lived with the Indians a Month, then we built a Fort, and a House, and planting Fruits, by September we made a crop of Tobacco; but upon the nineteenth of Septem-A Herica- ler came a Hericano and blew it away, all this while we lived upon Cassada Bread, Potatoes, Plantanes, Pines, Turtles, Guanes, and Fish plenty; for drink we had Nicnol by.

The 18th of March 1624, arrived Captain Jefferson, with three Men Passengers in the Hopewell of London, with some Trade for the Indians, and then we had another crop of Tobacco, in the mean time the French had planted themselves in the other end of the lile; with this crop Captain Warner returned for England in September

1625.

In his absence came in a French Pinnace, under the command of Monfieur de Nambe , that told us, the Indians had flain some French Men in other of the Charibbe Isles, and that there were fix Peryagoes, which are huge great Trees, formed as your Canoos, but so laid out on the sides with Their Fight Boards, they will feem like a little Gally: Six of those, with about four or five hundred strange Indians cause unso us, we bad them be gone, but they would not; whereupon we and the French joyned together, and upon the fifth of November fet upon them, and put them to dight: upon New

ple, then we fell to work and planting as

before; but upon the fourth of September came fuch a Hericano, as blew down all A Herica. our Houses, Tobacco, and two Drums in-no. to the air we know not whither, drove two Ships on Shoar that were both split; all our Provision thus lost, we were very miferable, living only on what we could get in the wild Woods, we made a fmall party of French and English to go aboard for Pro-French Men were flain in the Harbour.

Thus we continued till near June that the Tortles came in 1627, but the French 1627 being like to starve, sought to surprize us, and all the Cassado, Potatoes, and Tobacco we had planted, but we did prevent them. The 26th of Ottober, came in Captain William Smith, in the Hope-well, with some Ordnance, Shot and Powder, from the Earl of Carlifle, with Captain Pelham and thirty Men; about that time also came the Plow. also a small Ship of Briston, with Captain Warner's Wife, and fix or seven Women

Upon the 25th of Nevember, the Indiane Three In fet upon the French, for some injury about dians star their Women, and flew fix and twenty French Men, five English, and three Indians. Their Weapons are Bows and Arrows, their Bows are never bent, but the string lies flat to the Bow; their Arrows a finall Reed, four or five foot long, headed some with the poisoned Sting of the Tail of a Stingray, forme with Iron, some with Wood, but all so poisoned, that if they draw but blood, the hurt is incurable.

The next day came in Captain Charles The arm Saltonfiell, a young Gentleman, Son of Sir ny Engli Samuel Salvenfell, who brought with him ships. good store of all Commodities to relieve the Plantation; but by reason some Hollanders, and others had been there lately before him, who carried away with them all the Tobacco, he was forced to put away all his Commodities upon trust tile the next crop; in the mean time he refolved there eto stay, and imploy himself and his Comyears Even they came again, found three a party in planning Tobacco, koping thereby in make a Voyage, but before he could be flew.

Until the fourth of August. we stood upon our Gasard, living upon the spoil and did nothing. But now Captain Wormer the field and arriving again with now a hundred Profor fraught to England, three peace a pound,

1624.

with the Indians.

1626.

and nine pence a pound custom, which amounts together to more than threefcore pound in the hundred pound, to the great discouragement of him and many others, that intended well to those Plantations. Nevertheless he is gone again this present year 1629, with a Ship of about three hundred Tuns, and very near two hundred People, with Sir William Tuffton Governour for the Barbadoes, and divers Gentlemen, and all manner of Commodities fit for a Plantation.

Captain Prinn, Captain Stone, and divers others came in about Christmas; so that this last year, there hath been about thirty Sail of English, French, and Dutch Ships, and all the Indians forced out of the Ifle, for they had done much mischief amongst the French, in cutting their Throats, burning their Houses, and spoiling their Tobacco; amongit the rest Tegramund, a little Child, the King's Son, his Parents being flain, or fled, was by great chance faved, and carefully brought to England, by Mafter Merifield, who brought him from thence, and bringeth him up as his own Children.

The decription

It lieth seventeen degrees Northward of the Line, about an hundred and twenty f the Isle. Leagues from the Cape de tres Puntas, the nearest main Land in America, it is about eight Leagues in length, and four in breadth; an Island amongst 100 Isles in the West Indies, called the Caribbes, where ordinarily all them that frequent the West Indies, refresh themselves; those, most of them are Rocky, little, and Mountainous, yet frequenced with the Canibals; many of them inhabited, as Saint Domingo, Saint Martalin, Saint Lucia, Saint Vincent, Granada, and Margarita, to the Southward; Northward, none but Saint Christophers, and it but kitely, yet they will he ranging Marigalanta, Guardalupe, Deseat do, Mountferat, Antequa, Moves , Bernarda, Saint Martin, and Saint Bartholomen, but the worst of the four likes puffelled by the Spaniard, as Purteries or Jamaica, is bester than them all; as for Hispaniele, and Caba, they are worthy the Title of two rich Kingdoms, the rest not respected by the Spaniards, for want of Harbours, and their better choice of good Land, and profit in the main. But Captain Warner, having been very familiar with Captain Painten, in the Amazon, hearing his information of this St. Christophers; and having made a years trial, as it is faid, returned for England, joyning with Master Merifield and his Priends, got Letters Patents from King James to plant and passes it. Since then, the Right Honourshie the Earl of Cartife hath got Letters Patents also, not only of

that, but all the Caribe Isles about it, who is now chief Lord of them, and the English hls Tenants that do possels them; over whom he appointeth such Governours and Officers as their affairs require; and although there be a great Custom imposed upon them, confidering their other charges, both to feed and maintain themselves; yet there is there, and now a going, near upon the number of three thousand People; where by reason of the rockiness and thickness of the Woods in the lile, it is difficult to pass, and such a shuff of the Sea goeth on the Shoar, ten may better defend, than fifty affault. In this Ifle are many Springs, but The yet Water is scarce again in many places; Springs, the Valleys and fides of the Hills very fer- and Seatile, but the Mountains harsh, and of a sul- fons. phurous composition; all overgrown with Palmetas, Cotten Trees; Lignum vita, and divers other forts, but none like any in Christendom, except those carried thinher; the air very pleasant and healthful, but exceeding hot, yet so tempered with cool breaths, it feems very temperate to them, that are little used to it; the Trees being always green, the days and nights always very near equal in length, always Summer; only they have in their Seasons great Gusts and Rains, and fometimes a Hericano, which is an over grown, and a most violent ftorm.

In some of those Isles, are Cattel, Goats, and Hogs, but here none but what they must carry; Guanes they have, which is a little harmless Beath, like a Crocodile, or Ali- A strange gator, very fat and good Meat; she lays hatching Eggs in the Sand, as doth the Land Crabs, of Eggs which live here in abundance, like Conies for Beafts ist Bosoughs, unless about May, when they bome down to the Sea fide, to lay in the Sand, as the other; and all their Eggs are hatched by the heat of the Sun.

From May to September, they have good Fish. store of Tertoifes that come out of the Sea to lay their Eggs in the Sand, and are hatshed as the other; they will lay half a polk at a time, and wear a buffiel ere they save done, and are round like Tenis-balls: This Fifth is like Vest in teste, the Fue of a brownish colour, very good and wholform. We feck them in the Nights, where we find them on theer, we turn them upon hoir backs, till the ment day we fetch their home, for they can never return themselves, being so hard, a Care may go over them; and so big, one will suffice sorry or fifty Men to dinner. Divers forts of other Fifth they have in abundance, and Prawner most great and excellent, but none will keep Iweet forece ewelve hours

# 408 The true Travels, Adventures, and Observations

Birds.

The best and greatest is a Passer Flaminga, which walking at her length, is as tall as a Man; Pigeons and Turtle Doves in abundance; some Parrots, wild Hawks, but divers other forts of good Sea-fowl, whose Names we know not

Roots.

Cassado is a Root planted in the Ground, of a wonderful Increase, and will make very good White-bread, but the Juce Rank Poyion, yet boyled, better than Wine; Potatoes, Cabbages, and Radish plenty.

truit.

Maize, like the Virginia Wheat; we have Pinc-Apple, near fo big as an Hartichock, but the most daintiest taste of any Fruit; Plantnau, an excellent and most increasing Fruit; Apples, Prickle Pears, and Peafe, but differing all from ours. There is Pepper that groweth in a little red Husk, as big as a Walnut, about four Inches in length, but the long Cods are fmall, and much stronger and better for use, than that from the East Indies. There is too forts of Cotten, the filk Cotten as in the East Indies, groweth upon a small stalk, as good for Beds as Down; the other upon a shrub, and beareth a Cod bigger than a Walnut, full of Cotten Wool: Anotto also groweth upon a shrub, with a Cod like the other, and nine or ten on a bunch, full of Anotto, very good for Dyers, tho' wild; Sugar Canes,

not tame, four or five foot high; also Mafiick, and Locus-trees; great and hard Timber, Gourds, Musk-Melons, Water-Melons, Lettice, Parily; all places naturally bear Purslain of it self; Sope-berries like a Musquet Bullet, that washeth as white as Sope ; in the middle of the Root is a thing like a Sedge, a very good Fruit, we call Pengromes; a Pappaw is as great as an Apple, coloured like an Orange, and good to eat; a fmall hard Nut, like a Hazell Nut, grows close to the Ground, and like this grows on the Palmetas, which we call a Mucca Nut; Mustard-seed will grow to a great Tree, but bears no feed, yet the Leaves will make good Mustard; the Mancinel Tree, the Fruit is Poison; good Figs in abundance; but the Palmeta serveth to build Forts and Houses, the Leaves to cover them, and many other Uses; the juice we draw from them, till we fuck them to Death, (is held restorative) and the top for meat doth serve us as Cabbage; but oft we want Powder'd Beef and Bacon, and many other needful necessaries.

> By Thomas Simons, Rowland Grafcocke, Nicholas Burgh, and others.

#### CHAP. XXVI.

#### The first Planting of the Barbadoes.

THe Barbados lies South-West and by South, an hundred Leagues from St. Christophers, threescore Leagues West and South from Trinidado, and some fourscore Leagues from Cape de Salinos, the next part of the main. The first Planters brought thither by Captain Henry Powel, were forty English, with seven or eight Negres; then he went to Disacuba in the main, where he got thirty Indians, Men, Women and Children of the Arawacos, Enemies both to the · Caribbes and the Spaniards. The Isle is most elike a Triangle, each fide forty or fifty Miles square, Tome exceeding great Rocks, but the most part exceeding good Ground; abounding with an infinite number of Swine, fome Turtles, and many forts of excellent Fish; many great Ponds wherein is Duck and Mallard; excellent Clay for Pots, Wood and Stone for Building, and a Springnear the midst of the life of Birums, which is a liquid mixture like Tarr, that by the great Rains falls from the Tops of the Mountains, it

floats upon the Water in fuch abundance, that drying up, it remains like great Rocks of Pitch, and as good as Pitch for any use-

The Mancinel Apple, is of a most plea- Fruits fant sweet smell, of the bigness of a Crab, Trees. but rank Poylon, yet the Swine and Birds have wit to fhun it; great store of exceeding great Locus-trees, two or three Fathom about, of a great height, that beareth a Cod full of Meal, will make Bread in time of necessity. A Tree like a Pine beareth a Fruit so great as a Musk Melon, which hath always ripe Fruit Flowers, or Green Fruit, which will refresh two or three Men, and very comfortable; Plumb-trees many, the Fruit great and Yellow, which but strained into Water in four and twenty hours, will be very good drink; wild Figg-trees there are many; all those Fruits do fat the Hoggs, yet at sometimes of the Year they are so, lean as Carrion; Guane-trees bear a Fruit so big as a Pear, good and wholsom; Palmetaes of three feveral forps; Pappaws, Prickle

Prickle Pears, good to eat or make drink; Cedar Trees very tall and great; Fustick Trees are very great, and the wood yellow, good for dying; Soap Berries, the kernel fo big as a floe, and good to eat; Pumpeons in abundance; Goads fo great as will make good great Bottles, and cut in two pieces, good Diffes and Platters; many finall Brooks of very good Water. Guina imall Brooks of very good Water; Gninea Wheat, Cassado, Pines and Plantains; all things we there Plant, do grow exceedingly, to well as Tobacco; the Corn, Peale, and Beans, cut but away the Stalk, young sprigs will grow, and so bear Fruit for many Years together, without any more Planting; the Isle is overgrown with Wood or great Reeds, those Woods which are fost are exceeding light and full of Pitch, and those that are hard and great, they are as hard to cut as Stone.

Mr. John Powel came thither the 4th of umbers. August 1627. with forty five Men, where we stayed three Weeks, and then returning, left behind us about an Hundred People, and his Son John Powel for his Deputy, as Governour; but there have been for many Factions amongst them, I cannot from so many vatiable Relations, give you any

certainty for their orderly Government: for all those Plenties, much misery they have endured, in regard of their weakness at their Landing, and long stay without supplies; therefore those that go thither, it were good they carry good Provision with them; but the Isle is most healthful, and all things Planted do increase abundantly; and by this time there is, and now a going, about the number of fifteen or fixteen Hundred Peo-

Sir William Curtine, and Captain John Powel, were the first and chief Adventurers to the Planting this fortunate Isle; which had been oft frequented by Men of War to refresh themselves, and set up their Shallopes; being so far remote from the rest of the Isles, they never were troubled with any of the Indies. Harbours they have none, but exceeding good Rodes, which with a fmall Charge, might be very well Fortified; it doth Ebb and Flow four or five foot, and they cannot perceive that there hath ever been any Hericano in that Isle.

> From the Relations of Captain John Wnite, and Captain Wolverstone.

#### CHAP. XXVII.

The first Plantations of the Isle of Mevis.

he Det the Isle.

eir

BEcause I have ranged and lived a-mongst those Islands, what my Authors cannot tell me, I thing it no great error in helping them to tell it my felf. In this little like of Meon, more than twenty Years ago, I have remained a great time together, to Wood and Water and refresh my Men; it is all Woody, but by the Seafide Southward, there are Sands like Downs, where a Thouland Men may quarter themselves Conveniently; but in most places the Wood groweth close to the Water fide, at a hight Water mark, and in some places so thick of a foft foungy Wood like a wild Fig-tree, you cannot get through it, but by making your way with Hatchen, or Fauchions: whether it was the dew of those Trees, or of fome others, I am not certain, but many of our Men became so ton mented with a burning swelling all over their Bodies, they feemed like scalded Men, eand near Mad with Pain; here we found a great Pool, wherein bathing themselves they found much eafe a and finding it fed

with a Pleasant small stream that came out of the Woods, we found the head half a The Bath. Mile within the Land distilling from many Rocks, by which they were well cured in two or three days. Such factions here we had as commonly attend fuch Voyages, that a pair of Gallows were made, but Captain Smith for whom they were intended, could not be perswaded to use them; but not any one of the inventers, but their lives by fustice fell into his Power to determine of at his Pleasure, whom with much Mercy he favoured, that most basely and unjustly have betrayed him.

The last Year 1628. Mr. Littleton with some A great others, got a Patent of the Earl of Carlifle misprision. to Plant the Isle called the Barbadoes, thirty Leagues Northward of St. Christophers; which by report of their Informers, and Undertakers, for the excellency of the Pleafantness thereof, they called Dulcina, but when they came there, they found it such a Barren Rock they left it; altho they were told as much before, they would not believe it, perfwading

Mmmmm

perfivading themselves those contradictors would get it for themselves, with this by their cunning Opinion, the deceivers of themfelves; for feeing it lie conveniench for their purpose in a Map, they had not Patitience to know the goodness or badness, the inconvenience nor probability of the Quantity not Quality; which error doth prodominate in most of our homebred Adventurers, that will have all things as they conceit and would have it; and the more they are contradicted, the more hot they are; but you may fee by many Examples in the general History, how difficult a matter it is, to gather the Truth from amongst so many Foreign and feveral Relations, except you have exceeding good experience both of the Countries People, and their Conditions; and those ignorant undertakings, have been the greatest hindrance of all those Plantati-

7beir

At last because they would be absolute, Numbers, they came to Moun, a little Isle by St. Chriflophers; where they feated themselves, well furnished with all necessaries, being about the Number of an Hundred, and fince increased to an Hundred and fifty Persons, whereof many were old Planters of St. Christophers, especially Mr. Anthony Hinton, and Mr. Edward Tompson. But because all those Isles for the most part are so capable to produce, and in Nature like each other, let this discourse serve for the description of themall. Thus much concerning those Plantations, which now after all this time, loss and charge, should they be absentioned, topperefted, and diffolved, were most lamentable; and furely feeing they all strive so much about this Tobacco, and that the Frangh thereof, and other charges are to great, and for open to any Entropy by that Courmodely they cannot long fublish.

And it is a wonder to me to fee fuch Miracles and Milchiefs in Mon; how greedily they purfix to dispossess the Planters of the Name of Christ Jefus, yet thy they are Christians, when so smuch of the World is unpelleded; yes, and better Land than they so triuch drive for, murthering so many Christians, burning and spoiling to many Cities, Villages and Countries, and Sibverting to many Kingdoms, when to much lieth wait, or only policifed by a few moor savages, that more ferve the Dovil for fear,

than God for love; whose Ignorance we pretend to reform but Governments. Humours, Ambinion, Faction, and Pride hash to many infruments, we perform very little. to any surpose; nur is there either Hosotir or Profit to be got by any that are so vile, to undertake the subversion, or hinderance of any honest intended Christian Plants-

Now to conclude the Travels and Ad-Certained: ventures of Captuin Smith; how first he ploits of

Planted Virginia, and was fet ashoer with Smith. about an Hundred Men in the wild Woods; how he was taken Prisoner by the Savages, by the King of Pamaunke tied to a Tree to be shot to death, led up and down their Country to be shewed for a wonder; fatted as he thought, for a Sacrifice for their Idol, before whom they conjured him three days, with strange Dances and Invocations, then brought him before their Emperor Powhatan, that commanded him to be flain; how his Daughter Poorhones faves his life, returned him to James Town, relieved him and his familhed Company, which was but eight and thirty to polless those large Dominions; how de discovered all the several Nations, upon the Rivers falling into the Bay of Chifapeacke; stung near to death with a most Poisoned taile of a Fish called Stingray: how Powhatan out of his Country took the Kings of Pameunks and Paspahezh Prisoners, forced thirty nine of those Kings to pay him contribution, subjected all the Savages: how Smith was blown up with Gun-powder, and returned for England to be cured.

Also how he brought our New England to the subjection of the Kingdom of Great Britain; his fights with the Pirats, left alone amongst a many French mea of Warr, and his Ship was from him; his See-fights for the Frenchagainst the Spaniards; their bad usage of him; how in France in a little Boat. he escaped them; was admit all fuch a stormy Night at See by himself, when thirteen French Ships were split, or driven on shoar by the Me of Rea, the General and most of is Mon drowned, when God, so whom be all Honour and Praise, brought birn fale on thear to tall their Administrates that eleaped; you may read at large in his General Hilbery of Vigginia, the Summer the, and

New England.

#### CHAP. XXVIII.

The bad Life, Quilisies and Conditions of Pirates; and how they take Turks and Moors to become men of Warr.

S in all Lands where there are many People, there are some Thieves, so in all Seas much frequented, there are forme Pirates: the most Ancient within the Memory of threescore Years, was one Callin, who, most refreshed himself upon the Coast of Wales; Clinton and Purfer his Companions, who grew famous till Queen Elizabeth of Bleffed Memory, hanged them at Wapping; Flemming was as expert and as much fought for as they, yet fuch a Friend to his Country, that discovering the Spanish Armado, he voluntarily came to Plimouth, yielded himfelf freely to my Lord Admiral, and gave him notice of the Spaniards coming; which good warning came so happily and unexpectedly, that he had his Pardon, and a good Reward; some few Pirates there then remained; notwithstanding it is incredible how many great and rich Prizes the little Barques of the West Country daily brought home, in regard of their small Charge; for there are so many difficulties in a great Navy, by Wind and Weather, Victual, Sickness, culties of losing and finding one another, they seldom defray half the charge: But for the Grace, State and Defence of the Coast and narrow Seas, a great Navy is most necessary, but not to Attempt any far Voyage, except there be fuch a Competent stock, they want not wherewith to furnish and supply all things with expedition; but to the purpole.

a great

Navy.

Vouz.

After the death of our most Gracious What occa- Queen Elizabeth of Bleffed Memory, our fioneth Pi- Royal King James, who from his Infancy had Reigned in Peace with all Nations; had no imployment for those Men of Warr, so that those that were Rich rested with that they had; those that were poor and had nothing but from hand to Mouth, turned Pirates; some, because they became flighted of those for whom they had got much Wealth; some for that they could not get their Due; some that had lived bravely, would not abase themselves to Poverty; some vainly, only to get a name; others for Revenge, Covetousnels, or as ill; and as they found themselves more and Their chief more oppressed, their Passions increasing with discontent, made them turn Pirates.

> •Now because the grew hatefull to all Christian Princes, they retired to Barbary, where altho' there be not many good Harbours, but Tunis, Argier, Sally, Mamora,

and Tisuans, there are many convenien Rodes, or the open Sea, which is their chies Lordling: For their belt Harbours Maffat queber, the Towns of Oran, Mellila, Tangien and Cours, within the Streights, are posterfed by the Spaniards; without the Streights they have also Arzella, and Mazagan; Mamora they have likewife lately taken, and Fortified. Ward a poor English Sailer, and Dansker a Durchman, made first here their Marts. when the Moors knew scarce how to fail a Ship; Bifbop was Ancient and did little hurt; but Easton got so much as made himself a Marquess in Savoy; and Ward lived like a Bashay in Barbary; those were the first that taught the Moors to be Men of War. Gennings, Harris, Tompson, and divers others were taken in Ireland, a Coast they much frequented, and died at Wapping. Hams, Bough, Smith, Walfingham, Ellis, Collins, Sawkwel, Welling stone, Barrow, Wilson, Sayres, and divers others, all these were Captains amongst the Pirates, whom King James Mercifully Pardon'd; and was it not strange, a few of those should command the Seas. Notwithstanding the Malseses, the Pope, Florentines, Genoeses, French, Dutch and Em tifb, Gallies and Men of War, they would rob before their Faces, and even at their own Ports, yet feldom more than three, four, five, or fix in a Fleet: many times they had very good Ships, and well Man'd, but commonly in fuch Factions a- Their con-

mongst themselves, and so Riotous, Quar-disions. rellous, Treacherous, Blatphemous and Villanous, it is more than a wonder they could so long continue, to do so much Mischief; and all they got, they basely consumed it amongst Jews, Turks, Moors, and Whores.

The best was, they would seldom go to Sea, so long as they could possibly live on shoar, being compiled of English, French, Dutch and Moors, (but very few Spaniards or Italians) commonly running one from another, till they became so disjointed, disordered, debauched, and milerable, that he Turks and Moors began to command them as Slaves, and force them to instruct them in their best skill, which many an accurled Runnagado, or Christian turned Turk Renegadid, till they have made those Sally-men or Moors of Barbary to Powerful as they be, to the Terror of all the Streights, and many times they take Purchase in the Main Oce-

### APA The true Travels, Adventures, and Observisions

an, yea sometimes in the narrow Seas in men and Soldiers, have been most worthily England, and those are the most cruel Vil- benoused and esteemed, but now regarded lains in Turky or Barbary; whole Matives for the most part, but as the scum of the

Ments for (altho' many are sufficient Seamen as any) wild keads yet in regard of his superfluity, you shall find it fuch, that any wife Man would ra-ther live amongst wild Beatls, than them; therefore let all unadvised Persons take heed they entertain that quality; and I could how wish Merchants, Gentlemen, and all Setters forth of Ships, not to be sparing of a Compe-tent Pay, nor true Payment; for neither Sol-diers nor Seamen can live without Means, but necessity will force them to steel; and when they are once entred into that Trade, they are hardly reclaimed. Those Thles of Sea-

which however in the beginning were formed contemned, yet now you see how many Rich and Gallant People come from these, who went thither as Poor as any Soldier or Safler, and gets more in one Year, than you by Piracy in feven. I intreat you therefore to confider how many Thoulands yearly go thither; also how many Ships and Sailers are imployed to Transport them, and what Cultom they Yearly pay to our most Royal King Charles, whose Prosperity and his Kingdom's good, I humbly befeech the Immortal God to preferve and increase.

T baving pleased God, the Creator and Preserver of the Universe, by whose uncontroulable Will, the Counsels of Men are Governed, to Influence the Committee of the Greenland Company, to take a Resolution of making the most exact enquiry that could be, converning the true Condition of the Country of Greenland, during the Winter: Conserning the Nights there, and other Curious Observations (disputed among the Astronomers) it was resolved to select seven of the boldest and ablest Seamen, out of the Fleet, who for that purpose should tarry there all the Winter, which resolution being Published, the following seven offered themselves for that Service, and were accepted of accordingly: Outgert Jacobson of Grootenbrook, their Commander; Martin Carman of Schiedam, Clerk; Thauniss Adrian Thaudiffen of Shermerhem, as Cook; Dick Peterson of Veenhuyse; Peter Peterson of Harlem; Sebastian Gyse of Delfts-Haven, and Gerard Beautin of Bruges. These seven being left 1633, by their own choice, in the Isle of St. Maurice in Greenland, the Dutch Fleet set Sail from thence the 26th of August, and the Seamen Lefe us the following Account.

IN

# GREENLAND:

THE SECOND

Kept by feven other SAILERS

AT

# SPITZBERGEN,

In the Years 1622 and 1624.

HE 26th of August our Fleet fet sail for Hound with a strong N. E. Wind and a hollow Sea, which continued all that Night. The 27th, the Wind still at N. E. we went four or five times up to an Adjacent Hill, but did not observe the least Darkness all that Night. The 18th the Wind the same, it began to Snow very hard; we then Shar'd half a Pound of Tobacco betwixt us, which was to be our Attention ance for a week, towards went about together, to we could discover our Observation, burned. The 20th proving a clear Day, we sicended to

diffinely fee the Bears Momeain. The 30th the Wind turn'd to the N. W. with fome Snow in the Afternoon, the Night Cloudy, the Wind at N. E. The 31st, being a clear and Sun-shiny day, we had a perfect light of the Boars Mountain, with a fresh Gale from the N. E.

First Star-light Night.

The 1st of Spr. prov'd a fair day, the Wind at N. W. with some Snew in the Evening, and a Windy Night from the N. E. We went three or four times by the faw nothing. The 1d, the and delidy Night. The 3d, was a fair 2d, with some Snow; the Wind as Day before, which continued the Night feir and Star light. The oth, when , (and at feveral date times was a fair Fore-noon, but the Night when it was clear Weather) we could rainy, the Wind the same. The 7th,

### Two Journals kept by seven Sailers

the Wind continued as before all the day, with fair Weather, but turning to the S. E. by S. at Night produced a great deal of Rain. On the 8th 'twas a Rainy Morning, the Wind at S. E. but in the Afternoon fair, and the Might Star light; at the beginning, whereof we were fright at the beginning as if fomething had falled very heavy upon the Ground but faw noheavy upon the Ground, but faw nothing, the Wind at S. E. still. The 9th, the Wind the same; it prov'd a Sun-shiny day, and so warm that we pull'd off our shirts and sported in the Sun on see file of the Hill; we had also a light of the Bears Monntain; the Night was Rainy, the Wind at S.E. The 10th was very Stormy, the Night Rainy and the Wind the same. The 11th was a Foggy and Rainy day, the Wind at S. E. by S. but turn'd to the S. W. in the Afternoon, and to the N. E. in the Night, the Weather Cloudy; we made a shift to get some Salleting, being fond of a change of Diet. The 12th it blew hard from the N. E. the Weather clear, but the Night Snowy, the Wind as before. The 13th was a fair Sun-shiny day, the Wind st S. E. but the Wind turning to the N. E. by N. it began to Snow, the Night was still and close, the Wind at N. W. The 14th, it was fair Weather, the Wind in the West with some Snow; we went up the Hill, but faw nothing worth our Observation; except that at Night we observed the Setting of the Sun; the Wind at N. W. by W. a clear Night, and the Wind at S. W. The 15th it blew very hard, so that the Sea foam'd; we observ'd the Sun from the S. to the S. W. when it clouded in, but the Night prov'd Star light, the Wind at W. The 16th it was a fair Sunshiny day, the Wind at S. W. which made us go about to gather some Herbs for Salleting; it being a very Star light Moon-shiny Night, we saw abundance of Sca-Gulls. The 17th it blew very hard out of the S. W. which made the Sea foam, yet the day was clear and the Night calm, the Wind as before. The 18th it was a rainy Day, the Wind at East. The 3d the Wind was the at S. W. by S. This was the first time same in the Forence. we took each of us our Allorment of Brandy, being a certain Measure which was to serve us for Eleven days. The 19th it was a clear day, the Wind at W. the Night Star light, the Wind at S.E. The 20th it was Sun-fine, the Wind at S.E. by S. we then difcharged our great Guns, having no

more to fear from the Bifcay Privateers for this Season; the Night was Star light, the Wind at S. W. The 21st, Day and Night misty and rainy; the Wind at S. W. The 22d, it blew and rain'd very hard, the Wind at S. W. The 23d, being a cloudy day, the Wind at E. we discover'd a Whale near the Shoar, which made us fet out our Sloap in order to catch him; but he got clear of us, it turning a dark Sky, with Rain and Mist on a sudden, and in the Night it rain'd very hard; the Wind at S.E. The 24th, the Wind was at S. E. by S. with rainy Weather in the Forenoon, but the Afternoon being fair, we went to the Red Hill for some Salleting, but found none; at Night the Wind was at S. E. The 25th proved very Rainy in the Morning, the Wind at S. E. by E. but the Afternoon and Night it was very Stormy Weather. The 26th it was cold Frosty Weather, with an Easterly wind. The 27th being a fair Day, the Wind at N. E. we went towards the South fide of the Isle for some Salleting, but found none, being spoiled by the cold Rains; in the Night the Wind turn'd to the West, with very foul Weather. The 28th a violent Storm arose from the North, with some Snow and running Clowds, but the Night prov'd fair, the Wind at S. E. The 29th it blew very hard from the S.E. with some Snow, we observed the height of the Sun in the Sun fomething above the Mountains; the Night was fair, and the Wind South. The 30th it was a Cloudy Rainy day, the Wind at S. W. by W. the Night proved very wet, mixt with Snow and very stormy.

The 1st of Octob. it was fair in the Morning, the Wind at N. E. but in the Afternoon ftormy, and a cloudy Night, the Wind as before; it being Frosty Weather, we refolved to go to the South side of the lse. The ad it Froze so hard, that the Ice would bear even on the South part of the Island, the Wind the same as the day before: we found there a fine Spring of fresh Water, Same in the Forenoon, but turn'd to the West afterwards, with Frost and Show, but the Night was very fair. The 4th prov'd a Frosty day, the Wind South; in the Morning we saw the Biers Meumain; the Afternoon was very warm, and the Night Foggy and Rainy, the Wind very that p from the S. W. The 5th, the Wind continued

the same, with Rain from Morning till Night, which made us keep our Tents all that Day; at Night the Wind turn'd The 6th, the Wind was to the South. the same, with Frosty Weather, we obferved the Sun in the South, from our Huts, about half a Pace above the Hill; we also could fee the Bears Mountain: In the Night it blew very hard from the S.W. by S. with a hollow Sea and very dark Sky. The 7th it was very stormy, the Wind at S. W. by W. we went upon the Hill, but met with nothing there, the Night proved very wet. The 8th the Wind continued the same, in the Morning with Snow, but turn'd to the S. W. by S. in the Afternoon; towards Night it grew very Tempestuous, which shook our Huts to that degree, that we were not able to rest, the Storm increasing with Snow and Frost till late in the Night; the Wind at N. E. and afterwards to the N. with a very hollow Sea oth, the Tempest continued with such violence, that no Ship could have rid fafely at Anchor, with Frost and Snow, the Waves rising by the Northerly wind above the Fort. It being excessive cold, we began the first time to make a fire; we had still very strong winds from the N. E. by N. all that Night, which continuing the same the 10th; the excessiveness of the cold forced us to keep at home near the fire side; we found a considerable alteration in our Bodies, being troubled with a suddain giddiness in our Heads, the wind the fame as before. The 11 it was very cold and Snowy Weather, the wind at N. E. we had hung fome of our Linen in the Air to whiten, but were glad to bring them near the fire, they being in a moment Frozen as hard as a Board; we went along the Sea shoar to the Southern Rocks, but found nor saw any thing there. The 12th it Froze, Snow'd, and Blew so very hard, that our Barrel of Bear, (tho' laid within a Fathom from the Fire) was Frozen, the wind at N.E. we went upon the Hill that day but faw nothing, the 13th the cold Weather continued, we took a view about us on the Hill as usual, but discovered nothing, except that we see the Sun set? between S. and W. very clear, the wind at the North, the beginning of the Nightwas Star light, but towards Moining it was Stormy with Snow! The 14th the Wind and Weather the fame, and we observed the Sun to fet at S. W. by W. part of the Night was Statisht. The 14th is the Morning finding /ol. II.

two Whales cast a shoar near the old Furnace of Amsterdam, we went to work with our Harp-irons, Launces and Hangers, but notwithstanding all our endeavours, they got clear of us by the advantage of the Tide; the Weather proved indifferently well that day, the wind as the day before; we went upon the Hill but without seeing any thing. The 16th the Weather continued very cold with Snow, the Wind the same, which occasioned no small alteration in our Bodies; we took a view round about us on the Hill, but observed nothing. The 17th it was still Frosty weather, and Cloudy and blew very hard from the North; the Evening was Star-light; we went in the day upon the Hill, but faw nothing. The 18th the Frost continued the wind N. we observed the Sun to set at S. W. by N. or almost S. W. it was a very Moon light Night. The 19th the wind kept in the N. we saw from the Hill the Bears Mountain, and some Ice we faw, about a Mile to the North of the Shoar; It was a Sun shiny Day; but the Sun did not rife high enough to reach over the Hill, into our Huts in the Bay; it was a Bright Moon-light Night. The 20th being a fair Day, the wind at N. E. we had fight of a Bear the first we saw here, but could not catch him; we faw great Shoals of Ice, a good way at Sea, from the Shoar, and the Night proved veryCold, with an The 21st it Blowd and East wind. Snow'd very hard with a N.E. wind which continued all Night, with very thick The 22th it Snow'd all Day, Snow. and the Night continued Cloudy, the wind the same. The 23d was Cloudy, the wind at N. E. we took a view again round about us from the Hill, but faw nothing; the Night was very The 24th the wind and weather the same, with some Frost, we went upon the red Hill, where we faw nothing except the Tracts of some Beafts, whence we concluded that they began to come down towards the Seafide: The Night was Clear and Frosty. The 25th we had an excessive Cold, yet Sun shiny Day, the wind at S. W. but the Sun could not fend its beams over the Hills to our Huts: It being a Star-light Night, a Bear came in fight of our Huts; but we could not take him; the wind was the fame as the day before. The 26th the wind continuing the fame Corner, we went upon the Hill, where we faw nothing but Ice, the night was: very clear, the 00000

### Two Journals kept by seven Sailors

Wind at the West. The 27th it Was fair weather, the wind the same, the Niche very clear and star-light. The Night very clear and star-light. The 28th, the Wind blew from the same corner all Day and Night, with clear Frosty weather, we went up the Hill but saw nothing. The 20th being an excellive cold day, the Wind in the N. not only the Bay, but also the Sea, as far as we could fee, was full of ice; in the Night it Snowed very hard, the Wind as before. The 30th it contiaued Freezing very hard, with the fame Wind, and the Sea was fo full of Ice, that we could fee no Water; the Night proved very Tempestuous. The Night proved very Tempestuous. 31st the North Wind produced fuch an excessive Frost and Snow, that not the least drop of Water was to be feen. where-ever you turn'd your felf, and fome otour Vessels were Frozen to pieces, tho' we fav'd our Beer and other strong Liquors, by putting them in the Buttry

Cellar. The 1st. of November, a N. E. Wind vehemently encreased the cold, so that when we came upon the Hill, we could fee nothing but Ice on the North fide; yet we had still 10 hours day, tho' we feldom got fight of the Sun-beams, the same not appearing except on the South fide, whither we could not come by reason Towards Evening of the Snow and Ice. we got fight of a Bear, but he no fooner faw us making up towards him, but he faved himself upon the Ice at Sea, these Creatures being excessive thy here; the cold grew fo fierce by this time, that to preferve our Beer, and other Liquors, we were forced to kindle a Fire in the Towards Night, the Buttry Cellar. Bears appeared in fuch Mumbers about our Hutts, that we feares durft venture abroad; the Wind continued as before. The 2d, it being a very hard Frost, we discovered 9 or 6 Bears upon the Ice in the Bay, whereof we kill'd one, but the rest saved themselves upon the Ice. The 3d, it was tolerable good Westher, the Wind at M. E. we saw sour Bears, one whereof being kill'd, by a Gun, he got upon the Ice in the Bay, was pull'd a shoar by the help of some Roaps we had by us. The highs was Star-light, and the Wind as believe The 4th, the Wind being at the it froze very hard, the' is

a Snow, that we direct not venture out of our Hute; we had of late non fron any Sea Gulle; all that Night the Wind continued in the South, as well as the 6th, with some Tempestustugus Weather, the Wind turned East in the Night. The 7th it was still. the Wind at N. E. we went up the Hill, but discovered nothing; the Wind turning to the North in the Night, fill'd the Bay with great Shoals of Ice. The 8th the Wind continued at the North, with excellive cold weather; for want of Water we were forced to make use of melted Snow. The oth the North Wind holding still, we made thift to get to the Southern Moar, where we saw no Ice, but plainly discovered the Sun, this being the first time we had fight of it in 21 or 22 Days last past, being then above half an hour above the Horizon; the Wind continued in the North, all that Night as well as the next Day, being the 10th when we got fight of a great number of Bears. The 11th the North Wind en-creased, with thick Clouds: at Night the Wind turned N. E. which continued the 12th, with very thick fogs, we went upon the Hill, but could fee nothing but Ice; and some Sea Gulls; the Night proved very light by rea-fon of the Moon, the Wind at East. ion of the Moon, the Wind at East. The same Wind continuing the 13th it froze most severely; and the 14th the Wind turned to the West; the cold weather held on and brought vast quantities of Ice into the Bay; it was a bright Moon-shipy Night, but we saw no Bears that Day, tho' the pext being the 19th, we saw 3 or 4, but had only the Pleasure of seeing them, they not coming within the reach of our Guns. The 16th the Wind continued in the same Corner, all that tinued in the same Corner, all that Day and Night; we let fire at a Bear, that came in light of us, but missing him, he betook himself to the Ice in the Day. The 17th the Wind turn'd to the North, with dark Snowy weather, yet the Cold was not so excessive as before. 18th the Frost increased again with wind, which however prov'd most of one time in thereto; we ipendmostler, the time in the chearing to one
mother, the time and Land; it prov'd
mostler, the time and Land; it prov'd
mostler, wind the time to the North
mostler, we pair'd the full to the South
mostler, yet not wishout a great doel of 

Snow; we then had a full fight of the Boors Mountain, and fave the Sun just above the Surfece of the Sea, having yet fo much day-light left, that we could Write and Read in the open Air, but not within our Hutts, which made us very Melancholy; the Wind continued the fame as it did the 20th, with dark Snowy weather; in the Night the Wind turning to the West, continued there the 21st, when going up the Hillwelook'd to the North fide, but could fee nothing but Ice The 22d, the Wind held Westerly, with very cold Weather. The 23d the Wind shifted to the NW. by W. and being a fair day, we pas'd the Hill to the Red Hill, but could fee nothing but Ice where-ever we turn'd our Faces; 2 or 3 Bears came within fight of us, but not within the reach of our Guns: the beginning of the Night proving very clear and calm, we discover'd a Bear, at whom we discharged our Guns immediately (they being always ready charg'd) and wounded him forely, as we found by the Tracts of Blood near the Seashoar; yet escaped to the Ice, nothing being more frequent than to be shot quite thro the Body, without receiving much harm. The 24th proving a cloudy dark day, a S. E. Wind forced most of the Ice out of the Bay into the Sea, but yet not quite out of fight, at Night the Wind turning to the West, the Bay was fill'd again with Ice; the Weather being very Frosty; we saw a vast quantity of Sea-Gulls, but they kept close among the Mountains; the Wind as before. The 29th the Wind being in the West, with Frosty Weather, we fam a vast number of Sea-Gulls, but they return'd to the Mountains before Night, the Wind was as before. The 26th the Wind turning to the South, it prov'd a tolerable mild day, and most of the Ice was carried out of the Bay into the Sea; the Wind as before. The 27th it was fair Weather, the Wind at S. W. but turned to the East in the Night. The 28th the Wind was at S. E. with fair Weather; we got fight of a Bear again, whom we purfued over the Hill, but he proving too nimble for us, escap'd our hands. The mild for thele 5 or 6 days last post, that we believed the cold to be no more intenso here then it was in Helland, as the same time the Wind as before. The auth, the Wind continuing the fame, we want over the Hill again to she South fide of the tile, where

we found all cover'd with Ice: the' at the same time there was scarce any Ice; to be feen, within half a Mile of the Morthern floar; it was a Star-light The 30th the Wind blew from the same Corner, and seeing some Bears, we made what hafte we could after them, but in vain, not being able to overtake them; the Wind continued as be fore with violent Rains.

The 1st of December, a Southern Wind produced some Rain, but turn'd The 2d, the to the S. E. at Night. Wind continued the same, with Rainy Weather, which carried the Ice from the shoar to the North at Sea! It continued Thawing all that Night; the Weather mild. The 3d the Wind at S. with rainy Weather and strong Winds at Night. The 4th the Wind continuing Day and Night the same, with cloudy Weather, we heard some Bears near our Hutts, and pursued i or a of them, but could take none. The 5th the Wind still South, with mild calm Weather, so that to the best of our judgment, it could scarce be bet- . ter in Holland at that time of the Year ! we that one Bear, as we perceived by the Tract of Blood, but he had strength enough to get upon the Ice, out of our reach. The 6th the Wind blow from the S. E. cloudy Sky, but mild Weather, with a Star-light Night, the wind as before. The 7th the Wind continued the same with Foggy Weather, but the Wind turning to the South; at Night it began to Snow, and the Frost return'd. The 8th a N. E. Wind produced a dark and Frosty day, but at Night it turn'd to the West. Which continued thus the 9th, with very clearnd cold Weather, there being nothing but Ice to be feen as far as our Eyes could reach. It was a frofty Star-light Night. The 10th was a bright day, the Wind still at West; we found our solves furrounded on all fides with nothing but Ice, it being a Moon-shiny Night, we discovered 3 or 4 Bears, one of which we wounded in two places, yet he escaped our hands upon the Ice: we went upon the Hill, from whence we could discorn nothing but Ice; the Wind continued Weather was (to our great surprise) so , at West all Night, and the 1 ith with feir Weather, but could discover no Bears, that day; those that had once heard or felt the effects of our Guns, beginning to be very fly; it was a very Frosty Night. The 12th is the Morning, we had the good fortune to shoot a Bear in the Head, whodropt immediately; we roafted

roafted a Legg of him immediately. which happen'd to be a young one, it relished exceedingly well with us, having fed upon nothing but falt Meat for a confiderable time. The Wind held still iff the West, with very cold Weather, and a calm Moon-light Night. The 13th was a tloudy dark day, the Wind at S. W. we went crofs the Hill to the red Hill, but faw nothing but vaft. heaps of Ice in the Sea, to the North side; at Night the Wind turn'd to the S. E. with Snow. The 14th proved a clear Frosty day, the Wind at the South, and a bright Moon-light Night; we found the Ice removed from the Shoar, a great way into the Sea. The 19th the Wind being the same, it proved a dark day, and the Ice was forced back into the Bay: in the Night (which was exceeding dark) the Wind changed to the S. W. The 16th, the Wind continuing as before, we went up the Hill but obferved nothing; it was a Moon-light Night. The 17th prov'd a very cloudy dark day, the Wind still at South. We went again up the Hill but faw nothing. it Snowed and Thawed very hard at Night with the same South Wind, which brought us abundance of Sea-Gulls (as it frequently does) to the Sea fide; these make the same noise here, as they do at Holland in May, but retire every Night among the Mountains, their ordinary receptacle. The 18th, was a rainy dark day, the wind still at South, which changed to the E. the 19th with a hard Frost, and a calm and cloudy Night; the Wind asbefore, which continued the 20th with calm Weather, and a dark Night. The 21st, the Wind kept still in the same Corner, with dark Snowy Weather, the Snow lying so high upon the Ground, that we could not stir out without Boots; it Froze and Snow'd severely, the Wind at North. The 22d in the Morning, we found the Bay fill'd with Ice again, but the cold was so severe, that this was the coldest day we had met with as yet; we had still four hours day light; the Night was Star-light and calm. The 23d an Easterly Wind produced a bright Froity day, and Stormy Night, with io much Snow, that we durft scarce venture out of our Hatts, but could fee the Ice turn'd back into the Bay; the Wind: still at East, which continued the 24th. with a Foggy Air; yet the latter part of the Night was Star-liight, with a hard Frost and Storm from the N. E. The ageh, a South: Wind: produced a fair day,

but at Night the Wind turned to the North. The 26th it was a clear Frosty day, the Wind at East, but turned to the N. W. at Night. The 27th, the Wind and Weather as before, but the Night proved dark and calm, with an Eafterly Wind, which continued thus the 28th, with very dark Snowy Weather: in the Night it blew hard out of the West, with fo violent a Snow, that we could not stir out of our Hutts; Weather and Wind as before. The 29th the Wind veering about to the West, produced so clear and excessive cold day, the forepart of the Night prov'd Star-light and calm, but the Wind turning afterwards to the S. E. it Snowed very hard; we found the Bay clear of Ice in the Morn-The 30th it blew hard from the S. W. it was a cloudy but calm day; we faw neither Bears nor Fish. The 31st proved an indifferent good calm day, a \$. W. wind produced a great deal of Snow in the Night, but the cold was very tolerable.

In the Year 1634, the 1st of January, having wished one another a happy New Year, and good success in our Enterprise, we went to Prayers to disburthen out Hearts before God; the Weather was dark, cold and frosty, and the Wind as before; two Bears came near our Hutts. but being a dark day, and a very deep Snow, it was impossible to take them. The 2d of Jan. a N. E. Wind produced a clear day; and the Ice was forced out of the Bay to Sea, yet remained within fight; the fore part of the Night was Star-light, but afterwards an East Wind brought a cloudy Sky along with it. The 3d it rained a little, the Wind at S. E. which encreased at Night, the Wind blowing hard from the S.W. The 4th we had a fierce Westerly Wind, and cold Weather; the Bay was so fill'd with Ice again, that we could see no Water. The Night was pretty mild, with an Easterly Wind; which continued the 5th with a thick Fogg and Frost; the Night was Star-light, the Wind at W. The 6th was a clear frosty Day, the Wind at N. which increased all Nightwith some Snow. The 7th the Wind and Weather continued as before, but with abundance of Snow, more than we observed before, fince our coming hither; besides which, it Froze hard all the day and Nights that we dutil not venture to fiir about. We fear of being (William'd up in Constitutor other first with Saw. The Salishim Wind Hear hear the F.E. with very Friday.

cloudy afterwards; the Night was excessive cold and Stormy; whereof we now began to feel the Effects in our Bo-The oth the Wind and Weather continued as before, and the Bay was fill'd with fuch vast Ice-shoals, that at a distance they appear'd from the tops of our Hutts, (where we used often to make our Speculations) like white Hills or Land-skies; it was a clear Moon-light Night, tho' we never got light of the Moon, before she was 7 or 8 days old, by reason of the high Hills betwixt her and us; the Wind and Weather continued as before. The 10th, a N.E. Wind produced a bright, calm and pleafant day, but excessive cold, whereof we found the effects. The Bay continued full of Ice; the greatest part of the Night was Star-light, but very cold which seem'd likely to hold. The 11th the Forenoon proved clear and calm, but the Wind turning to the South in the Afternoon, it was cloudy, but neverthelfs cold, which not a little anoyed us, especially after the Wind brought with it a vast quantity of Snow from the S.E. The 12th, the same Wind and Snow continued, so that we could nor stir out, the the cold was not altogether fo exceffive as for some days before; in the Night the Wind and the Weather continued as before; and in the Morning the Ice was forced out to Sea, quite out of Sight. The 13th a S. E. Wind brought abundance of Snow, and feeing a Bear near our Hutts, we kill'd him with a Fusee upon the spot, and so drawing him with Roaps into our Tent, flea'd him, the Weather being so cold, and the Snow fo high, that we could not do it without doors; the Night was very The 14th it being a tolerable clear day, the Wind at East, we went cross the Hill to the Red Hill, but saw nothing; it was a Moon-light Night. and the Stars appeared some times; the The 15th it was a Wind as before. strong Easterly Wind, with Snow, we faw the Ice about a Mile from the Shoar; the Night was Moon-light, the Wind at N. E. The roth a South Wind produced good tolerable Weather; for we made this observation during our stay, . here, that with a South Wind the weather was not so cold as otherwise; in the Night the wind turned to the East; it was a dark but Frosty Night. 17th the wind continued as before, with cold Foggy weather; at Night the wind turning to the North, it Froze in fierce-ly, that the whole Boy was cover'd with Vol. II.

Ice, there being not the least Water to to be feen in the Morning. The 18th was a cold Foggy day; in the Afternoon the wind turned to the West, and in the Night it began to Snow, the wind as be-fore; which continued thus the 19th, with abundance of Snow; so that we were not able to stir abroad. The 20th the Snow continued with a Westerly wind, which lay so high, that we scarce peept out of our Tent or Hutt; tho' for the rest, it was not quite so cold, as some days before; and in the Night an Easterly wind brought us more Snow. The 21st, the same wind continued very strong, with a violent Snow; in the Night the wind turn'd to the West. The 22d the Snow and Westerly wind continued with great vehemency, which was follow'd by a very hard Frost at Night. The 23d it was a clear Frosty Morning, which made us get a little way out of our Hutts, (tho' not without a great deal of difficulty) to the South side of the Isle, to observe the heighth of the Sun; but growing cloudy foon after, could not make an exact Observation: however, we faw in the Bay thereabouts, the Ice and Snow at least 6 Foot high; the wind was East all Night, sometimes we could fee the Stars; the weather as before. The 24th a West wind had blown the Ice a great way into the Sea; it was first clear weather, then Snowy, and Starlight in the beginning of the Night; but in the Morning a South wind produced a cloudy Sky. The 25th, the strong South wind and Clouds continued, with a very cold Night. The 26th it Snow'd hard, the wind at West: at Night we faw the Ice again all over the Bay; at Night (which was cloudy) the wind turn'd to the South. The 27th the wind being West, it proved a mild cloudy day, and more Ice was forced into the Bay; the Night was dark and Snowy. with an East wind. The 28th the wind was at West at first, but veering about to the S. E. it began to Snow; the same Night the Ice was carried a good way into the Sea again. The 29th the wind turn'd to the S. W. and to the West at Night, with dark rainy weather: In the Morning the Bay was full of Ice again; the wind and weather as before. The 30 proving a calm, clear and frosty day, we went (tho' not without a great deal of difficulty) upon the Hill; and looking to the South, (observed according to guess) the Sun about an Hour and half high. In the Night the wind turn'd to the East, with fair weather; the Stars

appeared fome times; the wind and weather as before. The 31st, a Westerly wind brought us abundance of Snow, in the Night the wind turn'd to the North,

with Star-light Frosty weather.

The 1st of February, the wind continuing as before; it was clear and calm weather, which made us go upon the Hill, where we saw the Body of the Sun very clear; and on the North fide of the Isle nothing but Ice as far as we could fee; the Night was very calm and Star-The 2d, a N. E. wind produced clear but very cold weather; with a bright Moon-light Night, to our no small fatisfaction; we found the Bears to grow very shy of us, for we seldom saw any; the wind and weather as before. The 3d the wind was Easterly, the weather the same, but the Night was somewhat cloudy, with a S. E. wind; it was not fo cold as before. The 4th, the wind continued as the day before, in the Forenoon, when the Ice was carried out of the Bay into the Sea; in the Afternoon the wind turn'd to the South, with Snowy weather, but was not so cold as before; it was a Star-light Night. The 5th it was a fullen day, the wind at S. E. and at the East in the Night, with some Snow; but the cold was somewhat aba-The 6th, the wind continued as before; the weather calm and cloudy; the wind turning to the S. W. it proved a very clear and Moon-shiny Night. The 7th it blew strong from the East, the The 8th was a very weather cloudy. calm day, the wind at South; the Ice was carried away quite from the Shoar beyond the reach of our Eye-fight; it was a clear Moon-light Night. The 9th the wind being Northerly, it Snowed fo violently, that we could not stir abroad, it continued thus all Night; the wind at South. The 10th proved a pretty mild day, tho' the wind was at the N. but turn'd to the S. W. at Night, which was very dark and stormy. The 11th was a cloudy day, the wind at the South. but turn'd to the East at Night; but tolerable good weather. The 12th the wind continued the same, with some Snow; it was a dark Night, but not excessive cold, considering the Climate and . The 13th the wind flood still in the same Corner, with Snowy but calm weather; and it was a Moon-light Night. The 14th we had the same wind, and a clear day; but in the Night it Thawed and grew very stormy. 15th, the wind blew as yet from the East, and the Snow was so high, that we

funk to the waste in it, so soon as we stir'd out of our Hutts. The same wind continued the 16th, the weather pretty mild, but cloudy: This day we got fight of two Wild Fowls, which in respect of their bigness, did appear to us not unlike Geese, but were so shy, that they would not come within reach of our Guns; we also espied a Faulcon, but could likewise not come near enough to hit him. The 17th the wind blew still from the East, and had a great deal of Snow: in the Night the Stars appeared some times. The 18th the wind continued the same, with cloudy but mild weather. The 19th it was Easterly wind still; and being a fair day, we made thift to get over the Hill to the Red Hill, but faw nothing worth taking notice of, not fo much as any Ice; the weather as before. The 20th the weather and wind continued with very little Alteration, and was tolerably mild. The 21st the wind turn'd to the N.E. with very bright weather, which made us again get up the Hill (tho' not without a great deal of trouble) but could see nothing worth mentioning. The Night proved fair and calm, but afterwards Frosty with some The 22d the wind continu-Snow. ed N. E. with much Snow; the Night was dark and Frosty. The 23d the wind blew out of the fame Corner; the weather was very cold, which brought abundance of Ice into the Bay, but the main Sea was clear of it as far as we could fee; the Night was dark and Frosty. The 24th an Easterly wind produced a most violent Frost; the Day cloudy, but the Night clear, with a North wind, which held the 25th, with a cloudy Sky; in the Afternoon it clearing up in the West, we saw the Sun again the first time from our Hutts, and found it to Set at S. W. by W. the Night was very dark. The 27th it was very calm and mild Weather, but at Night a South wind brought us a The 28th the South wind and open weather continued, the Ice being forced out of the Bay into the main Sea; yet not quite out of fight; the Night was very dark, the wind at S. W.

The 1st of March, the wind and weather continued as before, with some Sunshine in the Forenoon, but afterwards it clanged, and proved rainy: we saw the Sunbeams on the S. W. of our Hutt; the Night was very dealy from the West, the weather the and cold, the Night was dark wind and the wind

wind very high from the N. E. The 3d the wind and weather continued with little alteration; a violent North wind forced the Ice into the Bay, but in small The 4th the wind turn'd to the N. E. with cloudy, but calm weather; the cold very tolerable. The 5th was cloudy, the wind at N.E. the Night the same. The 6th the wind and weather continued as the day before; the Night proved very calm and pleafant, yet by reason of the Snow could not as yet ftir from our Hutts. The 7th it was cloudy but calm, and the Night stormy from the N. E. The 8th the wind confrom the N. E. tinued as before, with dark and cloudy weather, but a Star-light Night. oth the wind blew still from the same Corner; both the Day and Night were cloudy, with a sharp Frost. The 10th it Froze very hard, the wind at N. E. with excessive cold weather; the Night was very clear and Frosty: The 11th the weather changed on a sudden; being a calm, pleasant Sun-shiny day; the South wind in the Night brought us such Pleasant weather, that we extreamly rejoyced at it. The 12th the same wind continued, and the Ice was carried out of the Bay into the main Sea, beyond the reach of our Eye-fight; the Night proved dark but not very cold; the wind at S.E. The 13th was a cloudy day; in the Night the wind and weather as before, very dark, but only moderately cold, the wind at N.E. The 14th it blew all day and all Night, being very cold from the N. E. The 15th the wind turning to the South, produced milder weather; and perceiving a Bear near our Hutts, (a thing we had not feen many days before) we let fly at him fo fuccessfully, that he dropt down dead upon the spot; being glad to find our felves some imployment, and to feed upon fresh Meat (having lived upon Powdered Beef for a confiderable time) we foon flea'd him, and having hung his skin up in the Air to dry, we feafted upon part of the flesh, and sprinkled the rest with a little salt only, by reason we were exceedingly afflicted with the Scurvy; the Night proved dark, the wind at S. W. The 16th the wind continued . the same, but the weather was very cold; we fix'd some Traps to catch Foxes; and in the Night the wind turn'd to the N. , which held thus the 17th, with cloudy weather, and fill'd the Bay with Ice from the Sea; as Night the wind was as before, which continued thus the 18th, being a Cloudy, our Frosty Day, but

a Starlight Night. The 20th, proving a Calm Sun-shiny Day, we went upon the Hill, but could discover nothing, (as far as we could see) but Ice; the Night was Cloudy, the wind in the South, which held thus the 21st. with dark Rainy weather, the Ice was all carried out to Sea again; the Night was Cloudy, the wind still in the South. The 22d the wind turn'd to the S. E. with thick Clouds; For want of Refreshments we began to be very heartless, being afflicted with the Scurvy to that degree, that our Legs were scarce able to bear us; the Night was Cloudy, and the wind as before. The 24th proved a pretty pleasant Sun-shiny Day; In the afternoon the wind shifted to the S. E. with fome Snow Clouds, the Night was exceeding Dark. 25th was a Sun-shiny and calm Day, from Morning till Night; towards Evening a Southerly wind produces some Clouds, but the Night proved clear again and Calm. 26th The Sea had forced the Ice into the Bay again; the Day was very Bright, the wind at and South, the Night was very Clear. The 27th the same wind continued with fair and Clear weather both Day and Night. The 28th proved a Cloudy Day, the wind at S. E. The Ice was carried so far into the Sea, out of the Bay, that we could scarce see it. The same Day we saw a Whale a huge Beast, in the Bay, but could not come at him; This Day going also over the Hill, to the red Hill, we spied from thence five Whales near the Shoar, and towards Evening 4 more in the Bay, being 10 in all we had seen that Day, had we had hands enough, and been provided with Instruments for such a purpose, we might have taken as many of these Fish, as would have freighted a good Fleet immediately, without being obliged to stay for the taking of them after their arrival, as they generally do: The Wind and Weather was in the Night as before. The 29th, a Southerly Wind produced a cloudy, but very mild day: Innumerable Whales appear'd near the Shore that day, so that had we not wanted Men and Tools, we might have made a confiderable Advantage, which we now durft not as much as Attempt, being but Seven in all, and disabled by the Scurvy: In the Night, the Wind and Weather as before; which continued the 30th, when we faw abundance of Fishes,

Fishes, as we did almost every day after; the Night was very dark, the Wind as before. The 31th it blew a brisk Gale from the N. E. with some Snow; We got sight of four or five Whales again, which came so near the Shore, that they were likely to have been cast upon the Sands; but if they had, we had not strength enough to have catch'd them: We saw likewise a She-Bear, with three young ones, about the bigness of a small Sheep: We did what we could to kill them, but our first Shot failing, they all got of, to our Grief, tho' it was no unpleasant sight to see the young ones solow the old; In the Night the Wind and Weather as before.

The first of April was a cloudy Day, the Wind at E. We saw four or five Whales again at the Entrance of the Bay, but had only the pleasure of looking at them; The Night was Star-light, the Wind in the South. The 2d, proved a Snowy Day, the Wind at S. E. but not very cold; the Night was dark, the Wind as before. The 3d, the Wind Wind as before. The 3d, the Wind turning to the W. produced a Cloudy Day; there being at this time no more than two of us in Health, (the rest be-ing very ill and cripled by the Scurvy) we kill'd the only two Pullets we had left, at their Request, and they fed pretty heartily upon them, in hopes it might prove a means to recover part of their Strength, which was much de-cayed, and which we heartily wished, being forry we had not a Dozen more for their fake: In the Night, the Weather and Wind was much the same as before, which continued thus all Day and all Night: The 4th, a Westerly Wind produced a Sun-shiny day: The 5th, we saw two very large Whales in the Bay; the Night was dark, the Wind The 6th it was clear Weather, but the Night dark, the Wind N. E. we faw 4 or 5 Whales more in the Bay; at Night, the Wind and the Weather as before, which continued the 8th, with cold Sun-shiny Weather; we saw innumerable Whales both at Sea and in the Bay: In the Night the Wind and the Weather continued as before, and so it did the oth, when we saw abundance of Whales again; the Night was cold and Frosty, the Wind at North. The noth, the Wind continued the same, with very clear Weather; the Bay was full of lce, and we saw some Whales, in the Night the Wind and Weather as before. The 11th we law neither Fishes nor Bears, having not feen any of the last

these several days; it continued to be very cold Weather; in the Night the Wind as before. The 12th the Wind-turning to the N.E. it proved a very clear Frosty day; at Night the Wind and Weather as before, which continued thus the 13: the Bay was full of Ice the Night very cold and dark. The 14th the Wind held still in the same Corner, with Sun-shine; at Night the Wind turning to the South, the Ice was carried out of the Bay, a great way from the Shoar. The 15th proved a calm mild day, we faw 4 Whales in the Bay, tho' we don't now flir out so often as formerly, our Clerk being very ill; the greatest part of the Night the Wind was at West, The 16th, being Easter day, our Clerk died, the Lord have Mercy upon his Soul, and upon us all, we being all very fick; the Wind was at West, with a clear Day and dark Night. The 17th, the Wind continued as the day before, but was very cloudy, the Bay was full of Ice again; the greatest part of the Night Weather and Wind as before. The 19th both Wind and Weather proved as the day before; and now having not the least Refreshment left, we grew worse and worse every day, and that without any hopes of Recovery, partly for want of Necessaries; partly by reason of the excelliveness of the cold, for being scarce able, whilst in Health, to keep our selves tolerably warm, by exercifing our Bodies we were but in little hopes of doing it now we were fick, and not able to ftir out of our Cabins; all our dependance being on God's Mercy; the Wind and Wea-The 20th proved a ther as before. cloudy day, the Wind at South, we faw the Ice forced a great way to the North at Sea, the Night was Snowy, with an Easterly Wind. The 21st was a bright calm and Sun-shiny day, but could make but slender Observations, being not able to stir from our Hutts, by reason of the Scurvy, which encreases upon us every day; the Night was cloudy, the Wind at N.E. which continued thus the 22d; the Ice was forced so near the Shoar, that we could scarce see any Water; at Night a South Wind carried the sce quite out of light again. The 23d, the Wind blew from the same Corner, with imall Rain; we were by this time reduced to a very deplorable State, there being none of them all, except my felf, that were able to bely them elves, much less one and the person of the law and I perthen lay agree for the flower, and I

long as God pleases to give me strength; I am just now a going to help our Commander out of his Cabin, at his Request, because he imagined by this change to ease his Pain, he then Struggling with Death; the Night was dark, and the Wind as before. The 24th was a cloudy Day and Night, the Wind at S. which continued the 25th with some Sun-shine: The Ice kept about half a Mile from the Shore to the Northfide, but on the South side of the same Bay, no Ice was to be feen: We had fight of many Whales again; the Night was dark, with a strong N.W. Wind; The Ice was forced nearer to the Shore; tho' there remained a good Interval of Water betwixt both; the Wind and Weather as before. The 26th, it was a Calm, but cloudy Day; the Night fair, the Wind at W. The 27th, it was Thawing Weather: That Day we kill'd our Dog for want of other Refreshment; The Night was Cloudy; yet without Rain, the Wind at E. which continued thus the 28th, with cloudy Weather: The Ice was this Day carried to Sea, quite out of fight: The Night was Cloudy with a strong N. Wind. The 29th, the Wind and Weather as before, but turn'd to blow hard from the N. E. at Night. 31st was a clear Sun-shiny Day, with the same Wind : [Die] Memorandum. This Word DIE, was the last, questionless, he writ, intending probably to fet down afterwards his Observation concerning the Night, according to his usual way. This Person being one, who, (according to the Report of others) had learn'd to write of the other fix, he writ as long as he was able, viz. to the last day of April; when perhaps, being seized by a Fainting Fit, he was forced to retire to his Cabin, where he delivered up his Soul to his Creator, as will appear more fully by the following Additions.

A Mong all the Ships that were fent the next year from Holland to Greenland, those of Zealand being the first that came in fight of the life of St. Maurice, some of the Seamen being eager to know what was become of their Comrades, went ashore in a Boat, striving who should be the first to come to their Hutts, tho' by their not appearing, upon the Sea-side, they did not presage any good to themselves. They were no fooner entred the Hut, but they found they were not deceived in their guess, every one of the moor Wretches, left

there last year, lying Dead in their Cabins, the News whereof they brought to their Commander.

The first of these Seven unfortunate Fellows, died the 16th of April 1634. whom they had put in a Coffin, and Deposited in one of the Huts. The other Six died in the beginning of May, as we believe by the Conclusion of the Journal at the end of April.

The before mentioned Ships of Zealand came to an Anchor in the Bay of St. Maurice's Ille the 4th of June 1634. where they found the Dead Carcasses of these unfor unate VV retches, each in his own Hut; Near one of them flood fome Bread and Cheefe, upon which probably he had fed not long before his Death; another had a Box with Ointment by his Cabin side, wherewith he had rubb'd his Teeth and Joints, his Arm being still extended to his Mouth; there also lay a Prayer-Book near him, wherein he had been Reading; the rest being found each in his Cabin.

If we feriously reflect upon the Condition of these VV retches, it must needs have been very miscrable, especially after all were faln Sick, so, as not to be able to affift one another; especially in respect of him that out lived the rest, being the same, who, according to his own testimony, attended them to the last; and had learn'd to write from the others, as did appear by his Hand-VVriting, till the Conclusion of the Journal, who, as we guess, lived some days after he left of VVriting; it being very probable, that some might grow fooner stiff, by the excessive Cold, than others, in proportion of the quantity of Natural Heat they had left; tho' it is beyond all question, that the Source of their Distemper was the Scurvy, occasioned by their Salt Food, without any manner of Refreshment, which having put the Cramp into their Limbs, and rendred them incapable of Exercise, they foon grew quite stiff, and were quite overcome by the Cold; it being certain, that without the Scurvy they needed not have dreaded the Cold, which was not so excessive, but that once within three or four days they chuld ftir abroad, after the Snow was a little settled.

Our Commodore had no sooner received the dismal News from the Seamen that had been ashore, but he ordered the Six Dead Carcasses to be put in Coffins, and to be Buried with the

Qqqqq

Seventh under the Snow, till the Ground should become more pliable; which he ing done, they were afterwards, nic. on St. John's Day, honogrably leterr'd (according to the Circumstances of Time and Place) under a general Diffcharge of the Cannon of the whole Fleet.

It is furthermore left to the Confideration of the Courteous Reader, That he was appointed Clerk for this Design, having never been in that Station before, his want of Ability ought to the fame subject.

plend fixingly for the Simplicity of these obliving late the Collins of time Friends) having (at the request of time Friends) has put to the Prais, were Published, and made as latelligible as the Mature of the Matter would allow of, wishout imposing upon the Publick, which has been done with the nunoff Sincerity, after the True Original, which fill remains in my Custody, in Opposition to divers fabulous Relations, which have been published upon the same subject.

Seven other Seamen, who being left in 1634

A T

### SPITZBERGEN

To pass the Winter, died there in 1635.

In the Year 1633, seven Persons being left much at the same time as well at Spiezbergen, as in the Isle of Saint Maurice; the Ships that were sent thither in 1634, had Orders from the Greenland Company, to release those that had stay'd there, and to leave in their room seven others, who should offer their Service for that purpose. Accordingly the following seven were (with their consent) appointed to remain the next following Winter at Spiezbergen: Andrew Johnson of Middleburgh; Cornelus Thyse of Rotterdam; Jerome Carcoen of Delfts Haven; Tiebke Jellis of Friseland; Nichelas Florison of Hoem; Adrian Johnson of Delft; Fettje Otters of Friseland.

These being provided with all manner of necessaries, as Meat, Drink, Phyfical Preparations, Herbs, &c. were left ashoar to continue all the Winter there; during which time, they kept a Journal of all Remarkable Occurrences; the chief Heads whereof I thought only fit to infert here; leaving out the more unnecessary Observations, such as of the Wind and Weather, Cc. to avoid Pro-The 11th of September, 1634, lixity. the Ships being fail'd thence for Holland, they got fight of abundance of Whales, at whom they discharged their Guns, but could not take any; they went also in fearch for green Heibs, Foxes and Bears, but met with none. The 20th, or 21st of October, they had no more light of the Sun: The 24th of November the Scurvy beginning to appear among them, they fearch'd very earnestly after greenHerbs. Bears and Foxes, but to their great grief could find neither of them; so they comforted one another wish hopes that God

would provide for them fomething or other for their Refreshment. The 2 Decem. Nichelas Florison took a dose of a Scorbutic Potion, and they fet some Traps to catch Foxes. The 11th, Jerome Carceon, took such another Potion; and they refolved for the future, every one to eat feparately from the other, some being not fo much afflicted with the Scurvy as the rest. They went often in quest after fome Refreshments, but meeting with none, they recommended themselves to God's Providence. The 12th, Cornelina Thyse did likewise take a Medicinal Potion against the Scurvy. The 23d, as the Cook was throwing out some Water, he faw a Bear just by the Hut, but he run away at the noise, before they could come at their Guns. The 24th, they discovered another Bear, three of them advancing towards him, he rife upon his hindermost legs, and being shot through the Body by one of our Guns, he began to bleed and to roar, and to bite one of our Halberds with a gread deal of fierceness; but finding us too hard for him, he betook to his legs: being excessive eager after some fresh Meat, (of which we stood in great need for the Recovery of our Health) we pursued him with Lanthorns and Candles a great way, but to our forrow could not overtake him; which made us fay to one another, that in case we were not supply'd by God's peculiar Providence with some Refreshments speedily, the Pain we endur'd must needs kill as before the return of our Ships; but God's Will be done. 15th, Cornelius Thyffe took another Potion against the Scurvy, being in a deplorable Condition. The 14th of Fanuary,

Adrian Johnson of Delft died, being the first of the seven, the the other fix were but no gody is able to stir for Pain; we full of Pain, and very lil. The isth, spend our time in constant Prayers, to Ferije Oraws died likewife; and on the implere works Mercy to delives us out 17th, Convelius The being the Man of of this Histry, being ready whenever all the role, in whom they had put their his please as call the we are cortainly most hopes next to God. The remaining 4 were very weak, and had scarce out Food or Fire, and cannot affift one strength left to stand upon their legs, yet they made shift to make Coffins for must every one bear our own Burthen.
these three, and put their Bodies into When the Ships from Holland arrive them. The 28th, they saw the first Fox, The 7th of but could not take him. February, they had the good fortune to take a Fox, to their no small satisfaction, tho' in effect they were too far gone to receive any Benefit thereby.

They saw many Bears, 3 or 4, nay fome times 6 or 10 together, but had not strength enough to manage their Guns; or if they had had, they could not have pursued them, being not in a condition to fet one foot before another, nay not even to bite their Biscuits, for they were seized with most cruel Pains, especially in their Loins and Belly, which encreased generally with the Cold; One did spit Blood, and another was afflicted with the Bloody-Flux, Jerome Carcoen was still something better than the rest, being still able to fetch them some Fewel for The 23d they began to be so weak, that they kept close in their Cabins, recommending themselves to God's The 24th they faw the Sun again, which they had not feen fince Oft. 20 or 21 in the preceeding Year. 26th, being the last day (as we guess) they were able to write, and lived not long after; they left this following Memorial behind them: Four of us that are still alive, lie flat upon the Ground in our Hutts; we believe we could still feed, were there but one among us that could

ftir out of his Hutt to get us some Fewel. not in a condition to live thus long withanother in our Mutual Afflictions, but

When the Ships from Holland arrived there in 1635, they found them all dead, that up close in their Tent, to secure their dead Bodies against the Bears and other Ravenous Creatures. This being the Tent of Middleburgh; a Baker who got ashoar first, happened to come to the back door, which he broke open, and running up stairs, found there upon the floor, part of a dead Dog that was laid there to dry; but making the best of his way down again, he trod upon the Carcass of another dead Dog (for they had two) at the Stair foot in the Buttry. From hence passing thro' another door, towards the fore-door, in order to open it, he stumbled in the dark over the dead Bodies of the Men, whom they faw, (after the door was opened) altogether in the same place, viz. three in Cossins, Nicholas Florison and another, each in a Cabin, the other two upon some Sails spread upon the Floor, with their knees drawn up to their chins. Coffins being ordered to be made for the four that had none; they were buried with the other three under the Snow, till the Ground becoming more penetrable, they were buried one by another, and certain stones laid upon their Graves, to hinder the Ravenous beasts from digging up their Carcasses: These were the last that pretended to pass the Winter at Spitzbergen.

A TRUE and SHORT

## ACCOUNT

### FORTY TWO PERSONS,

Who Perished by Shipwrack near

### SPITZBERGEN

In the Year 1646.

being ordered to Spitzbergen, to catch Whales, he set Sail from the Texel in a Galliot, the 6th of May 1646. and arrived the 3d of June following near Spitzbergen, with an Intention to Anchor in the Bay, but was by the vast Floats of Ice-Shoals forced to keep out at Sea. After having in vain Cruized up and down among the Ice-Shoals, they got into the Bay, but perceiving two Whales further at Sea, they sent out their Sloop in pursuit of the Whales.

Whilst they were Rowing up and down to watch the motion of these Creatures, they discovered at a distance, a great Ice-Shoal, with fomething white upon it, which at first fight they imagined to be Bears, (they being generally White here; ) But one Ellert Johnson, (who was in the Sloop to manage the Harpcock, or Iron, wherewith they frike the Whale) judging by the motion that it was something else, perswaded them to Row that way, which being done accordingly, they not long after perceived the same to be a piece of a Rope belonging to the Sails of a Ship, which was held up by a Man as a Signal of their utmost Distress; so they Rowed up to it with all the Oars they had, and coming near them, found, (to their great Surprize) four living Men and one dead one, (all Englishmen) upon the lee-Shoal, who upon their bended Knees express'd their Joy and Thankfulacs (2023) appropriate their Joy and Thankfulacs (2023) appropriate Delivers Thankfulness for Runexpected a Deliverance from the Jaws of Death. They were taken into the Sloop, and carried into the Bay aboard the Ship.

They had cut a great Hole, in the Nature of a subterraneous Cave, into the Ice, and round the entrance thereof had placed the pieces of Ice that were cut out of the Concavity, to defend themselves against the violence of the Winds and Waves. In this Hole they had spent Fourteen Days, (it being so long since they had lost their Ship.)

At first there were in all Forty Two of them, and they had saved some Victuals and Tools with their Sloop. The Commander, perceiving after a little while, that it was impossible for them to hold out long upon the Ice-Shoal, resolved to go ashore in the Sloop with Seventeen of his Men, if he could, and to send them word afterwards, how Matters stood there. This was done accordingly, but it blowing very hard, and they having not heard the least Tidings of them since, they were afraid that they were Drowned, before they reach'd the Shore.

There were then Twenty Four left upon the Ice-Shoal, but the want of Provisions encreasing daily among them; to that being reduced to a Starving Condition, and expecting nothing but present Death, they resolved to divide themselves, and to get upon several other Ice-Shoals, in hopes by some chance or other to come near to the Shore; but whether some of them got ashore, or

rrrr whe-

whether they were taken up by some Ship or other, or whether they were swallow'd up by the merciles Waves,

they were not able to tell.

Certain it is, that we found Four of them, (the miferable Remments of Forty Two) fitting together upon this Ice-Shoal, overwhelmed with Affliction, without any hopes of being Saved, from the last Extremity they were reduced to by Frost and Hunger, before we came in full fight of them with our Sloop; having had nothing to Feed upon for some time, but a Leather-Belt, (belong-

ing to one of them) which they had divided and Eat, share and share alike, till all was consumed.

After they were brought to our Ship, our Surgeon took all imaginable Care for their Recovery; notwithstanding which, three of them died in a few days after; so that of the Forty Two wherewith their Ship was Manned, no more than one escaped with Life, who arriving in September 1646. in the Galliot the Delf upon the Meuse, from thence returned to his Native Country in Lygland.

Monsieur de la MOTHE de VAYER.

## ACCOUNT OF ISELAND,

SENT TO

Monsieur de la MOTHE de VAYER.

SIR,

Urfuant to your Request, I amongoing to give you the best Account I am able of what I could Learn concerning the Condition of Island and Greenland, during our stay in the North. As nothing is more agreeable to my Sentiments than to Serve you to the witmost of my Power, so I will treat of both, one after another.

Iseland is a large lsle, and Greenland of a vast extent: I will begin with the first, and give you an Account of all the most material Passages I have met with concerning it, in their best Authors, elipecially in Angrim Jonas, (erroneously call'd Arngrim by some) and by Converting with feveral Persons of Note and Learning in Denmark; upon which Score I am particularly obliged to Olaus Wormins, a Doctor of Physick of Copenhagen, a Person very curious in all the Affairs of the North. I will also not pass by in filence, what I have read in Blefkenius, a Dane by Birth, and who has been in Iseland himself, at least as far as relates to those Things he has been an Eye-witness of; for which I have the same regard, as for what Herodorus affures us to have seen with his own Eyes; it appearsing very improbable to me, That Men of Honour and Learning should be so careless of their Reputation, as to impose Things upon the World, never seen by them, under a false Notion of their own Experience. To be short, I will tollow the Footsteps of Salust, and re-

hearse to you what I have either Read in Blefkenius or Angrim Jonas, or Sears from Dr. Wormius and others, upon whose Authority we are obliged to relie in this Point.

The Isle of Island lies in the Deucalidonian Ocean, at 13 Deg. 30 Min. Longitude, and 65 Deg. 44 Min. Latitude, according to the Elevation taken in the Bishoprick of Hole, the most Northern Part of the Isle, as Angrim Jonas tells us in his Crimogea; adding, that he had the same of Gundebrand de Thorlac, Bishop of Hole, his familiar Friend, and once a Disciple of the sames Astronomer Tycho Brahe.

Island is to the East washed by the Hyperborean Sea, and on the South-side by the Deucalidonian Sea; to the West it lies opposite to Greenland, towards the Cape Farewell, and on the North-side is enclosed by the Frozen Sea of Greenland. Its length from East to West, is computed to be 20 days Journey; and its breadth, where it is broadest, at four days Journey, from the South to the North. But Angrim Jonas, who has given us this Account, does not mention whether these days Journies are to be perform'd on Foot or on Horseback.

It is generally believed to be twice as big as the life of Sicily; and by its Elevation and the Globe, you will foon be convinced of the Truth of what I am going to tell you, viz. That about the Summer Solflice, whilst the Sun is in the Truins and Caneses; the Sun does never

gd

go entirely below the Horizon for two Months, in the North of Iseland; but fome part of it remains above it, and one half of it whilft the longest days last, from ten at Night till two in the Morning, when it rifes quite above the Horizon; whence it appears, that about the Winter Solftice, whilst the Sun is in the Signs of Sagittary and Capricorn, the whole Body of the Sun does for two Months successively not rise above the Horizon; and in the Shortest Days not above half of it, from 10 a clock in the Morning till two in the Afternoon, the ordinary time of Sun fet here at that Seafon.

This Isle has got its Name from the Whiteness of its Ice, Quest Iceland; It was formerly reputed fertile in Wheat, and well-stor'd with Wood, fit for the Building of large Ships; the Roots whereof being of a vast Bulk, are to this day found underground, where these Forests stood, and are as black as Ebony-Wood. But now-a-days, Iseland produces no Wheat, nay not so much as a Tree, except some few Shurbs. were it not that they are furnished with Grain from the Neighbouring Countries, and supplied with sufficient quantities of Wood, both for Fuel, and their Buildings, (which are like those of other Parts in the North ) by the Ice; which in the Month of May, is, together with the Wood, forced from the more Northern Parts on this Shore; they must perish with Hunger and Cold. In their Building they also make use of the Bones of Whales and other great Fishes; and for Firing, of two forts of Turffs, (or Cespes Bituminosus, called Gleba Fossilis by Angrim Jonas ) which they dig and dry in the Sun. These Shoals of Ice, which come from the North thither, bring along with them such vast Trunks of Trees, that according to the Iseland Chronieles, a Tree was carried thither of 63 Cubits long, and 7 in compass.

For no fooner come the ice-Shoals from the North to the Iseland Coast, but the Inhabitants go in quest of these Trees, and of several Beasts, which are carried along with it thither; such as white and red Foxes, Stags, Wolves, white and black Bears and Unicorns. For that fine and large Horn preserved in the King of Denmark's Palace at Fredericksburgh, (the Fentainbleau of that Kingdom) belonged to a Fish taken upon the Ice near Island : It is much larger than that of St. Denys in France. Count Viefeld, Great Marshal of Denmark,

shew'd me another of these Unicorns. which was entire, but not above two foot long, likewise taken upon the Ice near Iseland; He told me, that when he first had it, there was to be seen still part

of the Flesh and Skin.

Iseland is a strong and mountainous Country: Their Pastures are of such Goodness, that they are fain to remove the Cattle for fear they should Burst themselves; the Grass having so agreeable a Scent here, that Foreigners tran-fport and dry it, to lay it among their Linen. However, their Beef is not reckoned of the best fort, and their Mutton is rank; which the I elanders don't much regard, because they dry their Meat in the Sun and Wind, which preferves it better than Salt, and takes a-way much of its rankness. Butter they make in abundance, and keep it in Tubs, or for want of fuch, only Pile it up in Their ordinary Drink is the House. Milk or Whey, fometimes with Water, fometimes without. They don't want good Horses: These Feed during the Winter, upon dry'd Fish, as well as their Oxen and Sheep, when Hay begins to fall short: Of these dry'd Fish they also make Flour and Bread, when by the rigour of the Winter-Season, they can't sometimes be supplied with Grain from abroad

Iseland is full of clear and fine Springs, the Water whereof is not only very wholesome to drink, but some of them have also a nourishing quality like Beer: they are also not destitute of Hot Springs for Bathing; of Ponds and Lakes, they have great abundance, which furnish them with great quantities of Fish; as also great numbers of Brooks and Navigable Rivers, the Names whereof, as well as of their Bays and Capes, I will not infert here, they being to be found in o-

ther Authors.

Blefkening tells us of a certain Lake in the Western part of the lsle, which always smoaks, and yet is so cold, that it petrefies every thing that is put into it; For fays he, if you put a stick into the Ground near it, the stick changes into Fron as far as it is under Ground; as far as it lies under Water, it turns into Stone, and that part above the Water remains Wood as before. Blefkening fays, he saw this try'd twice, and that part which seem'd to be Iron, being put into the Fire, it burnt like Charcoal. He also tells us of another Lake in the middle of the same lile, the Exhalations whereof are fo malignant, that they kill the Birds

STITT

in an instant that fly over it. This Lake seems to be of the same Stamp with the Avernus of the Greeks mentioned by Virgil, lib. 6. Ameid.

Quam super hand ullum poterant impune voluntes Tendere iter pennis: talis sese halitus atris

Fancibus effundens, supera ad convexa ferebat:

Unde lecum Graji dixerunt nomine Aornum.

Blefkenieu adds, (belides what Angrim Jonas relates of the Hot Springs of I/eland, that certain Springs are so Hot here, that the Water thereof burns the Skin; and after it is fet to cool, it leaves a Sulphur upon its Surface, as the Sea-Water leaves a Saline Substance in the Salt-Upon the Surface of the Water of Pits. these Springs, swims also a certain red Substance, which plunges under Water as foon as you come near it, but no fooner do you turn your Back, but it appears again above Water. The fame Author afferes us, That in a certain Place of this lile, named Turleskhaven, there are two Fountains or Springs, one very Cold, the other excellive Hot; the Waters whereof being conveyed by two different Pipes or Channels, and mix'd together in one Trunk or Basin, make a convenient and most excellent Bath. Near it, (says he) is another Spring, the Water whereof having the taste of Wheat, is a good Remedy against the Venereal Diftemper, which, according to Blefkenius, is very common here.

Iseland affords not any Mines of Metal or Minerals, except Brimshone, whereof there is abundance in most Parts of the lile, but especially in the Monne Hecla in the East of the life, extending towards the South, and which fometimes appears all in Flames like Mount Vefucla, not only fends forth Flames, but alfo whole Torrents of Sulphureous Liquor, which burns like Spirit of Wine: Sometimes their Eruptions are followed by vast quantities of black Ashes and. Scones. These Evuptions cosse commonly with a West-Wind; which makes the Inhabitants living thereabouts, who know the Avenues of the Mountains, to choose that time to go to the top of it, and throw-great Stones in as the Hole, through which the Flames break forth: It being otherwise very dangerous to approach to near it, there being divers Inflances,

that Men have been fwallow'd up by the Earth that has given way as they were

going up the Mountain.

It is a received Opinion among the Ifelement, That this Mountain is the Place where the Souls of wicked Persons are tormented with Fire; for they will talk you, that they see sometimes whole. Troops of Infernal Spirits carrying the Dann'd Souls into the Abys of this Mount, and returning back again to feach more. Blefkenins says, This is generally observed, after some bloody Battel has been fought in some Place or other. Thus the Islanders believe, That the Noise which arises from the many Sea-shools forced against the Shore, are the Groans and Lamentations of the Dann'd Souls, by reason of the excessive Cold they endure; it being their Opinion, that some Souls are Condemn'd to suffer Eternal Cold, as well as Everlasting Fire.

The same Blefkenius tells us, that whilft he was in Ifeland, There arose fo prodigious a Fire about midnight in November, on the Sea near the Mount Hecla, that it was feen all over the Isle, to the no small Astonishment of the Inhabitants; the most sensible among whom, were however of Opinion, that the fame proceeded from Mouns Hecle it felf. Within an hour after, they perceived an Earthquake all over the life, which was followed foon after by fo dreadful a Noise, (like a Thunderclap) that every one expected the Day of Judgment to be at hand. Some few days after, the Sea was found dry near the Place where the Fire had appear'd, and was retreated at least two Leagues within its old

Bounds from the Shore.

As the use of Corn is unknown among the Islanders, so they neither Buy nor Sell; but what Commodities are brought to them, such as Flour, Beer, Wine, Strong-Waters, Iron, Woellen and Linen Cloths, &c. they Exchange for the Products of their Country; such as, Dry'd Fishea, Butter, Tallow, course Woollen Cloths, Brimstone, Foxes, Bears, Stag and Wolves Skins. Befining says, That the Garmans, who Trassick thither, set up their Tents upon the Shore, where they expose their Commodities, as Cloaks, Shopes, Looking-glasses, Knives, and such like Toys, which they exchange for what the Islanders bring to them. He further adds, Thet the young Momen of Island (who are hand some amough, but misterably clad) come to these Strangers to Prostitute

them-

themselves for some Bread, Biscuit, or forme other Trifle; nay, their Fathers often carry them to these Foreigners. and look upon it as a lucky Chance, if they happen to be with Child by them; they being after wayde in greater Effects among, and fooner Married by the L

Glanders than others.

. So foon as an Helander has Bought, (or rather Exchanged) some Wine or Beer, from these Strangers, he Invites his Kindred, Relations, and Friends, to make merry with him; when they feldom part as long as any strong Liquor During the Merriment, they is left. Sing the Atchievements of their Antient Warriours, but without any Art, Order, or Rule. It is accounted a fingular piece of Ill-breeding among them, to go away from the Table to Pifs, whilft The young Wenthey are Drinking. ches, ( who as I told you are not ugly ) commonly creep under the Benches, to reach them the Chamber-Pots.

Angrim Jonas is very angry with Blefkenius upon this Account, and Accuses him of Faischood, in reflecting upon the Reputation of his Country-Women, and Accusing them of Barbarity; as also, in regard of what he fays concerning their Washing their Months and Teeth every Morning with their own Urine, tho' the fame has been observed in the Celi-

berians by Catulius:

Nunc Celtiber in Celtiberia Terra, Quod quisque minxit, hoc sibi soteat mane Demem. & ruffam defricare Gingivam.

To tell you my Opinion upon this matter; It's possible the Iselanders are not now fo barbarous as formerly, tho' it may rationally be supposed, that a Nation living so near the North-Pole, may not be so Refined and Polished as some others, especially among the Vulgar fort, for People of Fashion, ought to be Exempted of this Rule, (less or more) in most Places.

Blefkenius assures us, That the Ifelanders have Familiar Spirits, who attend them like Servants, and give them notice from time to time, when they shall be success-That they call thefe Diemons or Spirits, Drolla's; which seems to have some Reference to the Danish word Trott, which Signifies a Dovil. Blefkenius further tells us, That the Iselanders Sell what Wind they please to Strangers. Angrim Jonas, ridicules this Story, called Ging, That the Island Seamen being very expert in

differning in the Evening, by the Difpolition of the Air, what Wind is likely to blow the next day; which, if they find fuitable to the Wish of such Strailgets, as lie ready to Sail near the Shore, they pretend to Sell them fuch a Wind, which (to cover the deceit) they do thus: They ask the Stranger to give them his Hankerchief; which done, they pretend to mutter certain Words into it, and immediately after Tie it into Knots, for fear the Words should Evaporate into the Air. Afterwards he returns him his Hankerchief thus knotted, with a strict Charge to keep it thus with extraordinary Care, till he arrives in the desired Port: Sometimes it happens, that the Wind proves according to Wish; but much hitner it proves quite otherwise: So soon as the poor Stranger is got out to Sea, if he be overtaken by a Tempeft, he is put to no small Nonplus what to do, imagining that he carries the Devil in his Pocket, and consequently thinking it a point of Conscience to keep it, yet is unwilling to part with it. It, fays Angrim, once in a great many times, the Wind proves according to what the Iselander has foretold the Stranger, this is a sufficient Precedent in Oppolition to many other Experiments made to the contrary; the Person who fancies to have bought his favourable Wind, not failing to tell it where-ever he comes, that with the affiftance of the Wind he purchased in Iseland, he was happily carried to the defired Port.

Tho' fuch-like Stories are not likely to make any Impression upon Men of Judgment, they may serve for Variety's fake, there being some Pleasure in Understanding what is said and believed by other People. Blefkenius tells us alfo, That there are Sorcerers in Ifeland, who can stop a Ship under full Sail; against which, (fays he) they make use of cer-tain ill-scented Sustamigations, (described by him) as counter Charms, by Virtue of which they force the Dæmon that retains them, to let the Ship pursue irs former Course. But it's time toreturn to more ferious Matters relating to

the History of Ifeland.

ful in Hunting or Fishing. Ortelins adds. P. Iseland was in Antient Times, divided into Four Provinces, according to the Four Corners of the World; each where-. of was Subdivided into Three Bailliages, called Repes by the Iselanders, except the Northern Province, which being the largest and most considerable of all, had Pour Ballliages; each of which was a-gain Subdivided into fix, feven, eight, or

ten Districts or Judicatures, in proportion to their Extent. Every year there was an Assembly held of the Bailliages in each Province, who were Convened by certain small Crosses of Wood, sent by the Governor of the Province to his respective Bailiss, who were to distribute them among the Judges, and thefe among such of the Heads of Families, as had a right to appear at this Assembly. Besides which, the Lord Chief Justice, or President of the whole sse, who being the Interpreter or Confervator of the Laws of the Land, who was also considered as the Soveraign of the Four Provinces, used at certain times, to call together the General Estates of the whole Isle; which was done by Four Wooden Hatches, fent to the Four Governors of the Provinces.

Each Bailliage had Three Principal Pagodes, or Pagan-Temples, for the Administration of Justice, and their Devotion; whence the Office of Bailiff was honoured with the Sirname of Godorp. i. e. Divine. The principal Care of these Bailiss was to provide for the Poor, whereof there were great numbers in fo desolate a Country; to take care, that the Poor of one Repe did not go thence to another; and to refrain the Licenti-ousness of sturdy Beggars, against whom the Laws were very severe; for they had liberty to Kill, or to Emasculate them, to prevent their Multiplication. had also a Law, forbidding, (under pain of Banishment) not only a poor Fellow to Marry a poor Woman, but also any Man, who had but just enough for his own Sustenance, to Marry a Woman without fomething to maintain her felf.

This Aristocratical Form of Government, and manner of Administring Justice, continued in this Isle till the year of Christ 1263. when the Kings of Norway Conquered the faid Isle, and forced them to Pay them an Annual Tribute: being invited thereunto by the intestine Broils arisen among the great Ones, about the Administration of the Government. The King's of Denmark, after having made themselves Masters of Norwegen, did fend into Iseland, their Governors or Viceroys; from which time on, they had nothing but the Shadow left of their Antient Liberty. These Governors have their Residence in a certain Castle, called Besestat, seated in the Western part of the sile: They are however not obliged to Reside there confiantly, unless in case of necessity, and when they gather the Yearly Tri-

bute, which is paid in the same Commodities, I had occasion to mention before, and which they Exchange with Strangers; which serve in some measure the King of Denmark to provide his Navy with Provisions, and Clothing for the Seamen.

The last Viceroy, or Governor of Iseland, since our coming into the North) was Mr. Prosmoel, Admiral of the Danish Fleet, lately defeated by the Swedes in the Baltick Sea: The Admiral sought with incredible Courage, and died upon the Deck of his Ship with Sword in hand, having refused to accept his Life from

the Hands of his Enemies.

Angrim Jonas, dates Christianism in Iseland, from the 1000 Year after the Birth of Christ; not, but that there were Christians there a considerable time before; but that Paganism was not absolutely abolished till that time. The Iselanders, whilst Pagans, did, besides other Gods, Adore Thor, and Odin: The first was to them instead of Jupiter, and Odin, in lieu of the Mercury of the Ancient Greeks and Romans. Hence they call to this day, their Thursday Thorsday, and their Wednesday Oden's Daguir. The Altars consecrated to their Gods, were covered with Iron Plates, upon which they kept an Everlasting Fire. Upon the Altar stood a certain Vessel of Tin, containing the Blood of the Sacrifice, wherewith they besprinkled the Spectators. On one side of this Vessel lay a Silver-Ring, of about 20 Ounces weight, which they used to be-Imear with the Blood of the Sacrifice, and lay their Fingers upon it, when The they were to take a Solemn Oath. Chronicles of Ifeland tell us, That they used to offer Sacrifices of Men to their Idols: These they threw down from the Rocks, or into deep Pits made for that purpose near the Gates of their Temples. The Pagan Iselanders had their two principal Temples, one in the North the other in the South part of the Isle. In lieu whereof, the Island Christians have erected two, and the only two Bi-shopricks in these Parts of the Isle, viz. that of Hole in the North, and that of Schalhold in the South. They at present profess the Lutheran Religion, as well as in Denmark.

The Ancient Iselanders, were tall, and well made, robust, nimble, and active, samous Gladiators, and much addicted to Pyracies. Monomachy's, or Single Duels, were publickly allowed among them; hay, even their Law-Differences

were decided by Duels, the vanquished losing their Pretensions, as did likewise he who refused to accept the Challenge, and was used in the same manner as if he had been vanquished. This was the chief Method of acquiring Possessions among them; for, if two Gladiators entred upon a single Combat, the Conqueror became by his Victory, Master of the whole Estate of his Conquered Enemy, against which, his Heirs had but one Remedy, which was to bring a large Bull or Ox to the Conqueror, which he was to kill with one stroke, which if he fail'd to do, he lost his whole Pretension upon the Estate of his conquer'd Adver-

fary.

Besides that the Iselanders were very strong and couragious, they had also a sufficient share of Wit, and were so curious in their Annals, that they not only carefully preserved their own History from Oblivion; but also, embellished the same with the most memorable Transactions, that happened in the Neighbouring Kingdoms. Hence it is, That Angrim Jonas, in his Specimen Iselandicum, speaking of his Countrymen, calls them Ad totius Europa res Historicas Lyncai, i.c. Quickfighted in the whole History of Europe. Certain it is, That Saxo Grammaticus, in his Preface to his Danish History, confesses, to have made Use with good Success of the Memoirs taken out of the Annals of Iseland, called Tylenses. Dr. Wormius, I remember, told me concerning these Annals, that they were curiously written, and contained many exquisite Matters, (not to be found elsewhere) relating to the Isles of Orcades, the Hebrides, Scotland, and England, nay, even in the Dukedom of Normandy; the reafon whereof, might probable be, that these ssellanders were very powerful in the Dencalidonian or Scotch Sea, and perhaps carried from thence their Commerce as far as Normandy.

The most Antient Histories of Iseland, and fuch as are most in Esteem among them, were written in Verse. It being observeable upon this Head, That the Ancient Kings and Heroes of the North, nsed constantly to carry some Poets along with them to the Wars, who used reach'd even his life, and that the Charms to celebrate their Histories in Verse These were Sung by the Soldiers in their Armies, and confequently divulged in the adjacent Countries. The Iselanders were so famous for their Poetry among the Neighbouring Nations, that it was generally believed, that there was a certain kind of Migick hidden in their Verses,

whereby they could Summon the Dzmons from the Infernal Regions, and change the Influence of the Planets. Their Poets are Born, and not made fuch; for the most Ingenious Person among them, cannot Write a Verse without his Natural Genius prompts him to it; the Rules of their Poetry being most strict and severe; whereas such as are Endowed with this Qualification by Nature, write them with such Facility, that they can Speak scarce any thing but in Metre. They are commonly seized with this Poetical Frenzy in the New-Moon; when their Faces appear dreadful, with a pale Countenance, and hollow Eyes; not unlike as the Sybil of Cuma is defcribed by Virgil: At that time it is very dangerous to Converse with these furious Fellows, the Wound given by a Mad-Dog being scarce more dangerous than

their venomous Satyrs. I can't forbear to tell you what Dr. Warmius related to me upon this Head: Some Years before, when he was Reltor Magnificus, (or Vice-Chancellor of the University of Copenhagen, ) a certain young Student, a Native of Iseland, made his Complaint to him, against one of his Countrymen; who, as he faid, had most highly affronted him in one of his Sa-Wormius, having fent for the Poet, he did not disown the Poem, but denied that it was intended against his Countryman; and in effect, the Vice-Chancellor according to the Knowledge he had of the Iseland-Tongue, (being a Dialect of the Antient Runick Language) could not find out any great Reason of Complaint in the faid Poem: The Plaintiff finding the Vice-Chancellor inclinable to his Adversaries side, burst out into Tears, telling him with a mournful Countenance, that if he did not affift him, he was lost for ever. Then rehearing to him, the Fables, Figures, and other malicious Designs, under which the malignity of this Satyr was couched; he further told him, That he must be look'd upon as an infamous Person in his Country, if this Poem should ever come thither, that all his welfare lay at Stake; nay, that the malicious Design of it contained therein would purfue him, and have their Effects upon him where-ever he went. Dr. Wormins, not a little moved in Compassion, when he saw him in this Agony, took the Poet alide, representing to him, the Duty and Charity of a Christian, and likewise the Severity of the Danish Laws against Sorcerers; with Tttit

fevere.

Revere Threats to deliver him into the Hands of Justice, if the other should happen to fall fick, tho' only out of fear; which made such impression upon the Poet, that at last he confessed the maliclous Defign of his Satyr, tore it to pieces, and promiting never to Write it or Speak of it again, Embraced the young Student, who was Ravished with Joy, because he had made his Peace with the Poet.

The Iseland Poets have a certain Mythology or Explanation of their Fables, The Edda. call'd Edda: Among other Matters, they suppose a certain Giant, named Immer, the first Principle of Things. They say, that the Chaos produced Dwarfs, who getting upon the Giant, took him in pieces. Out of his Skull they made the Heavens, out of his Right-Eye the Sun, out of his Left the Moon, out of his Shoulders the Mountains, the Rocks of his Bones, the Sea of his Bladder, and the Rivers of his Urine; and fo with the other Parts of his Body: Whence it is, That these Poets call the Heavens Immer's Skull, the Sun his Right Eye, the Moon his Left Eye, the Rocks his Bones, the Mountains his Shoulders, the Sea his Bladder, the Rivers his Urine, and so forth. Dr. Wormins did shew me a very Antient Copy of this Edda, written in the Iseland Tongue by an Iselander, and Interpreted it to me, whence I have taken what I have related to you now.

If we may believe the Iselanders Annals, they used in former Ages to be fo formidable at Sea, that both the Kings of Denmark and Norway were jealous of their Naval Strength; whereas now they have not Wood enough to Build a Fisher-Boat : They formerly Traffick'd into all the circumjacent Countries, whereas now they scarce ever leave the Isle, unless some few of them, who come to Copenhagen to Study, and are generally to eager to return to their Native Country, that there is not so much as one instance to be given of their staying in Denmark afterwards, tho'good Livings have been offered them there, there being some among them, who have apply'd themselves to their Studies with very good Success: They are so Bigotted to their Milery, that whatever you tell them concerning the Advantage of the Danish Climate beyond theirs, has not the least effect upon them. There were at that time about 14 or 15 Students at the University of Copenhagen, Who were generally speaking of a low

stature, and slender; tho' I remember. Blefkenins fays in one place. That he faw an Iselander in Iseland, of such a prodiglous Strength, that he could lift a Hamberough Barrel of Beer (holding 48 Gal-

lons) to his Mouth.

The Iselanders retain to this day some Relicks or rather a Shadow of their Ancient Government; their Laws being now so interwoven with those of Normay and Denmark, that whilst they are fond, not quite to part with their own, and at the same time are obliged to Obev the others, they entangle themselves into no small Difficulties concerning the Concordance betwixt their and the Danish Laws; which has made Angrim Jonas fay, that there are as many Pantinomies in the Laws of Iseland, as there are Antinomies in the Roman Law.

The Iselanders retain to this day their Ancient Custom of Building their Houses at a confiderable diffance from one another, without any Order or Rule, for fear of Fire, being all of Wood; They have no other Windows but a Hole on the top; their Houses being very low, and fometimes half under-ground, by reason of the high Winds that often blow here; They are commonly covered, (like those in Sweden) with the Bark of Beech-Tree covered with Turfs. much after the same manner as Virgil describes the Hut of Tuyrus in his Bucolicks:

Pauperis & Tuguri congestum cespite culmen.

These are their dwelling Houses, wherein they live to 100 years of Age, and more, without making use of any Phy-

fick or Physicians.

The whole life of Iseland has no more than two Villages, which are the Seats of their two Bishops, viz. Hole and Schalholt; the first whereof, being the biggest, has only a few Houses; and as they have neither Towns nor Villages, so they have no Highways; which obliges those that Travel here from one Province to another, to make use of the Needle and Compais, (as they do at Sea) for their Guide; and near those Pitts, or Holes, which by reason of their being fill'd with Snow, might prove dangerous to Travellers, they fet up Marks to forewarn them of the danger. The Helanders seldom Inhabit but near the Sea-more, or near a River, for the ' conveniency of Fishing and Pasture, fo that the inland-Country is in a magner a Defart Ar Hele, there is a College

or School for Boys till they come into Rhetorick, when they are fent to Copenhaven to Study Philosophy and Divinity. Here is also a Printing-Press, where they did sometime and Print the Old Testament, translated into the Heland Tongue: the New Testament is still in the Press for want of Paper, which is a dear Com-

modity in that Country. There have been divers Bishops of Note in Iseland especially in the See of Hole; a Catalogue of whom you may fee in the Crimogee of Angrim Jonas. Gundebrand Torlac was Bishop of this See, a Person of great Probity and Learning; Angrim Jones being his Coadjutor, had the Survivance of this Bishoprick granted him by the King of Denmark; but after the Death of Gundibrand, refused to accept of the same, having for some time before Devoted most of his time He is still lito his private Studies. ving; and, as Dr. Wormins told me, above 90 years of age, notwithstanding which he Married a very young Woman about four years ago. He is both a Man of Learning and Probity, and much considered for his Knowledge in the

Affairs of the North, as his Writings sufficiently testifie.

I had almost forgot to mention one thing, worth our Observation among the Islanders, viz. That they are great Chefs-Players, there being not a Peafant in the Country, but what has a Set of it, which they make themselves out of Fish-Bones. The whole Difference betwixt theirs and ours, being only that our Fools stand for their Bishops; because, say they, the Clergymen ought to be near the King's Person. Their Rooks represent little Captains, whence the Iseland Schollars call them Centuriones. They are represented with Swords on their Sides, with Bloated Cheeks, as if they were Blowing the Horn they hold in both their Hands. I shall have occafion to speak more concerning the Horns used by the Northern Generals in the Wars, which are not unlike that of our Rowland, or the Horn, or rather Trumpet of Misenus, whom Virgil styles Hetheris magni Comes, or Heltor's Companion; it being certain, that in Germany, as well as the Northern Parts, Trumpeters are not considered as Servants but Officers of the Troop; but of this more another time; we return to our Cheis-Game.

This Game is not francing, and guarant but all over the I

Chronicle tells us, That Drofen the Giant, Foster-Father of Herald sirnamed mach used the Hairy, (as Chiron was of Achilles in the having understood the great Actions of his Pupil, then King of Norway, sent him, among other Presents, (mentioned in that Chronicle) a very fine and rich Chefs-Table: This Herald reign'd about the year of Christ 870. And if Encolpius in Petronius could brag, that he had feen Trimalcion play at Draughts, upon Tables, made of Turpentine-Wood and Chrystals, with Men of Gold and Silver, I may boast to have play'd at Chefs, with the Counters Eleonore Natural Daughter to the King of Denmark, Married to Count Ulefeld, Great Marshal and Chief Minister to the King of Denmark: The Tables were Inlaid with a white and yellow Amber; the Pieces of Gold, curiously wrought, and Enamell'd with the same Colours as the The Kings and Queens were Tables. Dress'd in their Royal Robes, seated upon a Throne, with the Crown on the The Bishops had their Mitres and Habits, richly adorned; and the Knights were mounted on Horses, with fine Trappings. The Rooks were represented by Elephants with Towers on their Backs. The Men were little Mufqueteers, presenting their Guns close to their Cheeks, as if they were expecting the Word, to Fire.

Tongue was founded upon the Ancient Iseland I told you before, that the Iseland Runick Language; and Dr. Wormius, of the who is well versed in the Runick, and Runick. has writ a whole Treatise of it, has asfured me, That the Iseland Tongue is the purest Dialect of the Runick that is to be found now; For a further Proof whereof, it is to be observed, That the Alphabet given us by Blefkenius are Runick Characters; adding, that some of them being defign'd for Hieroglyphicks, express entire Words. Angrim Jonas has also a whole Chapter of it in his Crimogea. And fince this Book is very scarce to be had here, and consequently much more in France, you will, I hope, not take it amiss, if I entertain you with fome Things I have observed there, it being certain, that by explaining to you the Antiquity of the Iseland Tongue, I shall at once give you a considerable infight into the Ancient State of the

Angrim Jonas, tells us, That the Iseland Chronicles, speaking of the first Inhabitants of the Northern Part of the World, deduce their Origin from a

certain Afiatick Prince, named Odin or Ottin, who being forced out of the Leffer Phrygia, by the victorious Arms of Pempey the Great, retired with the remainder of his Fhrygian Forces into the North. Angrim is forced to confess, That the Island Chronicles don't begin but with Odin, tho' at the same time fome other Northern Countries trace their Origin much further, viz. Of a certain Prince, named Norus, who first erected Norway into a Kingdom, and provided them with wholesome Laws. This Norus was Son to Therre King of Gothland and Finland, the most potent, brave, and most virtuous Prince of that Age: for which reason, he was by his Subjects reverenced like a God; and the Norwegians to this day, call the Month of January, Therre, after his Name. King Therre had a most beautiful Daughter, named Goa, who being Ravished by a Foreign Prince, her Brother Norus went in pursuit of the Ravisher; and the Name of Gos was given to the Month of February, to her Memory, the fame being retained to this day among the Helanders. Angrim has given us the Genealogy of all the Ancestors of Norus, who were reckoned among the number of the Gods by the Northern Nations; one whereof represented the God of the Sea, another of the Winds, another of Snow, another of the Winter: Among the rest, they worshipped one under the Name of the God of Fire, whose Statue was extreamly fine and handsome; whence they gave him the Name of Halogie, i.e. A fierce and glorious Flame. This Genealogy reaches to Giloe, a Nephew of Norus, in whose Reign (as the Chronicle tells us) the Great Odin came out of Asia into the North.

Angrim Jonas finding such a Diversity in the Chronicles, saw himself obliged to look further backwards, beyond the sirft Kings of Norway; for the first Original of the Northern Nations, which he deduces from the Ancient Giants that were forced out of the Land of Promise by Joshua, and afterwards settled their Habitations in the Northern Parts, from whom the Goods derive their Race, the Word Got signifying as much as a Giant; wherefore I think it not amiss, to say something as well in Reference of these Giants as of Odin the Assatick Prince.

This famous Odin was worshipped as a God all over the North, under the Name of Mercury, by reason of his excellent Wit. It is he, who laid the first Foundation of the Northern Poelie,

and of their Magie, so much celebrated in other Parts of the World. Of the first I have said something already, and upon the Magie I could fay much more, were it not that it both deserves and requires a most particular Account, which I intend to referve for another opportunity. I can't however forbear to put you in mind upon this occasion, of the negligent Temper of many of our Modern Authors, who, without making any ferious Reflection upon the Circumstances of things imposed upon the World (without the least Sense or Reafon ) by Antiquity, are not only taken by them for granted, but also improved by them, in order to make them pass current in the World. I would desire any body to consider how little Coherency there is betwixt the fabulous Relations of Odin their Asiatick Prince, and the time of Pompey, fo much celebrated in History?

Is it not a most surprising thing, to fee most of the Ancients, sepresent the Founders of Nations, or other great Men, like Giants? Thus they make Hercules three times bigger than other Men; And Virgil represents his Aneas and Turnus like Mountains, Quantus Athes, aut quantus Erix; and compares Sandarus and Bitias to two tall Oaks. all the Pictures and Statues of Charles the Great, (in the German Churches) are much beyond the fize of an ordinary I remember that I faw the Statue of a Rowland in the Market-place of Bremen, of the heighth of a Pike. Saxo Grammaticus makes his Danes to be descended from Giants. Joh. and Olaus Magnus, two Brothers, and both Swedish Historians, do the same with their Countrymen, as Angrim Jonas describes his first Iselanders as Giants, the Word Got, as he fays, fignifying a Giant, and that the Ancient Goths were actually fuch. And because the Giants of Canaan, who were drove thence by Joshua, were the first Giants mentioned in the Holy Scripture after the Deluge, these must be brought into the North, because Palestine was too hot for them to abide in-

The two before-mentioned Swedish Historians, (who being Brothers, and succeeded one another in the Archbi-shoprick of Upsal) out-do even Angrim Jonas himself in deducing the Origin of the Swedes from the Children of Japher; and take a great deal of Pains to perfiwade the World, that the City of Upsal was built-in the time of Abraham I wonder how America Tonas happened

not to follow their Footsteps, in deducing the Origin of his Iselanders from the Race of Japher; seeing it is said of the Children of Japhet, in the 10th Chapter of Genesis, Ab bis divisa sunt Insula gentium in regionibus fuis, unufquisque fecundum linguam suam, & familias suas in nationibus suis; By these were the Istes of the Gentiles divided in their Lands, every one after his Tongue, after their Families in their Nations. For it being a general and Orthodox Opinion, That the Children of Noah did Repeople the World after the Deluge, and that those of Japhet in particular, settled in the Isles. Angrim might with much better pretence affirm, That of the first Inhabitants of his lile, which Olaus Magnus had told us of the Swedes being descended from the Race of Japhet; for belides that, Angrim has the History of Genesis on his side, (which the Swedes have not) it saves the trouble of tracing the Original of the Iselanders from the Giants of Canaan coming into the Northern Parts.

To tell you my real Opinion concerning those Gentlemen, who have taken fo'much Pains in making fo nice a Scrutiny into the first Inhabitants of the World, after the Deluge, they have taken a great deal of Pains in vain; it being certain, that fince we are destitute of true Histories concerning these most Ancient Times, all their Relations are founded only upon Conjectures, or fome fabulous Chronicle or Account ill Digested and worse Explained: I don't apply this only to Mr. Angrim Jonas, for whom I have a fingular Respect: The Error is general, he having not been the first, who traced the Original of the Northern Nations from the Giants of Canaan: besides that, he has no insignificant Plea for his Assertion, because he found some Iseland Words to have no finall Congruity with the Hebrew, which was called the Language of Canaan, after the Jews had made themselves Masters of the Land of Promise, by chacing the Giants thence. Our Author had unhappily forgot, That these Giants did not speak Hebrew, which being foreign to them, they could impossibly introduce it in the North, if we would take it for granted that they actually Inhabited there.

Many Errors of this Nature are to be let with in the Writings of most of the best Authors, who have run upon the same Mistake, in looking for the Vol. II

true Origin of Nations among the Interpretation or Etymology of certain German or Hebrews Words, which to them seem'd to have a near relation to the Language of those Nations they were treating of. Thus Mr. Greins, in his Treatise of the Origin of the Americans, deduces their Race from the Germans, because, says he, many of their Words terminate in Law, Land being a German Word. Mr. Satt fays, That there is a certain Nation in America, called Alavardes, who have got their Name from one Alvarado, a Spanish Commander, who Conquered them. But Grotius traces the Origin of the Alavardes from the Lombards, by a Corruption of the Word; as to this day the French call Hallbards, certain Arms of the Lombards, called Lombards by the Ancient French.

Mr. Bechard, a Person not Inferiour in Learning to Grotius, takes the same road in his Treatife called Phaleg, of the Partition, and Inhabitants of the Earth after the Deluge, his Reasons being founded upon Conjectures of the same Nature, tho' I must confess I could not but be surprised at his stupendious Knowledge in the Eastern Languages, in finding out the Interpretation of the Carthaginian Verse in Plantus his Comedy, called the Carthaginian, out of the He-I told you just now, that his Invention is full of Ingenuity; but can't however agree with him, That the Carthaginian Tongue had any relation to the Hebrew; For Dide, (who founded Carthage) being a Native of Phanicia, (which Language was very different from the Hebrew) the Carthaginians questionless were so far from speaking Hebrew in the days of Plantus, that it is most likely they retained the same Language that Dido had introduced there, viz. the Phanician. Mr. Samuel Petit, a Learned Man and great Critick, having before Mr. Bechard found out quite another Interpretation of the same Words in Plantus, I am apt to imagine that if a third Person (as well skill'd as they in the Hebrew ) should undertake the same task, he would find out another Interpretation of the same Carthaginian Verses in Planens, by Virtue of the Transposition of the Letters and Points, which these two Gentlemen have made use of to attain their end, according to the liberty allow'd to the Criticks in the Hibrew; by which rule they are able to give almost what Sense they please to a

Septence mil to we can make our Chimes found a funce of pleases pleases and this continues to provide the continues of pleases of the continues of the felse of the first pleases of the felse of the fe

I am apt to believe, That Augrin Jonar would have acknowledged the same Giants, who, according to his Opinion, first Peopled the North, for the first Founders of the Islanders, were it not, that he believes that Isle not to have begulphabited till for a considerable time after; wherefore it will not be smis, to relate the Chief Heads of his Relation upon that Account. He fays, That Ifeland was first of all discovered by one Naddocus, who, as he was going to the Isles of Fare, was cast by a Tempest on the Eastern part of Iseland, unto which he gave the Name of Sneeland, i. e. Snamland, from the vast heaps of Snow he faw there, which made Naddocus not to stay there long. The next who went in quest after this Isle, was a certain Swede, named Garderus, who hearing Naddocus speak of this Isle, found it, and landed there in the year 864, and having pas'd the whole Winter there, called it Gardersholm, i. e. Garders Isle. The third Person who came into this lse, was a famous Norwegian Pirate named Flacco, who having understood something of the Situation of this Isle, made use of a peculiar Invention for his Direction, the Compass being then a thing as yet unknown in the World. As he was going from Hittland, (one of the Orcades or Ockney Islands, he ventured boldly into the main Sea, and having taken 3 Ravens along with him, he let one of them fly as foon as he thought himself at a good distance from the Shore; but finding the Raven returning towards Hittland, from whence he was come, he kept on his Course further as Ses; and then

letting go the second Raven, he soon found by her return to the Ship, that second discover no Land; so Steering his could discover no Land; so Steering his third Raven, which discovering the Sails he could make; and a favourable Wind landed in

Harris Car

che lafferin part of reased from all'a General and sancting hander square the Notice and sancting hander square the Spring furceworded state whole mountains of Least (called the Granders loc by the land habitants) he gave it she Name is has retained eyer lands, which Name is has retained eyer lands, which Name is has retained eyer lands, which Name of the Idle's but being as little planted with that part as with the other, he neutr'd to Name, where they gave him the to Name of Refueloke, i. e. Floces the Reven, because he had made use of that Creature in the discovery of Island.

The true Founder of the Iselanders. was a certain Baron of Norway, named Ingulab, who having with his Brother-in-Law Hiorleifus, killed two of the greatest Men of that Country in a Duel, were Banish'd for that Fact. And it being the Custom of this Country for Exiles to take along with them the Doors or Gates of their Houses, Ingulph having cast Anchor near the Iseland Shore, threw his Gates over-board, in order to facilitate his Landing upon them. But being forced to another part of the Ise, viz. in the Southern-part, he landed there; but finding his Gates cast ashore 3 years after, he thought fit to fix his Habitation thereabouts. Ingulph and his Brother-in-Law first landed in this Isle in the year 870. but did not settle there till four years after, viz. 874. whence the Iseland Chronicles take their Epocha; this being the time of the first Peopleing of this lile, which the same Chronicle says, Ingulph found Desart and However, it is faid, Uncultivated. That some English and Irish Miners were before that time cast ashore here, the fame having been discovered by some Bells, Crosses, and other pieces made in England and Ireland, and some Books they had left behind them. It is agreed on all hands, That the Irish have been ashore in this lile several times before the time of Ingulph; for their Chronicles fay, That the Ancient Iselanders called these irish, Papa's, and the Westernpart of the lile, Paper, from the Irish who used to Land there.

Because the Island Chronicle calls Island. A Wilderness and Uncultivated, at the time of the arrival of Ingulph, Ingrim Jonas assures us boldly, That it was not Inhabited before that time; may, is Angry with those who disagree with him in this Point, as Pontanus, and others, who would have Island be the

I bule

The level the Ancients mentioned by Var- Bod here, as well et in other Places. oils who specialize of adaptives farm. the second office to the second of a

77 Table fervien aleima Thule.

For (Mys.he,) in his Specimen Melandiguest if Ifeland is supposed to have been the Thule of the Ancients, it must have heen inhabited in Angustus's time ( which " is contrary to our Isdaed Chronicles, which tell us. That it was not inhabited

till Augustus his time.

But I would have this Gentleman to call to mind, what he himsfelf has alledged in another place, viz. That the Irish used to come ashore in Iseland before the time of Ingulph, and that these Irish were called Papa's by the Ancient Helanders. I would fain know of him, who were these Ancient Helanders. I agreewith Angrim, that Iseland was not Converted to the Christian Religion till some years after Ingulph landed there; But on the other hand, he will I hope, easily allow me, that there were a considerable number of Christians at that time in the Northern Countries: 'Tis certain, That the Irish were such, the Marks they had left behind them, and found by Ingulph, sufficiently testifie the Angrim mentions in his Crimogea, That Ingulph's Brother-in-Law, who came along with him into Iseland, had many Sentiments which inclined to Christianity, if he was not an absolute Christian. And it is certain, That the Christian Religion was at that time fpread all over the Northern Countries. and among the rest in Iseland, as I shall have occasion to shew anon. This being granted, What time is it that Angrim pretends to allow to the Pagan Iselanders, who were, as he fays, so zealous in their Idolatry, and especially in their Adoration of Odin, by whom they used to Swear, and call him the Grand Protector of Asia. It is beyond all Dispute, That among all the Heathenish Superstitions, the Sacrifices of Men, are of the most Ancient date, which that they were practifed among the Ancient Iselanders, I have sufficiently demonstrated before. Their own Chronicle tells us, The till afterwards, it feems very probable, the Western-part of the ssleep that took a certain Cirque, in the Center when a certain Cirque, in the Center when the state of the state Gods. The same Chronicle mentions, That after the faid Custom was aboli-

Rock retained fill a red Tindelle, a commants of the Blood spill'd there be fore. I must, I thy, spon this Account, once more ask Angelon, Where he will fix thele many Ages mentioned in his Annals? And from whence he dates the betroduction or Invention of their Mythology call'd Edda, which are of fuch Antiquity, and so peculiar to the 1/olanders, that the other Nations have but very little knowledge of it, and all the

other Europeans none at all.

Add to this, Sir, That the Iseland Chronicles, when they speak of the Voyages of Naddocus, of Garderus, and Ploceo, ( all which happened before the time of Ingulph) don't make the least mention of the life of Iseland having been a Desert at that time: Certain it is, that Flocco lived there for two whole years, and in all probability, not without such Provisions as are the Products of a Country not destitute of Inhabitants. Besides this, How will Angrina Jonas come off of what he had said of the Iselanders, that they were very Exact and Curious, in Recording the Histories of all other Nations of Europe; Ad totius Europæ res Historiocas Lyneai, says he: Herodotus and Plate mention the same of the Ancient Egyptians: For, (fays he) they preserve in their Libraries, the most Ancient Monuments of the History of Foreign Nations, looking upon it, as the best Argument they can alledge for the Antiquity of their own Nations. To add as much weight as I can unto what Angrim Jonas says upon this head concerning his Ifelanders, I must tell you, That Dr. Wormins shew'd me a Copy of a Chronicle of the Westernpart of Ifeland, wherein, (by his Interpretation) I found many remarkable Passages in the History of Norway, Denmark, England, the Occades, Hebrides, and among the rest, of the Invalion of that part of France by the Normans, unto which they gave that Name after their Conquest. The arrival of Ingulph being not mentioned nas, are Authentick, and that the faid Ingulyh did not come into Meland till

polite than this; the defect thereof you will, I hope, attribute in a great measure, to the want of time, and my readiness to Obey your Commands, which must at this juncture serve as a Flea to you to excuse its Errors; in

hopes of which, I beg you to be perfusded, that I am,

# ACCOUNT OF GREENLAND

### ADVERTISEMENT

Concerning the

#### Map of GREENLAND.

understanding this Historical Account; so I shought I could not do amiss, in following the Advice of a Person so bighly and so universally estem d.

I have compiled this Map answerable to sour Elevations particularly known to mee viz. that of Castorians and the state of Science and Science and

vations particularly enough to me; vill. 1021 of Laper Farewel, of Iseland, of Spitzbergen, and of their part of the Christian's Sea, where Captain Monk, being flop'd by the Ice, gave it the name of Monk's Winter Haven.

Winter Haven.

I have computed the Longitude of all those Places, from the Meridian of the Iron Island of the Canatics, by the Advice of Mr. Rohevyal, a famous Mashematician; and of Mr. Sanfon, an excellent Geographer, whose steps I have followed in that Map.

The Longitude of Monk's Winter Haven, was more exactly discover'd to me beyond the rest, by an more exactly discover'd to me beyond the rest, by an elisse.

A great Eclipse of the Moon, mension d in the Journal of that I was Eclipse for the Moon, about Bighe a Cloth as Night, the 20th of December, in the Year 1679. This Eclipse must have been seen at Paris, (according to the Tables of the Celestial Monions) about three Hours, and that Captain Monk did not see it, either in its beginning, middle or end, I have consulted Mr. Gastendus, middle or end, I have consulted Mr. Gastendus, ing being sufficiently known to all, who make projecting being sufficiently known to all, who make projecting being sufficiently known to all, who make projections.

ing being sufficiently known to all, who make Projection of these Sciences, I shough I might with probaMonsieur bility enough, suppose this Eclipse discovered at
Gassendus Monk's Haven, between its beginning and end;
that is to fey, about the middle of its duration, or
about the bour that it must have been seen at Paris;
whence it is evident, that when it was three a Clock
in the Marsing of Darie is may manner that wich whence it is evident, that when it was more a tweethin the Morning at Paris, it was no more then eight a Clock of the preceeding Evening at Monk's Harbour; and that confequently there are feven bour; inference between the one place and the other. Now jupposing 15 Degrees for every bour, (according to the Rules of Astronomy) the Meridian of Monk's Harbour must be diffant from the Meridian of Paris of Degrees, and Davis heino at the 22 Degree and Harbour must be distant from the Meridian of Paris
105 Degrees, and Paris being at the 23 Degree and
bass of Longitude, Monk's Haven sught to be
placed in the 178 Degree and a bass, that it to say,
in the 81 Degree and bass being at the 23 Degree and
the 81 Degree and bass being at the Canaries: And consequently allowing 12 ordinary
Leagues of France for every Degree of the Parallel,
the Degrees (whereof are one less than the Degrees of the great Circles moity,) this Haven shall
be distant from Paris about 1260 Leagues. I have
divided the Southern part of Greenland, taken as
Gape Farewell, into two Islands, in the fammer
they are represented here. This I have done, I from
the Danila Accounts I made use of to complete this
History (for they don't mention n) has from a
Map communicated to me out of the Library of my

These are the Words in Latin, Written at the bettom of the said Map: This Delineation was made by Martin, the Son of Arnold, born at the Briel, a City of Holland; who twice, viz. 1624, and 1625; went as Commodore to the Ifle, known by the name of old Greenland. This Martin, the Son of Arnold, calls Greenland an Island; she is is not certainly known, whether it be an Island, or se not certainly mount, motern, to an almost life.

He declares it to be the Map of the old Greenland;

tho be might rather have call dit both the old and Theal. the might rather have call'd it both the old and Theel new, for none elfe has been discovered; and that New which we know, ought rather to be called the new Greenland, than the old. Because, the the old land. Greenland must undoubtedly be fix'd hereabours near the West of Iteland; nevertheless, this certain place is not known to this day, even not to the Inhabitants of Norway, the their Rore-stathers were the first discoverers of it, and dwelt in it some entire Ages, as well more fully appear out of the following Relation. Relation.

Relation.

The nearness of their Situation between Cape Farewell, and the Streights call'd Christian's Streights, with the Sea of that Name, and Monk's Winter Haven, has been represented according to the Map Capaain Monk canged to be made of his Voyage, and was Annened to his Journal. I was the rather inclined to follow his Footsfeps, for a much as it agrees with thes of Capaain Huddon, who first discover'd shefe Strengths, and this Sea; which Map Mr. Chaplain was pleased to communicate to me in order to compare it with that of nicase to me in order to compare it with that of Captain Monk.

Lapsain Monk.

I dare not affirm, That all the Coast of the Christian's Sca, and so Westerly from thence, between the Gulph of Davis, and Monk's Winter Haven, belongs to Greenland, because perhaps some great belongs to Greenland, because perhaps some great
River or Survigles, unknown, may separate Greenland from America. What makes me more doubtful upon this, is, That I never heard in Denmark,
that all this Gossif did belong to Greenland, as I
between Cape Farewell and Spitzbergen. I refer
the Solution of this Question to those who have gos
a better insight into this matter, from the Boglish
and Dutch Relations: my only design being to give
an Account of what I understand of this Country
out of the Danish Books, and from the Conversion
I have had in Denmark. I bave bad in Denmark.

The Embaffador, mentioned in this Relation, was Monfieur le la T H U I L L E R IE, who was so Informental in concluding that famo2s Peace between the two Northern Crowns.

AN

OCEAN DEVCALED GROENLAND

AN

### ACCOUNT GREENLAND,

T O

#### Monsieur de la MOTHE le VAYER

SIR,

Perceive that I have not fatisfied your Curiofity, in Writing to you a long Letter concerning Iseland: Tis but just therefore, that I should perform my promise, to fend you a Relation of Greenland. Don't wonder at the time that I have taken to país between these two Islands. If you weigh the Difficulties and the Dangers that attend fuch a Voyage, you will be fatisfied that I ought to inform my felf with leifure of the true Condition of this Northern Country, which deserves rather the name of Incognita, unknown, than the Southern part of the World. Nevertheless, it has been inhabited by the Norwegians, during the space of five or six hundred Years, who traffick'd and settled their Colonies there. But that I may not confound Matters, I will tell you what I have understood of this Country, (which is almost inaccessible,) with all imaginable Exactness, from what ever I could learn either by Conversation. or from the most confused Writings, I will not fay that ever I read, because they were explained to me out of a Tongue I underflood not, as were the Danish Books, and which Mr. Rets, a Danish Gentleman, was lo kind to read, and to interpret to me whom you will fee speedily at Paris; the King of Denmark having named him, in confideration of his Merits, his Relident in France.

Greenland is that Northern Tract of Land, which extends from the South to the East, and thence to the Morth from Care Farwell, that it joyns to the Great Tartary; But this is uncertain, as you shall see anon.

On the East it hath the Frozen Sea, on the South the Deucaledonian Ocean, on the West the Streights of Hudson or Christian and the Christian or Hudson's Sca, that divides it from America. Its extent towards the North is unknown hitherto. The Danish Chronicle informs us, that it is the farthest part of the World towards the North, and that beyond it, there is no Land on that side. Some believe, that Greenland is joyn'd to America, because the English, who have attempted to pass the Streights of Davis, to feek a passage that way to the East, have found, by experience, that what Davis fansied to be the Streights, is nothing but a Gulf; tho' according to the account of a certain Danish Captain, named John Monk, who ventured to find a Paffage to the East, by the North-west of the Gulf of Davi, there is great likelyhood, that this Country is altogether separated from America, as will appear in its proper place, when we shall discourse of his Voyage. The Elevation of Greenland taken at according to the computation of Cappain hs Lati grees and thirty minutes: The other part stade. Cape Farwell, (the most Southern part of it) Elevation of Spirzbergen, which the Danes sadge to belong to Greenland, is according to their computation 18 degrees or there-ability. I don't lay any thing concernings the Longitude of that Country, because my Accounts being filent here I have learn'd nothing more than what our Maps inform upon this head. It will be fufficient for me to take notice in this Place, that Cape Fare-

**Y y** y y y

Snorro Storlefonius, Au-Edda.

Torwald

Erick.

well is beyond the Canaries, and our first Meridian: As to the History of Greenland, I have chiefly made use of two Chronicles, one of Iseland, the other of Denmark; the first being very Ancient and in Profe, the other of a later date in Verle, but both in the Denish Language. However the Original of that of Iseland was written in the Iseland Tongue, by one Snorro Storlefonius an Iselander, who was Nomophylax, as Angrim Jonas calls him; that is, Chief Justice of that Island, in the year \$215. the same who compil'd the Edda, or the Iseland Fables in Verse I have formerly mentioned to you. The Danish Chronicle was written in Danish Verse, by a Danish Priest, named Claudie Christophersen; within these 15 years, or thereabouts. This Danish Chronicle says, that some Armenians being long toss'd at Sea by a furious Tempest were forced into the Northern Sea, at last got ashoar in Greenland, from whence they pass'd over into Norway, where they Inhabited the Rocks of the Hyperborean Sea: But this Relation is founded only upon Ancient Fables and Customs to deduce the Original of remote Places and Nations: But thus much is certain, that the Norwegians did first discover and inhabit Greenland.

A certain Gentleman of Norway, named and bis Som Torwald, and his Son Erick, firnamed the Red hair'd, having committed a Murder in his Country, fled over into Iseland, where Torwald died. His Son Erick being a cholerick Person, kill'd soon after another Man in Ifeland; so that to escape the severity of the Law, he refolved to feek for shelter in a Country which one Gundebuirne had told him he had feen to the West of Iseland; Erick landed by his direction, in a certain Harbour, made by two Capes or Points of · Land, viz. one at the end of an Island, opposite to the Continent of Greenland, the The Cape of other on the Continent: the Isle was named Huidserken, that of the Continent Huarfs; having between both a very good Harbour call'd Sandstafin, where Ships may ride fafely at Anchor, even in the greatest Storm.

Huidserken is a prodigious high Mountain, without comparison much bigger than \* Huarf. Erick call'd it Mukla-Jokel, i.e. The Ice Mountain; but has been fince named Bloserken, i. c. The Blew Shirt; and a third time Huidferken, i. c. the White Shirts The reason of these two last alterations, feems to be founded upon the change of its Colour; for the Ice that melts and freezes at the fame time, appears in Colour at orth not unlike the Moss, or Grass, or little Trees growing upon these Rocks: But when by a long continued Snow, vast heaps are gathered, the Ice becomes extraordina-

ry thick, and returns to its former color This I can affirm and natural whiteness. by my own experience in Swedeland, where we have feen Rocks, some whereof appeared to us of a bluish, and others of a white colour for the same reason. I will affure veral you, and my Lord Embaffador can te-lours, tifie, That in our return the same Winter from Swedeland to Denmark, as we pass'd in a Coach over the Sea, between Ellenore and Copenhagen, we met vast shoals of Ice piled upon one another, some whereof appeared to our fight very white; others of the finest Azure, which being not able to give a fufficient reason for this difference, as being produced by the same Water; and situate in respect of our Eyes, at no such distance as to cause so remarkable a difference. This put me in mind of what Virgil fays concerning the Frozen Zones.

Carulea glacie concrete atque Imbribus atris.

Tho' I am apt to believe that the word Carulea glacie ought to be interpreted in this Passage, the Black Ice, as Virgil funcies to be in these dark and black Countries; in the fame sence, he says in another Place

Olli caruleus Supra Caput adstitit Imber.

And in another place,

 Stant manibus Ara, Caruleis maste vittis atraq; Cupresso.

In both which Passages the word Caruleu. fignifies black, without all dispute.

But to return to our purpose, Erick before he would venture on the Continent, thought it adviseable to land in the Isle unto which he gave the name of Ericksund, i. e. Erick's Isle, and continued there all the Winter. In the Spring he passed over to the Continent, which he called Greenland; i. e. the Green Country from the verdure of its Pattures and Trees. Unto the Place where he Landed, he gave the name of Ericksfiorden, i. e. Erick's Haven, at a small distance from whence he built certain Habitations, call'd Ostraburg, i. c. The East Borough or Plantation. Next Autumn, he went to the Western side, where he Erected another Plantation call'd Vestreburg, i.e. The Western Borough. But whether the Continent feem'd him colder and sharper than that of Iseland; or whether he found it less secure, he returned the next Winter to Ericksund, yet returned from thense next Summer, to the Continent, taking his Counce towards the North to the foot of a great Rock which he named Sneefiel, I. e. fie Snow Rock, and thence to 2

certain Harbour, upon which he bestowed the name of Revensfiorden, i. e. Rookshaven, from a great number of Crows or Ravens he found there. Ravensfiorden lies directly opposite on the North side of the Erickssiorden, which is Seated on the South fide, being divided only by a Branch or Arm of the Sea: About the end of Autumn, Erick returned to his Island, where he pass'd the third Winter. In the Spring he resolved to go in Person to Iseland to Engage the Inhabitants of that Isle (with whom he had good Correspondence) to follow him into Greenland; he was not backward in telling them Wonders of his New discovered Country, of its plenty of great and fmall Cattel, of excellent Pastures, of Fishes and all forts of Game. His Rhetorick proved to prevailing, that a good number of them croffed the Sea with him into Greenland.

Erick had a Son, named Leiffe, accompanied his Father into Ifeland, and from thence croffed over to Norway; where as my Chronicle of Iseland tells us, he gave a favourable Account to King Olaus Trugger of the Country discover'd by his Father. The King of Norway having then but lately embraced the Christian Religion, caused I riffe to be instructed in the same, and to be Baptiz'd, who continued at his Court all the Winter. The next Summer he fent him back to his Father into Greenland, in Company of a certain Priest, to instruct Erick and his People in the Christian Faith. Leiffe being return'd to his Father in Greenland, had the name of Leiffdenkepne, i. c. Leiffe the Fortunate bestowed upon him, because he had cscap'd great Dangers in his Voyage: On the other hand, he met with but an indifferent Reception from his Father, because he had brought along with him certain strange Seamen, who being Shipwrack'd during the same Tempest he so narrowly escap'd, he found upon the Keel of their Ship, cast upon the Ice-rocks, and receiv'd them into his Ship, and carried them into Greenland. Erick was displeased because Leiffe had, as he alledg'd, shew'd to the Strangers the way to a Country be defired not to discover to all the World: But the generous Leiffe knew fo well how to manage his Father's Savage Temper, by feprefenting to him the true duty of Humanity; and of Charity the chief Ornament of Christians, that he began to relish his and the Priest's Advice, sent to him by the King of Norway with fuch Success, that he was perswaded to suffer himself to be Baptiz'd, as did all the Inhabitants under his Jurisdi-Ction. This is all I could learn concerning Bricks his Son Welffer, and those first Norwegians that inhabited Greenland. The I hand Chronicle mentions the departure of Torwald and of Erick his Son from the Harbour of 3cdrem in Norway to have happened under the Reign of Hakon Farle, Sirnamed the Wealthy, where this Chronicle begins under the Reign of Olaus Trugger King of Norway, who Reign'd about the Year of our Lord 982. But the Danish Chronicle puts it about the Year 770. I have proved to you in my Relation of Heland, that this Computation is more probable than the First, by a Bull of Pope Gregory IV. granted about the Year of our Lord 835, to Bishop Ansgarius, to encourage the Propagation of the Christian Religion in the Northern Countries, and particularly in Iseland and Greenland. I will not pretend in this Place to weigh all the Arguments alledged on this head, but will content my felf to mention two particulars only, in relation to this Opinion. The first is, That the fame Danish Chronicle says, that the Kings of Denmark being continued Christians during the Reign of the Emperour Lewis, the mild, Groenland was much talk'd of in those Days. The Second is, that Mr. Gunter Secretary to the King of Denmark, a Perfon of more than ordinary Learning and Ingenuity, and my intimate Friend, has affur'd me, that he himself saw among the Records of the Archbishoprick of Bremen. an Ancient MS. Chronicle containing a Copy of a Bull, by vertue whereof the Arch-Bishop of Bremen, was constituted Metropo- Archbishe litan of all the North, and particularly of of Breme Norma, and of the Islands thereunto be Metropol longing, viz. those of Island and Greenland. Norsh. He had indeed forgot the Date of the Bull, but remembred very well that it was granted before the Year of our Lord 900.

The Danish Chronicle says, that as the Successors of Erick increased in number in Greenland, they ventured deeper into the Country, and met with a fruitful Soil, Meadows, and Rivers in the Valleys between the Mountains. They divided Greenland into East and West Greenland, according to the different Situation of the two Boroughs. Oftreburg and Veftreburg built by Erick. In the East they laid the Foundation of a Town named Garde whither (as the Chronicle Garde Town in tells us) the Normegians Transported every Green-Year, divers Merchandices, and fold them land. the Inhabitants.

Their Posterity went farther in, and buil a City, unto which they gave the Name of Albe. And as their Zeal increased, they built a Monastery upon the Sea shoar, Dedicated to St. Thomas. The City of Garde was the Residence of their Bishops, and the Church of St. Nicholas (the Patron of St. Nich Seamen) built in the same Town, the Ca-lasChur.

thedral

thedral Church of Greenland. A Catalogue, together with the Succession of those Bishops, is to be seen in that part of the Specimen Mandicum of Angrim Jonas which treats of Greenland from the time of their Settlement there, till the Year 1389. And Pontan observes in his History of Denmark, that in the same Year 1389, one named Henry Bishop of Garde was Present at the Assembly of the States of Denmark held at Nieuburg in the Isle Funen, at the entrance of that part of the Baltick Sea, commonly call'd the Great Balt. As Greenland was

way in

knowl.
Drunthen in Norway, in Eccletiattical ivinues, and the Bishops of Greenland used frequently to cross the Sea into Norway to advise with the Bishops of Drunthen about such difficulties, as sometimes interven'd in points of Religion. Greenland was then Governed by the Laws of Iseland, under certain Governours, appointed by the Kings of Norway : The Names of whom, with the Actions performed by some Iseland Heroes in Greenland, you may read in the Specimen Islandicum, where good Angrim their Affectionate Countryman, has remembered them to the best Advantage.

The Danish Chronicle tells us, That in K. of Nor- the Year 1256, Greenland revolted and refused to pay their Tribute to King Magnus of Norway; which induced King Erick of Denmark (at the request of King Magnus who had Married his Niece) to Equip a Fleet against them; but they no sooner saw the Danish Flaggs displayed on the Coast of Greenland, but they were feiz'd with fuch fear that they fued for Pardon, and defired Peace. The King of Denmark (in respect of the love he bore to his Niece, and her Children) wou'd not take any Advantage of the Weakness of the King of Normey, but left him in full Poffeilion of Greenland. This Peace was concluded in the Year 1261. Angrim Jonas kurther mentions the names of the three Prineipal Inhabitants of Greenland, who were Instrumental in concluding the Treaty of Peace in Norway: By virtue thereof, those of Greenland were for the time to come to fwearFealty. and to pay Tribute to the Kings of Norway.

The Chronicle of Ifeland being only a Collection of other Stories; has among the rest a Chapter intituled a Description of Greenland, which as it feems to relate to its most flourishing State during the settlement of the Norwegians there; so I will Transcribe to you verbatim the whole Chapter, as it was interpreted to me from the Danish Tongue into French. But don't require from me either Time or Method in this Relation, for I can warmat neither,

In the most Eastern part of Greenland lies Skagefi. the City of Skagefiord, leated near an inac-ord. ceilible Rock; and further at Sea, a Sand Bank hinders Ships from entring the Road, except at high Water, when if the Wind blows hard, many Whales and other Fish come into the Bay, and are taken in great abundance. A little higher towards the East, there is another Harbour call'd Funchebuder, having borrow'd its name from a certain Page of St. Olaus King of Norway, who was with several others Shipwrack'd there. A OldGreen little higher nearer the Ice Mountains, there and dewith several others Shipwrack'd there. A in an illand call'd Rosenfen. Well ftor'd with Goile's

On the Western Coast lies the Bay of Kindelfiord, Inhabited all along the Shoar. On the Right hand of this Bay stands a Church call'd Korskirk, i. c. the Crofs Church; the Lands whereof reaches to Petrefulk near Vandalebug; and beyond it a Monastery of Monks, Dedicated to St. Olaus and St. Austin. The Jurisdiction of this Monastery extends to Bolton. Next to Kindelfiord, is Rumpefinfiord, where is a Nunnery, and near it seweral little Islands, having divers Hot Springs of fuch an excessive heat in the Winter, that no Body can indure it, tho in the Summer they are pretty Cool and Temperate; these Waters are very wholfome, and proper for the cure of divers Diseases. A little beyond them is Eynetsfiord: Between Eynetsfiord and Rumpesinfierd, stands a Royal Palace call'd Fos; and a great Church Dedicated to St. Nicholas. Near the Bay of Lunesford is the Cape of Klining, and beyond it another Bay call'd Grantevig; and beyond that a House named Daller, that belongs to the Cathedral of Greenland. To this Cathedral appertains all the Country about Lunesfiord, and particularly the great Island beyond Eynetsfierd call'd Reyatsen, because of the many Renes (a kind of Stags frequent in the North) found there. This Island produces a certain Stone call'd Talguestein, of Ali fuch folidity, as not to be corrupted by Fire, Stor and so easy to be cut, that drinking Vessels, Kertles and Vaults containing 10 or 12 Tun are made of it. More towards the West is an Island call'd Langen, where are eight Farms: This Island belong to the Cathedral. Near to the Church of Equessiond is a Royal Palace named Hollefted. Not far from it is the Bay of Ericksford; at the Entrance whereof lies an Island call'd Herrieven, i. e. the Lord's Island, one half whereof, belongs to the Cathedral, the other half to the Church called Diurnes, the first Church you meet with in Greenland, as you enter on Excitation density To the Church of Diurnes beautiful of the Church of the Chur a longs

Magnus way, and Erick of Denmark Conquer Greenhand.

gs all the Country as far as Midfiord, the whole Tract of Land from Ericks-fiord to the North East. Near it is Bondefiord to the North, where are many Islands and good Harbours. The Country is not Inhabited, but altogether Defart between ostrebug and Vestrebug. Near to this Desart is a Church named Strofnes, formerly the Cathedral and Residence of the Bishop of Greenland. The Skreglinguers or Skreglingres Inhabit all the Country about Vestrebug. These Defarts produce Horfes, Goats, Oxen, Sheep and all manner of Wild Beafts, tho' not Inhabited either by Christians or Pagans. The Author of this Account was one Iver Ben, who was a long time Steward of the Bishop of Greenland, and an Eye Witness of what he fays, having been with others employed by the Judge of Greenland to suppress the Skreylingres. At their Arrival they found no living Men, but abundance of Cattel, of which they took as much as their Ship could carry. Beyond Vestrebug is a great Rock call'd Himmelradifield; beyond this Rock there is no fafe Passage for Ships, by reason of the many

Whirlpools on that Coast. These are the Contents of the whole Chapter which I have fet down here with as much exactness as I was able; and as I had neither Map nor any other Hiltory of Greenland, to jultify or contradict this Account: I have given it you in the fame manner as I had it; what puzzles me most is, what is faid of the Church of Strofnes, between Oftrebug and Vestrebug, to have been ever fince Greenland began to be Inhabited, the Cathedral and the Bishop's Residence; there being not the least doubt but that the City of Garde has always had that Prerogative. The Danish Chronicle lamenting the loss of this Country, assures us, that if the City of Garde, the Residence of the Bishop, were yet in being, and the Passage thither could be recovered, we might from thence be supply'd with sufficient Memoirs for the compiling of a good History of Greenland. Angrim Jonas a Native of Iseland, speaking of this Residence says expresly Fundata in Bordum (we must read Garden) Episcopali Residentia in sinu Eynetsfiord Greenlandia Orientalis. An Episcopal See was settled in the City of Garden in the Bay of Eynersfierd, on the Eastern Coast of Greenland. The Author of that Relation may perhaps have been a good Steward, but has proved himfelf but an indifferent Historian, having now given us the least Account who were these Skreglingres, against whom he was sent. I svill therefore tell you what Mr. Wormius, the most curious Person that ever I met with in the Affairs of the North, has communicated to me by word of Mouth, and in

镰 地质的 地名

Writing. They were Savages, the Original nal Natives of Greenland, unto whom tis probable, the Norwegians gave that Name, but for what Reason I know not. "Tis likely they Inhabited the West side of the Bay of Kindelfiord in Greenland; the other being Inhabited by the Norwegians: What this Author says concerning the Skreglingres being in Possession of Vestrebug must be understood of the West-side; the East part being Posses'd by the Norwegians. 'Tis very probable that some few of the Norwegian Adventurers having pass'd the other side of the Bay of Kindelfiord, were worsted by those Skreglingres. The Vice-Roy, or Governour of Greenland call'd the Judge of Greenland, (according to the Ifeland Idiotn) being resolved to revenge this Affront, sent against them a Ship well Equipp'd, and Mann'd with Land Forces, which those Savages no fooner faw Approach their shoar, but according to their usual Custom(when they find they are too weak to refult) they fled into the Woods and Rocks. The Norwegians finding no living Body upon the Coast, Plunder'd the Country, and carried the Booty aboard their Ship. This did induce our Author to tell us, That amongst the Skreglingres, were Horses, Goats, Oxen, Sheep, &c. but neither Christians nor Pe-

Mr. Wormius is of Opinion, that those Skreglingres were not far distant from the Gulph of Davis, and perhaps were Americans, or the Native Inhabitants of New Greenland, Discover'd by the Danes, in the Reign of Christiern IV. their King; of which I shall have occasion to speak more hereafter: that they lived near the Old Greenland, Inhabited by the Norwegians, and that they Peopled part of Vestrebug, before ever Erick possessions.

To tell you my Opinion, I see no reason why we should Transplant the Americans hither; Mr. Wormius's Opinion is more reafonable; unto which I shall add only, that by the same reason that Vestrebug was Inhabited by the Natives of that Country, when the Norwegians came thither, Oftrebug had likewise its Inhabitants; and as the Eastern shore was nearer to the Fragen Sea, it was less Fruitful, and by consequence more Desart than the Western Coast. The Normegians finding less resistance on that side than on the other, took Possession of Oftrebug with less resistance than Vestrebug; and according to all the Relations that I have seen, they were not so resolute in attempting a Pasfage on the Western Coast, but to the North, where they Travelled eight Days together without discovering any thing but Snow and Ice in the Valleys. From whence you Z z z z z

of the kregingres. may infer that the Tract of Land, Inhabited by the Norwegians in Greenland was enclosed between the Southern and Eastern Seas; to the North by unaccessible Ice Mountains, and to the West by the Skreglingres, who stop'd their farther Progress on the side of Vestrebug. It is also observable, that the I/el and Chronicle affirms it for a certain Truth, that the Norwegians were possess'd of so small a Tract of Land in Greenland, as would not amount to above a third part of a Bishoprick in Denmark, notwithstanding their Bishopricks are no larger than those of France. The Danish Chronicle declares the same, tho' in different Words, viz. That the Norwegians did not Inhabit the hundredth part of Greenland; that it was Inhabited by divers Nations, Govern'd by their peculiar Lords, most of whom were never known to the Norwegians.

Green land bargen.

The IselandChronicle speaks variously concerning the Fruitfulnels of Greenland, according to the different Relations that Compose it. It says in one Place, that there grows the best Wheat in the World, and high and lofty Oaks, which bear Acorns as big as Apples. In another place he tells us, that nothing grows in Greenland, because of the cold, and that its Inhabitants know not what Bread is. This agrees with the Danish Chronicle, which affirms that when Erick first came into this Country, his People were forced to live altogether upon Fish, by reafon of the Sterility of the Land. Nevertheless the same Danish Chronicle relates, that Erick's Successors, who went farther into the Country, found between certain Mountains, Fruitful Lands, Meadows and Rivers, not discovered by Erick. The Contradictions in the Iseland Chronicle are not to be regarded, when it declares that nothing grows in Greenland because of the cold, the reafon it self alledg'd to back this Assertion, rendring it very dubious; it being most certain that That part of Greenland, inhabited by the Norwegians, was fituate under the fame degree of Elevation with Upland, the most Fruitful Province of Sweedland, which produces very good and fine Wheat. Add to this what the same Chronicle observes, in another Place, viz. That the cold is not so violent in Greenland as in Norway: Now 'tis most certain that Norway produces very good Wheat; and what I am going to tell you upon this head, would perhaps feem strange to you, if the same was not founded upon the Authority of Credit tole Persons, who have informed me that there are certain Places in Norway, where they wonderful have two Crops within the space of three ly fruitful. Months. This must be understood of the Plains betwise the Rocks, which being continually enlivered by the reverberated Sunbeams against these Rocks, in the Months of June, July, and August, become so Fertile, that in fix Weeks time they Sow and Reap good Corn. The Soil being so far and moist there by reason of the great quantity of Snow melted and carried into the Plains from the Mountains, that immediately after they Sow again, and at the end of another fix Weeks, never fail of a second Harvest

as good as the former.

Tis very likely that in Groenland as well as other Countries are, some good and some bad Grounds; some Plains, some Mountains . Tis certain it has many Rocks; the Ifeland Chronicle tells us expresly that it produces Marble of all Colours. And it is agreed on all hands, that their Pasture Grounds are excellent, and maintain abundance of great and small Cattle, many Horses, breen-Hares, Staggs, Renes and other Deer, ordinary Wolves, and Stag Wolves, Foxes, Bears white and black, and if Credit may be given to the Iselandian Chronicle, they have taken Castors and Martins also, the Furrs whereof were not inferior to the Martin Sable of Muscowy. Greenland abounds more in Falcons (white and gray) than any other place in the World. Formerly these Birds used to be sent to the Kings of Demmark as Rarities, because of their extraordinary goodness; and the Kings of Denmark Presented them frequently to other Kings and Princes, because Falcons and Hawks are not used in Denmark, nor in any of the Northern Countries.

The Sea produces great plenty of Fishes all along the Coasts of Greenland; as likewise Sea-Wolves, Sea-Dogs, and Sea-Calves, and an incredible number of Whales. I know not whether I ought to reckon the white Bears of Greenland amongst the Terrestrial Iss fisher or Marine Creatures; for, as the black Bears never forfake the Land, and live altogether upon Flesh, so white Bears never leave the Sea, and live upon what Fish they catch. They are much larger and wild- White er than the black. They hunt after the Sea- Bears. Wolves and Dogs, who fave their Young ones upon the Ice for fear of the Whales. They are greedy after the young Whales, their Flesh being a greater dainty to them than that of any other Fish: They never of their own accord venture into the main Sea when the Ice is melted: "Tis not but that they can fwim, and live in the Waver as well as the Fish, but they much dread the Whales pursuing them by the scent, out of a natural Antipathy, and because they devour their Young ones. It happens sometimes that walt Ice shoals are from the North part of Greenfand driven towards the South, io that the Hears not daring to venture from

the Ice are carried along with it, either into Iseland or Norway, and being enraged with Hunger

(Heu male cum soli Norwegum erratur in Oris.)

destroy all they meet in their way, whereof they tell you strange Stories in these \* Countries.

Greenland has ever yielded plenty of horned Beafts, call'd Unicorns. In Denmark We have frequent opportunity to fee many of them entire, and some pieces of these Horns. If you inquire what fort of Animals bear these Horns, I must tell you, Sir, that they are horned Creatures, improperly named Unicorns, having nothing common with that so much celebrated Horn of the Creature which bears that name, of what nature foever it be. And as this name is ambiguous, some do yet question, whether the Creatures that have them are Flesh or Fish. You may observe, that the Horns of the Unicorns which I saw in Denmark, (whether whole or in pieces) are of the same fubstance, fashion, and vertue, as those feen in France and elsewhere. That Beautiful entire Horn I have fometimes spoken of to you, in the King of Denmark's Palace at Fridericksboarg, is without dispute bigger than that at St. Denys. I confess, 'tis not so straight, and bends within two or three foot of the point, but for the rest, 'tis of the same colour, shape, and weight as that of St. Denys; for the pieces of those Horns I have feen in divers places at Copenhagen, are esteemed great Preservatives against Poison, as those in Paris, and elsewhere, are. Now taking it for granted that all those Horns in Denmark, are altogether the same with those of France, and that these of Denmark are brought thither from Greenland, the main question is, What fort of Animals bear these Horns in Greenland? Mr. Wormius being the first who informed me that they are Fishes; this occasion'd a smart Dispute betwixt us at Christianople, this Opinion being contradictory to the fentiments of all the Naturalists who have discoursed of it, who represent the Unicorn as a Terrestrial four legg'd Creature, which agrees with divers Passages of Holy Scripture which cannot be understood but of four legg'd Unicorns. Curious and Learned Person having had the goodness to give me a farther Aor count thereof in his Letter from Copenbagen, I will insert the Copy thereof here.

COme years ago, being at Mr. Frise the Lord Chancellor of Denmark's House (the Predecesser of Mr. Thomassen, the Pre-

fent Lord Chancellor) I took an occasion to complain to that Great Man, of the Negligence and want of Curiofity of our Merchants and Seamen that frequented Greenland, in not enquiring into the Nature of those Animals; the Horns whereof they brought in such plenty to us, without giving themselves the trouble of bringing along with them some part of their Flesh or Skin, for the better Discovery of the whole. The Lord Chancellor answer'd, They are more Curious than you imagine, and instantly sent for a great piece of a dry'd Skull, with part of that kind of Horn on it, of about four Foot long. Being extreamly rejoyced to fee me hold in my hands so great a Rarity, and could scarce sufficiently feast my Eyes with the fight of it, as not understanding at first what it was, I intreated my Lord to give me leave to earry it home to my House, to look upon it there at my own leifure, which he readily granted. I found this Cranium or Skull much like that of the Head of a Whale, having two holes on the top, and which Penetrate to the Pallat or Throat: these two holes, being doubtless the two Passages, thro' which this Fish spouts up the Water it drinks: I took also notice, that what they call'd the Horn, proceeded out of the left fide of its Jaw. I invited the most curious and ingenious of my Auditors, to be Eye Witnesses of so extraordinary a fight in my Closet; and among the rest sent for a Painter, who, in the presence of all the Company drew the Picture of that Skull, with the Horn, as it really was in Figure, and answerable to its bigness, according to the Original.

My curiofity stopt not here, but understanding that such another Creature had been taken near and carried into Iseland. I writ to the Bishop of Hole, whose name was Thorlac Schalonius, and had been formerly my Disciple at Copenhagen, to send me the Draught of that Animal, which he did accordingly; and fent me word at the same time, that the Iselanders call'd it Narbual, that is, Fish. a Whale that feeds upon dead Carcasses; for Hual fignifies a Whale, and Nara a dead Carcals. Twas really the Picture of a true Fish, like a Whale: I promise to fliew it to you in your Return from Chriftiamople, with that of the Skull, I had from my Lord Chancellor Frife.

Mr. Wormius fail'd not at our return to fulfill his promise, and even beyond it; for nor atisfied to shew me the Draughts of those Fifthes, he led me into his Closet, where I faw upon a Table the Skull it self of that Animal, which my Lord Chancellor had formerly delivered to him. He had got it, (at his request) from a Danish Gentleman,

#### An Account of GREENLAND.

a Kinfman of Monfieur Frise, who being one of his Co-heirs, had got it for his share, and valu'd at 8000 Rixdollers; he had brought it 20 Leagues to Copenhagen, to shew it to my Lord Embassador. I must confess, that I could not fufficiently admire so exquisit a piece of curiofity. After he had carried it to my Lord Embassador, he was desirous to look upon it in the same Closet. His Excellency viewed it with more than ordinary Satisfaction, and intreated Mr. Wormiss to lend it him, in order to have a draught made of it, which he intended to carry with him to Paris. This great Man, who has a great veneration for all vertuoso's will be glad to shew this Draught among his other curiofities he brings along with him As he has a particular from the North. affection for you, and for all those Gentlemen of the famous and ingenious Society of the Library of Monfieur Bourdelot; So I am certain, that his Closet (which he defigns to furnish and accomplish, if God grants him life) will after his return into France, be free for you, and for all those Gentlemen.

There is no doubt, but that the name of Unicorns. Unicorn is Equivocal, and belongs to feveral Animals, as to the Onyx and Indian Ais, mentioned by Aristotle, and to that wild Beaft, described by Pliny to have the head of a Stagg, the Body of a Horse, and the Feet folid all of a piece like the Elephant; and besides this of a wonderful swiftness and strength, being the same Unicorn, mention'd in several places of the Holy Scripture. As to its Swiftness, the same is represented as to Marvellous that God will cause Syrion, (a Mountain of Libanus,) to skip as the Foal of an Unicorn, and its strength so exalted that the Power of God is compared to it. The strength of God, (faith Moses, the leader of the Children of Ifrael,) is like that of the Unicorn. Whence it appears that our Unicorns of the North, which we know to be Fish, must be of a different kind from the Unicorns believed to be in the South or Eastern parts of the World, and are without doubt Terreftrial Animals, when the Prophet Isaiah foretells the Jews that God would drive them and their Kings, (whom he names Unicorns) from Jerusalem. The Unicorns, faith he, shall descend with them: this cannot be understood but of a Terrestria' Creature; if the Prophet had supposed those Unicorns to be Fishes, 'tis likely he would nave faid, they shall swim, instead of, they hall descend. I will therefore call them, 1 kind of Sca-Unicorns, as others have lone with Sea-Dogs, Sea-Calves, and Sea-Noives. This name is not new, feeing Barboline a Banish Author, hath inserted a pe-

culiar Chapter of Sea-Unicorns, in his Treatife of Unicorns. Notwithstanding which, there remains still another difficulty, viz. whether these Sea-Unicorns (of which we are now speaking) be really Unicorns, and whether that we call their Horns, be truly Horns, or rather their Teeth. The Refolution of the first doubt depends upon the fecond; for them to be Teeth, those Fishes cannot properly be call'd Unicorns, because they have no Horns, and if they be Horns, they are doubtless Unicorns, because they have but one Horn. Mr. Wormius affirms that they are Teeth and not Horns. And I find that Angrim Jonas calls them Dentes in that place of his Specimen Iselandicum, where he speaks of a Bishop of Greenland named Arnoldus, being Shipwrack'd as he was failing to Norway: the Ship being shatter'd to pieces by a Storm in the Isthmus to the West of Iseland. This Shipwrack happen'd in the Year 1126. He mentions the several things taken up out of this Shipwrack: Reperti funt, faith this old Man, Dentes Balenarum, &c. There were cast ashoar by the Tide precious and rare Teeth of Whales, Runick Let-Lafting ters done upon them, with a red Gum, Runiel not to be blotted out, that every one of the Letter. Seamen at the end of their Voyage might know their own. And 'tis certain, that this Angrim Jonas understands by these precious Teeth of Whales, the same which in Denmark, they call, and ought to be understood of those Horns we attribute to Unicorns, and of which we now treat; what makes me suppose them to be Teeth and not Horns, is, that Aristotle lays it down as an undoubted Truth, That all Unicorns, carry their Horns in the middle of their Fore-heads, but these Fish have that which we name Horns, at the end of their Snout, or under Jaw, or Gums, in the same place where Teeth are fixed. That the Horns are growing in the Fore-head per Symphysim, i. e. by an Adjunction, or natural Union with the Bore, but the Teeth are funk into the Gums per Gomphosim, i. c. as a Wedge or Nail that enters the substance. This was plainly to be feen in that Skull, Monsieur Wormius shewed us, which was funk into the Jaw near a Foot deep, and ftretch'd out in length like a Lance, laid flat in the same manner as the Fish named Priftes, carries its Sythe, and the Xiphias, or Sword-fish wears its Sword.

 I have taken notice of a very good reason, or rather Observation in Aristotle, concerning the Florn of these Unicorns. He says, That all the Animals that have two Horns, are Cloven-footed; but all Unicorns have but one folid Claw. That Nature "had made the fame Union, and the fame Con-

junction

junction of Claws in the Feet, as of the Horns in the Head of the Unicorns, as it has made the same division of Claws and Horns in the Feet and Heads of other Animals. From whence it follows, that the only diffinction of the Unicorns from the other Animals, consists in the Unity and Solidity of their Claws and Horns, and by the same reason that the Unicorns have their Claws in their Fect as the other Animals, they bear their Horns in the same place of the Head, namely in the Fore-head: And as the other Beafts that have two Horns, carry them on both fides of their Front: they that have but one, have it in the middle of the Fore-head. But as the Fish, we are speaking of, that have neither Claws nor Feet, capnot have any Horns in their Head, we may from hence conclude, that what some suppose their Horns, being fixed deep into their Jaws, and not faltned to their front, cannot properly be faid to be Horns, and therefore are to be reckon'd as Teeth.

At first I my self was not of this Opinion, but as I was disputing about it with Monsieur Wormius, the great Marshal of Denmank, (of whose high Birth, eminent Vertues, and Dignities he possesses next to the King, my Letters have inform'd you before.) This great Person, who has honoured me with his particular Favour, and taken a fingular fatisfaction to fatisfie my curiofity in every thing I could defire, told me in Relation to this matter, something that confirm'd me in my first Opinion, that they were Horns and not Teeth. He acquainted me, that the King of Demnark, his Master, designing to make a Present of a piece of this sort of Horns, that should be extraordinary beautiful and handsome, he ordered him to cause an entire Horn to be fawed near the Root, where 'tis biggest and most beautiful. As foon as he had fawed a little of the Horn, (which he fanfied to be folid) he found it hollow within, and what surprised him most, in the same Concavity, another less Horn, of the same figure and substance as the great one. He order'd the great Horn to be fawed round without touching the little one; and found it to be grown in the infide of the great one, about a Foot long within the Concavity, the remainder of the great one being folid. This made me igreat one being folid. magine that the Animals which bear those Horns, cast them as the Stags do theirs, that their great Horns fall off, and others come in their stead; and that it was doubtes for this Reason, that so many Horns separated from their Heads, were carried by the Ice Shoals unto the Coast of Greenland over Heland: But I was food convin- place, and was fold in the fame manner.

Vol. II

ced to the contrary, when I faw the Skull before mentioned, and observ'd that long Root that was fixed in its Jaw bone, and that the very same thing that the said Minifter told me, he had caused to be sawed, was a Tooth and no Horn: That also tis possible that Teeth fall, and others grow in their steads in these Fishes, as well as they fall and grow again in Children, and some Persons of a more advanced Age. 'Tis very frequent that such Teeth as fall are put out, and forced away by other new Teeth that begin to appear before the old ones fall away. The like never happens to the Stags, whose Heads after having cast their Horns, remain as bare as if they never had any, until such time as their new Horns grow again.

Horn of St. Denys. I have told you, that it is altogether, and every where like that of Denmark. I will add to this, that the Danes are of Opinion, (as most certainly it is) that all those kind of Horns found in Muscovy, Germany, Italy, and France, came originally out of Denmark, where this fort of Merchandize was very frequent, whilst there was a Passage between Norway and old Greenland, and that they constantly cross'd the Seas from one Coast to the other. The Danes, who brought them to Sale in Foreign Countries had no reason to declare them to be Fishes Teeth, but fold them for Unicorn's Horns, to fell them at the higher rate; this they have not only practifed formerly, but also continue to do it to this day. 'Tis not long fince, that the Company of new Greenland, Fishes at Copenhagen, sent one of their Agents Teeth fold into Muscovy with several great pieces of these for Horns kind of Horns, and amongst the rest, one of an Uniend of a considerable bigness, to sell it to the Great Duke of Muscovy. The Great Duke being extreamly taken with the beauty thereof, he shewed it his Physician, who understanding the matter, told the Great Duke, 'twas nothing but the Tooth of a Fish; so that this Agent returned to Copenbagen without felling his Commodity. ter his Return; giving an Account of the Success of his Journey, he exclaimed against the Physician who had spoiled his Market by diffracing his Commodities: Thou art a half-headed Fellow, Replied one of the Direstors of the Company, (as he told me fine. Why didst thou not offer two or three

hundred Ducats to the Physician, to perswade

him that they were the Horns of Unicorns?

You need not doubt, Sir, but that the Horn of

St. Denys, did come Originally from the same

But for fear to long a Discourse of Horns the Horn should seem tedious, I will conclude it with of St. Defaying something of the pretended Unicorn's nys.

I can't exactly tell you the time fince I faw it; but if the remembrance of the Idea that remains in me, deceives me not, 'tis a Tooth like those they show in Denmark; for it has the fame Root as the rest, hollow and Worm-eaten at the end like a rotten Tooth; this being granted as it is really True, I will positively affirm it to be a Tooth, fallen out of the Jaw bone of the fame Fish known in Iseland, by the name of Narhual, and that confequently it is no

But it is time to return into Greenland.

The Chronicle of Iseland tells us, That the Air of Greenland is milder and more temperate than in Norway: That there is not so much, nor such frequent Snow, neither the cold fo excessive: Not but that it freezes very hard, and fometimes they have grievous Tempests; but those violent Frosts and great Storms happen not often, nor do they continue for any considerable time. The Danish any confiderable time. Chronicle mentions it as a very strange thing, That in the year 1308, they were afflicted with such dreadful Thunders and Lightening in Greenland, that a Church named Skalholt, was burnt to the ground: That this Thunder and Lightening was fol-A violens lowed by fuch a prodigious Tempelt, that it overthrew the tops of feveral Rocks, which cast out such abundance of Ashes that they fansied it Rain'd Ashes. This Tempest was fucceeded by an excessive cold Winter, the like had never been known in Greenland; the Ice continuing a whole year without melting. One time as I was relating this stupendious Rain of Ashes to my Lord Embassador, he inform'd me, that being at Rochel, a Sea Captain lately come from the Canaries, affured him that lying A strange at Anchor about fix Leagues from those shower of Islands, there hapned to fall just such a shower of Ashes, which lay as thick upon the Deck of his Ship, as if it had Snowed very hard. The cause of this sudden accident was attributed to a violent Earthquake, which having shaken the Fiery Mountains

in the Canaries, the Affles were by the

Wind carried fix Leagues into the Sea. Tis very probable, That the Affies cast

out from the Greenland Rocks, proceeded from the same cause, and that there are in

that Country Sulphurous Moustains; sue

subterraneous Places, which burn like these

of the Canaries and ellewhere. This thay be verified by the Neighbourthood of Mount Heela in Ifeland, which lies much more

Northerly than this Part of Greenland, as allo by leveral Instances of other stery Mountains in Lapland, much farther than the distick Circle: Belides what questionless you may have taken notice of before, in the old Description of that Country, viz. That there are Baths there of fuch an excellive heat, that they are uliful only in Winter.

The Summer in Greenland is always pleafant both Night and Day, if that continualtwi-light, that in Summer abides all the Night in the Air may be called Night. As . the Days in Winter are very fhort, the Nights are confequently very long. Befides that, Nature produces there a wonder which I should scarce relate upon my own Credit, had not the Iseland Chromèle Recorded the fame as a Miracle; and had I not an entire confidence in Monsieur Rets, who did Read and Interpret it to me.

In Greenland with the beginning of the A ftran Night, a certain Light arises either with the Light. New Moon, or just before it, which gives light to all the Country, in the same degree and manner, as if it were full Moon; and the darker the Nights are, the more conspicuous the light appears. It takes its Course towards the North, whence it is call'd the Northern Light. It appears like a flying fiery Meteor, streaming along in the Air, as a high and long Palifado. As it moves from one place to another, it leaves behind it a Smoak in those places, through which it had paffed; its fwiftness being such, that none but such as have seen it are able to imagine it. It lasts all the Night and vanithes with Sun rifing. The enquiry into the true cause of this Meteor, I will leave to those who are better versed in Natural Philosophy than my felf, whether certain Vapours arising out of the Earth, enflamed by a continual Motion, are not the most probable cause thereof, as we see with the same fwiftness those long Fuzees, or fiery Tongues, to kindle, which fall from, or pass thro' the Sky, or in the same manner as the flaming Meteors fly about the Church-yards. I have been told for certain, that this Northern Light is plainly feen as far as Ifeland and Norway, when the Air is clear, and the Night not clouded with any Mists: gives light, not only to the People of this Northern Climate; but also discovers it self in our Parts. Doubtless this Light is the fame which I have heard mention d by the most Learned, and Judicious Philosopher Monfieur Gaffendi; to have been frequently feen by him and nam'd Aurora Boreals or the Norththern Twi-light. The most remarkable that he ever saw, was that seen all over France, flower than the New Moon, the Night September, it only en-

Green-

land.

Asbes.

described it at large, more compleat in his Learned Observations, and at the end of his Exercitations against Doctor Flud; whither I refer you, to avoid Prolixity; and to re-

turn to my former Relation.

The Danish Chronicle says, That in the Year 1271, a violent Wind from the North-east forced such a vast quantity of Ice should loaden with Bears and Wood, to the Coast of Iseland; that from thence they conjectured that what was discovered in the West of Greenland, was only a small part thereof; and that it extended a great way farther to the North-East. This perfivaded some Seamen of Iseland to venture upon this Difcovery, but could meet with nothing but Ice shoals, some Kings of Norway and Denmark having a long time before the same thought and design in their heads, they had fent thither feveral Ships, nay fome of them went thither in Person; but with no better fuccess than the Seamen of Island: What had induced them to attempt this Voyage, was either the Fame, or the general received Opinion grounded upon certain Reports that this Country abounded in Veins of Gold and Silver, and Precious Stones. Or perhaps that Pallage in 300 had made some impression upon their Mind, Gold cemes from the North. Upon which Account I can't forbear to tell you what the same Danish Chronicle says upon that Subject, viz. That in former times certain Merchants return'd from thence with great Riches. It says also, That in the Reign of St. Olam, King of Nerway, fothe Mariners of Frizeland undertook that Voyage for the same purpose; but being by violent Tempelts forced among the Rocks of this Coast, they were forc'd to shelter themselves in some Creek. He further tells us that when they adventur'd alhoar, they found not far from the Sea-shoar some ill built Hutts or Cabins half under ground; and about those Cabins, a great many Mineral Stones, glittering like Gold and Silver Ore, which made them refolve to take a good quantity along with Riches in them: In effect every one of them having the North ration as much as they could well carry away, ar they were Marching off to their Ships, they faw coming out of thefe underground Plants, a good number of ill fhap'd and ill look'd Fellows, refembling more the Devils than Mon, with their Bows and Slings, and great Dogs at their heels. This obliged the Mariners to haften their needs. I his obliged the Mariners to haften their pace to prefer to both themselves and their Treasure; but one of them lonering between the Misolance we fall the the halds of those Savages, who somethin haddediately in pieces; in the sight of the Companions. This Discontinuous states the Companions. This Discontinuous states the charge the Contant is full.

of Riches, and therefore 'tis commonly faid, That Saturn has hid here his Treasures, and Planted a fett of Devils here to guard

them.

In the Iseland Chronicle, he has a peculiar Chapter intituled, The Course and Navigation from Norway to Greenland. The Course into Greenland, according to the Accottnt given by the most skillful Pilots, born either in Greenland, or returned from thence lately, is as followeth. From Nordstadenfundmur in Norway, you direct your Course towards the West, till ye come to Horen-The strain days fail. From Suofuels Jokel, a Sulphu-Green. rous Mountain of Iseland to Greenland, the land. shortest way is to fall towards the West. Half way between Ifeland and Greenland lies Gundebuirne skeer. This was the old Passage before the Ice from the North rendred this Navigation very dangerous. "Tis alfo Recorded, (but in a separate Paragraph) from Langueries to Island, (which is the most Northerly part towards the Pole) are eighteen Leagues to Offreborn, which fignifies the Eastern Horn. From Offreborn to Huals-biedde; is twice 24 hours fail. would not have any body to undertake a Voyage into Greenland, according to this direction; the fame having always been, as far as I was able to learn, very difficult and dangerous; you may perhaps have taken notice of this from what I have faid before, of the return of Leiffe into Greenland, to his Father Errick, Simamed the Red bair'd, from the fore-mentioned Shipwrack of Bishop Arnold, and the disasters that befel the Mariners of Frizeland. The fame Iseland Chronicle has another Chapter, Entituled, A Copy taken out of an old Book call'd, Speculum Regale, or, The Royal Looking-Glass. Concerning the Affairs of Greenland, the Contents whereof are plainer than the former. It fays, That in former days, three Three large Sea Monsters of a strange shape, were Monsters. seen in the Sea of Greenland. The first was by the Norwegians call'd Haffftramb, which appear'd from the Girdle upwards above Water; its Neck, Head, Face, Noie and Mouth, were altogether like those of a Mail; only the Head was extraordinary high, and pointed towards the Crown had very large Shoulders, and at the extrewithout hands. The Body was but flender towards the middle; and keeping conftantly under Water, below the Girdle, none ever law the whole fliape of this Monster. Its Countenance appear d like ice, and as often as it was ten above Water, it provides the fliable of the state of t the foretituder of violent Storms.

The second Monster was call'd Marguguer: The second Monster was call'd Marguguer:
Monster. in shape, (as far as the Girdle) not unlike a Woman, with large Breafts, its Hair hanging down behind, large Hands, at the extreamities of its stumps of Arms with long Fingers join'd together, with a skin like the Feet of Geele. Sometimes this Monster has been feen holding a Fish in its Hands upon which it fed. It always portended an approaching violent Storm: if it dived under Water, with the Face towards the Mariners, 'twas a fign they should not be Shipwrack'd; but it it turn'd its back to them, 'twas an ill omen, foretelling that they should be cast away.

The third Monfter.

How to

cfeape

The third Monster was call'd Hafgierdinguer; being no Monster to speak properly, but three Mountains of Water railed by violent Storms, which occasioned a Whirlpool, that swallow'd up all the Ships that had the Misfortune to light within this Triangular Whirlpool, made by the Position of these Watery Mountains, out of which feldom any escap'd without Shipwracking. This pretended Monster or Whirlpool, was occasioned by the Currents of the Sca. which meeting with turbulent Winds contrary to the Current, used to surprize and Iwallow up the Ships.

This fame Book declares, That in this Sea are great heaps of Ice raifed upon one another, appearing at a distance like huge Statues of itrange shapes: It advises those that go into Greenland, to bend their Course towards the South-west, before they come near the shoar of that Country, by reason of the great quantity of Ice that swims on these Seas, at a great distance from the shoar, even in the Summer. It advises those that happen to be entangled among the great Ice shoals to put in practice what others have done, in such like emergencies, viz. to put their Longboat upon the thickest part of these Ice shoals, with all the Provision they have, and to stay there till this Ice carries Ice shouls them to some Land or other, or else it disfolves, when they may fave themselves in

heir Long-boat.

Here ends the History of old Greenland; but the History of Denmark tells us pre-cifely, that in the year 1348, a furious Plague, call'd the Black Peftilence, carried away the greatest part of the Inhabitants of the North, and among the rest, the Seamen and Merchants of Norway and of Den mark, that were Members of the Greenland And it is Company in both Kingdoms. observable, That from this time on, the Voyages and Traffick into Greenland were lilcontinued, and began to be loft. Monicur Wormins, as I remember, told me ne rertheless, to have read in an old Danish Manuscript, that about the year 1484, in the Reign of King John, there were in the City of Bergen in Norway, above 40 Seamen living that failed every year into Greenland, and brought from thence feveral Commodities of great value: But having refused to sell them to certain German Merchants, come on purpose to Bergen to buy them, these Germans (without discovering their, Defign) invited those Mariners to a Supper, and destroyed them all in one Night. This Story as 'tis related carries but little probability along with it; there being at that time no such free, and frequent Pallage betwist Norway and Greenland. The Narrative I am entring upon being most certain that the Trade and Traffick which Norway and Denmark formerly had with Greenland, was then either quite decayed, or totally ruined.

You must understand Sir, That the Tri- of the

butes and Customs of Greenland were anci-butes ently defigned and employed to defray the Green Charges of the Table of the Kings of Nor land. way; and that not a Mariner durst sayl into Greenland without leave, upon pain of Death. It happened in the year 1389, That Henry, Bishop of Garde, went over into Denmark, to be present, as I told you before. At the Assembly of the States of this Kingdom, then Assembled in Funen, in the Reign of Queen Margaret, who united the two Crowns of Norway and Denmark. It happened, about the same time, That certain Merchants of Norway, who had cross'd the Seas to Greenland without leave, were accused of having Embezzeled the Tributes and Customs belonging to the Queen's Table. The Queen treated those Merchants severely enough, for they had been infallibly hang'd, if they had not taken a strict Oath upon the Holy Bible, that they had been The dan, carried over into Greenland, not defignedly of Adv but by a Storm. And that what Merchan-swers difes they had brought from thence were to Gree purchased with ready Money, without med-land. ling in the least with the Queen's Revenues; they were discharged upon this Oath. However the severe Prohibitions made upon this occasion, together with the danger of the Seas, produced this Fatal effect, that fince that time, neither Merchant, nor Marriner durst venture on this Voyage. The Queen, some time after, sent thither some Ships, which were never heard of fince, Ships, which were never heart of nines, supposed to be cast away, the' it was never known either how or where, or in what manner they were lost. This put such a The cultival and the prevail sorruption thole Seas. of the continuous of the integer in Green and the continuous and t

. "

meeting no great Account of Greenland was not very forward to force them to these

Voyages.

The Danish Chronicle, unto which I stand indebted for this History, says, That about the same time, viz. in the year of our Lord 14.06, Eskild Bishop of Drunthem, in Norway, willing to take the fame care of Greenland, as his Predecessors had done before: sent thither a certain Person named Andrew, to Mucceed in the place of Henry, Bishop of Garde, in case he was dead, or to send him word if he was alive. But fince this Andrew took Shipping for Greenland, not the least News could be heard of him; and notwithstanding, all the inquiry that could be made, it was impossible to hear the least Tidings, either of him or of Bishop Henry. This was the last Bishop that was sent from Norway into Greenland

The same Danish Chronicle gives us a Catalogue of the Names of all the Kings of Denmark, fince Queen Margaret, to the garet Reign of Christian IV. the present King, with Nor- an exact Account of what happen'd in reference to the recovery of Greenland, in their respective Reigns. It is absolutely requisite, Sir, you should not be ignorant of this Succeilion, and of the Fatalities or Misfortunes, which have made us lofe even the Knowledge of this Renowned Country, which in former days was so well known, inhabited, and frequented by the People of our

World.

Erick of Pomerania succeeded to Queen Margaret, but as he was a Foreigner newly come into Denmark, he never took the Pains as much as to enquire, whether there was fuch a Country in the World as Green-

Christopher of Bavaria was Crown'd next after Erick, but being all the time of his Reign, imployed in a War against the Vandals, then inhabiting Pomerania, had but little leisure to look after Greenland.

The Family of Oldenbourg, that now sways the Danish Scepter, began to Reign in the year of our Lord 1448. But King Christian, the first of that name, and of that Race, instead of bending his Thoughts towards the North, employed them in the South: For going in Pilgrimage to Rome, he got from the Pope the Propriety of the Country of Dirlmarsen, to be annexed to the Crown of Denmark, and leave to establish an University at Copenhagen.

Christian the Ild., succeeded Christian the lit, and folemnly promated at his Coronation, to use his utmost endeavours for the recovery of Greenland: But instead of recovering a Country loft by his Predecessors, he was forced to forsake his own Kingdons. His Vol. II.

Cruelties having caused him to be driven out of Sweden, which Queen Margaret had united with the two Kingdoms of Norway and Denmark, and Establish'd in these three Kingdoms but one Government. He departed into Denmark, with the same furious Spirit that had possessed him in Sweden, so that the Danes, not able to fuffer him any more than the Swedes, deposed him. Whence it is, That he is represented amongst the Kings of Denmark, with a broken Scepter His Lord Chancellor Erick in his Hand. Valkanor, a Darish Gentleman, remarkable for his Vertue, Wisdom and Wit, being made Arch-bishop of Drunthem after his Master's Disgrace, retired to his Archbishoprick, where he employed his Mind and Skill in the recovery of Greenland. He perused all the Books that mention'd it: He examin'd all the Merchants and Mariners of Normay, that could in the least be supposed to have any knowledge of it, and caused a Map to be made of the Paffage, leading to it. But just as he was upon the point of putting in Execution so laudable a design in the Year 1524, a great Lord of Norway pick'd a Quarrel with him, and forc'd him to abandon both his Archbishoprick and the Kingdom, whence he departed to Rome, where he died.

Frederick the 1st. Uncle to K. Christian,

had took Possession of the Kingdoms of Denmark and Norway; and because the Faction of Christian was not altogether extinct, Frederick fearing the Interest of Valkanor, caus'd him to be driven out of Norway, and annull'd the Charters given to the respective Companies Erected for the Discovery and Recovery of Greenland.

Christian the 3d. succeeded Frederick who caused the Passage into Greenland to be Attempted, but those he sent, return'd without being able to find it out. This oblig'd this King to repeal all the fevere Prohibitions and Orders Publish'd by the King's Predeceffors, viz. That none should fail into Greenland without peculiar Licence. Instead whereof, he granted full Liberty to every one that had a mind to go thither without his leave. But the Norwegians being in those days so weak in Shipping, and so milerably Poor, were not in a condition to provide Ships for fo difficult and dangerous a

King Frederick the 2d. Inherited with King Free Kingdom his Father Christian the 3d's derick II. Delign. He sent a certain Person named of Den-Magnus Heigningson to discover Greenland, mark, his If we may rely upon the Author's Credit vours to in reference to this Voyage, there is a Secret recover and hidden Cause unknown to all the World, Greenthat visibly stops and hinders the designs of land. recovering this Country. For after Magnus 6 B Heigning on

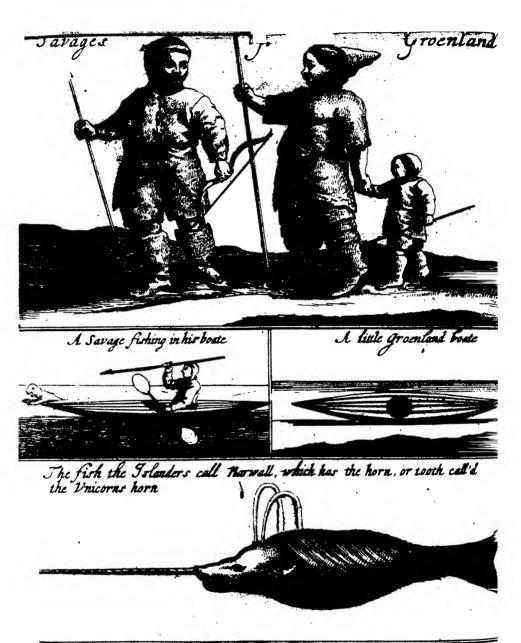

Heigningson had wandered and passed thro' many difficulties; he discovered Greenland at a distance, but could not come near it, for as foon as he had made the Coast, his Ship ftopt immediately, at which being aftonish'd (and not without reason) for it was in the Main Sea, in a great depth of Water without any Ice; besides, the Wind blew fresh and fair, and the Ship was under full Sail. Thus being unable to go forward, he was forced to return to Denmark, where he gave an Account of what had happen'd, to the King, whom he told by way of excuse, that in the bottom of those Seasthere are Rocks of Loaditone, which had itop'd his Ship. If he had but known the thory of the Remora, perhaps he might have alledg'd that as a Pretence, more probable than that of the Loadstone. Expedition happen'd in the Year 1588, or thereabouts, when King Frederick the 2d. Reigned. Our Danish Chronicle tracing exactly the Sequel of the time, hath inferted between the Reigns of King Christian and King Frederick, a long Narrative of the Voyage of Captain Martin Forbifber, an English Captain, who undertook the discovery of Greenland, in the Year 1577. As this Narrative gives us a much clearer infight into the affairs of Greenland and of its Inhabitants, than any other now extant, as far as ever I faw till this time; so I thought it not amiss to send you a Translation of the Matters contain'd therein.

The Voyage land.

Martin Forbifber fet fail out of England, for of Martin Greenland, in the faid Year 1577; he disco-Forbulier ver'd it, but could not land nor come near mio it that Year, by reason of the Night, the Ice and the Winter, which came very fuddenly upon him in that Voyage. After his Return into Lingland, he acquainted Queen Elizabeth with what he had feen. The Queen upon his Relation, thought to have recovered this unknown Country. She with the first beginning of the Spring, gave him three Ships With these Forbisher set fail, and having got fight of the Land, came to an Anchor on the East fide of it. The Inhabitants of the Country where he landed, fled away at the approach of the English, leaving their Houses to hide themselves up and down; nay, some of them for fear, climb'd up to the top of the sharpest and highest Rocks, from whence they cast themtelves down into the Sea. The English, who could never fo far prevail upon, or engage these Savages to come near them, enter'd into their forsäken Dwellings, being properly fpeaking no more than Tents made with skins of Sea-Calves or Whales, spread upon The Houses four great Poles, sowed together very Artiof Green- ficially with dry'd Nerves. They took Notice that all those Tents had two Entrances,

the one on the Western side, the other towards the South, whereby they sheltred themselves from the Winds that most troubled them from the East and North. In all ... those dwellings, they found nothing but an old Woman of a frightful look, and a Young Woman big with Child, whom they took away with them, with a little Infant that she held by the hand. As they took them away by force from the old Woman, she howl'd and cried most vehemently. From whence the failed slong the Coast towards the East, and faw a Monster upon the Water as big as an Ox, with a Horn at the end of its Snout \* of of a \* Yard and a half long, which they fan- Daniff fied to be an Unicorn. Thence they steer'd Menn their Course to the North East, and discovering Land, they cast Anchor there, the Country thereabouts appearing very Pleafant to them. And tho' this Place was within the Continent of Greenland, they named it Anavaciek, that they might keep it under another name. They found this Country much fubject to Earthquakes, which overthrew great Maffy Rocks, and rowled them into the Plains, and that there was no abiding there withour manifest Danger. However they staid there a while, and because they met with a Sand, glittering as if it were intermix'd with Gold Oar; they loaded of three Hundred Tunns of it in their Veffels. Sand. They did what they could to draw the Salvages of this Country to a Conversation with them, which they feem'd not to be unwilling to; for they answered by signs, to the figns the English made to them, giving them to understand, that if they would go higher, they would find what they fought for. Forbifher Answered he would, and for the S. that purpose took his Long boat with some rage Soldiers, giving order to his three Ships to Green follow. He passed along the Coast higher up, and faw a great number of those Salvages upon the Rocks, which made him apprehensive of a surprise. The Salvages who conducted him along the Coast and were afhoar perceiving his Jealoufy (that they might not fright him by their numbers) caused three Men only to appear from behind an Intrenchment, much handsomer and better habited than the rest. These desired the English by figns and demonstrations of love to come ashoar. Forbisher sceing no more than three near the shoar, the rest appearing on the Rocks at a distance, row'd towards the shoar, without the least fear, but some that were conceald in a Ditch being impatient (when they law Forbifoer rowing towards them) of delay, ran in a Croud to meet a cep off as a ces being not reason, en-

Here ends this Relation, which whether this Danific Author has relies out of the En lift Travels of Marries But the or whether he has written by hear-fay, in imitation of those Ancient Danes, who made up and Composid the History of their times according to the Tales that were spread abroad in the World, I am not able to determine. But it is time to return to the Kings of Den-

Christian the Vth. Son of Frederick IId. Christian undertook once more the business of Green- V. of land, refolving to leave no stone unturn'd for Denmark. the discovery thereof, notwithstanding the ill success his Father and Grandfather had met with in this Attempt : In order to this His endes Defign, he feat for a Captain and skilfull yours to Pilot from England, both well acquainted recover

with those Seas, and the Course they were Greento take in this Voyage. The Captain and land. Pilot being arrived in Denmark, three stout Ships were Equip'd and committed to the Conduct of Gotske Lindenau, a Danish Gen-Gotske tleman, as Commodore, who let fail from Lindenau the Sound in the beginning of the warm Sea Sciling to fon, in the Year 1605. These three Ships land.

Carrain being some to the Elevation he long d for, he steer'd his Course towards the the South West, for fear of the Ice, that he might with the more fafety and conveniency dats; approach the Good of Greenland. Dogs Course be took seem'd suitable to the Anci-

Greenland.

Two course ent Passage from Iseland mention'd before. The Relation whereof gives the same Directions. The Danish Commodore judging the English Captain to have taken the wrong Course to the South West, steer'd his Course to the North East, and arriv'd alone with his Ship in Greenland. As foon as he cast Anchor, divers Salvages that had discover'd him from the high Shoar, (where they Inhabited) leap'd into their little Boats, and came on board him. He receiv'd them with a great deal of Civility, and Welcom'd them with several Bumpers of excellent Wine; but these Salvages fancying it to be bitter, made very ugly faces at it; but seeing some Whale Oil, they defired fomething of that; accordingly great Pots being fill'd with it, they did drink them off very greedily. These Salvages brought Skins and Furrs, of Foxes, Bears, Sea-Calves, and a great many Horns, (which the Author calls Precious,) or at least some Picces, Ends and Stumps of them, which they exchanged for Needles, Knives, Lookinglaffes, Buckles and other fuch like Tritles, which the Danes shewed them. They making not the least Account of the Gold and Coined Silver that was offer'd them, but expres'd an earnest desire for all Steel-Works, a thing most in request among them, above all other Commodities. To purchase which, they were ready to part with what they esteem'd most precious, viz. their Bows, Arrows, Boats and Oars, and when they had nothing else to give, they stripped themfelves of their Shirts. Gorske Lindenau continued three days in this Road, but the Chronicle does not fay that he Landed here. Doubtless he was afraid to venture ashoar, and to hazard his small number of Men amongst such Multitudes of Salvages of this Country. He weighed Anchor and departed the 4th day, but before he fet fail, detain'd on Board his Vessel two of those Salvages that were come to Traffick with him, who made fuch violent efforts to get out of the hands of the Danes, that they attempted to leap over Board into the Sea, so that Those that they were forced to bind them. remained a shoar, seeing their Companions chained and carried away, made a most dreadful noise, and sent whole showers of Arrows and Stones after the Danes; but these firing a great Gun at them, they were foon difperfed. The Commodore return'd alone with his Ship into Denmark.

The English Captain, with his and the other Danish Ship, arrived in Greenland, [25 the Chronicle tells us) at the furthermost end of the Land, to the West, which could be no other place but Cape Farenel: For 'tis most certain that he enter'd Davis's Gulph,

and failed a-long the Eastern Coast of that Gulph. He discovered a great many good Harbours, a Beautiful Country and large verdent Plains. The Salvages of this part of the Country barter'd with them, as the Salvages of the other part of Greenland had done with Gotske Lindenau. These indeed feem'd to be much more wary, timorous and mistrustful than the others, for as foon as they had made any exchange of Goods with the Danes, they would run and leap into their Boats as if they had stolen them, or as if they had been purfued by an Enemy. The Danes being very desirous to Land in one of these Harbours, went ashoar well provided with all forts of Weapons. The Country where they set foot ashoar, appear'd to them Pleasant and Pretty good but Sandy and Stony, like the Grounds in Norway. By the Exhalations and Vapours that iffued out of the Earth, they concluded that there were divers Sulphurous Mines here, especially fince they found a great many Stones sup-silver posed to belong to the Silver Mines which flones. they carried over into Denmark; where out of one hundred weight of these Stones, they extracted twenty fix Ounces of Silver. This English Captain finding so many fine Harbours along this Coast, gave them Danish Names, and caus'd a Map to be drawn of them before his departure thence. He also feiz'd four of those Salvages, the most comely they could meet with, one of which was to enraged at his Captivity, that the Danes finding they could not drag him along with them, they beat out his Brains with the Butt end of their Musquets, which so frighted the other three that they followed them without any further Opposition. At the same time a Body of Salvages got together, either to revenge the Death of him that was kill'd, or to relieve those that were leading away into Captivity. To effect this, they got betwixt the Sea and the Danes, with an intention to engage them before they could reach the Harbour, and prevent their getting on Board. But the Danes having fent a volley of their small shot, seconded by their Cannon, among them, the Salvages frighted both with the Noise and the Fire, fled in great confusion, suffering the Danes to Embark without any farther disturbance, who were no fooner got on Board, but they weighed Anchor and returned into Denmark with the three Salvages, whom they prefented to the King their Master, who declared that he alought them much better shaped, and less thoughts, than those two Gorske Lindenses brought along with him, being also very different from them in their Habit, Language and Manners.

The

Davis's Gulph.

#### An Account of GREENLAND.

ing's v. The: King of Denmark well stiffied with 11d this first Voyage, referred on a Second. Accordingly the next Cear 1606, he fent the same Gentleman Gorikë Lindenau, With five good Ships into Groenland: He see fail from the Suand the 8th day of May carrying along with him the three Salvages, the English Capain had taken in Davis's Gulph, for to make use of them as his Interpreters. Those poor harmleis Creatures express d an unipeakable Joy when they understood that they were returning back into their own Country. One of them fell fick at Sea, died and was caft over board. Gotske Lindenau Securing his Course directly towards America (us the Englifb Captain had done before) came to the South West point of the Gulph of Davis by Cape Farewel. One of his five Ships loft her Company in a Milt, but the other four arrived in Greenland the 2d of August. the first Road where the Danes cast Anchor,

s jea the Sulvages appear'd in great Numbers near of the the shoar, but would not I raffick with them, es re-10 that as they feem'd to be afraid of the Danes, those likewife would not frust them. fick them. This obliged them to hold their Salls, and go up higher to another Place, where they met with a Harbour much more Commodious than the first, but the Inhabitants were as ill humoured as the former; for, being Jezlous of the Danes, they threatned to fight them if they offer'd to let foot on shoar. The Dance not willing to trust these any more than the others, or venture upon a Landing, failed further; and as they Coalted along the shoar. the Salvages rowed along in their final Boats, and following them at some distance; the Danes found a means to surprise at several times, fix of thefe Salvages, whom they carried aboard in their Boats belonging to their Ships. It happen'd that when the Danes had cast Anchor at the third Road, a Servant of Gotske Lindensu, a bold Fellow, earnestly intreated his Master to suffer him to go alone ashoar, in order to try the Tem-

ed either to intice them by the Commodities he would carry along with him, or to I bold Ad. lave himfelf by flight if they had any milenture to chievous delign against him. The Admihe defirm-ral yislded at last southe importantly of his ion of the Servant, but to looner had he fer his foot on shoar, but he was taken; kill'd and torn in pieces by these Salvages; who after this Tragedy withdrew from the floor, fleering themselves behind the bills beyond the reach of their The Knives and Smooths. and Smoods. THE PERSON NAMED IN Acres of the second the blords of call'd linico are as keen 祖如我 東 教教学

Gotske Linn

per of those Salvages, alledging that he hop-

not likely to get much advantage by staying in this Country, fet fail for Denmark, but one of his Greenland Prisoners was so much afflicted at his removal from his Native Country, that in despuir he cast himself over board into the Sea and was drown'd.

The Danes in their return home, met with the first ship that was separated from them in this Voyage, but did not keep together above five days, when by a most violent Storm they were again separated and scatter'd from one another in such a manner, that they did not meet again till a Month after the storm ceas'd. After much Labour, Hazzard, and a thousand Difficulties they return'd to Copenhagen the first day of

Offiber following.

The King of Demnark having taken are-The shird solution undertook the third and last Voyage Adveninto Greenland; he sent two great Ships under ture. the Command of a certain Captain, a Native of Holftein, named Karften Richkardtfen, who took into his Service some of the best Marriners of Norway and Iscland, who being well versed in those Seas, were to serve him as Guides in the dangerous Enterprise. The Chronicle says, this Captain set sall from the Sound, the 13th day of May, without mentioning the Year, which I could never learn. The 8th day of June following, he discovered the tops of the Mountains of Greenland, but he could not come near the shoar, by reason of the vast see shoals that were fettled near to the shoar, and extended a great way into the Sea. The Ice being heap'd upon one another, appear'd at a distance like Mountains or high Rocks. Upon this occasion the Author observes, that fome Years the Ice of Greenland never melts all the Summer. Thus the Captain of Holftein, finding no means to approach the shoar, and being besides this separated by itorm from the other Ship, before he is prevent-came to these wast Ice Mountains, was ob-preach the liged to return without being able to en floar by compass his design. However the King of the Ice. Denmink was pleafed to admit of his Excuses and the difficulties he alledg'd in his behalf. Perhaps you will be curious to know what became of the four first Salvages, and of the five lust, the Remnants of all they had tisken in the two first Voyages into Green-tand: I will give you, Sir, a brief Account

The King of Demnark appointed certain Perforis to take particular care of their food, An Acand to look after them, with this Provile, count of however, that they should be at liberty to walk some sal-where they pleased. Their food was Milk, vige car-biner, Check, raw Flesh, and Fishes, at Greenter the same manner its they used to feed in land into their own County! It being found impra- Denmarks

Ct cable

cticable to accustom them to our Bread, or roulted or boil'd Meut, much less to our Wines; but they fwallow'd nothing more greedily than great draughts of Oil, or of Whale's Greate. They often turn'd their heads towards the North, and by their fighs express'd the defire and affection they bore to their Native Country, that after their Krepers were removed, some of them who could get to their little Boats and Oars, put off to Sea, with an intention questionless to cross the Seas; but being surprised by a Storm about 10 or 12 Leagues from the Sound, were forced upon the Thoar of Schonon, where being taken by the Peafants they were brought back to Copenhagen, where they were more strictly guarded by their Keepers afterwards, which put them into such a Melancholy humour, that they pined themselves to death.

However there being five of these Salvages alive, a Spanish Ambassadour came into Denmark, the King being willing to give the faid Minister the Divertisement of seeing these Salvages to row in their little Canoo's or Boats, trey perform'd the fame with ex-

traordinary dexterity.

But to give you the best Idea I can of the shape of these Boats, I would have you faney the Weaver's Shuttle, of 10 or 12 Their Boats foot long, compos'd of large Whale Bones, and man- of the thickness of an Inch, or thereabouts, ner of u-cover'd both within and without, (not unfing them. like the sticks of an Umbrello) with the skins of Sea-Dogs, and Sea-Calves, stitched together, with the Nerves of the same Crea-

tures. We must also suppose this Engine or Boat to have a round hole on the top, in the middle about the compass of both the thighs of a Man; and that it grows narrower and narrower by degrees, at both ends proportionably to its bigness, (like our Watermen's Boats upon the Thames.) The chief strength and ingenuity of the whole Engine, conlisting chiefly in the junctures at both ends, where these Whale bones are join'd and fastened together; and in the Opening, Hole, or Circle above, in the Chromsterence where-of all the Whalebones from the lowermost parts meet; the Demi-circle underneath being faltened to the uppermost Circle, or round Hole like a Rundler, where a open towards its Paniers: It is further to be observed, that all the Whalebones underneith and of the lides of the Boat either pals alor or end in this Demi-circle; and that every thing is to well join'd together, that what with its light weight, and the good management of the Rower, it will bear against the most violent Storms at Sea.

The Salvages when they are to make use

of these Boats, get into them by the Hole or Open, at the Top, and stretching their Legs towards one or other of these two ends. stop the overtures left with their Wastcoats. made of Dog or Sea-Calves skins; thefe they falten close to their middle, and the Hole wherein they fit, and cover their heads with certain Bladders or Caps to'd to the upper part of their Wastcoats, that let the Weather be never to bad, and the Sea no." ver so boilterous; may tho' they are dip'd fometimes over head and cars, (which often happens) they are never the worse for it, no Water entring either thro their Cloubs, or into their Boat. Thus they aways swim on the Surface of the Water, and are in less danger in Tempeltuous Weather than a

large Ship.
They use only one Oar, not above 5 or 6 foot long, and half a foot broad at both ends, which they manage with both hands, grasping it in the middle where it is round.

I did not tell you without very good reafon, that the shape of these Boats resemble a Weaver's Shuttle, it being certain that the Shuttle manag'd by the most dexterous Workmen, does not go forward with the same swiftness as these Boats do upon the Water, by the dexterity of these Salvages: The Spanish Ambassador was extreamly delighted to see five of them perform their Task with such incredible swiftness, and to cross and pass by one another with so violent a motion, without touching their Oars or Boats.

The King of Denmark being curious to try the uttermost of their strength, Order'd a Sloop to be Mann'd with 8 pair of Oars, to Row against them, but they were so nimble, that the Sloop could fearce overtake them. The Ambassadour was so generous as to give a Present of Money to every one of these Salvages, which they bestow'd in Cloaths after the Danish Fashion: Now some of them bought themselves Boots and Spurs, and Feathers in their Hats, offering to serve the King on Horseback.

But they were foon after feiz'd with their The former Splenetick fits; all their thoughts be-1000 ing bent upon their Native Country. Two ren of thefe mention'd before, who got out at lane Sea, and were call upon the shoar of Schenen being not so strictly guarded as the rest, because no Body believed they would run the same hazard again, (after their first dethe same hazard again, more than into de-liverance) did once more Attempt to row in their Boats enough the Seas, steering their Courte nowages the right they were pur-fued arter as the kindness of the Sound, but could not be overtaken; so that it is probable stay who left, it being not likely they could reach Grandend ignifican finall Boats.

was generally observed, that these Salvagentwould burft out into Tears, as often as they faw a Child on his Monhers or a Nurses Breast; questionless because they were Married and could not forget their Wives and Children, they had been forced to leave behind them.

Those that remained at Copenhagen had a firiot Guard put upon them, which ferved only to encrease their defire to return to their Native Country, because they now

despaired of ever seeing it again.

This had fuch a Powerful influence upon their Minds, that they all died with vexation, except two who outliv'd their Companions about 10 or 12 Years. The Danes did what they could to render their Captivity easie, representing to them, that they were, and always should be treated among them like Friends and Country men; which feem'd to have fome influence upon them.

The next thing they did, was to endeavour to instruct them in the Christian Faith. but as they could never be brought to learn the Danish Tongue, and that Faith comes by hearing, it was impossible to make them truly fentible of the Mysteries of the

Christian Religion

Some People who had taken particular Notice of their Actions, did observe them frequently lifting up their Eyes towards Heaven, and to worship the Rising-Sun. One of them died at Colding in Jutland, being employed in Fishing of Pearls in the

For it is observable, Sir, that the Mussels in Denmark are fo full of Seed Pearls, (as they call them) that scarce any are without them; of these Mustels, vait quantities are taken in the River of Colding; and some among the rest, which contain very good

portunity of the next fair day, cross'd the Sens to the opposite shoar of the Sound, before any body had the least suspicion of his flight; however he was purfued and overtaken, but not before he was got betwixt 30 and 40 Leagues at Sea. Being given to understand by certain figns, that he must have been infallibly fwallow'd up by the Waves of the Sea, before he could reach the Greenland shoar; he answered by signs, that his intention was to keep along the Coast of Normey, to a certain light, from whence he would have cross'd over to Greenland, by the direction of the Stars. After his return to Copenhegen, he died for grief. This was the end of the unhappy Greenlanders.

They were much the same, as I formerly described to you the Laplanders, of a low stature and broad shoulder'd, forti pettore & armis, strong limb'd, flat Nosed, with large thick Lips. The remnants of their Boats, Oars, Bows, Arrows, Slings and Garments, are to be seen to this day in Denmark. I had the opportunity of feeing two of their Boats with their Oars at Copenhagen, one at Mr. Wormins's, and the other at the Landlord's of our Ambassadour. The said Mr. Wormiss has also some of their Garments made of Dogs and Sea-Calves skins, some of their shirts made of the guts of Fishes, one of their Vests made of the skin of a Bird, with the feathers on it of various colours; as also their Bows, Arrows, Slings, Knives, Hangers, and their Javelins or Darts, which they use in Fishing, pointed at the extremities (as well as their Arrows) with Horns, or Teeth sharpened at the Points. I also saw here a Greenland Almanack, compos'd of 25 or 30 small Canes or Reeds, fastened to a piece of a sheep-skin, but the Use thereof was known to no-body but the Greenlanders themselves.

ment, where negave and when ment in the River; the Salvage being an excellent Diver, brought up abundance of the best Mussels, and for the most part some of that kind, which contained very good Pearls; The Governour was so pleased so this Succels, that imagining no otherwise, but that in a little time he should be able to fell his Pearls by the Bushel, he made this Poor Salvage dive continually for Pearls (norwith-franding the Rigour Chine Winter Scafon) to fuch a degree, the Lath the cold kill'd him.

His Companion was become inconfo-lable by his Death, and thing the ope kill'd him.

of the Greenland Company) in order to Pro-fecute the same design. This Company sent The Danish in 1636, two Ships to the Gulph of Davis, Greenwhere they came to an Anchor near the pany. shoar, which surrounds that Bay. They had not been there long, before they faw gight Salvages of the Country coming toards them in their small Canoos or Boats; coming aboard, the Danes laid out their Knives, Looking-glasses, Needles and such like Trisles, and the Salvages their Furrand Dog skins, and Sca-Calves skins; belides a considerable quantity of what they call the Unicorns Horns.

Whilst they were budy in exchanging these Commodities, a Cannon abound one of these Ships happened to be discharged at the drinking of a Health; the sudden noise whereof put these poor Wretehes into such a consternation, that they run over-board into their Boats, and so put to Sea, with such fwiftpels, that they could fearce well perceive them, till about 200 or 300 Pages from the Ship. The Danes surprised at their unaccountable fear, gave a fignal to these Salvages to return, which they did, as foon as they faw the fire and finoak quite gone. Their manner of Traffick is thus: Having chosen what Commodities they like best, they put them together in one bundle; this done, they put in another bundle what Commodities they are willing to exchange for them; and thus adding or diminishing till both Parties are fatisfied, the bargain is struck at last.

Much about the same time that the Danes were butie in exchanging their Commodities with those of the Salvages, they saw one of these Marine Unicerns lying upon the shoar, where being cast by the Tides, it was left wallowing upon the Sands. As it is, generally reported of these Sea-Calves, that they love to feed upon Grass; so it is likely that these Fishes (which may well be call'd Sea-Oxen) take delight to come now

and then ashoar.

The Salvages had no fooner discovered the Prey, but they attack'd and kill'd the Fish, and after they had beaten his Horn or Teeth into several. Pieces, carried them aboard immediately and sold them to the Danes. This Fish which appears so desence the same thing at Sea to the Whale, that the Rhinoseros is to the Elephant among the Terrestrial Beasts; for he will engage the Whale, and run his Tooth into his fides. Some affirm, that they are of such strength as to be able to split a Yessel at Sea, if they run their Teeth against it, and that several Ships have been suck by them.

However this Traffick was not the main Reason that had induced the Daner to befrow such yast Charges upon those Voyages: The Pilot it seems, who was the chief Conductor of these Ships, had somethy taken notice of a certain Track near the San stoar on that Coast, she Sand whereof had both the Colour and sull Weight of Gold Od, be thought it best to improve this opposition, to gather'd as much of it, as the Ship aboard of which he was, could well carry and so set fail for Denmark, telling the Ships Carry that they were all Rich enoughs, if they could come safely thither.

The Great Marshal of Denmark, who was

Governour and the first Establisher of this Company, being furprifed at their fadden return, the Pilot told him, that his Ship being loaden with Gold, they had done their Buliness beyond expectation. But the Great Marshal being a Person not easily to be impos'd upon, he fent forme of this Sand, to the Gold-inities of Copenhagen, who not being able to bring as much as one fingle grain of Gold out of it, the Grand Murshal was so enraged at the folly of the Pilet, that; to give all Possible demonstrations that could be to the rest of the Company, that he had not the least hand in so gross a Miscarriage, he commanded the Pilot immediately to weigh Anchor and to throw the whole charge of his pretended Gold Our into the Baltick Sea: The Pilot was forced to obey, but finding himself at once despoiled of all his hopes, died foon after, as it is supposed, for grief.

However the Great Marshal had sufficient occasion afterwards to repent of this rash resolution; for (as he told me himselfs) not long after, such another Gold Dust or Sand being sound in the Mines of Norway, an Assaymatter, who was lately settled at conjection for the Coar, so that the Danes in all probability, lost a great Treasure by the ignorance of the other Goldsmiths (in whose skill they consided) who perhaps would not have drawn any Gold ever out of the Oar of

Pers

This was the last Voyage undertaken by the Danes for the Discovery of Greenland; in this Voyage they brought along with them, that great piece of an Unicorn's horn, which, as we told you before, the Great Duke of Muscovy's Physician discover'd to be the Tooth of a Fish; which the Master of the House, where the Ambassadour Lodged, and who belong'd to the Greenland Company, shew'd us, being valued at 6000 Rix-dollars.

The Danish Ship at the time of their departure from the Greenland Coaft, feized two of the Salvages of that Country aboard them, in order to carry shem to Denmark: After they were come into the Main Sea; they lootened these poor Wretches of their Bonds, who guided by a wiolent desire after their Native Country, laid hold of the first opportunity, and throwing themselves overshound, slid endeavour to mach that Shoar by swin they were devoured that the state of the first opportunity and throwing themselves overshound, slid endeavour to mach that Shoar by swin they were devoured that the state of th

I have found an Account of who of the he held of the Gld as the held of the found different ted, by

υy

by the Norwegians, Danes and English, whilst they were endeavouring to recover the Paffage in the first. Tis very probable that the Passage between the Old Greenland and Iseland, has been stop'd up by the vast Ice shoals forced thither during the extremity of the Winter Season; and by the strong North-East Winds from the Frozen Sea, and gathered into vast Ice Mountains in these Streights; whereby the free Passage for Ships being quite interrupted, those Mariners who were fent in quest after the Recovery of Old Greenland, were forced to steer their Course towards the Cape Farmel, and the Gulph of Davys, lying to the East, being that past of the Country now known by the name of New Greenland; it being certain by so many reiterated tryals and experiments, that the Paffage betwixt Iseland and the Old Greenland, has been quite loft, which must be attributed to its being stopped up by the Ice Mountains.

The Iseland Chronicle in that Chapter which treats of the Old Passage, mentions fomething which feems much to confirm the Truth of this affertion, viz. That half ways betwixt Iseland and Old Greenland, there were a confiderable Number of small Rocky Isles, frequented only by Bears; betwixt which, it is likely, these Ice shouls might be forced in betwixt those Rocks, with such violence, and in such vast heaps, that the Sun being not strong enough to melt them in the Summer Season; they became in process of time to be petrefied, and consequently stop'd up the whole Passage into the Old Greenland; so that ever since there has not been the least News heard of the Posterity of those Norwegians that settled there.

\*Tis not unlikely, that the same Plague which raged in 1348, all over the North, being transplanted out of Norway into Greenland, did sweep away most of their Inhabitants, as it happened in divers other Countries of the North. I am apt to perswade my self, that Gorske Lindenau, who as I told you, steer'd his Course to the North-East, in his first Voyage, did either actually come to the shoar of the Old Greenland, or at least very near it; and that the two Salvages he took in those Parts, were actually of the Posterity of the Ancient Norwegians, that settled in Old Greenland.

On the other hand, I have heard it affirm'd by very confiderable Persons, who saw and conversed with them at Copenhagen; that neither these, nor the other Salvages, brought from the Gule Davys (tho' much different both in their Manners and Language) had nothing either in their Language or Manners, that had the least Re-Vol. II.

lation either with Denmark or Norway; nay, that the Language of those Salvages was so far from having any Congruity with that of the Danes and Norwegians, that even they could not as much as understand one word they said.

The Danish Chronicle takes particular notice, that the three Salvages brought from the Gulph of Davys by the English Pilot, spoke so fast and thick, that one could not hear them speak distinctly, except these words, Oxa indecha; the fignification of which words, no body has been able to understand hitherto. "Tis beyond all dispute, that That part of Greenland, known by the name of the Old Greenland, is only a slender part of that vast Tract of Northern Land, lo often mentioned in this Treatise, and, that the shoar is opposite and nearest to Iscland, as also that the Norwegians, who settled there, did not advance very far into the Country, no more than those, who since that time have discover'd the New Greenland, did never advance farther than to the Ports, and upon the shoar; the most of them (as we told you before) not daring as much as to venture to fet foot ashoar.

I had it from the Lord Great Marshal of Denmark's own Mouth, that in the last Voyage made thither by the Danes in 1636, they by certain figns enquired of the Greenlanders, who came to Traffick with them, whether there lived another People like themfelves, beyond the Mountains, they faw about 10 or 12 Leagues distant from the Sea side; whereupon the Salvages did give them to understand by certain signs, that there actually lived other Men, having no hair upon their heads, on the other fide of those Mountains, That they were of a Gyantick Stature, with vast Bows and Arrows, killing all strangers that came into their Country. But no real certainty can be given of these People, no more than of the Country they Inhabit; both the Ancient and Modern Histories being silent in this Point; the only thing we are certain of, is, That Greenland is without Comparison of a much larger extent, than has been hitherto discovered by the Norwegians, Danes and English.

I was willing to enlarge my felf the more upon this Subject, in order to the representing to you, two other things: (1.) That it is not very certain, whether Greenland is coherent with the Continent of Afia, near the and Tartary; (2.) No more, than whether it be contiguous to America. Concerning the first, I can tell you, that the vast Ice Mountains near Nova Zembia, have hitherto so insested the Passage thereabouts, that no body has been able to determine, when

6 D

ther there be a Passage that way into the Sea of the East; For the the most skil-full Pilots and Mariners have been employed in finding it out, they could hever come beyond the Cape of Spitzbergen, accounted by the Danes a part of Greenland, whereabouts they catch most of the Whales, Transported afterwards into Europe: The Dutch here have their Hutts for the management of their Trade, and with other Nations, fend thither Ships e-

very Year.

I can't upon this occasion forbear to give you an Account of what I had the Honour to learn from the Grand Marshal of Denmark's own Mouth, conadjacent Sea: Nay, such was his Genero-fity, that not fatisfied to have told it me by way of Mouth, he would give himself the trouble of writing it in a Letter to me, which I carefully preserve as a glorious Proof of his generofity and favour towards me, in hopes of meeting before long, with a favourable opportuni-ty of showing the same to you. But what do I say of showing you his Letter, when there is so great a Prospect, that you may fuddenly see his Excellency in Person; it being at present reported here at the Hague, as a thing unquestionable, that this great Person, with the Countel's Eleonor his Spouse, the Daughter of the King of Denmark, are gone lately from Copenhagen to France, where this great Personage is to reside with the Character of Ambassadour Extraordinary, from his Majesty of Denmark: This is the same great Person, of whose most excellent qualifications, I have fent fuch ample Praises to our dear Friend Mr. Burdelot, when I gave him an Account of that Famous Interview betwixt the two Plenipotentaries of Sweden and Denmark at the Bridge of Brensbree on Account of a Negotiation of Peace, betwixt the two Northern Crowns; which was at half happily concluded by the intercession, and indesatigable Care of my Lord Ambassador from our most Illustrious King: This Interview was one of the most Glorious that had been feen for a long time, where the two Greatest Men of the two Northern Crowns, viz. the Grand Marshal of Denmark, and the Lord Chancellor of Sweden, did meet one another with an unexpressible Veneration, and all the marks of a most generous Carirage; and our Ambaffadour had there the Honour to Establish a most intimate Friendship between those two great Per-Conneges.

Of the Lord Chancellor of Sweden, I shall have occasion to speak upon another occasion, and it is beyond my present purpole to enter upon a Panegyrick of the Grand Marshal of Denmark, 10 I will only affure you, that whenever you shall have the opportunity of feeing this Great Minifter, you will be satisfied both in respect of his extraordinary Courage and refined Wit, and by his noble Presence, that he not only deserves the Honour of managing all the Affairs of Moment in the North, but also

of a far greater Empire.

Add to these his Historical Vertues, that he is a compleat Philosopher who disdains all Pomp and Vanities, but in lieu hereof is endowed with the most generous Inclinations in the World, which renders his Conversation the most agreeable in the Universe. This great Perion had in his Service among many others, a certain Spanifle Gentle, man named Leonin, who being a great Naturalist he sent him to Spitzbergen, in order to give him an account of what observations he could make there; whereof I will give a brief Account.

This Country is situate under the 78 degree of Elevation, and not improperly call'd Spitzbergen, i. c. peaked Mountains from those peaked Mountains wherewith i is covered. These Mountains are a Mix ture of Sand or rather Gravel, and finali flat Stones joined pretty close together, not unlike that which we commonly call the grey Ardoife stone. The Mountains increase in Bulk every Year, so as to be plainly discovered by those who fail that way; Leonin went alhoar, as deep into the Country as he durst venture, and found the whole Country, as far as his Eyefight could carry, all covered with these peaked Hills; and met with no living Creature except some few Foxes; he was not a little surprised to discover upon one of these Hills, about a League from the Sea side, a small Mast of a Ship, with one of its Pulleys still fastened to it; this made him ask the Seamen how that Mast came there, who told him they were not able to tell, but were fure they had feen it as long as they had used that Coast. Perhaps formerly the Sea might either cover or come near this Mountain, where fome Ship or other being franded, this Mast is some remnant of that Wrack.

They have some Grass, but so short, A deso that it is scarce to be seen above Ground, tion of or beyond the Stones; for to speak proper-Spitzbe ly, here is feares at Earth, but only fmall gen-Stones or Gravel, betwirt which comes forth a fort of Mos, lke that which grows upon the Barks of Trees; in other parts

of the Northern Climate, which serves for food for the Reendeer, and is fo nourishing to them, that they become absolutely fat by it; and I remember that the Grand Marshal had once one of these Creatures kill'd, which had at least four Inches of

This Country is a Defart, and not Habitable, by reason of the excessive Cold, for the sun does not fett here for four whole Months in the Year; and that for 6 Weeks more, it does not go below the Horizon above 3 Ells: To speak after the Danes, who feem to have taken their menfuration of the Heaven from Virgil; meaning that at Midnight (if you may so call it) the Sun does approach only within 11 degrees and half of the Horizon in this Country for the space of 6 Weeks: As the Cold is very fierce here, so the Sunbeams are very bright and piercing, and consequently this subtilty of the Air, encreases the effects of the Cold.

There is no living near these Mountains, which scarce having any folidity, they constantly send forth certain exhalations, which pierce the whole Body in a very little time; To prevent which, the belt remedy is to expose your self to the Sunbeams in a Place where they may furround you on all fides without any obstacle.

They have great quantities of Bears in this Country; they are all white, some living in the Water, others upon the shoar. They are commonly feen fwimming a good way out at Sea, or elfe upon the great Ice shoals. The Grand Marshal had caused several of these Creatures to be taken alive, which he kept at Copenhagen; and when he had amind to shew some sport to his acquaintance, they used to take a walk along the Sea shoar, and in some Sandy but deep place where the Water was very clear, cause these Bears to be thrown into the Water, where they could see them dive quite to the bottom; he told me, that it was one of the best Diversions in the World, to see those Creatures plunge themfelves down to the bottom of the Sea, and to sport there for two or 3 Hours succesfively; nay, he believed they would have continued there for a whole day, had they not been drawn out by the Ropes and Chains that were fastened round their

Bodies. beles of The Sea of Spitzbergen produces abun-pitther dance of Whales of such a bigness, that hales of fome taken hereabouts have been found to be no less than 200 total long, and of a portionable bignes in the Circumference their Bodies. But they frequently take

those of 130 and 160 foot long. These valt Creatures have no Teeth, and within there vaft Bodies, they seldom find any thing, except 10 or 12 handsfull of a kind of fmall black Spiders, progenerated by the corrupted Air of the Sea, and some small quantity of green Herbs tore up from the bottom of the Sea; it is most probable that these Whales don't live upon these Spiders, neither upon these Herbs, but upon the Sca, which produces both; the Sea hereabouts being to covered with these Insects, that it appears quite black, an infallible fign to those who go about catching of Whales, that they are likely to make a good booty; the Whales generally delight in that part of the Sea, which produces these Infects.

Sometimes they take of these Whales in fo vast numbers, and in so prodigious a bigness, that the Ships are not sufficient to carry all the Lard, but are forced to leave part of it behind them, in order to

carry it away the next Year.

It is observable that never any thing corrupts or putrifies in this Country; even the dead Carcasses buried 30 Years before, appear as entire and as well coloured, as they did at the same Moment they gave up the Ghoff

Here are certain Hutts creeted a long time ago, for the conveniency of boiling the Whale Oil or Greefe; these appear the self-same, without the least alteration, now, as they did from the beginning, when they were built, the Wood being as firm and as fresh, as it was the day it was cut from the Tree. To speak the truth of these Northern Parts, the dead fare better here than the living; for if the first don't Corrupt the living don't keep long in Health; witness poor Leonin (before mentioned) who returned from this Voyage fo cramp'd with Cold, that he lived not long after.

All the Birds you meet with here, are Water-birds, there being not one kind of them living upon Land. They have Ducks in great abundance, besides divers other forts of Water-fowl not known to Strangers. The Grand Marshal of Demmark has several of them by him stuffed out, it being impossible to bring them to Copenhagen alive. Their Feathers and Beaks, are not unlike those of the Paroquets, and their Feet are like those of the Ducks. Those that have taken them, affure us, that they fing very disciously, especially when many of them first together, they make a most harmonious noile.

Those that sail to Spitzbergen to catch Whales, arrive there in the Month of July,

Unier-

Ille.

tainty about

land whe-

and return from thence in August. If they come before July, they can't Approach the Shoar, by reason of the vast Ice shoals, and for the same reason they must not venture to stay longer than about the middle of August at farthest; for nothing is more frequent than to see vast Ice shoals in these Seas, sometimes 60, 70, or 80 Fathoms thick.

Que tantum vertice ad auras Aereas, Quantum radice ad Tartara tendunt:

For in certain places near this shoar, the Ice shoals are so thick, that they reach the bottom of the Sea, and these encreasing by degrees, by the occasion of new Ice shoals, arile as high above the Surface of the Water, as they are deep below it. These Ice shoals are as bright and transparent as Glass: What renders the Navigation hereabouts most dangerous, is, the uncertainty of the Currents, occasioned, as I suppose, by the fudden melting of the Ice, which fometimes congcals and melts in different Places, at no great distance, at the same time.

It ought therefore not to feem strange to you, if I am not able to resolve absolutely the first Proposition, viz. whether Greenland is coherent to the Continent of Asia, ther a Con. and the Grand Tartary or not; by reason of sinent or the vast distance there is between us and the Frozen Sea; the uncertainty of the melting of the Ice, the violence of the Tempests that reign frequently near these Coasts, the uncertainty of the true Course to be taken, the Defarts you meet with there, and what is worst, the want of all manner of Subfiftence and Conveniencies in these Desarts. all these taken together, are such insurmountable obstacles, as render this Discovery past all hopes of Success: The second Proposition being involved in no less difficulties than the first; we can with no more certainty affirm of this, than of the former, whether Greenland joins with the Continent of America or not.

Of this I can give you not a more convincing Proof, than what I intended to oblige you with, viz. The Account of a Voyage made by a Danish Captain named John Munck, (which I promised you long ago) who attempted the Discovery of the Eastern Passage, towards the North-West, betwixt Greenland and America; the same being not in the least Foreign to my pre-tent purpose; for besides that it contains to finall varieties, it has a particular relation to Greenland and the adjacent Isles.

The King of Denmark (that now Reigns) being prevailed upon to encourage by his land and Authority, the Discovery of a Paffage to

the East Indies, thro' a supposed Streight betwixt Greenland and America, engaged one Captain Munck to undertake this Voyage. A certain English Captain named Hudson, had some time before attempted the Discovery of this Sea and Streights with the same design, but was lost in the Voyage tho no body knows how; it is likely that his boldness, having some relation to the Prefumption of Icarus, his Wings were rendered useless by the Cold, as the others were by the heat of the Sun, and so met with the same Fate of Perishing in the Sea; which like that of Icarus got from him the name of Hudson's Streights and Hudson's Bay.

Captain Munel set sail from the Sounce the 16th of May 1619, with two Vessels equip'd at the Charge of the King of Den mark, one Mann'd with 48, and the other with 16 men. He arrived the 28th of Fa nuary on the Cape Farvel, (as the Dane. call it) i. e. Farewell; having got its name questionless from the Opinion the Dane have conceived, that fuch as go beyond it are passing into another World, and take a long Farewell from this part of it: Thi Cape Farewell, as I told you before, lies un der 60 degrees and a half of Elevation, it a Mountainous Country, covered always with Snow and Ice; and as these vary frequently in colour, and with their white ness and transparency, dazle the Eye the true shape of this Cape has not been

discovered hitherto.

From this Cape Captain Munck steering his Course to the West by North, entered Hudson's Streights, where meeting with a bundance of ice, he avoided the dange thereof, by keeping out at Sea: Hence it i that he advises those that will attempt thi Passage, not to go too far to the West, by reason of the many Ice shoals, and impetu ous Currents that are near the American Coast. He tells us, that the 8th of July there arose so thick and strong a Frost is these Seas, that all his Ship tackling wer covered with Ice-tags, fo that they wen scarce able to manage them; but that the nex day from three a Clock in the Afternoon till Sun-fett, it was so excessive hot, that they were forced to pull off their Cloaths.

Coming into Hudson's Streights, he gave the name of Christians Streights, after the King of Denmark his Master; and Lander time of his Men the 17th of July in an Isle upon the Coast of Greenland. Those that were the fent to view the Head the Captain, that his min they had the last the Captain, that his min they had the last the cooffeps of Men, but no make the cooffeps of them rear, the Sea that the last the

Munek's Voyage to discover\_a Paffage be-

ed at the fight of the Danes, did run away as fast as they could, but had no sooner hid their Arms, they carried along with them, behind an adjacent huge Mass of Stones, but they advanced towards the Danes, and in an obliging manner, return'd the Salute given by them, with this caution however, to keep betwixt the Danes and the Place, where they had concealed their Arms. But the Danes found means by several turnings and windings to amuse them so long, till coming near to the Stone heap, they seiz d upon their Bows, Quivers, and Arrows.

The poor Salvages quite dismay'd at their loss, did in the most submissive Posture, and with all the engaging signs in the World beg the Danes to reltore them their Weapons, giving them to understand, that as they lived upon Hunting, and must Perish for want of them, they would give them their Cloaths in exchange for them. The Danes moved with Compatition, restored them their Arms, which they joyfully received upon their bended Knees: Danes to engage them the more, produced their Toys, and made force trifling Presents to the Salvages, who were infinitely delighted with them, and in lieu thereof, gave to the Danes divers forts of Birds, and some fat of Fishes. One of these Salvages casting his eyes upon a little Looking-glass, in which he saw his face, was so taken with it, that he put it in his Bosom, and run away as fast as his leggs could carry him, the Danes having the divertion of laughing at his simplicity, as they had occasion to do foon after at the rest of the Salvages, who feeing one of their Ships Crew, with black hair and flat faced, not unlike themfelves, mistook him for one of their Country men, and Carrefs'd him as if they had been very old Acquaintance.
